James Irwin Charter Academy
Traffic Impact Study
(LSC #S224370)
PCD File No. COM-2222
September 7, 2022

Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

RE: James Irwin Charter School
Traffic Impact Study
El Paso County, Colorado
PCD File No. COM-2222
LSC #S224370

Dear Mr. Hammers,

LSC Transportation Consultants, Inc. has prepared this traffic impact study (TIS) for the proposed James Irwin Charter School in El Paso County, Colorado. The site is located northeast of the intersection of Powers Boulevard/Waynoka Road at 2460 Waynoka Place (El Paso County parcel ID 5331301024). Access to the site would be to Waynoka Place. No direct access is proposed to Powers Boulevard or Waynoka Road.

This report has been prepared for submittal to El Paso County.

REPORT CONTENTS

- Inventory of the existing adjacent and nearby area road system. This included surface conditions, functional classifications, roadway widths, lane configurations, traffic control, posted speed limits, pavement markings, intersection and access spacing, roadway and intersection alignments, auxiliary left-turn and right-turn lanes, intersection sight distances, etc.;
- Morning, mid-afternoon, and late afternoon peak-hour turning-movement traffic counts at the following “study-area” intersections:
 - Powers Boulevard/Waynoka Road
 - Waynoka Road/Waynoka Place
 - Waynoka Place/all site accesses
 - Constitution Avenue/Tutt Boulevard/Waynoka Place (morning peak only)
 - Palmer Park Road/Waynoka Road
- Review of previously-completed traffic studies in the vicinity of this site for information and findings relative to this development. Other recent studies completed in the area and

any applicable data/transferrable information/analysis etc. from previous LSC studies adjacent to the site were also utilized;

- Evaluation of intersection/access sight distance at the proposed access points based on current criteria in the County's *Engineering Criteria Manual (ECM)*;
- Estimates of average weekday and peak-hour trip generation for the proposed development;
- Estimation of directional distribution of site-generated vehicle trips on the area road system, at the study-area intersections, and at the proposed site-access points.
- Projections of site-generated turning-movement traffic volumes at the following "study-area" intersections:
 - Powers Boulevard/Waynoka Road
 - Waynoka Road/Waynoka Place
 - Waynoka Place/all site accesses
 - Constitution Avenue/Tutt Boulevard/Waynoka Place
 - Palmer Park Road/Waynoka Road
- Estimates of short- and long-term background traffic volumes at the study-area intersections and access points;
- Short-term and long-term total traffic projections at the study-area intersections;
- Level of service (LOS) analysis at the study-area intersections;
- Queuing analysis at the site-access points;
- On-site queue length necessary for parent drop-off/pick-up operations;
- Evaluation of existing, short- and long-term total projected intersection volumes with respect to criteria for auxiliary right-/left-turn lanes on Waynoka Road and Waynoka Place, based on the criteria in the County's *Engineering Criteria Manual*;
- The recommended access plan for the school and recommendations for roadway striping along Waynoka Place north of Waynoka Road;
- Other recommendations and the El Paso County Road Impact Fee Program requirement; and
- Summary of compiled data, analysis, findings, and recommendations.

SCHOOL LOCATION, ACCESS, AND CIRCULATION

Site Location

Figure 1 shows the location of the proposed James Irwin Charter School site relative to the adjacent and nearby streets. The site is in unincorporated El Paso County, adjacent to the city limits of the City of Colorado Springs, Colorado. The site is located at 2460 Waynoka Place (El Paso County parcel ID 5331301024 and is bordered by Powers Boulevard to the west, Waynoka Place to the east, Waynoka Road to the south, and a shopping center to the north. The school campus plan, including buildings, access points, parking areas, and circulation, is shown in Figure 2.

Previous Land Use

The site was originally developed as a large, single-user manufacturing facility. That facility is no longer in operation and existing buildings and parking lots are vacant.

Site Access Plan

Access to the site would be provided via three accesses to Waynoka Place. No direct access would be provided to Powers Boulevard.

- Proposed north access: 588 feet north of Waynoka Place/Waynoka Road (**entrance only** – proposed new access point - recommended by LSC). Only **entering** turning movements will be permitted at the proposed north access, which will be the primary access for parent drop-off/pick-up and student drivers
- Middle access: 375 feet north of Waynoka Place/Waynoka Road (main **exit**, entrance only for buses, visitors, and drop off/pick up of students using inter-school bus service to other James Irwin schools, bus access – existing access to the property).
- South access: 156 feet north of Waynoka Place/Waynoka Road (staff parking lot only – existing access to the property). Staff parking and primarily overflow parking would be served by the south access.

Figure 15 shows the recommended site access and circulation plan. The area is to be used for parent pick-up and drop-off “car line.” The figure also shows a concept for the bus loading and unloading area.

EXISTING AND PROJECTED FUTURE STUDENT ENROLLMENT

School Enrollment and Operations

During the opening school year (2023-2024), James Irwin Charter Academy will serve 359 students. Maximum future enrollment is planned to be about 720 students. Projected enrollment by school year is shown in Table 1, as well as the projected number of buses serving the school and faculty/staff numbers.

Table 1: James Irwin Charter Academy Projected Enrollment, Number of Buses, and Staff

School Year	Student Enrollment	Staff	Buses
2023-2024	359	39	4
2024-2025	395	43	4
2025-2026	489	55	5
2026-2027	525	58	5
2027-2028	574	62	6
2028-2029	623	68	7
Max Enrollment	720	80	8

School Operations

Students in grades 11-12 will generally spent 50-75 percent of their time at the proposed campus in this report, with the remainder of their schedule split between either an internship or at Pikes Peak Community College (PPCC). Each academic classroom will have 25 student desks and one teacher workstation to accommodate 20-25 students at any given time.

