Flying Horse North  
Updated Traffic Impact Analysis  
(LSC #164050)

July 21, 2016

Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

  
Jeffrey C. Hodson, P.E. #31684

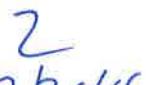

Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

RE: Flying Horse North  
El Paso County, Colorado  
Updated Traffic Impact Analysis  
LSC #164050

Dear Drew:

LSC Transportation Consultants, Inc. has prepared this updated traffic impact study for the proposed Flying Horse North at Shamrock Ranch development. As shown in Figure 1, the site is located generally south of Hodgen Road and west of Black Forest Road in El Paso County, Colorado.

## LAND USE AND ACCESS

The Flying Horse North at Shamrock Ranch site is located south of Hodgen Road and west of Black Forest Road. A narrow portion of the site extends west to State Highway 83/Stagecoach Road. At buildout, the site is planned to contain 283 single-family homes and an 18-hole golf course. The site plan is shown in Figure 2a.

### Access

Access is proposed via a new east/west road (Stagecoach Road) that would extend from SH 83 at an existing full-movement access for the Westcott Fire Station No. 2, which aligns with Stagecoach Road, to Black Forest Road aligning with the north intersection of Terra Ridge Circle. Access would also be provided via an extension of Holmes Road into the site.

Additionally, full-movement access is proposed to Hodgen Road about 1,340 feet west of Black Forest Road. Three full-movement access points are proposed to Black Forest Road aligning with Monty Place, aligning with Alpaca Heights, and about 725 feet south of Black Forest/Terra Ridge Circle (south). Per the *El Paso County Engineering Criteria Manual (ECM)* the minimum intersection spacing on both Hodgen Road and Black Forest Road is 1,320 feet. The south access point to Black Forest Road will require a deviation to this criteria.

## Phasing

The project would be completed in phases. The phasing plan is shown in Figure 2b. Stagecoach Road is initially planned to be built east from SH 83 about two miles to serve Phase 1 and west from Black Forest Road about 1,600 feet to serve Phase 2. An emergency road will be constructed between these two sections. Stagecoach Road will be improved adjacent to Phase 3 with that phase and completed with Phase 4.

The extension of Holmes Road north through the site to Stagecoach Road is not planned until Phase 9. The proposed south full-movement access to Black Forest Road is not planned until Phase 11. The proposed full-movement site access to Hodgen Road is not planned until Phase 12. The proposed full-movement access points to Black Forest Road aligning with Alpaca Heights and Monty Place are not planned until Phase 13.

## ROADWAY AND TRAFFIC CONDITIONS

### Area Roadways

The area roadways in the site's vicinity are shown on Figure 1 and are described below.

- **Hodgen Road** is a two-lane paved Rural Minor Arterial road that extends east from the intersection of Roller Coaster Road/Baptist Road to Eastonville Road. The speed limit on Hodgen Road is generally 55 miles per hour (mph) east of SH 83.
- **State Highway (SH) 83** extends from Colorado Springs north to Parker and areas of southeast Denver. In the vicinity of the site, SH 83 is classified as a Regional Highway (R-A). At this location, SH 83 is a two-lane rural highway with two- to four-foot shoulders and a speed limit of 55 miles per hour (mph). The intersection with Hodgen Road is signalized.
- **Shoup Road** is a two-lane, paved Rural Minor Arterial road that extends east from SH 85 Highway (US) 83 to just east of Vollmer Road. The posted speed limit on Shoup Road is 45 mph.
- **Black Forest Road** is a two-lane, paved Rural Minor Arterial road that extends north from Woodmen Road to County Line Road. Black Forest Road is offset about one-quarter mile to the east at Hodgen Road. In the vicinity of the site the posted speed limit on Black Forest Road is 45 mph.
- **Holmes Road** is a rural local paved two-lane road that extends north from Shoup Road to just north of Vessey Road. Holmes Road is planned to be extended north into the site as part of this development. The posted speed limit on Homes Road is 30 mph.
- **Vessey Road** is a rural local paved two-lane road that extends east from the Cathedral Pines development to Black Forest Road.

