DRAINAGE REPORT FOR
HOMESTEAD NORTH AT STERLING RANCH FILING NO. 1 September, 2022

**ENGINEER'S STATEMENT:**

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Mike Bramlett, Colorado P.E. 32314
For and On Behalf of JR Engineering, LLC

COLORADO LICENSED MIKE BRAMLETT MB 32314 9/9/22 PROFESSIONAL ENGINEER

**DEVELOPER'S STATEMENT:**

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

Business Name: SR Land, LLC

By:

Title: MANAGER

Address: 20 Boulder Crescent, Suite 200
Colorado Springs, CO 80903

**El Paso County:**

Filed in accordance with the requirements of the El Paso County Land Development Code, Drainage Criteria Manual, Volumes 1 and 2 and Engineering Criteria Manual, as amended.

# Table of Contents

APPENDIX

# PURPOSE

This document is intended to serve as the Final Drainage Report of Homestead North at Sterling Ranch Filing No. 1. The purpose of this document is to identify on-site and off-site drainage patterns, storm sewer, culvert and inlet locations, areas tributary to the site, and to safely route developed storm water to adequate outfall facilities that satisfies the requirements set forth by the El Paso County Drainage Criteria Manual and any conditions set forth by the approved master drainage development plans. The proposed use is permissible use within the residential zoning criteria.

# GENERAL SITE DESCRIPTION

## GENERAL LOCATION

Homestead North at Sterling Ranch Filing 1, Vollmer Road and the undeveloped land to the north (hereby referred to as the "site") is a proposed development with a total area of approximately 224.3 acres.

A portion of the SW 1/4 of the SW 1/4 of section 27, the SE 1/4 of section 28, section 33 and the W 1/2 of section 34, all in Township 12 South, Range 65 west of the 6th Principal Meridian County Of El Paso, State Of Colorado. The site is located immediately east of Vollmer Road. The site is bounded by Briargate Parkway to the south, unplatted vacant future residential parcels to the north, and Sand Creek borders the site to the east. The parcels are planned to be platted after approval of the Preliminary Plan. Refer to the vicinity map in Appendix A for additional information.

## DESCRIPTION OF PROPERTY

The site is currently being designed to accommodate approximately 73 single-family residential lots. The site is comprised of variable sloping grasslands that generally slope(s) downward to the east at 3 to 7% towards the Sand Creek tributary basin.

Soil characteristics are comprised of Type B hydrologic Soil groups. Refer to the soil survey map in Appendix A for additional information.

Sand Creek is within the eastern portion of the site. Currently, JR Engineering, LLC. is performing studies and plans to address Sand Creek stabilization per Sand Creek Channel Design Report JR Engineering, October 2021-Draft; corresponds to PCD project No CD-20-004.

There are no known irrigation facilities located on the project site.

### FLOODPLAIN STATEMENT

Based on the FEMA Firm Maps Number 08041C0533G and 08041C0535G revised December 7, 2018, the vast majority of the development is located within Zone X, or areas area outside the Special Flood Hazard Area (SFHA) and higher than the elevation of the 0.2-percent-annual-chance (or 500-year) flood. The eastern property boundary will be platted to the center of Sand Creek, placing a portion of the site within Zone AE. The area of disturbance for site grading is located outside of the delineated floodway within Zone X. The FEMA map containing the site has been presented in Appendix A. It is anticipated that the plat for Homestead North Filing No. 1, will be recorded prior to a LOMR for the channel improvements. The floodplain elevations will not adversely impact the site after the LOMR is submitted and are anticipated to meet a no rise condition.

# EXISTING DRAINAGE CONDITIONS

## MAJOR BASIN DESCRIPTIONS

The site lies within the Sand Creek Drainage Basin based on the “Sand Creek Drainage Basin Planning Study” (DBPS) completed by Kiowa Engineering Corporation in January 1993, revised March 1996. The Sand Creek Drainage Basin covers approximately 54 square miles and is divided into major sub-basins. The site is within the respective sub-basin is shown in Appendix E.

The Sand Creek DBPS assumed the Homestead North at Sterling Ranch property to have a "large lot residential" use for the majority of the site. However, the proposed Sterling Ranch master plan is a mix of; school, multi-family, single-family, and commercial land uses, resulting in higher runoff. The site generally drains from north to south consisting of rolling hills. Currently, the site is used as pasture land for cattle. Sand Creek is located in the east portion of the site running north to south. This reach of drainage conveyance is not currently improved. There are a few stock ponds within the creek channel used for cattle watering. Currently, JR engineering is performing studies and plans to address Sand Creek stabilization adjacent to the site.

## EXISTING SUB-BASIN DRAINAGE

The existing/ predeveloped site consists of 3 onsite basins (H1, H2, and H3) and offsite basins E1 – E6.2. This historic basins outfall to Sand Creek at 2 outfalls as shown in the Historic Drainage Map in Appendix E. A sub-division to the north of the site is being developed called “Retreat at Timberidge”. Runoff from this sub-division will be detained and will not impact storm-water runoff on the Sterling Ranch Homestead site.

**Basin E-1** (Q5 = 1.1 cfs, Q100 = 5.2 cfs) is 4.5 acres of undeveloped land adjacent to the northwest portion of Vollmer Road. Runoff from this basin drains to a 24” CMP pipe and outfalls on the eastern side of Vollmer Road, flows through basin H1, and outfalls into Sand Creek.

**Basin E-2** (Q5 = 28.1 cfs, Q100 = 192.9 cfs) is 180.3 acres of undeveloped land adjacent to the northwest portion of Vollmer Road. Runoff from this basin drains to a 24"CMP pipe and outfalls on the eastern side of Vollmer Road, flowing through basin H3 to DP 3h, and outfalls into Sand Creek.

**Basin E-3** (Q5 = 2.2 cfs, Q100 = 13.7 cfs) is 12.39 acres of undeveloped land adjacent to the western portion of Vollmer Road. Runoff from this basin drains offsite into a roadside swale adjacent to Vollmer Road, flowing through basin H3 to DP3h.

**Basin E-4 (**Q5 = 9.9 cfs, Q100 = 72.7 cfs) is 70.9 acres of undeveloped land to the south of Retreat at Timber Ridge and on the eastern side of sand creek. Runoff from this basin drains to design point 4o.

**Basin E-5** (Q5 = 3.4 cfs, Q100 = 24.9 cfs) is 18.8 acres of undeveloped land adjacent to the eastern portion of Sand Creek. Runoff from this basin sheet flow to the south and ultimately drains to Sand Creek in confluence with flow from basin E-4 at dp 5o to Sand Creek.

**Basin E-6.1** (Q5 = 17.7 cfs, Q100 = 130.0 cfs) is 124.9 acres of undeveloped land that drains to the south directly into sand creek at design point 6.1o.

**Basin E-6.2** (Q5 = 7.5, Q100 = 55.4 cfs) is 49.61 acres of undeveloped land that drains to a low point directly adjacent to basin E-6.1 at design point 6.2o. Runoff from this basin then drains to Sand Creek south of design point 6.1o in confluence with runoff from E-6.1.

**Basin H1** (Q5 = 8.9 cfs, Q100 = 61.1 cfs) is 45.2 acres of undeveloped land covered in native prairie grass at DP 1h.

**Basin H2** (Q5 = 3.5 cfs, Q100 = 26.0 cfs) is 16.1 acres of undeveloped land covered in native prairie grass. This basin drains directly into Sand Creek. The basin is to the south east of Vollmer road. This basin drains directly into Sand Creek at DP 2h.

**Basin H3** (Q5 = 5.9 cfs, Q100 = 40.8 cfs) is 28.4 acres of undeveloped land covered in native prairie grass. This basin drains directly into Sand Creek at DP 3h. The basin is to the south east of Vollmer Road and North of Briargate Parkway.

# PROPOSED DRAINAGE CONDITIONS

**Basin C1** 2.82 acres and 69% percent impervious, is comprised of single-family lots, and the northwestern side of the local residential roads Texas Jack Drive and Harvey Logan Drive. Runoff ($Q_5$=5.4 cfs, $Q_{100}$=11.4 cfs) from basin C1 drains to design point 1C at Wheatland Drive.

**Basin C2.1** 0.20 acres and 91% percent impervious, is comprised of single-family lots, and the southeastern side of the residential road Texas Jack Drive. Runoff ($Q_5$=0.8 cfs, $Q_{100}$=1.6 cfs) from basin C2.1 drains to design point 2.1C a 5' on grade type R inlet.

**Basin C2.2** 4.69 acres and 73% percent impervious, is comprised of local roads, single-family lots, and the northwestern side of the residential road Wheatland Drive. Runoff ($Q_5$=9.9 cfs, $Q_{100}$=20.3 cfs) from basin C2.2 drains to design point 2.2C in confluence with bypass runoff from basin C2.3. The runoff ultimately drains to design point 4C a 15' type R and 5' type R sump inlets. The total runoff from basins C1, C2.1, C2.2, C2.3 and C4.1 is collected within the sump inlet.

**Basin C2.3** 0.83 acres and 67% percent impervious, is comprised of local roads Wheatland Drive and Harvey Logan Drive, single-family lots, and the northwestern side of the residential road Wheatland Drive. Runoff ($Q_5$=1.9 cfs, $Q_{100}$=3.9 cfs) from basin C2.3 drains to design point 2.3C in confluence with runoff from basin C1 at an on grade 15' Type R inlet.

