**FINAL DRAINAGE REPORT FOR
DWIRE STORAGE YARD FILING NO. 1**

DRAINAGE PLAN STATEMENTS

ENGINEERS STATEMENT

The attached drainage plan and report was prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omission on my part in preparing this report.

Virgil A. Sanchez, P.E. #37160
For and on Behalf of M&S Civil Consultants, Inc

DEVELOPER'S STATEMENT

I, the developer have read and will comply with all the requirements specified in this drainage report and plan.

FINAL DRAINAGE REPORT FOR DWIRE STORAGE YARD FILING NO. 1

PURPOSE

This document is intended to serve as the Final Drainage Report for the DWIRE Storage Yard Filing No. 1. The purpose of this document is to identify and analyze the on and offsite drainage patterns and to ensure that post development runoff is routed through the site safely and in a manner that satisfies the requirements set forth by the El Paso County Drainage Criteria Manual. The development plan for the site will consist of a gravel storage yard with office/warehouse buildings, asphalt, curb, lighting, a Full Spectrum Detention Pond and landscaping. The parcel is zoned "I-3" and the proposed use is permissible within the Industrial zoning criteria.

GENERAL LOCATION AND DESCRIPTION

DWIRE Storage Yard Filing No. 1 is located in the southeast quarter of the southwest quarter of Section 28, Township 13 South, Range 65 West of the 6th P.M. in El Paso County, Colorado. The parcel is bound to the north by an existing and abandoned railroad embankment approximately 100 feet from the northern boundary and the East Fork Sand Creek Sub-tributary, to the west by Transit Mix property and East Fork Sand Creek Sub-tributary, to the south by Lot 7 of the Marksheffel Industrial Park, Capitol Drive, and to the east by Timberline Storage Yard. As shown on the enclosed FIRM panel, a channel known as the East Fork of Sand Creek Sub-tributary flows from north to south approximately 85 feet from the western boundary of the site. The site is located within the greater Sand Creek Drainage Basin and is tributary to the Sand Creek Channel via the East Fork Sand Creek Sub-Tributary. A vicinity map showing the location of the proposed development has been provided in the appendix of this report.

The proposed storage yard development and improvements will be constructed on approximately 14.6 acres of the 19.362 acre parcel. The site is currently zoned "I-3" which is associated with industrial development. In the existing condition, both the parcel and offsite contributing watershed lands are sparsely vegetated, with ground cover consisting primarily of native grasses ranging in density from fair to good. The proposed development will consist of a gravel storage yard with two office/warehouse buildings, gravel and asphalt parking areas, lighting, landscaping, and an access road. Slopes across the development typically range between 2% to 5%. Offsite flows reaching development are contributed in part from areas of Timberline Storage Yard along the eastern boundary and from small portions of unplatted property to the north. Flows produced within the development will be collected by proposed storm sewer improvements, swales, riprap rundowns, and will be routed to a proposed full spectrum detention (FSD) pond located at the southern boundary of the development.

SOILS

Soils for this project are delineated by the map in the appendix as Blendon Sandy Loam (10) which is characterized as Hydrologic Soil Types "B". Soils in the study area are shown as mapped by Soil Conservation Service in the "Soils Survey of El Paso County Area".

HYDROLOGIC CALCULATIONS

Hydrologic calculations were performed using the El Paso County and City of Colorado Springs Storm Drainage Design Criteria manual and where applicable the Urban Storm Drainage Criteria Manual. The Rational Method was used to estimate stormwater runoff anticipated from design storms with 5-year and 100-year recurrence intervals.

HYDRAULIC CALCULATIONS

Hydraulic calculations were estimated using the Manning's Formula and the methods described in the El Paso County and City of Colorado Springs Storm Drainage Design Criteria manual. The relevant data sheets are included in the appendix of this report.

FLOODPLAIN STATEMENT

A portion of the site lies within the 100 year floodplain according to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel No. 08041C0543 F, effective date March 17, 1997 and the more recent FIRM Panel No. 08041C0543 G, effective date December 7, 2018. Base Flood Elevation (BFE) lines from FIRM Panel No. 08041C0543 F (NGVD29) are used for hydraulic calculations, drainage maps, and a discussion within this report. No development is anticipated to occur within the floodplain located at the northwest corner of the site. See Proposed Drainage Map and the FIRM Panels located in the appendix of this report for details. Tract A is provided on the plat for the portion of the lot encumbered by the floodplain. The Floodplain application and Floodplain permit are included in this report, in the Floodplain Map section in the appendix. No portion of the developed lots are within the 100 year flood zone. Additional work will be at the discretion of the local floodplain administrator in accordance with FEMA policy.

DRAINAGE CRITERIA

This drainage analysis has been prepared in accordance with the current El Paso County Drainage Criteria Manual and where applicable the City of Colorado Springs DCM Volume 1 dated May 2014 effective January 2015. Hydrologic calculations were performed to determine runoff quantities for the 5-year and 100-year frequency storms for developed conditions using the Rational Method as required for basins having areas less than 130 acres (in accordance with Chapter 6 of the City of Colorado Springs DCM Volume 1). Full spectrum detention facilities have been designed in accordance with Section 3.2.1. of Chapter 13 of the City of Colorado Springs DCM Volume 1, dated May 2014, effective January 31, 2015 and Urban Drainage and Flood Control District Manuals dated January 2016.

FOUR STEP PROCESS

Step 1: Employ Runoff Reduction Practices. – Approx. 1.6 acres of the proposed development 19.362 acres is being set aside for a Full Spectrum Detention (FSD) Pond. Whenever possible, runoff produced within developable area containing impervious surfaces will be routed through landscaped areas or earthen swales (grass-lined where slope exceeds 2%) to minimize direct connection of impervious surfaces.

Step 2: Stabilize drainage ways –The DWIRE Storage Yard site proposes a Full Spectrum Detention (FSD) Pond to control developed runoff that is discharging to the East Fork Sand Creek Sub-Tributary located approximately 85-170 feet from the northern and western boundaries of the subject site. The FSD outlet structure has been designed to drain the water quality event storm in 40 hours, while reducing the 100 year peak discharge to approximately 90% of the predevelopment conditions. The development of this site is not anticipated to have negative effects on downstream drainageways. The existing channel embankment has been stabilized at the FSD pond's emergency spillway and where the outlet pipe from the pond enters the channel. Per the DBPS the existing channel is to remain, and no improvements are necessary for this reach of the channel (See "Referenced Reports" in the Appendix, Sheets EF-27 & EF-28).

COMMENT ADDRESSED. RESPONSIBLE PARTIES INCLUDED AND ADDITIONAL BMPs ADDED.

Step 3: Provide water quality capture volume. – A Full Spectrum Detention Pond is proposed to reduce peak discharge rates and provide water quality treatment. The WQCV will be released over a 40 hour period while larger event storms will be released in periods of times between 64-80 hours.

Step 4: Consider Need for Industrial and Commercial BMP's – This submittal provides a final grading and erosion control plans with BMPs in place. The proposed project will use silt fence, a vehicle tracking control pad, concrete washout area, mulching and reseeded to mitigate the potential for erosion across the site.

Individual lot owners will be responsible for additional permanent BMPs if necessary because of site use

EXISTING DRAINAGE CONDITIONS

The DWIRE Storage Yard Filing No. 1 site consists of 19.362 acres situated south and east of the East Fork Sub-tributary of Sand Creek. There are no existing structures within the site. In accordance with the Engineering Criteria Manual (ECM) and Drainage Criteria Manual (DCM) an existing conditions hydrologic analysis was performed to determine existing flow quantities entering and exiting the subject site so a comparison to post development discharge rates could be made. As shown on the enclosed Existing Drainage Map (located in the appendix of this report) the existing site terrain within the parcel generally slopes from north to south at grades that vary between 2% to 5%. An existing and abandoned railroad embankment lies approximately 100 feet from the northern boundary of the site and protects the site from the East Fork Sand Creek Sub-tributary and offsite runoff. The East Fork Sand Creek Sub-Tributary continues from north to south approximately 85 feet from the western boundary of the site. A site visit was made and it was observed that existing channel banks appear to be stable with established vegetation and minimal scour. Per the DBPS the existing channel is to remain, and no improvements are necessary for this reach of the channel (See "Reference Reports" in the Appendix, Sheets EF-27 & EF-28). An overlay of the 100 yr floodplain (Zone AE) is shown on the Existing Drainage Map and the Floodplain Map, of which 0.28 acres overlaps the northwest corner of the site. Refer to the enclosed Existing Drainage Map for specific flow rates associated with Existing Basins and Design Points.

Design Point 1 consists of native grass covered un-platted land located along the east parcel property boundary. Runoff produced by **Basins OS1, OS2 and A**, has been calculated to be 0.8 cfs in the 5-year storm event and 5.10 cfs in the 100-year storm event. Runoff from these basins is conveyed as sheet flow and earthen swale to the east towards **Design Point 1** and are treated for water quality by the Timberline Storage Yard Full Spectrum Detention Pond 1. The "Amendment No.1 to the Final Drainage Report for Timberline Storage Yard", dated March 2020, by M&S Civil Consultants, Inc. accounts for these flows and

then... (explain conveyance to Timberline FSD)

COMMENT ADDRESSED. CONVEYANCE TO TIMBERLINE ADDED.

the Full Spectrum Detention Pond 1 was designed with consideration to this tributary area (See Timberline Storage Yard Proposed Drainage Map, Basins OS2).

Design Point 2 consists of grass covered un-platted land and a portion of Timberline Storage Yard (Basin OS3). Runoff produced by **Basins A1 and OS3**, has been calculated to be 3.6 cfs in the 5-year storm event and 7.5 cfs in the 100-year storm event. Runoff from these basins is conveyed as sheet flow to the east towards **Design Point 2**. Runoff from Basin OS3 and A1 continues south on existing Capital Drive.