## Existing Traffic Conditions

Figure 3 shows the existing traffic volumes at the intersection of SH 83/Stagecoach based on traffic counts conducted by LSC in January 2016 and at the intersection of Hodgen/Black Forest (west) based on traffic counts conducted by LSC in December 2014. The traffic counts at Hodgen/Black Forest have not been recounted in 2016 due to the closure of Black Forest Road at Kettle Creek. The traffic count reports are attached. Figure 3 also shows CDOT annual average daily traffic volumes and LSC estimates of average daily traffic on County roads.

## Existing Level of Service

Level of service (LOS) is a quantitative measure of the level of delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

Table 1 Intersection Levels of Service Delay Ranges		
Level of Service	Signalized Intersections	Unsignalized Intersections
	Control Delay (seconds per vehicle)	
A	10 sec or less	10 sec or less
B	10-20 sec	10-15 sec
C	20-35 sec	15-25 sec
D	35-55 sec	25-35 sec
E	55-80 sec	35-50 sec
F	80 sec or more	50 sec or more

The intersections of SH 83/Stagecoach and Hodgen/Black Forest (west) were analyzed to determine the existing levels of service during the peak hours based on the unsignalized method of analysis procedures outlined in the *Highway Capacity Manual, 2010 Edition* by the Transportation Research Board. The results of the level of service analysis are shown in Figure 2. The level of service reports are attached.

As shown on Figure 3, all movements at the intersections of SH 83/Stagecoach and Hodgen/Black Forest (west) are currently operating at level of service C or better during the peak hours.

## BACKGROUND TRAFFIC

Background traffic is the traffic estimated for the existing and planned future roadways in the study area. These include the new roadways planned for Flying Horse North including Stagecoach Road

between SH 83 and Black Forest Road (completed with Phase 4) and the Holmes Road extension north to Stagecoach Road (not until Phase 9). Although background traffic estimates include the new on-site roadways, they do not include traffic to be generated by the site land uses (283 single-family homes and the golf course). Background traffic has been presented in this manner to clearly show estimates of non-site traffic volumes on the new roadway connections through this proposed development. Most of the traffic using the on-site roads—Stagecoach and Holmes north of its current terminus—represents a shift of local traffic volume from other current travel routes with the new routes through the Flying Horse North site. LSC does not anticipate use of the new on-site road connections by non-local-area traffic/through traffic.

### **Short Term**

Flying Horse North is projected to plat about 10 to 20 lots per year. Based on this rate of development Phases One through Six are estimated to be built out between six and fourteen years, therefore a short-term horizon of 10 years was selected for the traffic analysis. Figure 4 shows the short-term (year 2026) background traffic volumes on the area roadway segments and at the intersections in the vicinity of the site. The short-term background traffic volumes assume Stagecoach Road built east from SH 83 about two miles to serve Phase 1 and west from Black Forest Road about 1,600 feet to serve Phase 2 only with a gravel pilot road/ungated emergency road between these two sections. The short-term background volumes also assume Holmes Road has not been extended north to Stagecoach Road. The background traffic volumes on SH 83 are estimates by LSC based on the Colorado Department of Transportation (CDOT) twenty-year growth factors for the section of SH 83 adjacent to the site. The background traffic volumes on Hodgen Road and Black Forest Road assume a growth rate of two percent per year. The short-term background traffic volumes on Hodgen Road and Black Forest assume the existing alignment of Black Forest Road at Hodgen Road.

### **Long Term**

Figure 5 shows the 2040 background traffic volumes on the roadway segments and the intersections in the study area. The 2040 background traffic volumes assume completion of Stagecoach Road from SH 83 to Black Forest Road and the extension of Holmes Road north to Stagecoach Road. The background traffic volumes on SH 83 are estimates by LSC based on the Colorado Department of Transportation (CDOT) twenty-year growth factors for the section of SH 83 adjacent to the site. The background traffic volumes on Hodgen Road and Black Forest Road assume a growth rate of two percent per year. The 2040 background traffic volumes on Hodgen Road and Black Forest assume the existing alignment of Black Forest Road at Hodgen Road.

### **Level of Service Analysis**

Figures 4 and 5 also present the results of the background traffic level of service analysis. The figures indicate LSC assumptions for the background condition, intersection traffic control, and lane geometry.

## TRIP GENERATION

The site-generated vehicle-trips were estimated using the nationally published trip generation rates from *Trip Generation, 9<sup>th</sup> Edition, 2012* by the Institute of Transportation Engineers (ITE). Table 2 shows the site's average weekday, morning peak-hour, and afternoon peak-hour trip generation estimates for Phases 1 and 2, Phases 1 through 6, and at buildout.

