Engineer's Statement

This report and plan for the drainage design of the development, Grandview Reserve, was prepared by me (or under my direct supervision) and is correct to the best of my knowledge and belief. Said report and plan has been prepared in accordance with the *El Paso County Drainage Criteria Manual* and is in conformity with the master plan of the drainage basin. I understand that El Paso County does not and will not assume liability for drainage facilities designed by others. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Greg Panza, PE Date

State of Colorado No. 37081

For and on behalf of HR Green Development, LLC

Developer's Statement

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

Master Development Drainage Plan – Grandview Reserve

I. General Purpose, Location and Description

a. Purpose and Scope of study

The Purpose of this Master Development Drainage Plan (MDDP) is to describe the onsite and offsite drainage patterns, existing and proposed storm infrastructure as it relates to preliminary water quality and stormwater detention, areas tributary to the site and the planned storm water management for Grandview Reserve 2 development. The items discussed in this report are preliminary in nature and final drainage calculations and design will be required as development proceeds. This report provides a general drainage concept and guidance for future development of Grandview Reserve.

b. DBPS Investigations

The Geick Ranch Drainage Basin Planning Study (DBPS) Preliminary Design Report prepared by Drexel, Barrell was reviewed to determine existing plans and constraints that would influence the design of Grandview Reserve. The proposed plans for Grandview Reserve are in general conformance with the DBPS.

The DBPS shows 4 reaches through Grandview Reserve. The Main Stem (MS) in the south western portion of the site, the Main Stem Tributary #2 (MST2) to the north and east of the Main Stem, the East Fork Tributary (EFT) in the middle of the site north and east of MST2, and the East Fork Upper (EF) at the north east side of the site. These drainageways have been reviewed in the following reports and further analysis will be completed of these major drainageways in future planning documents.

- Unnamed Tributary Black Squirrel Creek, Four Way Ranch Letter of Map Revisions, Kiowa Engineering, March 2004
- Haegler and Geick Drainage Basins Letter of Map Revision, Four Way Ranch Subdivision, Kiowa, March 2004
- Unnamed Tributary Black Squirrel Creek Drainage Basin, Letter of Map Revision, Elbert Road Site, Kiowa Engineering, February 2006
- Geick Ranch Drainage Basin Planning Study (DBPS), Drexel Barrell, October 2010 (not approved)
- Meridian Ranch Master Development Drainage Plan (MDDP), Tech Contractors, January 2018

c. Agency Jurisdictions

Listed below are the jurisdictions that this project will conform to:

El Paso County

Falcon Colorado Municipal Code (where applicable)

Federal Emergency Management Agency

d. General Project Description

Grandview Reserve is located in Falcon, Colorado within El Paso County and contains approximately 776 acres within the south half of section 21 and 22 and the north half of section 27 and 28, Township 12 South, and Range 66 West of the Sixth Principal Meridian in El Paso County, Colorado. See below for approximate site location.

Figure 1 - Site Map

e. Data Sources

Listed Below are the technical resources reviewed in the preparation of this MDDP:

City of Colorado Springs Drainage Criteria Manual (DCM), Volumes 1 and 2

Mile High Flood District

NOAA Atlas 14

NRCS Soil Survey for El Paso County Area, Colorado

FEMA FIRM 08041C0556G and FIRM 08041C0552G (eff. 12/7/2018)

El Paso County Assessor Property Records

f. Applicable Criteria and Standards

Per the DBPS, flows from the proposed site will be limited to historic flows in an effort to maintain the stability and of the existing channels with the drainage basin. The master plan follows the Drainage Criteria Manual for El Paso County which refers to the City of Colorado Springs Drainage Criteria Manuals as amended.

II. Project Characteristics

a. Location in Drainage Basin, offsite flows, size

Grandview Reserve is located within the Gieck Ranch Drainage Basin which covers approximately 22 square miles. This drainage basin is tributary to Black Squirrel Creek and joins said creek just to the south of Elicott, CO about 18 miles to the south. Black Squirrel Creek eventually drains to the Arkansas River in Pueblo Colorado. The majority of the Gieck Ranch Drainage basin is undeveloped consisting of rural farmland. The Gieck Ranch Drainage basin lies north of the Haegler Ranch drainage basin.

As part of the Fourway LOMR discussed above, the study reviewed the hydrology and hydraulics for the Main Stem Tributaries, however only a small portion of the site within Grandview was analyzed. The peak flows rates for the Main Stem for the 100 year event was 413 cfs and for the Main Stem Tributary (MST2) was 280 cfs.

For the East Fork tributaries (EF and EFT), the DBPS established 100 year flow rates of 595 cfs for the East Fork (EF) and 217 cfs for the East Fork Tributary (EFT)

Generally offsite flows are conveyed through the site via the 4 tributaries. Minor offsite basins may sheet flow onto the site. These flows will be routed through the site via the 4 tributaries.

b. Compliance with DBPS

This MDDP is in general conformance with the guidelines outlined in the Gieck Ranch DBPS. Grandview Reserve will construct multiple full spectrum detention facilities to limit the effects of development and mimic natural flow patterns.

Existing downstream infrastructure is currently limited to the historic drainage channels and minimal downstream improvements exist. As such, the site follows the DBPS and restricts offsite flow rates to not exceed historic flow rates. The sites ultimate outfalls will generally be along the same historic tributaries. Although outfall rates will be at or below historic, the cumulative volume of runoff will increase and therefore downstream facilities may see an increase in the duration of flows. This may provide a net benefit to the downstream facilities by providing more water to assist with the sustenance of vegetation however it should be noted that increased volume may expedite potential erosion or channel movement.

c. Site Characteristic

Per the NRCS web soil survey, the site is made up entirely of Type A and B soils. The majority of which are Type A soils. The predominate soils are Blakeland loamy sand, Columbine gravelly sandy loam, and Stapleton sandy loam. The first two soils are Type A soil and cover approximately 55.1% of the site and the later soil is a Type B soil and covers the remaining 44.9% of the site. See Appendix A for the NRCS soil map.

Current ground cover is predominantly short- to mid-grass prairie grasslands and former farmland which consists of nonnative weeds and grasses. The site has very few, if any, trees and a minimal number of shrubs are found on the site.

d. Major drainage ways and structures

As mentioned previously, 4 major drainage ways exist on the site. These convey existing on and off-site flows and current on-site flows through the site in a southeasterly direction. The drainageways eventually cross Highway 24 via culverts and other structures; further survey will be conducted to determine their effectiveness as the development of the site progresses.

A breached stock pond is located along the Main Stem; while it is breached, it still causes some ponding along the channel. As development occurs, this dam will be completely removed, and the region of the channel will be regraded to match the existing character of the remainder of the Main Stem channel. Improvements along the Main Stem Channel will be limited to the previously described reach.

Main Stem Tributary will be realigned through the site and will meander through a designated 100-foot corridor generally maintaining a 1% slope with a series of grade control structures. MST will be constructed to achieve a channel that is high functioning and will require low maintenance.

East Fork and East Fork Tributary improvements will be implemented to ensure the channels are high functioning low maintenance drainageway corridors.

e. Existing and proposed land uses

The existing site is open rangeland and farmland with no visible structures. The proposed development will consist of low, medium, and high density residential, along with two institutional sites, multiple pocket park sites, a large community park and a commercial area adjacent to Highway 24. The current land plan assumes approximately 3,261 dwelling units will be constructed on the site.

Land Use	MAX DU/AC
Low	2
Medium	4
Medium – High	8
High	12

III. Hydrologic Analysis

a. Major Basins and subbasins

Major Basin Description

- Previous basin study: Gieck Ranch Drainage Basin Planning Study
- Per FEMA FIRM 08041C0556G and 08041C0552G (eff. 12/7/2018), Grandview Reserve has four mapped channels within its boundaries.
- Per aerial imaging, no major irrigation is in the vicinity that would affect Grandview Reserve.

The site has been divided into 8 major drainage basins per where each basin is tributary to a full spectrum detention pond facility. These basins and associated sub basins are described in more detail in the next section of this report.

Subbasin Description

The entire site drains in a south easterly direction and is divided into 8 major drainage basins and a total of 18 subbasins together as described below.

- Subbasin A1 is located in the southwestern corner of the site, to the south and west of MS. The basin drains towards the southeast to proposed detention pond A. Current planning documents call for medium density dwelling units and a small pocket park. The basin is 37.00 acres, with a composite impervious value of 35.22% and runoff rates for the 5 and 100 year of 30.72 cfs and 100.64 cfs respectively. The pond will discharge at predevelopment rates and into MS via the ponds outlet structure.
- Subbasin B1 is located between MS and MST2 to the east of subbasin A1. The basin drains towards the southeast and towards subbasin B2. Current planning documents call for medium density dwelling units and some parkland area. The basin is 37.00 acres, with a composite impervious value of 45.00% and runoff rates for the 5 and 100 year of 29.46 cfs and 97.08 cfs respectively.
- Subbasin B2 is located between MS and MST2 to the northeast of subbasin A1. The basin drains towards the southeast and towards Detention Pond B. Current planning documents call for medium density dwelling units. The basin is 24.89 acres, with a composite impervious value of 43.26% and runoff rates for the 5 and 100 year of 12.02 cfs and 42.26 cfs respectively.
- Subbasin B3 is located between MS and EF and to the northeast of east of basin B2. The existing MST2 tributary runs through the basin. The site drains towards the southeast and towards Detention Pond B. Current planning documents call for high, medium-high, and medium density dwelling units along with a pocket park. The basin is 118.90 acres, with a composite impervious value of 49.42% and runoff rates for the 5 and 100 year of 92.76 cfs and 295.27 cfs respectively.
- Subbasin C1 is located to the northeast of east of basin B1 and the existing MST2 tributary runs through the middle of the basin. The basin drains towards the southeast and towards Detention Pond C. Current planning documents call for an institutional parcel, medium and high density dwelling units and a pocket park. The basin is 77.83 acres, with a composite impervious value of 51.20% and runoff rates for the 5 and 100 year of 77.99 cfs and 238.03 cfs respectively.
- Subbasin D1 is located between MS and MST2 to the east of Basin B3 and adjacent to the MST2 channel. The basin drains towards the southeast and towards drainage basin D2. Current planning documents call for medium density dwelling units along with a pocket park. The basin is 24.33 acres, with a composite impervious value of 53.89% and runoff rates for the 5 and 100 year of 24.15 cfs and 70.07 cfs respectively.
- Subbasin D2 is located between MS and MST2 to the south of basins D1 and B3. The basin drains towards the southwest and towards detention pond D. Current planning documents call for high density dwelling units along with a pocket park and a commercial parcel. The basin is 77.90 acres, with a composite impervious value of 62.10% and runoff rates for the 5 and 100 year of 98.47 cfs and 252.18 cfs respectively.
- Subbasin E1 is located just east of EFT along the northern portion of the site. The basin drains towards the southeast and towards basins F3 and F4. Current planning documents call for low

density dwelling units. The basin is 88.60 acres, with a composite impervious value of 19.54% and runoff rates for the 5 and 100 year of 46.88 cfs and 178.04 cfs respectively.

