Engineer's Statement:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Ken Huhn, P.E. Date

State of Colorado No. 54022

For and on behalf of HR Green Development, LLC

Owner/Developer's Statement:

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

By: Date

Authorized Signature

Address: D.R. Horton
9555 S. Kingston Court
Englewood, CO

El Paso County Statement

Filed in accordance with the requirements of the Drainage Criteria Manual, Volumes 1 and 2, El Paso County Engineering Criteria Manual and Land Development code, as amended.

Joshua Palmer, P.E. Date

County Engineer/ECM Administrator

Appendices

I. General Purpose, Location and Description

a. Purpose

The purpose of this Preliminary Drainage Report (PDR) for the Grandview Reserve Subdivision Phase 3 is to describe the onsite and offsite drainage patterns, size drainage infrastructure to safely capture and convey developed runoff to water quality and detention facilities, and to safely route detained stormwater to adequate outfalls.

b. Location

The Grandview Reserve Phase 3 site is located in unincorporated El Paso County, Colorado. The Phase 3 location (referred to as the site herein) is located west of Grandview Reserve Filings 1-4 and MST2, south of Grandview Reserve Phase 2, and east of Rex Road.

The site lies within a tract of land within Sections 21, 22, 27 and 28, Township 12 South, Range 64 West of the 6th Principal Meridian, in El Paso County, State of Colorado. A Vicinity Map is included in **Appendix A**.

The site is bound by a segment of Rex Road to be developed with this project to the east and undeveloped land that has historically been used as ranching lands. The northwest of the site is bound by Phase 2 of the subdivision. The west of the site is bound by Grandview Reserve Filings 1-4 and MST2. A vicinity map is presented in Appendix A.

The Gieck Ranch Tributary #2 “MST2” (Channel B) is a part of the Gieck Ranch Drainage Basin tributary to Black Squirrel Creek. The channel draining through the site is an ongoing project with associated CLOMR Report and the PCD File No. is CDR228 with El Paso County. The Grandview Reserve improvements will follow any requirements of that report. There is another floodplain channel to the north of Rex Road that will not be disturbed by this phase of development and studies as a future project.

The existing surrounding platted developments include the Grandview Reserve Phase 1 Filings 1-4 and Grandview Reserve Phase 2.

c. Description of Property

The site is approximately 102.82 acres of proposed residential development with associated right of way, open space tracts, public improvements, and stormwater treatment infrastructure.

The existing groundcover and topography of the site is native grasses/weeds and exposed soil on gently rolling hillside with slopes ranging from 2% to 4%.

Per a NRCS soil survey, the site is made up of Type A Columbine gravelly sandy loam. The NRCS soil survey is presented in **Appendix A**.

There is one major drainageway through the site. The Gieck Ranch Tributary #2 (MST2 in the MDDP) traverses through the site and divides it in two. The drainageway generally flows from the northwest to the southeast towards Highway 24, before crossing through existing drainage infrastructure. The CLOMR report by HR Green for MST2 is ongoing and pending approval for this channel. Refer to the CLOMR report included in **Appendix E** for more specific design information regarding the MST2 channel. Gieck Ranch Tributary #3 (future Channel C) traverses the site along its northeastern boundary and forms the northeast boundary for Phase 3 along Rex Road. The initial analysis of this drainage way has been performed by HR Green in

conjunction with Phase 2. The analysis delineated the 100-yr floodplain and ensures the construction of Rex Road will not impact the floodplain. No fill will be placed in this channel in this phase of development. A CLOMR report is not required by the County at this time.

There are no known irrigation facilities in the area.

There are no known existing utilities or other encumbrances on site.

d. Floodplain Statement

Based on FEMA Firm map 08041C0552G & 08041C0556G (eff. 12/7/2018), the site contains flood Zone A through the site which is part of the Gieck Ranch Tributary #2. See FEMA Firm Maps in **Appendix A**. This floodplain is being studied and revised in the Gieck Ranch Tributary # 2 CLOMR report. A copy of the current revised floodplain map is also provided in **Appendix A**. There is a Zone A floodplain northeast of the site which will not be altered with this project's improvements.

II. Drainage Design Criteria

a. Drainage Criteria

Hydrologic data and calculations were performed using Drainage Criteria Manual Volume 1 of El Paso County (EPCDCM), with County adopted Chapter 6 and Section 3.2.1 of Chapter 13 of the City of Colorado Springs Drainage Criteria Manual (CCSDCM), May 2014 revised January 2021.

Onsite drainage improvements are designed for the 5-year storm (minor event) and 100-year storm (major event) using rainfall values from the NOAA Atlas 14 Point Precipitation Frequency Data Server. Runoff was calculated per CCSDCM Section 6.3.0 - Rational Method. Private, full spectrum pond design was completed using the latest version of Mile High Flood District's (MHFD) UD-Detention per CCSDCM Section 13.3.2.1 – Private, full spectrum Detention. Detention pond allowable release rate will be limited to less than historic rates.

Rainfall Depths per NOAA Atlas 14		
Return Period (yr)	5	100
1-hr Rainfall Depth (in)	1.21	2.49

Storm sewer and inlet sizing shown is preliminary at this stage of the project. Calculations for the storm sewer system on site will be provided with the Final Drainage Report (FDR) for the project. The sizing methodology that will be used is per the methods described in EPCDCM Section III Chapter 7 – Street Drainage and Storm Water Inlets. Storm sewer sizing was performed per the methods described in EPCDCM Section III Chapter 8 – Storm Drains and Appurtenances.

This preliminary drainage report follows any recommendations and is in conformance with the previously approved MDDP for the site prepared by HR Green, "*Grandview Reserve Master Development Drainage Plan",* HR Green, November 2020 (MDDP).

III. Drainage Basins and Subbasins

a. Major Basin Description

The site is located within the Gieck Ranch Drainage Basin. The site's drainage characteristics were previously studied in the following reports:

1. "Gieck Ranch Drainage Basin Planning Study" prepared by Drexel, Barrel & Co, February 2010.
2. "Grandview Reserve Master Development Drainage Plan" prepared by HR Green, August 2021.
3. "Grandview Reserve Filing No. 1 Preliminary Drainage Report" prepared by Galloway & Company, Inc., September 2022.
4. "Grandview Reserve CLOMR REPORT" prepared by HR Green, March 2023

Gieck Ranch Drainage Basin is a 22.05 square mile watershed located in El Paso County, Colorado. Gieck Ranch Drainage Basin is tributary to Black Squirrel Creek which drains to the Arkansas River. The majority of the basin is undeveloped and rolling range land of 2% - 4% slopes.

The Grandview Reserve MDDP divided the site into 8 major drainage basins (A-H), where each basin is tributary to a full spectrum detention pond facility. The Grandview Reserve Phase 3 improvements are located in subbasins B3 and D1 of the MDDP.