At buildout, the Flying Horse North at Shamrock Ranch site could be expected to generate about 3,337 new vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour, which typically occurs for one hour between 6:30 and 8:30 a.m., about 82 vehicles would enter and 167 vehicles would exit the site. During the afternoon peak hour, which typically occurs for one hour between 4:30 and 6:30 p.m., about 205 vehicles would enter and 130 vehicles would exit the site.

## DIRECTIONAL DISTRIBUTION AND ASSIGNMENT

The directional distribution of the site-generated trips on the area roadway network is an important factor in determining the site's traffic impacts. Figure 6 shows directional distribution estimates for the site-generated trips. The estimates have been based on the following factors: the site's land uses, the roadway network and access connections, and the site's location with respect to the nearby employment, commercial centers, other residential areas, and the balance of the Colorado Springs metropolitan area.

When the distribution percentages in Figure 6 are applied to the trip generation estimates shown in Table 2, the site-generated traffic volumes on the area roadways can be determined. The site-generated traffic volumes are shown in Figures 7, 8, 9a, and 9b. The figures also show average weekday traffic volumes on the internal and off-site roadways.

Figure 7 shows the Phase 1 and Phase 2 site-generated traffic volumes. The Phase 1 and Phase 2 site-generated traffic volume estimates assume Stagecoach Road built east from SH 83 about two miles to serve Phase 1 and west from Black Forest Road about 1,600 feet to serve Phase 2 with a gravel pilot road/ungated emergency road between these two sections. No traffic was estimated to use the gravel pilot road. These volumes assume no direct access to Hodgen Road and access to Black Forest Road via Stagecoach Road only. Figure 8 shows the site-generated traffic volumes through Phase 6 (including the golf course). The Phase 1 to Phase 6 site-generated traffic volume estimates assume Stagecoach Road has been completed between SH 83 and Black Forest Road but assumes Holmes Road has not been extended north through the site to Stagecoach Road. These volumes also assume no direct access to Hodgen Road or access to Black Forest Road via Stagecoach Road only.

Figure 9a shows the buildout site-generated traffic volumes at all of the proposed site access points and at the adjacent intersections. Figure 9b shows the buildout site-generated traffic volumes at three off-site intersections: Black Forest Road/Vessey Road, Vessey Road/Holmes Road, and Shoup Road/Holmes Road. The buildout site-generated traffic volumes assume Stagecoach Road has been extended from SH 83 to Black Forest Road and Holmes Road has been extended north through the

site to Stagecoach Road. These volumes also assume the full-movement access to Hodgen Road and the three full-movement access points to Black Forest Road are all constructed and open.

## **EXISTING PLUS PHASE 1 AND 2 SITE-GENERATED TRAFFIC**

Figure 10 shows the sum of the existing traffic volumes from Figure 3 plus the Phase 1 and Phase 2 site-generated traffic volumes from Figure 7. These volumes represent the short-term Phase 1 and Phase 2-only impacts of this development.

## **SHORT-TERM TOTAL TRAFFIC**

Figure 11 shows the short-term total traffic volumes at the intersections in the vicinity of the site assuming buildout of Phases 1 through 6 of the Flying Horse North at Shamrock Ranch and the golf course (assumed to occur during Phase 3). These volumes are the sum of the short-term background traffic volumes from Figure 4 plus the Phase 1 through Phase 6 site-generated traffic volumes from Figure 8.

## **2040 TOTAL TRAFFIC**

Figure 12 shows the 2040 total traffic volumes at the intersection in the vicinity of the site. These volumes are the sum of the 2040 background volumes from Figure 5 plus the buildout site-generated traffic volumes from Figure 9a.

## **PROJECTED LEVEL OF SERVICE**

The intersections in the vicinity of the site have been analyzed to determine the projected level of service based on the unsignalized method of analysis procedures outlined in the *Highway Capacity Manual, 2010 Edition* by the Transportation Research Board.

The intersections of Hogden/Black Forest, the full-movement site access to Hodgen Road, and both full-movement access points to Black Forest Road are all projected to operate at level of service C or better during the peak hours for all movements as Stop-sign-controlled intersections based on the projected existing plus Phase 1 and Phase 2 site-generated, short-term total, and 2040 total traffic volumes.

