DESIGN ENGINEER'S STATEMENT

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Emily Felton, P.E.
Registered Professional Engineer
State of Colorado No. 0054609

DEVELOPER'S STATEMENT

I, the owner/developer have read and will comply with all the requirements specified in this drainage report and plan.

Dean Pisciotta

INTRODUCTION

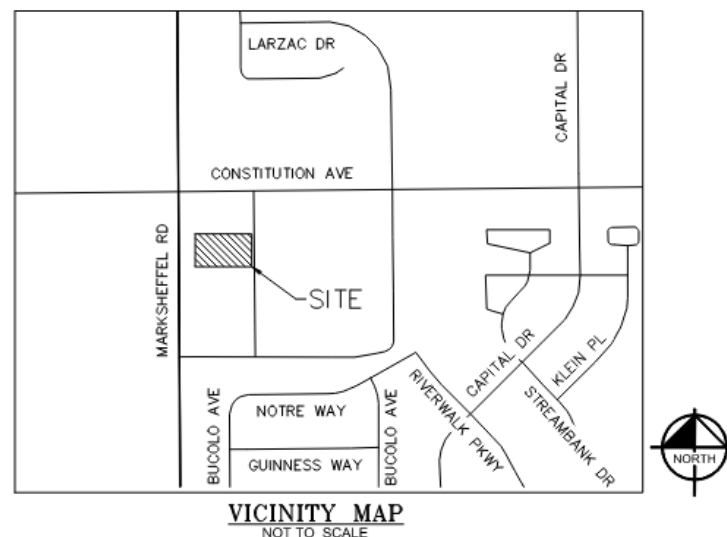

The purpose of this Drainage Compliance Letter is to outline the drainage design of the proposed Brakes Plus project ("the Project") located near the southeast corner of Constitution Avenue and Marksheffel Road in El Paso County, Colorado (the "Site"). This Drainage Letter has been developed in conformance with the *Final Drainage Report for SEC of Marksheffel Rd. & Constitution Ave.* prepared by Galloway & Company, Inc. dated September 14, 2015 (PCD File No. SF 1511), the *Drainage Conformance Letter* prepared by Galloway & Company, Inc. prepared October 12, 2018 and current City of Colorado Springs *Drainage Criteria Manual Volume 2*.

The Drainage Letter demonstrates the Project drainage, sub-basins, impervious area, and resulting stormwater runoff is consistent with assumptions within the *Final Drainage Report for SEC of Marksheffel Rd. & Constitution Ave.* as well as the *Drainage Conformance Letter* prepared by Galloway & Company, Inc. and will not cause negative impacts to downstream developments.

GENERAL LOCATION AND PROJECT DESCRIPTION

SITE LOCATION

The Site is located at the southeast corner of Marksheffel Road and Constitution Avenue and currently consists of the Claremont Ranch Filing No. 9C, Block 1. More specifically, the Site is located in the northwest quarter of Section 4, Township 14 South, Range 65 West of the of the Sixth Principal Meridian, County of El Paso, State of Colorado. A vicinity map is provided below for reference:

DESCRIPTION OF PROPERTY

The Site consists of the Claremont Ranch Filing No. 9C Lot 1. The current site is approximately 0.77 acres of undeveloped vacant land. The Project is anticipated to consist of a new automotive service center of approximately 4,839 total square feet, drive aisles and parking, landscaping, and associated utility improvements. Project access will be obtained from the existing curb cuts off the property to the northeast and northwest of the site, and existing curb cut off the property to the southeast of the site. Parking and

drive aisles are proposed to loop around the building to provide internal traffic circulation as well as emergency access throughout the Project.

The Site is currently undeveloped. Existing ground cover consists of patches of sparse vegetation of native weeds and grasses. A review of the Natural Resource Conservation Service (NRCS) Web Soil Survey determined that the Site is made up of Blendon sandy loam, which has an NRCS Soil Type B. Soil Type B has been utilized for calculations included within this report. The NRCS study is found in **Appendix A** of the report.