There are no known existing irrigation facilities or other obstructions that could influence or will be influenced by local drainage characteristics. Proposed local drainage characteristics will continue to follow historic patterns. The offsite flows entering Phase 3 from Phase 2 have been accounted for in the drainage calculations.

b. Existing Subbasin Description

The Grandview Reserve Phase 3 site drains from the northwest to the southeast slopes ranging from 2% - 4%. The majority of the site has historically drained into the Gieck Ranch Tributary #2 (existing MST2), with portions draining to East Fork Tributary (EFT).

The existing subbasins for the Grandview Reserve Phase 3 site were studied in the approved MDDP for Grandview Reserve. This site is located within subbasins B3 and D1 of this report and are described per the MDDP as follows.

"Subbasin B3 is located between MS and EF and to the northeast of basin B2. The existing MST2 tributary runs through the basin. The site drains towards the southeast and towards (proposed) Detention Pond B. Current planning documents call for high, medium-high, and medium density dwelling units along with a pocket park. The basin is 118.90 acres, with a composite impervious value of 49.42% and runoff rates for the 5 and 100 year of 92.76 cfs and 295.27 cfs respectively."

"Subbasin D1 is located between MS and MST2 to the east of Basin B3 and adjacent to the MST2 channel. The basin drains towards the southeast and towards drainage basin D2. Current planning documents call for medium density dwelling units along with a pocket park. The basin is 24.33 acres, with a composite impervious value of 53.89% and runoff rates for the 5 and 100 year of 24.15 cfs and 70.07 cfs respectively."

A copy of the approved MDDP has been included in **Appendix E** of this report. The proposed drainage conditions for this development will follow historic drainage patterns as described in the MDDP.

c. Proposed Subbasin Description

Description of Proposed Project

The proposed drainage conditions for the site generally follow historic drainage patterns. The site drains from the northwest to the southeast at slopes between 0.6% - 4%, into proposed public storm sewer systems via sheet flow/curb & gutter/channel flow which drain to proposed private extended detention basins for treatment and flood attenuation.

The northeastern corner of the site will drain to and be treated by "Pond R", which will outfall in the EFT, henceforth being referred to as "Channel C". Although the tributary area of Pond R would historically drain to MST2, it will now outfall in Channel C. The increase in discharge volume to Channel C will be negligible as a significant tributary area of Phase 2 Pond A and Pond B historically drained to Channel C and will now outfall into MST2. A comparison of the drainage areas is overlayed on the existing drainage map. Any increase in volume entering the channel will be mitigated with slope stabilization measures.

The west and south portions of the site will drain to and be treated by two separate detention ponds, "Pond F," and "Pond C." Both Pond F and Pond C will outfall into the rerouted channel MST2, henceforth being referred to as "Channel B." Drainage from both of these ponds has been accounted for in the channel re-alignment design and is detailed in the CLOMR report.

The 25.0 acre future school site will remain undeveloped and will not be accounted for in this report. Water quality treatment and detention will need to be provided on the future school site. A temporary sediment basin has been established at the future school site pond location to capture runoff not detained by the aforementioned permanent ponds.

There are minor offsite flows from Phase 2 which are accounted for.

Subbasins Tributary to and Treated by Pond R

Basin R-A1 is 1.20 acres of landscaped area. Stormwater (Q_5 = 2.6 cfs Q_{100} = 6.0 cfs) is conveyed via sheet flow to a 2' temporary grassed swale at the southern border of the site. Runoff captured combines with flow from DP F-11 and is conveyed east to a temporary sediment basin, which will be converted to an FSD Pond upon development of the future school site. This basin is treated as a WQCV exclusion with the current development. Total WQCV exclusions for the site consist of 3.68 acres and 4.9% of the overall drainage area.

Basin R-A2 is 2.54 acres of El Paso County (EPC) Local right-of-way (ROW), landscaped area and 50' lots area. Stormwater (Q_5 = 5.9 cfs Q_{100} = 13.5 cfs) is conveyed via curb and gutter to a 15' at grade type R inlet at DP R-2 and ultimately drains to Pond R via the proposed public storm sewer network.

Basin R-B is 4.19 acres of EPC Local ROW area, landscaped area, and 35' lots area. Stormwater (Q_5 = 6.1 cfs Q_{100} = 14.7 cfs) is conveyed via curb and gutter to a type R inlet at DP R-3 and ultimately drains to Pond R via the proposed public storm sewer network. Flowby from DP R-3 is captured at DP R-6 sump inlet.

Basin R-C is 2.90 acres of EPC Local ROW area, and 35' lots area. Stormwater (Q_5 = 5.4 cfs Q_{100} = 12.0 cfs) is conveyed via curb and gutter to a type R sump inlet at DP R-4 and ultimately drains to Pond R via the proposed public storm sewer network. In the event of inlet clogging, stormwater will overtop the curb and flow via an overflow swale to Rex Road.

Basin R-D is 5.53 acres of EPC Minor Arterial ROW area, landscaped area, and 35' lots area. Stormwater (Q_5 = 7.2 cfs Q_{100} = 17.7 cfs) is conveyed via curb and gutter to a type R inlet at DP R-5. Flowby stormwater from

Grandview Phase 2 Basin G-B, H-B is also captured at DP R-5 and ultimately drains to Pond R via the proposed public storm sewer network. Flowby from DP R-5 is captured at DP R-6 sump inlet.

Basin R-E is 1.81 acres of EPC Local ROW area, 35' lots area. Stormwater (Q_5 = 3.3 cfs Q_{100} = 7.4 cfs) is conveyed via curb and gutter to a type R sump inlet at DP R-6 and ultimately drains to Pond R via the proposed public storm sewer network.

Basin R-F is 0.81 acres of EPC Local ROW area and landscaped area. Stormwater (Q_5 = 1.8 cfs Q_{100} = 4.0 cfs) is conveyed via curb and gutter to a type R sump inlet at DP R-7 and ultimately drains to Pond R via the proposed public storm sewer network.

Basin R-G is 1.80 acres of landscaped detention facility area. Stormwater (Q_5 = 0.6 cfs Q_{100} = 4.3 cfs) is conveyed via sheet flow in Tract C and flows directly into Pond R at DP R-8.

Basin R-H comprises 0.46 acres of the northeastern section of proposed roundabout geometry & undeveloped area. The northern and eastern approaches are temporary dead ends until development of Grandview future phases, therefore, runoff (Q_5 = 1.0 cfs Q_{100} = 2.2 cfs) discharges directly to the East Fork Tributary. This basin is treated as a WQCV treatment exclusion with this development. Upon development of future phases a majority of this basin will be able to be treated with future ponds. Total WQCV exclusions for the site consist of 3.68 acres and 4.9% of the overall drainage area.

Subbasins Tributary to and Treated by Pond F

Basin F-A is 4.58 acres of EPC Local ROW area, landscaped area, and 35' lots area. Stormwater (Q_5 = 7.0 cfs Q_{100} = 15.8 cfs) is conveyed via curb and gutter to a type R sump inlet at DP F-1 and ultimately drains to Pond F via the proposed public storm sewer network.