- Subbasin F1 is located east of basin E1 and between EFT and EF along the northern portion of the site. The basin drains towards the southeast and towards basin F3 and F4. Current planning documents call for a large community park, high density dwelling units, commercial site and an institution parcel. The basin is 33.73 acres, with a composite impervious value of 25.00% and runoff rates for the 5 and 100 year of 16.28 cfs and 58.95 cfs respectively.
- Subbasin F2 is located east of the existing drainage channel EFT. The basin drains towards the southwest and towards basin F4 and to the EFT drainage channel which runs parallel to the north east with Highway 24. Current planning documents call for high density dwelling units and commercial space. The basin is 67.64 acres, with a composite impervious value of 51.39% and runoff rates for the 5 and 100 year of 60.11 cfs and 170.90 cfs respectively.
- Subbasin F3 is located west of the existing drainage channel EF. The basin drains towards the southeast towards drainage channel EF but will be conveyed south towards subbasin F4. Current planning documents call for medium density dwelling units. The basin is 12.84 acres, with a composite impervious value of 45.00% and runoff rates for the 5 and 100 year of 11.36 cfs and 32.93 cfs respectively.
- Subbasin F4 is located west of the existing drainage channel EF and south of subbasins F1 and F3. The basin drains towards the southeast towards detention pond F. Current planning documents call for medium and medium-high density dwelling units. The basin is 51.81 acres, with a composite impervious value of 49.54% and runoff rates for the 5 and 100 year of 42.32 cfs and 124.89 cfs respectively.
- Subbasin G1 is located west of the existing drainage channel EFT along the northern property boundary. The basin drains towards the southeast towards detention pond G. Current planning documents call for medium density dwelling units and a park. The basin is 20.13 acres, with a composite impervious value of 36.52% and runoff rates for the 5 and 100 year of 13.78 cfs and 43.95 cfs respectively.
- Subbasin G2 is located east of the existing drainage channel EFT along the northern property boundary. The basin drains towards the southeast towards detention pond G. Current planning documents call for low density dwelling units. The basin is 15.14 acres, with a composite impervious value of 25.00% and runoff rates for the 5 and 100 year of 6.55 cfs and 23.95 cfs respectively.
- Subbasin H1 is located in the northeast corner of the site and east of the existing drainage channel EFT. The basin drains towards the south towards subbasin H4. Current planning documents call for low density dwelling units and a small park. The basin is 20.71 acres, with a composite impervious value of 24.49% and runoff rates for the 5 and 100 year of 5.68 cfs and 27.62 cfs respectively.
- Subbasin H2 is located south of basin G2 and east of the existing drainage channel EFT. The basin drains towards the south towards subbasin H4. Current planning documents call for medium density dwelling units and a small park. The basin is 18.55 acres, with a composite

impervious value of 46.68% and runoff rates for the 5 and 100 year of 16.24 cfs and 47.62 cfs respectively.

- Subbasin H3 is located south of basin H2 and east of the existing drainage channel EFT. The basin drains towards the southeast towards subbasin H4. Current planning documents call for medium density dwelling units and a small park. The basin is 6.01 acres, with a composite impervious value of 40.57% and runoff rates for the 5 and 100 year of 5.21 cfs and 15.60 cfs respectively.
- Subbasin H4 is located south of basin H2 and east of the existing drainage channel EFT and basin H3. The basin drains towards the south towards detention pond H. Current planning documents call for medium density dwelling units and park/open space area. The basin is 27.65 acres, with a composite impervious value of 38.24% and runoff rates for the 5 and 100 year of 20.93 cfs and 64.71 cfs respectively.

The above mentioned basins are large planning area basins and as drainage reports are developed for the individual developed parcels additional drainage reports and calculations will be required. It is expected that storm drainage infrastructure consisting of inlets, storm sewer and open drainage channels will be constructed as the property develops.

- Offsite Basins as shown in the Meridian Ranch MDDP include basins HG4, HG5, HG6A, HG6B, HG13, and HG14. Flow contributing to the site from these basins will be routed through the existing tributaries. Flow rates as shown in the MDDP Ranch report include the following flows and associated tributary areas.

Offsite Flow Summary					
Basin Description	Ultimate Design Point	Basin Area (ac)	Receiving Tributary	5 Year Peak Runoff (cfs)	100 Year Peak Runoff (cfs)
HG4	G6	57	Main Stem	2	42
HG5	G6	72	Main Stem	3	52
HG6A	G6	88	Main Stem	3	51
HG6B	G6	66	Main Stem	2	35
HG13	G08	54	Main Stem Tributary 2	4	59
HG14	G08	147	Main Stem Tributary 2	5	83

Offsite Flow Summary				
Design Point	Basin Area (ac)	Receiving Tributary	5 Year Peak Runoff (cfs)	100 Year Peak Runoff (cfs)
G6	760	Main Stem	36	628
G08	201	Main Stem Tributary 2	8	122

These basins along with the offsite basins which lie east of Eastonville Road contribute flows onto the site through the major tributaries. Estimate oncoming flows for each tributary are as follows:

Offsite Flow Summary		
Tributary	5 Year Peak Runoff (cfs)	100 Year Peak Runoff (cfs)
Main Stem	36	628
Main Stem Tributary 2	8	122
East Fork Tributary*	56	116
East Fork*	175	357

*Flows from Gieck Ranch
DBPS, Oct 2010

As hydraulic analysis continues for the channels, these offsite flows will be used to size the channels for proper conveyance of the flow however it should be noted that the flows mentioned for the Main Stem and Main Stem Tributary 2 assume proper conveyance of the flow through (below or above) Eastonville Road. Due to the unknown nature of these conditions at the time of buildout, a probable scenario of the split flows will require analysis and agreed upon flow rates to each channel will be required. Currently some of the flow shown going to the Main Stem Tributary 2 may be diverted into the Main Stem. Previous analysis done by JR Engineering assumed approximately 160 additional cfs going to the Main Stem Tributary #2 during the 100-year event and as such it is recommended the following flows be used for analysis of the oncoming offsite flows:

Revised Offsite Flow Summary		
Tributary	5 Year Peak Runoff (cfs)	100 Year Peak Runoff (cfs)
Main Stem**	67	413
Main Stem Tributary 2**	59	280
East Fork Tributary*	61	217
East Fork*	180	595

*Flows from Gieck Ranch
DBPS, Oct 2010

**Flows from 4 Way Ranch LOMR, Mar 2004

Please note that the preliminary drainage reports will be required to reconcile any differences between the various reports done for these channels.

b. Methodology

Design rainfall was determined utilizing figures from the NOAA Atlas 14, Volume 8, Version 2 to determine the 5-year and 100-year rainfall values for 1, 6 and 24-hour events. The 1-hour rainfall depths are 1.22 and 2.50 in/hr respectively, 6 hour 1.79 and 3.87 in/hr respectively and 2.36 and 4.90 in/hr for the 24 hour event. The rainfall values were then used as inputs into the Colorado Urban Hydrograph Procedure (CUHP) spreadsheets to determine runoff values for both pre-development and post-development site.

CUHP is an evolution of the Snyder unit hydrograph and is calibrated for use along the Colorado Front Range. 1 Hour rainfall amounts are input into the program to produce a storm hyetograph that is then used to calculate a storm hydrograph for each basin depending on the subbasins properties including

slope, length, shape, impervious area, pervious depression storage area, and various infiltration rates. Tabular hydrographs are then computed and can be used in EPA SWMM. The CUHP results are included within Appendix B.

EPA SWMM was used to determine flow routing via the kinematic wave method. Subbasins were routed to their respective design points and detention ponds for both the developed and predeveloped condition to determine peak runoff amounts for the 5-year and 100-year storm events. Information from these models along with information and calculations performed in the Colorado Springs BMP spreadsheets was used to determine pond sizing calculations and release rates.

c. Basin Hydrology

A summary of the flows for both the predeveloped and developed cases for each basin, subbasin and Pond are found on next page along with the full computation found in Appendix B.

