1.0 DRAINAGE NARRATIVE:

1.1 Introduction

The site is located near the southwest corner of Woodmen Road and Meridian Road in El Paso County, CO within the Falcon Highlands Market Place commercial subdivision. The subject property has been platted as Lot 2 within the FHMP Filing No. 1B and has been assigned an address of 11775 Meridian Market View; Falcon, Colorado. The proposed improvements will include a ±2,579 square-foot Arby's fast-food restaurant building along with its associated parking, drainage, and utility infrastructure.

Stormwater quality and detention has been master planned for the subject site's proposed improvements and the overall calculations for the entire commercial subdivision has been provided in the appendix of this report. Applicable pages from the "Falcon Highlands Market Place Filing No. 1B Preliminary and Final Drainage Report" prepared by URS (October 18, 2005) can be found in Appendix #.

1.2 Zoning Status

The site is currently zoned CR, Commercial Regional Zoning District.

2.0 EXISTING CONDITIONS:

The existing site is currently a vacant 1.14-acre 'pad-ready' commercial outlot that mainly consists of grass vegetation with an east/west access drive at the north end of the property. The ground cover over the existing site generally directs stormwater runoff from north to south into a master planned storm sewer system located in the Meridian Market VW right-of-way. Stormwater is collected by the existing storm sewer system and then directed to an existing wet stormwater quality detention pond (Pond 'MN' in the master planned report) that is located just south of the subject site and across Meridian Road.

3.0 PROPOSED CONDITIONS

The proposed project includes a land disturbance of ±0.80 acres which involves the development of the new ±2,579 square-foot Arby's fast-food restaurant building along with its associated parking, drainage, and utility infrastructure. Stormwater will travel via overland flow from north to south, just as it does in the existing condition, and then will be collected by a new on-site storm sewer system. The new on-site storm sewer system will be routed to an existing 24" RCP stub at the southeast corner of the site. Stormwater will then travel to the existing wet detention pond (Pond MN), which also treats the proposed runoff with its stormwater quality features, and ultimately discharge into Black Squirrel Creek.

Stormwater detention and stormwater quality calculations are not required for the proposed development being that the project site's improvements fall into an already master planned drainage analysis for the existing commercial development. The project site, Lot 2 of the Falcon Highlands Market Place Filing No. 1B, falls within master planned drainage basin D-24, which was designed with a weighted runoff coefficient of $C=0.90$ in a 5-year storm event and $C=0.95$ in a 100-year storm event. The post-developed improvements generate a runoff coefficient of $C=0.58$ in the proposed condition. The proposed runoff coefficient is significantly lower than that in the master planned report; therefore, the existing wet pond is adequately sized for the post-developed improvements.

4.0 WATER QUALITY

The proposed improvements will result in an impervious area lot coverage of approximately 59%. The calculated water quality control volume (WQCV) from the proposed improvements equals 0.23. The overall development was designed with a master planned WQCV of 0.49. The proposed value is significantly less than that in the master planned report for the overall Falcon Highlands Market Place commercial development and therefore suggests that water quality is being adequately provided by the overall development. Narrative and calculation can be found in the overall development Stormwater Report.

5.0 CHANNEL PROTECTION

None Required

6.0 FLOOD PROTECTION

None Required

7.0 SUMMARY:

In summary, this report establishes that the proposed improvements will present no adverse impacts to the subject site and/or the surrounding properties.

8.0 APPENDIX:

1.0 DRAINAGE NARRATIVE:

1.1 Introduction

The site is located near the southwest corner of Woodmen Road and Meridian Road in El Paso County, CO within the Falcon Highlands Market Place commercial subdivision. The subject property has been platted as Lot 2 within the FHMP Filing No. 1B and has been assigned an address of 11775 Meridian Market View; Falcon, Colorado. The proposed improvements will include a ±2,579 square-foot Arby's fast-food restaurant building along with its associated parking, drainage, and utility infrastructure.

Stormwater quality and detention has been master planned for the subject site's proposed improvements and the overall calculations for the entire commercial subdivision has been provided in the appendix of this report. Applicable pages from the "Falcon Highlands Market Place Filing No. 1B Preliminary and Final Drainage Report" prepared by URS (October 18, 2005) can be found in Appendix #.

1.2 Zoning Status

The site is currently zoned CR, Commercial Regional Zoning District.