Although eligible to enroll at the school, students in grades 13-14 will never attend classes at this proposed campus (studied in this report), as they will attend PPCC full-time. Enrollment numbers for grades 13-14 were not included in Table 1.

SCHOOL BELL AND BUS OPERATIONS

The school day would begin at 7:30 a.m. and would end at 3:15 p.m. Buses (which would transport approximately 100 students from other campuses to the Waynoka Place site) are scheduled to arrive between 7:10 a.m. to 7:15 a.m. and leave between 3:45 p.m. to 4:00 p.m. These buses would also be available for student travel to other campuses.

LSC has analyzed the following peak-hour periods to coincide with the arrival/dismissal of students during the school day and the peak hour of adjacent street traffic:

- AM peak hour – 7:00 a.m. to 8:00 a.m.
- Mid-day school peak hour – 2:30 p.m. to 3:30 p.m.
- PM peak hour – 4:00 p.m. to 5:00 p.m.

AREA PEDESTRIAN AND BICYCLE FACILITIES

Sidewalks exist along Waynoka Place, but generally not along Waynoka Road. Sidewalks exist along Constitution Avenue to the north and along Palmer Park Boulevard east of Waynoka.

Future extensions of two major regional trails (Sand Creek Trail and the Rock Island Trail) are planned in close proximity to the site. These future major regional trail connections would provide connectivity to other trails and intersecting roadways (most with sidewalks and some with bicycle lanes).

ROADWAY AND TRAFFIC CONDITIONS

Study Area

The study area is bordered by Constitution Avenue on the north, Palmer Park Boulevard on the south, Powers Boulevard on the west, and a combination of Sand Creek, the Rock Island Trail ROW and the Cherokee Ridge Golf Course on the east. Per the multi-jurisdictional project

meeting, the study-area intersections added include Waynoka/Palmer Park and Constitution/Tutt/Waynoka Place.

Area Roadways

Figure 1 shows the roadways in the vicinity of the site. Major roadways are identified below, followed by a brief description.

Powers Boulevard (State Highway 21) classified by CDOT as a 6-lane F-W: Freeway in the vicinity of the site. Adjacent to the site, Powers has a posted speed limit of 55 miles per hour (mph). No auxiliary turn lanes currently exist at the stop-sign-controlled, right-in/right-out (RIRO) intersection of Powers Boulevard/Waynoka Road. **Note: Pursuant to a recent meeting with CDOT and El Paso County, CDOT will require the permanent closure of the Waynoka Road connection to Powers Boulevard with this project. A cul-de-sac turn-around will be constructed on Waynoka Road just west of Waynoka Place/Waynoka Road intersection.**

Constitution Avenue is shown on the El Paso County *Major Transportation Corridors Plan (MTCP)* as a four-lane Principal Arterial (County portion). Overall, Constitution extends east-to-west between Paseo Road and US Highway (Hwy) 24. The intersection of Constitution Avenue/Tutt Boulevard/Waynoka Place is signalized. This intersection is within the City of Colorado Springs.

Waynoka Road is shown on the *MTCP* as a two-lane Collector (the street is an Urban, Non-Residential Collector). Waynoka Road extends generally north/south for 1.1 miles between Powers Boulevard and Palmer Park Boulevard. The posted speed limit on Waynoka Road is 30 mph. **Note: Pursuant to a recent meeting with CDOT and El Paso County, CDOT will require the permanent closure of the Waynoka Road connection to Powers Boulevard with this project. A cul-de-sac turn-around will be constructed on Waynoka Road just west of Waynoka Place/Waynoka Road intersection.**

Waynoka Place is a local road that extends generally north/south for 0.4 miles between Waynoka Road and Constitution Avenue. No auxiliary turn lanes are striped/marked at the stop-sign-controlled T-intersection of Waynoka Road/Waynoka Place. Much of Waynoka Road and Waynoka Place will likely combine to form portions of the planned future Powers Boulevard frontage Road.

Palmer Park Boulevard extends from west of Union Boulevard east to Shawnee Drive. Classified as a Principal Arterial between Powers Boulevard and Peterson Boulevard, Palmer Park Boulevard has two through lanes in each direction plus a center two-way left-turn lane and a posted speed limit of 35 miles per hour (mph). The intersection of Palmer Park Boulevard/Waynoka Place is a stop sign-controlled, full-movement T-intersection.

ACCESS SIGHT-DISTANCE ANALYSIS

Both existing site-access points and the proposed north site-access point have been evaluated for intersection and stopping sight distance. Please refer to Figure 3a-c, which show the detailed access sight-distance analysis.

Site improvements (existing-to-remain and proposed new) must not impede sight-distance lines of sight, as the access points will need to meet El Paso County's *Engineering Criteria Manual (ECM)* standards for sight distance.

Existing site landscaping, lower tree branches, bushes, signs, buildings, parking areas, etc. should be removed, if necessary, and new site improvements should not be placed within the *ECM*-required line of sight "triangles."

Existing Traffic Volumes

Existing traffic volumes at the following intersections are shown in Figure 4. Detailed traffic count reports are attached.