Basin F-B is 3.76 acres of EPC Local ROW area and 40' lots area. Stormwater (Q_5 = 7.0 cfs Q_{100} = 15.2 cfs) is conveyed via curb and gutter to a type R sump inlet at DP F-2 and ultimately drains to Pond F via the proposed public storm sewer network.

Basin F-C1 is 2.08 acres of EPC Local ROW area, landscaped area, and 40' lots area. Stormwater (Q_5 = 4.0 cfs Q_{100} = 8.9 cfs) is conveyed via curb and gutter to a type R inlet at DP F-3 and ultimately drains to Pond F via the proposed public storm sewer network. Flowby from DP F-3 will flow to DP F-5 via curb and gutter.

Basin F-C2 is 3.64 acres of EPC Local ROW area and 40' lots area. Stormwater (Q_5 = 6.9 cfs Q_{100} = 14.6 cfs) is conveyed via curb and gutter to a type R inlet at DP F-5 and ultimately drains to Pond F via the proposed public storm sewer network. Flowby from DP F-5 is captured in DP F-7 sump inlet.

Basin F-C3 is 1.33 acres of EPC Local ROW, landscaped area, and 40' lots area. Stormwater (Q_5 = 2.9 cfs Q_{100} = 6.0 cfs) is conveyed via curb and gutter to a type R inlet at DP F-4 and ultimately drains to Pond F via the proposed public storm sewer network. Flowby from DP F-4 is routed to DP F-5.

Basin F-D is 3.13 acres of EPC Local ROW, landscaped area, and 50' lots area. Stormwater (Q_5 = 4.2 cfs Q_{100} = 10.4 cfs) is conveyed via curb and gutter to a type R inlet at DP F-6 and ultimately drains to Pond F via the proposed public storm sewer network. Flowby from DP F-6 is captured in DP F-7 sump inlet.

Basin F-E is 4.42 acres of EPC Local ROW, landscaped area, 35' lots area, 40' lots area, and 50' lots area. Stormwater (Q_5 = 7.7 cfs Q_{100} = 17.4 cfs) is conveyed via curb and gutter to a type R sump inlet at DP F-7 and ultimately drains to Pond F via the proposed public storm sewer network. In the event of inlet clogging, stormwater from DP F-7 is permitted to overtop the crown of the road and be captured at DP R-8 sump inlet.

Basin F-F is 0.94 acres of EPC Local ROW, landscaped area, and 50' lots area. Stormwater (Q_5 = 1.9 cfs Q_{100} = 4.1 cfs) is conveyed via curb and gutter to a type R sump inlet at DP F-8 and ultimately drains to Pond F via the proposed public storm sewer network. In the event of inlet clogging, stormwater at DP F-8 will overtop the curb and follow an overflow swale to Pond F.

Basin F-G is 0.63 acres of landscaped area and 50' lots area. Stormwater (Q_5 = 0.9 cfs Q_{100} = 2.2 cfs) is conveyed via sheet flow and drains directly to Pond F at DP F-9.

Basin F-H is 1.64 acres of landscaped detention facility area. Stormwater (Q_5 = 0.5 cfs Q_{100} = 3.8 cfs) is conveyed via sheet flow and drains directly to Pond F at DP F-10.

Basin F-I is 1.52 acres of undeveloped area. Stormwater (Q_5 = 3.6 cfs Q_{100} = 8.3 cfs) is collected in a 2' temporary grassed swale at DP F-11, where runoff is then conveyed east to a temporary sediment basin. Future development of the school site will introduce a permanent pond at this location. Total WQCV exclusions for the site consist of 3.68 acres and 4.9% of the overall drainage area.

Subbasins Tributary to and Treated by Pond C

Basin C-A is 3.43 acres of EPC Local ROW area, landscaped area, and 50' lots area. Stormwater (Q_5 = 3.7 cfs Q_{100} = 10.5 cfs) is conveyed via curb and gutter to a type R inlet at DP C-1 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-1 will flow to DP C-3 via curb and gutter.

Basin C-B is 4.54 acres of EPC Local ROW area, landscaped area,40' lots area, and 50' lots area. Stormwater (Q_5 = 6.1 cfs Q_{100} = 15.6 cfs) is conveyed via curb and gutter to a type R inlet at DP C-2 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-2 will flow to DP C-4 via curb and gutter.

Basin C-C is 2.30 acres of EPC Local ROW area, landscaped area, and 50' lots area. Stormwater (Q_5 = 3.6 cfs Q_{100} = 8.4 cfs) is conveyed via curb and gutter to a type R inlet at DP C-3 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-3 is captured by CP C-7 sump inlet.

Basin C-D is 1.88 acres of EPC Local ROW and 40' lots area. Stormwater (Q_5 = 3.8 cfs Q_{100} = 8.1 cfs) is conveyed via curb and gutter to a type R inlet at DP C-4 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-4 is captured by CP C-7 sump inlet.

Basin C-E is 2.30 acres of EPC Local ROW and 40' lots area. Stormwater (Q_5 = 4.7 cfs Q_{100} = 10.2 cfs) is conveyed via curb and gutter to a type R inlet at DP C-5 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-5 is captured by CP C-7 sump inlet.

Basin C-F is 2.60 acres of EPC Local ROW, landscaped area, and 40' lots area. Stormwater (Q_5 = 5.2 cfs Q_{100} = 11.3 cfs) is conveyed via curb and gutter to a type R inlet at DP C-6 and ultimately drains to Pond C via the proposed public storm sewer network. Flowby from DP C-6 is captured by CP C-8 sump inlet.

Basin C-G is 1.64 acres of EPC Local ROW, landscaped area, 40' lots area, and 50' lots area. Stormwater (Q_5 = 3.1 cfs Q_{100} = 7.1 cfs) is conveyed via curb and gutter to a type R sump inlet at DP C-7 and ultimately drains to Pond C via the proposed public storm sewer network. In the event of inlet clogging, stormwater from DP C-7 is permitted to overtop the crown of the road and be captured at DP C-8 sump inlet.

Basin C-H is 0.49 acres of EPC Local ROW, landscaped area, and 40' lots area. Stormwater (Q_5 = 1.2 cfs Q_{100} = 2.6 cfs) is conveyed via curb and gutter to a type R sump inlet at DP C-8 and ultimately drains to Pond C via the proposed public storm sewer network. In the event of inlet clogging, stormwater at DP C-8 will overtop the curb and follow an overflow swale to Pond F.

Basin C-I is 0.90 acres of landscaped area. Stormwater (Q_5 = 0.3 cfs Q_{100} = 1.9 cfs) is conveyed via swale flow and sheet flow at DP C-9 and drains directly into Pond C.

Basin C-J is 0.81 acres of landscaped area and 40' lots area. Stormwater (Q_5 = 1.0 cfs Q_{100} = 2.9 cfs) is conveyed via sheet flow at DP C-10 and drains directly into Pond C.