2.0 EXISTING CONDITIONS:

The existing site is currently a vacant 1.14-acre 'pad-ready' commercial outlot that mainly consists of grass vegetation with an east/west access drive at the north end of the property. The ground cover over the existing site generally directs stormwater runoff from north to south into a master planned storm sewer system located in the Meridian Market VW right-of-way. Stormwater is collected by the existing storm sewer system and then directed to an existing wet stormwater quality detention pond (Pond 'MN' in the master planned report) that is located just south of the subject site and across Meridian Road.

3.0 PROPOSED CONDITIONS

The proposed project includes a land disturbance of ±0.80 acres which involves the development of the new ±2,579 square-foot Arby's fast-food restaurant building along with its associated parking, drainage, and utility infrastructure. Stormwater will travel via overland flow from north to south, just as it does in the existing condition, and then will be collected by a new on-site storm sewer system. The new on-site storm sewer system will be routed to an existing 24" RCP stub at the southeast corner of the site. Stormwater will then travel to the existing wet detention pond (Pond MN), which also treats the proposed runoff with its stormwater quality features, and ultimately discharge into Black Squirrel Creek.

Stormwater detention and stormwater quality calculations are not required for the proposed development being that the project site's improvements fall into an already master planned drainage analysis for the existing commercial development. The project site, Lot 2 of the Falcon Highlands Market Place Filing No. 1B, falls within master planned drainage basin D-24, which was designed with a weighted runoff coefficient of $C=0.90$ in a 5-year storm event and $C=0.95$ in a 100-year storm event. The post-developed improvements generate a runoff coefficient of $C=0.58$ in the proposed condition. The proposed runoff coefficient is significantly lower than that in the master planned report; therefore, the existing wet pond is adequately sized for the post-developed improvements.

4.0 WATER QUALITY

The proposed improvements will result in an impervious area lot coverage of approximately 59%. The calculated water quality control volume (WQCV) from the proposed improvements equals 0.23. The overall development was designed with a master planned WQCV of 0.49. The proposed value is significantly less than that in the master planned report for the overall Falcon Highlands Market Place commercial development and therefore suggests that water quality is being adequately provided by the overall development. Narrative and calculation can be found in the overall development Stormwater Report.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado

Survey Area Data: Version 18, Jun 5, 2020

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 11, 2018—Oct 20, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

CERTIFICATIONS

Market Place Filing No. 1B – Drainage Letter

Engineer's Statement:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the City/County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Charlene Sammons

For and on behalf of Springs Engineering
Charlene Sammons, PE # 36727

Developer's Statement:

I, the developer have read and will comply with all of the requirements specified in this drainage report and plan.

Conditions:

Market Place Filing No. 1B

- Drainage Letter -

This Drainage Letter/Report is prepared in accordance with the City of Colorado Springs/El Paso County Drainage Criteria Manual. This site was originally part of the Falcon Highlands Market Place Filing No. 1 Preliminary and Final Drainage Reports, prepared by URS. The analysis and drainage plans from this report have been included in the appendix for reference.

GENERAL LOCATION AND DESCRIPTION

This development (Site) was originally platted as Lot 3 of Market Place Filing No. 1, and replatted as Lots 1 and 2 of Market Place Filing No. 1A. The site is situated approximately 240 feet west of the southwest intersection of Woodmen and Meridian Roads. The project Site is approximately 1.94 acres and is located in a portion of Section 12, Township 13 South and Range 65 West of the 6th Principal Meridian. This report is accompanying a plat amendment, which relocates the internal lot line for lots 1 and 2 from the Market Place Filing No. 1A replat. The overall area between the 2 lots being addressed remains the same.

The Site is currently vacant. The vegetation is typical eastern Colorado prairie grass. The terrain is evenly sloped to the south with slopes ranging from 1% to 4%. The entire site will enter into the existing detention pond, Pond MN located just south of the project on the east side of Meridian Road. An existing storm system intercept flows from this area and conveys flow under Meridian Road to the existing Detention Pond. This is consistent with the design in the Market Place Filing No. 1 drainage report. On-site specific drainage will be addressed with the site development plan.

The intermittent runoff from this development drains directly into the Black Squirrel Creek and eventually into the Arkansas River. The Flood Insurance Rate Map (FIRM No. 08041C0575 revised 11/26/03) indicates that there is no floodplain in the vicinity of the proposed site. The floodplain was modified in this area, so that an existing underground storm system along the north side of the site was constructed to convey all the flow from the north side of Woodmen, through and around the site to Detention Pond MN. There remains an existing floodplain north of Woodmen Road.