- Powers Road/Waynoka Road
 - Thursday, June 9, 2022, from 6:45 – 8:00 a.m.
 - Thursday, June 9, 2022, from 2:30 – 3:30 p.m.
 - Thursday, June 9, 2022, from 4:00 – 6:00 p.m.
- Waynoka Road/Waynoka Place
 - Thursday, June 9, 2022, from 6:45 – 8:00 a.m.
 - Thursday, June 9, 2022, from 2:30 – 3:30 p.m.
 - Thursday, June 9, 2022, from 4:00 – 6:00 p.m.
- Constitution Avenue/Waynoka Place/Tutt Boulevard
 - Tuesday, June 28, 2022, from 6:30 – 8:30 a.m.
- Palmer Park Boulevard/Waynoka Road
 - Tuesday, July 19, 2022, from 6:30 – 8:30 a.m.
 - Tuesday, July 19, 2022, from 1:30 – 3:30 p.m.
 - Tuesday, July 19, 2022, from 4:00 – 6:00 p.m.

TRIP GENERATION

Estimates of the existing and projected vehicle trips to be generated by a site are typically made using the following nationally-published average trip-generation rates in *Trip Generation, 11th Edition, 2021* by the Institute of Transportation Engineers (ITE). LSC used rates for ITE land-use code "538 – Charter School (K-12)" to estimate the school trip generation. LSC has also included a comparison to the trip generation for the previous land use at this site (estimated), for reference.

Short Term (2023-2024 School Year)

Table 2 below presents a summary of the estimated site trip generation for the 2023-2024 school year using ITE rates. The detailed short-term trip-generation estimate for the school is presented in Table 3 (attached).

Table 2: Estimated Site Vehicle-Trip Generation (2023-2024 School Year)

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	179	159	338
Mid-Day Peak Hour	131	131	262
Evening Peak Hour	7	7	14

Based on the ITE estimate for the proposed James Irwin Charter Academy, the site would generate about 785 external vehicle trips on the average weekday during the initial 2023-2024 school year. During the weekday morning peak hour, approximately 179 vehicles would enter and 159 vehicles would exit the site. Approximately 131 entering vehicles and 131 exiting vehicles are projected for the weekday school mid-afternoon peak hour. During the weekday late-afternoon “commuter” peak hour, approximately 7 vehicles would enter and 7 vehicles would exit the site.

Long Term (Maximum Enrollment)

Table 3 below presents a summary of the estimated site trip generation for the maximum enrollment school year using ITE rates. The detailed long-term trip-generation estimate for the school is presented in Table 5 (attached).

Table 3: Estimated Site Vehicle-Trip Generation (Maximum Enrollment School Year)

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	359	318	677
Mid-Day Peak Hour	263	263	526
Evening Peak Hour	13	13	26

Based on the long-term ITE trip estimate for the proposed James Irwin Charter Academy, about 359 vehicles would enter and 318 vehicles would exit the site during the morning peak hour. Approximately 263 entering vehicles and 263 exiting vehicles are projected for the weekday school mid-afternoon peak hour. During the weekday late-afternoon “commuter” peak hour, approximately 13 vehicles would enter and 13 vehicles would exit the site.

Comparison to Previous Land Use

Short Term

During the opening year, compared to the previous land use for the site (an 82,235-square-foot manufacturing building), the proposed James Irwin Charter Academy would generate:

- AM peak hour – 69 additional entering and 144 additional exiting trips
- Mid-day peak hour – 121 additional entering and 82 additional exiting trips
- PM peak hour – 14 fewer entering and 92 fewer exiting trips

Long Term

During the long term, compared to the previous land use for the site (an 82,235-square-foot office building), the proposed James Irwin Charter Academy would generate:

- AM peak hour – 249 additional entering and 303 additional exiting trips
- Mid-day peak hour – 253 additional entering and 214 additional exiting trips
- PM peak hour – 7 fewer entering and 85 fewer exiting trips

TRIP DISTRIBUTION AND ASSIGNMENT

Trip Directional Distribution

Estimating the directional distribution of site-generated vehicle trips to the study-area roads and intersections is a necessary component in determining the site's traffic impacts. Figure 5 shows the percentages of the site-generated vehicle trips projected to be oriented to and from the site's major approaches. Estimates have been based on the following factors: the proposed new land use, the area street and road system serving the site, and the site's geographic location relative to the balance of the City of Colorado Springs and unincorporated areas of El Paso County.

Additionally, the applicant provided a list of zip codes in which currently-enrolled students reside. LSC utilized these data as part of the trip distribution estimate. Please refer to Appendix Figure 1 for more details.

Site-Generated Traffic (Short Term)

Figure 6 shows the projected site-generated traffic volumes for the weekday morning and evening peak hours for the short term. Short-term site-generated traffic volumes have been calculated by applying directional-distribution percentages estimated by LSC (from Figure 5) to the short-term trip-generation estimates (from Table 3). The 2022-2023 school year estimates have been used for the short-term school site-generated traffic-volume estimates.

Site-Generated Traffic (Long Term)

Figure 7 shows the projected site-generated traffic volumes for the weekday morning and evening peak hours for the maximum enrollment year. Long-term site-generated traffic volumes have been calculated by applying directional-distribution percentages estimated by LSC (from Figure 5) to the long-term trip-generation estimates (from Table 3). The maximum enrollment school year estimates have been used for the long-term school site-generated traffic-volume estimates.

SHORT-TERM SCENARIO, BASELINE AND TOTAL TRAFFIC

The Waynoka Road connection to Powers Boulevard will be permanently closed **with this project**, as required by CDOT.

Figure 8 shows the estimated short-term baseline traffic volumes, which reflect adjustments and rerouting of existing traffic to account for the planned closure of the Waynoka Road/Powers Boulevard intersection.

Figure 9 shows the projected short-term total traffic volumes, which are the sum of short-term baseline (adjusted existing traffic, from Figure 8) plus estimated James Irwin Charter Academy short-term (2023-2024 school year) site-generated traffic (from Figure 6).