Design Point 3 consists of native grass covered un-platted land located central portion of the property and along the south and west property boundary. Runoff produced by **Basins OS4, OS5 and B**, has been calculated to be 2.6 cfs in the 5-year storm event and 17.2 cfs in the 100-year storm event. Runoff from these basins is conveyed as sheet flow to the south and is captured by an existing swale on the southern property boundary and routed west towards **Design Point 3**. This runoff outfalls into the East Fork Sand Creek Sub-tributary.

Design Point 4 consists of native grass covered un-platted land located at the northwest portion of the property boundary. Runoff produced by **Basins OS6 and C**, has been calculated to be 0.4 cfs in the 5-year storm event and 2.4 cfs in the 100-year storm event. Runoff from these basins is conveyed as sheet flow to the northwest towards **Design Point 4**. This runoff outfalls into the East Fork Sand Creek Sub-tributary.

Design Point 5 consists of native grass covered un-platted land located at the west portion of the property boundary. Runoff produced by **Basins OS7, D, Design Point 3 and Design Point 4**, has been calculated to be 4.5 cfs in the 5-year storm event and 29.3 cfs in the 100-year storm event. Runoff from these basins is conveyed as sheet flow to the southwest towards **Design Point 5**. This runoff outfalls into the East Fork Sand Creek Sub-tributary. The cumulative runoff values are from the onsite flows and do not include the East Fork Sand Creek Sub-tributary upstream flows. The values provided by FEMA for Sand Creek East Fork Subtributary at confluence with Sand Creek East Fork are 1970 cfs for the 100 year event.

PROPOSED DRAINAGE CHARACTERISTICS

General Proposed Conditions Drainage Discussion

The proposed storage yard development and improvements will be constructed on approximately 14.6 acres of the 19.362 acre parcel. The majority of the site has been accounted for as a storage yard and the remaining northern portion being considered as pastureland/undeveloped is shown on the Proposed Drainage Map. Refer to the Proposed Drainage Map for weighted runoff coefficients for the site. Proposed drainage patterns generally remain consistent with those in the existing condition with surface runoff traveling north to south. A swale is proposed on the western boundary of the site to capture and route runoff south to the Full Spectrum Detention (FSD) pond. The combined onsite runoff, offsite runoff from Timberline Storage Yard, and adjacent Basins OS3 & OS4 are conveyed to the proposed FSD pond. The runoff reaching the pond will be detained and discharged via a staged outlet structure and proposed 24" RCP storm system to the East Fork Sand Creek Sub-Tributary below historic rates. The outfall into the East Fork Sand Creek Sub-Tributary channel is armored with a proposed riprap pad and is grading away from main flows within the channel. Type M riprap protection is also proposed to stabilize the emergency spillway bank and all proposed grading around the outfall. Refer to the Proposed Drainage Map in the appendix for an illustration of the proposed site drainage patterns. A detailed description of the proposed drainage characteristics follows:

Proposed Conditions Detailed Drainage Discussion

Design Point 1, 2.59 acres, consists of offsite **Basins OS1** and onsite **Basin A**. Surface runoff, from these contributing areas, generally flows from north to south and exits the site at **Design Point 1**, where it combines with flows from neighboring Timberline Storage Yard and ultimately enters the Full Spectrum Detention Pond 1 on the Timberline Storage Yard site. The Proposed Drainage Map overlays Timberline Basin OS2 boundary in a gray dashed line type. Any discrepancy is minor, and within tolerance, with no significant drainage affects and changes to runoff values. The "Amendment No.1 for the Final Drainage Report for Timberline Storage Yard", dated March 2020, by M&S Civil Consultants, Inc. accounts for these flows and the Full Spectrum Detention Pond 1 was designed with consideration to this undeveloped tributary area (See Timberline Storage Yard Proposed Drainage Map, Basin OS2, referenced in the appendix). Onsite Basin A is to remain undeveloped at this time and runoff values are $Q_5=4.1$ cfs and $Q_{100}=9.3$ cfs have been calculated for **DP1**. The Timberline pond has been built.

Design Point 2, 2.89 acres, consists of offsite **Basin OS2** and onsite **Basin B**. Developed runoff of $Q_5=7.2$ cfs and $Q_{100}=14.4$ cfs has been calculated for **DP2**. Runoff from the existing neighboring Timberline Storage Yard improvements (parking lot, gravel lot, building) within offsite Basin OS3 travels as sheet flow west to onsite Basin B. All tributary runoff will be routed via a 6' wide pan, curb and gutter and collected by a 10' CDOT Type R sump inlet located at a low point at **DP2**. Captured flows are routed to the east forebay of the FSD pond and are treated before being discharged to the East Fork Sand Creek Sub-Tributary.

Design Point 3, 2.74 acres, consists of onsite **Basin B1**. Developed runoff of $Q_5=5.9$ cfs and $Q_{100}=11.7$ cfs has been calculated for **DP3**. Existing and proposed grading conveys runoff south (to **DP3**) where a localized swale captures all sheet and concentrated flows conveying them south into the FSD pond via a 3' wide trapezoidal riprap rundown. Energy associated with the runoff is dissipated by the trapezoidal rundown and outfalls into a concrete forebay located at the bottom of the rundown. All runoff tributary to **DP3** is treated within the FSD pond prior to being discharged to the East Fork Sand Creek Sub-Tributary.

Design Point 4, 10.67 acres, consists of onsite **Basins B2** and **Basin D**. Developed runoff of $Q_5=20.2$ cfs and $Q_{100}=40.2$ cfs has been calculated for **DP4**. A proposed swale along the western property boundary prevents any runoff produced within **Basin D** from traveling offsite. A proposed swale located along the north side of the larger proposed building routes runoff west where it combines with flows in the aforementioned swale prior to reaching **DP4**. At **DP4**, a 3' wide trapezoidal riprap rundown conveys concentrated flows south into the FSD pond. Energy associated with the runoff is dissipated by the trapezoidal rundown and outfalls into a concrete forebay located at the bottom of the rundown. All runoff tributary to **DP4** is treated within the FSD pond prior to being discharged to the East Fork Sand Creek Sub-Tributary.

Design Point 5, 1.34 acres, consists of **Basin OS4** and **Basin B3**. Developed runoff from Design Points **DP2**, **DP3**, **DP4**, offsite **Basins OS4** and **Basin B3** contribute to the proposed FSD pond at **DP5** at a peak flow rate of $Q_5=31.7$ cfs, $Q_{100}=64.7$ cfs. The proposed full spectrum detention pond was sized utilizing the UDFCD MFHD-Detention Worksheet, Ver 4.03. Based upon the contributing watershed acreage, characteristics, and imperviousness of the site, the pond requires a minimum of 2.296 acre feet of storage in the 100-year event and was limited to a peak discharge of 17.4cfs. A proposed outlet structure with a 24" RCP storm pipe and restrictor plate is recommended to meet the allowable discharge rate. All treated

discharge from the FSD pond is released to the East Fork Sand Creek Sub-Tributary via a flared end section and riprap pad to dissipate energy and maintain integrity of the outfall. The low tailwater basin, $D_{50} = 12''$, riprap and flared end section have been graded into the channel bank away from higher velocity main channel flows. In the case that the outlet structure were to become clogged, 100 year flows will be released through a 25' wide emergency spillway and rundown armored with Type M riprap, $D_{50} = 12''$. The emergency spillway is designed with a foot of freeboard in the 100-year event and has a crest elevation of 6533.13. This crest elevation is 5' above the 100-year FEMA water surface elevation of 6528.0. A hydraulic analysis for the FSD pond outlet structure and 24" RCP was performed in StormCAD and is enclosed in the appendix. The FEMA 100-year water surface elevation of 6528.0 was used as the starting hydraulic grade line (HGL) elevation. The results show that the FSD pond remains functional in the 100-year event and the outlet structure is able to discharge flows to the East Fork Sand Creek Sub-Tributary.

Design Point 6, 1.44 acres, consists of offsite **Basin OS5** and **Basin C**. Developed runoff of $Q_5 = 0.5$ cfs and $Q_{100} = 3.2$ cfs has been calculated for **DP6**. As shown on the Proposed Drainage Map, runoff from **DP6** enters the East Fork Sand Creek Sub-Tributary channel and continues south. The FEMA 100 yr floodplain, Zone AE, has been overlayed on the Proposed Drainage Map and crosses the northwest corner of the site within Basin C. Tract A within the plat has been dedicated to this area and no development is anticipated to occur within the floodplain, per plat restriction.

Design Point 7, 4.64 acres, consists of **Basin OS6**. Developed runoff from Design Point **DP6** and Pipe Run **PR2** contribute to the existing East Fork Sand Creek Sub-tributary at **DP7** at a peak flow rate of $Q_5 = 2.3$ cfs, $Q_{100} = 29.7$ cfs. The flows released do not exceed the flows calculated in the historic condition. The cumulative runoff values are from the onsite flows and do not include the East Fork Sand Creek Sub-tributary upstream flows. The FEMA 100 yr floodplain, Zone AE, has been overlayed on the Proposed Drainage Map along with the associated cross section IDs and water surface elevation markers. No grading is proposed within the floodplain with the exception of the emergency spillway from the proposed FSD pond and some cut around the FSD pond outfall to grade in the 24" RCP flared end section and riprap pad. Riprap is proposed in these areas to protect the FSD pond and all storm improvements discharging from the FSD pond to the East Fork Sand Creek Sub-Tributary channel. A floodplain development permit is included in the appendix on this report.

Basin OS3, 0.46 acres, consists of 4:1 vegetated slope with runoff of $Q_5 = 0.2$ cfs and $Q_{100} = 1.1$ cfs has been calculated for **Basin OS3**. As shown on the Proposed Drainage Map, runoff from **Basin OS3** is released as sheet flow.

