SMALL SUBDIVISION FINAL DRAINAGE REPORT FOR
CLOVERLEAF FILING NO. 1

ENGINEER'S STATEMENT:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Mike Bramlett, Colorado P.E. # 32314
For and On Behalf of JR Engineering, LLC

DEVELOPER'S STATEMENT:

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

Business Name: PT Cloverleaf, LLC.

APPENDIX

- Appendix A – Vicinity Map, Soil Descriptions, FEMA Floodplain Map
- Appendix B – Rational Hydrologic Calculations
- Appendix C – Water Quality Calculations
- Appendix D – Reference Material
- Appendix E – Drainage Maps

PURPOSE

This document is the Small Subdivision Final Drainage Report for Cloverleaf Filing No. 1, a replat of Woodmoor Greens, Tract F. The purpose of this report is to show that the proposed development is consistent with the original approved “*Woodmoor Greens Subdivision Drainage Plan and Report*” dated January 7, 1972, by Nelson, Haley, Patterson, and Quirk Inc. and to update the previously approved plans to be in conformance with the current El Paso County drainage standards and criteria. Refer to Appendix D for the original drainage plan as represented in the *Woodmoor Greens Drainage Plan and Report*, by Nelson, Haley, Patterson, and Quik, Inc., dated January 7, 1972.

PROPERTY DESCRIPTION

The proposed Cloverleaf Filing No. 1, known as “Cloverleaf” from herein, is three individual lots located in Section 23, Township 11 South, Range 67 West of the 6th Principal Meridian in El Paso County, Colorado. The small subdivision will replat a portion of Tract F of Woodmoor Greens vacation L496-500. The three lots are numbered Lots 142, 143, and 144, and will be suburban lots consistent with the RS-2000 zoning. Lot 142 is approximately 0.51 acres, Lots 143 and 144 are approximately 0.50 acres. Lot 142 borders Leggins Way to the southeast while Lots 143 and 144 border Bowstring Road to the west. A vicinity map of the area is presented in Appendix A.

Each lot is currently unoccupied and undeveloped. The existing ground cover is sparse vegetation and open space, typical of a Colorado rolling range land condition. In general, each lot slopes to the adjacent road (either Leggins Way or Bowstring Road).

Per an NRCS web soil survey of the area, Cloverleaf is made up of Type B soils. This Type B soil is a Tomah-Crowfoot loamy sand. This soil type has a moderate infiltration rate when thoroughly wet. It also consists of moderately deep or deep, moderately well drained or well-drained soil. A soil survey map has been presented in Appendix A.

There are no major drainageways or irrigation wells on the site. Each lot is located within Zone X, or areas area outside the Special Flood Hazard Area (SFHA) and higher than the elevation of the 0.2-percent-annual-chance (or 500-year) flood. A copy of FEMA map 08041C0278G containing the site has been presented in Appendix A.

EXISTING DRAINAGE CONDITIONS

Cloverleaf lies within the upper reaches of the Teachout Creek watershed basin. Although no DBPS currently exists for Teachout Creek, basin fees have been listed in the Interim Basin Section of the 2021 El Paso County Drainage Basin Fee list. Existing vegetation on the lots consists primarily of

SMALL SUBDIVISION FINAL DRAINAGE REPORT FOR CLOVERLEAF FILING NO. 1

native grasses. The terrain is sloped generally to the adjacent roadside ditch and ranges from 2% to 7%. Drainage from the site currently flows southwest through existing culverts to Lewis Palmer High School under Bowstring Road, into Teachout Creek, and eventually reaches Monument Creek.

Each of the three lots was analyzed in the existing condition as its own basin. The basin descriptions are below. Refer to Appendix E for the existing drainage map.

Basin EX-142 is approximately 0.51 acres and consists of prairie grasses. Flow from this basin ($Q_5=0.1$ cfs, $Q_{100}=1.1$ cfs) flows southwest to the adjacent properties and Leggins Way at design point (DP) EX142. The flow eventually reaches the existing 28" by 42" CMP culvert under Bowstring Road at Leggins Way and is routed under Bowstring Road to Lewis Palmer High School to the southwest.

Basin EX-143 is approximately 0.50 acres and consists of prairie grasses. Flow from this basin ($Q_5=0.1$ cfs, $Q_{100}=0.9$ cfs) flows west to the roadside ditch along the east side of Bowstring Road at DP-EX143. The roadside ditch routes the flow south to an existing 24" CMP culvert and is routed under Bowstring Road to Lewis Palmer High School to the south.