SWMM Basin and Pond Summary						
Basin Description	Basin Area (ac)	% Impervious	5 Year Peak Runoff (cfs)	100 Year Peak Runoff (cfs)	5 Year Pond Volume (ac-ft)	100 Year Pond Volume (ac-ft)
A1	45.38	35.22%	30.72	100.64		
Pond A					1.83	3.50
B1	37.00	45.00%	29.46	97.08		
B2	24.89	43.26%	12.02	42.26		
B3	118.90	49.42%	92.76	295.27		
Pond B					5.90	19.00
C1	77.83	51.20%	77.99	238.03		
Pond C					3.91	6.87
D1	24.33	44.14%	24.15	70.07		
D2	77.90	62.10%	98.47	252.18		
Pond D					6.61	10.19
E1	88.60	19.54%	46.88	178.04		
Pond E					1.96	2.44
F1	33.73	25.00%	16.28	58.95		
F2	67.64	51.39%	60.11	170.90		
F3	12.84	45.00%	11.36	32.93		
F4	51.81	46.54%	42.32	124.89		
Pond F					7.38	12.62
G1	20.13	36.52%	13.78	43.95		
G2	15.14	25.00%	6.55	23.95		
Pond G					0.72	2.03
H1	20.71	24.49%	5.68	27.62		
H2	18.55	43.68%	16.24	47.62		
H3	6.01	40.57%	5.21	15.60		
H4	27.65	38.24%	20.93	64.71		
Pond H					2.93	6.17

IV. Hydraulic Analysis

a. Major Drainageways

In general, the site runoff flows towards the 4 major drainageways and in a southeasterly direction. These basins are described in more detail below:

Main Stem

The Main Stem (MS) is in the southwestern portion of the site. Offsite flows collect and are conveyed under Eastonville Road via a culvert. MS travels in a southeasterly direction and combines with the Main Stem Tributary #2 (MST2) just off site where it is then conveyed past Highway 24 via a culvert. An existing breached stock pond exists in the approximate center point of the channel within the site. Jurisdictional wetlands exist within this channel and the area is within a Zone A floodplain towards the southern portion of the site. This channel sees only intermittent flows at this time however once development occurs there may be a more constant baseflow.

Proposed improvements for MS include the removal of the breached stock pond berm and regrading of the affected stretch of channel to restore its historic state. Proposed flow rates through MS are not to exceed historic flowrates and as such, the remainder of the channel is to remain in its current state sans any preemptive check structures; modeling indicates the channel shall remain stable despite the removal of the existing berm.

Main Stem Tributary #2

MST2 crosses Eastonville road via an existing culvert and flows through the site in a southeasterly direction. Portions of this channel are within a mapped floodplain as shown in the existing FIRM Panel. Per a July email from the USACE this drainage channel was preliminarily determined to be a non-jurisdictional waters/wetland.

Proposed improvements for MST2 include the realignment of the channel, generally shifting the channel towards the west to accommodate the proposed land plan. There is to be a dedicated 100' corridor in which the valley will meander. Preliminary analysis indicates the valley will have an average width of approximately 63' at the elevation necessary to meet freeboard requirements; initial sizing approximates the bankfull width to be 6.8'. The valley and channel thalweg will generally follow the same profile, with some deviation as the bankfull channel meanders through the valley in turn decreasing the low flow channels average slope. The average valley profile is to be approximately 1% with a series of grade control structures to both decrease elevation and dissipate energy to meet natural channel criteria as outline in El Paso County criteria and agreed upon channel parameters.

East Fork Tributary

The East Fork tributary (EFT) crosses the north property line and flows are conveyed through the site via a natural channel. The channel has been mapped as a Zone A floodplain per the existing FIRM panel; it appears any hydraulic effects of the crossing at Eastonville Road was not accounted for in the floodplain delineation. While the current floodplain delineation shows the channel continuing through Highway 24, there is no existing crossing for this section of the drainage channel below Highway 24 and instead the flows are conveyed to the northeast towards the East Fork Upper (EF). Per a July email from the USACE this drainage channel was preliminarily determined to be a non-jurisdictional waters/wetland.

Per SWMM modeling the current velocities will require channel stabilization. The EFT channel is to be engineered later in the design which will likely include a combination of channel widening, lowering of slope facilitated by the implementation of drop structures to meet non erosive velocity requirements. Bank stabilization, should it be necessary, may include coir rolls, erosion control blankets, live willow staking, soil lifts and/or other measures to ensure successful bank stabilization. The drainageway will require further analysis and design which will be completed as the project progresses.

East Fork Upper

The EF crosses the north property line approximately 1500' east of the EFT crossing. The flow through the site is via a natural channel and travels in a southeasterly direction. The channel is mapped as a Zone A floodplain, and the channel crosses Highway 24 via an existing shallow bridge. The current floodplain delineation shows EF and EFT eventually merging approximately 1750' southeast of the site, however, as mentioned above Highway 24 blocks the flow of the EFT and flows are conveyed northeast to the EF bridge crossing.

Per SWMM modeling the current velocities will require channel stabilization. The EF channel is to be engineered later in the design which will likely include a combination of channel widening, lowering of slope facilitated by the implementation of drop structures to meet non erosive velocity requirements. Bank stabilization, should it be necessary, may include coir rolls, erosion control blankets, live willow staking, soil lifts and/or other measures to ensure successful bank stabilization. The drainageway will require further analysis and design which will be completed as the project progresses.

V. Environmental Evaluations

a. Significant existing or potential wetland and riparian areas impacts

As part of this work, the developer has engaged Ecosystem Services, LLC (ECOS) to perform environmental studies of the site that will be submitted with the planning documents. Major information from this report related to the wetlands shows that two of the tributaries through the site, the Main Stem and the East Fork contain jurisdictional wetlands and the other two tributaries, the East Fork Tributary and the Main Stem Tributary #2 are non-jurisdictional wetlands.

At this time, only minor improvements to the jurisdictional channels are proposed. These stream improvements will be made with keeping the natural habitat intact and the natural function of these channels as it is to maintain the wetland habitat. The non-jurisdictional channels will be modified, and the design of those channels is forthcoming.

b. Stormwater quality considerations and proposed practices

As part of the development, full spectrum detention facilities will be installed to provide water quality for the development. The facilities will be designed using El Paso County criteria and provide stormwater quality by slowing the release of stormwater captured by the ponds and allowing solids to settle out. Additionally, when possible, the revised drainage channels, which were not jurisdictional wetlands, will be used to convey stormwater via a natural channel. Stormwater must be treated before entering the natural channels. The natural channel will provide a pervious means to transport stormwater and provide some water quality benefits as well.

On site practices for the homes, schools, churches, and other buildings should use means such that impervious areas drain across pervious area to allow for infiltration during the minor events. This would

include discharge of the gutters onto landscape areas vs. directly connecting to storm sewer and using natural ditches and swales where it is logical and makes sense to convey stormwater in lieu of storm sewer piping.

c. Permitting requirements

When work infringes upon the wetlands or floodplain a 404 Permit will be required. If the work within the waterways is minimal, it will likely be covered under a nationwide 404 permit; it is however possible that an individual permits will be required.

The Colorado Department of Public Health and Environment will require permits for any disturbance that exceed 1 acre of land. Should groundwater be encountered, a dewatering permit will also be required.

El Paso County will require an Erosion and Stormwater Quality Control Permit and any other construction permits required to complete the construction of the site.

FEMA will require a permit for floodplain development prior to the commencement of any construction or development within any special flood hazard area (SFHA).

FEMA will require a letter of map revision (LOMR) should work alter the base flood elevation (BFE) of any area falling within the floodplain as shown in FEMA FIRM 08041C0556G and FIRM 08041C0552G (eff. 12/7/2018).

d. 4-Step Process

In accordance with the Engineering Criteria Manual I.7.2.A and DCM V2, this site has implemented the four-step process to minimize adverse impacts of urbanization. The four-step process includes reducing runoff volumes, stabilizing drainageways, treating the water quality capture volume, and considering the need for Industrial Commercial BMPs.

Step 1 – Reducing Runoff Volumes: The development of the project site includes a variety of land uses including open and vegetated areas interspersed to help disconnect impervious areas and reduce runoff volumes.

Step 2 – Stabilize Drainageways: Altered channels will be designed in a manner that provides water quality benefits through infiltration and the removal of pollutants via phytoremediation. Vegetation will also be selected to stabilize the channel by reducing the velocity of flows and decreasing any scour. Should the final channel require, grade control structures may be implemented to further reduce flow velocities and protect against erosion. These improvements will help stabilize drainageways.

Step 3 – Provide WQCV: Runoff from this development is treated through capture and slow release of the WQCV via detention ponds that are designed per current El Paso County DCM V2.

Step 4 – Consider the need for Industrial and Commercial BMP's: A site specific storm water quality and erosion control plan and narrative will be prepared with subsequent land use approvals prepared in conjunction with the report prior to any construction. Site specific temporary source control BMPs as well as permanent BMPs are detailed in this plan and narrative. Guidelines detailed in the El Paso DCM V2 4.2 pertaining to the covering and storage handline and spill containment and control shall be followed as necessary.

VI. Selected Plan

a. Plan Hydrology

This MDDP schematically addressed on-site and off-site drainage patterns using the existing topography and proposed land use plan for the overall drainage design. Individual preliminary and final drainage reports will better define the planning areas as the site is developed. These reports will include inlet design, storm sewer hydraulics, street design and other requirements typical of more detailed drainage reports.

The overall site is divided into 8 separate major basins, basins A-H and contribute to individual detention ponds for each major basin. Basin sizes range from 35 acres to 181 acres in size. Basins A, B, C and D drain and eventually discharge into the Main Stem and Main Stem Tributary #2. Basins E, F, G, and H drain towards the East Fork Drainage channel.

The sub-basins are described in additional detail above.

b. Detention Ponds

The site plans propose the construction of 8 separate full spectrum detention facilities.

