## **DRAINAGE REPORT STATEMENT**

### **Design Engineer's Statement**

This attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

---

L DUCETT, P.E. 32339

Seal

### **OWNER/DEVELOPER'S STATEMENT:**

I, the owner/developer have read and will comply with all of the requirements specified in this drainage report and plan.

---

Authorized Signature

Conditions:

## **Purpose**

The purpose of this Final Drainage Report is to identify and analyze the existing and proposed drainage patterns, determine proposed runoff quantities, size drainage structures to safely convey the developed runoff, and present solutions to drainage impacts on-site and off-site resulting from this development.

## **General Description**

This Final Drainage Report is an analysis of the development of “HCD DRILLING” (AKA “TRACT IN NE4NW4 SEC 18-14-65”) owned by HCD Properties, LLC. The site is located at 2601 East Platte Avenue, Colorado Springs, CO 80916 in Section 18, Township 14S, Range 65 West of the 6<sup>th</sup> Principal Meridian in El Paso County. The site is bounded on the west by a landscaping supply business, on the north by E Platte Avenue Frontage Road, on the east by an RV and boat storage business, and on the south by a vacant lot owned by the City of Colorado Springs. The site is currently unplatted.

The site is currently used primarily for the parking and storage of vehicles and heavy equipment with some areas of soil excavation and storage at the southern end.

The proposed development is the addition of a 22,479 square foot building near the centroid of the lot but this project also makes preparations for a future building to be placed near the front of the lot with all of the associated drives, utilities, grading, and stormwater features. The proposed building will be used to house a drilling company and includes a front office building with an asphalt parking lot and an attached industrial building with a surrounding gravel lot. The use of the future building will be established at a later time. The access will be from E Platte Avenue Frontage Road via two paved entrances.

The site lies within the Sand Creek Drainage Basin.

## **Soils Condition**

The soil for this project is composed completely of Blakeland Loamy Sand per the “Soils Survey of El Paso County Area, which is in Hydrologic Soil Group A.

## **Drainage Criteria**

Hydrologic and Hydraulic calculations were performed using the El Paso County Storm Drainage Design Criteria Manual Volumes 1 & 2, latest editions. The Rational Method was used to estimate storm water runoff and the design of the FSEDB was performed using UD-Detention v3.07.

## **Existing (Historic) Drainage Conditions**

No previous drainage reports or studies could be found for this site. A drainage map for the existing conditions is included in the Appendix of this report. The site lies within the Sand Creek Basin. The existing topography has a relatively consistent 3% slope from the northeast to

the southwest but drops off more steeply at the western property line. The surface cover is composed of gravel lots and areas of disturbed ground with minimal vegetation.

Drainage ways for this site are poorly defined and runoff primarily sheet flows from the east/northeast to the west/southwest and leaves the site at three locations which are designated as Design Points (DP) for analysis. At the northwest property corner (DP X-1), runoff exits into the public drainage way along E Platte Avenue Frontage Road. At the west property line, about 250 feet south of the northwest property corner (DP X-2), runoff drains into a shallow swale and onto adjacent private property. Along the south side of the proposed development (DP X-3), runoff flows onto the same adjacent private property at a location approximately 500 feet south of DP X-2. Both DP X-2 and DP X-3 eventually release drainage into an existing pond on the west side of the adjacent property. At the southeast property line (DP X-4 & DP X-5), very small areas of runoff sheet flow onto Basin EX-C. There is a ridge that exists at the property line between Basins EX-A and EX-B and the adjacent eastern property which keeps drainage from flowing between sites. Therefore, there is no runoff from the adjacent property flowing onto Basins EX-A or EX-B.

Basin EX-A contributes to DP X-1 and has an area of 1.10 acres consisting of gravel lots and areas of disturbed soil, generating runoff amounts of Q<sub>5</sub>= 1.83 cfs and Q<sub>100</sub>= 4.62 cfs.

Basin EX-B contributes to DP X-2 and has an area of 2.10 acres consisting of gravel lots and areas of disturbed soil, generating runoff amounts of Q<sub>5</sub>= 2.20 cfs and Q<sub>100</sub>= 7.14 cfs.

Basin EX-C contributes to DP X-3 and has an area of 0.30 acres consisting of areas of disturbed soil, generating runoff amounts of Q<sub>5</sub>= 0.16 cfs and Q<sub>100</sub>= 0.88 cfs.

Basin OS-1 contributes to DP X-4 and has an area of 0.05 acres consisting of undeveloped land, generating runoff amounts of Q<sub>5</sub>= 0.02 cfs and Q<sub>100</sub>= 0.14 cfs.

Basin OS-2 contributes to DP X-5 and has an area of 0.10 acres consisting of undeveloped land, generating runoff amounts of Q<sub>5</sub>= 0.03 cfs and Q<sub>100</sub>= 0.25 cfs.

## **Developed Drainage Conditions**

A drainage map for the proposed condition is included in the appendix of this report.

A Full Spectrum Extended Detention Basin (FSEDB) will be provided for the proposed and future development with a watershed area of 6.05 acres.

The proposed facility is comprised of asphalt parking lots, gravel lots, buildings, and landscaping. The drainage pattern for the site remains generally the same; however, the majority of the proposed developed/impervious areas are routed to the FSEDB. Only proposed Basins I & K will not be conveyed to the pond. Basins I & K total 1.12 acres. The only impervious portion is a 0.01 acre piece of the west access drive that is directed towards the drainage ditch along E Platte Avenue Frontage Road. This 0.01 acre area would qualify for an exclusion (Per ECM App I.7.1.C.1.)

Runoff continues to exit into the public drainage way along E Platte Avenue Frontage Road at the northwest corner (DP 11). The area draining to this location is significantly reduced as compared to existing conditions.

Runoff is no longer discharged at design point X2 as it had been in the existing conditions.