**Basin C3.1** 0.35 acres and 73% percent impervious, is comprised of single-family lots, and the southeastern side of the residential road Wheatland Drive. Runoff ($Q_5$=1.2 cfs, $Q_{100}$=2.4 cfs) from basin C3.1 drains to design point 3.1C.

**Basin C3.2** 1.66 acres and 62.9% percent impervious, is comprised of local roads, single-family lots, and the southeastern side of the residential road Wheatland Drive and Tom Ketchum Drive. Runoff ($Q_5$=3.5 cfs, $Q_{100}$=7.2 cfs) from basin C3.2 drains to design point 3.2C.

**Basin C4.1** 6.34 acres and 65% percent impervious, is comprised of single-family lots, and the local residential road Texas Jack Drive and Nat Love Drive. Runoff ($Q_5$=12.1 cfs, $Q_{100}$=25.9 cfs) from basin C4.1 drains to design point 4C a 15' type R and 5' type R sump inlets. The total runoff from basins C1, C2.1, C2.2, C2.3 and C4.1 is collected within the sump inlet.

**Basin C4.2** 3.59acres and 57% percent impervious, is comprised of a local road Texas Jack Drive, a right in right out with access to Vollmer Road and single-family lots. Runoff ($Q_5$=5.9 cfs, $Q_{100}$=13.1 cfs) from basin C4.2 drains to design point 4.2C a 15' type R on grade inlet.

**Basin C5** 0.16 acres and 81% percent impervious, is comprised of the southeastern side of a residential road Wheatland Drive. Runoff ($Q_5$=0.6 cfs, $Q_{100}$=1.0 cfs) from basin C5 drains to design

point 5C, a 15' type R sump inlet. Basin C5 collects runoff from basin C3.2 and C5. The runoff from basin C ultimately outfalls into pond C. In the event the inlet clogs at Basin C5 the runoff will overflow to pond C. A berm has been graded to ensure that the overflow path will go into pond C.

**Basin C6** 2.59 acres and 20% percent impervious, is comprised of pond C and some single-family residential area. Runoff ($Q_5$=2.5 cfs, $Q_{100}$=8.8 cfs) generated in Basin B11 sheet flows into Pond C where it is treated for water-quality and is detained up until the 100 year-event. The MHFD Detention sheet for pond C is shown in Appendix C of this report.

**Pond C** has a tributary area of 224.4 acres and is 10.3 % impervious. Pond C has been graded in to fit the design volume, as shown in Appendix C of this report. This pond will be built in filing 1 of Homestead North at Sterling Ranch. The Pond C overflow emergency spillway will overflow into Sand Creek. The WQCV, 5 year and 100 year volumes, releases rates and stages for pond C are shown in Table 2.3 below. These results correspond to the Routed Hydrograph results, as shown in Appendix C of this report.

| | **TABLE 2.3 Pond C** | | |
|---|---|---|---|
| | Stage –ft | Volume (Acres) | Release Rate (cfs) |
| **WQCV** | 3.32 | 1.288 | 0.7 |
| **5 Year** | 6.22 | 4.310 | 20.6 |
| **100 Year** | 9.94 | 9.263 | 173.9 |

The following basins are tributary to the adjacent portion of Vollmer Road being designed by JR Engineering. Runoff will be detained within pond C and the runoff will then be released into Sand Creek adjacent to the crossing of Briargate road and Sand Creek.

**Basin D1** has a tributary area of 1.77 acres and is 40.1% impervious. Basin D1 consists of the northwest portion of Vollmer road (Rural Cross Section). Runoff from basin D1 ($Q_5$=2.4 cfs, $Q_{100}$=6.0 cfs) drains to an adjacent roadside swale and drains into a type C inlet at design point 1D runoff is then piped at design point 1.1D in confluence with upstream runoff from the inlet collect at design point 1o. From here on the runoff is piped with upstream runoff from basin OS1 into the Vollmer storm sewer system.

**Basin D2** has a tributary area of 1.44 acres and is 56.4% impervious. Basin D2 consists of the northeast portion of Vollmer road (Rural Cross Section). Runoff from basin D2 ($Q_5$=2.8 cfs, $Q_{100}$=6.6 cfs) drains to an adjacent roadside swale and drains into a type C inlet at design point 2D. From here

on the runoff is piped with upstream runoff from basin OS1and basin D1 into the Vollmer storm sewer system.

**Basin D3** has a tributary area of 0.18 acres and is 68% impervious. Basin D3 ($Q_5$=0.6 cfs, $Q_{100}$=1.2 cfs) consists of the northeast portion of Vollmer road Vollmer road with curb and gutter. Runoff on from this basin drains to an on grade 5' type R inlet at DP 3D.

**Basin D4** has a tributary area of 0.19 acres and is 57% impervious. Basin D4 ($Q_5$=0.5 cfs, $Q_{100}$=1.1 cfs) consists of the northwest portion of Vollmer road Vollmer road with curb and gutter. Runoff on from this basin drains to an on grade 5' type R inlet at D P4D. 0.3 cfs is by-passed down to DP 6D. Runoff is piped from basin(s) D3 and D4 to the Vollmer storm within the street's R.O.W.

**Basin D5** has a tributary area of 0.91 Acres and is 77% impervious. Basin D5 ($Q_5$=3.1 cfs, $Q_{100}$=6.1 cfs) consists of the northeast portion of Vollmer road with curb and gutter. Runoff from this basin drains to an on grade type R 10' inlet at the intersection of Vollmer and a right in right out at DP 5D, 0.7 cfs is by-passed downstream to design point 7D in the 100 year event.

**Basin D6** has a tributary area of 0.83 Acres and is 69% impervious. Basin D6 ($Q_5$=2.5 cfs, $Q_{100}$=5.2 cfs) consists of the northwestern portion of Vollmer road and the runoff drains into a 10' on grade type R inlet at DP 6D. 0.4 cfs is by-passed to the downstream design point D8 in the 100 yr event.

**Basin D7** has a tributary area of 0.75 Acres and is 79 % impervious. Basin D7 ($Q_5$=2.8 cfs, $Q_{100}$=5.3 cfs) consists of the northeast portion of Vollmer road. Runoff from this basin drains to an on grade type R 10' inlet at the intersection of Vollmer and Briargate at DP 7D. All of the runoff received by this inlet is captured within the 100 year event.

**Basin D8** has a tributary area of 0.72 Acres and is 69% impervious. Basin D8 ($Q_5$=2.4 cfs, $Q_{100}$=4.6 cfs) consists of the northwestern portion of Vollmer road and the runoff drains into a 15' on grade type R inlet at DP 8D. 0.7 cfs is by-passed downstream and will drain into a roadside swale in continuity will the current condition.

**Basin OS1** has a tributary area of 2.85 Acres and is 2.0% impervious. The runoff from basin OS1 ($Q_5$=0.8 cfs, $Q_{100}$=6.0 cfs) drains into a depression adjacent to on the northwest portion of Vollmer road. The runoff from basin OS1 is captured in a type C inlet at DP 1o, from there on runoff is piped within Vollmer road and outfalls into sand Creek.

**Basin OS2** has a tributary area of 179.61 Acres and is 2.0 % impervious. The runoff from the basin ($Q_5$=27.1 cfs, $Q_{100}$=190.9cfs) drains into a local depression at DP 2o near the northwest portion of Vollmer road. The runoff from the basin is piped within Vollmer Road and outfalls into pond C where it is detained, treated for water quality and then the runoff is discharged directly into Sand Creek.

**Basin OS3** has a tributary area of 11.98 Acres is 2.0 % impervious. The runoff from this basin ($Q_5$=2.2 cfs, $Q_{100}$=12.6 cfs) sheet flows towards Vollmer road and is captured within an existing ditch along the west side of Vollmer Road and corresponds to design point 3o. The existing roadside ditch will channel flow south along Vollmer Road to existing Type D inlets south of Briargate Parkway designed with the Homestead at Sterling Ranch Filing No.1 Final Drainage Report, see the associated drainage map in Appendix D. In the future, this side of Vollmer is expected to have a paved walk and a portion of runoff will drain directly onto Vollmer Road to the inlet at design point 8D and be piped to Pond C. As a conservative measure, runoff from this basin was also accounted for in the design of the proposed 15' type r inlet at design point 8D, associated storm pipe as well as Pond C in the event future basin development conveys runoff towards Homestead North Filing 1 and Pond C. In the interim condition, flow will continue to accumulate in the roadside ditch and flow south until the west side of Vollmer Rd is developed.

# DRAINAGE DESIGN CRITERIA

## DEVELOPMENT CRITERIA REFERENCE

Storm drainage analysis and design criteria for this project were taken from the "*City of Colorado Springs/El Paso County Drainage Criteria Manual*" Volumes 1 and 2 (EPCDCM), dated October 12, 1994, the "*Urban Storm Drainage Criteria Manual*" Volumes 1 to 3 (USDCM) and Chapter 6 and Section 3.2.1 of Chapter 13 of the "*Colorado Springs Drainage Criteria Manual*" (CSDCM), dated May 2014, as adopted by El Paso County.

