# **ENGINEER'S STATEMENT:**

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

# **PURPOSE**

This document is the Final Drainage report for the Solace Apartments. The purpose of this report is to:

- 1. Identify on-site and off-site drainage patterns.
- 2. Design storm water facilities to collect and convey storm runoff from the proposed development to appropriate discharge and/or detention locations.
- 3. Design water quality and detention facilities to control discharge release rates to below historic.
- 4. Demonstrate compliance with surrounding major drainage basin planning studies, master development drainage plans and flood insurance studies.

# GENERAL LOCATION AND DESCRIPTION

# Location

The proposed Solace Apartments, known as "Solace" from herein, is a parcel of land located in Section 7, Township 14 South, Range 65 West of the 6<sup>th</sup> Principal Meridian in El Paso County, Colorado. Solace is a 28.99 acre, urban, multifamily-development and is comprised of 16 apartment dwellings and associated infrastructure. Solace will be split into two phases for construction, lot 1 (phase 1) contains most of the site with lot 2 (phase 2) containing the northern most section of the development. See appendix A for a site plan exhibit showing the Solace phasing. Solace is bound by existing industrial developments to the North and vacant land to the West. Galley Road bounds the property to the south and existing light industrial businesses to the east. A vicinity map of the area is presented in Appendix A.

Currently, there is one major Drainageway that runs along Solace: Sand Creek (Center Tributary) Drainageway. This Drainageway was analyzed, both hydrologically and hydraulically, in the following reports:

- Sand Creek Drainage Basin Planning Study (KEC), January 1993.
- Flood Insurance Study– El Paso County, Colorado & Incorporated Areas Vol 7 of 8, December 2018.
- Sand Creek Center Tributary Channel Analysis Report for Solace Apartments (JR), June 2020
- LOMR- Case No. 05-08-0368P Federal Emergency Management Agency, May 23, 2007.

The impact of this Drainageway and planning studies on the proposed development will be discussed later in the report.

# **Description of Property**

Solace is currently unoccupied and undeveloped. The existing ground cover is sparse vegetation and open space, typical of a Colorado rolling range land condition. In general, Solace slopes from northwest to southeast.

Per an NRCS web soil survey of the area, Solace is made up of Type B soils with a very small percentage of Type A in the northwest corner of the property. This Type B soil is a Blendon sandy loam. This soil type has a moderate infiltration rate when thoroughly wet. It also consists of moderately deep or deep, moderately well drained or well drained soil. A soil survey map has been presented in Appendix A.

# Floodplain Statement

Based on the FEMA FIRM Maps number 08041C0751G and 08041C0752G, dated December 7, 2018, a portion of the existing drainageway lies within Zone AE and Zone X. Zone AE is defined as area subject to inundation by the 1-percent-annual-chance flood event. Zone X is defined as area outside the Special Flood Hazard Area (SFHA) and higher than the elevation of the 0.2-percent-annual-chance (or 500-year) flood. The FIRM Maps have been presented in Appendix A.

# Drainage Basins and Sub-Basins

# **Existing Major Basin Descriptions**

Solace lies within Sand Creek Drainage Basin based on the "Sand Creek Drainage Basin Planning Study" prepared by Kiowa Engineering in January 1993.

The Sand Creek Drainage Basin covers approximately 54 square miles in unincorporated El Paso County, CO. The Sand Creek Drainage Basin is tributary to Fountain Creek. In its existing condition, the basin is comprised of rolling rangeland with fair to good vegetative cover associated with Colorado's semi-arid climate. The natural Drainageway within the site limits is typically deep and narrow with a well-defined flow path in most areas. Anticipated land use for the basin includes multifamily residential and open space.

As part of its drainage research, JR Engineering reviewed the following drainage studies, reports and LOMRs:

- Sand Creek Drainage Basin Planning Study prepared by Kiowa Engineering Corporation in January 1993.
- Flood Insurance Study– El Paso County, Colorado, & Incorporated Areas Vol 7, December 2018.
- LOMR- Case No. 05-08-0368P Federal Emergency Management Agency, May 23, 2007.
- Sand Creek Center Tributary Channel Analysis Report for Solace Apartments (JR), June 2020

• Preliminary Drainage Report For Solace Apartments (JR), September 3, 2020

The Sand Creek Drainage Basin Planning Study was used to establish a stormwater management plan for the existing and future stormwater infrastructure needs within the Sand Creek Drainage Basin. Based on provided drainage maps and analysis, in its existing condition, the Sand Creek Center Tributary Drainageway contains a 100-year flow of 820-1100 cfs along Solace's east property line. The major Sand Creek Drainageway conveys the stormwater south along the eastern property line where it ultimately outfalls into the Fountain Creek. JR Engineering has performed checks on these flow rates to verify their validity. Basin calculations show that the 820-1100 cfs are still valid for this existing condition.

FEMA prepared a revised FIS for El Paso County Colorado, Volume 7 of 8, dated December 7, 2018. The effective floodplain for the site is shown on the FIRM 08041C0752G, revised to reflect LOMR, dated December 7, 2018. The study area of the FIS where the Sand Creek Drainageway crosses Galley Road, was found to overtop the culverts and flow onto the road. According to the FIS, this crossing has a 10% annual chance of flooding and is located in Zone AE of the FIRM. The *Sand Creek Drainage Basin LOMR* was executed on May 23, 2007. The LOMR revised the flood zone or the area south of Galley Road. See FIRM Map Panel 08041C0752G for limits of LOMR study and revised flood zones, presented in Appendix D.

# **Existing Sub-basin Drainage**

On-site, existing basin drainage patterns are generally from northwest to southeast by way of on-site swales. Existing on-site areas flow directly into the Sand Creek Drainageway. For this development, the existing onsite drainage has been broken into Basin A and Basin B. All existing basins that are offsite are represented by Basin OS. All basin delineation for the existing condition can be found in the existing drainage map located in Appendix E.

Basin A contains a total of 23.98 acres and is broken down into three sub-basins: A1, A2, and A3. This basin represents a majority of the proposed development and is comprised solely of undeveloped land. Flows from this basin are tributary to the Sand Creek Center Tributary Drainageway in the existing condition.

Sub-basin A1 ( $Q_5$ =3.1 cfs,  $Q_{100}$ =21.0 cfs) is 14.75 acres of undeveloped land, and represents the easternmost portion of the site that is adjacent to the Sand Creek Center Tributary Drainageway. Storm runoff from this sub-basin flows southeast, via overland flow, directly into the Sand Creek Center Tributary Drainageway at Design Point 1.

Sub-basin A2 ( $Q_5$ =0.9 cfs,  $Q_{100}$ =6.2 cfs) is 3.79 acres and represents the undeveloped land in the center of the development. Storm runoff from this sub-basin flows south (Design Point 2), via overland flow, directly onto Galley Road. From here, flows are conveyed east in the existing curb and gutter into the Sand Creek Center Tributary Drianageway.

Final Drainage Report Solace Apartments

Sub-basin A3 ( $Q_5=1.4$  cfs,  $Q_{100}=9.5$  cfs) is 5.44 Acres and represents the undeveloped land on the southern property line of the development. Storm runoff from this sub basin flows south (Design Point 3), via overland flow, directly onto Galley Road. From here, flows are conveyed east via the existing curb and gutter to the Sand Creek Center Tributary Drainageway.

Sub-basin B1 ( $Q_5$ =1.3 cfs,  $Q_{100}$ =9.0 cfs) Sub-basin B1 consists of 4.84 acres of undeveloped land that drains overland to the southwest (Design Point 4) and offsite where it ultimately outfalls into an existing retention pond on the northeast corner of the intersection of Galley Road and Powers Blvd. This basin represents the westernmost portion of the site.

Basin OS consists of Sub-Basins OS1-OS2 combining for a total of 26.66 acres. This basin represents the developed land located to the north of the proposed development's property line, where the site ties in to Paonia Street. These sub-basins are primarily light industrial sites, and become stormwater runoff is conveyed via overland flow and local roads. DP43 per proposed drainage plan and DP 5 per the existing drainage map. Revise accordingly Paonia Street and the existing

light industrial properties located just north of the site. In the existing condition, a portion of runoff from this sub-basin is captured by an existing concrete line channel along the north boundary of the site. The remaining runoff flows south onsite into the second drainageway where it ultimately outfalls into Sand Creek Center Tributary Drainageway at Galley Road. In the proposed condition, the runoff will be captured by the existing concrete channel and a proposed overflow channel at the north property line (Design Point 4 to prevent any offsite flows from entering the property. Once this existing flow has been captured, the runoff will be conveyed directly into the existing Sand Creek Center Tributary Drainageway at Design Point 1.1. Capturing this flow and draining it directly into the Sand Creek Center Tributary Drainageway will cause a slight change in the existing drainage patterns. A portion of this flow will no longer enter the existing second drainageway along the proposed Paonia Street alignment. Instead, this entire flow will enter the Sand Creek Center Tributary Drainageway near the north property line at Design Point 1.1. In order to accommodate this change, combination of rip rap and concrete lining shall be utilized in the overflow channel to prevent channel erosion. The Sand Creek Drainageway channel shall be modified to give the drainageway adequate capacity to contain the 100 year water surface and protect against erosive velocities in the channel. A typical cross section of the channel can also be found on the Channel Improvement Plans in Appendix E, for further detail of channel improvements see the JR Engineering Sand Creek Center Tributary Channel Improvements Letter. Channel analysis and weir calculations can be found in the Sand Creek - Center Tributary Channel Analysis Report for Solace Apartments, prepared by JR Engineering in May 2020.

Sub-basin OS2 ( $Q_5$ =21.3 cfs,  $Q_{100}$ =42.5 cfs) consists of the existing Ainsworth Street and the existing light industrial properties located just east of Ainsworth Street. Runoff from this sub-basin is captured by an existing swale along N. Powers Boulevard. The Solace Apartment site has a 5' berm that is proposed along the northern property line. This berm will prevent any drainage from this

DP44 in proposed map and DP 6 in existing drainage map. Revise accordingly.

DP 1.0-1.3 are on the existing

the proposed drainage map.

drainage map and 5.0-5.3 are in

Final Drainage Report Solace Apartments

basin to reach the site, and will utilize an onsite conveyance swale located at the toe of the berm to convey flow west to Design Point 5 per historic conditions.

The table on the drainage map indicates 862 cfs. Revise accordingly.

If a berm is proposed to keep offsite funoff from entering the site were taken directly from modeling date used by FEMA for the determination of the then how is it plain extents shown in FEMA FIRM 08041C0752G. These flows were used in the matching historice of the HEC-RAS model to show the 100-year capacity of the drainageway in the its Please clarify in the nation. Design Point 5.0 (Q<sub>100</sub>=760 cfs) represents the flows in the drainageway prior to narrative entering the site boundary. Design Point 5.1 (Q<sub>100</sub>=820 cfs) represents the flow in the drainageway after the flows from Basin OS1 enter the channel. Design Point 5.2 (Q<sub>100</sub>=1100 cfs) represents the area where flows enter the drainageway from developments and roads located to the east of the site. Design Point 5.3 (Q<sub>100</sub>=1100 cfs) represents the flows at the Galley Road crossing. This flow was used to analyze the overtopping of Galley Road and the existing weir structure on the south side of the road.

# Proposed Sub-basin Drainage

The proposed Solace basin delineation is as follows;

Sub-basin A1 ( $Q_5$ =1.7 cfs,  $Q_{100}$ =3.3 cfs) contains a total of 0.50 acres. This basin represents the north eastern portion of the proposed Phase 1 development. This basin is primarily multi-family residential and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured via a series of on-grade and sump inlets (Design Point 4). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-basin A2 ( $Q_5$ =1.6 cfs,  $Q_{100}$ =3.1 cfs) contains a total of 0.47 acres. This basin represents the eastern portion of the proposed along the Phase 1 development phase line. This basin is primarily multi-family residential and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured via a series of on-grade and sump inlets (Design Point 5). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-basin A3 ( $Q_5$ =1.6 cfs,  $Q_{100}$ =3.1 cfs) contains a total of 0.45 acres. This basin represents the center portion of the proposed development along the Phase 1 development phase line. This basin is primarily parking lot with garages and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an area inlet (Design Point 6). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Final Drainage Report Solace Apartments

Sub-basin A4 ( $Q_5=0.6$  cfs,  $Q_{100}=1.0$  cfs) contains a total of 0.15 acres. This basin represents a northern half of a proposed building and is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 2.1). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-basin A5 ( $Q_5$ =0.5 cfs,  $Q_{100}$ =1.0 cfs) contains a total of 0.13 acres. This basin represents a northern half of a proposed building and is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 2.3). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Please revise your Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-basin A6 ( $Q_5=3.2$  cfs,  $Q_{100}=7.0$  cfs) contains a total of 1.51 acres. This basin central portion of the proposed Phase 1 development. This basin is primarily/mult 41% impervious. If this is and minor open space. Stormwater runoff from this basin is conveyed via private captured by a sump inlet (Design Point 10). Runoff from this sub-basin ultimately paving. proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

description as the drainage map indicates correct then the basin wouldn't be primarily

Sub-basin A7 ( $Q_5=1.0$  cfs,  $Q_{100}=2.4$  cfs) contains a total of 0.58 acres. This basin represents the northwestern portion of Paonia Street. This basin is primarily road paving and minor open space. Stormwater runoff from this basin is conveyed via curb & gutter, where it is captured by an on-grade inlet (Design Point 11). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2. this basin appears to be split between paving and open space.

Sub-basin A8 ( $Q_5$ =0.8 cfs,  $Q_{100}$ =1.7 cfs) contains a total of 0.30 acres. This basin represents the northeastern portion of Paonia Street. This basin is primarily road paving and minor open space. Stormwater runoff from this basin is conveyed via curb & gutter, where it is captured by an on-grade inlet (Design Point 12). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-basin A9 ( $Q_5$ =0.4 cfs,  $Q_{100}$ =2.9 cfs) contains a total of 1.33 acres. This basin represents the northeastern portion of the development. This basin is primarily open space and Pond A. Stormwater runoff from this basin is conveyed via overland flow, where it is captured by Pond A (Design Point 6A). From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

— western

Final Drainage Report Solace Apartments

0.37 is indicated in the drainage map. Revise accordingly so that they match.

Sub-basin B1 ( $Q_5=1.6$  cfs,  $Q_{100}=2.8$  cfs) contains a total of 0.35 acres. This basin represents the center portion of the proposed Phase 1 development along the phase line. This basin is primarily parking lot and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an on-grade inlet (Design Point 14). Runoff from this sub-basin politicated in outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 14.