WATER QUALITY PROVISIONS AND MAINTENANCE

The proposed full spectrum detention (FSD) pond functions to provide detention and water quality for the proposed development. This full spectrum detention pond will function to treat approximately 19.362 acres of tributary area by providing 0.453 acre-feet of storage for the water quality event, 1.519 acre feet of storage at the EURV event storm and 2.296 acre-feet of storage in the 100-year event. The 25' wide emergency spillway is designed with a foot of freeboard in the 100-year event and has a crest elevation of 6533.13. This crest elevation is 5' above the 100-year FEMA water surface elevation of 6528.0. A hydraulic analysis for the FSD pond outlet structure and 24" RCP was performed and is enclosed in the appendix (Storm Cad). The FEMA 100-year water surface elevation of 6528.0 was used as the starting

hydraulic grade line (HGL) elevation. The results show that the FSD pond remains functional in the 100-year event and the outlet structure is able to discharge flows to the East Fork Sand Creek Sub-Tributary. The sizing for the full spectrum detention facility has been determined using the guidelines set forth in the Urban Drainage and Flood Control District Criteria Manual. Refer to the UDFCD MHFD-Detention, Version 4.03, Excel Workbook located within the appendix of this report for calculations.

The proposed FSD pond will be private and shall be maintained by the property owner. Access shall be granted to the owner and El Paso County for access and maintenance of the private WQCV facility. A private maintenance agreement document shall accompany this report submittal.

EROSION CONTROL

It is the policy of the El Paso County that we submit a grading and erosion control plan with the drainage report. Proposed silt fence, vehicle traffic control, and concrete washout area are proposed as erosion control measures. The costs for these measures have been provided on the Grading and Erosion Control plan.

CONSTRUCTION COST OPINION

Private Drainage Facilities (**NON-Reimbursable**):

Item	Description	Quantity	Unit Cost	Cost
1.	18" RCP	22 LF	\$40 /LF	\$880.00
2.	24" RCP	42 LF	\$50 /LF	\$2,100.00
3.	18" RCP FES	1 EA	\$800 /EA	\$800.00
4.	24" RCP FES	1 EA	\$900 /EA	\$900.00
5.	10' CDOT Type R Inlet	1 EA	\$5,000 /EA	\$5,000.00
6.	Type M riprap, 2' deep	255 CY	\$65 /CY	\$16,575.00
7.	FSD Pond (Including Outlet Struct, Access Road, Trickle Channel, Forebays)	1 EA	\$23,000 /EA	\$23,000.00
Total \$				\$49,255.00

M & S Civil Consultants, Inc. (M & S) cannot and does not guarantee the construction cost will not vary from these opinions of probable costs. These opinions represent our best judgment as design professionals familiar with the construction industry and this development in particular. The above and below is only an estimate of the facility cost and drainage basin fee amounts in 2020.

DRAINAGE & BRIDGE FEES – DWIRE STORAGE YARD

This site is within the Sand Creek Drainage Basin. The 2020 (Resolution 19-441) Drainage and Bridge Fees per El Paso County for the DWIRE Storage Yard Filing No. 1 site are as follows:

COMMENT ADDRESSED. TRACT A (FLOOD PLAIN)
OMITTED FROM ACRE TO BE ACCESSED FOR
DRAINAGE FEES.

Per DWIRE Storage Yard Filing No. 1 Plat –
Tract A (No build per Plat restriction, within floodplain)-

19.362 Acres
-0.432 Acres
Total Area 18.93 Acres

DWIRE STORAGE YARD FILING NO. 1 FEES:

Drainage Fees:	18.93	x	67.1%	\$	19,698.00	=	\$	250204.59
Bridge Fees:	18.93	x	67.1%	\$	8,057.00	=	\$	<u>102,340.26</u>
Total							\$	352,544.85

SUMMARY

Per this final drainage report, the proposed drainage facilities recommended within this report will adequately convey, detain and route runoff from the planned development to the East Fork Sand Creek Sub-Tributary drainage way at peak flow rates which are below existing with no negative impacts on surrounding developments. All drainage facilities described herein and shown on the included Proposed Drainage Map (See Appendix) are subject to change due to formal design considerations during the construction document preparation stage (simultaneous review of Proposed Drainage Report and Construction Documents). Care will be taken to accommodate overland emergency flow routes on site and temporary drainage conditions. The development of the DWIRE Storage Yard Filing No.1 site will not adversely affect adjacent or downstream properties.

This does not make sense

No-build areas (some of which are currently in use) need to be delineated and the intent clarified -- "forever" no-build/no disturbance or "just for now"? Drainage calculations need to be revised for assumed uses if the areas are not platted as no-build tracts.

COMMENT ADDRESSED.
AREAS ADDRESSED AS
NO BUILD.

**DWIRE Storage Yard DAM Non-Jurisdictional
Water Division 2 Water District 10**

SUBJECT: Signed Notice of Intent to Construct a Non-Jurisdictional Water Impoundment Structure

Dear Mr. Emick:

Our office is in receipt of a Notice of Intent (NOI) to Construct a Non-Jurisdictional Water Impoundment Structure for the subject dam. The impoundments are to be located adjacent to East Fork of Sand Creek tributary to Fountain Creek, with the filling source to be Stormwater for Temporary Detention.

In accordance with Rule 11.1 of the Colorado Rules and Regulations for Dam Safety and Dam Construction, the hazard of this dam has been assessed as Low based on the construction drawing plans submitted with the NOI. A copy of the signed NOI is attached. An electronic copy will be maintained with the Division of Water Resources.

Please note the following:

- Location information has been corrected on your submission.
- This structure must be designed and constructed to standards outlined in 37-92-602(8) for stormwater detention facilities.
- Because this structure is located on a tributary to Fountain Creek, the structure can only operate pursuant a Colorado Discharge Permit System Municipal, Separate Storm Sewer System Permit issued by the Department of Public Health and Environment Pursuant to Article 8 of Title 25, C.R.S.
- In the event groundwater is encountered during construction of the pond, the pond must be backfilled so as not to expose groundwater until such time as: 1) a well permit has been obtained for the groundwater pond pursuant to CRS §37-90-137, or 2) the pond is lined in accordance with the document, ["State Engineer Guidelines for Lining Criteria for Gravel Pits,"](#) dated August 1999.

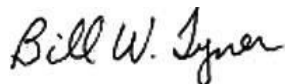

The requirements and recommendations provided herein are based on our review of the safety and water administration aspects of the proposed dam and the information provided in the submitted NOI. These requirements and recommendations create no liability for the State of Colorado should the dam fail for any reason. Please be aware that it is in the owner's best interest to construct, operate, and maintain the structure in a safe manner, as he or she may be held liable in civil court for any downstream damages resulting from failure of the dam. A copy of Specifications for Construction of Non-Jurisdictional Dams is provided to assist you in the construction of a sound structure.

Finally, please be aware of any other permitting or regulatory requirements associated with the construction of a water impoundment structure, including but not limited to county and/or municipal regulations and wetland permitting through the U.S. Army Corps of Engineers (see www.usace.army.mil for regional contact information).

The plans reviewed in this determination are submitted as part of the Developmental Approval process. Prior to the operation of this structure, please provide notice of completion of construction and as-constructed plans in PDF form including as constructed Stormwater Detention and Infiltration Data Sheet. Additionally, prior to the operation of this structure, notice must be provided pursuant to 37-92-602(8)(d) to the substitute water supply plan notification list maintained by the state engineer pursuant to section 37-92-308 (6) for the water division in which the facility is located.

If you have any questions regarding this approval, please contact Water Commissioner, Doug Hollister, at (719) 227-5291 or via email to doug.hollister@state.co.us, or Dam Safety Engineer, John Hunyadi, at (719)-227-5294, or via email to john.hunyadi@state.co.us,

Sincerely,

Bill W. Tyner, P.E.
Division Engineer, Division 2

COMPLETION OF CONSTRUCTION

DAM ID. 100541

Upon the completion of the DWIRE Storage Yard DAM, Subject of the Notice of Intent to Construct a Non-Jurisdictional Dam under the Receipt above, location in Sec. 28 Twp. 13 S Rng. 65 W; UTM NAD83 , Northing 4304006, Easting 527860.

Indicate in the blank at the bottom of this form, the date of completion of construction and return to:

Colorado Division of Water Resources
Division 2
310 East Abriendo Ave, Suite B
Pueblo, CO 81004

Date of Completion: _____

Signature of Owner Date

NON-JURISDICTIONAL WATER IMPOUNDMENT STRUCTURE¹

This notice is required per Section 37-87-125, C.R.S. (1998) and must be submitted to the Division Engineer's Office a minimum of 45 days prior to construction.