Basin EX-144 is approximately 0.50 acres and consists of prairie grasses. Flow from this basin ($Q_5=0.1$ cfs, $Q_{100}=0.9$ cfs) flows west to the roadside ditch along the east side of Bowstring Road at DP-EX144. The roadside ditch routes the flow south to an existing 24" CMP culvert and is routed under Bowstring Road to Lewis Palmer High School to the south.

PROPOSED DRAINAGE CONDITIONS

The proposed land use (single-family residential) is consistent with the anticipated land use in the approved Woodmoor Greens drainage report, dated January 7, 1972. Refer to Appendix D for the drainage report. Lot 142 was included in the Tract "F" open space shown in the Woodmoor Greens plat recorded on February 16, 1972. Refer to Appendix D for the plat. Lots 143 and 144 were initially portions of platted lots, as shown in the February 16, 1972 plat, and then were replatted to be included in the Tract "F" open space, as shown in the vacation and replat of lots 496 through 500, filed August 23, 1972. Refer to Appendix D for the vacation and replat.

The approved Woodmoor Greens drainage report assumed that each developed lot would have a 2,500 square foot house. However, the existing developed lots within Woodmoor Greens include between about 5,000 and 6,000 square feet of impervious area. For this report, the development of each proposed lot was assumed to add an impervious area equal to 25% of the total lot area, which is consistent with the existing developed lots. Per El Paso County drainage criteria, a sand filter on each of the three lots is proposed to provide water quality to offset the impervious area added as part of the development of the lots. Refer to Appendix C for the sizing calculations for the sand filters. When

SMALL SUBDIVISION FINAL DRAINAGE REPORT FOR CLOVERLEAF FILING NO. 1

the approved drainage report was approved, El Paso County did not require water quality for the development of Woodmoor Greens, so no sand filters or similar permanent BMPs were proposed.

Each lot was analyzed as its own basin in the proposed condition. The basin descriptions are below. Each lot will be graded so that the entire lot will drain to the proposed sand filter and no offsite flow will be tributary to the lot. A system of berms on the uphill sides of the lots will be graded by the home-builders or lot owners to intercept offsite flows and route them around the lot to their existing outfall locations. Swales will also be used to intercept runoff generated on-site and route it to the proposed Full-Spectrum Sand Filter Basins. Refer to Appendix E for the proposed drainage map including berm and swale section details. Basin and design point summary tables are provided after the basin descriptions. The approved Woodmoor Greens drainage report calculated runoff for the 25-year storm event. This report uses the 5-year and 100-year events to conform to current El Paso County drainage criteria.

Basin 142 is approximately 0.51 acres and will consist of prairie grasses and a single-family residential house and associated improvements (driveway and walks). Flow from this basin ($Q_5=0.4$ cfs, $Q_{100}=1.4$ cfs) will be routed via drainage ditches and overland flow to the sand filter at DP-142 located in the south corner of the lot. The sand filter will provide water quality and will discharge to the adjacent roadside ditch along the northwest side of Leggins Way. Once in the ditch, the flow will follow historic drainage patterns.

Basin 143 is approximately 0.50 acres and will consist of prairie grasses and a single-family residential house and associated improvements (driveway and walks). Flow from this basin ($Q_5=0.4$ cfs, $Q_{100}=1.3$ cfs) will be routed via drainage ditches and overland flow to the sand filter at DP-143 located in the southwest corner of the lot. The sand filter will provide water quality and will discharge to the adjacent roadside ditch along the east side of Bowstring Road. Once in the ditch, the flow will follow historic drainage patterns.

Basin 144 is approximately 0.50 acres and consists of prairie grasses and a single-family residential house and associated improvements (driveway and walks). Flow from this basin ($Q_5=0.4$ cfs, $Q_{100}=1.3$ cfs) will be routed via drainage ditches and overland flow to the sand filter at DP-143 located in the southwest corner of the lot. The sand filter will provide water quality and will discharge to the adjacent roadside ditch along the east side of Bowstring Road. Once in the ditch, the flow will follow historic drainage patterns.

