FINAL DRAINAGE REPORT FOR HANNAH RIDGE AT FEATHERGRASS FILINGS NO. 5, 6 & 7

DRAINAGE REPORT STATEMENT

DESIGN ENGINEER'S STATEMENT:
The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage report and said report is in conformity with the applicable master plan and drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

FINAL DRAINAGE REPORT FOR HANNAH RIDGE AT FEATHERGRASS FILINGS NO. 5, 6 & 7

PURPOSE

This document is the Final Drainage Report for Hannah Ridge at Feathergrass Filings No. 5, 6 & 7. The purpose of this report is to identify onsite and offsite drainage patterns, storm sewer, inlet locations, and areas tributary to the site, and to safely route developed storm water runoff to adequate detention and water quality facilities while releasing storm water at or below historic rates and in accordance with all applicable master drainage plans. This report will discuss the proposed storm system to be built with Filing 5, 6 and 7 and discuss the final construction details, and more specifically, the final design details of the proposed sub-regional public detention/water quality facility located at the southerly end of Filing 6 that will handle the treatment for Filings 5, 6 and 7. Final design information for the Filing No. 5, 6 and 7 detention/water quality facility included in this report.

GENERAL DESCRIPTION

The Hannah Ridge at Feathergrass development is a 121.2 acre residential and commercial district within the south half of Section 32, Township 13 South, Range 65 West of the 6th Principal Meridian in El Paso County, Colorado. The site is located on the west side of Akers Drive just north of Constitution Avenue. The existing abandoned Chicago Rock Island and Pacific Railroad sits directly north and west of the site, with Akers Drive bordering the east side and Constitution adjoining the south side of the site. The entire proposed development includes a total of 345 single-family residences and will be developed in seven filings. The Filing No. 5, 6 and 7 are the only remaining areas that are currently undeveloped within the community and was previously re-platted under Hannah Ridge at Feathergrass Filing No. 1. Filing No. 5 includes 55 residential lots on approximately 12.92 acres. Filing No. 6 will include 33 lots on approximately 7.94 acres, and Filing No. 7 is 81 lots on approximately 15.40 acres.

The average soil condition of the entire site and tributary area to the proposed ponds reflects Hydrologic Group "A" (Blakeland, loamy sand) as determined by the "Soil Survey of El Paso County Area," prepared by the National Cooperative Soil Survey (see map in Appendix).

EXISTING DRAINAGE CONDITIONS

The site is located within the Sand Creek Drainage Basin. More specifically, it is situated in the north half of the overall Hannah Ridge at Feathergrass residential portion of the development. These last three residential filings makeup nearly all of the Basin A4, as shown on the existing drainage map provided by MVE, Inc. (See Appendix) The abandoned railroad bed along the north edge of the development serves as the northerly basin boundary and Winslow Park Dr. to the south as the southerly basin boundary. The recent construction of Filing 3 improvements included a 6'x10' CBC under Winslow Park Dr. out-falling into a 90" RCP storm. Adjacent to the 6'x10' CBC, a stormwater quality facility (Sand Filter Basin) was also constructed within Tract E, Hannah Ridge at Feathergrass Filing 1. The on-site pre-development drainage patterns sheet flow towards the natural channel through the middle of the property and ultimately into the 6'x10' CBC. This facility was constructed to allow the significant off-site flows from the north, passing under the railroad bed (Q_{10} = 360 cfs and Q_{100} = 640 cfs per Sand Creek DBPS) historically, traversing the site within an unimproved natural channel within a drainage easement. These off-site flows will continue to flow through the site as planned with the Hannah Ridge at Feathergrass Filing 3 construction drawings, designed by MVE, Inc., approved October 2017. This concept will be finalized in the Filing 5 construction drawings.

DEVELOPED DRAINAGE CONDITIONS

Given some recent changes in City/County Drainage Criteria, the calculations for these last phases of development now reflect current criteria for stormwater quality requirements. Proposed Pond 1 will be designed as a full spectrum facility to accommodate the developed flows from Filings 5, 6 and 7. This will include the design of concrete forebays, concrete trickle channels, concrete micropool and an outlet structure designed to release flows based on full spectrum criteria. The attached developed conditions drainage map contains many design points related to proposed at-grade and sump conditions. All public Type R inlets have been designed at these various locations to accept both the 5-yr. and 100-yr. developed flows. All proposed storm facilities within the public Right-of-way will be public with ownership and maintenance by El Paso County. All proposed storm facilities within easements or tracts and the proposed Pond 1 will be owned and maintained by the Hannah Ridge HOA.

Design Point 1 (Q_5 = 7 cfs and Q_{100} = 15 cfs) and **Design Point 2** (Q_5 = 0.7 cfs and Q_{100} = 1.4 cfs) collect developed flows from Basins OS-2, A and F. At this sump condition, a 10' and a 5' Type R sump inlets,

respectively, will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 24" RCP storm sewer in a southerly direction towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 2 (Q_5 = 7 cfs and Q_{100} = 16 cfs).** The emergency overflow route at this location is in the southerly direction directly into a drainage tract that will route the flows towards Pond 1.

Design Point 3 (Q_5 = 9 cfs and Q_{100} = 21 cfs) and **Design Point 4** (Q_5 = 2 cfs and Q_{100} = 4 cfs) collect developed flows from Basins OS-3, D and E. At this sump condition, a 10' and a 5' Type R sump inlets, respectively, will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 30" RCP storm sewer towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 4 (Q_5 = 11 cfs and Q_{100} = 24 cfs).** The emergency overflow route at this location is via a natural swale between two lots within a drainage easement and then directly into the natural channel. **Pipe Run 5 (Q_5 = 17 cfs and Q_{100} = 38 cfs)** represents the combined pipe flows from Design Points 1-4. This 36" RCP storm sewer will route these developed flows to a rip-rap chute and then directly into Pond 1. This pond inflow is designated later in this report as the easterly pond inflow.