Sub-basin B2 ( $Q_5$ =1.4 cfs,  $Q_{100}$ =2.7 cfs) contains a total of 0.37 ccres. This basin represents a small western portion of the proposed Phase 1 development along the phase line. This basin is primarily parking lot and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an area inlet (Design Point 15). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-basin B3 ( $Q_5$ =1.2 cfs,  $Q_{100}$ =2.4 cfs) contains a total of 0.35 acres. This basin represents the northwestern portion of the proposed Phase 1 development along the phase line. This basin is primarily parking lot and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an area inlet (Design Point 16). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-basin B4 ( $Q_5$ =0.1 cfs,  $Q_{100}$ =0.2 cfs) contains a total of 0.03 acres. This basin represents a western portion of a proposed building and is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 3.2). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B5 ( $Q_5$ =1.0 cfs,  $Q_{100}$ =1.8 cfs) contains a total of 0.26 acres. This basin represents a eastern portion of a proposed building and a small western portion of an adjacent building. This sub-basin is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 3.3). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B6 ( $Q_5$ =1.9 cfs,  $Q_{100}$ =4.1 cfs) contains a total of 0.73 acres. This basin represents the western drive aisle of the proposed Phase 1 development. This basin is primarily parking lot with garages and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an area inlet (Design Point 19). Runoff from this sub-basin ultimately

outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B7 ( $Q_5$ =0.8 cfs,  $Q_{100}$ =2.0 cfs) contains a total of 0.47 acres. This basin represents a proposed building and open space in the center of the development. This sub-basin is comprised primarily of proposed roof and open space. Stormwater runoff from this basin is captured by proposed roof and area drains. Runoff is then conveyed to the proposed storm sewer infrastructure (Design Point 3.5). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B8 ( $Q_5$ =0.9 cfs,  $Q_{100}$ =1.7 cfs) contains a total of 0.25 acres. This basin represents an eastern portion of a proposed building and a small western portion of an adjacent building. This sub-basin is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 3.6). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B9 ( $Q_5$ =0.7 cfs,  $Q_{100}$ =1.3 cfs) contains a total of 0.19 acres. This basin represents a eastern portion of a proposed building and is comprised solely of proposed roof. Stormwater runoff from this basin is captured by proposed roof drains and conveyed to the proposed storm sewer infrastructure (Design Point 3.7). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B10 ( $Q_5$ =1.0 cfs,  $Q_{100}$ =2.2 cfs) contains a total of 0.38 acres. This basin represents the clubhouse parking area and open space. This basin is primarily parking lot with open space. Stormwater runoff from this basin is conveyed curb and gutter, where it is captured by an on-grade inlet (Design Point 23). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B11 ( $Q_5$ =1.0 cfs,  $Q_{100}$ =2.6 cfs) contains a total of 0.74 acres. This basin represents a proposed building and open space in the center of the development. This sub-basin is comprised primarily of proposed roof and open space. Stormwater runoff from this basin is captured by proposed roof and area drains. Runoff is then conveyed to the proposed storm sewer infrastructure (Design Point 4.0). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B12 ( $Q_5$ =2.7 cfs,  $Q_{100}$ =5.6 cfs) contains a total of 1.08 acres. This basin represents the drive aisle just west of the clubhouse of the Phase 1 development. This basin is primarily parking lot with garages and minor open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by a sump inlet (Design Point 27). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B13 ( $Q_5$ =1.5 cfs,  $Q_{100}$ =3.2 cfs) contains a total of 0.58 acres. This basin represents the drive aisle and open space in the center of Basin B. This basin is primarily parking lot with open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by an area inlet (Design Point 25). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B14 ( $Q_5$ =1.3 cfs,  $Q_{100}$ =2.6 cfs) contains a total of 0.49 acres. This basin represents the western portion of the clubhouse and associated parking and drive aisle. This basin is primarily roof, parking lot, and open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by a sump inlet (Design Point 28). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B15 ( $Q_5$ =0.9 cfs,  $Q_{100}$ =1.8 cfs) contains a total of 0.27 acres. This basin represents the eastern portion of the clubhouse and associated parking and drive aisle. This basin is primarily roof, parking lot, and open space. Stormwater runoff from this basin is conveyed via private streets, where it is captured by a sump inlet (Design Point 30). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B16 ( $Q_5$ =0.4 cfs,  $Q_{100}$ =0.8 cfs) contains a total of 0.15 acres. This basin represents a southern portion of a proposed building and a small open space area. Stormwater runoff from this basin is captured by proposed roof drains and an area inlet. Runoff is then conveyed to the proposed storm sewer infrastructure (Design Point 4.3). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Sub-basin B17 ( $Q_5$ =1.8 cfs,  $Q_{100}$ =4.5 cfs) contains a total of 0.99 acres. This basin represents the northwestern portion of Paonia Street within Basin B. This basin is primarily road paving and open space. Stormwater runoff from this basin is conveyed via curb & gutter, where it is captured by an on-grade inlet (Design Point 31). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Final Drainage Report Solace Apartments

Sub-basin B18 ( $Q_5$ =1.1 cfs,  $Q_{100}$ =2.4 cfs) contains a total of 0.47 acres. This basin represents the northeastern portion of Paonia Street within Basin B. This basin is primarily road paving and minor open space. Stormwater runoff from this basin is conveyed via curb & gutter, where it is captured by an on-grade inlet (Design Point 32). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-basin B19 ( $Q_5$ =2.1 cfs,  $Q_{100}$ =5.7 cfs) contains a total of 1.92 acres. This basin represents the southern half of the clubhouse and patio area, along with the southwestern portion of Paonia Street within Basin B. This basin is primarily road paving, open space, and roof. Stormwater runoff from this basin is conveyed via overland flow and curb & gutter, where it is captured by an on-grade inlet (Design Point 33). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-basin B20 ( $Q_5$ =0.6 cfs,  $Q_{100}$ =1.4 cfs) contains a total of 0.26 acres. This basin represents the southeastern portion of Paonia Street within Basin B. This basin is primarily road paving and minor open space. Stormwater runoff from this basin is conveyed via curb & gutter, where it is captured by an on-grade inlet (Design Point 34). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-basin B21 ( $Q_5$ =0.5 cfs,  $Q_{100}$ =3.6 cfs) contains a total of 2.46 acres. This basin represents the northeastern portion of the development. This basin is primarily open space and Pond B. Stormwater runoff from this basin is conveyed via overland flow, where it is captured by Pond B (Design Point 37). From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3

Sub-Basin C1 ( $Q_5$ =0.8 cfs,  $Q_{100}$ =2.2 cfs) contains a total of 0.74 acres. This basin represents the southernmost portion of the proposed development. This basin is primarily proposed roadway and minor open space. Stormwater runoff from this basin is conveyed via proposed curb and gutter to a proposed crosspan (Design Point 40) at the intersection of Paonia Street and Galley Road. Runoff is then conveyed east by the existing curb and gutter in Galley Road to the Sand Creek Center Tributary Drainageway, per historic conditions.

Sub-Basin C2 ( $Q_5$ =0.3 cfs,  $Q_{100}$ =2.3 cfs) contains a total of 0.80 acres. This basin represents the westernmost portion of the proposed Phase 1 development. This basin is solely comprised of open space. Stormwater runoff from this basin follows historic drainage patterns and sheet flows offsite (Design Point 41).

DP41 was not found on the drainage plan. pLease provide

Sub-Basin D1 ( $Q_5$ =0.5 cfs,  $Q_{100}$ =1.9 cfs) contains a total of 0.40 acres and represents the northern most portion of Paonia Street. This basin is comprised primarily of proposed roadway and open

space. Runoff from this basin is conveyed via emergency overflow channel to the Sand Creek Center Tributary Drainageway (Design Point 42) per historic conditions. See the *Sand Creek-Center Tributary Channel Analysis Report for Solace Apartments*, prepared by JR Engineering October 15<sup>th</sup>, 2020 for overflow channel details.

Please show this DP on the plan

Sub-Basin F1 ( $Q_5$ =2.2 cfs,  $Q_{100}$ =4.7 cfs) contains a total of 0.92 acres and represents the northwestern most portion of the Pond A tributary. This basin is comprised primarily of future parking areas, open space, and a future building. Runoff from this basin will be captured by future storm sewer infrastructure (Design Point 1). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-Basin F2 ( $Q_5$ =0.5 cfs,  $Q_{100}$ =1.0 cfs) contains a total of 0.14 acres and represents the future parking spaces along the drive aisle of the northernmost site access location. This basin is comprised solely of future parking. Runoff from this basin will be captured by the existing storm sewer infrastructure (Design Point 4). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-Basin F3 ( $Q_5$ =2.1 cfs,  $Q_{100}$ =4.4 cfs) contains a total of 0.73 acres and represents the eastern portion of the future parking spaces along the north property line of the site. This basin is comprised primarily of future parking and open space. Runoff from this basin will be captured by future storm sewer infrastructure (Design Point 3). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.2.

Sub-Basin F4 ( $Q_5$ =0.8 cfs,  $Q_{100}$ =2.3. cfs) contains a total of 0.68 acres and represents a portion of the Phase 2 improvements located in the center of the site. This basin is comprised primarily of future open space and a future building. Runoff from this basin will be captured by future storm sewer infrastructure (Design Point 7). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond A. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Prainageway below historic rates at Design Point 5.2.

Sub-Basin F5 ( $Q_5$ =5.7 cfs,  $Q_{100}$ =14.7 cfs) contains a total of 3.88 acres and represents the western portion of the future parking spaces along the north property line of the site, the future buildings on the northwest portion of the site, and the open space associated with these improvements. This basin is comprised primarily of future parking, future buildings, and open space. Runoff from this basin will be captured by future storm sewer infrastructure (Design Point 3.0). Runoff from this sub-basin ultimately outfalls into the proposed onsite Pond B. From the detention pond, the treated flows are then released directly into the Sand Creek Center Tributary Drainageway below historic rates at Design Point 5.3.

Per the drainage map, the runoff from these basins flow onto B and A basins. Be sure to account for the runoff accordingly and discuss this in the 11 narrative.

Final Drainage Report Solace Apartments

Sub-Basin F6 ( $Q_5$ =0.2 cfs,  $Q_{100}$ =1.0 cfs) contains a total of 0.35 acres. This basin represents the westernmost portion of the proposed Phase 1 development. This basin is solely comprised of open space. Stormwater runoff from this basin follows historic drainage patterns and sheet flows offsite (Design Point 41).

Sub-Basin F7 ( $Q_5$ =0.2 cfs,  $Q_{100}$ =1.5 cfs) contains a total of 0.53 acres. This basin represents the westernmost portion of the proposed Phase 1 development. This basin is solely comprised of open space. Stormwater runoff from this basin follows historic drainage patterns and sheet flows offsite (Design Point 41).

All calculations and stormwater routing can be found in Appendix B.

# Existing Major Drainageway – Sand Creek

The Sand Creek channel conveys an existing 820-1100 cfs along the sites eastern property line. In order to maintain the drainage patterns on the site, 2 detention ponds have been proposed to release developed flows, at or below historic rates. Based on the results of the Sand Creek - Center Tributary Channel Analysis Report for Solace Apartments, prepared by JR Engineering in May 2020, the existing channel sections will need protection from erosion as a result of the Solace development. This report analyzed the existing conditions to ensure that the Sand Creek channel is stable and velocities do not exceed allowable limits. Based on the results of this report, it was found that the channel in its current conditions is inadequate, as velocities in the channel exceeded allowable limits and overtopping occurs at the Galley Road. The report recommended several improvements to ensure channel stability, including channel lining such as riprap or concrete to protect from the high velocities, widening the channel to increase capacity and decrease velocity & adding check/ drop structures to reduce velocities. The report also indicates that improvements will be necessary to address the overtopping at the Galley Road crossing. An existing overflow structure is currently in place to convey any overtopping flows, but does not have adequate capacity. Analysis of the proposed improvements to the channel can be found in the Sand Creek Center Tributary Channel Improvements Letter. Channel hydraulic analysis sheets are presented in Appendix B of the aforementioned report and Channel Plans for the proposed improvements can be found in Appendix E. A drainage map for the Solace site can be found in Appendix E.

# DRAINAGE DESIGN CRITERIA

# Development Criteria Reference

Storm drainage analysis and design criteria for the project were taken from the "City of Colorado Spring/El Paso County Drainage Criteria Manual" Volumes 1 and 2 (EPCDCM), dated October 12, 1994, the "Urban Storm Drainage Criteria Manual" Volumes 1 - 3 (USDCM) and Chapter 6 and Section 3.2.1 of Chapter 13 of the "Colorado Springs Drainage Criteria Manual (CCSDCM), dated May 2014, as adopted by El Paso County.

# Hydrologic Criteria

All hydrologic data was obtained from the "El Paso Drainage Criteria Manual" Volumes 1 and 2, and the "Urban Drainage and Flood Control District Urban Storm Drainage Criteria Manual" Volumes 1, 2, and 3. Onsite drainage improvements were designed based on the 5 year (minor) storm event and the 100-year (major) storm event. Rational Method calculations were prepared, in accordance with Chapter 6, Section 3.0 of the EPCDCM, for the sub-basins that directly impact the sizing of the proposed storm sewer outfalls. Rational method calculations are presented in Appendix B.

Mile High Flood District's MHFD-Detention, Version 4.03 workbook was used for pond sizing. Required detention volumes and allowable release rates were designed per USDCM and CCS/EPCDCM. Pond sizing spreadsheets are presented in Appendix C.

# Hydraulic Criteria

GeoHECRAS was used as the primary analysis method for the site in the *Sand Creek – Center Tributary Channel Analysis Report for Solace Apartments* and the *Sand Creek Center Tributary Channel Improvements Letter*. GeoHECRAS was used to model existing flows within the Sand Creek Drainageway in its existing and proposed conditions. This model was used to verify flood plains and analyze any overtopping that may occur within the project site. The 100-year water surface profiles for the model were analyzed form the north property line of the site to the area just south of the Galley Road Crossing.

Using StormCAD V8i, a modeling program for stormwater drainage, the hydraulic grade lines and energy grade lines were determined for the storm sewer network. Manhole and pipe losses for the model were obtained from the *Urban Storm Drainage Criteria Manual*, Mile High Flood District. Model results for the project site have been included in Appendix B.

# Drainage Facility Design

# General Concept

The proposed stormwater conveyance system was designed to convey the developed Solace runoff to two proposed full spectrum water quality and detention ponds via private storm sewer. The proposed pond bottoms are approximately 1.5 feet higher than the existing channel bottom. This allows adequate drainage from the ponds to outfall into the channel without the need for backflow prevention measures. The proposed ponds were also designed to release at less than historic rates to minimize adverse impacts downstream. Treated water will outfall directly into the Sand Creek Drainageway, where it will eventually outfall into Fountain Creek. The current site will be constructed in 2 phases. Both of the proposed ponds will be designed and constructed with the Phase 1 improvements along with the storm sewer within Paonia Street. Proposed drainage maps are presented in Appendix E, showing locations of the pond and channel outfall locations and improvements.

# Specific Details

## Four Step Process to Minimize Adverse Impacts of Urbanization

In accordance with the El Paso County Drainage Criteria Manual Volume 2, this site has implemented the four step process to minimize adverse impacts of urbanization. The four step process includes reducing runoff volumes, stabilizing drainageways, treating the water quality capture volume (WQCV), and consider the need for Industrial Commercial BMP's.

Step 1, Reducing Runoff Volumes: The development of the project site is a proposed multi-family development with open spaces and lawn areas interspersed within the development which helps disconnect impervious areas and reduce runoff volumes.

Step 2, Stabilize Drainageways: Solace utilizes private storm sewer throughout the project site. This private storm sewer directs the on-site development flows to the multiple detention ponds within the project that release at or below historic rates into the Sand Creek Drainageway. Sand Creek (Center Tributary) Drainageway is stabilized downstream of the development, however additional stabilization measures shall be implemented to prevent any negative impacts to the drainageway. Drop structures have been added in order to reduce the slope of the channel. The channel shall also utilize concrete paving to avoid any erosion of the channel along the site.

Step 3, Provide WQCV: Runoff from this development is treated through capture and slow release of the WQCV in multiple full spectrum water quality and detention ponds that are designed per current El Paso County drainage criteria for Extended Detention Basins (EDB). These ponds will facilitate pollutant removal for the site, while also reducing peak stormwater rates into the Sand Creek Drainageway.

Step 4, Consider the need for Industrial and Commercial BMP's: No industrial or commercial uses are proposed within this development. However, a site specific storm water quality and erosion control plan and narrative have been prepared in conjunction with this final drainage report. Site specific temporary source control BMPs as well as permanent BMP's are detailed in this plan and narrative to protect receiving waters.

# Water Quality

In accordance with Section 13.3.2.1 of the CCS/EPCDCM, full spectrum water quality and detention are provided for all developed basins. Outlet structure release rates shall be limited to less than historic rates to minimize adverse impacts to downstream stormwater facilities. Complete pond and outlet structure designs can be found in the appendix C. See Table 3 below for the proposed pond parameters.

In regards to stormwater quality, Per ECM appendix I, 100% of the applicable development site must be captured. There are basins that are not being captured by the proposed ponds such as Basins F6, F7, C2, C1 (please include any others i have missed). Please explain in the narrative how water quality is being addressed for these basins. If an exclusion such as I.7.1.B.7 (land disturbance to undeveloped land that will remain undeveloped) and/or the exclusion allowed per I.7.1.C.1 is being utilized please state it in the your report.

Table 3: Pond Summary

Tributary Sub-Basin	Pond Name	Tributary Acres	Comp. % Imperv.	WQ Volume (ac-ft)	Total Detention Volume (ac-ft)	Provided Volume (ac-ft)
Α	POND A	7.89	49.43	0.135	0.732	1.292
В	POND B	17.50	40.6	0.264	1.412	2.659

### Erosion Control Plan

The El Paso County Drainage Criteria Manual specifies a estimate must be submitted with each Final Drainage Rephas been submitted with this report.

Please provide exact fees as this is a final drainage report that has been submitted with the final plat application. Also please provide the costs of the channel improvements indicated in the DBPS.

## **Operation & Maintenance**

In order to ensure the function and effectiveness of the stormwater infrastructure, maintenance activities such as inspection, routine maintenance, restorative maintenance, rehabilitation and repair, are required. All proposed drainage structures within the any platted County ROW will be owned and maintained by El Paso County. All proposed drainage structures within the property or tracts will be owned and maintained by the property owner. Vegetation in the natural and improved portions of Sand Creek Drainageway is the responsibility of El Paso County. This includes all mowing, seeding and weed control activities. An Inspection & Maintenance Plan has been submitted concurrently with this report that details the required maintenance activities and intervals to ensure proper function of all stormwater infrastructure in the future. The full spectrum detention ponds will be owned & maintained by the property owner.