PREVIOUS DRAINAGE STUDIES

The City of Colorado Springs/El Paso County - Drainage Criteria Manual, Volumes I and II, latest revision.

Falcon Basin - Drainage Basin Planning Study, (DBPS) prepared by URS, latest revision.

Falcon Highlands Master Drainage Development Plan (MDDP) prepared by URS, latest revision

Falcon Highlands Market Place Filing No. 1 Preliminary and Final Drainage Report, prepared by URS October 18, 2005.

EXISTING DRAINAGE CHARACTERISTICS

As stated above, the terrain of the Site is evenly sloped to the south with slopes ranging from 2% to 4%. The existing conditions of this site were analyzed with the Market Place Filing No. 1 drainage report. These calculations and drainage plan have been included in the index for reference.

Market Place Filing No.1B
Drainage Letter

PROPOSED DRAINAGE CHARACTERISTICS

The site was analyzed as part of the Market Place Filing No.1 Final Drainage Report. The area was located within the larger basin D-24. This basin directs flows toward Design Point 20, a stub pipe located at the back of the existing inlet at Design Point 3. This system releases into Pond MN. There are no changes to the proposed site, which would change any basin boundaries, flow paths or design point locations. A copy of the proposed drainage analysis has been included in the appendix. No new calculations have been performed at this time.

STORM SYSTEM:

It is anticipated, that there maybe the need for some on-site structures. These will be designed during the site development stage of the project.

WATER QUALITY:

No water quality will be necessary for this site, as all flows are directed towards Pond MN which has a water quality facility.

DETENTION POND MN:

There are current deficiencies in Detention Pond MN. The construction of this site does not increase the deficiencies which are present in the pond. These issues are being dealt with by the Falcon Highlands Metropolitan District directly in order to have drainage credits assigned and to allow their collateral to be released.

CONCLUSION

There have been no changes to the proposed site, which allows the drainage calculations performed in the Market Place Filing No. 1 Final Drainage Report to remain current and up to date. This Drainage Report for the Site is in accordance with Section 4.5 of the El Paso County Drainage Criteria manual.