- Pond A is located in the southwest corner of the site and discharges into the Main Stem drainageway. The pond is planned to store a maximum of 4.05 ac-ft during the 100 year event and have a peak outflow of 55.9 cfs which is slightly below the pre development peak outflow of 57.1 cfs. The 5 year storage volume is 2.46 ac-ft with a peak outflow of 3.7 cfs.
- Pond B is located to the east of Pond A and the Main Stem and discharges into the Main Stem Tributary #2. The pond is planned to store a maximum of 16.60 ac-ft during the 100 year event and have a peak outflow of 165.4 cfs which is slightly above the pre development peak outflow of 164.2 cfs. The 5 year storage volume is 8.44 ac-ft with a peak outflow of 2.6 cfs.
- Pond C is located near the center of the western portion of the site near the existing Main Stem Tributary #2. The pond discharges into a revised open channel to be designed and discharges to the Main Stem Tributary #2 which merges with the Main Stem Tributary just off site. The pond is planned to store a maximum of 6.91 ac-ft during the 100 year event and have a peak outflow of 119.2 cfs which is slightly below the pre development peak outflow of 120.2 cfs. The 5 year storage volume is 4.07 ac-ft with a peak outflow of 1.5 cfs.
- Pond D is located near the southern portion of the site adjacent to Highway 24. The pond discharges into the Main Stem right after the Main Stem and Main Stem Tributary #2 merge. The pond is planned to store a maximum of 9.41 ac-ft during the 100 year event and have a peak outflow of 154.4 cfs which equals the predevelopment peak flow rate. The 5 year storage volume is 6.28 ac-ft with a peak outflow of 2.0 cfs.
- Pond E is located in the middle of the site just east of the East Fork drainage way. The pond discharges into the East Fork drainageway. The pond is planned to store a maximum of 2.40 ac-ft during the 100 year event and have a peak outflow of 163.4 cfs which is greater than the pre

development peak outflow of 157.99 cfs. The 5 year storage volume is 1.70 ac-ft with a peak outflow of 18.8 cfs.

- Pond F is located near the south east corner of the site just west of the East Fork Tributary drainageway. The pond discharges into the East Fork Tributary drainageway. The pond is planned to store a maximum of 12.40 ac-ft during the 100 year event and have a peak outflow of 235.5 cfs which is greater than the pre development peak outflow of 221.11 cfs. The 5 year storage volume is 8.07 ac-ft with a peak outflow of 14.5 cfs.
- Pond G is located near the north east corner of the site just west of the East Fork Tributary drainageway. The pond discharges into the East Fork Tributary drainageway at an upstream location within the site. The pond is planned to store a maximum of 2.54 ac-ft during the 100 year event and have a peak outflow of 50.7 cfs which is slightly greater than the pre development peak outflow of 48.48 cfs. The 5 year storage volume is 1.69 ac-ft with a peak outflow of 9.1 cfs.
- Pond H is located near the south east corner of the site just east of the East Fork Tributary drainageway and adjacent to Highway 24. The pond discharges into the East Fork Tributary drainageway. The pond is planned to store a maximum of 6.60 ac-ft during the 100 year event and have a peak outflow of 99.1 cfs which matches the pred development peak outflow. The 5 year storage volume is 4.03 ac-ft with a peak outflow of 1.3 cfs.

Overall runoff from the site will by and large match the predevelopment peak flows. The volume of water will increase however as the drainage channels are designs, continuous simulation models will be done to see the effects of prolonged runoff rates. Predevelopment and post development flows for the 5-year and 100-year events are summarized in the following table for the 4 site outfalls.

OUTFALL	Predevelopment		Postdevelopment*	
	5 year	100 year	5 year	100 year
1	80.03	479.80	67.69	466.95
2	85.96	597.41	61.68	536.11
3	30.00	154.35	8.58	160.70
4	341.05	1335.77	276.10	1291.25

*Values to be refined with Preliminary and Final Drainage Reports for each filing

VII. Drawings

Please refer to the appendices for vicinity maps and drainage basin maps.

VIII. Summary

Grandview Reserve is a large master planned community consisting of various densities of dwelling units to include single family homes, multifamily homes, parks, institutional sites, and commercial areas. Due to development increased runoff will occur. To mitigate downstream impacts 8 large full spectrum detention facilities will be built to reduce the runoff rate to near historic levels. These detention facilities will provide water quality enhancements to account for the increased urbanization of the upstream catchment areas.

Additional analysis will be required and completed to review the hydraulics of the proposed major drainage channels and be included in future submittals. The proposed design, as described in this report, is not anticipated to cause any adverse impact to downstream properties however as noted previously due to the increased volume of water, downstream tributaries will see increases in the volume of flow. It is advised that low impact design be considered when designing and developing each filing. This shall include those items listed in the four-step process above and any additional measures that are within reason to disconnect impervious areas and increase infiltration. This will alleviate the additional volume of water due to development. Although the rate will remain at or below historic levels, the amount of time the channels will see water will increase which may cause more channel movement than historic. Downstream planning efforts should allow for the natural migration and movement of the channel by continuing to provide large floodplain areas to allow movement of the channel.

This document was prepared from the best data available at the time of printing. El Paso County, Colorado, makes no claim as to the completeness or accuracy of the data contained herein.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the **Flood Profiles and Floodway Data** and/or **Summary of Stillwater Elevations** tables contained within the **Flood Insurance Study (FIS)** report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded, whole-foot elevations. Floodway data is provided for the purpose of determining the relationship between flood elevation and floodway management. Floodway data should not be used as the sole source of flood elevation information in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Stillwater Elevations and Floodway Data tables of the FIS report. Floodway data is provided for the purpose of determining the relationship between flood elevation and floodway management. Floodway data should not be used as the sole source of flood elevation information in conjunction with the FIRM for purposes of construction and/or floodplain management.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with the exception of the floodway boundaries shown in the Flood Insurance Study report and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight, positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/> or contact the National Geodetic Survey at the following address:

Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at <http://www.ngs.noaa.gov/>.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, and Anderson Consulting Engineers, Inc. These data are current as of 2006.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains automatic hydraulic data) may reflect stream channel configurations that do not match the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable in the FIS report. As a result, the profile and Floodway Data Tables may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes are to amendments or determinations may have occurred since the last update, users are encouraged to contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-368-9620 and its website at <http://www.msc.fema.gov/>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP (1-877-336-2627)** or visit the FEMA website at <http://www.fema.gov/business/nfp>.

El Paso County Vertical Datum Offset Table

Flooding Source	Vertical Datum Offset (ft)

REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION

Panel Location Map

This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperative Agreement between El Paso County, Colorado Springs Utilities, Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard Information and resources are available from local communities and the Colorado Water Conservation Board.

ZONE A
Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently identified. Zone A areas are subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, AV, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE AE
No Base Flood Elevations determined.

ZONE AH
Base Flood Elevations determined. Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE AO
Flood depths of 1 to 3 feet (usually areas of ponding); average depths determined. For areas of abutment flow, velocities also determined.

ZONE AR
Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently identified. Zone A areas are subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, AV, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE AV
Coastal flood zone with velocity hazard (wave action); no Base Flood Elevation determined.

ZONE VE
Coastal flood zone with velocity hazard (wave action); Base Flood Elevation determined.

FLOODWAY AREAS IN ZONE AE
The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS
ZONE X
Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS
ZONE D
Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS
OTHERWISE PROTECTED AREAS (OPAs)
CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

Floodplain boundary
Floodway boundary
Zone D boundary

Notes to User: This Map Number is shown below only for information purposes. It is not a Community Number for use in determining flood insurance availability. It is a Community Number for use in determining flood insurance availability for the subject community.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the **Flood Profiles and Floodway Data** and/or **Summary of Stillwater Elevations** tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded, whole-foot values. These values are rounded to the nearest foot for informational purposes only and should not be used as the basis for flood elevation engineering purposes. Flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal base flood elevations are also provided in the Summary of Stillwater Elevations and Floodway Data tables. The Flood Insurance Study report that accompanies this FIS report for information on flood control structures for this jurisdiction.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with the exception of the **Special Flood Hazard Areas (SFHAs)** and **Special Flood Hazard Areas (SFHAs)** and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight, positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and elevation elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, NINGS12
National Geodetic Survey
SSMNC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 715-3242 or visit its website at <http://www.ngs.noaa.gov/>.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, City of Fountain, Bureau of Land Management, National Oceanic and Atmospheric Administration, United States Geological Survey, and Anderson Consulting Engineers, Inc. These data are current as of 2006.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report, which contain authoritative hydraulic data, may reflect stream channel configurations that are different from those shown on this map. Flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred since the date of publication, users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact **FEMA Map Service Center (MSC)** via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-368-9620 and its website at <http://www.msc.fema.gov/>.

If you have **questions about this map** or **questions concerning the National Flood Insurance Program** in general, please call **1-877-FEMA MAP (1-877-336-2627)** or visit the FEMA website at <http://www.fema.gov/business/nfip>.