## Drainage & Bridge Fees

The site lies within the Sand Creek Drainage Basin. A conceptual estimate is presented below, exact fees to be determined at time of final plat.

	202	0 DRAINAGE AN	D BRIDGE FEES – So	olace Apartm	nents
Imperv Acres		Drainage Fee (Per Imp. Acre)	Bridge Fee (Per Imp. Acre)	Solace Drainage Fee	Solace Bridge Fee
12.2	6	\$19,698	\$8,057	\$241,498	\$98,779

The Solace development will receive full credit for any channel improvements indicated in the Sand Creek DBPS. From the *Sand Creek (Center Tributary) Channel Analysis*, *by* JR Engineering, the preliminary estimated channel improvements will cost \$554,950. Per the Sand Creek Drainage Basin Planning Study, the Center Tributary has proposed crossing improvements at Terminal Avenue and Omaha Boulevard. Both of these crossing were estimated to be \$72,000. Crossing improvements were also proposed at W. Frontage Road for \$106,200, US 24 Bypass for \$211,500, E. Frontage Road for \$84,600, Bijou Street for \$84,600, Platte Avenue for \$169,200, & Galley Road for \$90,000. These estimates provide costs for the storm sewer required to replace the existing infrastructure at

This was the estimated cost in the drainage reports submitted with the preliminary plan. Please verify if this is the actual estimated cost now that you have designed the proposed conditions. Revise as/if needed.

# Final Drainage Report Solace Apartments

these locations. The Galley Road crossing estimate reflects upsizing the existing culverts to 5'x 8' concrete box structures. These estimates can be found in Appendix D. Based on these estimated costs, it is presumed that no drainage basin fees will be necessary.

Please clarify in the narrative that the

Please clarify in the narrative that the below estimates do not include the channel improvements.

# Construction Cost Opinion

El Paso County specifies a cost estimate of proposed drainage facility improvements be submitted with the Final Drainage Report. A construction cost opinion for both public and private drainage improvements have been provided below.

PUBLIC DRAINAGE FACILITIES				
Item	Quantity	Unit	Unit Price	Extended Cost
18" RCP	93	LF	\$65.00	\$6,045.00

	10% Eng. A	And Conting	gency	\$95,246.10
			Grand Total	\$1,047,707.10

# **SUMMARY**

The proposed development remains consistent with pre-development drainage conditions with the construction of the recommended drainage improvements, including storm sewer, detention ponds and existing drainageways. The proposed development will not adversely affect the offsite major drainageways or surrounding development. In order to safely convey flows through the Sand Creek Drainageway, channel improvements will be necessary to ensure channel stability and prevent channel degradation. Concrete paving will be required to armor the channel and stabilize the slopes during a major storm event. These improvements will ensure the drainageway functions properly as

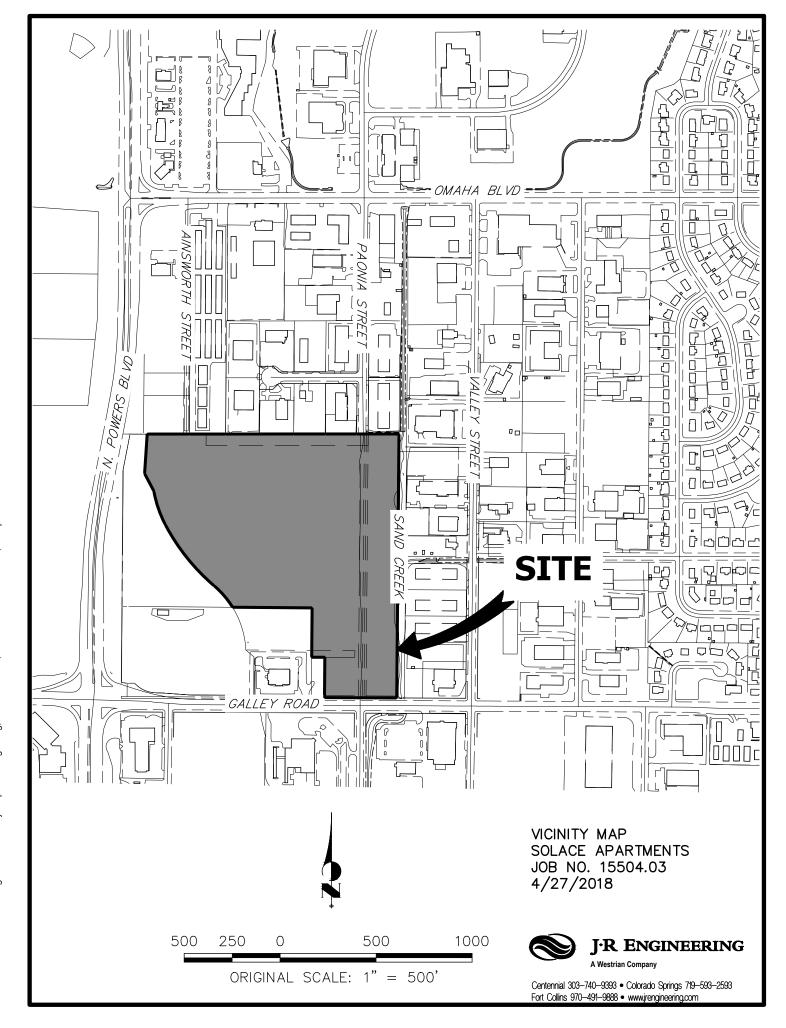

Final Drainage Report Solace Apartments

a primary drainage conveyance system for the Solace Apartments. These improvements to the Sand Creek Center Tributary Drainageway are discussed in the *Sand Creek Center Tributary Channel Improvements Letter*. This report meets the latest El Paso County Drainage Criteria requirements for this site.

# **Description**

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

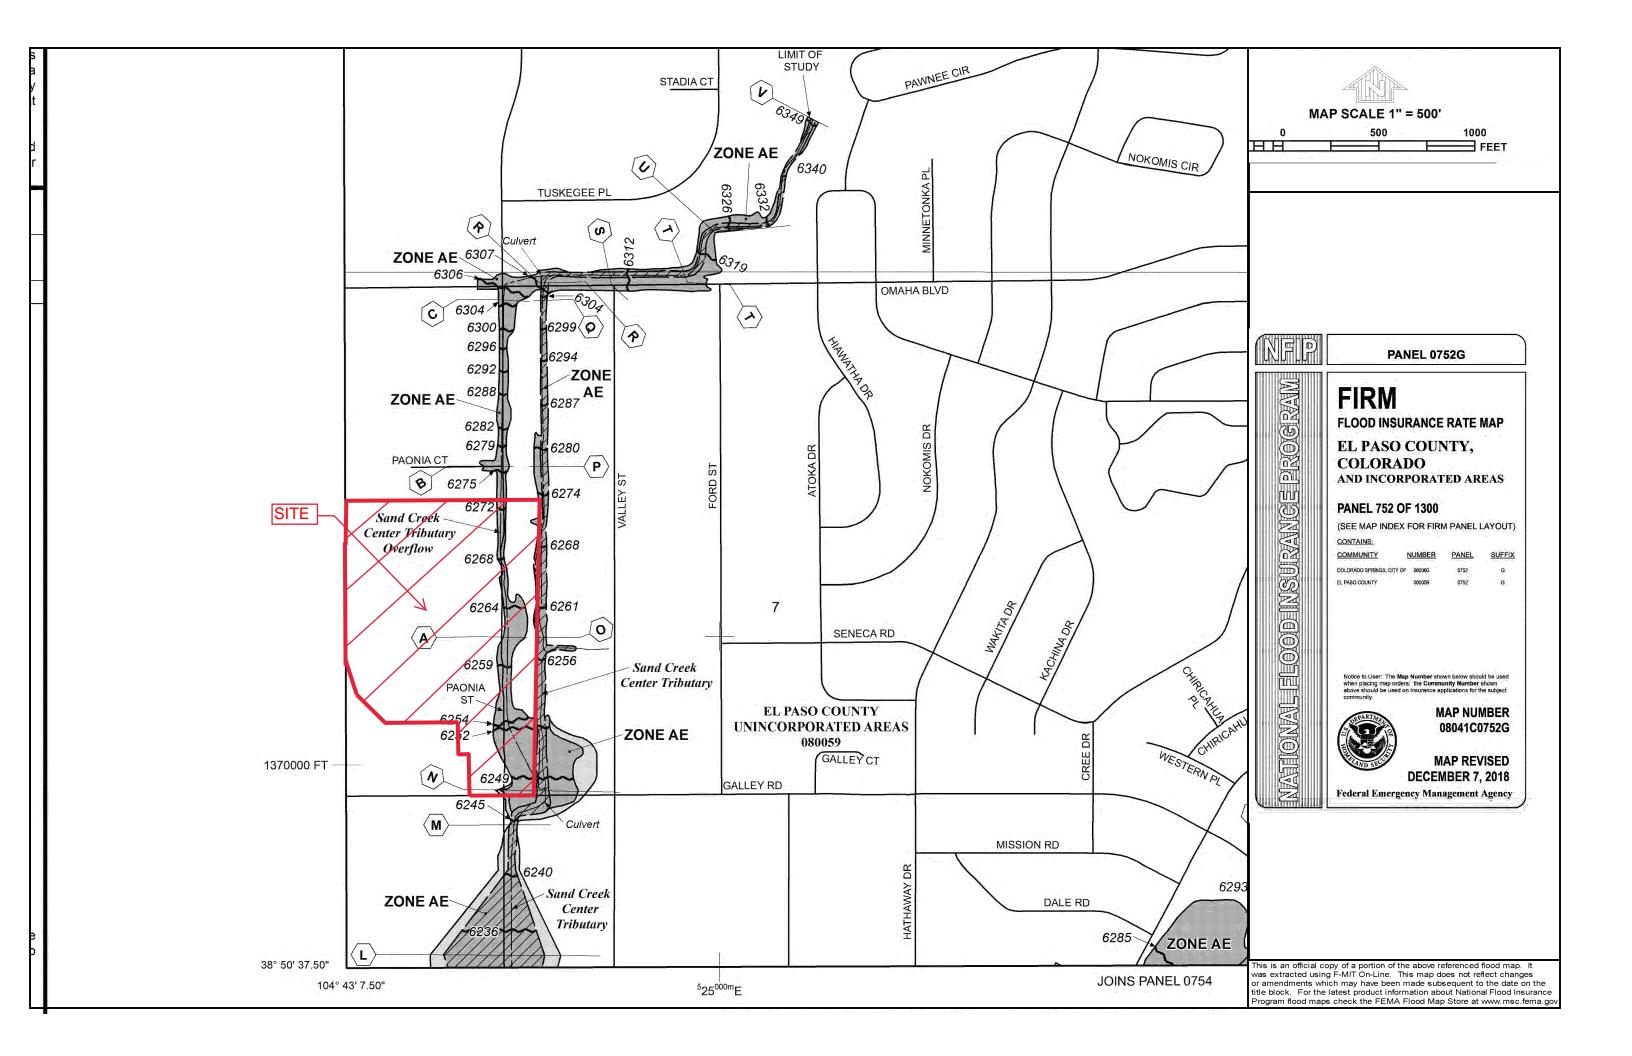

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Tie-break Rule: Higher

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services NOAA, N/NGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at http://www.ngs.noaa.gov/.

**Base Map** information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, City of Fountain, Bureau of Land Management, National Oceanic and Atmospheric Administration, United States Geological Survey, and Anderson Consulting Engineers, Inc. These data are current as of 2006.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located

Contact **FEMA Map Service Center** (MSC) via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at http://www.msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