## HYDROLOGIC CRITERIA

All hydrologic data was obtained from the "*El Paso Drainage Criteria Manual*" Volumes 1 and 2, and the "*Urban Drainage and Flood Control District Urban Storm Drainage Criteria Manual*" Volumes 1, 2, and 3. Onsite drainage improvements were designed based on the 5 year (minor) storm event and the 100-year (major) storm event. Runoff was calculated using the Rational Method, and rainfall intensities for the 5-year and the 100-year storm return frequencies were obtained from Table 6-2 of the CSDCM. One hour point rainfall data for the storm events is identified in the chart below. Runoff coefficients were determined based on proposed land use and from data in Table 6-6 from the CSDCM. Time of concentrations were developed using equations from CSDCM. All runoff calculations and applicable charts and graphs are included in the Appendices.

**Table 3 - 1-hr Point Rainfall Data**

| Storm | Rainfall (in.) |
|---|---|
| 5-year | 1.50 |

| | |
|---|---|
| 100-year | 2.52 |

## HYDRAULIC CRITERIA

The Rational Method and USDCM's SF-2 and SF-3 forms were used to determine the runoff from the minor and major storms on the site, and the UDFCD MHFD-Detention v4.03 spreadsheet was utilized for evaluating proposed detention and water quality pond. Sump and on-grade inlets were sized using UDFCD UD-Inlet v2.07. Manning's equation was used to size the proposed pipes in this report and StormCAD will be used to model the proposed storm sewer system and to analyze the proposed HGL calculations for Construction Drawings. Manhole and pipe losses for the model were obtained from the *Modeling Hydraulic and Energy Gradients in Storm Sewers: A Comparison of Computation Methods*, by AMEC Earth & Environmental, Inc. The manhole loss coefficients used in the model can be seen in Table 2 and apply for storm pipe 42" or smaller. StormCAD results along with street and inlet capacities are presented in Appendix C. The standard head loss stormCAD head loss coefficients were entered in for storm greater than 42" as shown in table 3 below.

**Table 2** - StormCAD Standard Method Conversions

| StormCAD Conversion Table | | | |
|---|---|---|---|
| Bend Loss | Bend Angle | K coefficient Conversion | |
| | 0 | 0.05 | |
| | 22.5 | 0.1 | |
| | 45 | 0.4 | |
| | 60 | 0.64 | |
| | 90 | 1.32 | |
| Lateral Loss | 1 Lateral K coefficient Conversion | | |
| | Bend Angle | Non Surcharged | Surcharged |
| | 45 | 0.27 | 0.47 |
| | 60 | 0.52 | 0.9 |
| | 90 | 1.02 | 1.77 |
| | 2 Laterals K coefficient Conversion | | |
| | 45 | 0.96 | |
| | 60 | 1.16 | |
| | 90 | 1.52 | |

**Table 3**

| Type of Manhole | Diagram | Headloss Coefficient |
|---|---|---|
| Trunkline only with no bend at the junction |  | 0.5 |
| Trunkline only with 45° bend at the junction |  | 0.6 |
| Trunkline only with 90° bend at the junction |  | 0.8 |
| Trunkline with one lateral |  | Small 0.6 Large 0.7 |
| Two roughly equivalent entrance lines with angle < 90° between lines |  | 0.8 |
| Two roughly equivalent entrance lines with angle > 90° between lines |  | 0.9 |
| Three or more entrance lines |  | 1.0 |

# DRAINAGE FACILITY DESIGN

## GENERAL CONCEPT

The proposed stormwater conveyance system was designed to convey the developed Sterling Ranch Homestead North Filing No. 1 runoff to the proposed full spectrum water quality and detention pond C via storm sewer. Pond C will also be utilized to detain and treat large portions of offsite area tributary to Vollmer road. Runoff from the majority of offsite area will sheet flow into an interim overflow structure at DP 2o at an interim mh with a grate overflow and into a 48 inch RCP pipe. These flows will continue to design point 8D where the rest of the offsite flow is being collected after running through design point 3o. From there, it all flows to pond C through a 60 inch RCP pipe. Runoff from Vollmer is captured within type D inlets and swales at DP 1D and DP 2D for the northern portion of improvements, as shown in the Drainage Map in Appendix E. For the southern portion of Vollmer, ending at Briargate, runoff will be captured in a series of on-grade type r inlets. Runoff in the filing one subdivision will be captured in on-grade type r inlets and flow through 18 inch RCP pipes. Directly north of the pond C the runoff will be captured within two sump inlets at DP 4C and DP 5C; an overflow path has been provided, if the sump inlets clog to pond C. Runoff from Filing One and the offsite runoff, Vollmer improvements are dissipated in two separate forebays. For additional information on design points, runoff, routing of flow, refer to the Drainage Map in Appendix E of this report and the proposed calculations in Appendix B of this report. The proposed pond was designed to release at less than the predeveloped rate to minimize adverse impacts downstream. Treated water will outfall directly into the Sand Creek Drainageway, where it will eventually outfall into Fountain Creek. The pond will be owned and maintained by Sterling Ranch Metro District. A proposed drainage map is presented in Appendix E showing locations of the pond and channel outfall locations.

## FOUR STEP PROCESS TO MINIMIZE ADVERSE IMPACTS OF URBANIZATION

In accordance with the El Paso County Drainage Criteria Manual Volume 2, this site has implemented the four step process to minimize adverse impacts of urbanization. The four step process includes reducing runoff volumes, treating the water quality capture volume (WQCV), stabilizing drainage ways, and implementing long-term source controls.

Step 1 – Reducing Runoff Volumes: The Homestead North at Sterling Ranch development project consists single -family homes with open spaces and lawn areas interspersed within the development which, helps disconnect impervious areas and reduce runoff volumes. Roof drains from the structures will discharge to lawn areas, where feasible, to allow for infiltration and runoff volume reduction.

Step 2 – Stabilize Drainageways: The site lies within the Sand Creek Drainage Basin. Basin and bridge fees will be due at time of platting. These funds will be used for the channel stabilization being designed by JR Engineering adjacent to the site and on future projects within the basin to stabilize drainageways. The Soils and Geology study on the site showed a potentially unstable region directly adjacent to the western bank of Sand Creek on the northeast corner of the site. At the time of final design, specifications from a Geotechnical Engineer will be implemented to ensure that the developed site is safe. Homestead North lots will discharge into Full Spectrum Detention Ponds, and outflows will be less than or equal to historic flows. Existing flows from the northwest of Vollmer road and runoff from the Vollmer Road improvements will be piped under Vollmer Road and then along the north side of Briargate Parkway and will be detained and treated for water quality directly on-site. The subdivision improvement agreement (SIA) for Sterling Ranch Filing 1 states that "bank stabilization of the Sand Creek channel shall be required prior to any replats of other final plats adjacent to the channel. The design and installation of said improvements shall be accomplished and guaranteed through the normal subdivision review and collateralization process." Additionally, "Other drainage improvements in Tract D and future tracts containing the Sand Creek Channel, such as drop structures, check structures and similar stabilization or protection improvements, will be designed and constructed by the District with the final construction drawings to be approved by the County no later than the final platting of the 700$^{th}$ single family lot within the boundaries of the approved Sterling Ranch Sketch Plan and the completion of all said improvements no later than the 800$^{th}$ single family lot with the boundaries of the approved Sterling Ranch Sketch Plan."

Step 3 – Treat the WQCV: Water Quality treatment for this site is provided full spectrum water quality detention ponds: Pond C. The runoff from this site will be collected within inlets and conveyed to the proposed ponds via storm sewer. Upon entrance to the ponds, flows will be captured in a forebay designed to promote settlement of suspended solids. A trickle channel is also incorporated into the ponds to minimize the amount of standing water. The outlet structure has been designed to detain the water quality capture volume (WQCV) for 40 hours, and the extended urban runoff volume (EURV) for 72 hours. All flows released from the ponds will be reduced to less than

historic rates.

Step 4 – Consider Need for Industrial and Commercial BMPs: There are no commercial or industrial components to this development; therefore no BMPs of this nature are required. BMPs will be utilized to minimize off-site contaminants and to protect the downstream receiving waters. The site is a residential subdivision (ie: not a high-risk site per Figure I-1 in ECM Appendix I), therefore specialized BMPs do not need to be considered. Site specific temporary source control BMPs that will be implemented include, but are not limited to, silt fencing placed around downstream areas of disturbance, construction vehicle tracking pads at the entrances, designated concrete truck washout basin, designated vehicle fueling areas, covered storage areas, spill containment and control, etc. The permanent erosion control BMPs include asphalt drives and parking, storm inlets and storm pipe, three full spectrum water quality and detention ponds, and permanent vegetation.

## WATER QUALITY

The site is split into Basins C, D and the offsite basin(s) tributary to Vollmer Road. The tributary areas for the site is serviced by an extended full spectrum water quality / detention pond (i.e) Pond C. The pond has been designed per Section 13.3.2.1 of Resolution 15-042 of the El Paso County Drainage Criteria Manual. For additional information on pond storage and outlet characteristics see the MHFD sheets within Appendix C. Water quality for Sterling Ranch Road and Briargate Parkway is being provided for in the proposed interim detention ponds FSD14A and FSD16 shown in the Sterling Ranch Road and Briargate Parkway GEC plans and the associated drainage letter; PCD CDR221.