Design Point 5 (Q_5 = 9 cfs and Q_{100} = 25 cfs) collects developed flows from Basins OS-4 and J. At this sump condition, a 15' Type R sump inlet will be installed to collect a portion of both the 5-year and 100-year developed flows. These flows being collected have a maximum ponding depth up to the crown of the street. The collected flows at this location equal (Q_5 = 8 cfs and Q_{100} = 8 cfs) with flow-by of (Q_5 = 1 cfs and Q_{100} = 17 cfs) that will overtop the crown and travel into basins K and L. Given the location of the inlet with respect to this "T" intersection, it is assumed that approximately 75% of the flow-by will enter Basin K and 25% of the flow-by will enter Basin L. The downstream design points account for this flow-by assumption.

Design Point 6 (Q_5 = 6 cfs and Q_{100} = 24 cfs) and **Design Point 7** (Q_5 = 4 cfs and Q_{100} = 12 cfs) collect developed flows from Basins K, L and the flow-by described above from DP-5. At this sump condition, a 10' and a 5' Type R sump inlets, respectively, will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth up to the crown in Electronic Drive and be conveyed via a 36" RCP storm sewer in a southerly direction towards Design Point 8. The

total flow within the pipe at this location is given by **Pipe Run 9 (Q_5 = 17 cfs and Q_{100} = 44 cfs).** The emergency overflow route at this location is in the southerly direction over the crown of Electronic Drive towards Design Point 8.

Design Point 8 (Q_5 = 3 cfs and Q_{100} = 7 cfs) collects developed flows from Basin M. At this sump condition, a 10' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and be conveyed via a 36" RCP storm sewer in a southerly direction towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 10 (Q_5 = 20 cfs and Q_{100} = 49 cfs).** The emergency overflow route at this location is in the southerly direction directly into a drainage tract that will route the flows towards the Grand Prix cul-de-sac.

Design Point 9 (Q_5 = 9 cfs and Q_{100} = 19 cfs) and **Design Point 10** (Q_5 = 2 cfs and Q_{100} = 5 cfs) collect developed flows from Basins OS-5, N and O. At this sump condition, a 10' and a 5' Type R sump inlets, respectively, will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 36" RCP storm sewer in an easterly direction towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 12 (Q_5 = 10 cfs and Q_{100} = 23 cfs).** The emergency overflow route at this location is in the southerly direction directly into a drainage tract that will route the flows towards the natural channel. **Pipe Run 13 (Q_5 = 30 cfs and Q_{100} = 71 cfs)** represents the combined pipe flows from Pipe Runs 10 and 12. This 42" RCP storm sewer will route these developed flows directly into Pond 1. This pond inflow is designated later in this report as the westerly pond inflow.

Basin OS-1 (Q_5 = 0.6 cfs and Q_{100} = 1.3 cfs) develops flows from the existing Akers Dr. roadway, north of the highpoint, that will continue to drain in a northerly direction as curb and gutter flow. **Basin C** (Q_5 = 0.5 cfs and Q_{100} = 1 cfs) develops flows from the existing Akers Dr. parkway landscape area adjacent to the roadway that will sheet flow into the road and continue to travel in a southerly direction. **Basin G** (Q_5 = 0.7 cfs and Q_{100} = 1.4 cfs) develops flows from a small portion of the proposed lots and roadway that cannot be collected on-site. These minor flow will continue to drain in a northerly direction directly into Winslow Park Dr. **Basin B** (Q_5 = 2 cfs and Q_{100} = 4 cfs), **Basin** H (Q_5 = 1 cfs and Q_{100} = 2 cfs) and **Basin P** (Q_5 = 2 cfs and Q_{100} = 4 cfs) develop flows from the rear yards of the proposed lots that cannot be reasonably collected by Pond 1. These areas are mainly landscaped backyards with any impervious areas

There needs to be less than one acre of development area that does not receive WQCV. With this 0.80 acre piece and other areas such a Basin G, this development (Filings 5,6 &7) does not meet this criteria. Please route this area so it receives WQCV or provide its own WQCV Facility. Or adjust the overall plan accordingly.

CLASSIC CONSULTING ENGINEERS & SURVEYORS

routed through these landscaped areas (sod) prior to exiting the basins. **Basin Q** (Q_5 = 2 cfs and Q_{100} = 6 cfs) develops flows from rear yards of the proposed lots adjacent to Pond 1 and the facility itself. These flows are all tributary to Pond 1.

The total inflow into Pond 1 equals Q_5 = 44 cfs and Q_{100} = 103 cfs per the UD-Detention spreadsheet. (See Appendix) This facility will be constructed with the proposed Filing 5 development and the downstream flows will remain consistent with the previous filings. This facility will have two separate inflow points (westerly and easterly). The westerly inflow (Q_5 = 30 cfs and Q_{100} = 71 cfs) will be from a 42" RCP into a concrete forebay with a required size of 566 CF based on 3% of the WQCV from this inflow. The forebay is designed with 18" high walls, 6" notch and a 24" wide concrete trickle channel routing the flows towards the pond outlet. The easterly inflow (Q_5 = 17 cfs and Q_{100} = 38 cfs) will outlet from a 36" RCP, down a rip-rap chute into a concrete forebay with a required size of 305 CF based on 3% of the WQCV from this inflow. The forebay is designed with 12" high walls, 5" notch and an 28" wide concrete trickle channel routing the flows towards the pond outlet. These two forebays trickle channels will combine into a 30" wide concrete trickle channel conveying the flows to the outlet structure. The outlet structure consists of a 6'x4' concrete box with an integral 190 SF micropool allowing for 6" initial surcharge depth. The micropool total depth of 3.0' provides the required 0.3% of the WQCV. The outlet box height required to meet the EURV design volume equals 5.75'. (See UD-BMP Spreadsheets in Appendix) The orifice plate on the front of the outlet box consists of a series of 5 holes, 13.8" apart. (See UD-Detention Spreadsheets in Appendix) This facility will be owned and maintained by the Hannah Ridge HOA.