# El Paso County Vertical Datum Offset Table Vertical Flooding Source

REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION

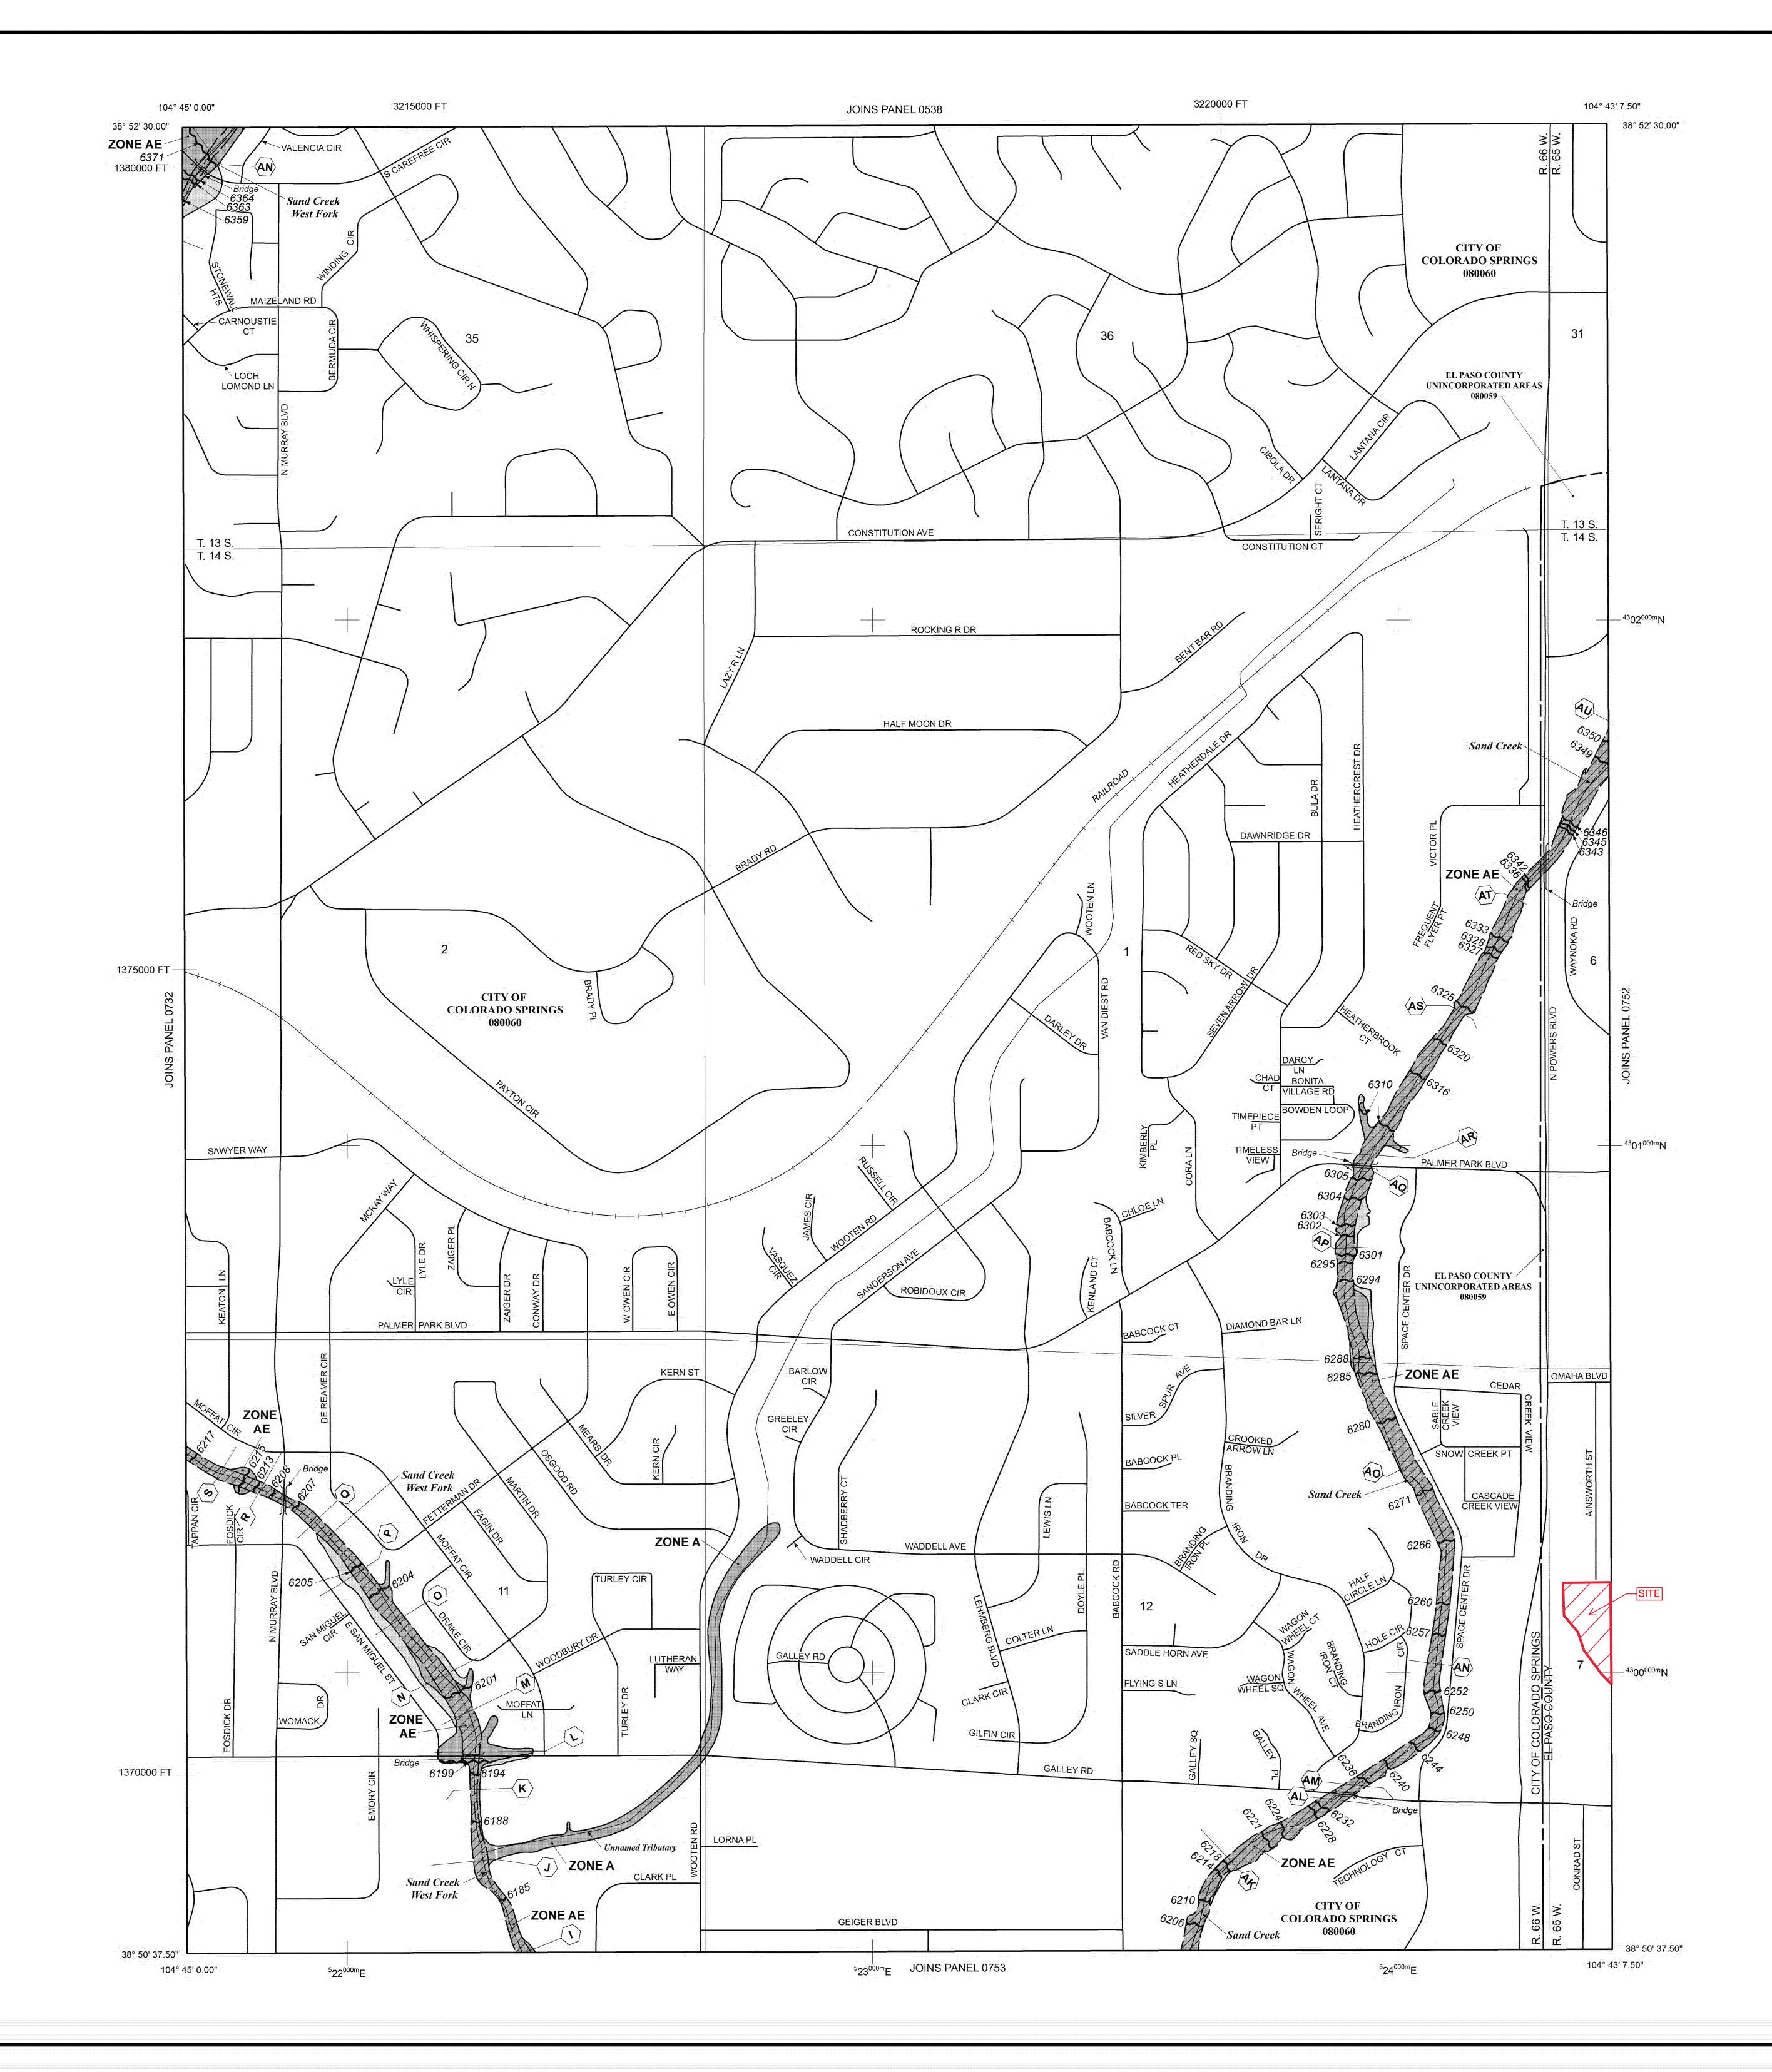

**Panel Location Map** 

**Vertical Datum** 

This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.

# LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

Elevation is the water-surface elevation of the 1% annual chance flood.

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood

IE A No Base Flood Elevations determined.

ZONE AE
Base Flood Elevations determined.

Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
 ZONE AR Special Flood Hazard Area Formerly protected from the 1% annual chance

indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.

ZONE A99 Area to be protected from 1% annual chance flood by a Federal flood

flood by a flood control system that was subsequently decertified. Zone AR

protection system under construction; no Base Flood Elevations determined.

V Coastal flood zone with velocity hazard (wave action); no Base Flood

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

00000000000

Areas determined to be outside the 0.2% annual chance floodplain.

Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

Floodplain boundaryFloodway boundaryZone D Boundary

Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

CBRS and OPA boundary

#### NOTES:

Where:

NOTES:  $t_c = t_l + t_t$  Equation 6-2  $t_i = \frac{0.395(1.1 - C_5)\sqrt{L}}{S_e^{0.33}}$  Equation 6-3 Where:  $t_c = \text{computed time of concentration (minutes)}$   $t_i = \text{overland (initial) flow time (minutes)}$   $t_i = \text{overland (initial) flow time (minutes)}$   $t_i = \text{channelized flow time (minutes)}$   $t_i = \text{channelized flow time (minutes)}$   $t_i = \frac{L_t}{60K\sqrt{S_e}} = \frac{L_t}{60V_t}$  Equation 6-4  $t_i = (26-17i) + \frac{L_t}{60(4i+9)\sqrt{S_e}}$  Equation 6-5

Table 6-2. NRCS Conveyance factors, K

Type of Land Surface	Conveyance Factor, K
Heavy meadow	2.5
Tillage/field	5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

 $t_t$  = channelized flow time (travel time, min)  $L_t$  = waterway length (ft)  $S_0$  = waterway slope (ft/ft)  $V_t$  = travel time velocity (ft/sec) =  $K \sqrt{S_0}$ K = NRCS conveyance factor (see Table 6-2).

 $t_c$  = minimum time of concentration for first design point when less than  $t_c$  from Equation 6-1.  $L_t$  = length of channelized flow path (ft)

i = imperviousness (expressed as a decimal)  $S_t$  = slope of the channelized flow path (ft/ft).

Use a minimum  $t_c$  value of 5 minutes for urbanized areas and a minimum  $t_c$  value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

## NOTES:

Where:

Where:

 $t_c = t_i + t_t$ 

 $t_c$  = computed time of concentration (minutes)

 $t_i$  = overland (initial) flow time (minutes)

 $t_t$  = channelized flow time (travel time, min)

 $t_l$  = chalmenzed now time (awer time, min)  $L_r$  = waterway length (ft)  $S_0$  = waterway slope (ft/ft)  $V_t$  = travel time velocity (ft/sec) = K $\sqrt{S_0}$  K = NRCS conveyance factor (see Table 6-2).

 $t_t$  = channelized flow time (minutes).

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t}$$

Equation 6-2

Equation 6-4  $t = (26 - 17i) + \frac{L_t}{60(14i + 9)\sqrt{S_t}}$ 

 $t_i = \frac{0.395(1.1 - C_5)\sqrt{L_i}}{S_o^{0.33}}$ 

 $t_i$  = overland (initial) flow time (minutes)  $C_3$  = runoff coefficient for 5-year frequency (from Table 6-4)  $L_j$  = length of overland flow (ft)  $C_3$  = average slope along the overland flow path (ft/ft).

Equation 6-5

Equation 6-3

 $t_c$  = minimum time of concentration for first design point when less than  $t_c$  from Equation 6-1.  $L_t =$ length of channelized flow path (ft)

i = imperviousness (expressed as a decimal)  $S_t$  = slope of the channelized flow path (ft/ft).

Use a minimum  $t_c$  value of 5 minutes for urbanized areas and a minimum  $t_c$  value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of

#### Table 6-2. NRCS Conveyance factors, K

Type of Land Surface	Conveyance Factor, K
Heavy meadow	2.5
Tillage/field	5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

X:\2510000/all\2517400\StormCAD\Solace.stsw

Please revise to include design point 16 and 17 to pipe summary sheets.

Please remove inconsistencies between drainage report and construction drawings regarding pipe slopes.

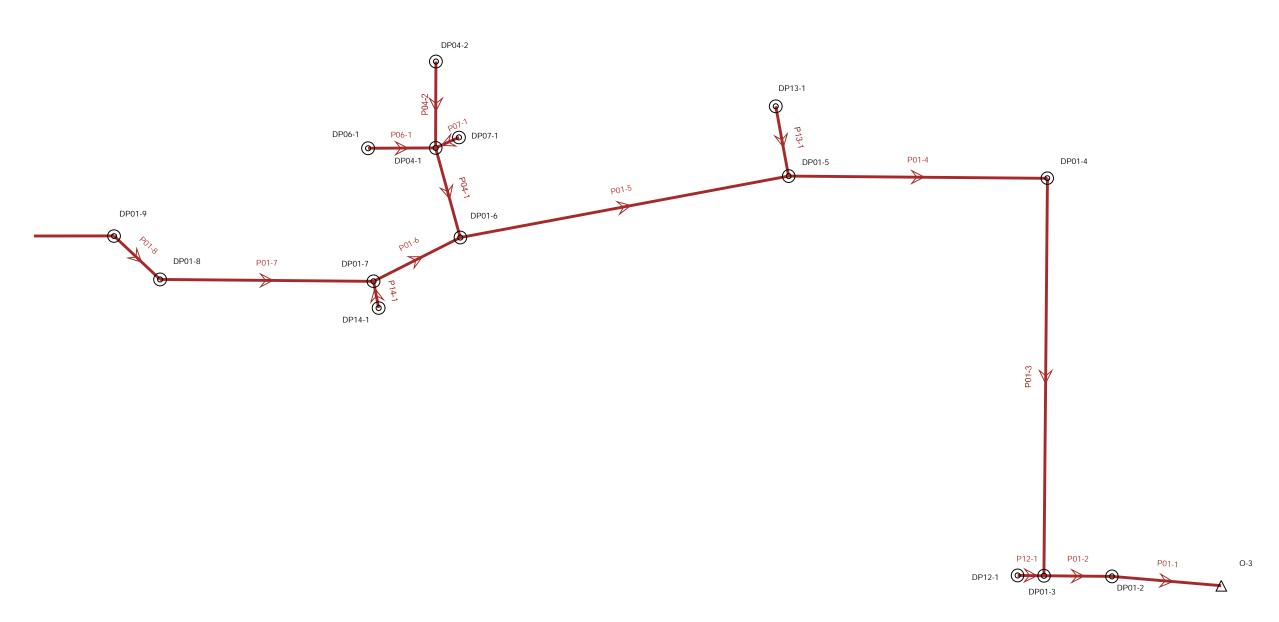

Please update to show velocity in pipe.

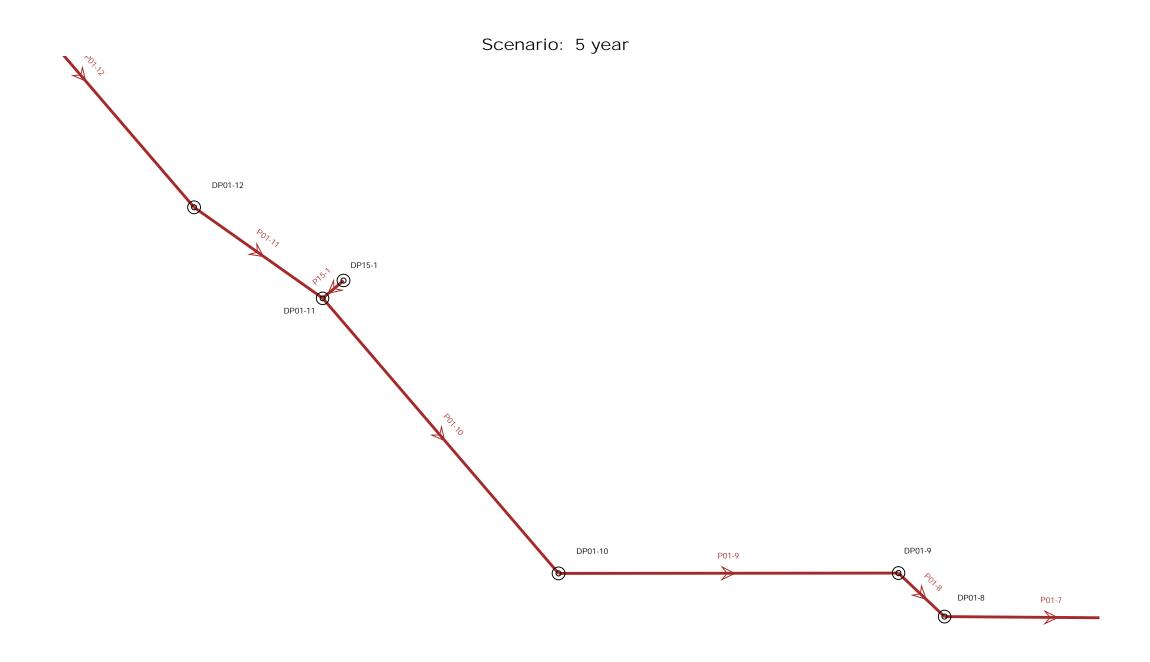

Scenario: 100 year Current Time Step: 0.000 h Conduit FlexTable: Combined Pipe/Node Report

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.03 (May 2020)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

The user should graphically co

MHFD-Detention, Version 4.03 (May 2020)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically. The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

For best results, include the stages of all grade slope changes (e.g. ISV and Floor) from the S-A-V table on Sheet 'Basin'.

Also include the inverts of all outlets (e.g. vertical orifice, overflow grate, and spillway, where applicable).

#### JAN 3 0 2007

**CERTIFIED MAIL** RETURN RECEIPT REQUESTED

The Honorable Sallie Clark Chair, El Paso County **Board of Commissioners** 27 East Vermijo Avenue Colorado Springs, CO 80903 IN REPLY REFER TO:

Case No.: 05-08-0368P

Community Name: El Paso County, CO

Community No.: 080059

Effective Date of MAY 2 3 2007

#### Dear Ms. Clark:

The Flood Insurance Study report and Flood Insurance Rate Map for your community have been revised by this Letter of Map Revision (LOMR). Please use the enclosed annotated map panel(s) revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals issued in your community.