El Paso County Vertical Datum Offset Table

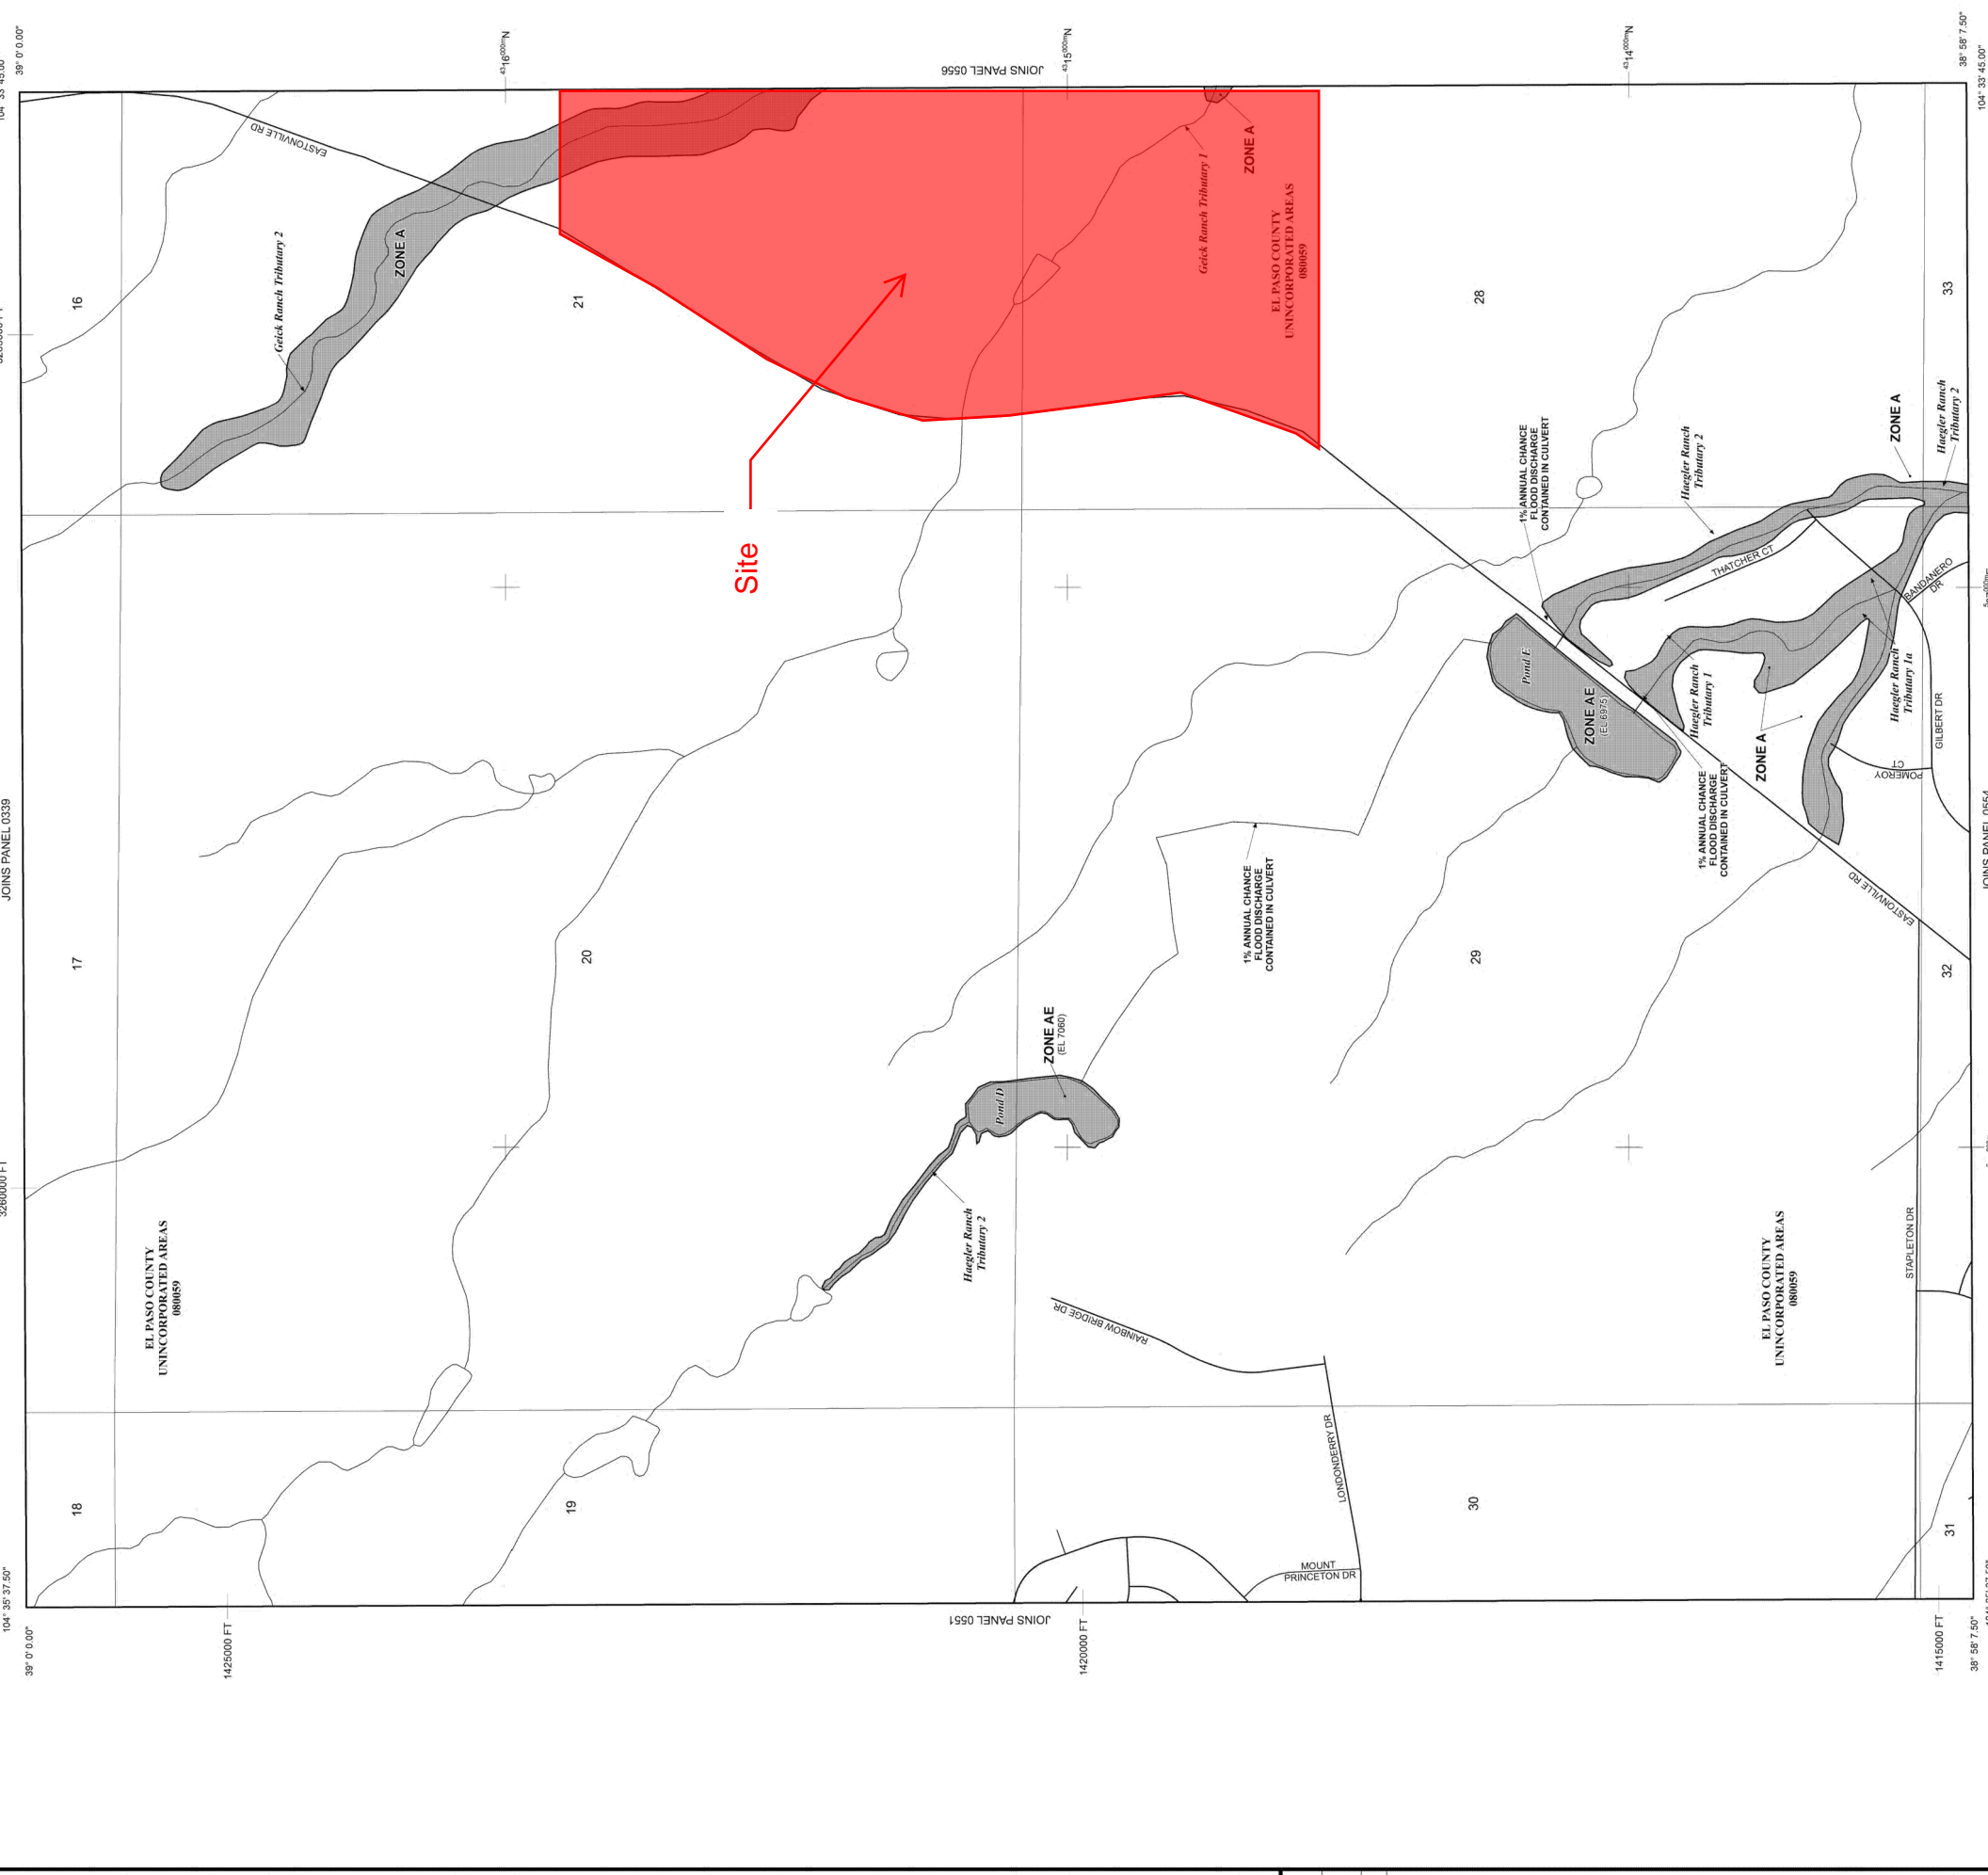

Flooding Source	Vertical Datum Offset (ft)
REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION	

Panel Location Map

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.