BASIN SUMMARY TABLE							
Tributary	Area	Percent			t_c	Q_5	Q_{100}
Sub-basin	(acres)	Impervious	C_5	C_{100}	(min)	(cfs)	(cfs)
142	0.51	25%	0.22	0.46	13.7	0.4	1.4
143	0.50	25%	0.22	0.46	16.8	0.4	1.3
144	0.50	25%	0.22	0.46	16.8	0.4	1.3

DESIGN POINT SUMMARY TABLE		
DP	Q5	Q100
142	0.4	1.4
143	0.4	1.3
144	0.4	1.3

WATER QUALITY

The full-spectrum sand filters basins were designed per the Full-Spectrum methodology. Each sand filter was designed to provide the required Water Quality Capture Volume (WQCV), Excess Urban Runoff Volume (EURV), and the 100-yr detention volume above the basins filtration median bed per the basin characteristics and the MHFD-Detention workbook Version 4.04. Each sand filter was designed to have a WQCV drain time of 12 hours, controlled by the filtration media and a 4" slotted under-drain with a WQ orifice. However, per the County's request, the minimum underdrain orifice size of 3/8ths of an inch was used and found to allow a faster drain time.

Each full spectrum sand filter will include an 18" Nyoplast Drain basin with an 18" domed grate to control the release of storm water for all storms above the WQCV. A water quality plate consisting of (4) 1-3/8" inch holes and the domed grate control all design storm release rates above the WQCV. A 12" HDPE outlet pipe will transport flows from the Full-Spectrum Sand Filter basins to the adjacent existing roadside swales. These swales transport water to existing drainage infrastructure and to the major basin outfall and appear stable in their present day condition per a field inspection performed by the Engineer of Record. Each outlet structure was designed to release at rates as close to the pre-development rates as possible, but never above, for all design storms.

Should the full-spectrum sand filter basin's outlets become clogged, or a storm greater than the 100-yr design storm produce flows in-excess of the basins design volumes a 6 foot wide (crest length) type VL soil-riprap armored spillway is provided in each basin and directs water to the roadside ditch where each basin will outfall.

Each sand filter basin also includes type VL riprap armored rundowns at all proposed concentrated inflow locations. It should be noted that the flows rates and anticipated velocities are not considered to be erosive on turf/vegetated slopes but the riprap will provide an extra layer of protection.

Basin 142:

WQCV: = 0.005 ac-ft, EURV: = 0.008 ac-ft, 100-yr: = 0.017 ac-ft, total design volume = 0.03 ac-ft

SMALL SUBDIVISION FINAL DRAINAGE REPORT FOR CLOVERLEAF FILING NO. 1

Basins 143, 144

WQCV: = 0.004 ac-ft, EURV: = 0.008 ac-ft, 100-yr: = 0.017 ac-ft, total design volume = 0.03 ac-ft

Refer to Appendix C for the sizing calculations. Each sand filter is proposed to have the same dimensions, outlet design, and provide the same total detention volume. Refer to the detail shown on the proposed drainage map in Appendix E.

Each sand filter does not include an impermeable liner but includes an underdrain, so some infiltration is allowed (see the description for “Partial Infiltration Section” sand filter in *Urban Storm Drainage Criteria Manual Volume 3*, page SF-4 and SF-8). The sand filters will be owned and maintained by the property owners. Due to the size of the sand filter basins, and required maintenance activities, a traditional access road is not provided or recommended for the basins as any heavy machinery could damage the filtration media, underdrain, and outlet structures. All maintenance should be completed from the top of the basin or by hand to avoid impact to the functionality of the basins. Any machinery needed to complete maintenance activities can park adjacent to the basins and within range of the structures, filtration median, and cleanout within the existing R.O.W. or project site.

FOUR-STEP PROCESS

Step 1: Employ Runoff Reduction Practices

The site was design in such a way that all impervious areas are routed to grass buffers and/or grass swales, and ultimately to a Full Spectrum extended detention basin, all of which promote infiltration.

Step 2: Stabilize Drianageways

The site was designed to include riprap and vegetated stabilized drainage paths. Additionally, the drainage and bridge fees will be paid prior to construction on the project site which will fund drainage improvements within the major basin per the approved DBPS.

Step 3: Provide Water Quality Capture Volume (WQVC)

The site provides the required WQCV in the three proposed sand filter basins. See the above Water Quality section of this report for further details and the proposed drainage map included in appendix E.

Step 4: Consider the need for Industrial and Commercial BMP's

The project site has no commercial or industrial component. Construction BMP's will be implemented by the lot builders as needed and required by the BESQCP.