## EROSION CONTROL PLAN

The El Paso County Drainage Criteria Manual specifies an Erosion Control Plan and associated cost estimate must be submitted with each Final Drainage Report. The Erosion Control Plan for Sterling Ranch Homestead North Filing No. 1 has been submitted with this report.

## OPERATION & MAINTENANCE

In order to ensure the function and effectiveness of the stormwater infrastructure, maintenance activities such as inspection, routine maintenance, restorative maintenance, rehabilitation and repair, are required. The property owner shall be responsible for the inspection, maintenance, rehabilitation and repair of stormwater and erosion control facilities located on the property unless another party accepts such responsibility in writing and responsibility is properly assigned through legal documentation. Access is provided from onsite facilities and easements for proposed infrastructure located offsite. We respectfully request that the Operation & Maintenance Manual be submitted in conjunction with the construction documents. Maintenance is provided for pond C at two locations with 12-foot access roads. The maintenance is provided off Wheatland Drive for two the two forebays and outlet structure. The maintenance drive for the Sand Creek improvements is provided

off Wheatland drive, and a turnaround is provided directly adjacent to the Sand Creek and Briargate Bridge crossing.

## DRAINAGE AND BRIDGE FEES

The site lies within the Sand Creek Drainage Basin. The drainage and bridge fee is presented within the table below; refer to the Drainage and Bridge Fees for Homestead North Filing 1 calculation sheet presented in Appendix B for additional information.

| 2022 DRAINAGE AND BRIDGE FEES – HOMESTEAD NORTH FILING 1 | | | | |
|---|---|---|---|---|
| **Impervious Acres (ac)** | **Drainage Fee (Per Imp. Acre)** | **Bridge Fee (Per Imp. Acre)** | **HN F1 Drainage Fee** | **HN F1 Bridge Fee** |
| 24.81 | $21,814 | $8,923 | $541,225 | $221,388 |

## CONSTRUCTION COST OPINION

JR Engineering, LLC cannot and does not guarantee the construction cost will not vary from these opinions of probable cost. These opinions represent our best judgement as design professionals familiar with the construction industry and this development in particular. The cost estimate for the storm sewer infrastructure has also been provided in the Financial Assurance Estimate.

Swapping of DBPS improvements for proposed improvements is being proposed for this project. A map demonstrating the DBPS improvements costs are being swapped is found in Appendix D.

Homestead North Filing No. 1 (Public Non-Reimbursable)

| Item | Description | Quantity | Unit | Unit Price | Cost |
|---|---|---|---|---|---|
| 1 | 18" RCP | 835 | L.F. | $ 67 | $ 55,945.00 |

| Earlier Plats Deferred Drainage Fees (Branding Iron F1 & Homestead F1) | $219,540.55 |
| SR F2 (SF-2015) Drainage Fees Deferred per LDC section 8.5.5.C.3.b(ii) | $400,855.70 |
| SR F3 (SF-2132) Drainage Fees Deferred per LDC section 8.5.5.C.3.b(ii) | $214,430.47 |
| HN F1 (SF-2213) Drainage Fees Deferred per LDC section 8.5.5.C.3.b(ii) | $541,225.00 |
| Subtotal Deferred Drainage Fees | $1,376,051.72 |
| | |
| Unused Reimb. Costs associated with DBPS Segments 159-164, 169-186 | $1,153,641.28 |

Sterling Ranch Deferred Bridge Fees Analysis
Reimbursable Costs associated with DBPS Bridge at Briargate Parkway and Sterling Ranch Rd.

| | |
|---|---|
| Financial Assurance Estimate Briargate Parkway Bridge from CDR 2113 | $1,546,676.98 |
| Financial Assurance Estimate Sterling Ranch Road Bridge from CDR 226 | $990,016.80 |
| Subtotal Reimb. Costs associated with BGP and SR Rd. Bridges | $2,536,693.78 |
| | |
| SR F3 (SF-2132) Bridge Fees Deferred per LDC section 8.5.5.C.3.b(ii) | $87,709.60 |
| HN F1 (SF-2213) Bridge Fees Deferred per LDC section 8.5.5.C.3.b(ii) | $221,388.00 |
| Subtotal Deferred Bridge Fees | $309,097.60 |
| | |
| Unused Reimb. Costs associated with Briargate Parkway and SR Road Bridges | $2,227,596.18 |

# SUMMARY

The proposed Homestead North at Sterling Ranch Filing No. 1 drainage improvements were designed to meet or exceed the El Paso County Drainage Criteria. The proposed development's pond was designed to release less than 90% of the predeveloped runoff study associated with the subject site. The proposed development will not adversely affect the offsite drainageways or surrounding development. This report is in conformance and meets the latest El Paso County Storm Drainage Criteria requirements.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 17, Sep 13, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 8, 2018—May 26, 2019

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

# Hydrologic Soil Group

| Map unit symbol | Map unit name | Rating | Acres in AOI | Percent of AOI |
|---|---|---|---|---|
| 71 | Pring coarse sandy loam, 3 to 8 percent slopes | B | 90.2 | 100.0% |
| **Totals for Area of Interest** | | | **90.2** | **100.0%** |

## Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

## Rating Options

*Aggregation Method:* Dominant Condition

*Component Percent Cutoff: None Specified*

*Tie-break Rule:* Higher

# NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

**Coastal Base Flood Elevations** shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at http://www.ngs.noaa.gov/.

**Base Map** information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, and Anderson Consulting Engineers, Inc. These data are current as of 2008.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

**Corporate limits** shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

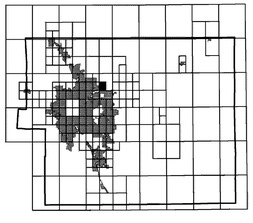
Contact **FEMA Map Service Center** (MSC) via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at http://www.msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

**El Paso County Vertical Datum Offset Table**

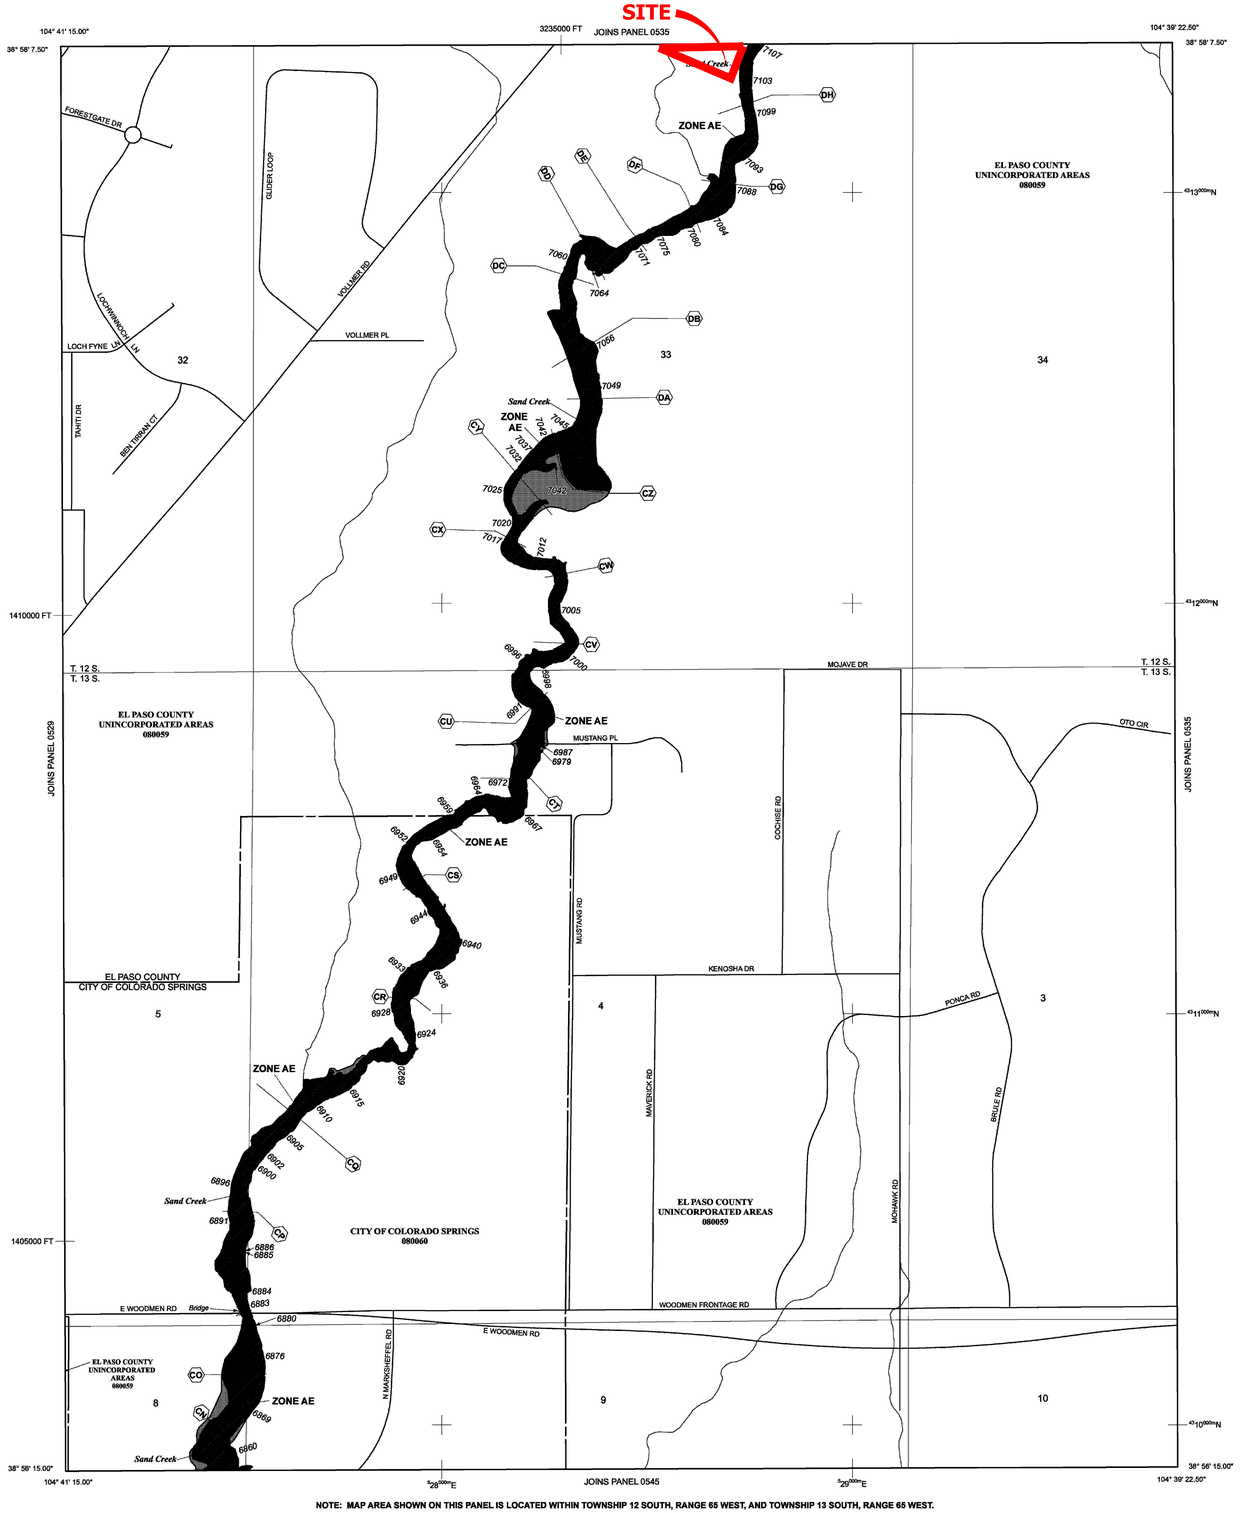
| Flooding Source | Vertical Datum Offset (ft) |
|---|---|
| REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION | |

**Panel Location Map**



This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.



**NOTE: MAP AREA SHOWN ON THIS PANEL IS LOCATED WITHIN TOWNSHIP 12 SOUTH, RANGE 65 WEST, AND TOWNSHIP 13 SOUTH, RANGE 65 WEST.**

# LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

**ZONE A** No Base Flood Elevations determined.
**ZONE AE** Base Flood Elevations determined.
**ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
**ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
**ZONE AR** Special Flood Hazard Area Formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
**ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
**ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
**ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

**ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

**ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
**ZONE D** Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

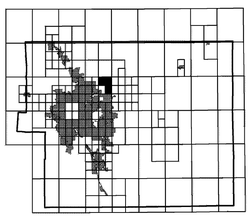
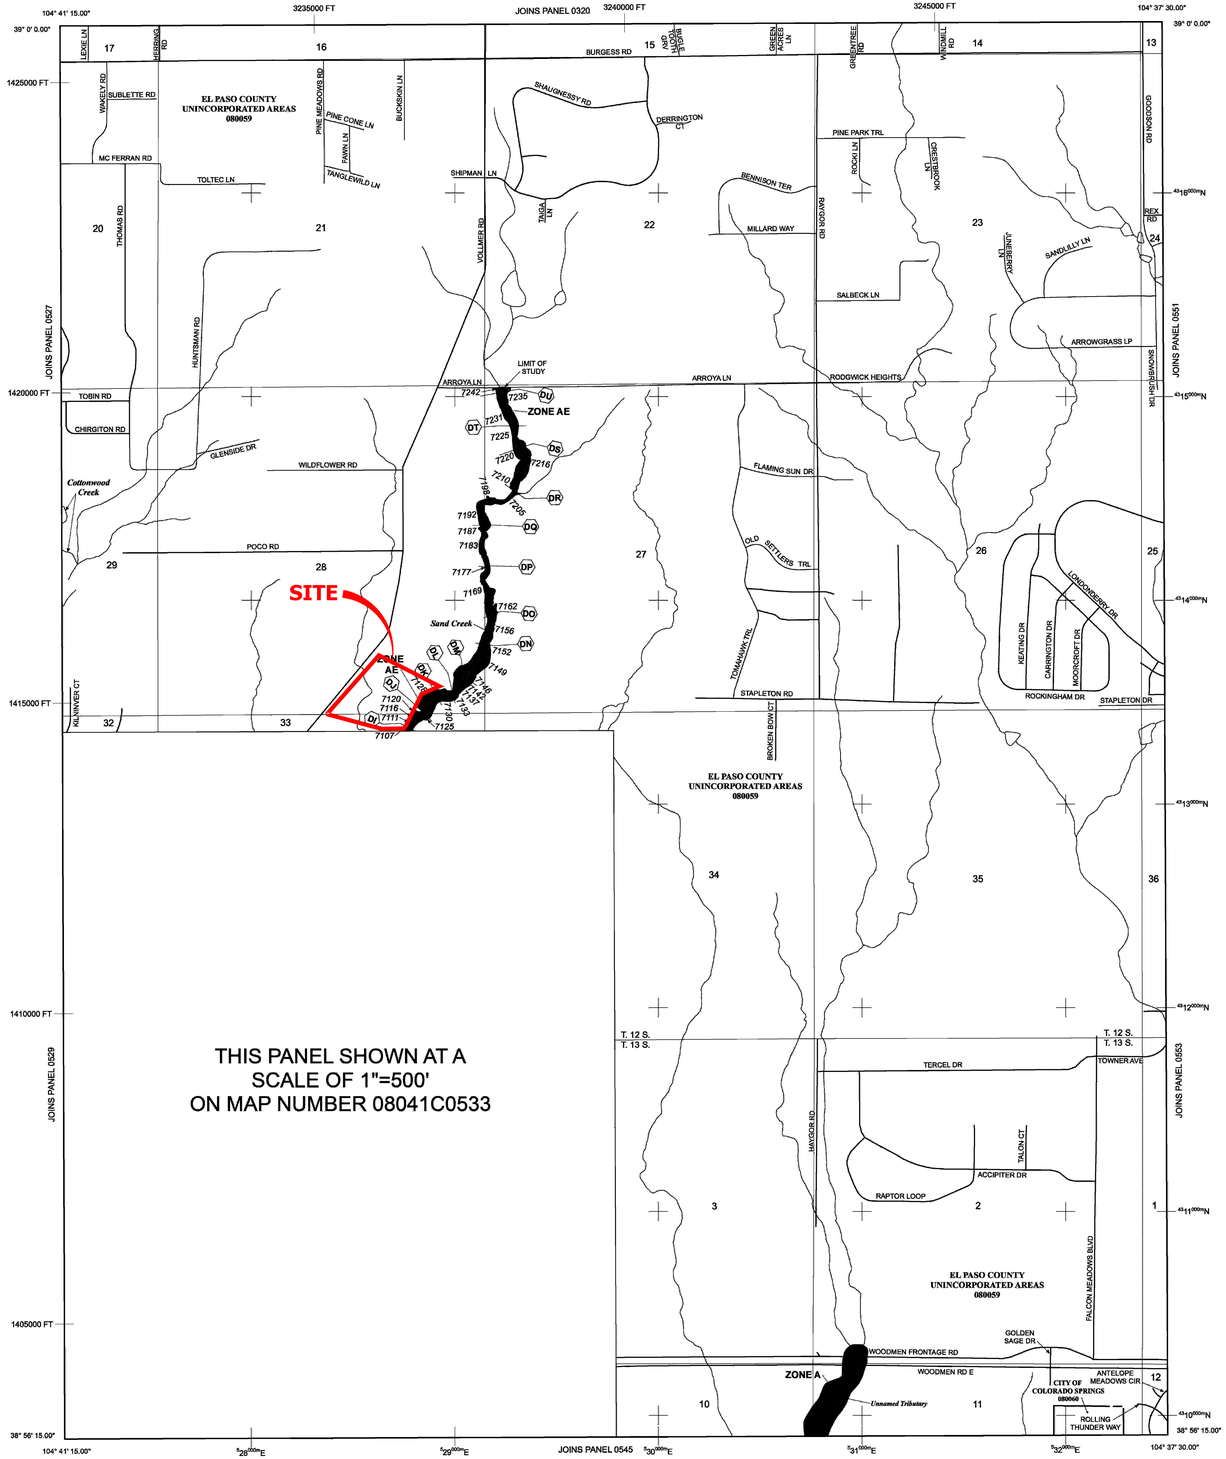
REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION

**Panel Location Map**



This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.