Offsite Basins C1 - C14 is 43.50 acres of Grandview Filing 4 subdivision. Stormwater (Q_5 = 50.5 cfs Q_{100} = 107.4 cfs) is conveyed via offsite storm network and trickle channel flow at DP C-11 and flows directly into Pond C.

Basin C-K is 3.01 acres of landscaped detention facility area. Stormwater (Q_5 = 0.9 cfs Q_{100} = 6.6 cfs) is conveyed via trickle channel flow at DP C-12 and drains directly into Pond C.

Basin C-L is 0.50 acres of undeveloped area & proposed gravel trail. Stormwater (Q_5 = 1.2 cfs Q_{100} = 8.8 cfs) follows historic drainage patterns and sheet flows offsite at DP C-13. Basin C-L is accounted as a WQCV exclusion area of the site. Total WQCV exclusions for the site consist of 3.68 acres and 4.9% of the overall drainage area.

IV. Drainage Facility Design

a. General Concept

The proposed improvements will generally follow historic drainage patterns. Inlets will be placed at low points and in the public ROW where the street capacity would be exceeded. Stormwater from the development will be routed via a proposed public storm sewer system to a full spectrum detention pond which release runoff into Channel B and Channel C. All ponds and water quality features will discharge the design storms at less than rates specified in the Grandview reserve MDDP.

b. Water Quality & Detention

Pond R (Full Spectrum Detention Basin)

Water quality and detention for Basins RA-1 through R-G is provided in Pond R; a private, full spectrum extended detention basin within Phase 3 of Grandview Reserve. A total of 19.29 acres at 42% composite imperviousness will be detained. The pond has been sized to provide water quality treatment, and detention for up to the 100-yr storm volume to be released at or below historic rates. The WQCV is 0.298 ac-ft, the EURV is 0.897 ac-ft, and the 100-year detention volume is 1.373 ac-ft. The WQCV, EURV and 100-year storms are released in 40, 72 and 77 hours, respectively. A forebay is located at the outfall into the pond and a 6.0' trickle channel conveys flow towards the outlet structure. A 15' access and maintenance road is provided to the bottom of the pond to facilitate maintenance of the pond facilities. A 9' emergency overflow spillway is provided that conveys the developed, peak 100-yr flow rate with 1.0' of freeboard towards Channel C.

Pond F (Full Spectrum Detention Basin)

Water quality and detention for Basins F-A through F-H is provided in Pond F; a private, full spectrum extended detention basin within Phase 3 of Grandview Reserve. A total of 26.63 acres at 49% composite imperviousness will be detained. The pond has been sized to provide water quality treatment, and detention for up to the 100-yr storm volume to be released at or below historic rates. The WQCV is 0.461 ac-ft, the EURV is 1.540 ac-ft, and the 100-year detention volume is 2.353 ac-ft. The WQCV, EURV and 100-year storms are released in 40, 71 and 74 hours, respectively. A forebay is located at the outfall into the pond and

a 6.0' trickle channel conveys flow towards the outlet structure. A 15' access and maintenance road is provided to the bottom of the pond to facilitate maintenance of the pond facilities. A 30.0' emergency overflow spillway is provided that conveys the developed, peak 100-yr flow rate with 1.0' of freeboard towards Channel B.

Pond C (Full Spectrum Detention Basin)

Water quality and detention for offsite Basins C1- C14, and onsite Basins C-A through C-K is provided in Pond C; a private, full spectrum extended detention basin majority within Phase 3 of Grandview Reserve, and partially within Filing 4 of Grandview Reserve. A total of 67.16 acres at 53% composite imperviousness will be detained. The pond has been sized to provide water quality treatment, and detention for up to the 100-yr storm volume to be released at or below historic rates. The WQCV is 1.209 ac-ft, the EURV is 4.205 ac-ft, and the 100-year detention volume is 6.247 ac-ft. The WQCV, EURV and 100-year storms are released in 40, 71 and 72 hours, respectively. A forebay is located at the outfall into the pond and a 6.0' trickle channel conveys flow towards the outlet structure. A 15' access and maintenance road is provided to the bottom of the pond to facilitate maintenance of the pond facilities. A 75.0' emergency overflow spillway is provided that conveys the developed, peak 100-yr flow rate with 1.0' of freeboard towards Channel B.

c. Channel Improvements

The Gieck Ranch Tributary #2 is proposed to be rerouted. As part of this rerouting of the channel, offsite upstream tributary flows will be captured upstream from the proposed Rex Road extension and be conveyed via culvert to the rerouted channel along the Grandview Reserve Phase 2 western boundary. An analysis has been done for the channel with both existing and future condition flows as described within the Grandview Reserve CLOMR Report, HR Green; September 2021; revised January 2022 (CLOMR). Both scenarios, throughout the channel fall within the channel stability criteria. Channel improvement construction plans have been submitted to El Paso County for review as a separate project (#CDR228).

d. Inspection and Maintenance

After completion of construction and upon the Board of County Commissioners acceptance, it is anticipated that all drainage facilities within the public Right-of-Way are to be owned and maintained by El Paso County.

All private detention ponds are to be owned and maintained by the Grandview Reserve Metropolitan District NO. 2 (DISTRICT), once established, unless an agreement is reached stating otherwise. Maintenance access for all full spectrum detention facilities will be provided from public Right-of-Way. Maintenance access for the drainageways will be provided through the proposed tracts.

V. Wetlands Mitigation

There is one existing wetlands on site associated with the Gieck Ranch Tributary #2. The wetlands are contained within the existing channel and classified as non-jurisdictional. The wetlands USACE determination will be provided with the Grandview Reserve CLOMR Report, HR Green; April 2022, which can be found in **Appendix E**. Wetlands maintenance will be the responsibility of the Grandview Reserve Metropolitan District No. 2.

VI. Four Step Method to Minimize Adverse Impacts of Urbanization

Step 1 – Reducing Runoff Volumes: Low impact development (LID) practices are utilized to reduce runoff at the source. In general, stormwater discharges are routed across pervious areas prior to capture in storm sewer. This practice promotes infiltration and reduces peak runoff rates. Rear and side yard swales are also being utilized in the design to promote infiltration from individual lot impervious areas. Roof drainas will be routed to these areas minimizing directly connected impervious areas. Larger lots were utilized where possible to increase open area to impervious roof ratios and reduce overall density. The Impervious Reduction Factor (IRF) method will be used in the final design and calculations provided with the FDR.

Step 2 – Treat and slowly release the WQCV: This step utilizes full spectrum water quality and detention to capture the WQCV and slowly release runoff from the site. Onsite full spectrum detention pond provides water quality treatment for the site. The WQCV is released over a period of 40 hours while the EURV is released over a period of 68-72 hours. A small portion of the site is unable to be treated with Phase 3 development due to topographical/grading constraints. This area is discussed below:

Basins C-L, F-I, R-A1, and R-H (cumulative 3.68 acres and 4.9% of overall drainage area) are not treated with this development. Basin C-I will discharge directly to the Main Stem Tributary 2. Basins F-I and R-A1 will be treated with development of the future school site. A temporary grassed swale collects flows along the southern border of the site, conveying them to a temporary sediment basin located at the future pond location of the school site. Basin R-H will be directly discharged to the East Fork Tributary. A majority of Basin R-H will be able to be treated upon development of Grandview Future Phases.