The outlet of the FSEDB (DP 9) is the location at which runoff from the proposed development is discharged after treatment.

Basin A contributes to DP 1 and has an area of 1.36 acres consisting primarily of proposed paved and future building area with a small portion of landscaped area, generating runoff amounts of Q<sub>5</sub>= 5.26 cfs and Q<sub>100</sub>= 10.67 cfs. Minor runoff is conveyed under the entrances at E Platte Avenue Frontage Road via 2 ft wide concrete trench drains just to the north of this basin. The runoff is collected by a 8' D-10-R inlet at design point 1 and conveyed to the FSEDB via storm pipe.

Basin B contributes to DP 2 and has an area of 0.71 acres consisting mostly of paved areas and much smaller areas of lawn/landscaping, generating runoff amounts of Q<sub>5</sub>= 2.58 cfs and Q<sub>100</sub>= 5.35 cfs. The runoff is collected by a type C inlet at design point 2 and conveyed to the FSEDB via storm pipe.

Basin C contributes to DP 3 and has an area of 0.54 acres consisting of paved area, building, gravel lot, and lawn/landscaping, generating runoff amounts of Q<sub>5</sub>= 1.59 cfs and Q<sub>100</sub>= 3.47 cfs. The runoff sheet flows and travels by a 2' concrete pan to a type C inlet at design point 3 and then conveyed to the FSEDB via storm pipe.

Basin D contributes to DP 4 and has an area of 0.26 acres consisting of building, paved area, gravel lot, and lawn/landscaping, generating runoff amounts of Q<sub>5</sub>= 0.82 cfs and Q<sub>100</sub>= 1.74 cfs. The runoff is collected by an inlet at design point 4 and conveyed to the FSEDB via storm pipe.

Basin E contributes to DP 5 and has an area of 0.35 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q<sub>5</sub>= 1.20 cfs and Q<sub>100</sub>= 2.48 cfs. The runoff is collected by an inlet at design point 5 and conveyed to the FSEDB via storm pipe.

Basin F contributes to DP 6 and has an area of 0.29 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q<sub>5</sub>= 1.03 cfs and Q<sub>100</sub>= 2.10 cfs. The runoff is collected by an inlet at design point 6 and conveyed to the FSEDB via storm pipe.

Basin G contributes to DP 7 and has an area of 0.35 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q<sub>5</sub>= 1.20 cfs and Q<sub>100</sub>= 2.48 cfs. The runoff is collected by an inlet at design point 7 and conveyed to the FSEDB via storm pipe.

Basin H contributes to DP 8 and has an area of 0.20 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q<sub>5</sub>= 0.71 cfs and Q<sub>100</sub>= 1.46 cfs. The runoff is collected by an inlet at design point 8 and conveyed to the FSEDB via storm pipe.

Basin I contributes to DP 9 and has an area of 0.96 acres consisting of grading needed for the construction of the FSEDB and other landscaped area generating runoff amounts of Q<sub>5</sub>= 0.26 cfs and Q<sub>100</sub>= 1.95 cfs. No new impervious area is being added and the ground cover will be improved from gravel and disturbed soil to maintained landscaping. Basin I is excluded from permanent WQ control measures per ECM Appendix I Section I.7.1.B.7 since this area consists of land disturbance to undeveloped land that will remain undeveloped after site construction is complete. Therefore, the area does not require treatment in the FSEDB. The runoff sheet flows onto adjacent property at design point 9 as in the existing conditions.

Basin J contributes to DP 10 and has an area of 1.82 acres consisting of the FSEDB, some paved area, gravel lot, and landscaped area, generating runoff amounts of Q5= 1.81 cfs and Q100= 5.37 cfs. The runoff sheet flows towards the FSEDB located at design point 10.

Basin K is the small area that continues to exit into the public drainage way along E Platte Avenue Frontage Road at the northwest corner (DP 11) as it had previously. The area and runoff of this basin is significantly reduced as compared to existing conditions. Basin K is excluded from permanent WQ control measures per ECM Appendix I Section I.7.1.B.7 since this area consists of land disturbance to undeveloped land that will remain undeveloped after site construction is complete. It generates runoff amounts of Q5= 0.09 cfs and Q100 = 0.45.

Basin L contributes to DP 12 and has an area of 0.06 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q5= 0.23 cfs and Q100= 0.47 cfs. The runoff is collected by an inlet at design point 12 and conveyed to the FSEDB via storm pipe.

Basin M contributes to DP 13 and has an area of 0.06 acres consisting of building, paved area, and gravel lot, generating runoff amounts of Q5= 0.19 cfs and Q100= 0.41 cfs. The runoff is collected by an inlet at design point 13 and conveyed to the FSEDB via storm pipe.

Basins OS-1 & OS-2 remain as they had previously.

## FSEDB

In an effort to protect receiving water and as part of the “four step process to minimize adverse impacts of urbanization” this site was analyzed in the following manner:

Step 1: Employ Runoff Reduction Practices – The nature of the development precludes reducing runoff as most of the site is used for buildings, asphalt lots, and gravel lots.

Step 2: Stabilize Drainageways – There are no existing streams associated with this site.

Step 3: Provide Water Quality Capture Volume – The FSEDB is designed to capture and treat the runoff from the proposed development in the appropriate manner.

Step 4: Consider Need for Industrial and Commercial BMPs – given that the site will be used to house a drilling company, the presence of fuel and other contaminants are likely; therefore, spill kits should be kept on site and any outdoor storage of industrial materials should include the appropriate safeguards.