Additional documents are enclosed which provide information regarding this LOMR. Please see the List of Enclosures below to determine which documents are included. Other attachments specific to this request may be included as referenced in the Determination Document. If you have any questions regarding floodplain management regulations for your community or the National Flood Insurance Program (NFIP) in general, please contact the Consultation Coordination Officer for your community. If you have any technical questions regarding this LOMR, please contact the Director, Federal Insurance and Mitigation Division of the Department of Homeland Security's Federal Emergency Management Agency (FEMA) in Denver, Colorado, at (303) 235-4830, or the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP). Additional information about the NFIP is available on our website at http://www.fema.gov/nfip.

Sincerely,

Patrick, F. Sacbibit, P.E., CFM, Project Engineer

#### **DETERMINATION**

This document provides the determination from the Department of Homeland Security's Federal Emergency Management Agency (FEMA) regarding a request for a Letter of Map Revision (LOMR) for the area described above. Using the information submitted, we have determined that a revision to the flood hazards depicted in the Flood Insurance Study (FIS) report and/or National Flood Insurance Program (NFIP) map is warranted. This document revises the effective NFIP map, as indicated in the attached documentation. Please use the enclosed annotated map panels revised by this LOMR for floodplain management purposes and for all flood insurance policies and renewals in your community.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional Information about the NFIP is available on our website at http://www.fema.gov/nfip.

> Patrick F. Sacbibit, P.E., CFM, Project Engineer **Engineering Management Section**

Enclosures reflect changes to flooding sources affected by this revision.

#### COMMUNITY INFORMATION

#### APPLICABLE NFIP REGULATIONS/COMMUNITY OBLIGATION

We have made this determination pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (P.L. 93-234) and in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, P.L. 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65. Pursuant to Section 1361 of the National Flood Insurance Act of 1968, as amended, communities participating in the NFIP are required to adopt and enforce floodplain management regulations that meet or exceed NFIP criteria. These criteria, including adoption of the FIS report and FIRM, and the modifications made by this LOMR, are the minimum requirements for continued NFIP participation and do not supersede more stringent State/Commonwealth or local requirements to which the regulations apply.

We provide the floodway designation to your community as a tool to regulate floodplain development. Therefore, the floodway revision we have described in this letter, while acceptable to us, must also be acceptable to your community and adopted by appropriate community action, as specified in Paragraph 60.3(d) of the NFIP regulations.

NFIP regulations Subparagraph 60.3(b)(7) requires communities to ensure that the flood-carrying capacity within the altered or relocated portion of any watercourse is maintained. This provision is incorporated into your community's existing floodplain management ordinances; therefore, responsibility for maintenance of the altered or relocated watercourse, including any related appurtenances such as bridges, culverts, and other drainage structures, rests with your community. We may request that your community submit a description and schedule of maintenance activities necessary to ensure this requirement.

#### **COMMUNITY REMINDERS**

We based this determination on the 1-percent-annual-chance flood discharges computed in the FIS for your community without considering subsequent changes in watershed characteristics that could increase flood discharges. Future development of projects upstream could cause increased flood discharges, which could cause increased flood hazards. A comprehensive restudy of your community's flood hazards would consider the cumulative effects of development on flood discharges subsequent to the publication of the FIS report for your community and could, therefore, establish greater flood hazards in this area.

Your community must regulate all proposed floodplain development and ensure that permits required by Federal and/or State/Commonwealth law have been obtained. State/Commonwealth or community officials, based on knowledge of local conditions and in the interest of safety, may set higher standards for construction or may limit development in floodplain areas. If your State/Commonwealth or community has adopted more restrictive or comprehensive floodplain management criteria, those criteria take precedence over the minimum NFIP requirements.

We will not print and distribute this LOMR to primary users, such as local insurance agents or mortgage lenders; instead, the community will serve as a repository for the new data. We encourage you to disseminate the information in this LOMR by preparing a news release for publication in your community's newspaper that describes the revision and explains how your community will provide the data and help interpret the NFIP maps. In that way, interested persons, such as property owners, insurance agents, and mortgage lenders, can benefit from the information.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional Information about the NFIP is available on our website at http://www.fema.gov/nfip.

#### Federal Emergency Management Agency

Washington, D.C. 20472

#### LETTER OF MAP REVISION DETERMINATION DOCUMENT (CONTINUED)

We have designated a Consultation Coordination Officer (CCO) to assist your community. The CCO will be the primary liaison between your community and FEMA. For information regarding your CCO, please contact:

Ms. Jeanine D. Petterson
Director, Federal Insurance and Mitigation Division
Federal Emergency Management Agency, Region VIII
Denver Federal Center, Building 710
P.O. Box 25267
Denver, CO 80225-0267
(303) 235-4830

#### STATUS OF THE COMMUNITY NFIP MAPS

We will not physically revise and republish the FIRM and FIS report for your community to reflect the modifications made by this LOMR at this time. When changes to the previously cited FIRM panel(s) and FIS report warrant physical revision and republication in the future, we will incorporate the modifications made by this LOMR at that time.

This determination is based on the flood data presently available. The enclosed documents provide additional information regarding this determination. If you have any questions about this document, please contact the FEMA Map Assistance Center toll free at 1-877-336-2627 (1-877-FEMA MAP) or by letter addressed to the LOMR Depot, 3601 Eisenhower Avenue, Alexandria, VA 22304. Additional Information about the NFIP is available on our website at http://www.fema.gov/nfip.

Within 90 days of the second publication in the local newspaper, a citizen may request that we reconsider this determination. Any request for reconsideration must be based on scientific or technical data. Therefore, this letter will be effective only after the 90-day appeal period has elapsed and we have resolved any appeals that we receive during this appeal period. Until this LOMR is effective, the revised BFEs presented in this LOMR may be changed.

A notice of changes will be published in the Federal Register. This information also will be published in your local newspaper on or about the dates listed below.

Patrick F. Sacbibit, P.E., CFM, Project Engineer Engineering Management Section

CHANGES ARE MADE IN DETERMINATIONS OF BASE FLOOD ELEVATIONS FOR THE CITY OF COLORADO SPRINGS AND THE UNINCORPORATED AREAS OF EL PASO COUNTY, COLORADO, UNDER THE NATIONAL FLOOD INSURANCE PROGRAM

On March 17, 1997, the Department of Homeland Security's Federal Emergency Management Agency identified Special Flood Hazard Areas (SFHAs) in the City of Colorado Springs and in the unincorporated areas of El Paso County, Colorado, through issuance of a Flood Insurance Rate Map (FIRM). The Mitigation Division has determined that modification of the elevations of the flood having a 1-percent chance of being equaled or exceeded in any given year (base flood) for certain locations in these communities is appropriate. The modified Base Flood Elevations (BFEs) revise the FIRM for the communities.

The changes are being made pursuant to Section 206 of the Flood Disaster Protection Act of 1973 (Public Law 93-234) and are in accordance with the National Flood Insurance Act of 1968, as amended (Title XIII of the Housing and Urban Development Act of 1968, Public Law 90-448), 42 U.S.C. 4001-4128, and 44 CFR Part 65.

A hydraulic analysis was performed to incorporate new topographic data for Sand Creek Center Tributary from just upstream of Airport Road to just upstream of Galley Road and for Sand Creek East Fork from approximately 970 feet downstream of Powers Boulevard to just downstream of Stewart Avenue. This has resulted in a revised delineation of the regulatory floodway, increases and decreases in SFHA width, and increased and decreased BFEs for both aforementioned flooding sources. The table below indicates existing and modified BFEs for selected locations along the affected lengths of the flooding source(s) cited above.

•	Existing BFE	Modified BFE
Location	(feet)*	(feet)*
Sand Creek Center Tributary:		
<sup>1</sup> Approximately 150 feet upstream of Airport Road	6,109	6,108
<sup>1</sup> Approximately 1,250 feet upstream of East Frontage Road	6,168	6,164
<sup>2</sup> Approximately 1,350 feet upstream of East Frontage Road	6,170	6,165
<sup>2</sup> Just downstream of Terminal Avenue	6,216	6,213
Sand Creek East Fork:		
<sup>1</sup> Approximately 810 feet downstream of Powers Boulevard	6,099	6,096
<sup>1</sup> Approximately 140 feet downstream of Stewart Avenue	6,206	6,205

<sup>\*</sup>National Geodetic Vertical Datum, rounded to nearest whole foot

Under the above-mentioned Acts of 1968 and 1973, the Mitigation Division must develop criteria for floodplain management. To participate in the National Flood Insurance Program (NFIP), the community must use the modified BFEs to administer the floodplain management measures of the NFIP. These modified BFEs will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and contents.

Upon the second publication of notice of these changes in this newspaper, any person has 90 days in which he or she can request, through the Chief Executive Officer of the community, that the Mitigation Division reconsider the determination. Any request for reconsideration must be based on knowledge of

<sup>&</sup>lt;sup>1</sup>City of Colorado Springs

<sup>&</sup>lt;sup>2</sup>Unincorporated areas of El Paso County

changed conditions or new scientific or technical data. All interested parties are on notice that until the 90-day period elapses, the Mitigation Division's determination to modify the BFEs may itself be changed.

Any person having knowledge or wishing to comment on these changes should immediately notify:

The Honorable Sallie Clark Chair, El Paso County Board of Commissioners 27 East Vermijo Avenue Colorado Springs, CO 80903

OR

The Honorable Lionel Rivera Mayor, City of Colorado Springs P.O. Box 1575 Colorado Springs, CO 80901

Resolution No. 189-95

A RESOLUTION ADCPTING THE SAND CREEK DRAINAGE BASIN PLANNING STUDY AND ESTABLISHING A DRAINAGE FEE, A DETENTION POND CAPITAL FEE, A DETENTION POND LAND FEE, AND AN ARTERIAL BRIDGE FEE FOR THE BASIN.

WHEREAS, the City Engineering Division of the City of Colorado Springs Department of Planning and Development has reviewed the Sand Creek Drainage Basin Planning Study as prepared by Kiowa Engineering Corporation, Colorado Springs, Colorado dated November 2, 1995, and

WHEREAS, the City/County Drainage Board has recommended approval of the above study at their November 2, 1995, meeting;

WHEREAS, the Sand Creek Drainage Basin includes unplatted land within the City limits;

NOW THEREFORE, BE IT RESOLVED by the City Council of the City of Colorado Springs:

Section 1. That the Sand Creek Drainage Basin Planning Study, dated November 1995, by Kiowa Engineering Corporation is adopted for use. City Engineering will utilize that study to assist in evaluating subdivision drainage reports.

Section 2. That a Sand Creek Drainage Basin Fee be established as \$4,895/acre, that a Sand Creek Detention Pond Capital Fee be established as \$1,213/acre, that a Sand Creek Detention Pond Land Fee be established as \$167/acre, and that a Sand Creek Arterial Bridge Fee be established as \$323/acre, as part of

Dated at Colorado Springs, Colorado, this 28th November 1995.

ď

Mayor

TTEST:

City Clerk

## ENGINEER'S STATEMENT:

The attached SAND CREEK DRAINAGE BASIN PLANNING STUDY report was prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the City for drainage reports. I accept responsibility for any liability caused by any negligent acts, errors and omissions on my part in preparing this report.

Kiowa Engineering Corporation, 1011 North Weber St., Suite 200, Colorado Springs, CO 80903

## I. INTRODUCTION

#### Authorization

The preliminary design of the drainageway and roadway crossing facilities within the Sand Creek Drainage Basin was authorized under the terms of Agreement Number 90-85 between the City of Colorado Springs (City) and Kiowa Engineering Corporation. The agreement was approved by the Colorado Springs City Council, April 10, 1990. Subsequent to this agreement, a change order to the contract to allow for the inclusion of technical information contained in the draft East Fork Sand Creek Drainage Basin Planning Study was approved July, 1993.

## Purpose and Scope

The purpose of the study is to identify feasible stormwater management plans to satisfy the existing and future needs within the Sand Creek Drainage Basin. The Sand Creek basin is to be referred to throughout this study and is inclusive of the Sand Creek mainstem and East Fork Sand Creek watersheds. The specific scope of work for this study included the following tasks:

- Meet with the City to: insure compliance with the services required by this agreement, obtain existing data and general information from participating entities, solicit desires of participating entities and other interested agencies or groups in order to develop alternate plans, procure current information relative to development plans in the basin, procure information relative to right-of-way limitations, proposed stormwater projects, potential hazards due to flooding, and avoid duplication of effort whenever possible by utilizing existing information available from other agencies.
- Contact the Civy, County, individuals, and other agencies who have knowledge and/or interest in the study area.
- Utilize City policies and criteria and applicable information wherever possible.
- Perform hydraulic and hydrologic analyses within the study area
- Identify environmental setting of basin.
- Identify existing and potential drainage and/or flooding problems.
- Develop improvement alternatives to reduce existing and potential flooding problems, and to mitigate the impact of stormwater runoff upon environmentally significant areas along the drainageway(s).
- 8. Examine the operation and maintenance aspects of feasible alternatives.

- Conduct an economic analysis of each alternative.
- Recommend and prepare a preliminary design for a selected alternative plan.
- Develop drainage and bridge fees for the basin.
- Prepare a written report discussing all items examined in the study.
- 13. Conduct presentations to public and private entities in order to define project goals, and to involve agencies with specific interest to help define feasible alternatives.

## Summary of Data Obtained

Listed below are the technical reports collected for the review as part of preparing this study:

- Soil Survey for El Paso County, Colorado, dated June 1981.
- "City of Colorado Springs/El Paso County Drainage Criteria Manual", prepared by City of Colorado Springs, El Paso County, and HDR Infrastructure, Inc., dated May 1987.
- "Flood Insurance Studies for Colorado Springs, and El Paso County, Colorado", prepared by the Federal Emergency Management Agency (FEMA), revised 1989.
- Flood Insurance Restudy, Hydrology Report and Hydrologic Analyses, prepared by RCI, Inc., 1989.
- Sand Creek Drainage Basin Planning Study prepared by Simons, Li & Associates, Inc., dated July, 1985.
- Flood Hazard Analysis, Sand Creek, City of Colorado Springs and El Paso County, Colorado, prepared by the Soil Conservation Service, dated December, 1973.
- Banning-Lewis Ranch Master Drainage Plan, prepared by MSM Consultants, Inc., dated June 1981.
- Sand Creek Drainage Basin Study, prepared by United Planning and Engineering Company, October, 1977.
- Draft East Fork Sand Creek Drainage Basin Planning Study, prepared by Kiowa Engineering Corporation, January, 1989.
- Drainage Basin Inventory, Sand Creek Drainage Basin, prepared by Oliver E. Watts, P.E., June 1990.

In addition to the above listed reports there were a number of drainage study reports, sketch plans, preliminary and final design drawings, land use and zoning maps, development

•

plans, and existing drainage facility maps that were collected from the City, County, and other local agencies.

Reports which were prepared previous to the preliminary design report include the "Sand Creek Drainage Basin Planning Study Hydrology Report," and the "Sand Creek Drainage Basin Planning Study Development of Alternatives Report." These reports were prepared as part of the overall planning effort and have been referred to throughout this report. The Hydrology Report summarized peak flow data for existing and future basin development conditions without improvements in the basin, and established the base line hydrologic conditions from which the alternative planning then proceeded. The Development of Alternatives report evaluated the various combinations of drainageway improvements for the basin, taking into account environmental, cost, construction, right-of-way, maintenance and implementation factors for each feasible alternate plan. These reports are on file with the City Engineering Division, as well as technical addenda for each report. Both of these reports covered only the mainstem of the Sand Creek Basin. The similar information prepared for the draft East Fork Sand Creek Drainage Basin Planning Study has been summarized in this preliminary design report.

## Mapping and Surveving

Mapping used in the planning effort for the mainstem of Sand Creek consisted of USGS 7-1/2 minute quadrangles, and 2-foot contour interval, 1-inch to 200-foot scale planimetric topographic maps. For the area of the basin north of Woodmen Road, aerial topographic mapping was compiled in May 1990. For the balance of the basin, the City of Colorado Springs Department of Public Utilities provided topographic mapping compiled from aerial photographs dated 1989. This mapping has been prepared as part of the Facility Inventory Management System (FIMS). The aerial topographic mapping was used in the drainage inventory, hydrologic/hydraulic analyses, and in the alternative planning phases of this project. All topographic mapping was based upon USGS vertical datum.

For the East Fork Sand Creek basin, mapping from the FIMS office and two-foot contour interval topography prepared in 1987 for the Banning-Lewis Ranch property were used in the preparation of the preliminary design. Where topographic mapping was not available, USGS quadrangle maps were used.