NOTE: MAP AREA SHOWN ON THIS PANEL IS LOCATED WITHIN TOWNSHIP 12 SOUTH, RANGE 65 WEST, AND TOWNSHIP 13 SOUTH, RANGE 65 WEST.

# LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

| | |
|---|---|
| ZONE A | No Base Flood Elevations determined. |
| ZONE AE | Base Flood Elevations determined. |
| ZONE AH | Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined. |
| ZONE AO | Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined. |
| ZONE AR | Special Flood Hazard Area Formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood. |
| ZONE A99 | Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined. |
| ZONE V | Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined. |
| ZONE VE | Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined. |

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

| | |
|---|---|
| ZONE X | Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. |

OTHER AREAS

| | |
|---|---|
| ZONE X | Areas determined to be outside the 0.2% annual chance floodplain. |
| ZONE D | Areas in which flood hazards are undetermined, but possible. |

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- Floodplain boundary
- Floodway boundary
- Zone D Boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 (EL 987) — Base Flood Elevation line and value; elevation in feet* / Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the North American Vertical Datum of 1988 (NAVD 88)

- A — A: Cross section line
- 23 — 23: Transect line
- 97° 07' 30.00" / 32° 22' 30.00": Geographic coordinates referenced to the North American Datum of 1983 (NAD 83)
- 4275000mN: 1000-meter Universal Transverse Mercator grid ticks, zone 13
- 6000000 FT: 5000-foot grid ticks: Colorado State Plane coordinate system, central zone (FIPSZONE 0502), Lambert Conformal Conic Projection
- DX5510 X: Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5: River Mile

EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP
**MARCH 17, 1997**

EFFECTIVE DATE(S) OF REVISION(S) TO THIS PANEL
**DECEMBER 7, 2018** - to update corporate limits, to change Base Flood Elevations and Special Flood Hazard Areas, to update map format, to add roads and road names, and to incorporate previously issued Letters of Map Revision.

For community map revision history prior to countywide mapping, refer to the Community Map History Table located in the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

| | | | | | | | | | | | | | | | | | |

NOTES:

$$t_c = t_i + t_t$$ Equation 6-2

Where:

$t_c$ = computed time of concentration (minutes)

$t_i$ = overland (initial) flow time (minutes)

$t_t$ = channelized flow time (minutes).

$$t_i = \frac{0.395(1.1 - C_5)\sqrt{L_i}}{S_o^{0.33}}$$ Equation 6-3

Where:

$t_i$ = overland (initial) flow time (minutes)
$C_5$ = runoff coefficient for 5-year frequency (from Table 6-4)
$L_i$ = length of overland flow (ft)
$S_o$ = average slope along the overland flow path (ft/ft).

**Table 6-2. NRCS Conveyance factors, K**

| Type of Land Surface | Conveyance Factor, K |
|---|---|
| Heavy meadow | 2.5 |
| Tillage/field | 5 |
| Short pasture and lawns | 7 |
| Nearly bare ground | 10 |
| Grassed waterway | 15 |
| Paved areas and shallow paved swales | 20 |

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t}$$ Equation 6-4

Where:

$t_t$ = channelized flow time (travel time, min)
$L_t$ = waterway length (ft)
$S_o$ = waterway slope (ft/ft)
$V_t$ = travel time velocity (ft/sec) = $K\sqrt{S_o}$
$K$ = NRCS conveyance factor (see Table 6-2).

$$t_c = (26 - 17i) + \frac{L_t}{60(14i + 9)\sqrt{S_t}}$$ Equation 6-5

Where:

$t_c$ = minimum time of concentration for first design point when less than $t_c$ from Equation 6-1.
$L_t$ = length of channelized flow path (ft)
$i$ = imperviousness (expressed as a decimal)
$S_t$ = slope of the channelized flow path (ft/ft).

| | | | | | | | | | | | | | | | | | |

NOTES:

$$t_c = t_i + t_t$$

Where:

$t_c$ = computed time of concentration (minutes)

$t_i$ = overland (initial) flow time (minutes)

Equation 6-2 $$t_i = \frac{0.395(1.1 - C_5)\sqrt{L_i}}{S_o^{0.33}}$$

Where:

$t_i$ = overland (initial) flow time (minutes)

$C_5$ = runoff coefficient for 5-year frequency (from Table 6-4)

$L_i$ = length of overland flow (ft)

Equation 6-3

**Table 6-2. NRCS Conveyance factors, K**

| Type of Land Surface | Conveyance Factor, K |
|---|---|
| Heavy meadow | 2.5 |
| Tillage/field | 5 |
| Short pasture and lawns | 7 |
| Nearly bare ground | 10 |

# STANDARD FORM SF-2
# TIME OF CONCENTRATION

Subdivision: Homestead North Fil. 1

Calculated By: ARJ
Checked By:
Date: 6/15/22

| SUB-BASIN DATA | | | | | | INITIAL/OVERLAND ($T_i$) | | | TRAVEL TIME ($T_t$) | | | | | *tc* CHECK (URBANIZED BASINS) | | | FINAL |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| BASIN ID | D.A. (ac) | Hydrologic Soils Group | Impervious (%) | $C_5$ | $C_{100}$ | $L$ (ft) | $S_o$ (%) | $t_i$ (min) | $L_t$ (ft) | $S_t$ (%) | $K$ | VEL. (ft/s) | $t_t$ (min) | COMP. $t_c$ (min) | TOTAL LENGTH (ft) | Urbanized $t_c$ (min) | $t_c$ (min) |

$t_t$ = channelized flow time (minutes).

$S_o$ = average slope along the overland flow path (ft/ft).

| | |
|---|---|
| Grassed waterway | 15 |
| Paved areas and shallow paved swales | 20 |

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t}$$ Equation 6-4

Where:

$t_t$ = channelized flow time (travel time, min)
$L_t$ = waterway length (ft)
$S_o$ = waterway slope (ft/ft)
$V_t$ = travel time velocity (ft/sec) = $K\sqrt{S_o}$
$K$ = NRCS conveyance factor (see Table 6-2).

$$t_c = (26 - 17i) + \frac{L_t}{60(14i + 9)\sqrt{S_t}}$$ Equation 6-5

Where:

$t_c$ = minimum time of concentration for first design point when less than $t_c$ from Equation 6-1.
$L_t$ = length of channelized flow path (ft)
$i$ = imperviousness (expressed as a decimal)
$S_t$ = slope of the channelized flow path (ft/ft).

Use a minimum $t_c$ value of 5 minutes for urbanized areas and a minimum $t_c$ value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

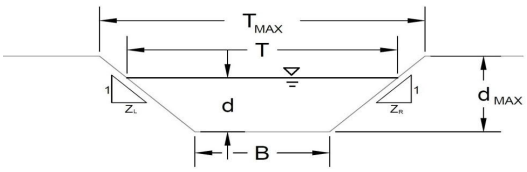
**Inlet 2D**



This worksheet uses the NRCS vegetal retardance method to determine Manning's n.

For more information see Section 7.2.3 of the USDCM.

**Analysis of Trapezoidal Grass-Lined Channel Using SCS Method**

| | | | |
|---|---|---|---|
| NRCS Vegetal Retardance (A, B, C, D, or E) | A, B, C, D or E | B | |
| Manning's n (Leave cell D16 blank to manually enter an n value) | n = | see details below | |
| Channel Invert Slope | $S_O$ = | 0.0310 | ft/ft |
| Bottom Width | B = | 0.10 | ft |
| Left Side Slope | Z1 = | 5.00 | ft/ft |
| Right Side Slope | Z2 = | 5.00 | ft/ft |

Check one of the following soil types:

| Soil Type: | Max. Velocity ($V_{MAX}$) | Max Froude No. ($F_{MAX}$) |
|---|---|---|
| Non-Cohesive | 5.0 fps | 0.60 |
| Cohesive | 7.0 fps | 0.80 |
| Paved | N/A | N/A |

Choose One:
- ○ Non-Cohesive
- ◉ Cohesive
- ○ Paved

| | | Minor Storm | Major Storm | |
|---|---|---|---|---|
| Max. Allowable Top Width of Channel for Minor & Major Storm | $T_{MAX}$ = | 12.00 | 16.00 | feet |
| Max. Allowable Water Depth in Channel for Minor & Major Storm | $d_{MAX}$ = | 1.30 | 1.30 | feet |

**Allowable Channel Capacity Based On Channel Geometry**

| | | Minor Storm | Major Storm | |
|---|---|---|---|---|
| **MINOR STORM Allowable Capacity is based on Top Width Criterion** | $Q_{allow}$ = | 4.5 | 6.8 | cfs |
| **MAJOR STORM Allowable Capacity is based on Depth Criterion** | $d_{allow}$ = | 1.19 | 1.30 | ft |

**Water Depth in Channel Based On Design Peak Flow**

| | | | | |
|---|---|---|---|---|
| **Design Peak Flow** | $Q_o$ = | 2.8 | 6.6 | cfs |
| **Water Depth** | d = | 1.02 | 1.30 | feet |