Pond 1 has the following design parameters as a full-spectrum facility:

0.74 Ac.-ft. WQCV required

2.44 Ac.-ft. EURV required

2.6 Ac.-ft. EURV design with 4:1 max. slopes

4.4 Ac.-ft. 100-yr. storage

Total In-flow:	**Q_5 = 44 cfs, Q_{100} = 103 cfs**
Pond Design Release:	**Q_5 = 0.8 cfs, Q_{100} = 38 cfs**
Pre-development Release:	**Q_5 = 0.8 cfs, Q_{100} = 46 cfs**

HYDROLOGIC CALCULATIONS

Hydrologic calculations were performed using the City of Colorado Springs/El Paso County Drainage Criteria Manual, as revised in November 1991 and 1994 with County adopted Chapter 6 and Section 3.2.1 of Chapter 13 of the City of Colorado Springs/El Paso County Drainage Criteria Manual as revised in May 2014. Individual on-site developed basin design used for inlet sizing and storm system routing was calculated using the Rational Method. Full-Spectrum detention pond modeling developed using UD-Detention spreadsheet ver. 3.07, Urban Drainage and Flood Control District.

The City of Colorado Springs/El Paso County DCM requires the Four Step Process for receiving water protection that focuses on reducing runoff volumes, treating the water quality capture volume (WQCV), stabilizing drainage ways, and implementing long-term source controls. The Four Step Process pertains to management of smaller, frequently occurring storm events, as opposed to larger storms for which drainage and flood control infrastructure are sized. Implementation of these four steps helps to achieve storm water permit requirements.

This site adheres to this **Four Step Process** as follows:

1. **Employ Runoff Reduction Practices:** Proposed impervious areas (roof tops, patios) will sheet flow across landscaped yards and through open space areas to slow runoff and increase time of concentration prior to being conveyed to the proposed public streets. This will minimize directly connected impervious areas within the project site.

2. **Stabilize Drainageways:** After developed flows utilize the runoff reduction practices through the front yards, these flows will travel via curb and gutter within the public streets and eventually public storm systems. These collected flows are then routed directly to the full-spectrum detention facility on-site (Pond 1). Where developed flows are not able to be routed to public streets (rear yards), sheet flows will travel towards the natural drainage channel within the open space corridor. This corridor will be protected with rip-rap and erosion control matting as required to reduce velocities to erosive levels.

Non-Erosive

3. **Provide Water Quality Capture Volume (WQCV):** Runoff from this development will be treated through capture and slow release of the WQCV in the proposed full-spectrum permanent Extended Detention Basin (Pond 1) designed per current El Paso County drainage criteria.

4. **Consider need for Industrial and Commercial BMPs**: No industrial or commercial uses are proposed within this development. However, a site specific storm water quality and erosion control plan and narrative has been submitted along with the grading and erosion control plan. Details such as site specific source control construction BMP's as well as permanent BMP's were detailed in this plan and narrative to protect receiving waters. BMP's will be constructed and maintained as the development has been graded and erosion control methods employed.

FLOODPLAIN STATEMENT

No portion of this site is located within a FEMA floodplain as determined by the Flood Insurance Rate Maps (F.I.R.M.) Map Numbers 08041C0752F, with effective dates of March 17, 1997 (See Appendix).

EROSION CONTROL PLAN

The Drainage Criteria Manual specifies an Erosion Control Plan and associated cost estimate be submitted with the Final Drainage Report. We respectfully request that the Erosion Control Plan and cost estimate be submitted in conjunction with the Overlot Grading Plan and construction assurances posted prior to obtaining a grading permit.

DRAINAGE & BRIDGE FEES

This site lies within the Sand Creek Drainage Basin. The fees are calculated using the following impervious acreage method approved by El Paso County. All three Filings are re-plats of previously platted tracts within Filing 1. However, these tracts were designated as future development and no fees were paid at time of original platting. Thus, the percent imperviousness for each Filing is calculated below based on the following acreages:

There needs to be a section that discusses the upstream abandoned Chicago and Rock Island Pacific railroad embankment and the concrete box. Please clearly state in this report:
A. What the hazard is. (the amount of ponding, box and/or embankment failure, etc.)
B. The importance that the box culvert and embankment are periodically observed and maintained and who is responsible for this work.

Filing 5: 12.92 ac.

Filing 6: 7.94 ac.

Filing 7: 15.40 ac. However, 1.69 ac. is a re-plat of Tract A, Filing 6 with fees paid at that time
Filing 7 net acreage for drainage/bridge fees = 13.71 ac.

The total development area for each Filing is broken into different residential uses:
PUD zone (5000-6000 SF lots – 60% Impervious)
PUD zone (6000 SF avg. lots – 53% Impervious)
PUD zone Open space/drainage tracts (Greenbelts – 2% Impervious).

The following calculations are based on the 2018 drainage/bridge fees for the Sand Creek Basin:

FILING 5:

6000 SF avg. lots

(Per El Paso County Percent Impervious Chart for 6000 SF lots: 53**%**)

11.93 Ac. x 53% = **6.32 Impervious Ac.**

Open Space Tracts

(Per El Paso County Percent Impervious Chart for greenbelts: 2**%**)

0.99 Ac. x 2% = **0.02 Impervious Ac.**

Total Impervious Acreage: 6.34 Imp. Ac.

FILING 5 FEE TOTALS:

Bridge Fees

$ 5,210.00 x 6.34 Impervious Ac. = $ 33,031.40

Drainage Fees

$ 17,751.00 x 6.34 Impervious Ac. = $ 112,541.34

FILING 6:

5000 - 6000 SF avg. lots

(Per El Paso County Percent Impervious Chart for 5000 - 6000 SF lots: 60**%**)

6.25 Ac. x 60% = **3.75 Impervious Ac.**

Open Space Tracts

(Per El Paso County Percent Impervious Chart for greenbelts: 2**%**)

1.69 Ac. x 2% = **0.03 Impervious Ac.**

Total Impervious Acreage: 3.78 Imp. Ac.