This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

ZONE A
No Base Flood Elevations determined.

ZONE AE
Base Flood Elevations determined. Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevation determined.

ZONE AH
Flood depths of 1 to 3 feet (usually areas of ponding); average depths determined. For areas of altitudinal fan flooding, velocities also determined.

ZONE AR
Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently identified. Zone AR areas are protected from the 1% annual chance of greater flood protection from the 1% annual chance of greater flood protection system under construction; no Base Flood Elevations determined.

ZONE V
Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE
Coastal flood zone with velocity hazard (wave action); Base Flood Elevation determined.

FLOODWAY AREAS IN ZONE AE
The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS
Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS
Areas determined to be outside the 0.2% annual chance floodplain. Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS
CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 17, Sep 13, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 8, 2018—May 26, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
8	Blakeland loamy sand, 1 to 9 percent slopes	A	22.4	2.6%
19	Columbine gravelly sandy loam, 0 to 3 percent slopes	A	450.7	52.5%
83	Stapleton sandy loam, 3 to 8 percent slopes	B	385.4	44.9%
Totals for Area of Interest			858.5	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

COS PCM-FSD Preliminary Design (Beta Version 1.00, September 2019)

Sheet 1 of 3

Designer: Chris McFarland

Project: Grandview Reserve Pond A

Date: April 6, 2020

Last Edited: April 13, 2020

1. Select WQCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB) ▼

2. WQCV/EURV Outlet Details
A) Average Infiltration Rate of WQCV
B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
C) Underdrain Outlet Orifice Area
D) Number of WQCV Orifice Rows
E) Vertical Spacing between WQCV Orifice Rows
F) WQCV Orifice Area (A_o) per Row
G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
H) EURV Orifice Area (A_o) in Single Row
I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain A _o =	N/A	N/A
# WQCV rows =	10	10
Orifice Spacing =	4.0	4.0
WQCV A _o =	0.61	0.61
Max Stage wqcv =	3.40	3.40
EURV A _o =	2.06	2.06
Max Stage EURV =	4.50	4.50
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

A) Length of Basin at Top of EURV
B) Width of Basin at Top of EURV
C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	370.3	370.3
W _{PCM} =	113.6	113.6
Stage at Top of Bench =	4.60	4.60
L _{Bench} =	371.1	371.1
W _{Bench} =	114.4	114.4
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
		13.03				57.08

B) Adjust "Time Interval" to match hydrograph data

5-yr and 100-yr Hydrology Required (Other Storms are Optional)

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
0:00		0.00				0.00	
0:05		0.32				0.84	
0:10		2.12				2.93	
0:15		6.24				8.14

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

	Input Parameters		
	User Input	COS DCM	
H _{weir front} =	4.50	4.50	ft
L _{weir front} =	8.00	9.00	ft
S _{weir sides} =	0.00	0.00	ft / ft
Horizontal L _{weir sides} =	8.00	5.00	ft
Grate Open Area =	70%	70%	%
Debris Clogging =	50%	50%	%
H _{grate top} =	4.50	4.50	ft
Slope L _{weir sides} =	8.00	5.00	ft
Open Area (No Clogging) =	44.80	31.50	sq ft
Open Area (Clogged) =	22.40	15.75	sq ft

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

	Input Parameters		
	User Input	COS DCM	
Pipe Invert Depth =	1.50	1.50	ft
Pipe Diameter =	36.00	30.00	inches
Plate Height =	22.42	28.11	inches
Theta =	1.82	2.63	radians
Outlet Ao =	4.63	4.78	sq ft
Outlet _{centroid} =	1.06	1.22	ft
Open Area Ratio =	9.68	6.59	

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

	Input Parameters		
	User Input	COS DCM	
H _{spillway invert} =	5.90	6.00	ft
L _{spillway crest} =	42.00	33.00	ft
S _{spillway ends} =	4.00	4.00	ft / ft
Freeboard Depth =	1.00	1.00	ft
Flow Depth _{spillway} =	0.80	1.00	ft
Freeboard Top Stage =	7.70	8.00	ft
Max Basin Area =	1.27	1.29	acres

9. Routed Hydrograph Results

	Results based on User Input								
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	0.64	1.66		2.16					7.27
Inflow Hydrograph Volume (ac-ft) =	N/A	N/A		13.0					57.1
Predevelopment Peak Q (cfs) =	N/A	N/A		30.7					100.4
Peak Inflow (cfs) =	0.3	0.5		4.6					56.3
Peak Outflow (cfs) =	N/A	N/A		0.4					1.0
Ratio (Outflow/Predevelopment) =	Orifice Plate	Orifice Plate		Overflow Grate					Outlet Pipe
Structure Controlling Flow =	N/A	N/A		0.1					1.2
Max Velocity through Grate =	39	69		73					61
Time to Drain 97% of Volume (hr) =	41	72		77					72
Time to Drain 99% of Volume (hr) =	3.40	4.50		4.70					5.90
Maximum Ponding Depth (ft) =	0.80	0.97		0.98					1.09
Area at Max Ponding Depth (ac) =	0.64	1.66		1.87					3.11
Maximum Volume Stored (ac-ft) =									
	Results based on COS DCM Inputs								
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	0.64	1.66		2.16					7.27
Inflow Hydrograph Volume (ac-ft) =	N/A	N/A		13.0					57.1
Predevelopment Peak Q (cfs) =	N/A	N/A		30.7					100.4
Peak Inflow (cfs) =	0.3	0.5		4.3					57.5
Peak Outflow (cfs) =	N/A	N/A		0.3					1.0
Ratio (Outflow/Predevelopment) =	Orifice Plate	Orifice Plate		Overflow Grate					Outlet Pipe
Structure Controlling Flow =	N/A	N/A		0.2					1.8
Max Velocity through Grate =	39	69		73					61
Time to Drain 97% of Volume (hr) =	41	72		77					72
Time to Drain 99% of Volume (hr) =	3.40	4.50		4.70					5.90
Maximum Ponding Depth (ft) =	0.80	0.97		0.98					1.09
Area at Max Ponding Depth (ac) =	0.64	1.66		1.87					3.11
Maximum Volume Stored (ac-ft) =

1. Select WQCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB)

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	14	14
Orifice Spacing =	4.0	4.0
WQCV Ao =	1.49	1.49
Max Stage wqcv =	4.70	4.70
EURV Ao =	1.49	1.49
Max Stage EURV =	6.00	6.00
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	644.7	644.7
W _{PCM} =	191.2	191.2
Stage at Top of Bench =	6.10	6.10
L _{Bench} =	645.5	645.5
W _{Bench} =	192.0	192.0
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
	17.56				164.21	

B) Adjust "Time Interval" to match hydrograph data

5-yr and 100-yr Hydrology Required (Other Storms are Optional)

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

COS PCM-FSD Preliminary Design (Beta Version 1.00, September 2019)

Sheet 2 of 3

Designer: Chris McFarland

Project: Grandview Reserve Pond B

Date: April 6, 2020

Last Edited: April 13, 2020

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

	Input Parameters		
	User Input	COS DCM	
H _{weir front} =	6.00	6.00	ft
L _{weir front} =	17.00	17.00	ft
S _{weir sides} =	0.00	0.00	ft / ft
Horizontal L _{weir sides} =	17.00	7.00	ft
Grate Open Area =	70%	70%	%
Debris Clogging =	50%	50%	%
H _{grate top} =	6.00	6.00	ft
Slope L _{weir sides} =	17.00	7.00	ft
Open Area (No Clogging) =	202.30	83.30	sq ft
Open Area (Clogged) =	101.15	41.65	sq ft

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

	Input Parameters		
	User Input	COS DCM	
Pipe Invert Depth =	1.50	1.50	ft
Pipe Diameter =	54.00	48.00	inches
Plate Height =	37.00	42.00	inches
Theta =	1.95	2.42	radians
Outlet Ao =	11.61	11.66	sq ft
Outlet _{centroid} =	1.73	1.87	ft
Open Area Ratio =	17.42	7.14	

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

	Input Parameters		
	User Input	COS DCM	
H _{spillway invert} =	9.50	9.30	ft
L _{spillway crest} =	136.00	122.00	ft
S _{spillway ends} =	4.00	4.00	ft / ft
Freeboard Depth =	1.00	1.00	ft
Flow Depth _{spillway} =	0.90	1.00	ft
Freeboard Top Stage =	11.40	11.30	ft
Max Basin Area =	3.70	3.68	acres