FUTURE LONG-TERM TRAFFIC SCENARIO

Several potential future changes to the area roadway network will affect future traffic volumes in the study area.

- Powers Boulevard is planned as a future freeway. Although Powers Boulevard volumes are likely to continue to increase, the corridor already currently carries high volumes.
- The Waynoka Road connection to Powers Boulevard will be permanently closed **with this project**, as required by CDOT.
- Waynoka Road south of Waynoka Place and Waynoka Place will likely combine to form portions of the planned future Powers Boulevard frontage road.
- Some currently-vacant parcels along Waynoka Road may be developed in the future. Although this will add some additional traffic to Waynoka, the roadway is under-capacity and will be able to accommodate additional trips.

2042 BACKGROUND TRAFFIC

Figure 10 shows the background traffic volumes for the year 2042. Background traffic is the traffic estimated to be on the adjacent roadway system without consideration of the proposed school. Background traffic includes the through traffic and the traffic generated by adjacent developments (existing and anticipated future) but assumes zero traffic generated by the site.

2042 TOTAL TRAFFIC

Figure 11 shows the total traffic volumes for the year 2042 at the study-area intersections, which are the sum of the 2042 background traffic volumes (from Figure 10) plus the long-term site-generated traffic volumes (from Figure 7).

LEVEL OF SERVICE ANALYSIS

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from “A” to “F.” LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 4 shows the level of service delay ranges for signalized and unsignalized intersections.

Table 4: Intersection Levels of Service Delay Ranges

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	Average Control Delay (seconds per vehicle) ⁽¹⁾
A	10.0 sec or less	10.0 sec or less
B	10.1-20.0 sec	10.1-15.0 sec
C	20.1-35.0 sec	15.1-25.0 sec
D	35.1-55.0 sec	25.1-35.0 sec
E	55.1-80.0 sec	35.1-50.0 sec
F	80.1 sec or more	50.1 sec or more
(1) For unsignalized intersections, if V/C ratio is greater than 1.0 the level of service is LOS F, regardless of the projected average control delay per vehicle.		

Detailed Synchro reports are attached. A summary of LOS during the weekday morning and evening peak hours for the study-area intersections is shown in the following figures:

- Figure 4: Existing Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 8: Short-Term Baseline Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 9: Short-Term Baseline + Site Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 10: 2042 Background Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 11: 2042 Background + Site Traffic, Lane Geometry, Traffic Control, and LOS

Powers Boulevard/Waynoka Road

The westbound-right turning movement at Powers Boulevard/Waynoka Road currently operates at LOS D during the morning peak hour but LOS F during the mid-day and PM peak hours. Pursuant to a recent meeting with CDOT and El Paso County, CDOT has indicated that this intersection must be closed prior to the opening of the proposed school. As such, no short- or long-term analysis has been included in this report.

Waynoka Place/Site Access Points

LSC has assumed that Waynoka Road would be restriped with a painted left-turn median. This would either be striping for dedicated left-turn bays or a center two-way left-turn lane (TWLTL) in conjunction with the opening of the charter school.

Waynoka Place/North Site Access

All individual turning movements at the proposed north site access are projected to operate at LOS A through the long-term during all peak periods. Only northbound-left and southbound-right **entering** movements by parents and students would be permitted at this access.

Waynoka Place/Middle Site Access

All individual turning movements at the proposed north site access are projected to operate at LOS D or better through the long-term during all peak periods. Separate eastbound-left and eastbound-right exiting movements would be provided. This access will be the primary exit for the school, including parent and student vehicles. Buses would be permitted to **enter** (and exit) at this access, as would visitors, and parents dropping off/picking up students using inter-school bus service to other James Irwin schools.

Waynoka Place/South Site Access

All individual turning movements at the proposed north site access are projected to operate at LOS B or better through the long-term during all peak periods. Only staff/faculty and overflow parking would be permitted at this full-movement access.

Waynoka Road/Waynoka Place

All single-lane approaches at this intersection currently operate at and are projected to remain at LOS B or better during all peak periods, with or without the addition of site-generated traffic. Note: This analysis has been conducted based on the current laneage of single-lane approaches. Please refer to the following Auxiliary Turn-Lane Needs Analysis section of this report.

Constitution Avenue/Tutt Boulevard/Waynoka Place

Note: LSC did not modify the City's existing signal timings at this intersection when analyzing any short-term or long-term scenario, with or without the addition of site-generated traffic. Based on projected volume increases on Tutt Boulevard and Waynoka Place, the City may opt to adjust existing signal timings to provide more green time to the northbound and southbound approaches in order to improve LOS on the minor-street approaches.

Short Term

Based on existing signal timings, all individual turning movements currently operate at and are projected to remain at LOS D or better during the short term, with or without the addition of site-generated traffic from the proposed charter school.

Long Term

Using existing signal timings, the following individual turning movements are projected to operate at LOS E or worse during the long term, with or without the addition of site-generated traffic from the proposed charter school: southbound-through and northbound-left. The northbound-through/right shared turn lane is projected to operate at LOS E during the maximum enrollment school year.

It is unlikely that LOS on the northbound approach would improve without modifying the existing signal timings to provide more green time on minor-street approaches. There is not sufficient room to add separate northbound-through and northbound-right lanes, so this turning movement is likely to remain a single northbound-through/right shared turn lane in the future. Additionally, the eastbound-right turning movement already exceeds the City's threshold for requiring a right-turn deceleration lane, but this improvement is not feasible due to geometric constraints on the southwest corner of Constitution/Tutt/Waynoka.