All movements at the Stop-sign-controlled intersection of SH 83/Stagecoach are projected to operate at level of service C or better during the peak hours based on the existing plus Phase 1 and Phase 2 site-generated traffic. Prior to completion of Phase 6 a southbound left-turn acceleration lane will be required on SH 83 at Stagecoach Road. A simulation was performed using Synchro/SimTraffic to determine the impact of this lane. The simulation was run five times and the results averaged. The average delay for each movement was then compared to the delay showed in Table 1 to determine the projected level of service. The 2040 analysis indicates the westbound approach left-turn movement at this intersection is projected to operate at LOS E during the afternoon peak hour. It is unlikely a traffic signal warrant will be met based on the projected traffic volumes and assuming the intersection laneage shown in Figure 12.

## TRAFFIC SIGNAL WARRANT ANALYSIS

The intersection of SH 83/Stagecoach was analyzed to determine if a Four-Hour Vehicular Volume Traffic Signal Warrant would be met or close to being met based on the projected 2040 total traffic volumes and lane geometry. As shown in Figure 13 this intersection is not projected to meet the thresholds for a Four-Hour Vehicular Volume Traffic Signal Warrant during the morning and afternoon peak hours based on the short-term scenario.

## AVERAGE DAILY TRAFFIC IMPACTS

At buildout, Flying Horse North is projected to add about 185 vehicles per day to Holmes Road just south of Vessey Road. However, with the extension of Holmes Road north to Stagecoach Road about 400 trips generated by the existing land uses south of the site are projected to be rerouted to use this new connection. The net impact to Holmes Road south of Vessey Road is therefore negligible.

## CONCLUSIONS

### Trip Generation

- At buildout the Flying Horse North at Shamrock Ranch site could be expected to generate about 3,337 new vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour about 82 vehicles would enter and 167 vehicles would exit the site. During the afternoon peak hour about 205 vehicles would enter and 130 vehicles would exit the site.

### Traffic Volume Impacts

- At buildout the site is projected to add about 185 vehicle-trips per day to Holmes Road just north of Shoup Road. However, a portion of the existing traffic using Holmes Road just north of Shoup would instead use the new Phase 9 extension of Holmes to Stagecoach through Flying Horse North at Shamrock Ranch.
- At buildout the site is projected to add about 1,340 vehicle trips per day to SH 83 just south of Stagecoach Road. This represents an increase of about seven percent above the projected 2040 background traffic volume.
- At buildout the site is projected to add about 400 vehicle-trips per day to Hodgen Road just west of the proposed site access point. This represents an increase of about 4.3 percent above the projected 2040 background traffic volume.
- At buildout the site is projected to add about 345 vehicle-trips per day to Black Forest Road just south of Hodgen Road. This represents an increase of about 10.6 percent above the projected 2040 background traffic volume.

## Level of Service

- The intersections of Hogden/Black Forest, the full-movement site access to Hodgen Road, and both full-movement access points to Black Forest Road are all projected to operate at level of service C or better during the peak hours for all movements as Stop-sign-controlled intersections based on the projected existing plus Phase 1 site-generated, short-term total, and 2040 total traffic volumes.
- All movements at the Stop-sign-controlled intersection of SH 83/Stagecoach are projected to operate at level of service C or better during the peak hours based on the existing plus Phase 1 and Phase 2 site-generated traffic and short-term total traffic (through Phase 6). The 2040 analysis indicates the westbound approach left-turn movement at this intersection is projected to operate at LOS E during the afternoon peak hour. It is unlikely a traffic signal warrant will be met based on the projected traffic volumes and assuming the intersection laneage shown in Figure 12 including a southbound left-turn acceleration lane on SH 83.

## Traffic Signal Warrants

- The projected 2040 peak-hour total traffic volumes and lane geometry at the intersection of SH 83/Stagecoach Road are not projected to meet the thresholds for a Four-Hour Vehicular Volume Traffic Signal Warrant.

## Auxiliary Turn Lanes

- Table 3 shows a summary of the auxiliary turn lanes that will be required by phase of this project.

## Phases 1 and 2

- No auxiliary turn lanes will be required based on the projected existing plus Phase 1 and Phase 2 site-generated traffic volumes.