FILING 6 FEE TOTALS:

Bridge Fees

$ 5,210.00 x 3.78 Impervious Ac. = $ 19,693.80

Drainage Fees

$ 17,751.00 x 3.78 Impervious Ac. = $ 67,098.78

FILING 7:

5000 - 6000 SF avg. lots

(Per El Paso County Percent Impervious Chart for 5000 - 6000 SF lots: 60**%**)

13.71 Ac. x 60% = **8.23 Impervious Ac.**

Total Impervious Acreage: 8.23 Imp. Ac.

FILING 7 FEE TOTALS:

Bridge Fees

$ 5,210.00 x 8.23 Impervious Ac. = $ 42,878.30

Drainage Fees

$ 17,751.00 x 8.23 Impervious Ac. = $ 146,090.73

SUMMARY

This proposed development remains consistent with the previously approved MDDP and Final Drainage Reports for Hannah Ridge at Feathergrass Filings 2, 3 and 4. The existing storm facilities continue to adequately handle both the 5-yr. and 100-yr. developed flows. All proposed detention facilities meet current criteria and provide full spectrum design. The proposed development will not adversely impact surrounding developments.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 16, Sep 10, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 15, 2011—Jun 17, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

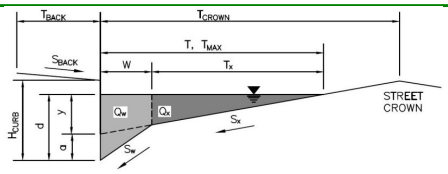
Version 4.05 Released March 2017

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: Hannah Ridge at Feathergrass Filing No. 5, 6 & 7

Inlet ID: DP-1



Gutter Geometry (Enter data in the blue cells)

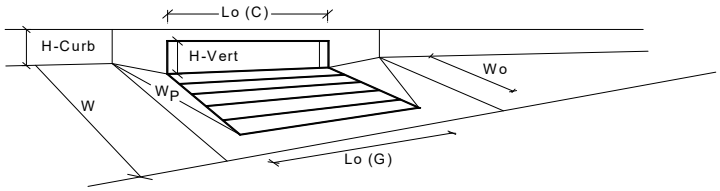
Maximum Allowable Width for Spread Behind Curb	T_{BACK} =	7.5	ft
Side Slope Behind Curb (leave blank for no conveyance credit behind curb)	S_{BACK} =	0.020	ft/ft
Manning's Roughness Behind Curb (typically between 0.012 and 0.020)	n_{BACK} =	0.013	
Height of Curb at Gutter Flow Line	H_{CURB} =	6.00	inches
Distance from Curb Face to Street Crown	T_{CROWN} =	17.0	ft
Gutter Width	W =	2.00	ft
Street Transverse Slope	S_X =	0.020	ft/ft
Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)	S_W =	0.083	ft/ft
Street Longitudinal Slope - Enter 0 for sump condition	S_O =	0.000	ft/ft
Manning's Roughness for Street Section (typically between 0.012 and 0.020)	n_{STREET} =	0.016	

		Minor Storm	Major Storm	
Max. Allowable Spread for Minor & Major Storm	T_{MAX} =	17.0	17.0	ft
Max. Allowable Depth at Gutter Flowline for Minor & Major Storm	d_{MAX} =	6.0	12.0	inches
Check boxes are not applicable in SUMP conditions		☐	☐	

		Minor Storm	Major Storm	
MINOR STORM Allowable Capacity is based on Depth Criterion				
MAJOR STORM Allowable Capacity is based on Depth Criterion	**Q_{allow} =**	**SUMP**	**SUMP**	**cfs**

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017



Design Information (Input)	CDOT Type R Curb Opening		MINOR	MAJOR	
Type of Inlet		Type =	CDOT Type R Curb Opening		
Local Depression (additional to continuous gutter depression 'a' from above)		a_{local} =	3.00	3.00	inches
Number of Unit Inlets (Grate or Curb Opening)		No =	1	1	
Water Depth at Flowline (outside of local depression)		Ponding Depth =	6.0	12.0	inches
Grate Information			MINOR	MAJOR	☑ Override Depths
Length of a Unit Grate		L_o (G) =	N/A	N/A	feet
Width of a Unit Grate		W_o =	N/A	N/A	feet
Area Opening Ratio for a Grate (typical values 0.15-0.90)		A_{ratio} =	N/A	N/A	
Clogging Factor for a Single Grate (typical value 0.50 - 0.70)		C_f (G) =	N/A	N/A	
Grate Weir Coefficient (typical value 2.15 - 3.60)		C_w (G) =	N/A	N/A	
Grate Orifice Coefficient (typical value 0.60 - 0.80)		C_o (G) =	N/A	N/A	
Curb Opening Information			MINOR	MAJOR	
Length of a Unit Curb Opening		L_o (C) =	10.00	10.00	feet
Height of Vertical Curb Opening in Inches		H_{vert} =	6.00	6.00	inches
Height of Curb Orifice Throat in Inches		H_{throat} =	6.00	6.00	inches
Angle of Throat (see USDCM Figure ST-5)		Theta =	63.40	63.40	degrees
Side Width for Depression Pan (typically the gutter width of 2 feet)		W_p =	2.00	2.00	feet
Clogging Factor for a Single Curb Opening (typical value 0.10)		C_f (C) =	0.10	0.10	
Curb Opening Weir Coefficient (typical value 2.3-3.7)		C_w (C) =	3.60	3.60	
Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)		C_o (C) =	0.67	0.67	
Low Head Performance Reduction (Calculated)			MINOR	MAJOR	
Depth for Grate Midwidth		d_{Grate} =	N/A	N/A	ft
Depth for Curb Opening Weir Equation		d_{Curb} =	0.33	0.83	ft
Combination Inlet Performance Reduction Factor for Long Inlets		$RF_{Combination}$ =	0.57	1.00	
Curb Opening Performance Reduction Factor for Long Inlets		RF_{Curb} =	0.93	1.00

Rock Chute Design Data

(Version 4.01 - 04/23/03, Based on Design of Rock Chutes by Robinson, Rice, Kadavy, ASAE, 1998)

Project: Hannah Ridge at Feathergrass Fil. 5-7 **County:** EL Paso
Designer: Marc Whorton **Checked by:**
Date: 10/3/2018 **Date:**

Input Channel Geometry

Inlet Channel	Chute	Outlet Channel
Bw = 6.0 ft.	Bw = 8.0 ft.	Bw = 8.0 ft.
Side slopes = 4.0 (m:1)	Factor of safety = 1.20 (F_s)	Side slopes = 4.0 (m:1)
n-value = 0.035	Side slopes = 4.0 (m:1) → 2.0:1 max.	n-value = 0.013
Bed slope = 0.0100 ft./ft.	Bed slope (3:1) = 0.330 ft./ft. → 2.5:1 max.	Bed slope = 0.0100 ft./ft.
Freeboard = 1.0 ft.	Outlet apron depth, d = 1.5 ft.	Base flow = 17.0 cfs

Design Storm Data (Table 2, NHCP, NRCS Grade Stabilization Structure No. 410)

Drainage area = acres Rainfall = ○ 0 - 3 in. ◉ 3 - 5 in. ○ 5+ in.

