October 12, 2026
ASB2623

Stormwater infrastructure and PCM construction is completed. Construction of the remaining public and private improvements for the Townhomes at Western continues as of the date shown above. The Concrete Testing for public improvements will be provided at the conclusion of the townhome building project.

In the meantime, we'd like to see concrete testing for the pond's concrete components if you can get it.

Otherwise we can wait until after the public improvements are completed to review all of the concrete testing data at once.