The runoff from Basins A, B, C, D, E, F, G, H, J, L, M, & OS-1 of the proposed development are routed to the proposed 2.235 ac-ft private FSEDB located at the southern portion of the property at DP 10. The FSEDB treats runoff from a combined watershed area of 6.05 acres with an imperviousness of 65.3%. The elevation of the bottom of the pond is 6243.00 and the top of the berm is at 6252.00. The pond design has a WQCV storage volume of 0.129 ac-ft at a water surface elevation of 6245.20. The EURV storage volume is 0.362 ac-ft at a water surface elevation of 6246.82. The 100-year storage volume of 0.240 ac-ft corresponds to a water surface of 6247.71. The WQCV discharge is less than 0.1 cfs and will be fully released in 40 hours. The EURV discharge is 0.2 cfs and will fully released in 72 hours. The 100 year outflow is 3.5 cfs and is fully released in 73 hours.

The forebay exceeds the size requirement of 2% of the WQCV volume of 0.129 ac-ft. A Trickle channel 2 ft wide and 0.5 ft deep at 0.54% slope runs from the forebay to the micropool at the

FSEDB outlet structure. The outlet structure is a 2.0 ft by 2.0 ft riser box with the inlet invert set at 6243.00 and the top of grate set at elevation 6246.82. A metal orifice plate on the front of the structure regulates the WQCV and EURV via three orifices with 0.7 square inches, 0.7 square inches, and 4 square inches spaced 1.27 ft apart. The invert of 18" outlet pipe is at elevation 6242.75 with a restrictor plate set 4.5 inches higher. The outlet pipe is 82 ft long at a slope of 1.12% with a metal end section at the outlet end with type L riprap protection (D50= 12 in).

An emergency spillway is set at elevation 6249.00. The spillway has a bottom width of 8 ft with 4:1 side slopes and is protected by type VL riprap (D50= 12 in). The 100 year HWL is 1.29 feet below the spillway. In an emergency overflow situation, the runoff will flow onto the property south of the site. Drainage from both the outlet pipe and emergency spillway will discharge from the southwest corner of the site to an existing depression in the land south of the site which is owned by the City of Colorado Springs. If this depression were to overtop, drainage would travel onto the adjacent commercial property to the west and travel over gravel and concrete channel to an existing pond on the western edge of that site in much the same way as in historical conditions.

### **Floodplain Statement**

According to FEMA's FIRM No. 08041CO754G (eff. 12/7/2018), the proposed development is within an area designated as Zone X, having minimal flood hazard.

### **Construction Cost Opinion**

#### **Private Drainage Facilities Improvements (Non-Reimbursable)**

Description	Quantity	Unit Price	Cost
4 ft Concrete Drain Pan	735 LF	\$42	\$30,870
2 ft Conc. Trench Drain	56 LF	\$230	\$12,880
<b>Total</b>			<b>\$43,750</b>

#### **Private Permanent BMP (Non-Reimbursable) – 1 FSEDB**

Description	Quantity	Unit Price	Cost
Earthwork	3607 Cu Yd	\$12	\$43284
Forebays	1 EA	\$1500	\$1500
Trickle Channel	92 LF	\$32	\$2944
Outlet Structure (box riser, micropool, pipe, headwall, and riprap)	1 EA	\$5000	\$5000
Emergency Spillway	1 EA	\$1500	\$1500
Maintenance Access Rd	1 EA	\$500	\$500
Stabilization	1 EA	\$5000	\$5000
<i>Subtotal</i>			<i>\$59,728</i>
<i>10% Contingency</i>			<i>\$5973</i>
<b>Total</b>			<b>\$65,701</b>

## **Drainage And Bridge Fees**

This currently unplatted site is in the Sand Creek Drainage Basin. The site is 7.13 acres. The combined Drainage Fees (2021) are due prior to final plat recordation.

Fee Type	% Imp.	Parcel Area (acre)	Imp. Area (acre)	Fee per Imp Acre	Mod %	Fee Cost
Drainage	65.3	7.13	4.66	\$20,387	100	\$95,003.42
Bridge	65.3	7.13	4.66	\$8,339	100	\$38,859.74
				<b>Total</b>		\$133,863.16

## **Maintenance**

The proposed FSEDB will be privately maintained by the lot owner and is accessible via a 12' wide aggregate base maintenance access road. The proposed entrance trench drains and proposed concrete drain pans will be privately maintained by the lot owner.

## **Summary**

This Final Drainage Report analyzed the development of HCD Drilling owned by HCD Properties, LLC, located at 2601 East Platte Avenue, Colorado Springs, CO 80916. Runoff from the development will not adversely affect the surrounding or downstream developments. Proposed flows, as detailed in this report, will follow existing drainage patterns and will be safely routed downstream. Water quality and detention are provided on-site using a FSEDB. No public storm drainage modifications or design changes are necessary as a result of the development.

