Natural Landforms, Riparian Report

**RE: Man Cave Storage
New Building
Bent Grass Meadows Dr**

The large majority of the lot is flat covered by short grassland. The far east side of the lot contains a small knoll that will be undisturbed by construction. The east side of the lot also falls into the lowest density category of the riparian environment according to the ecological system distribution map. Upon visiting the site, it was not obvious where, or if any riparian vegetation is present at this time. The east part of the lot appeared to be mostly short grassland consistent with the rest of the lot. The wildlife consists of antelope, and rabbits.