DRAINAGE AND BRIDGE FEES

The site lies within the Teachout Creek Drainage Basin. Anticipated drainage and bridge fees are presented below and will be paid at time of platting (depending on date of plat submittal):

2021 DRAINAGE AND BRIDGE FEES – CLOVERLEAF FILING NO. 1				
Impervious Acres (ac)	Drainage Fee (Per Imp. Acre)	Bridge Fee (Per Imp. Acre)	Cloverleaf Drainage Fee	Cloverleaf Bridge Fee
0.38	\$5,429	\$816	\$2,063	\$311

SUMMARY

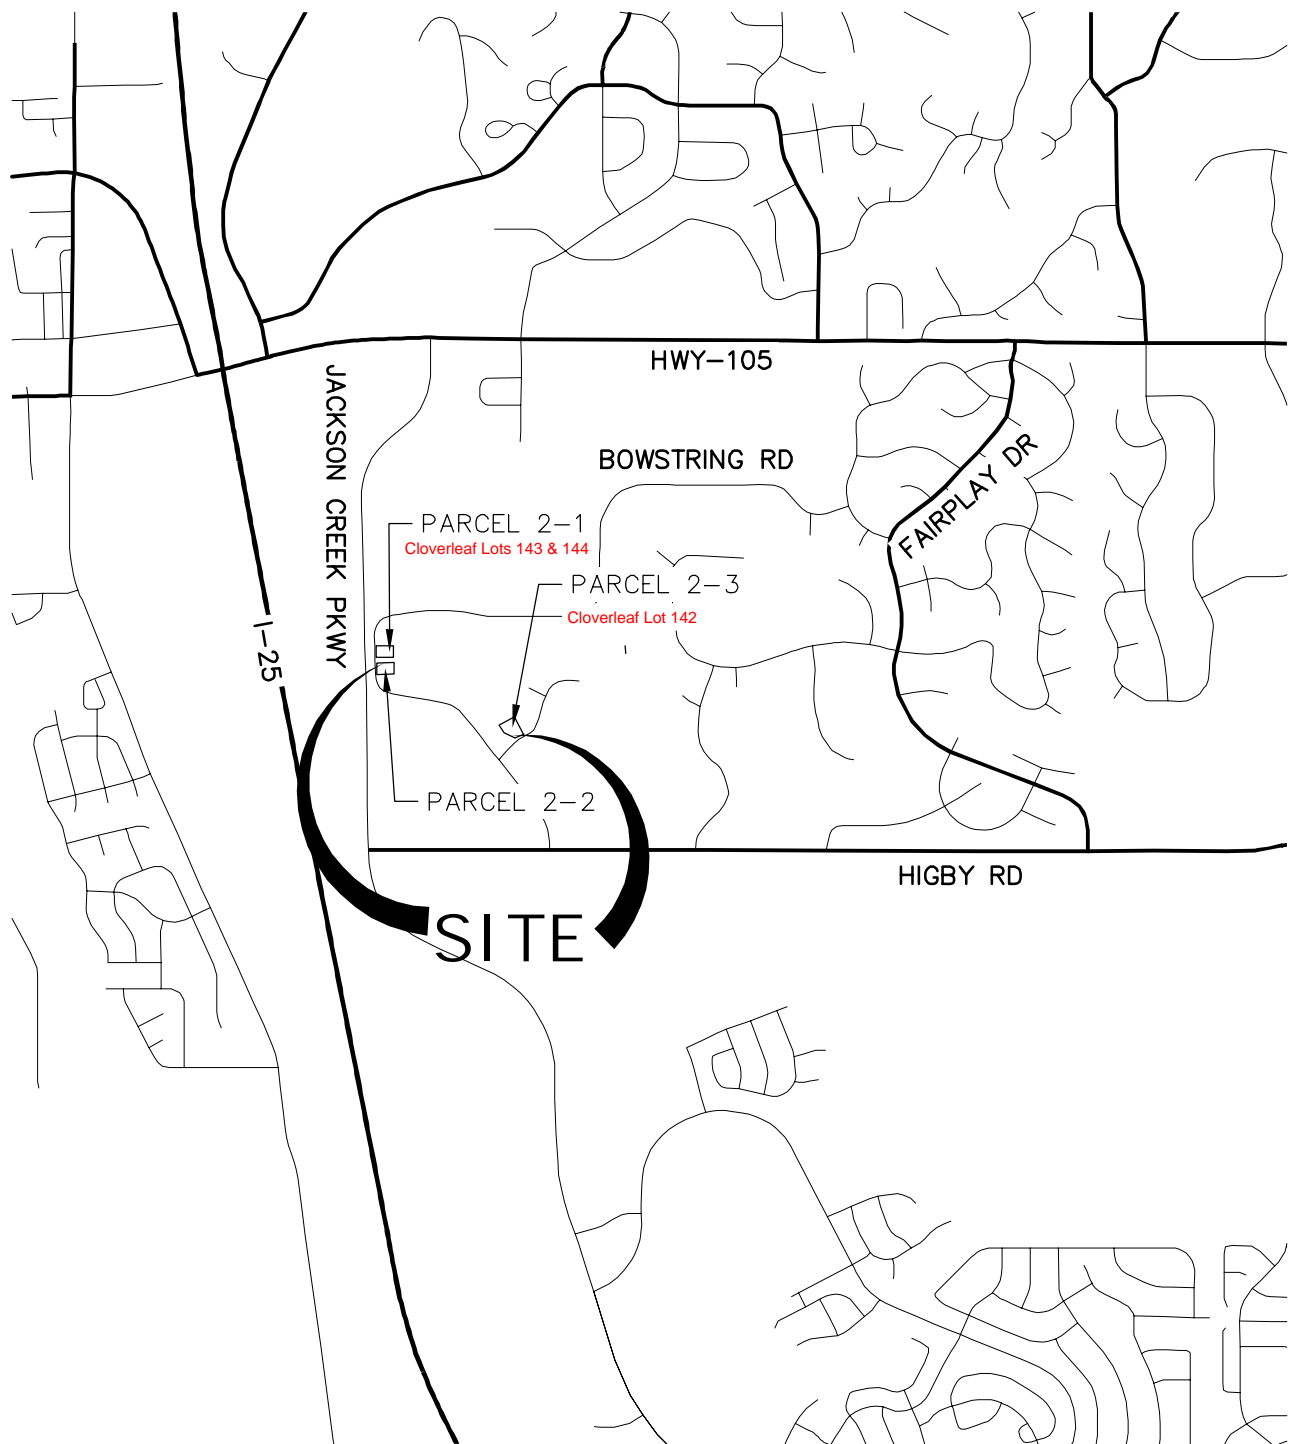

The proposed Cloverleaf Filing No. 1 development drainage improvements, including drainage ditches and three sand filters were designed to meet or exceed the El Paso County Drainage Criteria. The proposed development will not adversely affect the offsite drainageways or surrounding development. The proposed site conditions will release runoff at rates at or below pre-development rates. This report is in conformance and meets the latest El Paso County Storm Drainage Criteria requirements for this site.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
 Survey Area Data: Version 16, Sep 10, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 4, 2010—Oct 16, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

71	Pring coarse sandy loam, 3 to 8 percent slopes	B	0.8	0.2%