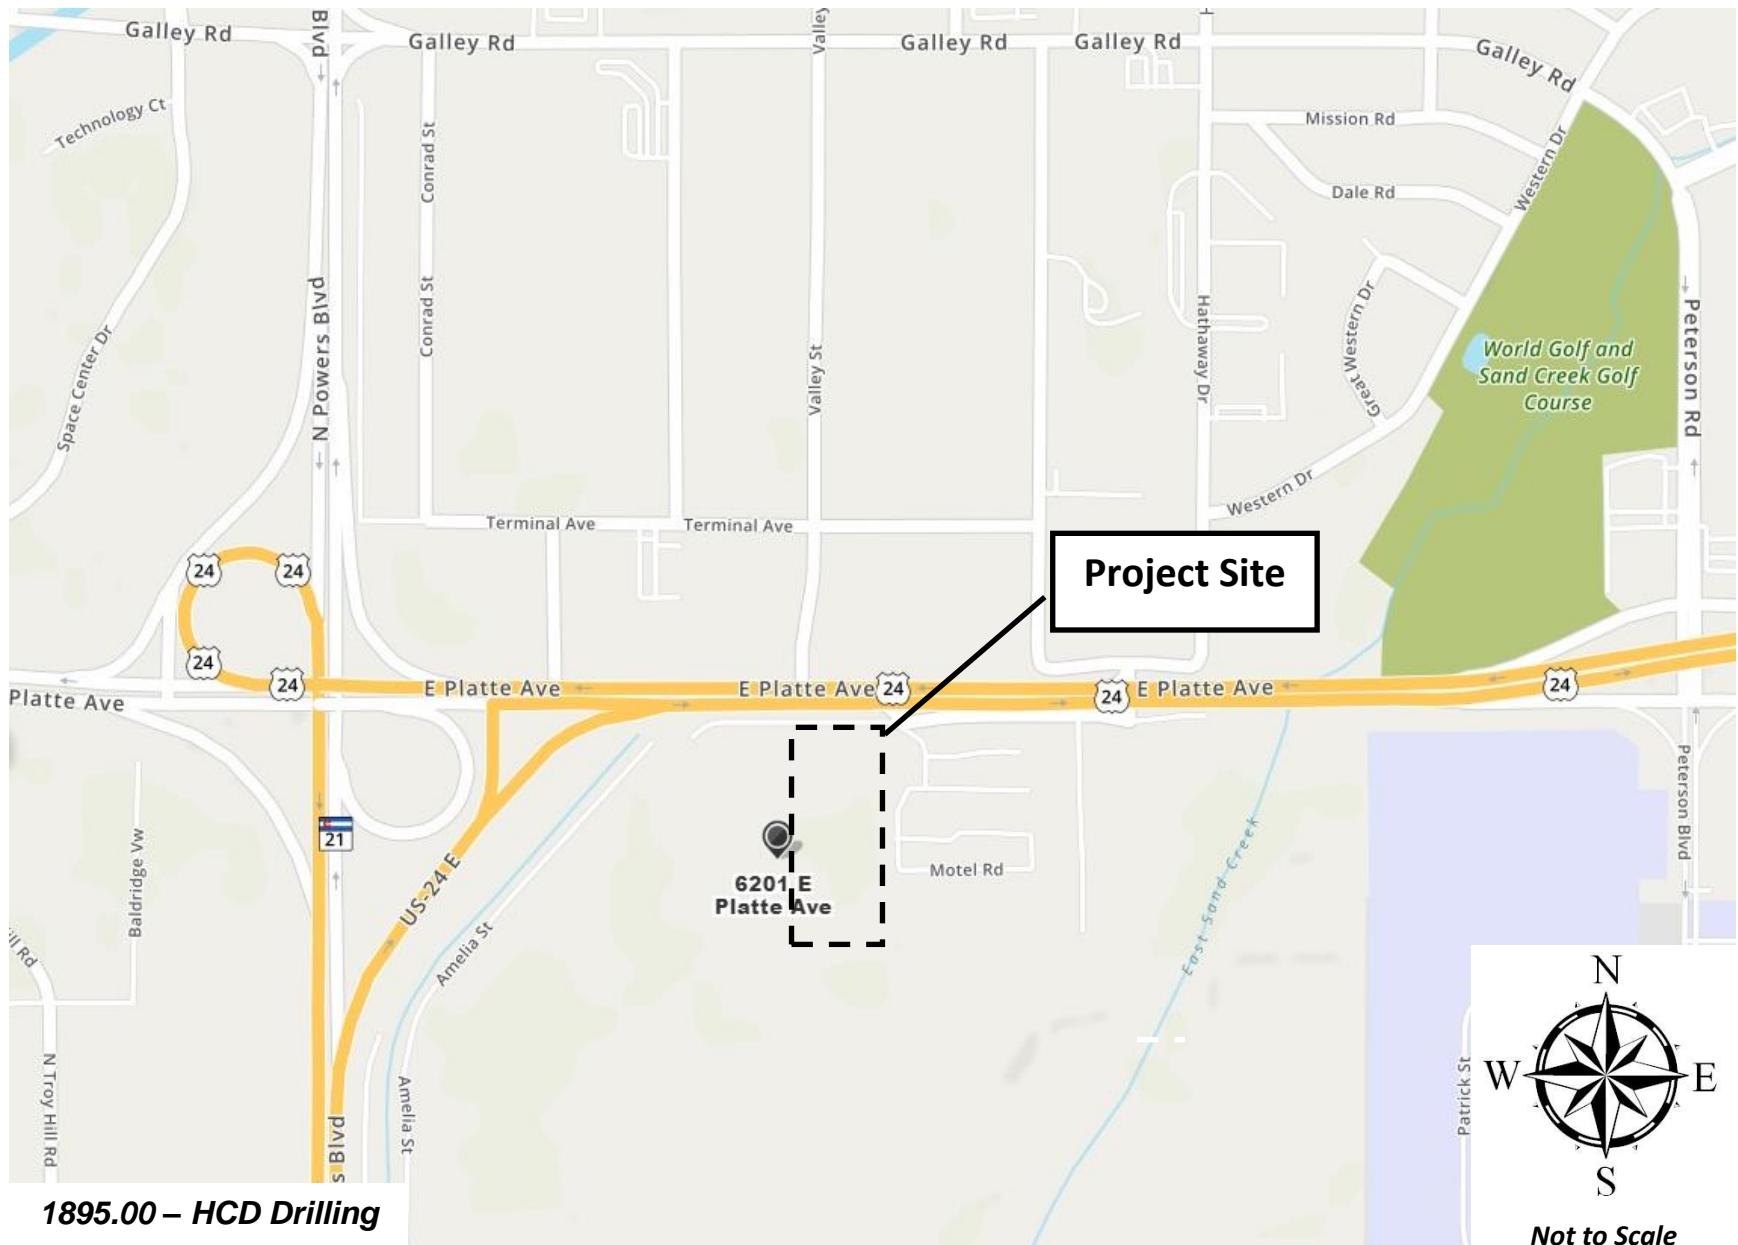

An Erosion Control Plan will be submitted separately.