Apron elev. --- Inlet = 6475.0 ft. --- Outlet = 6464.5 ft. --- (H_{drop} = 9 ft.)

Chute capacity = Q10-year
Total capacity = Q25-year
Minimum capacity (based on a 5-year, 24-hour storm with a 3 - 5 inch rainfall)

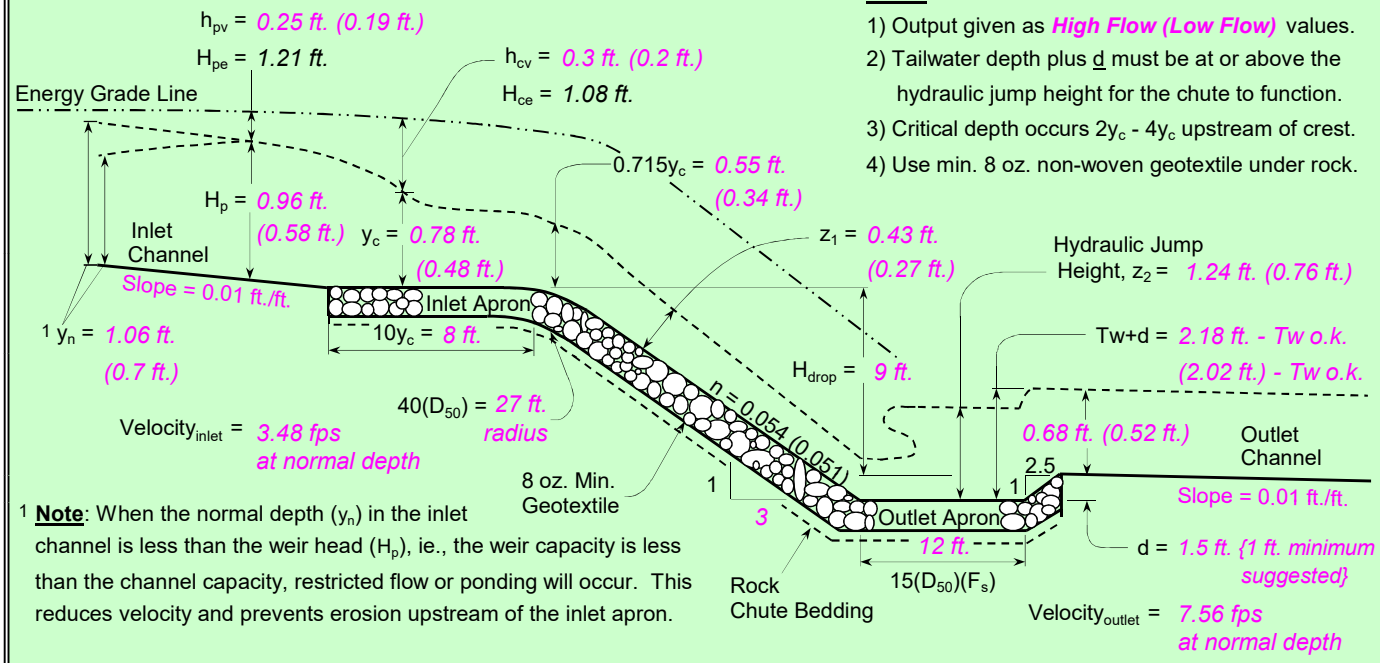
Q_{high} = 38.0 cfs High flow storm through chute → Tw (ft.) = Program

Q_{low} = 17.0 cfs Low flow storm through chute → Tw (ft.) = Program

***Note**: The total required capacity is routed through the chute (principal spillway) or in combination with an auxiliary spillway.*
***Input tailwater (Tw)**:*

0.33

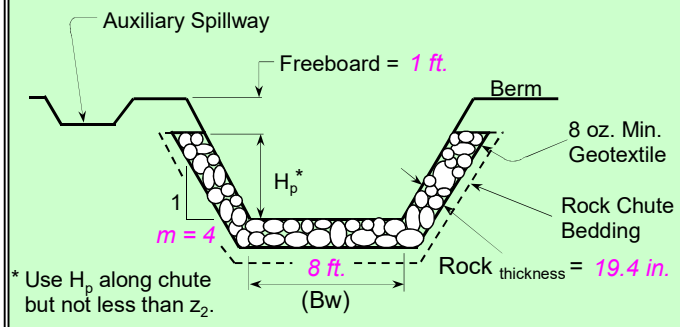
Profile and Cross Section (Output)



Notes:
1) Output given as ***High Flow (Low Flow)*** values.
2) Tailwater depth plus d must be at or above the hydraulic jump height for the chute to function.
3) Critical depth occurs 2y_c - 4y_c upstream of crest.
4) Use min. 8 oz. non-woven geotextile under rock.

[1] **Note**: When the normal depth (y_n) in the inlet channel is less than the weir head (H_p), ie., the weir capacity is less than the channel capacity, restricted flow or ponding will occur. This reduces velocity and prevents erosion upstream of the inlet apron.

Profile Along Centerline of Chute



* Use H_p along chute but not less than z_2.