Stream cross-section data was obtained from the aerial mapping described above. These sections were verified against the cross-sections compiled in the 1986 City of Colorado Springs Flood Insurance Study (FIS), wherever possible.

Drainageway site inspections were conducted throughout the study area, and photographs were taken documenting the key drainage features.

# The following general conditions have been placed upon the use of the FIMS topographic mapping:

- Use of these products is restricted to the project for which the FIMS products are provided.
- Only the body content found within the neatline of the borrowed maps may appear in any report/publication developed for your study. Also, the labeling that appears on any photographs provided shall not appear in any such report/publication.
- All FIMS' products provided to contractors involved in the subject study shall be retrieved by your department upon conclusion of the study and either returned to FIMS or destroyed.
- The report(s) developed in which the FIMS' products are used shall include the following disclaimer statement:

"The maps and photographs included in this report were developed for purposes of the Colorado Springs Department of Utilities and are for internal use only. The Colorado Springs Department of Utilities makes no warranty, expressed or implied, as to the completeness, accuracy, or content of such products or any reproductions thereof. Any order use is not recommended and occurs at the risk of the user; such user is solely responsible and/or liable for the use of such products.

Original maps and photographs are the property of the Colorado Springs Department of Utilities. All rights are reserved. These maps and photographs or any associated record may not, wholly or in part, be reproduced, stored, or transmitted in any form or by any means, electronic, mechanical, photocopying, or otherwise, without the express prior written permission of the Colorado Springs Department of Utilities.

Regardless of the existence of purported copies of these official maps and photographs which may from time to time be made or published, there is only one set of official maps and photographs, which are those kept and maintained by the Colorado Springs Department of Utilities."

## Project Coordination

Throughout the course of the study, meetings were held with representatives of City, County. State, and Federal agencies with an interest in drainageway planning in general. The primary reason for the coordination effort was to obtain technical information and to identify concerns with regard to the development of drainageway facilities within the basin. During the course of preparing the Development of Alternatives report, the planning constraints and concepts were discussed with the agencies and interested individuals and their input used to refine the feasible alternatives and to eventually identify a recommended drainageway plan for further design evaluation. The complete mailing list and project correspondence is contained in Appendix A of this report.

က

Coordination with a similar list of agencies and individuals was conducted during the preparation of the draft East Fork Sand Creek Drainage Basin Planning study. This study was authorized and conducted for Aries Properties, Inc. Meetings with state and federal agencies, the City and the County were involved in a series of meetings during the development of the alternative planning concepts and the preliminary design for the East Fork Sand Creek basin.

## Acknowledgements

Colorado Division of Wildlife, U.S. Army Corps of Engineers (COE), and various City During the preparation of the study, several government agencies and interested individuals were routinely involved in the coordination activities. Representatives from the Departments provided valuable commentary during the development of the alternative plans. A listing of the individuals and agencies routinely coordinated with during the study has been presented below:

## II. STUDY AREA DESCRIPTION

The Sand Creek drainage basin is a left-bank tributary to the Fountain Creek lying in the west-central portions of El Paso County. Sand Creek's drainage area at Fountain Creek is approximately 54 square miles of which approximately 18.8 square miles are inside the City of Colorado Springs corporate limits. The basin is divided into five major sub-basins, the Sand Creek mainstem, the East Fork Sand Creek, the Central Tributary to East Fork, the West Fork, and the East Fork Subrributary. Figure II-1 shows the location of the Sand Creek basin.

## Basin Description

The Sand Creek basin covers a total of 54 square miles in unincorporated El Paso County and Colorado Springs, Colorado. Of this total, approximately 28 square miles is encompassed by the Sand Creek basin, and 26 square miles for the East Fork Sand Creek basin. The basin trends in generally a south to southwesterly direction, entering the Fountain Creek approximately two miles upstream of the Academy Boulevard bridge over Fountain Creek. Two main tributaries drain the basin, those being the mainstem of Sand Creek and East Fork Sand Creek. Development presence in most evident along the mainstream. At this time, approximately 25 percent of the basin is developed. This alternative evaluation focuses upon the Sand Creek basin.

The maximum basin elevation is approximately 7,620 feet above mean sea level, and falls to approximately 5,790 feet at the confluence with Fountain Creek. The headwaters of the basin originate in the conifer covered areas of The Black Forest. The middle eastern portions of the basin are typified by rolling range land with fair to good vegetative cover associated with semi-arid climates.

#### Climate

This area of El Paso County can be described, in general as high plains, with total precipitation amounts typical of a semi-arid region. Winters are generally cold and dry. Precipitation ranges from 14 to 16 inches per year, with the majority of this precipitation occurring in spring and summer in the form of rainfall. Thunderstorms are common during the summer months, and are typified by quick-moving low pressure cells which draw moisture from the Gulf of Mexico into the region. Average temperatures range from about 30°F in the winter

to  $75^{\circ}$  in the summer. The relative humidity ranges from about 25 percent in the summer to 45 percent in the winter.

### Soils and Geology

Soils within the Sand Creek basin vary between soil types A through D, as identified by the U. S. Department of Agriculture, Soil Conservation Service. The predominant soil groupings are in the Truckton and Bresser soil associations. The soils consist of deep, well drained soils that formed in alluvium and residium, derived from sedimentary rock. The soils have high to moderate infiltration rates, and are extremely susceptible to wind and water erosion where poor vegetation cover exists. In undeveloped areas, the predominance of Type A and B soils give this basin a lower runoff per unit area as compared to basins with soils dominated by Types C and D. Presented on Figure II-2 is the Hydrologic Soil distribution map for the Sand Creek basin.

## Property Ownership and Impervious Land Densities

Property ownership along the major drainageway within the Sand Creek basin vary from public to private. Along the developed reaches, drainage right-of-ways and greenbelts have been dedicated during the development of the adjacent residential and commercial land. Where development has not occurred, the drainageways remain under private ownership with no delineated drainage right-of-way or easements. There are several public parks which abut the mainstem of Sand Creek. Roadway and utility easements abutting or crossing the major drainageways occur most frequently in the developed portions of the basin.

Land use information for the existing and future conditions were reviewed as part of the planning effort. This information is used in the hydrologic analysis to predict runoff rates and volumes for the purposes of facility evaluation. The identification of land uses abutting the drainageways is also useful in the identification of feasible plans for stabilization and aesthetic treatment of the creek. Presented on Figure II-3 is the proposed land use map used in the evaluation of impervious land densities discussed in the hydrologic section of this report. Figure II-3 is not intended to reflect the future zoning or land use policies of the City or the Country.

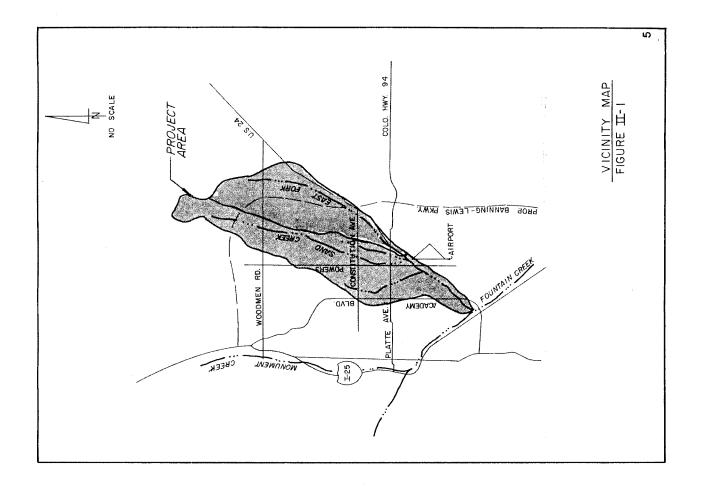

The land use information within the Banning-Lewis Ranch property was obtained from Arics Properties during the time the draft East Fork Sand Creek Drainage Basin Planning Study was being prepared. The land use information was again reviewed with the City of Colorado Springs Department of Planning and was found to be appropriate for use in the estimation of hydrology for the East Fork Basin. The location of future arterial streets and roadways within

4

the Banning Lewis property were obtained from the Banning-Lewis Ranch master plan. The location of roadways offsite from the Banning Lewis-Ranch were obtained from the El Paso County Major Transportation Plan dated 1988.

## Park Land and Open Space

An inventory of park land and public open space was prepared. Many times, the combination of the drainageway and adjacent park lands can be used to visually extend the limits of a park or open space. The drainageway can also act to link parks and other land uses within the basin if multiple use trails are incorporated into the channel section(s). The Sand Creek drainageway has been identified as a major trail corridor within the City of Colorado Springs Trails Plan. Park land designated within the Banning-Lewis Ranch master plan were taken into account during the siting of stormwater facilities within the Banning-Lewis property.

# NOTICE TO FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study (FIS) report may not contain all data available within the repository. It is advisable to contact the community repository for any additional data.

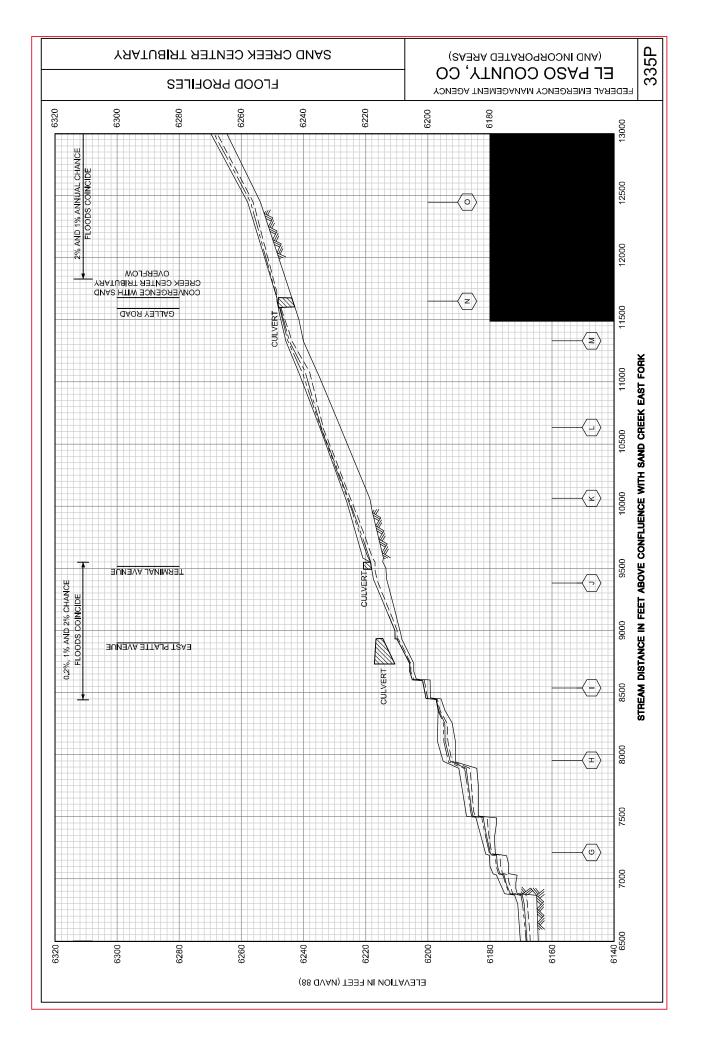

Part or all of this FIS report may be revised and republished at any time. In addition, part of this FIS report may be revised by the Letter of Map Revision process, which does not involve republication or redistribution of the FIS report. It is, therefore, the responsibility of the user to consult with community officials and to check the community repository to obtain the most current FIS report components.

This FIS report was revised on December 7, 2018. Users should refer to Section 10.0, Revisions Description, for further information. Section 10.0 is intended to present the most up-to-date information for specific portions of this FIS report. Therefore, users of this report should be aware that the information presented in Section 10.0 superseded information in Sections 1.0 through 9.0 of this FIS report.

Initial Countywide FIS Report Effective Date: March 17, 1997

First Revised Countywide FIS Report Effective Date: August 23, 1999 - to add base flood elevations, to add special flood hazard areas, and to change special flood hazard areas.

Second Revised Countywide FIS Report Effective Date: December 7, 2018 - to update corporate limits, to change Base Flood Elevations and Special Flood Hazard Areas, to update map format, to add roads and road names, and to incorporate previously issued Letters of Map Revision.

### **OVERVIEW**

This report was prepared to provide design information for the existing Sand Creek -Center Tributary Drainageway as part of the Solace Apartment development. This document is the Channel Analysis report for the Solace Apartments. The Sand Creek-Center Tributary Drainageway has been studied as part of a Flood Insurance Study (FIS) for El Paso County Colorado, Volume 7 of 8, revised December 7, 2018 and Sand Creek Drainage Basin Planning Study, dated January 1993. Existing flow rates from the Sand Creek Planning Study were used as the basis for the design of the existing channel condition.

#### GENERAL LOCATION AND DESCRIPTION

#### Location

The proposed Solace Apartments, known as "Solace" from herein, is a parcel of land located in Section 7, Township 14 South, Range 65 West of the 6<sup>th</sup> Principal Meridian in El Paso County, Colorado. Solace is a 28.99 acre, urban, multifamily-development and is comprised of 16 apartment buildings and associated infrastructure. Solace is bound by existing industrial developments to the North and vacant land to the West. Galley Road bounds the property to the south and existing light industrial businesses to the east. A vicinity map of the area is presented in Appendix A.

#### **Description of Property**

Solace is currently unoccupied and undeveloped. The existing ground cover is sparse vegetation and open space, typical of a Colorado rolling range land condition. In general, Solace slopes from northwest to southeast. The existing conditions of the Sand Creek -Center Tributary Drainageway on the site are heavily wooded for the length of the channel throughout the Solace site.

Per an NRCS web soil survey of the area, Solace is made up of Type B soils with a very small percentage of Type A in the northwest corner of the property. This Type B soil is a blendon sandy loam. This soil type has a moderate infiltration rate when thoroughly wet. It also consists of moderately deep or deep, moderately well drained or well drained soil. A soil survey map has been presented in Appendix A.

# Floodplain Statement

Based on the FEMA FIRM Map numbers 08041C0751G & 08041C0752G, dated December 7, 2018, a portion of the existing drainageway lies within Zone AE and Zone X. Zone AE is defined as area subject to inundation by the 1-percent-annual-chance flood event and is a flood hazard area. Zone X is defined as area outside the Special Flood Hazard Area (SFHA) and higher than the elevation of the 0.2-percent-annual-chance (or 500-year) flood. The FIRM Map has been presented in Appendix A. Currently a portion of the Solace site lies within Zone AE at the extension of Paonia Street to Galley Road, as seen in FEMA FIRM Map number 08041C0752G.

#### PREVIOUS SAND CREEK STUDIES

Solace lies within Sand Creek Drainage Basin based on the "Sand Creek Drainage Basin Planning Study" prepared by Kiowa Engineering in January 1993.

The Sand Creek Drainage Basin covers approximately 54 square miles in unincorporated El Paso County, CO. The Sand Creek Drainage Basin is tributary to Fountain Creek. In its existing condition, the basin is comprised of developed land with the exception of the Solace Parcel which is comprised of rolling rangeland with fair to good vegetative cover associated with Colorado's semi-arid climate. The natural Drainageway within the site limits is typically deep and narrow with a well-defined flow path in most areas. Anticipated land use for the Solace parcel includes multifamily residential and open space.

As part of its drainage research, JR Engineering reviewed the following drainage studies, reports and LOMRs:

- Sand Creek Drainage Basin Planning Study prepared by Kiowa Engineering Corporation in January 1993.
- Flood Insurance Study– El Paso County, Colorado & Incorporated Areas Vol 7 of 8, December 2018.
- LOMR- Case No. 05-08-0368P Federal Emergency Management Agency, May 23, 2007.

The Sand Creek Drainage Basin Planning Study was used to establish a stormwater management plan for the existing and future stormwater infrastructure needs within the Sand Creek Drainage Basin. The Sand Creek Drainage Basin Planning Study conducted a hydrologic analysis using a runoff model named the Soil Conservation Service (SCS) Computer Program for the Project Formulation Hydrology (TR20). Based on provided drainage maps and analysis, in its existing condition, the Sand Creek-Center Tributary Drainageway contains a 100-year flow of 720 cfs at upstream station 1053 then jumps to 960 cfs at station 1030 in Sand Creek along Solace's east property line. The flow then changes again at station 1014, to a value of 956 cfs, where the flow from the secondary drainageway on Paonia Street converges with the Sand Creek Drainageway, this flow was based on JR Engineering analysis. These flows were used in the model as they were depicted as being the flows present in the project section of the Sand Creek Tributary Drainageway as called out in Sand Creek Drainage Basin Planning Study. The major Sand Creek-Center Tributary Drainageway conveys the stormwater south along the eastern property line where it ultimately outfalls into the Fountain Creek. JR Engineering also performed a hydrologic analysis to determine the flows in the Sand Creek-Center Tributary Drainageway and arrived at similar results to those shown in the Sand Creek Drainage Basin Planning Study, thus verifying the validity of these flows. These basin calculations show that the 720-960 cfs, based on the Sand Creek Drainage Basin *Planning Study*, are still valid for this existing condition, a summary table of the flows in the Sand Creek Drainageway based on various studies can be found below.