Step 3 – Stabilize stream channels: This step establishes practices to stabilize drainageways and provide scour protection at stormwater outfalls. Erosion protection is provided at all concentrated stormwater discharge points in the form of riprap pads.

Step 4 – Consider the need for source controls: No industrial or commercial uses are proposed within this development and therefore no source controls are proposed.

VII. Drainage and Bridge Fees

Gieck Ranch drainage basin has not been established as a fee basin within El Paso County. Therefore, no drainage basin fees are due at time of platting.

VIII. Opinion of Probable Cost

An engineer's opinion of probable cost will be provided with the Final Drainage Report (FDR) for the site.

IX. Hydraulic Grade Line Analysis

Hydraulic grade line analysis and final pipe sizes will be provided with the FDR for the site.

X. Summary

The Grandview Reserve Phase 3 site lies within the Gieck Ranch Drainage Basin. Water quality and detention for the site is provided in full spectrum water quality and detention ponds. There is one major drainageway that traverses the site: Gieck Ranch Tributary #2. The water quality and detention features

ponds will be maintained by the Grandview Reserve Metropolitan District No. 2 (DISTRICT). All drainage facilities were sized per the El Paso County Drainage Criteria Manuals.

The development of this project will not adversely affect adjacent or downstream properties.

XI. Drawings

Refer to the appendices for vicinity and drainage basin maps.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 20, Sep 2, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 11, 2018—Jun 12, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
19	Columbine gravelly sandy loam, 0 to 3 percent slopes	A	254.0	66.5%
83	Stapleton sandy loam, 3 to 8 percent slopes	B	127.8	33.5%
Totals for Area of Interest			**381.8**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

- Jurisdiction Boundary

NOTES TO USERS

For information and questions about this Flood Insurance Rate Map (FIRM), available products associated with this FIRM, including historic versions, the current map date for each FIRM panel, how to order products, or the National Flood Insurance Program (NFIP) in general, please call the FEMA Map Information eXchange at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA Flood Map Service Center website at https://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the website.

Communities annexing land on adjacent FIRM panels must obtain a current copy of the adjacent panel as well as the current FIRM Index. These may be ordered directly from the Flood Map Service Center at the number listed above.

For community and countywide map dates, refer to the Flood Insurance Study Report for this jurisdiction.

To determine if flood insurance is available in this community, contact your Insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

Basemap information shown on this FIRM was provided in digital format by the United States Geological Survey (USGS). The basemap shown is the USGS National Map: Orthoimagery. Last refreshed October, 2020.

This map was exported from FEMA's National Flood Hazard Layer (NFHL) on **12/14/2023 3:20 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time. For additional information, please see the Flood Hazard Mapping Updates Overview Fact Sheet at https://www.fema.gov/media-library/assets/documents/118418

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards. This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Watershed Information

Selected BMP Type =	EDB	
Watershed Area =	67.53	acres
Watershed Length =	1,890	ft
Watershed Length to Centroid =	1,050	ft
Watershed Slope =	0.020	ft/ft
Watershed Imperviousness =	53.00%	percent
Percentage Hydrologic Soil Group A =	100.0%	percent
Percentage Hydrologic Soil Group B =	0.0%	percent
Percentage Hydrologic Soil Groups C/D =	0.0%	percent
Target WQCV Drain Time =	40.0	hours
Location for 1-hr Rainfall Depths =	User Input	

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

		Optional User Overrides	
Water Quality Capture Volume (WQCV) =	1.208 acre-feet		acre-feet
Excess Urban Runoff Volume (EURV) =	4.195 acre-feet		acre-feet
2-yr Runoff Volume (P1 = 0.93 in.) =	2.379 acre-feet	0.93	inches
5-yr Runoff Volume (P1 = 1.21 in.) =	3.190 acre-feet	1.21	inches
10-yr Runoff Volume (P1 = 1.46 in.) =	4.011 acre-feet	1.46	inches
25-yr Runoff Volume (P1 = 1.84 in.) =	5.462 acre-feet	1.84	inches
50-yr Runoff Volume (P1 = 2.15 in.) =	6.932 acre-feet	2.15	inches
100-yr Runoff Volume (P1 = 2.49 in.) =	8.780 acre-feet	2.49	inches
500-yr Runoff Volume (P1 = 3.35 in.) =	13.395 acre-feet	3.35	inches
Approximate 2-yr Detention Volume =	2.114 acre-feet		
Approximate 5-yr Detention Volume =	2.867 acre-feet		
Approximate 10-yr Detention Volume =	3.609 acre-feet		
Approximate 25-yr Detention Volume =	4.851 acre-feet		
Approximate 50-yr Detention Volume =	5.606 acre-feet		
Approximate 100-yr Detention Volume =	6.488 acre-feet		

Define Zones and Basin Geometry

Zone 1 Volume (WQCV) =	1.208	acre-feet
Zone 2 Volume (EURV - Zone 1) =	2.987	acre-feet

Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	5.36	1.208	Orifice Plate
Zone 2 (EURV)	7.68	2.987	Circular Orifice
Zone 3 (100-year)	8.79	2.293	Weir&Pipe (Restrict)
Total (all zones)		6.488	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)

Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain

Underdrain Orifice Area = ft^2

Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Centroid of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)	WQ Orifice Area per Row =	1.979E-02	ft^2
Depth at top of Zone using Orifice Plate =	7.68	ft (relative to basin bottom at Stage = 0 ft)	Elliptical Half-Width =	N/A	feet
Orifice Plate: Orifice Vertical Spacing =	N/A	inches	Elliptical Slot Centroid =	N/A	feet
Orifice Plate: Orifice Area per Row =	2.85	sq. inches (diameter = 1-7/8 inches)	Elliptical Slot Area =	N/A	ft^2

Calculated Parameters for Plate

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.79	3.57					
Orifice Area (sq. inches)	2.85	2.85	2.85					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

	Zone 2 Circular	Not Selected			Zone 2 Circular	Not Selected	
Invert of Vertical Orifice =	5.36	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Area =	0.11	N/A	ft^2
Depth at top of Zone using Vertical Orifice =	7.68	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Centroid =	0.19	N/A	feet
Vertical Orifice Diameter =	4.50	N/A	inches				

Calculated Parameters for Vertical Orifice

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir and No Outlet Pipe)

	Zone 3 Weir	Not Selected			Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	7.70	N/A	ft (relative to basin bottom at Stage = 0 ft)	Height of Grate Upper Edge, H_t =	7.70	N/A	feet
Overflow Weir Front Edge Length =	8.00	N/A	feet	Overflow Weir Slope Length =	8.00	N/A	feet
Overflow Weir Grate Slope =	0.00	N/A	H:V	Grate Open Area / 100-yr Orifice Area =	16.29	N/A	
Horiz. Length of Weir Sides =	8.00	N/A	feet	Overflow Grate Open Area w/o Debris =	44.54	N/A	ft^2
Overflow Grate Type =	Type C Grate	N/A		Overflow Grate Open Area w/ Debris =	22.27	N/A	ft^2
Debris Clogging % =	50%	N/A	%				