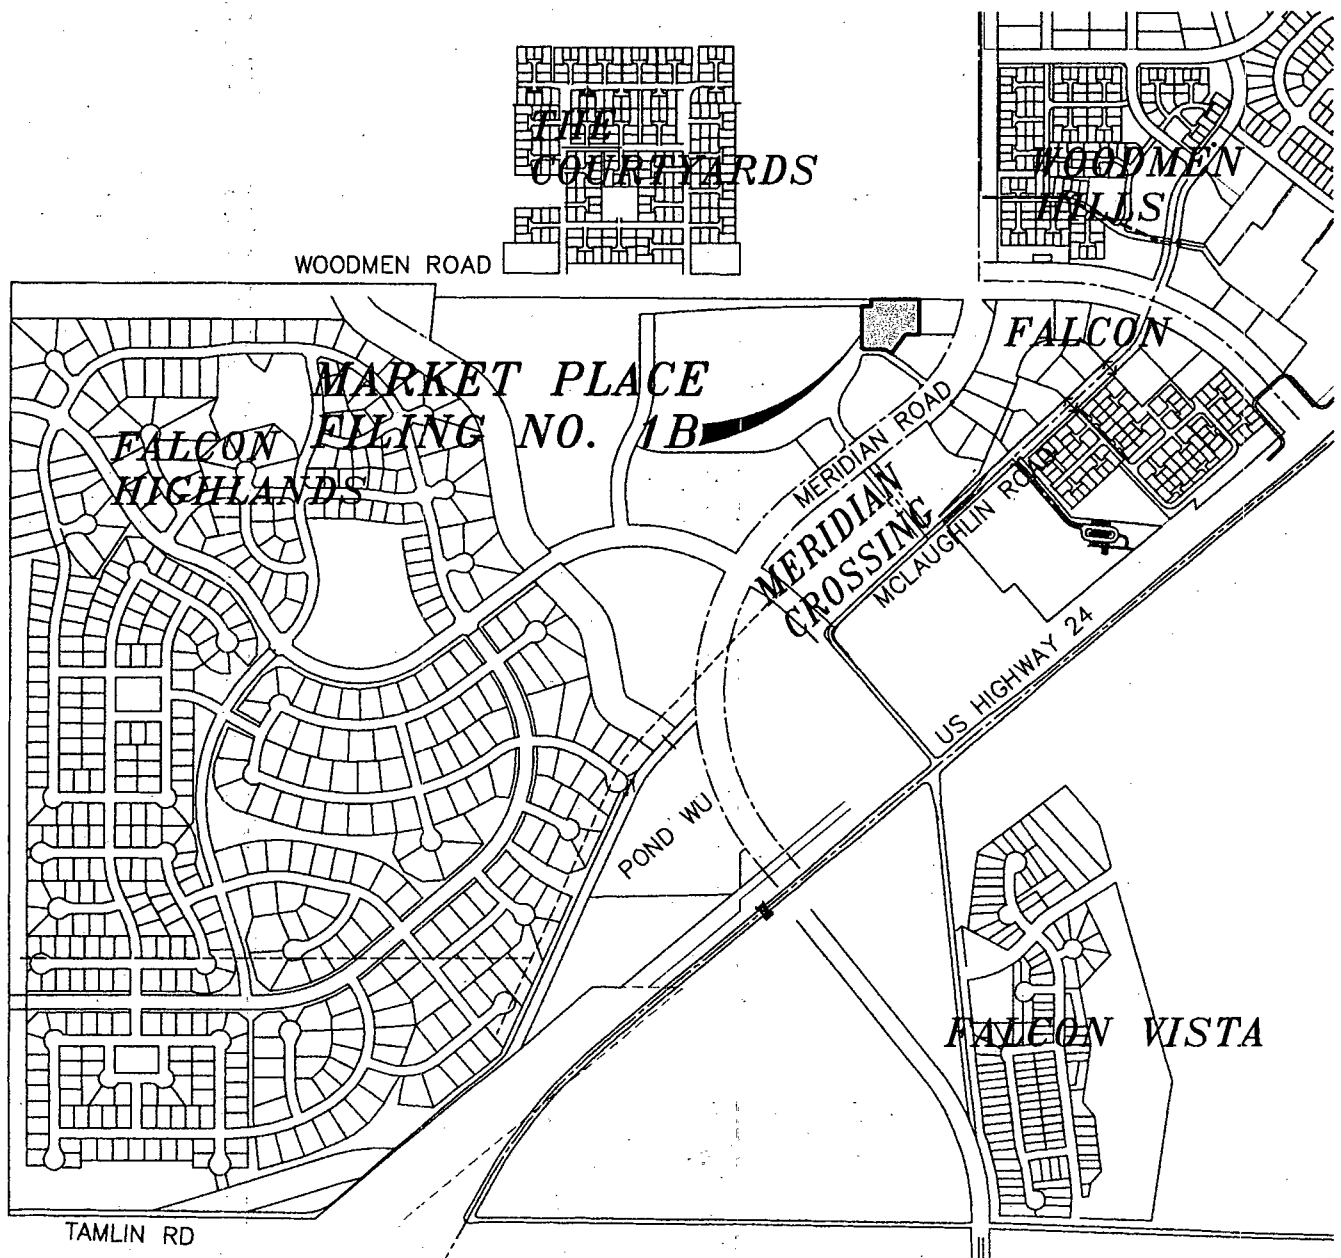

If you have any questions or comments, please contact me at 719-227-7388.

Sincerely,
Springs Engineering

Charlene Sammons, P. E..
Project Engineer

Appendix G: Water Quality Pond Calculations

STAGE-DISCHARGE SIZING OF THE WATER QUALITY CAPTURE VOLUME (WQCV) OUTLET

Project: **Armstrong Development**

Basin ID: **Lowes Site Incl. Meridian Crossing**

WQCV Design Volume (Input):

Catchment Imperviousness, I_p = **99.0** percent

Catchment Area, A = **27.6600** acres

Depth at WQCV outlet above lowest perforation, H = **12.00** inches

Number of layers, N_L = **3**

Vertical distance between layers, h = **4.00** inches

Orifice discharge coefficient, C_o = **0.65**

Diameter of holes, D = **0.25** in.

Number of holes per layer, N = **100**
OR

Height of slot, H = **2.00** in.

Width of slot, W = **4.24** in.

Outlet Design Information (Output):

Water Quality Capture Volume ($1.0 * (0.91 * I_3 - 1.19 * I_2 + 0.78 * I_1)$), WQCV = **0.49** watershed inches

Design Volume (WQCV / $12 * \text{Area} * 1.2$) Vol = **1.3522** acre-feet

Recommended maximum outlet area per layer (based on 4" vertical spacing of layers), A_o = **8.47** square inches

Total opening area at each layer, A_o = **8.47** square inches

Total opening area at each layer, A_o = **0.0588** square feet

Calculation of Collection Capacity :
