Wastewater Treatment Report.

Based on a conservatively low 0% consumptive use of domestic water, the development is expected to produce 1,600 gallons of wastewater per day, representing 0.06% of CMD's wastewater capacity. This usage is in line with anticipated wastewater demand for this area of the district. This 0% consumptive use is calculated for the purposes of ensuring CMD wastewater collection and treatment infrastructure is capable of treating the maximum possible volume of wastewater generated from this development. This will be conveyed to the Cherokee Metropolitan District Wastewater Treatment Facility.