Calculated Parameters for Overflow Weir

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Restrictor	Not Selected			Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	1.00	N/A	ft (distance below basin bottom at Stage = 0 ft)	Outlet Orifice Area =	2.73	N/A	ft^2
Outlet Pipe Diameter =	24.00	N/A	inches	Outlet Orifice Centroid =	0.88	N/A	feet
Restrictor Plate Height Above Pipe Invert =	19.50		inches	Half-Central Angle of Restrictor Plate on Pipe =	2.25	N/A	radians

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage=	8.70	ft (relative to basin bottom at Stage = 0 ft)	Spillway Design Flow Depth=	0.79	feet
Spillway Crest Length =	75.00	feet	Stage at Top of Freeboard =	10.49	feet
Spillway End Slopes =	4.00	H:V	Basin Area at Top of Freeboard =	3.19	acres
Freeboard above Max Water Surface =	1.00	feet	Basin Volume at Top of Freeboard =	11.13	acre-ft

Calculated Parameters for Spillway

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

Subbasin Description

The entire site drains in a south easterly direction and is divided into 8 major drainage basins and a total of 18 subbasins together as described below.

- Subbasin A1 is located in the southwestern corner of the site, to the south and west of MS. The basin drains towards the southeast to proposed detention pond A. Current planning documents call for medium density dwelling units and a small pocket park. The basin is 37.00 acres, with a composite impervious value of 35.22% and runoff rates for the 5 and 100 year of 30.72 cfs and 100.64 cfs respectively. The pond will discharge at predevelopment rates and into MS via the ponds outlet structure.
- Subbasin B1 is located between MS and MST2 to the east of subbasin A1. The basin drains towards the southeast and towards subbasin B2. Current planning documents call for medium density dwelling units and some parkland area. The basin is 37.00 acres, with a composite impervious value of 45.00% and runoff rates for the 5 and 100 year of 29.46 cfs and 97.08 cfs respectively.
- Subbasin B2 is located between MS and MST2 to the northeast of subbasin A1. The basin drains towards the southeast and towards Detention Pond B. Current planning documents call for medium density dwelling units. The basin is 24.89 acres, with a composite impervious value of 43.26% and runoff rates for the 5 and 100 year of 12.02 cfs and 42.26 cfs respectively.
- Subbasin B3 is located between MS and EF and to the northeast of east of basin B2. The existing MST2 tributary runs through the basin. The site drains towards the southeast and towards Detention Pond B. Current planning documents call for high, medium-high, and medium density dwelling units along with a pocket park. The basin is 118.90 acres, with a composite impervious value of 49.42% and runoff rates for the 5 and 100 year of 92.76 cfs and 295.27 cfs respectively.
- Subbasin C1 is located to the northeast of east of basin B1 and the existing MST2 tributary runs through the middle of the basin. The basin drains towards the southeast and towards Detention Pond C. Current planning documents call for an institutional parcel, medium and high density dwelling units and a pocket park. The basin is 77.83 acres, with a composite impervious value of 51.20% and runoff rates for the 5 and 100 year of 77.99 cfs and 238.03 cfs respectively.
- Subbasin D1 is located between MS and MST2 to the east of Basin B3 and adjacent to the MST2 channel. The basin drains towards the southeast and towards drainage basin D2. Current planning documents call for medium density dwelling units along with a pocket park. The basin is 24.33 acres, with a composite impervious value of 53.89% and runoff rates for the 5 and 100 year of 24.15 cfs and 70.07 cfs respectively.
- Subbasin D2 is located between MS and MST2 to the south of basins D1 and B3. The basin drains towards the southwest and towards detention pond D. Current planning documents call for high density dwelling units along with a pocket park and a commercial parcel. The basin is 77.90 acres, with a composite impervious value of 62.10% and runoff rates for the 5 and 100 year of 98.47 cfs and 252.18 cfs respectively.
- Subbasin E1 is located just east of EFT along the northern portion of the site. The basin drains towards the southeast and towards basins F3 and F4. Current planning documents call for low

These basins along with the offsite basins which lie east of Eastonville Road contribute flows onto the site through the major tributaries. Estimate oncoming flows for each tributary are as follows:

Offsite Flow Summary		
Tributary	**5 Year Peak Runoff (cfs)**	**100 Year Peak Runoff (cfs)**
Main Stem	36	628
Main Stem Tributary 2	8	122
East Fork Tributary*	56	116
East Fork*	175	357

*Flows from Gieck Ranch DBPS, Oct 2010

As hydraulic analysis continues for the channels, these offsite flows will be used to size the channels for proper conveyance of the flow however it should be noted that the flows mentioned for the Main Stem and Main Stem Tributary 2 assume proper conveyance of the flow through (below or above) Eastonville Road. Due to the unknown nature of these conditions at the time of buildout, a probable scenario of the split flows will require analysis and agreed upon flow rates to each channel will be required. Currently some of the flow shown going to the Main Stem Tributary 2 may be diverted into the Main Stem. Previous analysis done by JR Engineering assumed approximately 160 additional cfs going to the Main Stem Tributary #2 during the 100-year event and as such it is recommended the following flows be used for analysis of the oncoming offsite flows:

Revised Offsite Flow Summary		
Tributary	**5 Year Peak Runoff (cfs)**	**100 Year Peak Runoff (cfs)**
Main Stem**	67	413
Main Stem Tributary 2**	59	280
East Fork Tributary*	61	217
East Fork*	180	595

*Flows from Gieck Ranch DBPS, Oct 2010

**Flows from 4 Way Ranch LOMR, Mar 2004

Please note that the preliminary drainage reports will be required to reconcile any differences between the various reports done for these channels.

b. Methodology

Design rainfall was determined utilizing figures from the NOAA Atlas 14, Volume 8, Version 2 to determine the 5-year and 100-year rainfall values for 1, 6 and 24-hour events. The 1-hour rainfall depths are 1.22 and 2.50 in/hr respectively, 6 hour 1.79 and 3.87 in/hr respectively and 2.36 and 4.90 in/hr for the 24 hour event. The rainfall values were then used as inputs into the Colorado Urban Hydrograph Procedure (CUHP) spreadsheets to determine runoff values for both pre-development and post-development site.

CUHP is an evolution of the Snyder unit hydrograph and is calibrated for use along the Colorado Front Range. 1 Hour rainfall amounts are input into the program to produce a storm hyetograph that is then uses to calculate a storm hydrograph for each basin depending on the subbasins properties including

slope, length, shape, impervious area, pervious depression storage area, and various infiltration rates. Tabular hydrographs are then computed and can be used in EPA SWMM. The CUHP results are included within Appendix B.