The existing topography generally drains from the northeast to the southwest into the existing storm infrastructure. The overall site varies in elevation from a low of approximately 6444 feet to a high of approximately 6450 feet. Respective runoff sheet flows across the property from northeast to the southwest at slopes varying from 1.5% to 10%. No geologic hazards have been identified within the proposed project site.

DRAINAGE BASINS

MAJOR BASINS

The Site is located mostly within Basin D-2 and partly within D-3 according to the *Final Drainage Report*. Runoff from Basin D-2 was designed to be captured by a future storm sewer pipe system within the future development and connect to the existing storm sewer system which outfalls to the existing pond immediately west of the King Soopers building (an Extended Detention Basin located in Lot 1, Block 1 of Claremont Ranch Filing No. 9) as identified in the *Final Drainage Report*. The general design intent of the drainage basin (D-2/D-2A) shown in the *Final Drainage Report & Drainage Conformance Letter* has remained consistent with the Site design. Runoff from this basin was estimated in the *Drainage Conformance Letter*. The existing 18" storm sewer located at the southeast corner of Lot 2 was sized to convey the 100-year runoff from the Site of 3.31 CFS.

By scaled map location and graphical review of the Flood Insurance Rate Map (FIRM) Number 08041C0756G, dated December 7, 2018, the Site lies within an area classified as Zone X. Areas classified as Zone X are considered areas of minimal flood hazard, usually depicted by Flood Insurance Rate Maps as areas outside of the 500-year flood plain. The FIRM map is included in **Appendix A**.

MINOR BASINS

The proposed site improvements result in an on-site impervious value of 88%, which is below the maximum allowable of 95% per the approved *Drainage Conformance Letter*. The proposed development will not produce more runoff than accounted for in the *Final Drainage Report*; therefore, no pond improvements are proposed. The site is designed to convey runoff to proposed inlets which will convey stormwater to the existing storm sewer stub, installed with the Lot 2 Improvements at the southeast corner of the site. Flows from Sub-basin B reflect the existing flows that originally contributed to the storm existing storm manhole on the northeast corner of the site. A proposed inlet in Sub-basin B (a portion of existing basin D-1 from the *Drainage Conformance Letter*) will connect to this existing manhole to mimic the existing drainage pattern. The combined on-site 100-year runoff contributing to the existing storm sewer stub on the south side of the site is 3.31 CFS. This value of the Proposed Lot 1 runoff (3.31 CFS) is less than the estimated Total D-2 runoff in the *Final Drainage Report* (6.61 CFS) as well as the *Drainage Conformance Letter* for D-2A (3.43 CFS). Runoff calculations are provided in **Appendix B**.

The disturbed area with this site has been broken up into eight sub-basins, A, B, C, R1, R2, OS1, OS2, and OS3. These sub-basins have been delineated for appropriate sizing of the proposed storm sewer infrastructure.

Sub-basin A is tributary to Design Point A, a Type R inlet, located at the east side of the parking lot and includes runoff from the eastern parking lot, sidewalk, and landscaping areas. Stormwater is routed via the existing storm infrastructure via proposed storm sewer. This sub-basin is ± 0.16 acres with an impervious value of 76%. Runoff is conveyed to the inlet via sheet flow and curb and gutter.

Sub-basin B is tributary to Design Point B, a Type R inlet, located at the north side of the property and includes runoff from the northern drive aisle and landscaping. Runoff is conveyed via sheet flow and curb & gutter to Design Point B. Existing Basin OS-2 (Drainage Letter for END Credit Union PCD File No. PPR-18-012) from the northern ENT property routes through this sub-basin and captured in Design Point B, mimicking existing conditions. The existing on-site temporary inlet is to be demolished and replaced by the curb inlet at Design Point B to capture these flows. The inlet at Design point B will convey the flows to the existing storm infrastructure located at the northeast corner of the site to mimic existing patterns where the previous inlet was connecting to. This sub-basin is ± 0.15 acres with an impervious value of 76%.

