Stormwater Facility Name: Pond 1

2) If these values were modified on here to get the outputs to better align with MHFD-Detention, simply upload MHFD-Detention calcs into this EDARP slot. We do not specifically need this SDI sheet, just any pond calcs. We'd rather have the MHFD-Detention calcs then two spreadsheets that have differing inputs.

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

Once CUHP has been run and the Stage-Area-Discharge information has been provided, click 'Process Data' to interpolate the Stage-Area-Volume-Discharge data and generate summary results in the table below. Once this is complete, click 'Print to PDF'.