Typical Cross Section

q_t =	3.87 cfs/ft.	Equivalent unit discharge
F_S =	1.20	Factor of safety (multiplier)
z_1 =	0.43 ft.	Normal depth in chute
n-value =	0.054	Manning's roughness coefficient
$D_{50}(F_s)$ =	9.7 in. (66 lbs. - 50% round / 50% angular)	
$2(D_{50})(F_s)$ =	19.4 in.	Rock chute thickness
Tw + d =	2.18 ft.	Tailwater above outlet apron
z_2 =	1.24 ft.	Hydraulic jump height
*** The outlet	will	function adequately

High Flow Storm Information

Rock Chute Design - Plan Sheet

(Version 4.0 - 07/10/00, Based on Design of Rock Chutes by Robinson, Rice, Kadavy, ASAE, 1998)

Project: Hannah Ridge at Feathergrass Fil. 5-7 **County:** EL Paso
Designer: Marc Whorton **Checked by:**
Date: 10/3/2018 **Date:**

Design Values

Angular D_{50} dia. = 9.7 in.
$Rock_{chute}$ thickness = 19.4 in.
Inlet apron length = 8 ft.
Outlet apron length = 12 ft.
Radius = 27 ft.
Will bedding be used? Yes

Rock Gradation Envelope

% Passing	Diameter, in. (weight, lbs.)
D_{100} ---------	15 - 19 (224 - 532)
D_{85} ---------	13 - 17 (146 - 388)
D_{50} ---------	10 - 15 (67 - 224)
D_{10} ---------	8 - 13 (34 - 146)

Depth (in.) = 6.0

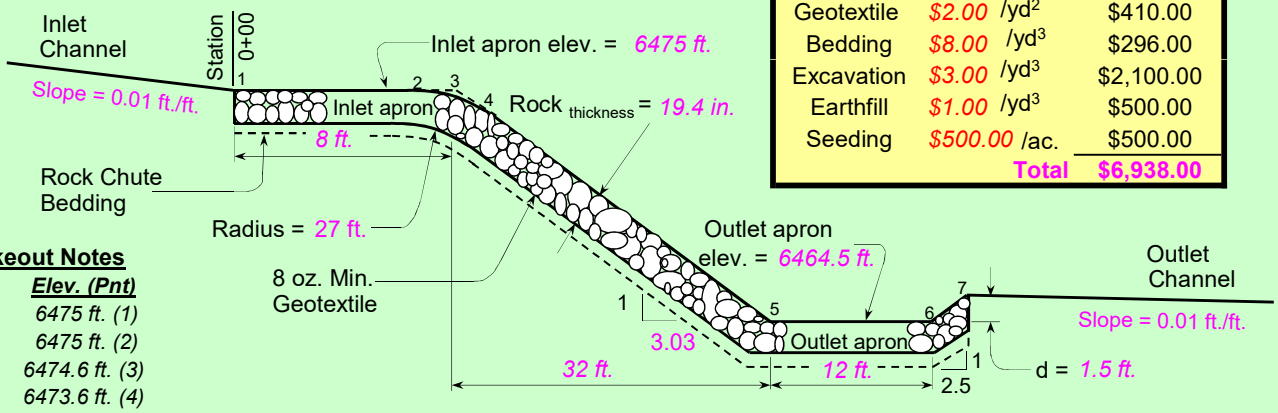
Quantities [a]

Angular Rock = 87 yd^3
Geotextile (8 oz.)[b] = 205 yd^2
Bedding (6 in.) = 37 yd^3
Excavation = 700 yd^3
Earthfill = 500 yd^3
Seeding = 1.0 acres

Notes: [a] *Rock, bedding, and geotextile quantities are determined from the x-section below (neglect radius).*
[b] *Geotextile shall be overlapped (18-in. min.) and anchored (18-in. min. along sides and 24-in. min. on the ends).*

Rock Chute Cost Estimate

Unit	Unit Cost	Cost
Rock	$36.00 /$yd^3$	$3,132.00
Geotextile	$2.00 /$yd^2$	$410.00
Bedding	$8.00 /$yd^3$	$296.00
Excavation	$3.00 /$yd^3$	$2,100.00
Earthfill	$1.00 /$yd^3$	$500.00
Seeding	$500.00 /ac.	$500.00
	Total	**$6,938.00**

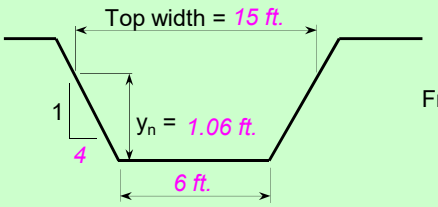


Stakeout Notes

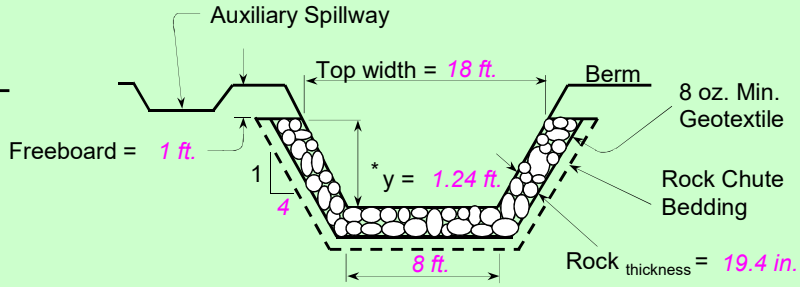
Sta.	Elev. (Pnt)
0+00	6475 ft. (1)
0+3.7	6475 ft. (2)
0+8	6474.6 ft. (3)
0+12.1	6473.6 ft. (4)
0+40	6464.5 ft. (5)
0+52	6464.5 ft. (6)
0+55.8	6466 ft. (7)

Profile Along Centerline of Rock Chute

** **Note**: ***The outlet will function adequately***



Inlet Channel Cross Section



Rock Chute Cross Section

* Use H_p throughout chute but not less than z_2.