## Phase 3

- Based on the projected short-term total traffic volumes and the criteria contained in the *State of Colorado Highway Access Code*, a northbound right-turn deceleration lane would be required on SH 83 approaching Stagecoach Road. The short-term total traffic volumes assume buildout of Flying Horse North at Shamrock Ranch through Phase 6 and the golf course and assumes the construction of Stagecoach Road from SH 83 to Black Forest Road. This lane should be 378 feet long plus a 222-foot-long taper.
- Based on the short-term total traffic volumes and the criteria contained in the *State of Colorado Highway Access Code*, a northbound right-turn acceleration lane would be required on SH 83 at Stagecoach Road. The short-term total assumes buildout of Flying Horse North at Shamrock

Ranch through Phase 6 and the golf course and assumes the construction of Stagecoach Road from SH 83 to Black Forest Road. This lane should be 738 feet long plus a 222-foot-long taper.

- Based on the projected short-term total site-generated traffic volumes and the criteria contained in the *State of Colorado Highway Access Code*, a southbound left-turn lane would be required on SH 83 approaching Stagecoach Road. This lane should be 418 feet long plus a 222-foot-long taper.
- Based on comments received from the Colorado Department of Transportation a southbound left-turn acceleration lane will be required on SH 83 from Stagecoach Road. This lane should be 738 feet long plus a 222 foot taper (adjusted for grades as necessary).

## Phase 7

- Based on the projected 2040 total traffic volumes and on the criteria contained in the *El Paso County Engineering Criteria Manual* a northbound left-turn lane would be required on Black Forest Road approaching the north full-movement site access (Stagecoach Road). The 2040 total volumes assume buildout of Flying Horse North at Shamrock Ranch, the construction of Stagecoach Road from SH 83 to Black Forest Road, and the extension of Holmes Road north to Stagecoach Road. Based on a design speed of 60 mph for a Rural Minor Arterial, this lane should be 340 feet long plus a 240-foot-long taper.

## Buildout

- Based the projected existing plus Phase 1 and Phase 2 site-generated traffic, short-term total, and 2040 total volumes and on the criteria contained in the *El Paso County Engineering Criteria Manual* no auxiliary turn lanes would be required on Hodgen Road approaching the proposed full-movement site access just west of Black Forest Road.
- There is an existing eastbound right-turn deceleration lane and westbound left-turn lane on Hodgen Road approaching Black Forest Road. Based on the criteria contained in the *El Paso County Engineering Criteria Manual* no additional turn lanes would be required at this intersection based on the projected existing plus Phase 1 and Phase 2 site-generated traffic, short-term total, and 2040 total traffic volumes.
- Based on the projected existing plus Phase 1 and Phase 2 site-generated traffic, short-term total, and 2040 total volumes and the criteria contained in the *El Paso County Engineering Criteria Manual* southbound right-turn deceleration lanes would not be required on Black Forest Road approaching the proposed full-movement site access points.
- Based on the projected existing plus Phase 1 and Phase 2 site-generated traffic, short-term total, and 2040 total volumes and the criteria contained in the *El Paso County Engineering Criteria Manual* no auxiliary turn lanes would be required on Black Forest Road approaching the proposed full-movement site access points.

### Roadway Classifications

- Stagecoach Road should be classified as a Rural Minor Residential Collector from SH 83 to Black Forest Road. The projected traffic volume for the west portion of this roadway would exceed the *Engineering Criteria Manual* design average daily traffic criteria for Rural Minor Residential Collector roadways. A deviation request will be submitted separately.
- LSC recommends all other roadways within Flying Horse North at Shamrock Ranch be classified as Rural Local.

### Other Deviations

- The proposed full-movement access to Black Forest Road, about 725 feet south of Black Forest/Terra Ridge Circle (south) proposed for Phase 11, will require a deviation to the *El Paso County Engineering Criteria Manual* (ECM) as the proposed spacing is less than the minimum intersection spacing for Minor Arterials. The proposed location was selected for the best sight distance. A deviation request will be submitted separately.

### Countywide Road Impact Fee Program

- The Flying Horse North at Shamrock Ranch development will be required to participate in the Countywide Road Impact Fee program. The specific PID option (or opt-out option) as well as the specific calculated fee amount will be provided with the submittal of the Preliminary Plan or Final Plat. The fee per residential dwelling unit will be payable at the time of the building permit.