**Minor storm max. allowable capacity GOOD - greater than the design flow given on sheet 'Inlet Management'**

**Major storm max. allowable capacity GOOD - greater than the design flow given on sheet 'Inlet Management'**

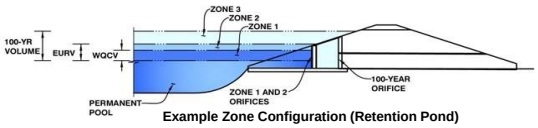
# DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.04 (February 2021)*

**Project:** Pond C with offsite flow

**Basin ID:**



**Example Zone Configuration (Retention Pond)**

## Watershed Information

| | | |
|---|---|---|
| Selected BMP Type = | EDB | |
| Watershed Area = | 224.4 | acres |
| Watershed Length = | 5,645 | ft |
| Watershed Length to Centroid = | 3,387 | ft |
| Watershed Slope = | 0.034 | ft/ft |
| Watershed Imperviousness = | 10.30% | percent |
| Percentage Hydrologic Soil Group A = | 0.0% | percent |
| Percentage Hydrologic Soil Group B = | 100.0% | percent |
| Percentage Hydrologic Soil Groups C/D = | 0.0% | percent |
| Target WQCV Drain Time = | 40.0 | hours |
| Location for 1-hr Rainfall Depths = | User Input | |

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

| | | | Optional User Overrides | |
|---|---|---|---|---|
| Water Quality Capture Volume (WQCV) = | 1.285 | acre-feet | | acre-feet |
| Excess Urban Runoff Volume (EURV) = | 2.178 | acre-feet | | acre-feet |
| 2-yr Runoff Volume (P1 = 1.19 in.) = | 3.053 | acre-feet | 1.19 | inches |
| 5-yr Runoff Volume (P1 = 1.5 in.) = | 6.692 | acre-feet | 1.50 | inches |
| 10-yr Runoff Volume (P1 = 1.75 in.) = | 10.317 | acre-feet | 1.75 | inches |
| 25-yr Runoff Volume (P1 = 2 in.) = | 16.756 | acre-feet | 2.00 | inches |
| 50-yr Runoff Volume (P1 = 2.25 in.) = | 21.159 | acre-feet | 2.25 | inches |
| 100-yr Runoff Volume (P1 = 2.52 in.) = | 27.486 | acre-feet | 2.52 | inches |
| 500-yr Runoff Volume (P1 = 4 in.) = | 55.496 | acre-feet | 4.00 | inches |
| Approximate 2-yr Detention Volume = | 1.394 | acre-feet | | |
| Approximate 5-yr Detention Volume = | 2.182 | acre-feet | | |
| Approximate 10-yr Detention Volume = | 4.471 | acre-feet | | |
| Approximate 25-yr Detention Volume = | 6.214 | acre-feet | | |
| Approximate 50-yr Detention Volume = | 6.506 | acre-feet | | |
| Approximate 100-yr Detention Volume = | 8.395 | acre-feet | | |

## Define Zones and Basin Geometry

| | | |
|---|---|---|
| Zone 1 Volume (WQCV) = | 1.285 | acre-feet |
| Zone 2 Volume (EURV - Zone 1) = | 0.893 | acre-feet |
| Zone 3 Volume (100-year - Zones 1 & 2) = | 6.218 | acre-feet |
| Total Detention Basin Volume = | 8.395 | acre-feet |
| Initial Surcharge Volume (ISV) = | user | $ft^3$ |
| Initial Surcharge Depth (ISD) = | user | ft |
| Total Available Detention Depth ($H_{total}$) = | user | ft |
| Depth of Trickle Channel ($H_{TC}$) = | user | ft |
| Slope of Trickle Channel ($S_{TC}$) = | user | ft/ft |
| Slopes of Main Basin Sides ($S_{main}$) = | user | H:V |
| Basin Length-to-Width Ratio ($R_{L/W}$) = | user | |
| Initial Surcharge Area ($A_{ISV}$) = | user | $ft^2$ |
| Surcharge Volume Length ($L_{ISV}$) = | user | ft |
| Surcharge Volume Width ($W_{ISV}$) = | user | ft |
| Depth of Basin Floor ($H_{FLOOR}$) = | user | ft |
| Length of Basin Floor ($L_{FLOOR}$) = | user | ft |
| Width of Basin Floor ($W_{FLOOR}$) = | user | ft |
| Area of Basin Floor ($A_{FLOOR}$) = | user | $ft^2$ |
| Volume of Basin Floor ($V_{FLOOR}$) = | user | $ft^3$ |
| Depth of Main Basin ($H_{MAIN}$) = | user | ft |
| Length of Main Basin ($L_{MAIN}$) = | user | ft |
| Width of Main Basin ($W_{MAIN}$) = | user | ft |
| Area of Main Basin ($A_{MAIN}$) = | user | $ft^2$ |
| Volume of Main Basin ($V_{MAIN}$) = | user | $ft^3$ |
| Calculated Total Basin Volume ($V_{total}$) = | **user** | acre-feet |

Depth Increment = 1.00 ft

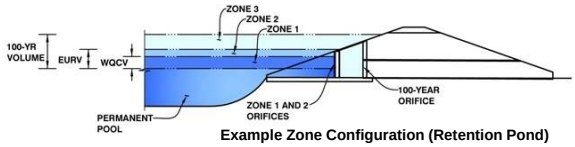
# DETENTION BASIN OUTLET STRUCTURE DESIGN

*MHFD-Detention, Version 4.04 (February 2021)*

**Project:** **Pond C with offsite flow**

**Basin ID:**



**Example Zone Configuration (Retention Pond)**

| | Estimated Stage (ft) | Estimated Volume (ac-ft) | Outlet Type |
|---|---|---|---|
| Zone 1 (WQCV) | 3.32 | 1.285 | Orifice Plate |
| Zone 2 (EURV) | 4.27 | 0.893 | Orifice Plate |
| Zone 3 (100-year) | 9.35 | 6.218 | Weir&Pipe (Restrict) |
| Total (all zones) | | 8.395 | |

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

| | | | | | |
|---|---|---|---|---|---|
| Underdrain Orifice Invert Depth = | N/A | ft (distance below the filtration media surface) | Underdrain Orifice Area = | N/A | $ft^2$ |
| Underdrain Orifice Diameter = | N/A | inches | Underdrain Orifice Centroid = | N/A | feet |

Calculated Parameters for Underdrain

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

| | | | | | |
|---|---|---|---|---|---|
| Invert of Lowest Orifice = | 0.00 | ft (relative to basin bottom at Stage = 0 ft) | WQ Orifice Area per Row = | 3.257E-02 | $ft^2$ |
| Depth at top of Zone using Orifice Plate = | 4.27 | ft (relative to basin bottom at Stage = 0 ft) | Elliptical Half-Width = | N/A | feet |
| Orifice Plate: Orifice Vertical Spacing = | N/A | inches | Elliptical Slot Centroid = | N/A | feet |
| Orifice Plate: Orifice Area per Row = | 4.69 | sq. inches (use rectangular openings) | Elliptical Slot Area = | N/A | $ft^2$ |

Calculated Parameters for Plate

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

| | Row 1 (required) | Row 2 (optional) | Row 3 (optional) | Row 4 (optional) | Row 5 (optional) | Row 6 (optional) | Row 7 (optional) | Row 8 (optional) |
|---|---|---|---|---|---|---|---|---|
| Stage of Orifice Centroid (ft) | 0.00 | 1.25 | 2.50 | | | | | |
| Orifice Area (sq. inches) | 4.69 | 4.69 | 4.69 | | | | | |

| | Row 9 (optional) | Row 10 (optional) | Row 11 (optional) | Row 12 (optional) | Row 13 (optional) | Row 14 (optional) | Row 15 (optional) | Row 16 (optional) |
|---|---|---|---|---|---|---|---|---|
| Stage of Orifice Centroid (ft) | | | | | | | | |
| Orifice Area (sq. inches) | | | | | | | | |

User Input: Vertical Orifice (Circular or Rectangular)

| | Not Selected | Not Selected | | | | |
|---|---|---|---|---|---|---|
| Invert of Vertical Orifice = | N/A | N/A | ft (relative to basin bottom at Stage = 0 ft) | Vertical Orifice Area = | N/A | N/A $ft^2$ |
| Depth at top of Zone using Vertical Orifice = | N/A | N/A | ft (relative to basin bottom at Stage = 0 ft) | Vertical Orifice Centroid = | N/A | N/A feet |
| Vertical Orifice Diameter = | N/A | N/A | inches | | | |

Calculated Parameters for Vertical Orifice

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

| | Zone 3 Weir | Not Selected | | | | |
|---|---|---|---|---|---|---|
| Overflow Weir Front Edge Height, Ho = | 4.36 | N/A | ft (relative to basin bottom at Stage = 0 ft) | Height of Grate Upper Edge, $H_t$ = | 7.47 | N/A feet |
| Overflow Weir Front Edge Length = | 7.00 | N/A | feet | Overflow Weir Slope Length = | 12.80 | N/A feet |
| Overflow Weir Grate Slope = | 4.00 | N/A | H:V | Grate Open Area / 100-yr Orifice Area = | 5.64 | N/A |
| Horiz. Length of Weir Sides = | 12.42 | N/A | feet | Overflow Grate Open Area w/o Debris = | 70.89 | N/A $ft^2$ |
| Overflow Grate Type = | Close Mesh Grate | N/A | | Overflow Grate Open Area w/ Debris = | 17.72 | N/A $ft^2$ |
| Debris Clogging % = | 75% | N/A | % | | | |