Project: HANNAH RIDGE AT FEATHERGRASS FILINGS 5-7
Location: EL PASO COUNTY

1. Basin Storage Volume	
A) Effective Imperviousness of Tributary Area, I_a	I_a = 60.0 %
B) Tributary Area's Imperviousness Ratio ($i = I_a / 100$)	i = 0.600
C) Contributing Watershed Area	Area = 37.500 ac
D) For Watersheds Outside of the Denver Region, Depth of Average Runoff Producing Storm	d_6 = 0.42 in
E) Design Concept (Select EURV when also designing for flood control)	Choose One: ○ Water Quality Capture Volume (WQCV) ◉ Excess Urban Runoff Volume (EURV)
F) Design Volume (WQCV) Based on 40-hour Drain Time ($V_{DESIGN} = (1.0 * (0.91 * i^3 - 1.19 * i^2 + 0.78 * i) / 12 * Area$)	V_{DESIGN}= 0.738 ac-ft
G) For Watersheds Outside of the Denver Region, Water Quality Capture Volume (WQCV) Design Volume ($V_{WQCV\ OTHER} = (d_6 * (V_{DESIGN}/0.43))$	$V_{DESIGN\ OTHER}$= 0.721 ac-ft
H) User Input of Water Quality Capture Volume (WQCV) Design Volume (Only if a different WQCV Design Volume is desired)	$V_{DESIGN\ USER}$= ac-ft
I) Predominant Watershed NRCS Soil Group	Choose One: ○ A ◉ B ○ C / D
J) Excess Urban Runoff Volume (EURV) Design Volume For HSG A: $EURV_A = 1.68 * i^{1.28}$ For HSG B: $EURV_B = 1.36 * i^{1.08}$ For HSG C/D: $EURV_{C/D} = 1.20 * i^{1.08}$	EURV = 2.448 ac-f t
2. Basin Shape: Length to Width Ratio (A basin length to width ratio of at least 2:1 will improve TSS reduction.)	L : W = 2.0 : 1
3. Basin Side Slopes	
A) Basin Maximum Side Slopes (Horizontal distance per unit vertical, 4:1 or flatter preferred)	Z = 4.00 ft / ft
4. Inlet	
A) Describe means of providing energy dissipation at concentrated inflow locations:	Concrete Forebays

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Marc A. Whorton, P.E.
Company: Classic Consulting
Date: October 3, 2018
Project: HANNAH RIDGE AT FEATHERGRASS FILINGS 5-7
Location: EL PASO COUNTY

5. Forebay

A) Minimum Forebay Volume (V_{FMIN} = 3% of the WQCV) — V_{FMIN} = 0.022 ac-ft

B) Actual Forebay Volume — V_F = 0.022 ac-ft

C) Forebay Depth (D_F = 30 inch maximum) — D_F = 12.0 in

D) Forebay Discharge

i) Undetained 100-year Peak Discharge — Q_{100} = 103.00 cfs

ii) Forebay Discharge Design Flow ($Q_F = 0.02 * Q_{100}$) — Q_F = 2.06 cfs

E) Forebay Discharge Design

Choose One
- ○ Berm With Pipe
- ◉ Wall with Rect. Notch
- ○ Wall with V-Notch Weir

F) Discharge Pipe Size (minimum 8-inches) — Calculated D_P = in

G) Rectangular Notch Width — Calculated W_N = 9.8 in

6. Trickle Channel

A) Type of Trickle Channel

Choose One
- ◉ Concrete
- ○ Soft Bottom

F) Slope of Trickle Channel — S = 0.0100 ft / ft

7. Micropool and Outlet Structure

A) Depth of Micropool (2.5-feet minimum) — D_M = 2.5 ft

B) Surface Area of Micropool (10 ft^2 minimum) — A_M = 190 sq ft

C) Outlet Type

Choose One
- ◉ Orifice Plate
- ○ Other (Describe):

D) Smallest Dimension of Orifice Opening Based on Hydrograph Routing (Use UD-Detention) — $D_{orifice}$ = 1.62 inches

E) Total Outlet Area — A_{ot} = 15.81 square inches

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Marc A. Whorton, P.E.
Company: Classic Consulting
Date: October 3, 2018
Project: HANNAH RIDGE AT FEATHERGRASS FILINGS 5-7
Location: EL PASO COUNTY

8. Initial Surcharge Volume	
A) Depth of Initial Surcharge Volume (Minimum recommended depth is 4 inches)	D_{IS} = 6 in
B) Minimum Initial Surcharge Volume (Minimum volume of 0.3% of the WQCV)	V_{IS} = 94.2 cu ft
C) Initial Surcharge Provided Above Micropool	V_s = 95.0 cu ft
9. Trash Rack	
A) Water Quality Screen Open Area: $A_t = A_{ot} * 38.5*(e^{-0.095D})$	A_t = 522 square inches
B) Type of Screen (If specifying an alternative to the materials recommended in the USDCM, indicate "other" and enter the ratio of the total open are to the total screen are for the material specified.)	*Aluminum Amico-Klemp SR Series with Cross Rods 2" O.C.*
Other (Y/N): N	
C) Ratio of Total Open Area to Total Area (only for type 'Other')	User Ratio =
D) Total Water Quality Screen Area (based on screen type)	A_{total} = 735 sq. in.
E) Depth of Design Volume (EURV or WQCV) (Based on design concept chosen under 1E)	H= 5.75 feet
F) Height of Water Quality Screen (H_{TR})	H_{TR}= 97 inches
G) Width of Water Quality Screen Opening ($W_{opening}$) (Minimum of 12 inches is recommended)	$W_{opening}$ = 12.0 inches

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Marc A. Whorton, P.E.
Company: Classic Consulting
Date: October 3, 2018
Project: HANNAH RIDGE AT FEATHERGRASS FILINGS 5-7
Location: EL PASO COUNTY

10. Overflow Embankment	
A) Describe embankment protection for 100-year and greater overtopping:	Weir with rip-rap
B) Slope of Overflow Embankment (Horizontal distance per unit vertical, 4:1 or flatter preferred)	4.00
11. Vegetation	Choose One: ○ Irrigated ◉ Not Irrigated
12. Access	
A) Describe Sediment Removal Procedures	

Notes:

Design Procedure Form: Extended Detention Basin (EDB)

UD-BMP (Version 3.06, November 2016)

Designer: Marc A. Whorton, P.E.