OWNER INFORMATION

Name: Tim Enick Telephone/E-Mail: (719) 499-1291 / TEMICK@TIMBERLINELANDSCAPING.COM
Address: 8110 OPPORTUNITY VIEW Colorado Springs CO 80939

Street / P.O. Box/ Rural Route City State Zip Code
Contractor: SAME Telephone/E-Mail: () /

STRUCTURE INFORMATION

Name of Dam: DWIRE STORAGE YARD Water Division: 2 Water District: CS

Location: (Provide Section, Township, Range, and GPS Point taken at crest of dam above streamline/outlet)

- Section: 28, Township: 13 SOUTH, Range: 65 WEST P.M.
- Northing: 527860 meters, Easting: 4304006 meters (Datum should be UTM, NAD 83)

Dam Dimensions:

- Vertical Height²: 5.08 ft., Length: 85 ft., Crest Width: 17 ft., Slopes: U/S: 4:1 (H:1V), D/S: 4:1 (H:1V)

Reservoir:

- Surface Area¹: 0.7 acres, Capacity¹: 1.619 acre-feet, Drainage Area*: 19.362 acres
*(If drainage area is unknown leave blank and a spillway size will be assigned):

Emergency Spillway: (See Table 1, Spillway Sizing Guidelines)

- Bottom Width: 15' ft., Side Slopes: 4:1 H:1V, Freeboard³: 0.95 ft

Outlet Conduit Type: RCP, Size: 24" inches, Location: WESTSIDE

Stream Name or Water Source⁴: SAND CREEK E. TRIB Proposed Water Use: STORM WATER

Water Court Case or WDID : _____
(Water District Identification Number)

Signature of Owner

Date

Office Use Only

DIVISION ENGINEER'S REQUIREMENTS:

Dam I.D. 100541

Signature of Division Engineer

Date

¹ A "Non-Jurisdictional Structure" is a dam creating a reservoir with a capacity of 100 acre-feet or less and a surface area of 20 acres or less and a vertical height (footnote 2) of 10 feet or less. Non-jurisdictional size dams are regulated and subject to the authority of the State Engineer consistent with sections 37-87-102 and 37-87-105 C.R.S.
² "Vertical Height" is measured from the elevation of the lowest point of the natural surface of the ground or the invert of the outlet conduit (whichever is lower) where that point occurs along the longitudinal centerline of the dam up to the crest of the emergency spillway of the dam.
³ "Freeboard" is the vertical distance from the bottom of spillway to the crest of the dam. Minimum Freeboard is 3 feet.
⁴ If construction in reservoir intercepts groundwater, a well permit is required. (Well permit applications can be found at www.water.state.co.us)

HYDRAULIC CALCULATIONS / FSD POND CALCULATIONS

Verify based on revised hydrology calculations.

COMMENT ADDRESSED. FLOW TO INLET
AND HGL AND POND IMPERVIOUS
REVISED.

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project:

Dwire Storage Yard

Inlet ID:

Inlet at DP2

**Gutter Geometry (Enter data in the blue cells)**

Maximum Allowable Width for Spread Behind Curb

 $T_{BACK} = 7.5$ ft

Side Slope Behind Curb (leave blank for no conveyance credit behind curb)

 $S_{BACK} = 0.020$ ft/ft

Manning's Roughness Behind Curb (typically between 0.012 and 0.020)

 $n_{BACK} = 0.018$

Height of Curb at Gutter Flow Line

 $H_{CURB} = 6.00$ inches

Distance from Curb Face to Street Crown

 $T_{CROWN} = 21.0$ ft

Gutter Width

 $W = 2.00$ ft

Street Transverse Slope

 $S_X = 0.020$ ft/ft

Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)

 $S_W = 0.083$ ft/ft

Street Longitudinal Slope - Enter 0 for sump condition

 $S_O = 0.000$ ft/ft

Manning's Roughness for Street Section (typically between 0.012 and 0.020)

 $n_{STREET} = 0.012$

Max. Allowable Spread for Minor & Major Storm

	Minor Storm	Major Storm	
$T_{MAX} =$	21.0	21.0	ft
$d_{MAX} =$	5.6	7.8	inches

Max. Allowable Depth at Gutter Flowline for Minor & Major Storm

Check boxes are not applicable in SUMP conditions

**MINOR STORM Allowable Capacity is based on Depth Criterion****MAJOR STORM Allowable Capacity is based on Depth Criterion**

	Minor Storm	Major Storm	
$Q_{allow} =$	SUMP	SUMP	cfs

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017

Design Information (Input)

Type of Inlet CDOT Type R Curb Opening

Local Depression (additional to continuous gutter depression 'a' from above)

Number of Unit Inlets (Grate or Curb Opening)

Water Depth at Flowline (outside of local depression)

Grate Information

Length of a Unit Grate

Width of a Unit Grate

Area Opening Ratio for a Grate (typical values 0.15-0.90)

Clogging Factor for a Single Grate (typical value 0.50 - 0.70)

Grate Weir Coefficient (typical value 2.15 - 3.60)

Grate Orifice Coefficient (typical value 0.60 - 0.80)

Curb Opening Information

Length of a Unit Curb Opening

Height of Vertical Curb Opening in Inches

Height of Curb Orifice Throat in Inches

Angle of Throat (see USDCM Figure ST-5)

Side Width for Depression Pan (typically the gutter width of 2 feet)

Clogging Factor for a Single Curb Opening (typical value 0.10)

Curb Opening Weir Coefficient (typical value 2.3-3.7)

Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)

Low Head Performance Reduction (Calculated)

Depth for Grate Midwidth

Depth for Curb Opening Weir Equation

Combination Inlet Performance Reduction Factor for Long Inlets

Curb Opening Performance Reduction Factor for Long Inlets

Grated Inlet Performance Reduction Factor for Long Inlets

Total Inlet Interception Capacity (assumes clogged condition)

Inlet Capacity IS GOOD for Minor and Major Storms(>Q PEAK)

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.03 (May 2020)

Project: DWIRE Storage Yard

Basin ID: FSD Pond 1

Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.98	0.453	Orifice Plate
Zone 2 (EURV)	4.84	1.065	Orifice Plate
Zone 3 (100-year)	5.86	0.746	Weir&Pipe (Restrict)
Total (all zones)		2.264	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain
Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = inches
Orifice Plate: Orifice Area per Row = sq. inches (diameter = 1-9/16 inches)

Calculated Parameters for Plate
WQ Orifice Area per Row = ft²
Elliptical Half-Width = feet
Elliptical Slot Centroid = feet
Elliptical Slot Area = ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.61	3.23					
Orifice Area (sq. inches)	1.91	1.91	1.91					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = Not Selected Not Selected ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = Not Selected Not Selected ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = Not Selected Not Selected inches

Calculated Parameters for Vertical Orifice
Vertical Orifice Area = Not Selected Not Selected ft²
Vertical Orifice Centroid = Not Selected Not Selected feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

Overflow Weir Front Edge Height, H_o = Zone 3 Weir Not Selected ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = 4.85 N/A feet
Overflow Weir Grate Slope = 8.00 N/A H:V
Horiz. Length of Weir Sides = 0.00 N/A feet
Overflow Grate Open Area % = 3.50 N/A %, grate open area/total area
Debris Clogging % = 70% N/A %

Calculated Parameters for Overflow Weir
Height of Grate Upper Edge, H_u = Zone 3 Weir Not Selected feet
Overflow Weir Slope Length = 4.85 N/A feet
Grate Open Area / 100-yr Orifice Area = 3.50 N/A feet
Overflow Grate Open Area w/o Debris = 12.82 N/A ft²
Overflow Grate Open Area w/ Debris = 19.60 N/A ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = Zone 3 Restrictor Not Selected ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = 0.25 N/A inches
Restrictor Plate Height Above Pipe Invert = 24.00 N/A inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate
Outlet Orifice Area = Zone 3 Restrictor Not Selected ft²
Outlet Orifice Centroid = 1.53 N/A feet
Half-Central Angle of Restrictor Plate on Pipe = 0.56 N/A radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = 6.00 ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = 25.00 feet
Spillway End Slopes = 4.00 H:V
Freeboard above Max Water Surface = 1.00 feet

Calculated Parameters for Spillway
Spillway Design Flow Depth = 0.78 feet
Stage at Top of Freeboard = 7.78 feet
Basin Area at Top of Freeboard = 1.01 acres
Basin Volume at Top of Freeboard = 3.99 acre-ft

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

Specification Sheet – VMax® SC250® Turf Reinforcement Mat

DESCRIPTION

The composite turf reinforcement mat (C-TRM) shall be a machine-produced mat of 70% straw and 30% coconut fiber matrix incorporated into permanent three-dimensional turf reinforcement matting. The matrix shall be evenly distributed across the entire width of the matting and stitch bonded between a heavy duty UV stabilized nettings with 0.50 x 0.50 inch (1.27 x 1.27 cm) openings, an ultra heavy UV stabilized, dramatically corrugated (crimped) intermediate netting with 0.5 x 0.5 inch (1.27 x 1.27 cm) openings, and covered by an heavy duty UV stabilized nettings with 0.50 x 0.50 inch (1.27 x 1.27 cm) openings. The middle corrugated netting shall form prominent closely spaced ridges across the entire width of the mat. The three nettings shall be stitched together on 1.50 inch (3.81cm) centers with UV stabilized polypropylene thread to form permanent three-dimensional turf reinforcement matting. All mats shall be manufactured with a colored thread stitched along both outer edges as an overlap guide for adjacent mats.

The SC250 shall meet Type 5A, 5B, and 5C specification requirements established by the Erosion Control Technology Council (ECTC) and Federal Highway Administration's (FHWA) FP-03 Section 713.18

Material Content

Matrix	70% Straw Fiber	0.35 lb/sq yd (0.19 kg/sm)
	30% Coconut Fiber	0.15 lbs/sq yd (0.08 kg/sm)

GRADING AND EROSION CONTROL PLAN

DWIRE YARD - GRADING AND EROSION CONTROL PLAN

EL PASO COUNTY, STATE OF COLORADO

A PORTION OF THE SOUTHWEST QUARTER OF SECTION 28, TOWNSHIP 13 SOUTH, RANGE 65 WEST OF THE 6TH PRINCIPAL MERIDIAN,

VICINITY MAP
N.T.S.

DESIGN ENGINEER'S STATEMENT

THIS GRADING AND EROSION CONTROL PLAN WAS PREPARED UNDER MY DIRECTION AND SUPERVISION AND IS CORRECT TO THE BEST OF MY KNOWLEDGE AND BELIEF. SAID PLAN HAS BEEN PREPARED ACCORDING TO THE CRITERIA ESTABLISHED BY THE COUNTY FOR GRADING AND EROSION CONTROL PLANS. I ACCEPT RESPONSIBILITY FOR ANY LIABILITY CAUSED BY NEGLIGENT ACTS, ERRORS OR OMISSIONS ON MY PART IN PREPARING THIS PLAN.