Sub-basin C is tributary to Design Point C, a Type R inlet, located at the south side of the property and includes runoff from the west and southern sides of the parking lot and drive aisle, and includes the flows from sub basins R1 and R2. Runoff is captured in the inlet on the south side of the site and conveyed to the existing storm infrastructure via proposed storm sewer. This sub-basin is ± 0.18 acres with an impervious value of 98%. Runoff is conveyed to the inlet via sheet flow and curb and gutter.

Sub-basin R1 is tributary to Design Point R1, which is a roof drain outfall from the building, located at the southern edge of the building. This sub-basin is ± 0.10 acres with an impervious value of 90%. Runoff is conveyed into sub-basin C, where it flows to Design Point C.

Sub-basin R2 is tributary to Design Point R2, which is a roof drain outfall from the building, located at the northern edge of the building. This sub-basin is ± 0.01 acres with an impervious value of 90%. Runoff is conveyed into sub-basin C, where it flows to Design Point C.

Sub-basin OS1 follows existing drainage patterns and flows southwest off-site to the existing inlets located on Marksheffel Road to the west of the site via existing curb and gutter. This is consistent with what is shown for Basin OS-2 in the *Final Drainage Report*. This sub-basin is ± 0.16 acres with an impervious value of 0%. Runoff is conveyed to the existing inlets via sheet flow and curb and gutter along Marksheffel Road.

Sub-basin OS2 flows off-site to Lot 2 where it then follows existing drainage patterns and sheet flows into the existing inlet installed with Lot 2. This sub-basin is ± 0.02 acres with an impervious value of 42%. Due to the decrease in imperviousness of our site compared to the assumed values from the *Final Drainage Report* (i.e. decrease in flows), existing reports show this flow can be handled by the downstream infrastructure. Flows captured by this inlet are conveyed to the existing pond immediately west of the King Soopers building (an Extended Detention Basin located in Lot 1, Block 1 of Claremont Ranch Filing No. 9) as identified in the *Final Drainage Report*.

Sub-basin OS3 flows off-site to Lot 2 where it then follows existing drainage patterns and sheet flows into the existing inlet installed with Lot 2. This sub-basin is ± 0.01 acres with an impervious value of 100%. Due to the decrease in imperviousness of our site compared to the assumed values from the *Final Drainage Report* (i.e. decrease in flows), existing reports show this flow can be handled by the downstream infrastructure. Flows captured by this inlet are conveyed to the existing pond immediately west of the King

Soopers building (an Extended Detention Basin located in Lot 1, Block 1 of Claremont Ranch Filing No. 9) as identified in the *Final Drainage Report*.

Please note, Sub-basin A is capturing greater off-site flows into the site than OS2 and OS3 are releasing off-site to Lot 2.

These sub-basins are illustrated in the Proposed Drainage Map in **Appendix E**.

FOUR STEP PROCESS

STEP 1: RUNOFF REDUCTION PRACTICES

Due to the site size of 0.77 acre, the implementation of grass buffers or swales is not practical. This site is compliant with the approved Final Drainage Report for SEC of Marksheffel Rd. & Constitution Ave. Every attempt was made to reduce impervious areas which also complying with the parking requirements set forth by El Paso County.

STEP 2: STABILIZE DRAINAGEWAYS

This step is not applicable. There are no drainageways located on this site.

STEP 3: PROVIDE WATER QUALITY CAPTURE VOLUME (WQCV)

Runoff from this site will be collected via proposed storm sewer and be routed via existing storm sewer to an existing water quality pond located southeast of the site. The existing condition of the pond has been evaluated through observation and site photos have been included in **Appendix D**. In summary, the pond is observed to be in working condition as originally intended with the design.

STEP 4: CONSIDER NEED FOR INDUSTRIAL AND COMMERCIAL BMPS

Due to the site being less than 1 acre and no water quality pond being proposed, this site does not fall under definition of “new development or significant redevelopment” per Appendix I Section 7.1.B. This step is not applicable. The onsite contaminants of concern would not be filtered out by specialized BMPs (sand filter basin or porous landscape detention), therefore they are not necessary.