9. Routed Hydrograph Results

	Results based on User Input								
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	2.41	5.73		6.67					31.72
Inflow Hydrograph Volume (ac-ft) =	N/A	N/A		17.6					164.2
Predevelopment Peak Q (cfs) =	N/A	N/A		75.7					366.2
Peak Inflow (cfs) =	1.1	1.4		1.4					166.4
Peak Outflow (cfs) =	N/A	N/A		0.1					1.0
Ratio (Outflow/Predevelopment) =	Orifice Plate	Orifice Plate		Overflow Grate					Outlet Pipe
Structure Controlling Flow =	N/A	N/A		0.0					0.8
Max Velocity through Grate =	40	68		76					61
Time to Drain 97% of Volume (hr) =	42	72		80					73
Time to Drain 99% of Volume (hr) =	4.70	6.00		6.10					9.10
Maximum Ponding Depth (ft) =	1.92	2.83		2.85					3.32
Area at Max Ponding Depth (ac) =	2.41	5.73		6.04					15.28
Maximum Volume Stored (ac-ft) =									
	Results based on COS DCM Inputs								
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	2.41	5.73		6.67					31.72
Inflow Hydrograph Volume (ac-ft) =	N/A	N/A		17.6					164.2
Predevelopment Peak Q (cfs) =	N/A	N/A		75.7					366.2
Peak Inflow (cfs) =	1.1	1.4		1.4					166.5
Peak Outflow (cfs) =	N/A	N/A		0.1					1.0
Ratio (Outflow/Predevelopment) =	Orifice Plate	Orifice Plate		Overflow Grate					Outlet Pipe
Structure Controlling Flow =	N/A	N/A		0.0					2.0
Max Velocity through Grate =	40	68		76					61
Time to Drain 97% of Volume (hr) =	42	72		80					73
Time to Drain 99% of Volume (hr) =	4.70	6.00		6.10					9.20
Maximum Ponding Depth (ft) =	1.92	2.83		2.85					3.34
Area at Max Ponding Depth (ac) =	2.41	5.73		6.04					15.62
Maximum Volume Stored (ac-ft) =

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

COS PCM-FSD Preliminary Design (Beta Version 1.00, September 2019)

Sheet 1 of 3

Designer: Chris McFarland

Project: Grandview Reserve Pond C

Date: April 6, 2020

Last Edited: April 08, 2020

1. Select QWCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB)

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	12	12
Orifice Spacing =	4.0	4.0
WQCV Ao =	1.05	1.05
Max Stage wqcv =	4.00	4.00
EURV Ao =	17.07	17.07
Max Stage EURV =	6.00	6.00
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	453.3	453.3
W _{PCM} =	177.8	177.8
Stage at Top of Bench =	6.10	6.10
L _{Bench} =	454.1	454.1
W _{Bench} =	178.6	178.6
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
	9.95				120.21	

B) Adjust "Time Interval" to match hydrograph data

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
0:00		0.00				0.00

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

Input Parameters		
	User Input	COS DCM
H _{weir front} =	6.00	5.00
L _{weir front} =	12.00	11.00
S _{weir sides} =	0.00	0.00
Horizontal L _{weir sides} =	12.00	11.00
Grate Open Area =	70%	70%
Debris Clogging =	50%	50%
H _{grate top} =	6.00	6.00
Slope L _{weir sides} =	12.00	11.00
Open Area (No Clogging) =	100.80	84.70
Open Area (Clogged) =	50.40	42.35

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

Input Parameters		
	User Input	COS DCM
Pipe Invert Depth =	1.50	1.50
Pipe Diameter =	48.00	42.00
Plate Height =	33.13	39.36
Theta =	1.96	2.63
Outlet Ao =	9.25	9.37
Outlet _{centroid} =	1.54	1.71
Open Area Ratio =	10.90	9.04

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

Input Parameters		
	User Input	COS DCM
H _{spillway invert} =	8.00	999.00
L _{spillway crest} =	79.00	42.00
S _{spillway ends} =	4.00	4.00
Freeboard Depth =	1.00	1.00
Flow Depth _{spillway} =	1.00	
Freeboard Top Stage =	10.00	
Max Basin Area =	2.34	

9. Routed Hydrograph Results

Results based on User Input									
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

1. Select WQCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB) ▼

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	13	13
Orifice Spacing =	4.0	4.0
WQCV Ao =	1.34	1.34
Max Stage wqcv =	4.50	4.50
EURV Ao =	20.83	20.83
Max Stage EURV =	6.50	6.50
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	588.5	588.5
W _{PCM} =	180.1	180.1
Stage at Top of Bench =	6.60	6.60
L _{Bench} =	589.3	589.3
W _{Bench} =	180.9	180.9
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Last Edited: April 13, 2020

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

Input Parameters		
	User Input	COS DCM
H _{weir front} =	6.50	6.50
L _{weir front} =	11.00	9.00
S _{weir sides} =	0.00	0.00
Horizontal L _{weir sides} =	11.00	9.00
Grate Open Area =	70%	70%
Debris Clogging =	50%	50%
H _{grate top} =	6.50	6.50
Slope L _{weir sides} =	11.00	9.00
Open Area (No Clogging) =	84.70	56.70
Open Area (Clogged) =	42.35	28.35

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

Input Parameters		
	User Input	COS DCM
Pipe Invert Depth =	1.50	1.50
Pipe Diameter =	48.00	48.00
Plate Height =	44.00	44.00
Theta =	2.56	2.56
Outlet Ao =	12.07	12.07
Outlet _{centroid} =	1.93	1.93
Open Area Ratio =	7.02	4.70

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

Input Parameters		
	User Input	COS DCM
H _{spillway invert} =	8.00	999.00
L _{spillway crest} =	105.00	42.00
S _{spillway ends} =	4.00	4.00
Freeboard Depth =	1.00	1.00
Flow Depth _{spillway} =	1.00	
Freeboard Top Stage =	10.00	
Max Basin Area =	2.95	

9. Routed Hydrograph Results

		Results based on User Input								
		WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =		1.96	6.56		6.97				18.57

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

COS PCM-FSD Preliminary Design (Beta Version 1.00, September 2019)

Sheet 1 of 3

Designer: Chris McFarland

Project: Grandview Reserve Pond E

Date: April 6, 2020

Last Edited: April 13, 2020

1. Select WQCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB)

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	10	10
Orifice Spacing =	4.0	4.0
WQCV Ao =	0.67	0.67
Max Stage wqcv =	3.60	3.60
EURV Ao =	0.67	0.67
Max Stage EURV =	4.50	4.50
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Slope at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	327.0	327.0
W _{PCM} =	127.7	127.7
Stage at Top of Bench =	4.60	4.60
L _{Bench} =	327.8	327.8
W _{Bench} =	128.5	128.5
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
		32.34				157.99

B) Adjust "Time Interval" to match hydrograph data

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
0:00		0.00				0.00

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

	Input Parameters		
	User Input	COS DCM	
H _{weir front} =	4.50	4.50	ft
L _{weir front} =	15.00	9.00	ft
S _{weir sides} =	0.00	0.00	ft / ft
Horizontal L _{weir sides} =	15.00	9.00	ft
Grate Open Area =	70%	70%	%
Debris Clogging =	50%	50%	%
H _{grate top} =	4.50	4.50	ft
Slope L _{weir sides} =	15.00	9.00	ft
Open Area (No Clogging) =	157.50	56.70	sq ft
Open Area (Clogged) =	78.75	28.35	sq ft

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

	Input Parameters		
	User Input	COS DCM	
Pipe Invert Depth =	1.50	1.50	ft
Pipe Diameter =	60.00	54.00	inches
Plate Height =	43.00	50.00	inches
Theta =	2.02	2.59	radians
Outlet Ao =	15.06	15.37	sq ft
Outlet _{centroid} =	1.99	2.18	ft
Open Area Ratio =	10.46	3.69	

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

	Input Parameters		
	User Input	COS DCM	
H _{spillway invert} =	5.80	999.00	ft
L _{spillway crest} =	100.00	42.00	ft
S _{spillway ends} =	4.00	4.00	ft / ft
Freeboard Depth =	1.00	1.00	ft
Flow Depth _{spillway} =	0.70		ft
Freeboard Top Stage =	7.50		ft
Max Basin Area =	1.22		acres

1. Select WQCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB)

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	14	13
Orifice Spacing =	4.0	4.0
WQCV Ao =	1.55	1.47
Max Stage wqcv =	4.80	4.50
EURV Ao =	1.55	7.84
Max Stage EURV =	6.00	6.00
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Slope at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	570.9	570.9
W _{PCM} =	217.0	217.0
Stage at Top of Bench =	6.10	6.10
L _{Bench} =	571.7	571.7
W _{Bench} =	217.8	217.8
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
		42.34				221.11

B) Adjust "Time Interval" to match hydrograph data

5-yr and 100-yr Hydrology Required (Other Storms are Optional)

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

Input Parameters		
	User Input	COS DCM
H _{weir front} =	6.00	5.00
L _{weir front} =	13.00	10.00
S _{weir sides} =	0.00	0.00
Horizontal L _{weir sides} =	13.00	10.00
Grate Open Area =	70%	70%
Debris Clogging =	50%	50%
H _{grate top} =	6.00	6.00
Slope L _{weir sides} =	13.00	10.00
Open Area (No Clogging) =	118.30	70.00
Open Area (Clogged) =	59.15	35.00

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

Input Parameters		
	User Input	COS DCM
Pipe Invert Depth =	1.50	1.50
Pipe Diameter =	66.00	60.00
Plate Height =	46.05	54.00
Theta =	1.98	2.50
Outlet Ao =	17.70	18.61
Outlet _{centroid} =	2.14	2.38
Open Area Ratio =	6.68	3.76

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

Input Parameters		
	User Input	COS DCM
H _{spillway invert} =	7.60	999.00
L _{spillway crest} =	126.00	42.00
S _{spillway ends} =	4.00	4.00
Freeboard Depth =	1.00	1.00
Flow Depth _{spillway} =	0.90	
Freeboard Top Stage =	9.50	
Max Basin Area =	3.37	