Palmer Park Boulevard/Waynoka Road

Short Term

Assuming the existing stop-sign control, all individual turning movements would continue to operate at LOS D or better during the short term, with or without the addition of site-generated traffic from the proposed charter school.

Long Term

Based on the long term projected total volumes, the southbound left-turning movement is projected to operate at LOS E or worse during the morning and mid-afternoon peak hours. Assuming existing traffic control, the southbound-left turning movement is projected to operate at LOS F during all peak hours during the 20-year horizon. This intersection is a short distance east of the Powers/Palmer Park signalized intersection. Relatively long traffic gaps in eastbound traffic are created by this upstream signal and the signal at the adjacent Wendy's/shopping center signal, which benefit southbound-left-turning motorists at Waynoka Road/Palmer Park Boulevard.

Right-of-way has been reserved for potential future realignment of Waynoka Road north of Palmer Park. The Powers Environmental Assessment envisions this realignment such that

Waynoka Road would align with the rear access to the former Kmart shopping center, and this four-leg intersection would be signalized. The property owner on the north side of Palmer Park is (and has been) evaluating other short-term and long-term access and traffic-control alternatives for this section of Palmer Park Boulevard.

QUEUING ANALYSIS – ACCESS POINT INTERSECTIONS AND OFFSITE INTERSECTIONS

A queuing analysis was performed for the eastbound approach at the middle site access to Waynoka Place. Queuing analyses have been run for the short-term total and the 2042 total traffic volumes.

“Upstream block time” represents the percent of time during the peak hour in which the entry point for a turn lane upstream of the subject intersection is blocked by a queue in the adjacent through lane. “Storage block time” is the proportion of time in which the turn lane’s queue exceeds the available storage length and left-turning vehicles overspill the turn lane in the model and into the adjacent through lane.

“Maximum queue” represents the maximum queue length observed for each individual lane during the 15-minute analysis period. SimTraffic records the maximum back of queue observed for every two-minute period. In SimTraffic, a vehicle is considered queued whenever it is behind another vehicle traveling at less than 10 feet/second (approximately 7 mph) or at a stop bar. The maximum observed queue may not occur during the same interval in which the highest upstream block time (percent) or storage block time (percent) occurs. LSC has analyzed the highest value for each metric for each turn lane/approach, regardless of whether or not they occur in the same 15-minute interval.

Reported queue lengths for auxiliary turn lanes in SimTraffic is generally limited by the turn-lane length. SimTraffic simply reports the maximum observed queue length during simulations. Any spillover from a left-turn lane is reported in the adjacent lane queue length.

Middle Access

Analysis has been run to estimate the maximum queue length of the eastbound-left and eastbound-right exiting lanes at the middle access to determine the minimum on-site stacking length for parent and student vehicles after pick-up and drop-off operations. These lanes would be striped separately in their entirety after the parent loading zone.

During the mid-afternoon peak hour, simulation reports indicate that the eastbound-left queue is projected to reach a maximum of about 264 feet, while the eastbound-right queue is projected to reach a maximum of about 135 feet during the long-term afternoon release period.

LSC recommends that the eastbound exiting turn lanes at the middle access each be striped for a minimum of 264 feet, which would accommodate approximately 10-12 vehicles. Please refer

to the attached SimTraffic reports for projected maximum and 95th percentile mid-day peak-hour queue lengths.

North Access

Analysis has been run to estimate the maximum queue length of the northbound-left lanes at the north access that would extend to the middle access. A 180-foot dedicated northbound-left turn lane is recommended on Waynoka Place between the north and middle site accesses.

SimTraffic simulation reports indicate that the northbound-left queue is projected to reach a maximum of about 105 feet, which would **not** exceed the 180 feet of stacking distance for this turn lane.

AUXILIARY TURN-LANE NEED ANALYSIS

Please refer to the following exhibits (attached) for proposed striping plans at each site access:

- Figure 12: Proposed North Access Laneage
- Figure 13: Proposed Middle Access Laneage
- Figure 14: Proposed South Access Laneage

Powers Boulevard/Waynoka Road

Powers Boulevard is classified as “F-W: Freeway” with a posted speed limit of 55 mph in the vicinity of the site. Waynoka Road is classified as a Non-Residential Collector. No auxiliary right-turn lanes currently exist on Powers Boulevard at Waynoka Road. However, CDOT has indicated that this RIRO intersection will be **closed** in conjunction with the opening of the proposed school.

Waynoka Road at Waynoka Place

Following the closure of the Waynoka Road/Powers intersection, nearly all vehicles would be westbound-right-turning (to head northbound on Waynoka Place), so there would be no need for a separate right-turn deceleration lane on the westbound approach.

Additionally, LSC recommends that the southbound approach on Waynoka Place approaching Waynoka Road should remain a single-lane approach. Striping for a short northbound-left-turn bay is recommended just north of this intersection at the south access (staff/overflow parking lot), and that is achievable with the southbound single-lane approach on Waynoka Place at Waynoka Road.

Waynoka Place/Site Access Points

LSC recommends that Waynoka Place be striped with a painted left-turn median. This would either be striping for dedicated left-turn bays or a center two-way left-turn lane (TWLTL) in conjunction with the opening of the charter school. The preliminary recommended configuration of the access points and associated laneage, striping of Waynoka Place, etc. is shown in Figures Figure 12-Figure 14

Waynoka Place/North Site Access

Only entering turning movements will be permitted at the north access, which will be the ingress for parent and student drivers. Based on projected traffic volumes, *ECM* thresholds for southbound-right and northbound-left turn lanes would be met at the main access. LSC recommends the following turn-lane dimensions at the north access:

- 280-foot southbound right-turn deceleration lane (190 feet with 90-foot taper)
- Northbound left-turn deceleration lane at part of TWLTL

Waynoka Place/Middle Site Access

The middle access would serve as an exit-only, except for buses, visitors and parents dropping off/picking up students using inter-school bus service to other James Irwin schools. These vehicles would be allowed entry at this middle access. LSC recommends that separate eastbound-left and eastbound-right turn lanes with at least 250 feet of stacking distance per lane be provided to accommodate projected exiting queues.