VIRGIL A. SANCHEZ, COLORADO P.E. #37160
FOR AND ON BEHALF OF M & S CIVIL CONSULTANTS, INC. DATE

OWNER/DEVELOPER'S STATEMENT:

I, THE OWNER/DEVELOPER HAVE READ AND WILL COMPLY WITH ALL OF THE REQUIREMENTS SPECIFIED IN THESE DETAILED PLANS AND SPECIFICATIONS.

NAME: DATE

BUSINESS NAME:

ADDRESS:

EL PASO COUNTY:

COUNTY PLAN REVIEW IS PROVIDED ONLY FOR GENERAL CONFORMANCE WITH COUNTY DESIGN CRITERIA. THE COUNTY IS NOT RESPONSIBLE FOR THE ACCURACY AND ADEQUACY OF THE DESIGN, DIMENSIONS, AND/OR ELEVATIONS WHICH SHALL BE CONFIRMED AT THE JOB SITE. THE COUNTY THROUGH THE APPROVAL OF THIS DOCUMENT ASSUMES NO RESPONSIBILITY FOR COMPLETENESS AND/OR ACCURACY OF THIS DOCUMENT.

FILED IN ACCORDANCE WITH THE REQUIREMENTS OF THE EL PASO COUNTY LAND DEVELOPMENT CODE, DRAINAGE CRITERIA, AND ENGINEERING CRITERIA MANUAL AS AMENDED.

IN ACCORDANCE WITH EGM SECTION 1.12, THESE CONSTRUCTION DOCUMENTS WILL BE VALID FOR CONSTRUCTION FOR A PERIOD OF 2 YEARS FROM THE DATE SIGNED BY THE EL PASO COUNTY ENGINEER. IF CONSTRUCTION HAS NOT STARTED WITHIN THOSE 2 YEARS, THE PLANS WILL NEED TO BE RESUBMITTED FOR APPROVAL, INCLUDING PAYMENT OF REVIEW FEES AT THE PLANNING AND COMMUNITY DEVELOPMENT DIRECTOR'S DISCRETION.

JENNIFER IRVINE, P.E.
COUNTY ENGINEER / ECM ADMINISTRATOR DATE

LEGAL DESCRIPTION:

A PARCEL OF LAND IN THE SOUTHWEST QUARTER (SW 1/4) OF SECTION 28, TOWNSHIP 13 SOUTH, RANGE 65 WEST OF THE 6TH PRINCIPAL MERIDIAN, EL PASO COUNTY, COLORADO MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BASIS OF BEARINGS: A PORTION OF THE SOUTH LINE OF THE SOUTHWEST QUARTER (SW1/4) OF SECTION 28, TOWNSHIP 13 SOUTH, RANGE 65 WEST OF THE 6TH PRINCIPAL MERIDIAN, EL PASO COUNTY, COLORADO. THE SECTION CORNER COMMON TO SECTIONS 28,29, 32, AND 33 BEING MONUMENTED WITH A 3" ALUMINUM CAP STAMPED "PLS 38256", FROM WHICH A YELLOW PLASTIC CAP STAMPED "PLS 37909", BEARS N89°58'59"E, A DISTANCE OF 861.03 FEET.

COMMENCING AT THE AFORESAID YELLOW PLASTIC CAP;
THENCE N09°06'45"E A DISTANCE OF 145.85 FEET;
THENCE N00°59'19"E A DISTANCE OF 325.07 FEET;
THENCE N01°07'15"W A DISTANCE OF 804.53 FEET TO THE SOUTHERLY LINE OF THE FORMER CHICAGO, ROCK ISLAND, AND PACIFIC RAILROAD AS RECORDED UNDER RECEPTION NO. 215057836 IN THE RECORDS OF EL PASO COUNTY, COLORADO;
THENCE 649.44 FEET ON THE ARC OF A NON-TANGENT CURVE TO THE RIGHT ON SAID SOUTHERLY LINE, SAID CURVE HAVING A RADIUS OF 1795.32 FEET, AND A CENTRAL ANGLE OF 20°43'34" (THE CHORD OF WHICH BEARS N75°36'49"E, 645.91 FEET);
THENCE S00°13'52"W A DISTANCE OF 1455.11 FEET TO THE AFORESAID SOUTH LINE OF SECTION 28;
THENCE N89°57'07"W ALONG SAID SOUTH LINE A DISTANCE OF 626.77 FEET TO THE POINT OF BEGINNING;

SAID PARCEL CONTAINS A CALCULATED AREA OF 843,414 S.F. (19.362 ACRES MORE OR LESS).

THE ENGINEER PREPARING THESE PLANS WILL NOT BE RESPONSIBLE, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARER OF THESE PLANS.