JR Engineering October 2019	@ Galley Road	956

FEMA prepared a revised FIS for El Paso County Colorado, Volume 7 of 8, dated December 7, 2018. The effective floodplain for the site is shown on the FIRM 08041C0752G, revised to reflect LOMR, dated May 23, 2007. The study area of the FIS where the Sand Creek Drainageway crosses Galley Road, was found to overtop the culverts and flow onto the road. According to the FIS, this crossing has a 10% annual chance of flooding and is located in Zone AE of the FIRM. This location is a Special Flood Hazard Area (SFHA) inundated by the 100-year flood, Zone AE (base flood elevations determined). The *Sand Creek Drainage Basin LOMR* was executed on May 23, 2007. The LOMR revised the flood zone or the area south of Galley Road. See FIRM Map Panel 08041C0752G for limits of LOMR study and revised flood zones, presented in Appendix C.

To the west of the Sand Creek-Center Tributary Drainageway is a secondary Drainageway that captures the flow coming from the west side of Paonia Street. This drainage way is located at the proposed extension of Paonia Street to meet Galley Road. The flows created by the secondary drainageway and the development north of the site will be captured on the Solace site, and transported to the Sand Creek-Center Tributary Drainageway. According to Sand Creek Drainage Basin LOMR, the flow present in this secondary drainageway in a 1-percent-annual-chance flood event is 213 cfs. This was calculated by use of the LOMR maps, and evaluating the difference in flow as the Sand Creek Center Tributary Drainageway splits as it crosses Omaha Boulevard. Section R of the FEMA Map Panel 08041C0752G, shows the split as the flow present in the channel drops to 421 cfs from 634 cfs at section S just upstream. The difference in these flows is 213 cfs this flow is assumed to overtop the road at Omaha Boulevard crossing structure, and travel west to Paonia Street and is routed south in the Sand Creek Center Tributary onto the Solace site. A calculation of the flows present in Paonia was also conducted by Galloway Engineering in the Preliminary Drainage Report and Floodplain Certification for Powers Center Point, dated October 1<sup>st</sup>, 2007. This report used a similar methodology in calculating the flows; however this analysis was made using LOMR data from 1997 with higher flows thus resulting in a calculated flow of 500 cfs. To be conservative, JR Engineering's design will be based on the 500 cfs specified, rather than the 213 cfs calculated. Additional information has been requested via FEMA FIS data request. When this additional data

can be obtained, a proposed channel improvements report including both main channel and overflow improvements will be updated to reflect the latest available information. At the current point in time, all available published data has been exhausted to prove a reduced flow rate in the overflow channel (Paonia Street).

Just north of the Solace site on Paonia Street a concrete channel exists that diverts a portion of the flows present in Paonia Street back into the Sand Creek-Center Tributary Drainageway. However the size of this channel will not convey all flows present in Paonia, therefore improvements are necessary to mitigate the offsite flows. Potential options to mitigate these flows are discussed below. Each possible alternative has been preliminarily evaluated to ensure feasibility in mitigating the secondary drainageway currently existing in Paonia Street.

The first conceptual option would be to have future Paonia Street continue to maintain an existing super elevation that will direct all flows present on Paonia towards the east side of the road. GIS contours indicate this super elevation exists, as well as confirmation stated by the Galloway Engineering Preliminary Drainage Report. The curb and gutter along the east side of Paonia will be omitted to create a 110 ft weir that will route flows back to the existing Sand Creek-Center Tributary Drainageway. The 110 ft weir would reduce into a 40 ft wide channel as it approaches the existing channel at a 45 degree angle. Flow calculations for this overflow design can be found in Appendix B, along with flow capacity calculations for existing Paonia Street & existing concrete channel north of the site.

A second conceptual option would be to create a low point in Paonia shortly after crossing south onto the subject property, thus creating a sump condition. The sump inlets would capture minor runoff and pipe it to the main channel, while a larger event would behave in a similar manner to the above scenario, routing via the same overflow weir and channel back to the main Sand Creek-Center Tributary Channel. The alternative profile for this scenario can be found in Appendix B, as well as on the preliminary Paonia Street Improvement plans.

Finally, a third option would be to widen the existing concrete channel at the property line to increase capacity enough to accept all flows from the overflow channel.

The first option has been presented in the drainage maps and preliminary plans associated with this report; however no alternative has been definitively selected at this time. One alternative or a combination of these alternatives may be utilized at time of final design to safely and efficiently route the Paonia Street overflow channel back to the main channel near the northern site boundary.

#### Channel Deficiencies

The Sand Creek Drainage Basin Planning Study performed a hydraulic analysis of the Sand Creek-Center Tributary Drainageway between Galley Road and Paonia Street, and an analysis of the crossing structure for Sand Creek at Galley Road. For the crossing structure at Galley Road they determined that the existing crossing structures were inadequate for the demands of the Drainageway

and would require improvements to expand the capacity of these structures. These results can be seen in Table IV-1 Summary of Hydraulic Structures – Crossings: Sand Creek Drainage Basin Planning Study shown below. The Study proposed improvements to the existing crossing structures by replacing them with 3-8'Wx 5'H Concrete Box Culverts.

TABLE IV-1: SUMMARY ( SAND CRE		LIC STRUCTURE GE BASIN PLAN

Omaha Boulevard	CT-2	2-36"x57"	METAL ARCH PIPE	INADEQUATE	INADEQUATE	v

The study also found the existing channel for the Sand Creek-Center Tributary Drainageway between Galley Road and Paonia Street to be inadequate for the given flow rate. The report says that the existing channel has limited maintenance access, leading to the channel degrading and being filled with obstructions. Those findings can be seen in Table IV-2 Summary of Hydraulic Structures – Channels: Sand Creek Drainage Basin Planning Study. The Sand Creek Drainage Basin Planning Study recommended improvements to the existing channel by lining the channel with concrete.

TABLE IV-2: S	UMMAR SAND C	RY OF I	HYDRA DRAIN	AULIC AGE B	STRUCTURES - CHANNELS ASIN PLANNING STUDY			
LOCATION	REACH		DIMENSI		TYPE	CAPAG	CITY (1)	COMMENTS

Platte Ave. to Terminal Ave.	CT-2	15-25	1:1	4-6	Trapezoidal concrete lined.	x		Channel has adequate capacity.
Terminal Avenue to Galley Road	CT-2	21	1:1	5	Trapezoidal concrete lined.	х		Channel has adequate capacity.
Galley Road to Paonia Ct. (ext)	CT-2	30-40	varies	4-5	Unimproved segment.		x	Channel is degraded and filled with debris. Poor maintainance access.
Paonia Ct. to Omaha Blvd.	CT-2	21	1:1	5	Trapezoidal concrete lined channel.	х		Maintainence access poor. Debris and trash in channel.

The GeoHecRas model results completed with this report contain similar findings to those in the drainage basin planning study. This model was based on the existing channel conditions; a model will be created for the sites proposed conditions in the final drainage report. Average velocities of 10-12 fps for a majority of the channel reach exceed allowable limits for an unprotected channel. The current Galley road crossing structures lack of capacity also leads to overtopping of the road during these events. This report confirms that both this Sand Creek channel reach and Galley Road crossing structures are inadequate for the 100-yr storm event.

#### Channel Improvement Recommendations

The Sand Creek Drainage Basin Planning Study (DBPS) concluded that the Sand Creek-Center Tributary Drainageway channel, in its current state, is inadequate to handle the historical flows tributary to the channel. This report falls in line, indicating that improvements shall be made to the channel in order to provide adequate capacity and prevent erosion. In the DBPS improvements are also designated for the crossing structures at Galley Road to provide adequate capacity and prevent overtopping of the road. Upon further investigation, this report found that overtopping of Galley Road appears to be addressed via the overflow structure and associate downstream bank protections shown in Figure 1. This weir was analyzed to determine the effectiveness to safely pass overtopping flows. From the

Figure 1: Existing Drainage Structures at Galley Road (Viewed from South)

HEC-RAS model, it was determined that approximately 581 cfs overtops the roadway during a 100-year event. The weir in its current configuration could only adequately pass approximately 40 cfs of this flow. On the north side of the Galley road crossing, there is a section of roadway without curb & gutter; this allows the water transported along the north half of galley road to directly flow into the Sand Creek Center Tributary Drainageway. A picture of this curb opening is shown below in figure 2.

Figure 2: Curb Opening on North Half of the Galley Road Crossing (Looking to the North)

This analysis notes existing overtopping, further discussion with the county engineer to discuss potential solutions is recommended. One possible solution is that the existing culverts be replaced to prevent overtopping at Galley Road by upsizing to a larger culvert(s). Ultimately, culvert

improvements will be necessary when the County deems the historic overtopping of Galley Road above acceptable tolerance. Currently, no adjacent structures are impacted by this overtopping. Weir calculations can be found in the appendix.

Based upon the findings to the *Sand Creek Drainage Basin Planning Study* and the conforming GeoHecRas modeling contained in this report, potential recommended channel improvements include:

- Widening of the channel west bank to reduce flow depth, thus corresponding velocities
- Lining portions of the channel with riprap or other protective surfaces
- Adding check structures and potentially drop structures to reduce channel grade, a conceptual profile can be seen in Appendix A.
- Replacing existing culverts at Galley Road to prevent roadway overtopping

Stable slopes of 1% were chosen for the channel based on stable slope specified by The Sand Creek Drainage Basin Planning Study (DBPS.)

#### CONCEPT COST ESTIMATE

Below is Conceptual Cost Estimate for the proposed channel improvements to the Sand Creek-Center Tributary Drainageway.

PUBLIC DRAINAGE FACILITIES				
Item	Quantity	Unit	Unit Price	Extended Cost
Clearing & Grubbing	2	AC	\$5,000.00	\$10,000.00
Channel Widening Earthwork (Cut)	7000	CY	\$3.00	\$21,000.00
Riprap Lining (Type M)	5100	CY	\$85.00	\$433,500.00
Drop Structures	2	EA	\$20,000.00	\$40,000.00
			Sub-Total	\$504,500.00
	10	)% Eng. Aı	nd Contingency	\$50,450.00
			Grand Total	\$554,950.00

**Table 3: Cost Opinion-Public Reimbursable** 

# DRAINAGE DESIGN CRITERIA

# Development Criteria Reference

Storm drainage analysis techniques were taken from the "City of Colorado Spring/El Paso County Drainage Criteria Manual" Volumes 1 and 2 (EPCDCM), dated October 12, 1994, the "Urban Storm Drainage Criteria Manual" Volumes 1 - 3 (USDCM) and Chapter 6 and Section 3.2.1 of Chapter 13 of the "Colorado Springs Drainage Criteria Manual (CCSDCM), dated May 2014, as adopted by El Paso County.

#### Hydrologic Criteria

The hydrologic analysis for this project is based on the *Sand Creek Drainage Basin Planning Study*. The flow rates for the 100-yr storm event were taken from sheets CTP-2 & CTP-3 of this study. The Baseline Flows from the *Sand Creek Drainage Basin Planning Study* are included in Appendix C.

## Hydraulic Criteria

GeoHecRas was used as the primary analysis method for the site. GeoHecRas was used to model existing flows within the Sand Creek-Center Tributary Drainageway. This model was used to verify flood plains and analyze any overtopping that may occur within the project site. The 100-year water surface profiles for the model were analyzed form the north property line of the site to the area 100 feet south of the Galley Road Crossing. Hydraulic computations for the models are contained in Appendix B. In the model the value for the roughness coefficient (n) were based upon those shown in Table 12-2 of the City of Colorado Springs Drainage Criteria Manual, Volume 1. The manning's roughness coefficient for the sides of the channel was evaluated as n=0.05, as the channel sides are most closely categorized as sluggish reaches with weeds, the minimum value of n was taken. For the bottom of the channel a manning's roughness coefficient value of n=0.025, as the existing channel bottom being very clear and free of plants or other debris, the minimum value of n was taken. Table 12-2 highlights the manning values used for the model. The channel was analyzed as a winding channel in the GeoHecRas model.

Table 12-2. Roughness Coefficients

Channel Description	Roughn	ess Coeffici	ient (n)
Channel Description	Minimum	Typical	Maximum

submerged at high stages			
<ul> <li>Bottom: gravels, cobbles, and few boulders</li> </ul>	See Jarrett's		
<ul> <li>Bottom: cobbles with large boulders</li> </ul>	equation*		

The flows in the channel, upstream and downstream of the Solace site, were determined using the sheet CTP-2 of the *Sand Creek Drainage Basin Planning Study*, with the flow 720 cfs being used at the upstream end of the channel till river station 1031 where the flow changes to 960 cfs, and once again at the Galley Road crossing to 1340 cfs. These can be seen in the GeoHecRas output table. Geometry of the channel and the crossing structure at Galley Road was determined from survey

conducted by JR Engineering's internal survey department. The Galley road crossing structure was modeled in the GeoHecRas model; its geometric parameters were determined using survey obtained data to the crossing. The sizes of the 48" CMP culverts in the crossing were also determined from survey data.

#### **SUMMARY**

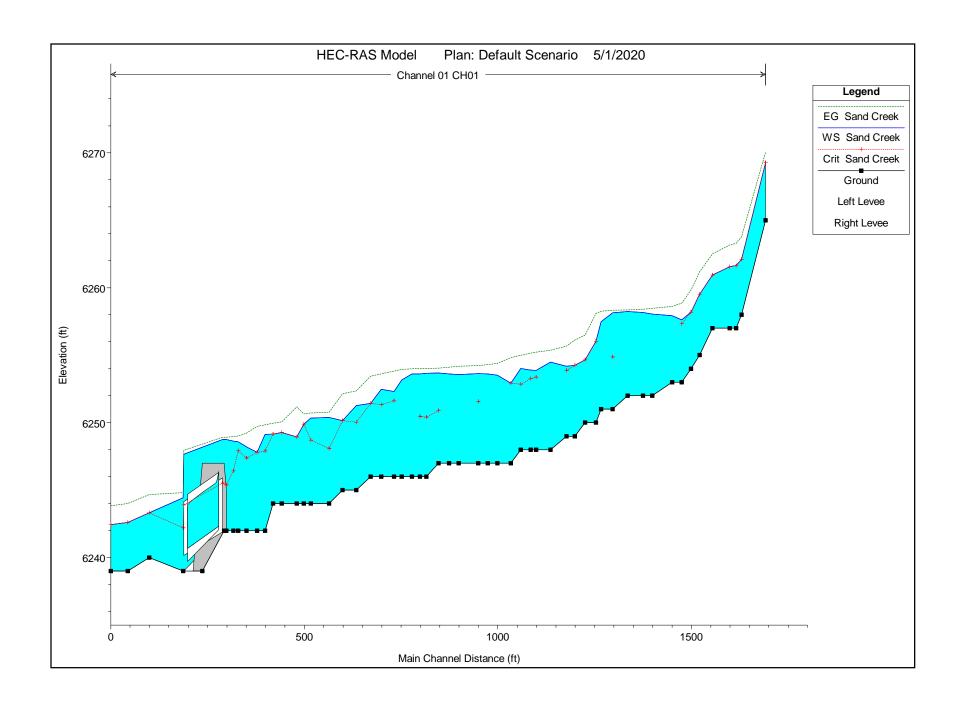

This analysis of the Sand Creek-Center Tributary Drainageway remains consistent with previous studies. Velocities in the drainageway are of concern and require channel improvements, such as widening and riprap lining to ensure the Sand Creek Drainageway remains stable during a 100-yr event. This report meets the latest El Paso County Drainage Criteria requirements for this site. The results of JR Engineering's GeoHecRas model for the channel appear accurate as the water surface elevations of the channel matchup very closely to the elevations called out in the FEMA FIS along the channel. The overtopping elevation at Galley Road shown in the model matches the elevation shown in the FEMA floodplain map of 6249, showing that the GeoHecRas model results are valid.

**Subject:** Sand Creek Center Tributary Channel Improvements

The purpose of this letter is to provide design information for the existing conditions of the Sand Creek Center Tributary Drainageway, located east of the Solace Apartments site. This letter will also discuss the proposed improvements for the channel, design methodology, and the modeling results. For further information on the previous evaluation of the channel in its existing conditions and conceptual design, see the *Sand Creek – Center Tributary Channel Analyses Report for Solace Apartments* by JR Engineering. For further information concerning drainage for the Solace Apartments Site, see the *Final Drainage Report for Solace Apartments*, by JR Engineering.