Project: HANNAH RIDGE AT FEATHERGRASS FILINGS 5-7
Location: Westerly Pond Inflow

1. Basin Storage Volume	
A) Effective Imperviousness of Tributary Area, I_a	I_a = 60.0 %
B) Tributary Area's Imperviousness Ratio ($i = I_a / 100$)	i = 0.600
C) Contributing Watershed Area	Area = 22.960 ac
D) For Watersheds Outside of the Denver Region, Depth of Average Runoff Producing Storm	d_6 = 0.42 in
E) Design Concept (Select EURV when also designing for flood control)	Choose One: ○ Water Quality Capture Volume (WQCV) ◉ Excess Urban Runoff Volume (EURV)
F) Design Volume (WQCV) Based on 40-hour Drain Time ($V_{DESIGN} = (1.0 * (0.91 * i^3 - 1.19 * i^2 + 0.78 * i) / 12 * Area$)	V_{DESIGN} = 0.452 ac-ft
G) For Watersheds Outside of the Denver Region, Water Quality Capture Volume (WQCV) Design Volume ($V_{WQCV\ OTHER} = (d_6 * (V_{DESIGN}/0.43))$)	$V_{DESIGN\ OTHER}$ = 0.441 ac-ft
H) User Input of Water Quality Capture Volume (WQCV) Design Volume (Only if a different WQCV Design Volume is desired)	$V_{DESIGN\ USER}$ = ac-ft
I) Predominant Watershed NRCS Soil Group	Choose One: ○ A ◉ B ○ C / D
J) Excess Urban Runoff Volume (EURV) Design Volume For HSG A: $EURV_A = 1.68 * i^{1.28}$ For HSG B: $EURV_B = 1.36 * i^{1.08}$ For HSG C/D: $EURV_{C/D} = 1.20 * i^{1.08}$	EURV = 1.499 ac-f t
2. Basin Shape: Length to Width Ratio (A basin length to width ratio of at least 2:1 will improve TSS reduction.)	L : W = 2.0 : 1
3. Basin Side Slopes	
A) Basin Maximum Side Slopes (Horizontal distance per unit vertical, 4:1 or flatter preferred)	Z = 4.00 ft / ft
4. Inlet	
A) Describe means of providing energy dissipation at concentrated inflow locations:	Concrete Forebays

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Marc A. Whorton, P.E.
Company: Classic Consulting

Location: Westerly Pond Inflow

5. Forebay	
A) Minimum Forebay Volume (V_{FMIN} = 3% of the WQCV)	V_{FMIN} = 0.013 ac-ft
B) Actual Forebay Volume	V_F = 0.013 ac-ft
C) Forebay Depth (D_F = 18 inch maximum)	D_F = 18.0 in
D) Forebay Discharge	
i) Undetained 100-year Peak Discharge	Q_{100} = 71.00 cfs
ii) Forebay Discharge Design Flow ($Q_F = 0.02 * Q_{100}$)	Q_F = 1.42 cfs
E) Forebay Discharge Design	Choose One: ○ Berm With Pipe ◉ Wall with Rect. Notch ○ Wall with V-Notch Weir (flow too small for berm w/ pipe)
F) Discharge Pipe Size (minimum 8-inches)	Calculated D_P = in
G) Rectangular Notch Width	Calculated W_N = 6.4 in
6. Trickle Channel	
A) Type of Trickle Channel	Choose One: ◉ Concrete ○ Soft Bottom
F) Slope of Trickle Channel	S = 0.0100 ft / ft
7. Micropool and Outlet Structure	
A) Depth of Micropool (2.5-feet minimum)	D_M = ft
B) Surface Area of Micropool (10 ft^2 minimum)	A_M = sq ft
C) Outlet Type	Choose One: ◉ Orifice Plate ○ Other (Describe):
D) Smallest Dimension of Orifice Opening Based on Hydrograph Routing (Use UD-Detention)	$D_{orifice}$ = inches
E) Total Outlet Area	A_{ot} = square inches

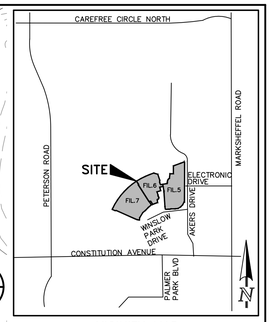
There needs to be less than one acre of development area that does not receive WQCV. With this 0.80 acre piece and other areas such a Basin G, this development (Filings 5,6 &7) does not meet this criteria. Please route this area so it receives WQCV or provide its own WQCV Facility.



VICINITY MAP
N.T.S.

FLOOD PLAIN STATEMENT:
NO PORTION OF THIS SITE IS LOCATED WITHIN A FEMA FLOODPLAIN AS DETERMINED BY THE FLOOD INSURANCE RATE MAPS (F.I.R.M.) MAP NUMBERS 08041C 0752F, WITH EFFECTIVE DATES OF MARCH 17, 1997 (SEE APPENDIX).

NOTES:
THIS MAP IS FOR DRAINAGE PURPOSES ONLY.
SEE GRADING PLAN FOR APPROPRIATE GRADING INFORMATION.

POND DESIGN DATA:
TRIBUTARY ACREAGE = 37.5 AC. @ 60% IMP
WQCV REQ. = 0.74 AC-FT
EURV REQ. = 2.44 AC-FT

RELEASE:
Q5 = 0.85 cfs @ WSE = 6467.21 (2.6 AC-FT)
Q100 = 38 cfs @ WSE = 6468.90 (4.4 AC-FT)

EMERGENCY SPILLWAY ELEV. = 6469.00
EMERGENCY OVERFLOW ELEV. = 6469.87

There needs to be a section that discusses the upstream abandoned Chicago and Rock Island Pacific railroad embankment and the concrete box. Please clearly state in this report:
A. What the hazard is. (the amount of ponding, box and/or embankment failure, etc.)
B. The importance that the box culvert and embankment are periodically observed and maintained and who is responsible for this work.