CAUTION

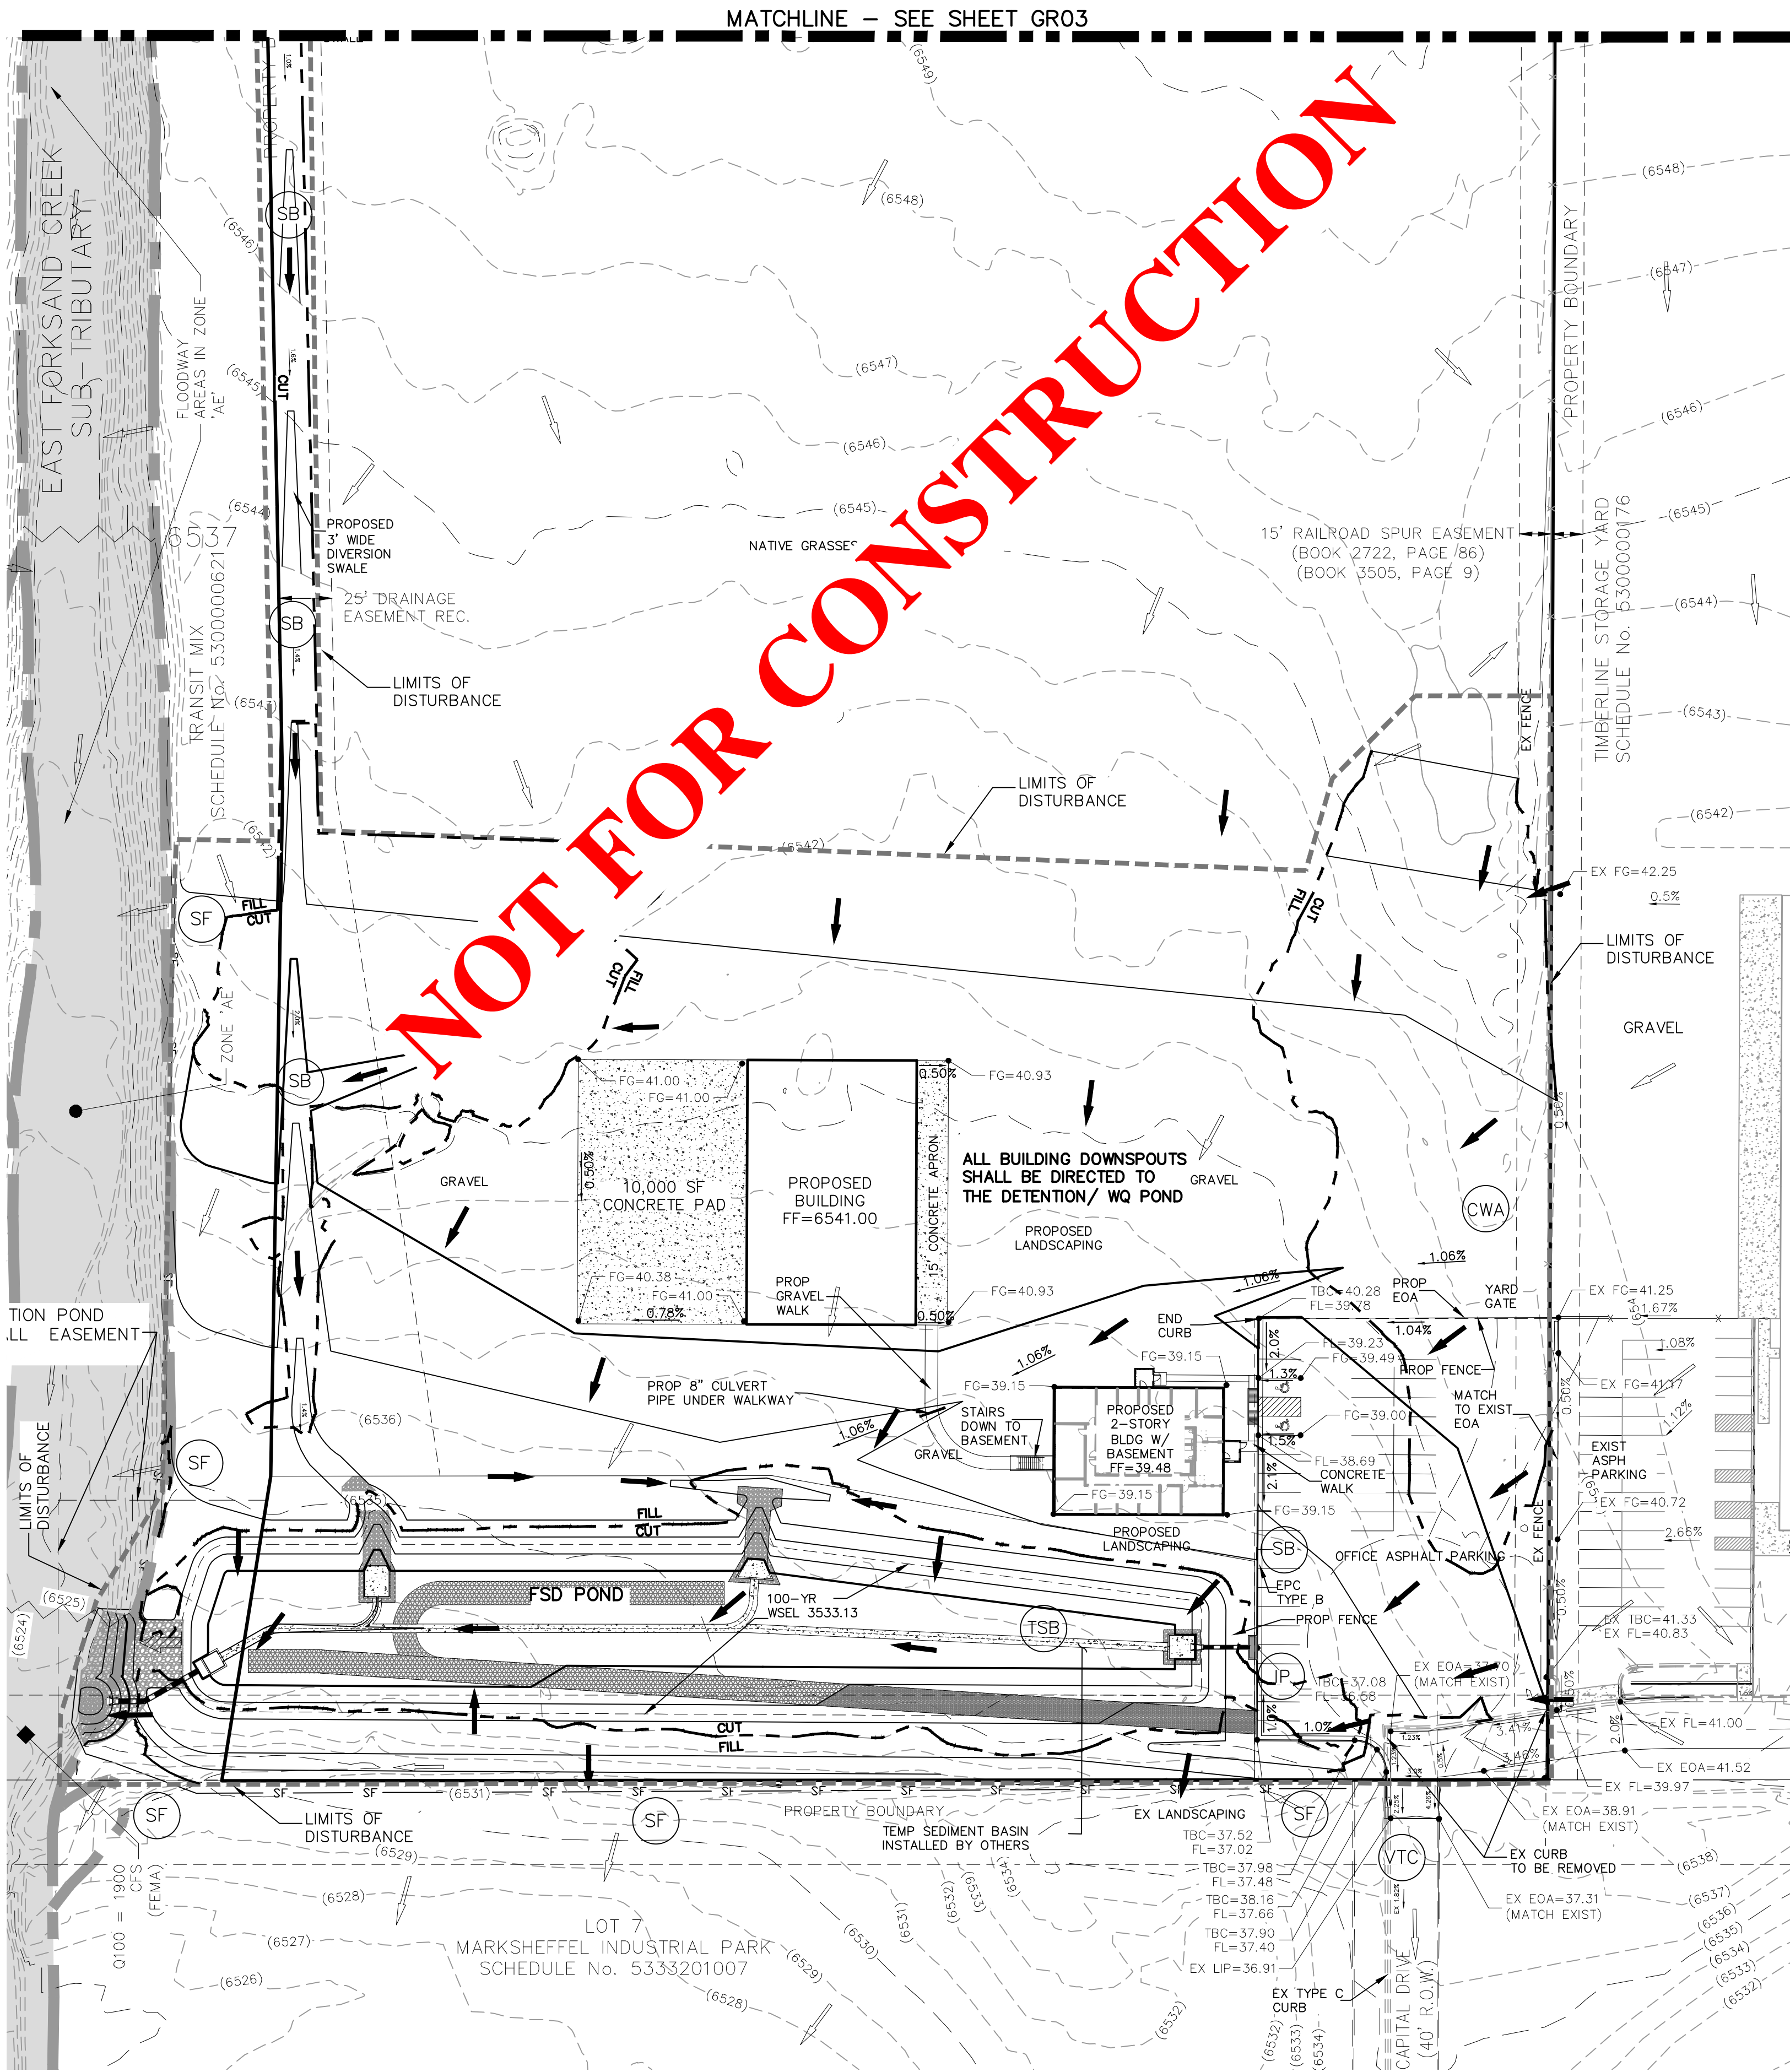

GRADING AND EROSION CONTROL NOTES:

- STORMWATER DISCHARGES FROM CONSTRUCTION SITES SHALL NOT CAUSE OR THREATEN TO CAUSE POLLUTION, CONTAMINATION, OR DEGRADATION OF STATE WATERS. ALL WORK AND EARTH DISTURBANCE SHALL BE DONE IN A MANNER THAT MINIMIZES POLLUTION OF ANY ON-SITE OR OFF-SITE WATERS, INCLUDING WETLANDS.
- NOTWITHSTANDING ANYTHING DEPICTED IN THESE PLANS IN WORDS OR GRAPHIC REPRESENTATION, ALL DESIGN AND CONSTRUCTION RELATED TO ROADS, DRAINAGE AND EROSION CONTROL SHALL CONFORM TO THE STANDARDS AND REQUIREMENTS OF THE MOST RECENT VERSION OF THE RELEVANT ADOPTED EL PASO COUNTY STANDARDS, INCLUDING THE LAND DEVELOPMENT CODE, THE ENGINEERING CRITERIA MANUAL, THE DRAINAGE CRITERIA MANUAL, AND THE DRAINAGE CRITERIA MANUAL VOLUME 2. ANY DEVIATIONS FROM REGULATIONS AND STANDARDS MUST BE REQUESTED, AND APPROVED, IN WRITING.
- A SEPARATE STORMWATER MANAGEMENT PLAN (SMWP) FOR THIS PROJECT SHALL BE COMPLETED AND AN EROSION AND STORMWATER QUALITY CONTROL PERMIT (ESQCP) ISSUED PRIOR TO COMMENCING CONSTRUCTION. MANAGEMENT OF THE SWMP DURING CONSTRUCTION IS THE RESPONSIBILITY OF THE DESIGNATED QUALIFIED STORMWATER MANAGER OR CERTIFIED EROSION CONTROL INSPECTOR. THE SWMP SHALL BE LOCATED ON SITE AT ALL TIMES DURING CONSTRUCTION AND SHALL BE KEPT UP TO DATE WITH WORK PROGRESS AND CHANGES IN THE FIELD.
- ONCE THE ESQCP IS APPROVED AND A "NOTICE TO PROCEED" HAS BEEN ISSUED, THE CONTRACTOR MAY INSTALL THE INITIAL STAGE EROSION AND SEDIMENT CONTROL MEASURES AS INDICATED ON THE APPROVED GEC. A PRECONSTRUCTION MEETING BETWEEN THE CONTRACTOR, ENGINEER, AND EL PASO COUNTY WILL BE HELD PRIOR TO ANY CONSTRUCTION. IT IS THE RESPONSIBILITY OF THE APPLICANT TO COORDINATE THE MEETING TIME AND PLACE WITH COUNTY STAFF.
- CONTROL MEASURES MUST BE INSTALLED PRIOR TO COMMENCEMENT OF ACTIVITIES THAT COULD CONTRIBUTE POLLUTANTS TO STORMWATER. CONTROL MEASURES FOR ALL SLOPES, CHANNELS, DITCHES, AND DISTURBED LAND AREAS SHALL BE INSTALLED IMMEDIATELY UPON COMPLETION OF THE DISTURBANCE.
- ALL TEMPORARY SEDIMENT AND EROSION CONTROL MEASURES SHALL BE MAINTAINED AND REMAIN IN EFFECTIVE OPERATING CONDITION UNTIL PERMANENT SOIL EROSION CONTROL MEASURES ARE IMPLEMENTED AND FINAL STABILIZATION IS ESTABLISHED. ALL PERSONS ENGAGED IN LAND DISTURBANCE ACTIVITIES SHALL ASSESS THE ADEQUACY OF CONTROL MEASURES AT THE SITE AND IDENTIFY IF CHANGES TO THOSE CONTROL MEASURES ARE NEEDED TO ENSURE THE CONTINUED EFFECTIVE PERFORMANCE OF THE CONTROL MEASURES. ALL CHANGES TO TEMPORARY SEDIMENT AND EROSION CONTROL MEASURES MUST BE INCORPORATED INTO THE STORMWATER MANAGEMENT PLAN.
- TEMPORARY STABILIZATION SHALL BE IMPLEMENTED ON DISTURBED AREAS AND STOCKPILES WHERE GROUND DISTURBING CONSTRUCTION ACTIVITY HAS PERMANENTLY CEASED OR TEMPORARILY CEASED FOR LONGER THAN 14 DAYS.
- FINAL STABILIZATION MUST BE IMPLEMENTED AT ALL APPLICABLE CONSTRUCTION SITES. FINAL STABILIZATION IS ACHIEVED WHEN ALL GROUND DISTURBING ACTIVITIES ARE COMPLETE AND ALL DISTURBED AREAS EITHER HAVE A UNIFORM VEGETATIVE COVER WITH INDIVIDUAL PLANT DENSITY OF 70 PERCENT OF PRE-DISTURBANCE LEVELS ESTABLISHED OR EQUIVALENT PERMANENT ALTERNATIVE STABILIZATION METHOD IS IMPLEMENTED. ALL TEMPORARY SEDIMENT AND EROSION CONTROL MEASURES SHALL BE REMOVED UPON FINAL STABILIZATION AND BEFORE PERMIT CLOSURE.
- ALL PERMANENT STORMWATER MANAGEMENT FACILITIES SHALL BE INSTALLED AS DESIGNED IN THE APPROVED PLANS. ANY PROPOSED CHANGES THAT EFFECT THE DESIGN OR FUNCTION OF PERMANENT STORMWATER MANAGEMENT STRUCTURES MUST BE APPROVED BY THE ECM ADMINISTRATOR PRIOR TO IMPLEMENTATION.
- EARTH DISTURBANCES SHALL BE CONDUCTED IN SUCH A MANNER SO AS TO EFFECTIVELY MINIMIZE ACCELERATED SOIL EROSION AND RESULTING SEDIMENTATION. ALL DISTURBANCES SHALL BE DESIGNED, CONSTRUCTED, AND COMPLETED SO THAT THE EXPOSED AREA OF ANY DISTURBED LAND SHALL BE LIMITED TO THE SHORTEST PRACTICAL PERIOD OF TIME. PRE-EXISTING VEGETATION SHALL BE PROTECTED AND MAINTAINED WITHIN 50 HORIZONTAL FEET OF A WATERS OF THE STATE UNLESS SHOWN TO BE INFEASIBLE AND SPECIFICALLY REQUESTED AND APPROVED.
- COMPACTION OF SOIL MUST BE PREVENTED IN AREAS DESIGNATED FOR INFILTRATION CONTROL MEASURES OR WHERE FINAL STABILIZATION WILL BE ACHIEVED BY VEGETATIVE COVER. AREAS DESIGNATED FOR INFILTRATION CONTROL MEASURES SHALL ALSO BE PROTECTED FROM SEDIMENTATION DURING CONSTRUCTION UNTIL FINAL STABILIZATION IS ACHIEVED. IF COMPACTION PREVENTION IS NOT FEASIBLE DUE TO SITE CONSTRAINTS, ALL AREAS DESIGNATED FOR INFILTRATION AND VEGETATION CONTROL MEASURES MUST BE LOOSENEED PRIOR TO INSTALLATION OF THE CONTROL MEASURE(S).
- ANY TEMPORARY OR PERMANENT FACILITY DESIGNED AND CONSTRUCTED FOR THE CONVEYANCE OF STORMWATER AROUND, THROUGH, OR FROM THE EARTH DISTURBANCE AREA SHALL BE A STABILIZED CONVEYANCE DESIGNED TO MINIMIZE EROSION AND THE DISCHARGE OF SEDIMENT OFF SITE.
- CONCRETE WASH WATER SHALL BE CONTAINED AND DISPOSED OF IN ACCORDANCE WITH THE SWMP. NO WASH WATER SHALL BE DISCHARGED TO OR ALLOWED TO ENTER STATE WATERS, INCLUDING ANY SURFACE OR SUBSURFACE STORM DRAINAGE SYSTEM OR FACILITIES. CONCRETE WASHOUTS SHALL NOT BE LOCATED IN AN AREA WHERE SHALLOW GROUNDWATER MAY BE PRESENT, OR WITHIN 50 FEET OF A SURFACE WATER BODY, CREEK OR STREAM.
- DURING DEWATERING OPERATIONS OF UNCONTAMINATED GROUND WATER MAY BE DISCHARGED ON SITE, BUT SHALL NOT LEAVE THE SITE IN THE FORM OF SURFACE RUNOFF UNLESS AN APPROVED STATE DEWATERING PERMIT IS IN PLACE.
- EROSION CONTROL BLANKETING OR OTHER PROTECTIVE COVERING SHALL BE USED ON SLOPES STEEPER THAN 3:1.
- CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OF ALL WASTES FROM THE CONSTRUCTION SITE FOR DISPOSAL IN ACCORDANCE WITH LOCAL AND STATE REGULATORY REQUIREMENTS. NO CONSTRUCTION DEBRIS, TREE SLASH, BUILDING MATERIAL WASTES OR UNUSED BUILDING MATERIALS SHALL BE BURIED, DUMPED, OR DISCHARGED AT THE SITE.
- WASTE MATERIALS SHALL NOT BE TEMPORARILY PLACED OR STORED IN THE STREET, ALLEY, OR OTHER PUBLIC WAY, UNLESS IN ACCORDANCE WITH AN APPROVED TRAFFIC CONTROL PLAN. CONTROL MEASURES MAY BE REQUIRED BY EL PASO COUNTY ENGINEERING IF DEEMED NECESSARY, BASED ON SPECIFIC CONDITIONS AND CIRCUMSTANCES.
- TRACKING OF SOILS AND CONSTRUCTION DEBRIS OFF-SITE SHALL BE MINIMIZED. MATERIALS TRACKED OFF-SITE SHALL BE CLEANED UP AND PROPERLY DISPOSED OF IMMEDIATELY.
- THE OWNER/DEVELOPER SHALL BE RESPONSIBLE FOR THE REMOVAL OF ALL CONSTRUCTION DEBRIS, DIRT, TRASH, ROCK, SEDIMENT, SOIL, AND SAND THAT MAY ACCUMULATE IN ROADS, STORM DRAINS AND OTHER DRAINAGE CONVEYANCE SYSTEMS AND STORMWATER APPURTENANCES AS A RESULT OF SITE DEVELOPMENT.
- THE QUANTITY OF MATERIALS STORED ON THE PROJECT SITE SHALL BE LIMITED, AS MUCH AS PRACTICAL, TO THAT QUANTITY REQUIRED TO PERFORM THE WORK IN AN ORDERLY SEQUENCE. ALL MATERIALS STORED ON-SITE SHALL BE STORED IN A NEAT, ORDERLY MANNER, IN THEIR ORIGINAL CONTAINERS, WITH ORIGINAL MANUFACTURER'S LABELS.
- NO CHEMICAL(S) HAVING THE POTENTIAL TO BE RELEASED IN STORMWATER ARE TO BE STORED OR USED ONSITE UNLESS PERMISSION FOR THE USE OF SUCH CHEMICAL(S) IS GRANTED IN WRITING BY THE ECM ADMINISTRATOR. IN GRANTING APPROVAL FOR THE USE OF SUCH CHEMICAL(S), SPECIAL CONDITIONS AND MONITORING MAY BE REQUIRED.
- BULK STORAGE OF ALLOWED PETROLEUM PRODUCTS OR OTHER ALLOWED LIQUID CHEMICALS IN EXCESS OF 55 GALLONS SHALL REQUIRE ADEQUATE SECONDARY CONTAINMENT PROTECTION TO CONTAIN ALL SPILLS ONSITE AND TO PREVENT ANY SPILLED MATERIALS FROM ENTERING STATE WATERS, ANY SURFACE OR SUBSURFACE STORM DRAINAGE SYSTEM OR OTHER FACILITIES.
- NO PERSON SHALL CAUSE THE IMPEDIMENT OF STORMWATER FLOW IN THE CURB AND GUTTER OR DITCH EXCEPT WITH APPROVED SEDIMENT CONTROL MEASURES.
- OWNER/DEVELOPER AND THEIR AGENTS SHALL COMPLY WITH THE "COLORADO WATER QUALITY CONTROL ACT" (TITLE 25, ARTICLE 8, CRS), AND THE "CLEAN WATER ACT" (33 USC 1344), IN ADDITION TO THE REQUIREMENTS OF THE LAND DEVELOPMENT CODE, DCM VOLUME II AND THE ECM APPENDIX I. ALL APPROPRIATE PERMITS MUST BE OBTAINED BY THE CONTRACTOR PRIOR TO CONSTRUCTION (1041, NPDES, FLOODPLAIN, 404, FUGITIVE DUST, ETC.). IN THE EVENT OF CONFLICTS BETWEEN THESE REQUIREMENTS AND OTHER LAWS, RULES, OR REGULATIONS OF OTHER FEDERAL, STATE, LOCAL, OR COUNTY AGENCIES, THE MOST RESTRICTIVE LAWS, RULES, OR REGULATIONS SHALL APPLY.
- ALL CONSTRUCTION TRAFFIC MUST ENTER/EXIT THE SITE ONLY AT APPROVED CONSTRUCTION ACCESS POINTS.
- PRIOR TO CONSTRUCTION THE PERMITTEE SHALL VERIFY THE LOCATION OF EXISTING UTILITIES.
- A WATER SOURCE SHALL BE AVAILABLE ON SITE DURING EARTHWORK OPERATIONS AND SHALL BE UTILIZED AS REQUIRED TO MINIMIZE DUST FROM EARTHWORK EQUIPMENT AND WIND.
- THE SOILS REPORT FOR THIS SITE HAS BEEN PREPARED BY RMG ENGINEERS, DATED MAY 3RD, 2019 AND SHALL BE CONSIDERED A PART OF THESE PLANS.
- AT LEAST TEN (10) DAYS PRIOR TO THE ANTICIPATED START OF CONSTRUCTION, FOR PROJECTS THAT WILL DISTURB ONE (1) ACRE OR MORE, THE OWNER OR OPERATOR OF CONSTRUCTION ACTIVITY SHALL SUBMIT A PERMIT APPLICATION FOR STORMWATER DISCHARGE TO THE COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT, WATER QUALITY DIVISION. THE APPLICATION CONTAINS CERTIFICATION OF COMPLETION OF A STORMWATER MANAGEMENT PLAN (SWMP), OF WHICH THIS GRADING AND EROSION CONTROL PLAN MAY BE A PART. Concrete Washout Area (CWA) MM-1

