Date: November 1, 2018

Subject: Falcon Landing Drainage Letter

The proposed Falcon Landing project site is within an existing MDDB. Said MDDB stated a designed flow for the site and included the expected flows in the drainage design flowing to a master drainage basin.

As such, the design of the Falcon Landing project site includes a Porous Landscape Detention basin as a water quality feature that connects to the system at or below the flows described in the MDDB for said parcel.

Regards,

Charles Cothorn, P.E.