Water quality and detention are being provided by an existing pond located on Lot 1 Block 1 Claremont Ranch Filing No. 9.

Brakes Plus does not change oil onsite and fluids are recycled as used. In the Colorado Springs market, the vendor, Envirovac, cleans out the sand/oil interceptor annually. Brakes Plus receives a report from the vendor detailing the amount of water, oil and solids that are removed from the interceptor. Envirovac is owned by Brian Tucker and they have serviced our stores for over 10 years.

CONCLUSION

COMPLIANCE WITH STANDARDS

The drainage design presented within this letter conforms to the *El Paso County Engineering Criteria Manual*. No drainage variances are requested with this Drainage Compliance Letter.

As stated earlier in this report, the proposed site coverage contributing to the existing storm system is 88% imperviousness which is less than what was assumed in the Final Drainage Report.

The on-site storm drainage presented in this letter will adequately convey the minor and major storm events from the proposed development to the existing storm sewer system provided off-site. Stormwater runoff from the minor and major storm events from the proposed development are consistent with stormwater runoff assumptions in the *Final Drainage Report for SEC of Marksheffel Rd. & Constitution Ave.* and the *Drainage Conformance Letter* prepared by Galloway & Company, Inc. used to evaluate conveyance downstream of the Site.

DRAINAGE FEE NOTE

Typically, drainage fees are paid with the final plat with no additional fees due with site plan applications. The drainage fees for this project have been paid under the submission of the original plat for the development of which the project is located within.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
 Survey Area Data: Version 18, Jun 5, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 19, 2018—Sep 23, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
10	Blendon sandy loam, 0 to 3 percent slopes	B	0.9	100.0%
Totals for Area of Interest			0.9	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NIMS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at <http://www.ngs.noaa.gov/>.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, City of Fountain, Bureau of Land Management, National Oceanic and Atmospheric Administration, United States Geological Survey, and Anderson Consulting Engineers, Inc. These data are current as of 2008.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact **FEMA Map Service Center (MSC)** via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at <http://www.msc.fema.gov/>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/business/nfip>.

Panel Location Map

This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWC) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.

NOTE: MAP AREA SHOWN ON THIS PANEL IS LOCATED WITHIN TOWNSHIP 13 SOUTH, RANGE 65 WEST, AND TOWNSHIP 14 SOUTH, RANGE 65 WEST.

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area Formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- Floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary

Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

DESIGNER TO OBTAIN AUTOCAD FILE FROM ARCHITECT AND VERIFY ALL HORIZONTAL CONTROL, DIMENSIONING PRIOR TO CONSTRUCTION STAGING. DIMENSIONING MUST VERIFY ALL BENCHMARK, GRADE, OR SURVEYING AND DATUM INFORMATION TO ENSURE IMPROVEMENTS WILL BE AT THE SAME HORIZONTAL AND VERTICAL LOCATIONS SHOWN ON THE DESIGN CONSTRUCTION DRAWINGS. PRIOR TO CONSTRUCTION STAGING ANY SURVEYING MUST BE REPORTED TO DESIGNER AND ENGINEER PRIOR TO CONSTRUCTION OF ANY FURTHER STAGING OR CONSTRUCTION WORK.

BASIS OF BEARING

BEARINGS ARE BASED ON THE NORTH LINE OF THE SUBJECT PROPERTY BEARING AND ARE NOT TO BE USED FOR ANY OTHER PURPOSES. BENCHMARK: CITY OF COLORADO SPRINGS FIRM 15101-7 ALUMINUM CAPS NORTHWEST CORNER OF HEADQUARTER OF RICH CLAYTON AT FIRST CORNER. CHERRYWOOD LANE CORNER (EAST) EAST OF MARKS VILLAGE. ELEVATION: 4910.00 FEET (HIGHER THAN DATUM).