### OTHER FEATURES

- Digital Data Available
- No Digital Data Available
- Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards.

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **7/24/2019 at 5:22:04 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

# Manning Formula Uniform Pipe Flow at Given Slope and Depth

Check out our spreadsheet version of this calculator [Download Spreadsheet](#) [Open Google Sheets version](#) [View All Spreadsheets](#)

## Pipe Run 1

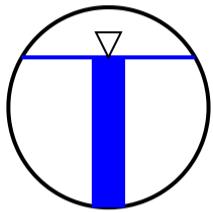

24" RCP

### Inputs

Pipe diameter, $d_0$	24	in <input type="button" value="▼"/>
Manning roughness, $n$	0.013	
Pressure slope (possibly <a href="#">?</a> equal to pipe slope), $S_0$	0.01	rise/run <input type="button" value="▼"/>
Percent of (or ratio to) full depth (100% or 1 if flowing full)	.75	fraction <input type="button" value="▼"/>

### Results

Flow, $Q$ (See notes)	20.6269	cfs <input type="button" value="▼"/>
Velocity, $v$	2.4877	m/s <input type="button" value="▼"/>
Velocity head, $h_v$	0.3155	m H <sub>2</sub> O <input type="button" value="▼"/>
Flow area	0.2348	m <sup>2</sup> <input type="button" value="▼"/>
Wetted perimeter	1.2767	m <input type="button" value="▼"/>
Hydraulic radius	0.1839	m <input type="button" value="▼"/>
Top width, $T$	0.5279	m <input type="button" value="▼"/>
Froude number, $F$	1.19	
Shear stress (tractive force), $\tau$	18.0341	N/m <sup>2</sup> <input type="button" value="▼"/>

Notes:

**This is the flow and depth *inside* the pipe.**

Getting the flow into the pipe may require significantly higher headwater depth. Add at least 1.5 times the velocity head to get the headwater depth or [see my 2-minute tutorial](#) for standard culvert headwater calculations using HY-8.

## Pipe Run 10

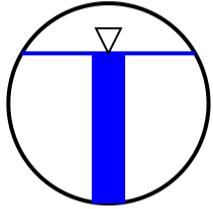

24" RCP

### Inputs

Pipe diameter, $d_0$	24	in <input type="button" value="▼"/>
Manning roughness, $n$	0.013	
Pressure slope (possibly <a href="#">?</a> equal to pipe slope), $S_0$	0.01	rise/run <input type="button" value="▼"/>
Percent of (or ratio to) full depth (100% or 1 if flowing full)	.75	fraction <input type="button" value="▼"/>

### Results

Flow, $Q$ (See notes)	20.6269	cfs <input type="button" value="▼"/>
Velocity, $v$	2.4877	m/s <input type="button" value="▼"/>
Velocity head, $h_v$	0.3155	m H <sub>2</sub> O <input type="button" value="▼"/>
Flow area	0.2348	m <sup>2</sup> <input type="button" value="▼"/>
Wetted perimeter	1.2767	m <input type="button" value="▼"/>
Hydraulic radius	0.1839	m <input type="button" value="▼"/>
Top width, $T$	0.5279	m <input type="button" value="▼"/>
Froude number, $F$	1.19	
Shear stress (tractive force), $\tau$	18.0341	N/m <sup>2</sup> <input type="button" value="▼"/>

Notes:

**This is the flow and depth *inside* the pipe.**

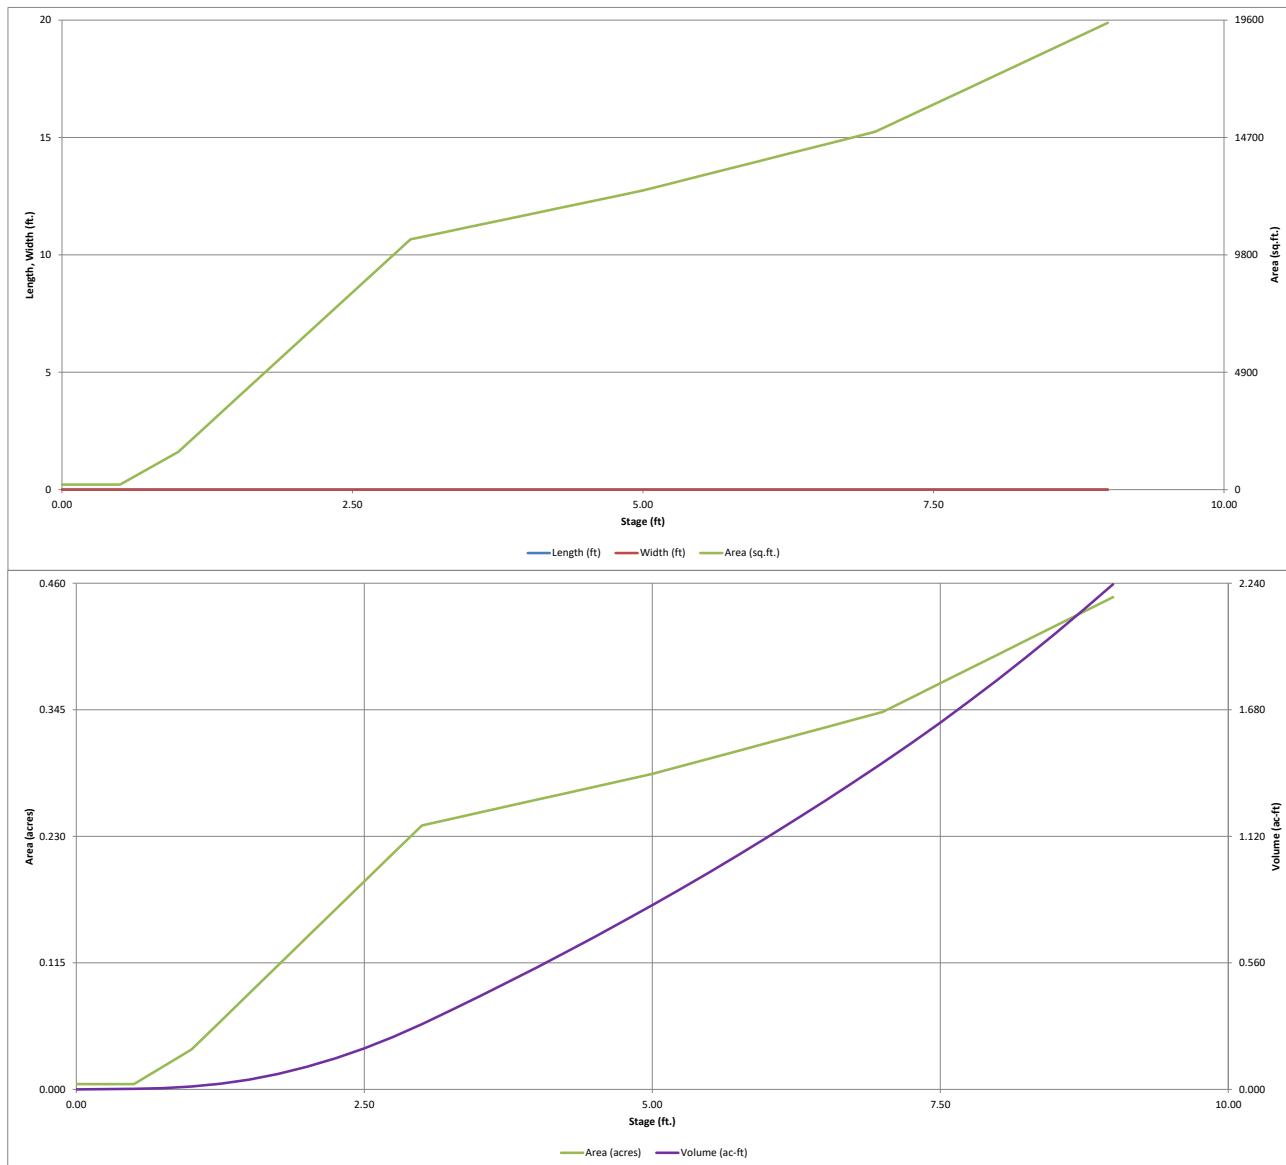

Getting the flow into the pipe may require significantly higher headwater depth. Add at least 1.5 times the velocity head to get the headwater depth or [see my 2-minute tutorial](#) for standard culvert headwater calculations using HY-8.

## **FSEDB CALCULATIONS**

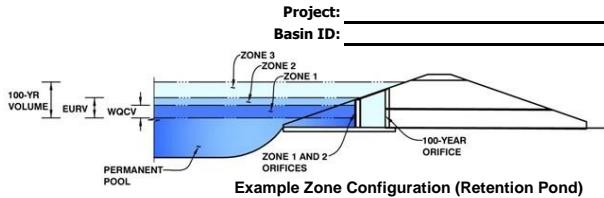

# DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.04 (February 2021)*

# DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.20	0.129	Orifice Plate
Zone 2 (EURV)	3.82	0.362	Orifice Plate
Zone 3 (100-year)	4.71	0.240	Weir&Pipe (Restrict)
Total (all zones)		0.731	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =  ft (distance below the filtration media surface)  
Underdrain Orifice Diameter =  inches

Calculated Parameters for Underdrain  
Underdrain Orifice Area =  ft<sup>2</sup>  
Underdrain Orifice Centroid =  feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =  ft (relative to basin bottom at Stage = 0 ft)  
Depth at top of Zone using Orifice Plate =  ft (relative to basin bottom at Stage = 0 ft)  
Orifice Plate: Orifice Vertical Spacing =  inches  
Orifice Plate: Orifice Area per Row =  inches

Calculated Parameters for Plate  
WQ Orifice Area per Row =  ft<sup>2</sup>  
Elliptical Half-Width =  feet  
Elliptical Slot Centroid =  feet  
Elliptical Slot Area =  ft<sup>2</sup>

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.27	2.55				
Orifice Area (sq. inches)	0.70	0.70	4.00				
Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)							
Orifice Area (sq. inches)							

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice =  ft (relative to basin bottom at Stage = 0 ft)  
Depth at top of Zone using Vertical Orifice =  ft (relative to basin bottom at Stage = 0 ft)  
Vertical Orifice Diameter =  inches

Calculated Parameters for Vertical Orifice  
Vertical Orifice Area =  ft<sup>2</sup>  
Vertical Orifice Centroid =  feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

Overflow Weir Front Edge Height, Ho =  ft (relative to basin bottom at Stage = 0 ft)  
Overflow Weir Front Edge Length =  feet  
Overflow Weir Grate Slope =  H:V  
Horiz. Length of Weir Sides =  feet  
Overflow Grate Type =  ft  
Debris Clogging % =  %

Calculated Parameters for Overflow Weir  
Zone 3 Weir =  ft  
Height of Grate Upper Edge, H<sub>t</sub> =  feet  
Overflow Weir Slope Length =  feet  
Grate Open Area / 100-yr Orifice Area =  ft<sup>2</sup>  
Overflow Grate Open Area w/o Debris =  ft<sup>2</sup>  
Overflow Grate Open Area w/ Debris =  ft<sup>2</sup>