#### **Project General Discussion**

The Sand Creek Center Tributary Channel is located in Section 7, Township 14 South, Range 65 West of the 6<sup>th</sup> Principal Meridian in El Paso County, Colorado. The site is part of the Solace Apartments project and is located on the eastern edge of the project. As part of the proposed improvements for the Solace Apartments Project, this reach of the Sand Creek Center Tributary will also be improved. The sections upstream and downstream of the site have already undergone improvements, and the channel in its current state shows extensive flooding in a 100 year event. In addition to improvements to the Sand Creek Center Tributary Channel, the channels secondary drainageway located to the west of the channel in Paonia Street will also be improved with an overflow channel that will direct flow present in the secondary drainageway into the main channel and avoid further flooding of the Paonia Street extension into the Solace Apartments site.

#### **Channel Flows**

Evaluation of the flows present in the Sand Creek Center Tributary and its secondary drainageway were discussed in detail in the Sand Creek – Center Tributary Channel Analysis for Solace Apartments by JR Engineering. Since the initial analysis of the channel took place, JR Engineering was able to acquire the modeling data used by FEMA for determination of flood plain modeling shown in FEMA FIRM 08041C0752G. JR Engineering assumes FEMA's flows to be accurate, and thus utilized these as the basis for our model. The main channel contains 820 cfs of flow and the secondary channel contains 217 cfs. The flow in the main channel then jumps up to 1,037 cfs at the convergence of the secondary drainageway. Downstream an existing channel coming from nearby Valley Road (east) converges with the main channel, we then utilized FEMA's 1,100 cfs to model the remaining portion of the channel.

#### **Existing Channel Conditions**

In its existing conditions the Sand Creek Center Tributary Channel along the Solace site consists of a natural channel overgrown with trees and bushes along the sides of the channel with the bottom being relatively clean and free of obstacles. The 1,350 LF reach of the Sand Creek Center Tributary Channel located incorporated with the Solace site is undeveloped, as compared to the majority of channels in the basin which have had some improvement. Downstream and upstream sections of the Sand Creek Center Tributary Channel are concrete lined. The secondary Drainageway located in Paonia Street flows south from Omaha Blvd to the Solace Apartments site where flow splits between an existing concrete channel running east to the main Sand Creek Center Tributary Channel, and a swale flowing south where it eventually rejoins the main channel at the Galley Road crossing. It is anticipated that the concrete channel will divert 42 cfs from the 217cfs present in the secondary drainageway, with 175 cfs flowing south down the existing swale. There is also an existing channel coming from Valley Road to the east. This channel intersects the main channel approximate halfway between the north and south limits of the site, adding 63 cfs to the main channel, as discussed in the Channel Flows section above. In its existing conditions, the Sand Creek Center Tributary Channel FEMA firm panel 08041C0752G, depicts 100 year flooding extending into the adjacent properties to the east and onto Paonia Street improvements to the west. The existing channel currently overtops the Galley Road crossing; primarily due to the capacity of the culverts at the crossing rather than the channel's current conditions.

#### **Proposed Channel Improvements**

As determined by the Sand Creek Drainage Basin Planning Study (DBPS) & and JR Engineering Sand Creek – Center Tributary Channel Analysis for Solace Apartments, this section of the Sand Creek Center Tributary will require improvements to ensure adequate capacity in the channel and protection against erosive velocities. In order to be consistent with improvements already made in the surrounding area and to align with the recommendations made by the DBPS, JR Engineering is proposing concrete lining of the channel along the Solace site, along with widening of the existing channel and modification to the channel alignment in this area. JR Engineering is also proposing the addition of a USBR Type III Stilling Basin and 10 foot sloped concrete drop in the channel, in order to force a hydraulic jump in the channel and reduce velocities present in the channel while still matching existing grades for the majority of channel alignment. The design methodology of the sloped drop and USBR Type III Stilling Basin are based on the design procedure for Stilling Basins presented in the Federal Highway Administrations Hydraulic Engineering Circular No. 14, Chapter 8. Calculation for stilling basin and accessories sizing can be found in the Appendix of this letter. The proposed channel section shall be a trapezoidal channel section with a 10' bottom width, with a minimum channel depth of 6.5' and side slopes varying from 3:1 to 2:1 along the channel's alignment. The channel shall be lined with concrete for a depth of 4.5' to protect the channel from the erosive velocities present in the channel, with an average depth of flow in a 100 year event for the proposed channel being approximately 3' this will provide a freeboard of 1'-1.5' from the top of the concrete lining to the 100 year water surface. The concrete section shall typically be a 6" thick concrete apron for the channel, with sections of the section of channel located within the sloped drop and stilling basin being a 12" thick concrete apron. In accordance with the DBPS the channel shall be designed with a stable slope of 1% for the majority of the channel. For further details please see the Channel Improvement Plans included in the Appendix of this letter. In order to reduce the velocities present in the

channel and avoid excessively steep slopes for extended portions of the channel's alignment, a 100' long sloped drop structure, with a total vertical drop of 10', will be placed at the upstream end of the channel. At the base of the drop will be a USBR Type III Stilling Basin that will include chute blocks, baffle blocks and a sill wall to decrease the velocity of the water coming down the sloped drop and force a hydraulic jump. This basin will also include a low flow channel through the sill wall located at the end of the stilling basin to allow water movement through the structure at lower flows and prevent ponding of water in the structure. Further detail for the sloped drop and stilling basin can be found in the channel improvement plans shown in the Appendix.

#### **Paonia Street Secondary Drainageway Improvements**

Part of the Sand Creek Center Tributary Improvements also includes the addition of a diversion channel that will direct flows present in the Paonia Street Secondary Drainageway into the main channel. This diversion will be known as the Overflow Channel for the remainder of this letter. The Overflow Channel shall be a concrete and riprapped lined channel with varying widths and depths that will convey the flows present in Paonia Street into the main channel. The diversion channel shall be concrete from the edge of Paonia to the right-of-way, after which it will become a riprap trapezoidal channel section with a typical bottom width of 20' and a depth of 2'-3'. The channel will run east from Paonia until it intersects with the proposed Sand Creek Center Tributary Channel alignment, where it will outfall just upstream of the proposed sloped drop in the channel. Just south of the diversion channel opening along Paonia Street will be two 15'type R inlets, that will be used to capture nuisance flows in the curb & gutter and also any flow that may bypass the diversion channel. These inlets will directly outfall into the main channel and will not be detained by any of the onsite detention ponds. For further detail on the diversion channel please see the channel improvement plans, and for detail on the type R inlets see the exert of the Solace Construction Drawings, both shown in the Appendix of this letter.

#### **Modeling Results**

The proposed conditions of the channel and its second Drainageway were modeled using GeoHecRas to determine the extents of the 100 year floodplain for the site. Flow rates from the model were used based on those discussed in the Channel Flows section and Existing Conditions section of this letter. The model was run with downstream boundary conditions for each reach using critical depths, and the entirety of the model was ran using steady flow conditions. The model was contains four separate reaches, with the main reach modeling the proposed alignment and conditions for the Sand Creek Center Tributary Channel. The other reaches modeling the Paonia Street Overflow Channel, the existing concrete overflow channel at Paonia and an existing channel that runs east to west from Valley Street and intersects the Sand Creek Center Tributary Channel, each reach intersection were modeled using the energy equation. The model used manning's values (n) of 0.013 for the concrete lining, 0.033 for the riprap of the overflow channel, and 0.03 for the any location outside of the concrete or riprap extents as they were determined to be most similar to a grassed area with some weeds. The results of the GeoHecRas model show that the proposed improvements to the channel substantially reduce the extents of the flood plain in the channel and contain the 100 year flood plain within the concrete extents of the channel. The results also show a maximum velocity in the channel of 10.32 ft/s in a 100 year event, showing that the concrete lining of the channel will provide sufficient protection from erosive velocities present in the channel. The GeoHecRas model for the proposed conditions also shows overtopping of the channel crossing at Galley Road, which is consistent with the flood data presented by the FEMA FIRM 08041C0752G. Flooding of the roadway is due to the insufficient capacity of the culvert crossing in this area, with the current configuration of three 48" CMP culverts only providing 365 cfs of capacity of the 1,100 cfs flow at the crossing. Flooding of the Galley Road Crossing could be alleviated by upsizing of the culvert(s), these improvements will be necessary when the County deems the historic overtopping of Galley Road to be above acceptable tolerance. The channel improvements did not results in any change to existing overtopping of Galley Road as this is due to insufficient capacity of the culverts at this crossing, which will ultimately be addressed at a later date. Further details on the model results can be found in the Appendix.

#### **Summary**

The analysis of the proposed improvements of the Sand Creek Center Tributary Drainageway and its secondary drainageway located in Paonia Street show significant reduction of the flood plain extents, with it now being contained within the channel extents and no longer extensively flooding properties adjacent the proposed Solace Apartment Site. The proposed diversion channel also redirects flow that would otherwise flood the proposed extension of Paonia Street back into the channel, thus alleviating the risk of the roadway flooding in a 100 year event.

Please contact me should you have any questions or concerns regarding this letter at 303-267-6240.

- 3.4. CDOT M&S STANDARDS
- 4. NOTWITHSTANDING ANYTHING DEPICTED IN THESE PLANS IN WORDS OR GRAPHIC REPRESENTATION, ALL DESIGN AND CONSTRUCTION RELATED TO ROADS, STORM DRAINAGE AND EROSION CONTROL SHALL CONFORM TO THE STANDARDS AND REQUIREMENTS OF THE MOST RECENT VERSIONS OF THE RELEVANT ADOPTED EL PASO COUNTY STANDARDS, INCLUDING THE LAND DEVELOPMENT CODE, THE EINGEERI9NG CRITERIA MANUAL, THE DRAINAGE CRITERIA MANUAL, AND THE DRAINAGE CRITERIA MANUAL VOLUME 2. ANY DEVIATIONS FROM REGULATIONS AND STANDARDS MUST BE REQUESTED, AND APPROVED, IN WRITING. ANY MODIFICATIONS NECESSARY TO MEET CRITERIA AFTER-THE-FACT WILL BE ENTIRELY THE DEVELOPER'S RESPONSIBILITY TO RECTIFY.
- 5. IT IS THE DESIGN ENGINEER'S RESPONSIBILITY TO ACCURATELY SHOW EXISTING CONDITIONS, BOTH ONSITE AND OFFSITE, ON THE CONSTRUCTION PLANS. ANY MODIFICATIONS NECESSARY DUE TO CONFLICTS, OMISSIONS, OR CHANGED CONDITIONS WILL BE ENTIRELY THE DEVELOPER'S RESPONSIBILITY TO RECTIFY.
- 6. CONTRACTOR SHALL SCHEDULE A PRE-CONSTRUCTION MEETING WITH EL PASO COUNTY PLANNING AND COMMUNITY DEVELOPMENT INSPECTIONS, PRIOR TO STARTING CONSTRUCTION.
- 7. IT IS THE CONTRACTOR'S RESPONSIBILITY TO UNDERSTAND THE REQUIREMENTS OF ALL JURISDICTIONAL AGENCIES TO OBTAIN ALL REQUIRED PERMITS, INCLUDING BUT NOT LIMITED TO EL PASO COUNTY EROSION AND STORMWATER QUALITY CONTROL PERMIT (ESQCP), REGIONAL BUILDING FLOODPLAIN DEVELOPMENT PERMIT, U.S. ARMY CORPS OF ENGINEERS-ISSUED 401 AND/OR 404 PERMITS, AND COUNTY AND STATE FUGITIVE DUST PERMITS.
- 8. CONTRACTOR SHALL NOT DEVIATE FROM THE PLANS WITHOUT FIRST OBTAINING WRITTEN APPROVAL FROM THE DESIGN ENGINEER AND PCD. CONTRACTOR SHALL NOTIFY THE DESIGN ENGINEER IMMEDIATELY UPON DISCOVERY OF ANY ERRORS OR INCONSISTENCIES.
- 9. ALL STORM DRAIN PIPE SHALL BE CLASS III RCP UNLESS OTHERWISE NOTED AND APPROVED BY PLANNING AND COMMUNITY
- 10. CONTRACTOR SHALL COORDINATE GEOTECHNICAL TESTING PER ECM STANDARDS. PAVEMENT DESIGN SHALL BE APPROVED BY EL PASO COUNTY PCD PRIOR TO PLACEMENT OF CURB AND GUTTER AND PAVEMENT.
- 11. ALL CONSTRUCTION TRAFFIC MUST ENTER/EXIT THE SITE AT APPROVED CONSTRUCTION ACCESS POINTS.
- 12. SIGHT VISIBILITY TRIANGLES ARE IDENTIFIED IN THE PLANS SHALL BE PROVIDED AT ALL INTERSECTIONS. OBSTRUCTIONS GREATER THAN 18 INCHES ABOVE FLOWLINE ARE NOT ALLOWED IN SIGHT TRIANGLES.
- 13. SIGNING AND STRIPING SHALL COMPLY WITH EL PASO COUNTY DEPARTMENT OF PUBLIC WORKS AND MUTCD CRITERIA.
- 14. CONTRACTOR SHALL OBTAIN ANY PERMITS REQUIRED BY EL PASO COUNTY DEPARTMENT OF PUBLIC WORKS, INCLUDING WORK WITHIN THE RIGHT-OF-WAY AND SPECIAL TRANSPORT PERMITS.
- 15. THE LIMITS OF CONSTRUCTION SHALL REMAIN WITHIN THE PROPERTY LINE UNLESS OTHERWISE NOTED. THE OWENER/DEVELOPER SHALL OBTAIN WRITTEN PERMISSION AND EASEMENTS, WHERE REQUIRED, FROM ADJOINING PROPERTY OWNER(S) PRIOR TO ANY OFF-SITE DISTURBANCE, GRADING, OR CONSTRUCTION.

Subject: Callout Page Label: 201 Author: Daniel Torres Date: 2/1/2021 10:57:17 AM

Status: Color: Layer: Space: Please provide a basin for this area. Account for it in your analysis/design and address in the

narrative.

Subject: Highlight Page Label: 201 Author: Daniel Torres Date: 2/1/2021 10:57:46 AM

Status: Color: Layer: Space:

Subject: Cloud+ Page Label: 18 Author: Daniel Torres Date: 2/1/2021 11:34:26 AM

Status: Color: Layer: Space: Please provide exact fees as this is a final drainage report that has been submitted with the final plat application. Also please provide the costs of the channel improvements indicated in the

DBPS.

Subject: Callout Page Label: 19 Author: Daniel Torres Date: 2/1/2021 11:38:43 AM

Status: Color: Layer: Space: Please clarify in the narrative that the below estimates do not include the channel improvements.

Subject: Callout Page Label: 18 Author: Daniel Torres Date: 2/1/2021 4:47:31 PM

Status: Color: Layer: Space: This was the estimated cost in the drainage reports submitted with the preliminary plan. Please verify if this is the actual estimated cost now that you have designed the proposed conditions. Revise as/if

needed.

Subject: Callout Page Label: 8

Author: Daniel Torres Date: 2/1/2021 5:33:42 PM

Status: Color: Layer: Space: If a berm is proposed to keep offsite funoff from entering the site then how is it matching historic.

Please clarify in the narrative.

Subject: Callout Page Label: 201 Author: Daniel Torres Date: 2/1/2021 5:37:29 PM

Status: Color: Layer: Space: Please indicate in the narrative whether or not CDOT is ok with conveyance of this offsite flow to their ROW. Additionally state whether or not any protection is needed as this flow is now a concentrated flow where as the historic conditions

this was sheet flow.

Subject: Callout Page Label: 14 Author: Daniel Torres Date: 2/1/2021 5:41:48 PM

Status: Color: Layer: Space: Per the drainage map, the runoff from these basins flow onto B and A basins. Be sure to account for the runoff accordingly and discuss this in the narrative.

Subject: Text Box Page Label: 17 Author: Daniel Torres Date: 2/1/2021 6:19:44 PM

Status: Color: Layer: Space:

In regards to stormwater quality, Per ECM appendix I, 100% of the applicable development site must be captured. There are basins that are not being captured by the proposed ponds such as Basins F6, F7, C2, C1 (please include any others i have missed). Please explain in the narrative how water quality is being addressed for these basins. If an exclusion such as I.7.1.B.7 (land disturbance to undeveloped land that will remain undeveloped) and/or the exclusion allowed per I.7.1.C.1 is being utilized please state it in the your report.

Subject: Callout Page Label: 7