92	Tomah-Crowfoot loamy sands, 3 to 8 percent slopes	B	323.0	91.8%
93	Tomah-Crowfoot complex, 8 to 15 percent slopes	B	28.1	8.0%
Totals for Area of Interest			352.0	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

NOTES:

$$t_c = t_i + t_t$$

Where:

t_c = computed time of concentration (minutes)

t_i = overland (initial) flow time (minutes)

t_t = channelized flow time (minutes).

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t}$$

Where:

t_t = channelized flow time (travel time, min)

L_t = waterway length (ft)

S_o = waterway slope (ft/ft)

V_t = travel time velocity (ft/sec) = K√S_o

K = NRCS conveyance factor (see Table 6-2).

$$\text{Equation 6-2} \quad t_i = \frac{0.395(1.1 - C_5)\sqrt{L_i}}{S_o^{0.33}}$$

Where:

t_i = overland (initial) flow time (minutes)

C₅ = runoff coefficient for 5-year frequency (from Table 6-4)

L_i = length of overland flow (ft)

S_o = average slope along the overland flow path (ft/ft).

$$\text{Equation 6-4} \quad t_t = (26 - 17i) + \frac{L_t}{60(14i + 9)\sqrt{S_t}}$$

Where:

t_t = minimum time of concentration for first design point when less than t_c from Equation 6-1.

L_t = length of channelized flow path (ft)

i = imperviousness (expressed as a decimal)

S_t = slope of the channelized flow path (ft/ft).