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe =  ft (distance below basin bottom at Stage = 0 ft)  
Outlet Pipe Diameter =  inches  
Restrictor Plate Height Above Pipe Invert =  inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate  
Zone 3 Restrictor =  ft<sup>2</sup>  
Not Selected =  ft<sup>2</sup>  
Outlet Orifice Area =  ft<sup>2</sup>  
Not Selected =  ft<sup>2</sup>  
Outlet Orifice Centroid =  radians  
Half-Central Angle of Restrictor Plate on Pipe =  radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage =  ft (relative to basin bottom at Stage = 0 ft)  
Spillway Crest Length =  feet  
Spillway End Slopes =  H:V  
Freeboard above Max Water Surface =  feet

Calculated Parameters for Spillway  
Spillway Design Flow Depth =  feet  
Stage at Top of Freeboard =  feet  
Basin Area at Top of Freeboard =  acres  
Basin Volume at Top of Freeboard =  acre-ft

## Routed Hydrograph Results

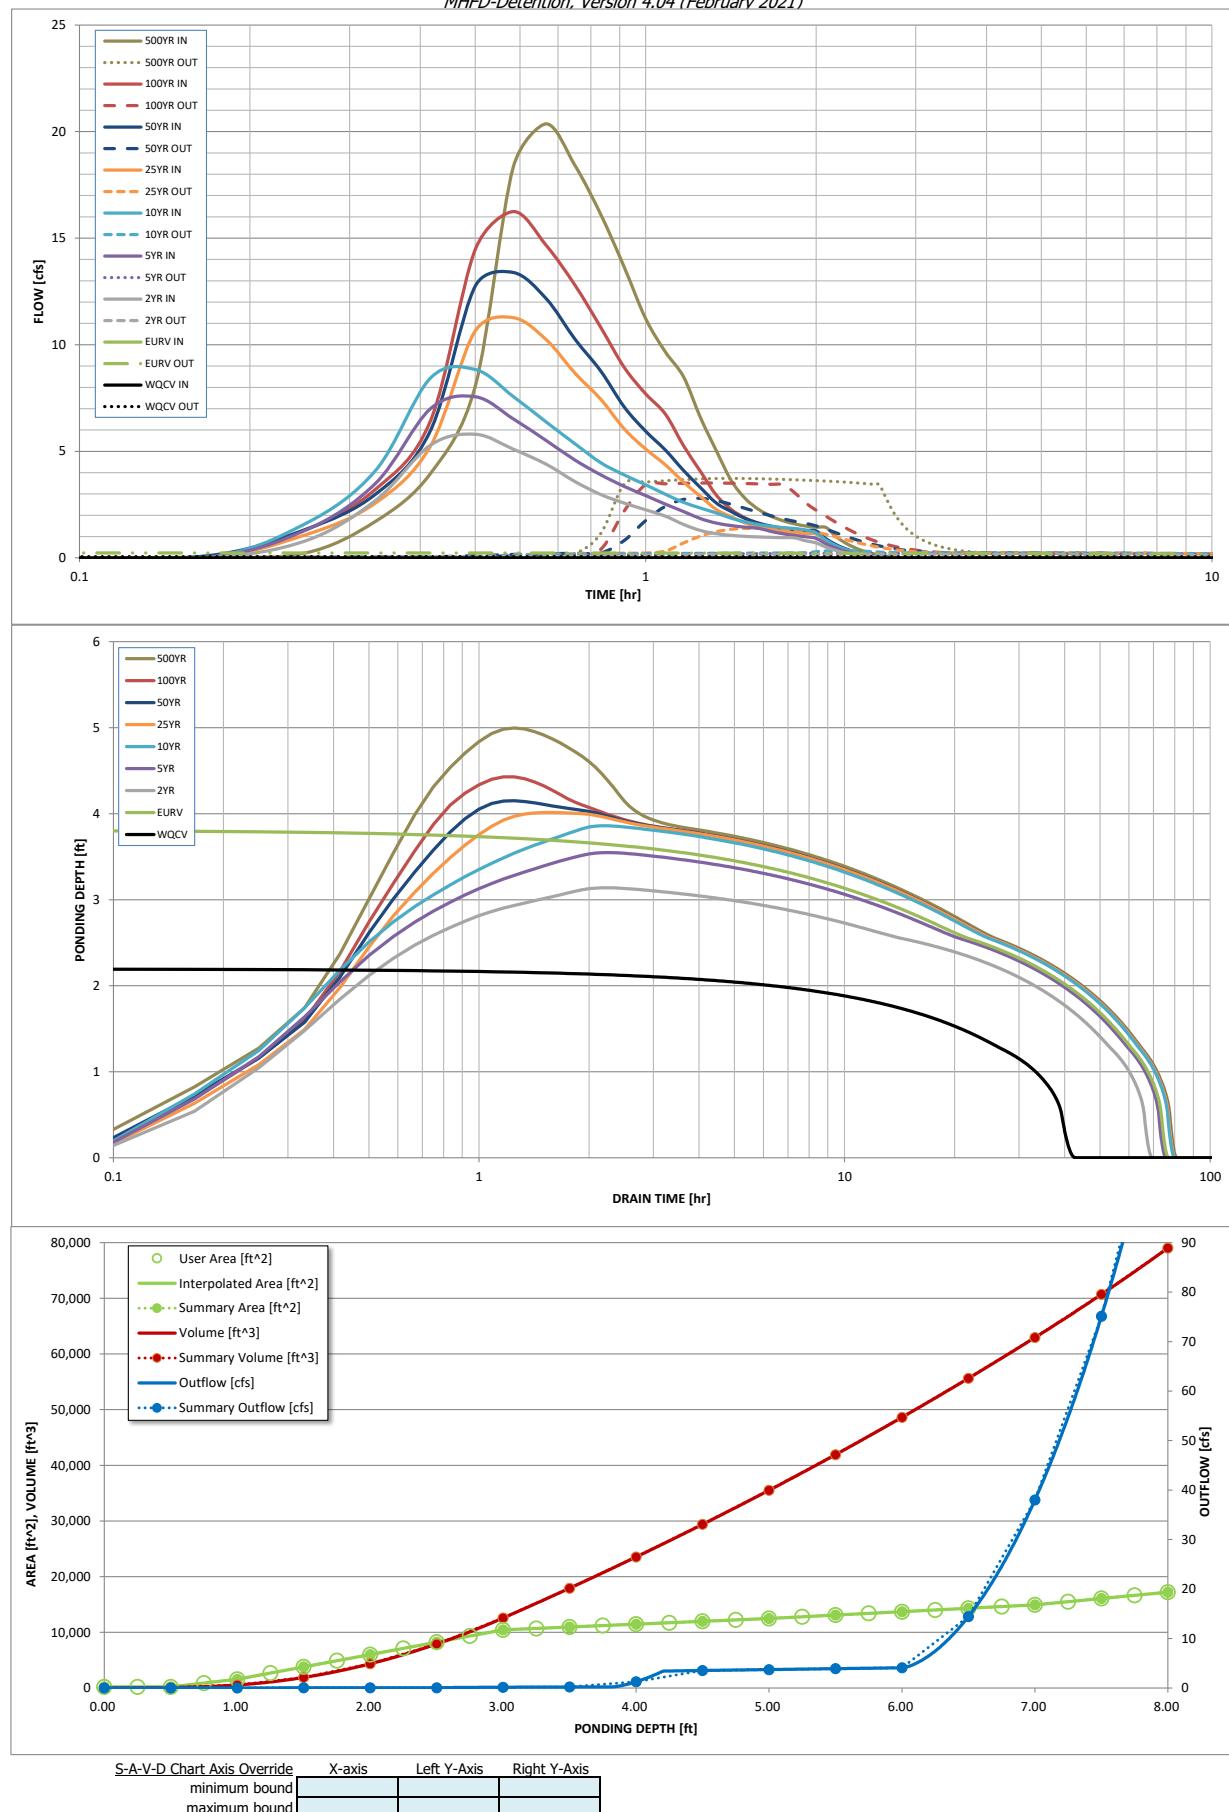

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =									
One-Hour Rainfall Depth (in) =	N/A	N/A	1.19	1.50	1.75	2.00	2.25	2.52	3.00
CUHP Runoff Volume (acre-ft) =	0.129	0.491	0.346	0.454	0.540	0.653	0.763	0.898	1.123
Inflow Hydrograph Volume (acre-ft) =	N/A	N/A	0.346	0.454	0.540	0.653	0.763	0.898	1.123
CUHP Predevelopment Peak Q (cfs) =	N/A	N/A	0.0	0.1	0.1	1.1	2.3	3.7	6.0
OPTIONAL Override Predevelopment Peak Q (cfs) =	N/A	N/A							
Predevelopment Unit Peak Flow, q (cfs/acre) =	N/A	N/A	0.01	0.02	0.02	0.19	0.38	0.62	0.99
Peak Inflow Q (cfs) =	N/A	N/A	5.8	7.6	8.8	11.5	13.4	16.2	20.4
Peak Outflow Q (cfs) =	0.1	0.2	0.2	0.3	1.4	2.8	3.5	3.7	
Ratio Peak Outflow to Predevelopment Q =	N/A	N/A	2.3	2.7	1.2	1.2	0.9	0.6	
Structure Controlling Flow =	Plate	Overflow Weir 1	Plate	Overflow Weir 1	Overflow Weir 1	Overflow Weir 1	Overflow Weir 1	Outlet Plate 1	Outlet Plate 1