EPA SWMM was used to determine flow routing via the kinematic wave method. Subbasins were routed to their respective design points and detention ponds for both the developed and predeveloped condition to determine peak runoff amounts for the 5-year and 100-year storm events. Information from these models along with information and calculations performed in the Colorado Springs BMP spreadsheets was used to determine pond sizing calculations and release rates.

c. Basin Hydrology

A summary of the flows for both the predeveloped and developed cases for each basin, subbasin and Pond are found on next page along with the full computation found in Appendix B.

SWMM Basin and Pond Summary						
Basin Description	**Basin Area (ac)**	**% Impervious**	**5 Year Peak Runoff (cfs)**	**100 Year Peak Runoff (cfs)**	**5 Year Pond Volume (ac-ft)**	**100 Year Pond Volume (ac-ft)**

H4	27.65	38.24%	20.93	64.71		
			Pond H		2.93	6.17

IV. Hydraulic Analysis

a. Major Drainageways

In general, the site runoff flows towards the 4 major drainageways and in a southeasterly direction. These basins are described in more detail below:

Main Stem

The Main Stem (MS) is in the southwestern portion of the site. Offsite flows collect and are conveyed under Eastonville Road via a culvert. MS travels in a southeasterly direction and combines with the Main Stem Tributary #2 (MST2) just off site where it is then conveyed past Highway 24 via a culvert. An existing breached stock pond exists in the approximate center point of the channel within the site. Jurisdictional wetlands exist within this channel and the area is within a Zone A floodplain towards the southern portion of the site. This channel sees only intermittent flows at this time however once development occurs there may be a more constant baseflow.

Proposed improvements for MS include the removal of the breached stock pond berm and regrading of the affected stretch of channel to restore its historic state. Proposed flow rates through MS are not to exceed historic flowrates and as such, the remainder of the channel is to remain in its current state sans any preemptive check structures; modeling indicates the channel shall remain stable despite the removal of the existing berm.

Main Stem Tributary #2

MST2 crosses Eastonville road via an existing culvert and flows through the site in a southeasterly direction. Portions of this channel are within a mapped floodplain as shown in the existing FIRM Panel. Per a July email from the USACE this drainage channel was preliminarily determined to be a non-jurisdictional waters/wetland.

Proposed improvements for MST2 include the realignment of the channel, generally shifting the channel towards the west to accommodate the proposed land plan. There is to be a dedicated 100’ corridor in which the valley will meander. Preliminary analysis indicates the valley will have an average width of approximately 63’ at the elevation necessary to meet freeboard requirements; initial sizing approximates the bankfull width to be 6.8’. The valley and channel thalweg will generally follow the same profile, with some deviation as the bankfull channel meanders through the valley in turn decreasing the low flow channels average slope. The average valley profile is to be approximately 1% with a series of grade control structures to both decrease elevation and dissipate energy to meet natural channel criteria as outline in El Paso County criteria and agreed upon channel parameters.

East Fork Tributary

The East Fork tributary (EFT) crosses the north property line and flows are conveyed through the site via a natural channel. The channel has been mapped as a Zone A floodplain per the existing FIRM panel; it appears any hydraulic effects of the crossing at Eastonville Road was not accounted for in the floodplain delineation. While the current floodplain delineation shows the channel continuing through Highway 24, there is no existing crossing for this section of the drainage channel below Highway 24 and instead the flows are conveyed to the northeast towards the East Fork Upper (EF). Per a July email from the USACE this drainage channel was preliminarily determined to be a non-jurisdictional waters/wetland.

Per SWMM modeling the current velocities will require channel stabilization. The EFT channel is to be engineered later in the design which will likely include a combination of channel widening, lowering of slope facilitated by the implementation of drop structures to meet non erosive velocity requirements. Bank stabilization, should it be necessary, may include coir rolls, erosion control blankets, live willow staking, soil lifts and/or other measures to ensure successful bank stabilization. The drainageway will require further analysis and design which will be completed as the project progresses.

East Fork Upper

The EF crosses the north property line approximately 1500' east of the EFT crossing. The flow through the site is via a natural channel and travels in a southeasterly direction. The channel is mapped as a Zone A floodplain, and the channel crosses Highway 24 via an existing shallow bridge. The current floodplain delineation shows EF and EFT eventually merging approximately 1750' southeast of the site, however, as mentioned above Highway 24 blocks the flow of the EFT and flows are conveyed northeast to the EF bridge crossing.

Per SWMM modeling the current velocities will require channel stabilization. The EF channel is to be engineered later in the design which will likely include a combination of channel widening, lowering of slope facilitated by the implementation of drop structures to meet non erosive velocity requirements. Bank stabilization, should it be necessary, may include coir rolls, erosion control blankets, live willow staking, soil lifts and/or other measures to ensure successful bank stabilization. The drainageway will require further analysis and design which will be completed as the project progresses.

V. Environmental Evaluations

a. Significant existing or potential wetland and riparian areas impacts

As part of this work, the developer has engaged Ecosystem Services, LLC (ECOS) to perform environmental studies of the site that will be submitted with the planning documents. Major information from this report related to the wetlands shows that two of the tributaries through the site, the Main Stem and the East Fork contain jurisdictional wetlands and the other two tributaries, the East Fork Tributary and the Main Stem Tributary #2 are non-jurisdictional wetlands.

At this time, only minor improvements to the jurisdictional channels are proposed. These stream improvements will be made with keeping the natural habitat intact and the natural function of these channels as it is to maintain the wetland habitat. The non-jurisdictional channels will be modified, and the design of those channels is forthcoming.

b. Stormwater quality considerations and proposed practices

As part of the development, full spectrum detention facilities will be installed to provide water quality for the development. The facilities will be designed using El Paso County criteria and provide stormwater quality by slowing the release of stormwater captured by the ponds and allowing solids to settle out. Additionally, when possible, the revised drainage channels, which were not jurisdictional wetlands, will be used to convey stormwater via a natural channel. Stormwater must be treated before entering the natural channels. The natural channel will provide a pervious means to transport stormwater and provide some water quality benefits as well.

On site practices for the homes, schools, churches, and other buildings should use means such that impervious areas drain across pervious area to allow for infiltration during the minor events. This would

Grandview Reserve CLOMR Report

Introduction

This report was prepared by HR Green to support the submission of MT-2 forms and documents in a request for a Conditional Letter of Map Revision (CLOMR) for channel improvements along Geick Ranch Tributary 2. This request impacts the current delineation of the 100-year boundary on Flood Insurance Rate Maps (FIRMs) 08041C0552G and 08041C0556G.

Grandview Reserve is located in Falcon, Colorado within El Paso County and contains approximately 776 acres within the south half of section 21 and 22 and the north half of section 27 and 28, Township 12 South, and Range 66 West of the Sixth Principal Meridian in Ela Paso County, Colorado.