Calculated Parameters for Overflow Weir

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

| | Zone 3 Restrictor | Not Selected | | | | |
|---|---|---|---|---|---|---|
| Depth to Invert of Outlet Pipe = | 6.29 | 0.00 | ft (distance below basin bottom at Stage = 0 ft) | Outlet Orifice Area = | 12.57 | $ft^2$ |
| Outlet Pipe Diameter = | 48.00 | | inches | Outlet Orifice Centroid = | 2.00 | feet |
| Restrictor Plate Height Above Pipe Invert = | 48.00 | | inches | Half-Central Angle of Restrictor Plate on Pipe = | 3.14 | radians |

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

User Input: Emergency Spillway (Rectangular or Trapezoidal)

| | | | | | |
|---|---|---|---|---|---|
| Spillway Invert Stage= | 9.99 | ft (relative to basin bottom at Stage = 0 ft) | Spillway Design Flow Depth= | 0.74 | feet |
| Spillway Crest Length = | 123.00 | feet | Stage at Top of Freeboard = | 11.73 | feet |
| Spillway End Slopes = | 4.00 | H:V | Basin Area at Top of Freeboard = | 1.67 | acres |
| Freeboard above Max Water Surface = | 1.00 | feet | Basin Volume at Top of Freeboard = | 12.10 | acre-ft |

Calculated Parameters for Spillway

Routed Hydrograph Results

*The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).*

# DETENTION BASIN OUTLET STRUCTURE DESIGN

*MHFD-Detention, Version 4.04 (February 2021)*

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

| Stage - Storage Description | Stage [ft] | Area [ft$^2$] | Area [acres] | Volume [ft$^3$] | Volume [ac-ft] | Total Outflow [cfs] |
|---|---|---|---|---|---|---|
| | | | | | | |

For best results, include the stages of all grade slope changes (e.g. ISV and Floor) from the S-A-V table on Sheet 'Basin'.

Also include the inverts of all outlets (e.g. vertical orifice, overflow grate, and spillway, where applicable).

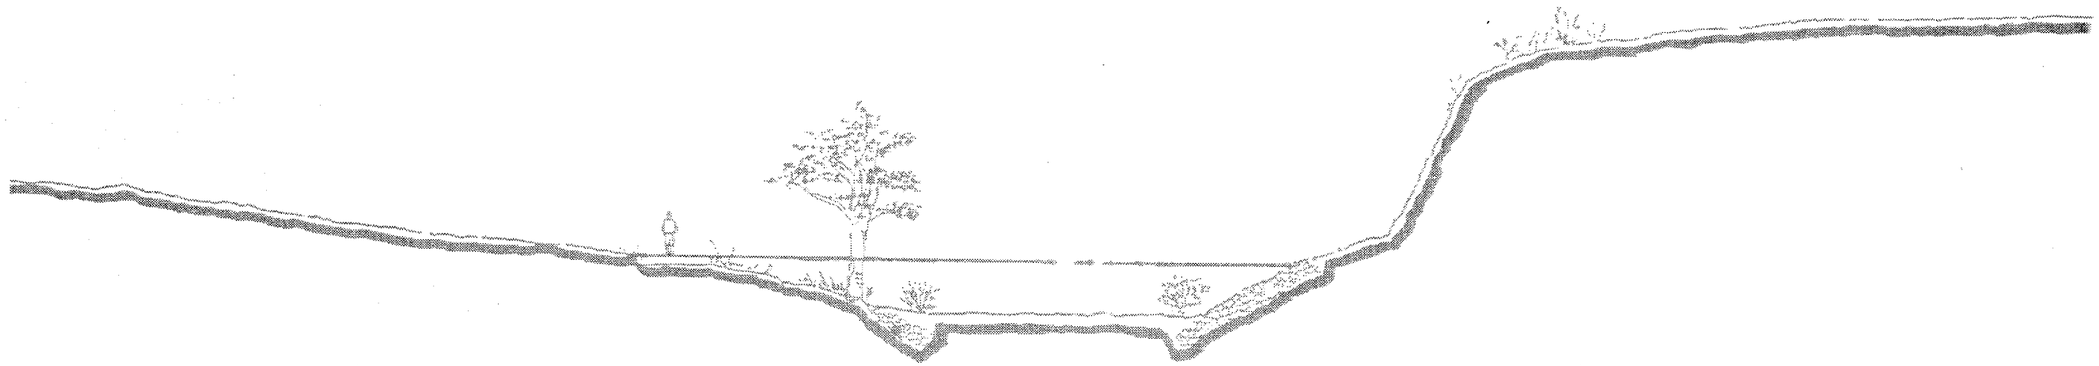
SAND CREEK DRAINAGE BASIN PLANNING STUDY

# PRELIMINARY DESIGN REPORT

CITY OF COLORADO SPRINGS, EL PASO COUNTY, COLORADO



**PREPARED FOR:**

City of Colorado Springs
Department of Comprehensive Planning, Development and Finance
Engineering Division
30 S. Nevada
Colorado Springs, Colorado 80903

**PREPARED BY:**

Kiowa Engineering Corporation
1011 North Weber
Colorado Springs, CO 80903

# II. STUDY AREA DESCRIPTION

The Sand Creek drainage basin is a left-bank tributary to the Fountain Creek lying in the west-central portions of El Paso County. Sand Creek's drainage area at Fountain Creek is approximately 54 square miles of which approximately 18.8 square miles are inside the City of Colorado Springs corporate limits. The basin is divided into five major sub-basins, the Sand Creek mainstem, the East Fork Sand Creek, the Central Tributary to East Fork, the West Fork, and the East Fork Subtributary. Figure II-1 shows the location of the Sand Creek basin.

Basin Description

The Sand Creek basin covers a total of 54 square miles in unincorporated El Paso County and Colorado Springs, Colorado. Of this total, approximately 28 square miles is encompassed by the Sand Creek basin, and 26 square miles for the East Fork Sand Creek basin. The basin trends in generally a south to southwesterly direction, entering the Fountain Creek approximately two miles upstream of the Academy Boulevard bridge over Fountain Creek. Two main tributaries drain the basin, those being the mainstem of Sand Creek and East Fork Sand Creek. Development presence in most evident along the mainstream. At this time, approximately 25 percent of the basin is developed. This alternative evaluation focuses upon the Sand Creek basin only.

The maximum basin elevation is approximately 7,620 feet above mean sea level, and falls to approximately 5,790 feet at the confluence with Fountain Creek. The headwaters of the basin originate in the conifer covered areas of The Black Forest. The middle eastern portions of the basin are typified by rolling range land with fair to good vegetative cover associated with semi-arid climates.

Climate

This area of El Paso County can be described, in general as high plains, with total precipitation amounts typical of a semi-arid region. Winters are generally cold and dry. Precipitation ranges from 14 to 16 inches per year, with the majority of this precipitation occurring in spring and summer in the form of rainfall. Thunderstorms are common during the summer months, and are typified by quick-moving low pressure cells which draw moisture from the Gulf of Mexico into the region. Average temperatures range from about 30$^{O}$F in the winter to 75$^{O}$ in the summer. The relative humidity ranges from about 25 percent in the summer to 45 percent in the winter.

Soils and Geology

Soils within the Sand Creek basin vary between soil types A through D, as identified by the U. S. Department of Agriculture, Soil Conservation Service. The predominant soil groupings are in the Truckton and Bresser soil associations. The soils consist of deep, well drained soils that formed in alluvium and residium, derived from sedimentary rock. The soils have high to moderate infiltration rates, and are extremely susceptible to wind and water erosion where poor vegetation cover exists. In undeveloped areas, the predominance of Type A and B soils give this basin a lower runoff per unit area as compared to basins with soils dominated by Types C and D. Presented on Figure II-2 is the Hydrologic Soil distribution map for the Sand Creek basin.

Property Ownership and Impervious Land Densities

Property ownership along the major drainageway within the Sand Creek basin vary from public to private. Along the developed reaches, drainage right-of-ways and greenbelts have been dedicated during the development of the adjacent residential and commercial land. Where development has not occurred, the drainageways remain under private ownership with no delineated drainage right-of-way or easements. There are several public parks which abut the mainstem of Sand Creek. Roadway and utility easements abutting or crossing the major drainageways occur most frequently in the developed portions of the basin.

Land use information for the existing and future conditions were reviewed as part of the planning effort. This information is used in the hydrologic analysis to predict runoff rates and volumes for the purposes of facility evaluation. The identification of land uses abutting the drainageways is also useful in the identification of feasible plans for stabilization and aesthetic treatment of the creek. Presented on Figure II-3 is the proposed land use map used in the evaluation of impervious land densities discussed in the hydrologic section of this report. Figure II-3 is not intended to reflect the future zoning or land use policies of the City or the County.

The land use information within the Banning-Lewis Ranch property was obtained from Aries Properties during the time the draft East Fork Sand Creek Drainage Basin Planning Study was being prepared. The land use information was again reviewed with the City of Colorado Springs Department of Planning and was found to be appropriate for use in the estimation of hydrology for the East Fork Basin. The location of future arterial streets and roadways within