Max Velocity through Grate 1 (fps) =	N/A	N/A	N/A	N/A	0.3	0.5	0.8	1.0	1.1
Max Velocity through Grate 2 (fps) =	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Time to Drain 97% of Inflow Volume (hours) =	38	67	61	66	69	68	66	64	62
Time to Drain 99% of Inflow Volume (hours) =	40	72	65	71	75	74	74	73	72
Maximum Ponding Depth (ft) =	2.20	3.82	3.14	3.55	3.86	4.01	4.15	4.43	5.00
Area at Maximum Ponding Depth (acres) =	0.16	0.26	0.24	0.25	0.26	0.26	0.27	0.27	0.29
Maximum Volume Stored (acre-ft) =	0.129	0.493	0.320	0.422	0.501	0.543	0.580	0.653	0.813

Update outlet structure design. For full spectrum design these must be equal to or less than predevelopment flows.  
Unresolved

# DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

## **FORBAY VOLUMES**

---

### FORBAY VOLUME

<b>ELEV</b>	<b>AREA</b>	<b>AREA AVG.</b>	<b>DELTA ELEV.</b>	<b>VOLUME</b>	<b>VOLUME TOTAL</b>
6244.00	200	200	1.5	300	
6245.50	200				300

End Area Method: 300 C.F.  
0.007 A.F.

Required Forbay Volume = 3% of WQCV

WQCV = 0.129 ac-ft

WQCV = 5,619 cu-ft

3% of WQCV = 168.58 cu-ft

### PROPOSED MICROPOOL VOLUME

<b>ELEV</b>	<b>AREA</b>	<b>AREA AVG.</b>	<b>DELTA ELEV.</b>	<b>VOLUME</b>	<b>VOLUME TOTAL</b>

adjust outlet structure bottom to match the micropool bottom. See example below.  
Unresolved.

X X X

Revise to identify the diameter of orifice.

Include forebay and micropool sizing and well screen calcs with this drainage report. MHFD has the UD-BMP spreadsheet that does these calcs for you.

Unresolved. Missing well screen calcs

**Remove Sheet**  
Redline comments are cursory comments. Detailed comments will be provided to the construction drawings as part of the review of the site development plan application.