Grandview Reserve (GVR) falls within the Gieck Ranch Drainage Basin which covers approximately 22 square miles. This drainage basin is tributary to Black Squirrel Creek and joins said creek just to the south of Ellicott, CO about 18 miles to the south. Black Squirrel Creek eventually drains to the Arkansas River in Pueblo Colorado. Much of the Gieck Ranch Drainage basin is undeveloped and consists of rural farmland. The Gieck Ranch Drainage basin lies north of the Haegler Ranch drainage basin. The channels through the Grandview property can all be described as gently sloping drainages that roll through the site towards the creeks to which they are tributary.

Per the NRCS web soil survey, the site is made up entirely of Type A and B soils. The majority of which are Type B soils. The vegetation found within Grandview Reserve consists of wetland communities in the floodplain with a transitional area to shortgrass prairie communities that dominate the site. The primary species found in the shortgrass prairie regions include little bluestem, blue grama, and buffalograss. The transitional area between the wetlands and shortgrass prairie includes patches of snowberry, and wood's rose. There are a few plains cottonwoods along the main channels. The area has historically been heavily grazed and there are weeds throughout the site. Weeds found onsite include Canada thistle, Russian thistle, common mullein and yellow toadflax spp.

Observations of the existing channels suggest that they are at equilibrium with their watershed flows; evidence including relatively stable bank full channels, adequate floodplain (above bank full channel elevations) and in-tact plant communities that would be expected in this type of reach support the notion that the reach is in equilibrium.

At present, the preliminary analysis and design of Geick Ranch Tributary 2 (GRT2) has been completed. Proposed improvements for Geick Ranch Tributary 2 include refinement of the existing channel alignment and a stabilizing natural stream design that will allow a more predictable floodplain. There is to be a dedicated 100' wide corridor in which the channel valley will meander. The valley is the area needed to fully contain the 100-year event. Preliminary analysis indicates the valley will have an average width of approximately 63'; initial sizing approximates the bank full width to be 8.8' – 13.8'. The valley and channel thalweg will generally follow the same profile, with some deviation as the bank full channel meanders through the valley in turn decreasing the low flow channels average slope. The average valley profile is to be approximately 0.9% with a series of grade control structures to both decrease elevation and dissipate energy to meet natural channel criteria as outlined in El Paso County criteria.

Hydrology

El Paso County criteria states that all developments are required to detain storm flows down to their historic peaks. For this reason GRT2 has been designed using the flows that drain to it in the existing conditions.

NOTES:

1. BASIS OF BEARINGS: THE EAST LINE OF SECTION 21, BEING MONUMENTED AT THE SOUTHEAST CORNER BY A 3-1/4" ALUMINUM SURVEYOR'S CAP STAMPED "PS INC PLS 30087 1996", BEING APPROPRIATELY MARKED, AND BEING MONUMENTED AT THE NORTHEAST CORNER BY A 3-1/4" ALUMINUM SURVEYOR'S CAP STAMPED "PS INC PLS 30087 1996", BEING APPROPRIATELY MARKED, BEING ASSUMED TO BEAR NORTH 00 DEGREES 52 MINUTES 26 SECONDS WEST, A DISTANCE OF 5290.17 FEET.
2. BENCHMARK:
   DESIGNATION = F 24
   PID = JK0240
   DESCRIPTION = DISK ON TOP OF CONCRETE MONUMENT
   CONTROL POINT COORDINATE SYSTEM: NAVD88
   NORTHING: 1421049.80
   EASTING: 3273631.55
   ELEVATION: 6866.33

Lot Type Identification:	
Lot Size (SF)	*Lot Size (Acre)*
0 - 8,167	1/8 Acre
8,168 - 12,704	1/4 Acre
12,705 - 18,149	1/3 Acre
18,150 - 32,670	1/2 Acre
32,671 - 43,560	1 Acre

NOTES:
% Impervious values are taken directly from Table 6-6 in the Colorado Springs DCM Vol. 1. CH. 6 (Referencing UDFCD 2001)

COMPOSITE RUNOFF COEFFICIENT CALCULATIONS: EXISTING & PROPOSED

Subdivision: Grandview Reserve
Location: CO, El Paso County

Project Name: Grandview Subdivision PDR
Project No.: HRG01
Calculated By: TJE
Checked By: BAS
Date: 5/26/22

Lot Type Identification:	
Lot Size (SF)	*Lot Size (Acre)*
0 - 8,167	<= 1/8 Acre
8,168 - 12,704	1/4 Acre
12,705 - 18,149	1/3 Acre
18,150 - 32,670	1/2 Acre
32,671 - 43,560	1 Acre

NOTES:
C values are taken directly from Table 6-6 in the Colorado Springs DCM Vol. 1. CH. 6 (Referencing UDFCD 2001)
Coeffficients use HSG A&B soils - Refer to "Appendix A: Exhibits and Figures" for soil map

STANDARD FORM SF-2: EXISTING & PROPOSED
TIME OF CONCENTRATION

Subdivision: Grandview Reserve
Location: CO, El Paso County

Project Name: Grandview Subdivision PDR
Project No.: HRG01
Calculated By: TJE
Checked By: BAS
Date: 5/26/22

NOTES:
$T_i = (0.395*(1.1 - C_5)*(L)^0.5)/((S)^0.33)$, S in ft/ft
T_t=L/60V (Velocity From Fig. 501)
Velocity V=Cv*S^0.5, S in ft/ft
Tc Check = 10+L/180
For Urbanized basins a minimum T_c of 5.0 minutes is required.
For non-urbanized basins a minimum T_c of 10.0 minutes is required

- AREA TO BE DETAINED IN PBMP (POND C)
- AREA TO BE DETAINED IN PBMP (POND D)
- AREA TO BE DETAINED IN PBMP (POND E)
- AREA NOT TO BE DETAINED IN PBMP PER SECTION I.7.1.B.7 (LAND DISTURBANCE TO UNDEVELOPED LAND THAT WILL REMAIN UNDEVELOPED)
- AREA TO BE DETAINED IN FUTURE PBMP WITH THE REMAINDER OF THE REX RD DEVELOPMENT – TSB PROVIDED
- AREA WHERE WATER QUALITY IS ACHIEVED THROUGH RUNOFF REDUCTION (ROOF DRAINS & IMPERVIOUS SURFACES NOT PERMITTED ON BACK OF THESE LOTS)
- AREA TO BE DETAINED IN PUBLIC PBMP (EASTONVILLE ROAD)

NOTES:

1. EASTONVILLE ROAD AND THE WESTERN PORTION OF REX ROAD AT EASTONVILLE IS TO BE CONSTRUCTED CONCURRENTLY WITH THIS DEVELOPMENT. DRAINAGE FOR THESE AREAS WILL BE CAPTURED AND TREATED BY OFFSITE INFRASTRUCTURE AND PONDS AS DESCRIBED IN THE "FINAL DRAINAGE REPORT FOR EASTONVILLE ROAD FROM FUTURE REX ROAD TO LONDONDERRY DRIVE", BY HR GREEN, MARCH 2022. BASIN SHOWN ARE FOR REFERENCE ONLY.