- CWA-1. CONCRETE WASHOUT AREA
- CWA INSTALLATION NOTES
- SEE PLAN VIEW FOR:
-CWA INSTALLATION LOCATION.
 - DO NOT LOCATE AN UNLINED CWA WITHIN 400' OF ANY NATURAL DRAINAGE PATHWAY OR WATERBODY. DO NOT LOCATE WITHIN 1,000' OF ANY WELLS OR DRINKING WATER SOURCES. IF SITE CONSTRAINTS MAKE THIS INFEASIBLE, OR IF HIGHLY PERMEABLE SOILS EXIST ON SITE, THE CWA MUST BE INSTALLED WITH AN IMPERMEABLE LINER (16 MIL MIN. THICKNESS) OR SURFACE STORAGE ALTERNATIVES USING PREFABRICATED CONCRETE WASHOUT DEVICES OR A LINED ABOVE GROUND STORAGE ARE SHOULD BE USED.
 - THE CWA SHALL BE INSTALLED PRIOR TO CONCRETE PLACEMENT ON SITE.
 - CWA SHALL INCLUDE A FLAT SUBSURFACE PIT THAT IS AT LEAST 8' BY 8' SLOPES LEADING OUT OF THE SUBSURFACE PIT SHALL BE 3:1 OR FLATTER. THE PIT SHALL BE AT LEAST 3' DEEP.
 - BERM SURROUNDING SIDES AND BACK OF THE CWA SHALL HAVE MINIMUM HEIGHT OF 1'.
 - VEHICLE TRACKING PAD SHALL BE SLOPED 2% TOWARDS THE CWA.
 - SIGNS SHALL BE PLACED AT THE CONSTRUCTION ENTRANCE, AT THE CWA, AND ELSEWHERE AS NECESSARY TO CLEARLY INDICATE THE LOCATION OF THE CWA TO OPERATORS OF CONCRETE TRUCKS AND PUMP RIGS.
 - USE EXCAVATED MATERIAL FOR PERIMETER BERM CONSTRUCTION.

EC-2 Temporary and Permanent Seeding (TS/PS)

Table TS/PS-2. Minimum Drill Seeding Rates for Perennial Grasses

Common Name	Botanical Name	Growth Season	Growth Form	Seeds/ Pound	Pounds of PLS/acre
Alkalali Soil Seed Mix					
Alkali sacaton	<i>Sporobolus airoides</i>	Cool	Bunch	1,750,000	0.25
Basin wildrye	<i>Elymus cinereus</i>	Cool	Bunch	165,000	2.5
Soder streambank wheatgrass	<i>Agropyron riparium Soder</i>	Cool	Sod	170,000	2.5
Low tall wheatgrass	<i>Agropyron elongatum Low</i>	Cool	Bunch	79,000	7.0
Arriba western wheatgrass	<i>Agropyron smithii Arriba</i>	Cool	Sod	110,000	5.5
Total					17.75
Fertile Loamy Soil Seed Mix					
Ephraim crested wheatgrass	<i>Agropyron cristatum Ephraim</i>	Cool	Sod	175,000	2.0
Dural hard fescue	<i>Festuca ovina duraliscula</i>	Cool	Bunch	565,000	1.0
Lincoln smooth brome	<i>Bromus inermis leysii Lincoln</i>	Cool	Sod	130,000	3.0
Soder streambank wheatgrass	<i>Agropyron riparium Soder</i>	Cool	Sod	170,000	2.5
Arriba western wheatgrass	<i>Agropyron smithii Arriba</i>	Cool	Sod	110,000	7.0
Total					15.5
High Water Table Soil Seed Mix					
Meadow foxtail	<i>Allegroparus pratensis</i>	Cool	Sod	900,000	0.5
Redtop	<i>Agrostis alba</i>	Warm	Open sod	5,000,000	0.25
Reed canarygrass	<i>Phalaris arundinacea</i>	Cool	Sod	68,000	0.5
Lincoln smooth brome	<i>Bromus inermis leysii Lincoln</i>	Cool	Sod	130,000	3.0
Pathfinder switchgrass	<i>Panicum virgatum Pathfinder</i>	Warm	Sod	389,000	1.0
Alkali tall wheatgrass	<i>Agropyron elongatum Alkali</i>	Cool	Bunch	79,000	5.5
Total					10.75
Transition Toof Seed Mix					
Reabens Canadian blugrass	<i>Poa compressa Reabens</i>	Cool	Sod	2,500,000	0.5
Dural hard fescue	<i>Festuca ovina duraliscula</i>	Cool	Bunch	565,000	1.0
Citation perennial ryegrass	<i>Lolium perenne Citation</i>	Cool	Sod	247,000	3.0
Lincoln smooth brome	<i>Bromus inermis leysii Lincoln</i>	Cool	Sod	130,000	3.0
Total					7.5

TS/PS-4 Urban Drainage and Flood Control District
Urban Storm Drainage Criteria Manual Volume 3 June 2012

Temporary and Permanent Seeding (TS/PS) EC-2

Table TS/PS-2. Minimum Drill Seeding Rates for Perennial Grasses (cont.)

Common Name	Botanical Name	Growth Season	Growth Form	Seeds/ Pound
Sandy Soil Seed Mix				
Blue grama	<i>Bouteloua gracilis</i>	Warm	Sod-forming bunchgrass	1
Camper little bluestem	<i>Schizachyrium scoparium Camper</i>	Warm	Bunch	1
Prairie sandreed	<i>Calamagrostis longifolia</i>	Warm	Open	2.0
Sand dropseed	<i>Sporobolus cryptandrus</i>	Cool		0.25
Vaughn sideots grama	<i>Bouteloua curtipendula Vaughn</i>	Warm		2.0
Arriba western wheatgrass	<i>Agropyron smithii Arriba</i>	C		5.5
Total				10.25
Heavy Clay, Rocky Foothill Seed Mix				
Ephraim crested wheatgrass	<i>Agropyron cristatum Ephraim</i>			175,000
Oahu Intermediate wheatgrass	<i>Agropyron intermedium</i>	Cool		115,000
Vaughn sideots grama	<i>Bouteloua curtipendula Vaughn</i>		Sod	191,000
Lincoln smooth brome	<i>Bromus inermis leysii Lincoln</i>	Cool	Sod	130,000
Arriba western wheatgrass	<i>Agropyron smithii Arriba</i>	Cool	Sod	110,000
Total				17.5

^a All of the above seedings should be followed by crimped straw mulch. These rates should be doubled if seed is broadcasted or if seed is applied through hydraulic seeding. If seed is applied through hydraulic seeding, it should be done as a separate operation.

^b See Table TS/PS-3 for seeding rates.

^c If site is to be irrigated, the seeding rates should be doubled.

^d Crested wheatgrass should not be seeded on slopes steeper than 6H to 1V.

^e Can substitute 0.5 lbs PLS of blue grama for the 2.0 lbs PLS of Vaughn sideots grama.

SC-6 Inlet Protection (IP)

IP-2. CURB ROCK SOCKS UPSTREAM OF INLET PROTECTION

- CURB ROCK SOCK INLET PROTECTION INSTALLATION NOTES
- SEE ROCK SOCK DESIGN DETAIL FOR INSTALLATION REQUIREMENTS.
 - PLACEMENT OF THE SOCK SHALL BE APPROXIMATELY 30 DEGREES FROM PERPENDICULAR IN THE OPPOSITE DIRECTION OF FLOW.
 - SOCKS ARE TO BE FLUSH WITH THE CURB AND SPACED A MINIMUM OF 5 FEET APART.
 - AT LEAST TWO CURB SOCKS IN SERIES ARE REQUIRED UPSTREAM OF ON-GRADE INLETS.