Waynoka Place/South Site Access

Staff parking and primarily overflow parking would be served by the south access. Due to the short distance on Waynoka Place between the south access and the stop bar at Waynoka Road, LSC recommends striping for a short 100-foot northbound-left turn bay at the south access. This lane would consist of 50 feet of storage and a 50-foot taper.

Palmer Park Boulevard/Waynoka Road

Based on projected traffic volumes, the westbound right-turn movement would exceed the *ECM* threshold requiring a separate westbound right-turn deceleration lane. The cross-section of Palmer Park Boulevard includes a striped, center left-turn median (TWLTL).

Constitution Avenue/Tutt Boulevard/Waynoka Place

There is not sufficient room to add separate northbound-through and northbound-right lanes, so this turning movement is likely to remain a single northbound-through/right shared turn lane in the future. Additionally, the eastbound-right turning movement already exceeds the City's

threshold for requiring a right-turn deceleration lane, but this improvement is not feasible due to geometric constraints on the southwest corner of Constitution/Tutt/Waynoka.

ON-SITE QUEUING REQUIREMENT (FOR PARENT PICK-UP/DROP-OFF “CAR-LINE”)

School On-Site Queueing for Parent Drop-off and Pick-up

The North Carolina Municipal School Transportation Assistance (MSTA) performs studies that address the safety concerns with the overall pedestrian safety and traffic operations on a school campus, and how traffic affects adjacent roadways. To calculate school operations, MSTA has developed a database of specific data related to school operations, including required queue lengths and trip-generation estimates by mode (parent drop-off/pick-up, bus, etc.). LSC has used the MSTA’s spreadsheet in several similar school operations studies, as it has typically been required by jurisdictions as a preferred alternative to ITE rates for schools.

Data indicates that AM traffic operations on a school campus usually operate safely and efficiently due to parent traffic arriving at a broader range of times. PM traffic operations are quite different, as parents often arrive well before the school dismissal and park or queue (back up) along campus driveways. The PM queue often results with vehicles stopped in the roadway or along the shoulder of a major through route, which increase the chances of accidents and similar traffic-related safety concerns.

Per information from the City of Colorado Springs Traffic Engineering Division, the required “high-demand” stacking length on-site in the proposed parent drop-off/pick-up loop for the maximum enrollment (720 students) would be 1,650 feet. The school “carpool” plan will need to show this length of on-site stacking/queueing distance for parent drop-off/pick-up **plus** 175 feet of active loading/unloading zone distance (NC MSTA guidelines). Depending on the site operational characteristics, the necessary on-site queue lengths could potentially be adjusted.

This queue distance is exclusive of a recommended 5-7-vehicle-long drop-off/pick-up zone (the 175-foot distance). The empirical formula adds an additional 30 percent to a base queue-length calculation of required total queue length as a precaution for atypical events, including bad weather, school performances, and other special events. Formula-generated queue lengths are based on afternoon school peak-hour empirical queueing data.

ROADWAY CLASSIFICATIONS

Powers Boulevard is a designated Freeway, Waynoka Road is a Non-Residential Collector, and Waynoka Place is a Local Road. However, Waynoka Place should likely be considered a Non-Residential Collector.

CONFORMANCE WITH THE MTCP

No reimbursable roadway improvement projects have been identified as being needed by the year 2040, per Map 13 and Table 4 of El Paso County's 2016 *MTCP*. See the attached *MTCP* maps for reference.

COUNTY ROAD IMPROVEMENT FEE PROGRAM

The applicant will be required to participate in this program.

MULTI-MODAL/TRANSPORTATION DEMAND MANAGEMENT (TDM) OPPORTUNITIES

No multi-modal/transportation demand management (TDM) roadway improvement projects have been identified as being needed by the year 2040 per Map 15 and Table 5 of El Paso County's 2016 *MTCP*.

Please refer to the Pedestrian and bicycle section above for details on sidewalk facilities and two nearby future regional trail extensions/connections.

SUMMARY

Trip Generation

- During the morning peak hour, about 359 vehicles would enter and 318 vehicles would exit the site.
- Approximately 263 vehicles would enter and 263 vehicles would exit the site during the school afternoon peak hour.
- During the PM peak hour, about 13 vehicles would enter and 13 vehicles would exit the site.

Pedestrian and Bicycle Accessibility

- Please refer to the section of the report for details on existing sidewalk locations in the area. Two planned major regional trail corridors intersect near the site. This will provide excellent pedestrian and bicycle accessibility in the future once these trails are established.

Projected Levels of Service

- All individual turning movements and single-lane approaches at the proposed site-access points are projected to operate at LOS D or better through the 20-year horizon following the opening of the charter school. Please refer to the "Level of Service" section for details.

- Please refer to the “Level of Service” section for analysis and results at the two offsite intersections analyzed.

Auxiliary Turn-Lane Needs Analysis

- Please refer to the “Auxiliary Turn-Lane Analysis” section for details.
- Regarding the site-access points and adjacent section of Waynoka Place, Figure 12-Figure 14 show a preliminary laneage concept. LSC will assist the design team with the detailed configuration of the access points, access radii, alignment and width, associated laneage, striping of Waynoka Place, etc. at the design stage.