9. Routed Hydrograph Results

		Results based on User Input								
		WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

Last Edited: April 13, 2020

1. Select QWCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB) ▼

2. WQCV/EURV Outlet Details
A) Average Infiltration Rate of WQCV
B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
C) Underdrain Outlet Orifice Area
D) Number of WQCV Orifice Rows
E) Vertical Spacing between WQCV Orifice Rows
F) WQCV Orifice Area (A_o) per Row
G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
H) EURV Orifice Area (A_o) in Single Row
I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain A _o =	N/A	N/A
# WQCV rows =	9	9
Orifice Spacing =	4.0	4.0
WQCV A _o =	0.49	0.49
Max Stage wqcv =	3.20	3.20
EURV A _o =	1.94	1.94
Max Stage EURV =	4.00	4.00
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

A) Length of Basin at Top of EURV
B) Width of Basin at Top of EURV
C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	349.7	349.7
W _{PCM} =	105.4	105.4
Stage at Top of Bench =	4.10	4.10
L _{Bench} =	350.5	350.5
W _{Bench} =	106.2	106.2
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
		9.42				48.48

B) Adjust "Time Interval" to match hydrograph data

5-yr and 100-yr Hydrology Required (Other Storms are Optional)

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
0:00		0.00				0.00	
0:05		0.18				0.49	
0:10		1.27				1.75	
0:15		3.86				5.05	
0:20		12.69				17.55	
0:25		19.21				47.38	
0:30		20.06				63.86	
0:35		18.72				67.51	
0:40		16.88				66.01	
0:45		15.24				62.38	
0:50		13.74				57.86	
0:55		12.37				53.71	
1:00		11.12				49.93	
1:05		10.01				44.10	
1:10		9.05				38.52	
1:15		8.20				33.58	
1:20		7.42				29.30

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

	Input Parameters		
	User Input	COS DCM	
H _{weir front} =	4.00	4.00	ft
L _{weir front} =	26.00	26.00	ft
S _{weir sides} =	0.00	0.00	ft / ft
Horizontal L _{weir sides} =	26.00	26.00	ft
Grate Open Area =	70%	70%	%
Debris Clogging =	50%	50%	%
H _{grate top} =	4.00	4.00	ft
Slope L _{weir sides} =	26.00	26.00	ft
Open Area (No Clogging) =	473.20	473.20	sq ft
Open Area (Clogged) =	236.60	236.60	sq ft

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

	Input Parameters		
	User Input	COS DCM	
Pipe Invert Depth =	1.50	1.50	ft
Pipe Diameter =	30.00	27.00	inches
Plate Height =	22.22	26.24	inches
Theta =	2.07	2.80	radians
Outlet Ao =	3.90	3.94	sq ft
Outlet _{centroid} =	1.03	1.12	ft
Open Area Ratio =	121.39	119.97	

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

	Input Parameters		
	User Input	COS DCM	
H _{spillway invert} =	5.40	4.90	ft
L _{spillway crest} =	136.00	23.00	ft
S _{spillway ends} =	4.00	4.00	ft / ft
Freeboard Depth =	1.00	1.00	ft
Flow Depth _{spillway} =	0.30	0.90	ft
Freeboard Top Stage =	6.70	6.80	ft
Max Basin Area =	1.08	1.09	acres

9. Routed Hydrograph Results

	Results based on User Input								
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

1. Select QOCV/EURV PCM Type:
Imports the Stage-Area-Volume-Discharge information from the corresponding PCM worksheet. The selected PCM worksheet must be completed before the import will work.

Extended Detention Basin (EDB)

2. WQCV/EURV Outlet Details

- A) Average Infiltration Rate of WQCV
- B) Depth to Centroid of Underdrain Outlet Orifice from filter media surface
- C) Underdrain Outlet Orifice Area
- D) Number of WQCV Orifice Rows
- E) Vertical Spacing between WQCV Orifice Rows
- F) WQCV Orifice Area (A_o) per Row
- G) Maximum Stage of WQCV (includes ISD and Trickle Channel Depth)
- H) EURV Orifice Area (A_o) in Single Row
- I) Maximum Stage of EURV (includes ISD and Trickle Channel Depth)
- J) Discharge Coefficient for all WQCV/EURV Outlet Orifice(s)

Input Parameters		
	User Input	COS DCM
i =	N/A	N/A
y =	N/A	N/A
Underdrain Ao =	N/A	N/A
# WQCV rows =	11	11
Orifice Spacing =	4.0	4.0
WQCV Ao =	0.66	0.66
Max Stage wqcv =	3.60	3.60
EURV Ao =	4.73	4.73
Max Stage EURV =	5.00	5.00
Cd =	0.60	0.60

3. Flood Control Surcharge Basin Geometry (above EURV) - See Figure
Default Flood Surcharge Geometry inputs represent a continuation of the PCM Geometry in an upward direction without a transition bench.

- A) Length of Basin at Top of EURV
- B) Width of Basin at Top of EURV
- C) Stage at Top of Transition Bench (Bottom of Flood Control Surcharge)
- D) Length of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- E) Width of Basin at Top of Transition Bench (Bottom of Flood Control Surcharge)
- F) Average Side Slopes of Flood Control Surcharge above Transition Bench (Recommend no steeper than 3H:1V slope. Use zero for vertical walls.)

Input Parameters		
	User Input	COS DCM
L _{PCM} =	468.4	468.4
W _{PCM} =	141.1	141.1
Stage at Top of Bench =	5.10	5.10
L _{Bench} =	469.2	469.2
W _{Bench} =	141.9	141.9
Z _{Surcharge} =	4.00	4.00

User can override default flood surcharge geometry inputs to create a transition bench between the top of the PCM and the Flood Surcharge Volume by entering larger dimensions in C), D), and E). See the Figure to the right.

Bench Slope is 4H:1V in length direction
Bench Slope is 4H:1V in width direction

4. Tributary Watershed Hydrology

A) Input hydrology data (copy/paste) from model runs

Pre-Development Peak Flow (cfs)						
2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
	17.11				99.16	

B) Adjust "Time Interval" to match hydrograph data

5-yr and 100-yr Hydrology Required (Other Storms are Optional)

Post-Development Storm Inflow Hydrographs (cfs)							
Time (min)	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
0:00		0.00				0.00	
0:05		0.41				1.20	
0:10		3.42				4.91	
0:15		10.22				13.16

Preliminary Design Procedure Form: Full Spectrum Detention (FSD) Routing

5. Flood Control Outlet Structure Type

A) Select Flood Control Outlet Structure Type

Overflow Weir/Grate, Outlet Pipe Restriction & Emergency Spillway

6. Overflow Weir (Dropbox) and Grate (Flat or Sloped)
(Assumes that top of grate is flush with the top of the concrete dropbox)

- A) Overflow Weir Front Edge Height (relative to Stage = 0 ft)
- B) Overflow Weir Front Edge Length (inside edge of dropbox)
- C) Overflow Weir Grate Slope (H:V, enter zero for flat grate)
- D) Horizontal Length of Weir Sides (inside edge of dropbox)
- E) Overflow Grate Open Area % (grate open area / total grate area)
- F) Debris Clogging %
- G) Height of Grate Upper Edge (at back side of dropbox)
- H) Overflow Grate Slope Length (inside edge of dropbox)
- I) Overflow Grate Open Area (without debris)
- J) Overflow Grate Open Area (with debris)

Input Parameters		
	User Input	COS DCM
H _{weir front} =	5.00	5.00
L _{weir front} =	9.00	7.00
S _{weir sides} =	0.00	0.00
Horizontal L _{weir sides} =	9.00	7.00
Grate Open Area =	70%	70%
Debris Clogging =	50%	50%
H _{grate top} =	5.00	5.00
Slope L _{weir sides} =	9.00	7.00
Open Area (No Clogging) =	56.70	34.30
Open Area (Clogged) =	28.35	17.15

7. Outlet Pipe with Flow Restriction Plate

A) Select Type of Outlet Restriction
(Circular Pipe w/ Restrictor Plate, Circular Orifice or Rectangular Orifice)

Circular Outlet Pipe w/ Restrictor Plate

- B) Depth to Invert of Outlet Pipe (relative to Stage = 0 ft)
- C) Outlet Pipe Diameter
- D) Restrictor Plate Height above Pipe Invert
- E) Half-Central Angle of Restrictor Plate on Pipe
- F) Outlet Orifice Area
- G) Height of Outlet Orifice Centroid above Outlet Pipe Invert
- H) Ratio of Grate Open Area / 100-yr Orifice Area (should be ≥ 4)

Input Parameters		
	User Input	COS DCM
Pipe Invert Depth =	1.50	1.50
Pipe Diameter =	42.00	42.00
Plate Height =	34.00	34.00
Theta =	2.24	2.24
Outlet Ao =	8.34	8.34
Outlet _{centroid} =	1.54	1.54
Open Area Ratio =	6.80	4.11

8. Emergency Spillway (Rectangular or Trapezoidal)

- A) Spillway Invert Stage (relative to Stage = 0 ft)
- B) Spillway Crest Length
- C) Spillway End Slopes (H:V)
- D) Freeboard above Maximum Water Surface
- E) Spillway Design Flow Depth
- F) Stage at Top of Freeboard
- G) Basin Area at Top of Freeboard

Input Parameters		
	User Input	COS DCM
H _{spillway invert} =	6.70	999.00
L _{spillway crest} =	136.00	27.00
S _{spillway ends} =	4.00	4.00
Freeboard Depth =	1.00	1.00
Flow Depth _{spillway} =	0.50	
Freeboard Top Stage =	8.20	
Max Basin Area =	1.89	

9. Routed Hydrograph Results

		Results based on User Input							
	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	1.03	2.73		3.25					11.08