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 65 (45%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.31

Intersection Signal Delay: 18.8

Intersection LOS: B

Intersection Capacity Utilization 45.7%

ICU Level of Service A

Analysis Period (min) 15

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 65 (45%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.31

Intersection Signal Delay: 19.2

Intersection LOS: B

Intersection Capacity Utilization 45.7%

ICU Level of Service A

Analysis Period (min) 15

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 65 (45%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.41

Intersection Signal Delay: 21.1

Intersection LOS: C

Intersection Capacity Utilization 49.2%

ICU Level of Service A

Analysis Period (min) 15

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 65 (45%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.52

Intersection Signal Delay: 24.1

Intersection LOS: C

Intersection Capacity Utilization 57.5%

ICU Level of Service B

Analysis Period (min) 15

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 65 (45%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.19

Intersection Signal Delay: 39.5

Intersection LOS: D

Intersection Capacity Utilization 70.2%

ICU Level of Service C

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Lanes, Volumes, Timings

1: Waynoka PI/Tutt Blvd & Constitution Ave

2042 Background + Site
AM

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 1: Waynoka PI/Tutt Blvd & Constitution Ave

MTCP Maps

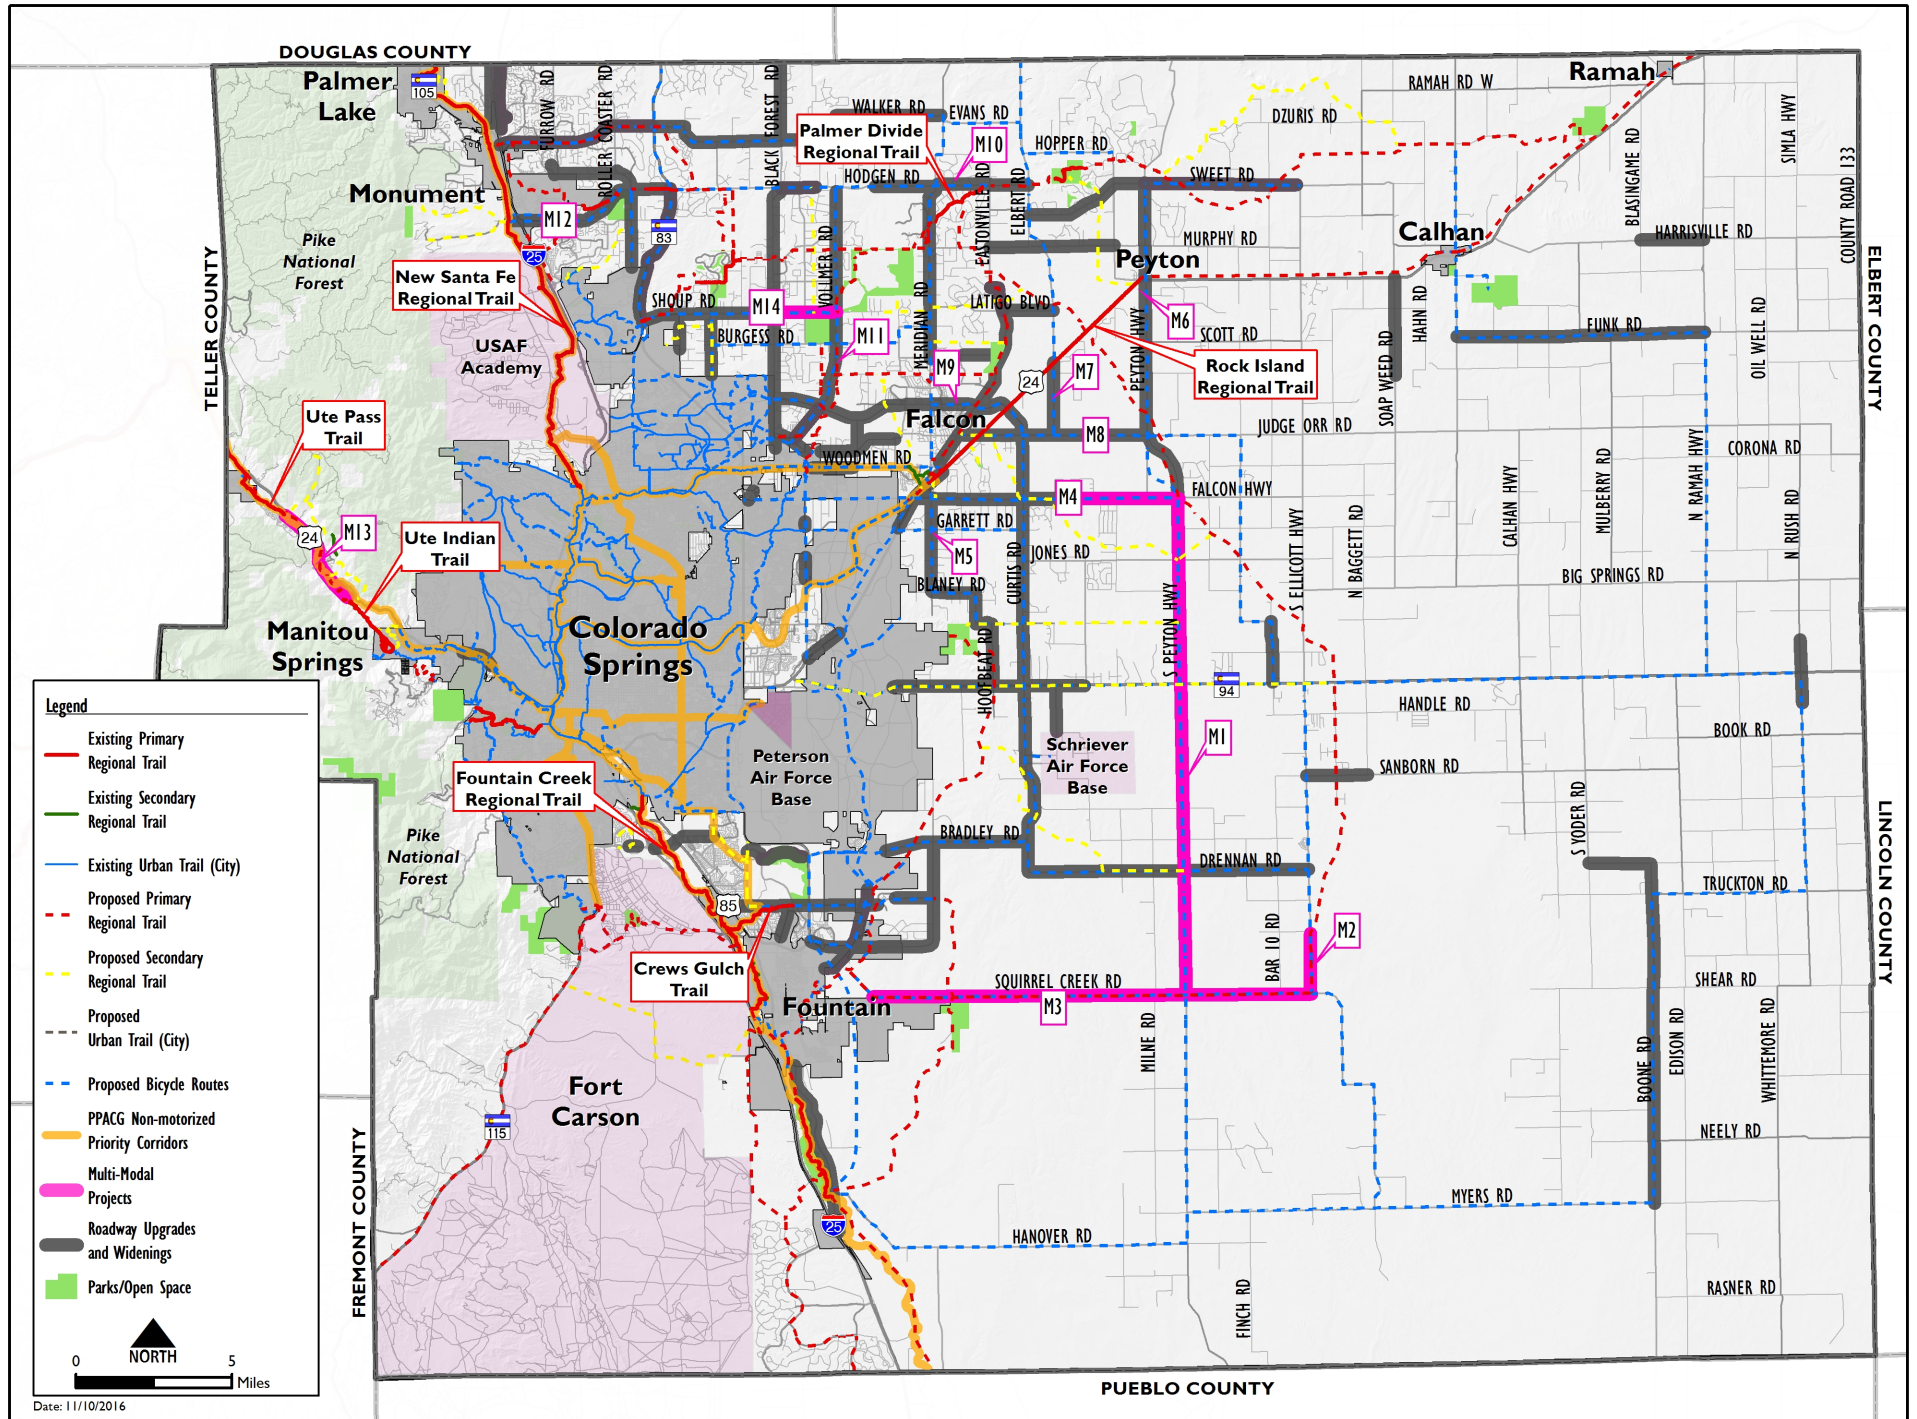

Map 13: Improvements Map

Map 14: 2040 Roadway Plan (Classification and Lanes)

Map 15: Multimodal Improvements

Roadway Plan

A total of 67 different projects have been identified as being needed by the year 2040. These projects are shown on Map 13 and listed on Table 4, with each project numbered within each improvement category. Capacity improvement projects are concentrated in the developing urban/suburban western part of the County, while paving projects are spread throughout the County with several in the eastern part.

Map 14 shows the 2040 Roadway Plan that results from the implementation of the improvements described above. The map shows road laneage and classification envisioned in 2040 if all 67 projects are implemented.

Table 4: 2040 Roadway Improvement Projects

Project ID	Road Segment	Segment		PPRTA Project	Urban vs. Rural	Existing Conditions		Future Conditions		Total Cost
		Beginning	End			Lanes	Functional Class	Lanes	Functional Class	
Paving Improvement Projects										
P1	Black Forest Rd	Walker Rd	County Line Rd		Rural	2	Gravel Road	2	Unimproved County Rd	\$1,954,000