Equation 6-3

Table 6-2. NRCS Conveyance factors, K

Type of Land Surface	Conveyance Factor, K
Heavy meadow	2.5
Tillage/field	5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

Equation 6-5

Use a minimum t_c value of 5 minutes for urbanized areas and a minimum t_c value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

NOTES:

$$t_c = t_i + t_t$$

Where:

t_c = computed time of concentration (minutes)

t_i = overland (initial) flow time (minutes)

t_t = channelized flow time (minutes).

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t}$$

Where:

t_t = channelized flow time (travel time, min)

L_t = waterway length (ft)

S_o = waterway slope (ft/ft)

V_t = travel time velocity (ft/sec) = K√S_o

K = NRCS conveyance factor (see Table 6-2).

Equation 6-2

$$t_i = \frac{0.395(1.1 - C_5)\sqrt{L_i}}{S_o^{0.33}}$$

Where:

t_i = overland (initial) flow time (minutes)

C₅ = runoff coefficient for 5-year frequency (from Table 6-4)

L_i = length of overland flow (ft)

S_o = average slope along the overland flow path (ft/ft).

Equation 6-4

$$t_t = (26 - 17i) + \frac{L_t}{60(14i + 9)\sqrt{S_o}}$$

Where:

t_t = minimum time of concentration for first design point when less than t_c from Equation 6-1.

L_t = length of channelized flow path (ft)

i = imperviousness (expressed as a decimal)

S_o = slope of the channelized flow path (ft/ft).

Equation 6-3

Table 6-2. NRCS Conveyance factors, K

Type of Land Surface	Conveyance Factor, K
Heavy meadow	2.5
Tillage/field	5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

Equation 6-5

Use a minimum t_c value of 5 minutes for urbanized areas and a minimum t_c value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

MHFD-Detention, Version 4.04 (February 2021)

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Project: Cloverleaf Filing No. 1

Basin ID: Lot 142 Sand Filter

Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	0.50	0.005	Filtration Media
Zone 2 (EURV)	1.12	0.008	Orifice Plate
Zone 3 (100-year)	1.98	0.017	Weir&Pipe (Restrict)
Total (all zones)		0.030	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = 2.10 ft (distance below the filtration media surface)
Underdrain Orifice Diameter = 0.38 inches

Calculated Parameters for Underdrain
Underdrain Orifice Area = 0.0 ft²
Underdrain Orifice Centroid = 0.02 feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = 0.50 ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = 1.12 ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = N/A inches
Orifice Plate: Orifice Area per Row = N/A inches

Calculated Parameters for Plate
WQ Orifice Area per Row = N/A ft²
Elliptical Half-Width = N/A feet
Elliptical Slot Centroid = N/A feet
Elliptical Slot Area = N/A ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.60	0.60	0.90	0.90	0.90			
Orifice Area (sq. inches)	2.07	2.07	2.07	2.07	2.07			

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = N/A ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = N/A ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = N/A inches

Calculated Parameters for Vertical Orifice
Vertical Orifice Area = N/A ft²
Vertical Orifice Centroid = N/A feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

Overflow Weir Front Edge Height, H_o = 1.75 ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = 2.17 feet
Overflow Weir Grate Slope = 0.00 H:V
Horiz. Length of Weir Sides = 2.17 feet
Overflow Grate Type = Type C Grate
Debris Clogging % = 50%

Calculated Parameters for Overflow Weir
Height of Grate Upper Edge, H_u = 1.75 feet
Overflow Weir Slope Length = 2.17 feet
Grate Open Area / 100-yr Orifice Area = 4.17
Overflow Grate Open Area w/o Debris = 3.28 ft²
Overflow Grate Open Area w/ Debris = 1.64 ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = 2.20 ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = 12.00 inches
Restrictor Plate Height Above Pipe Invert = 13.00 inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate
Outlet Orifice Area = 0.79 ft²
Outlet Orifice Centroid = 0.50 feet
Half-Central Angle of Restrictor Plate on Pipe = 3.14 radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = 1.88 ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = 6.00 feet
Spillway End Slopes = 4.00 H:V
Freeboard above Max Water Surface = 0.12 feet

Calculated Parameters for Spillway
Spillway Design Flow Depth = 0.12 feet
Stage at Top of Freeboard = 2.12 feet
Basin Area at Top of Freeboard = 0.02 acres
Basin Volume at Top of Freeboard = 0.03 acre-ft

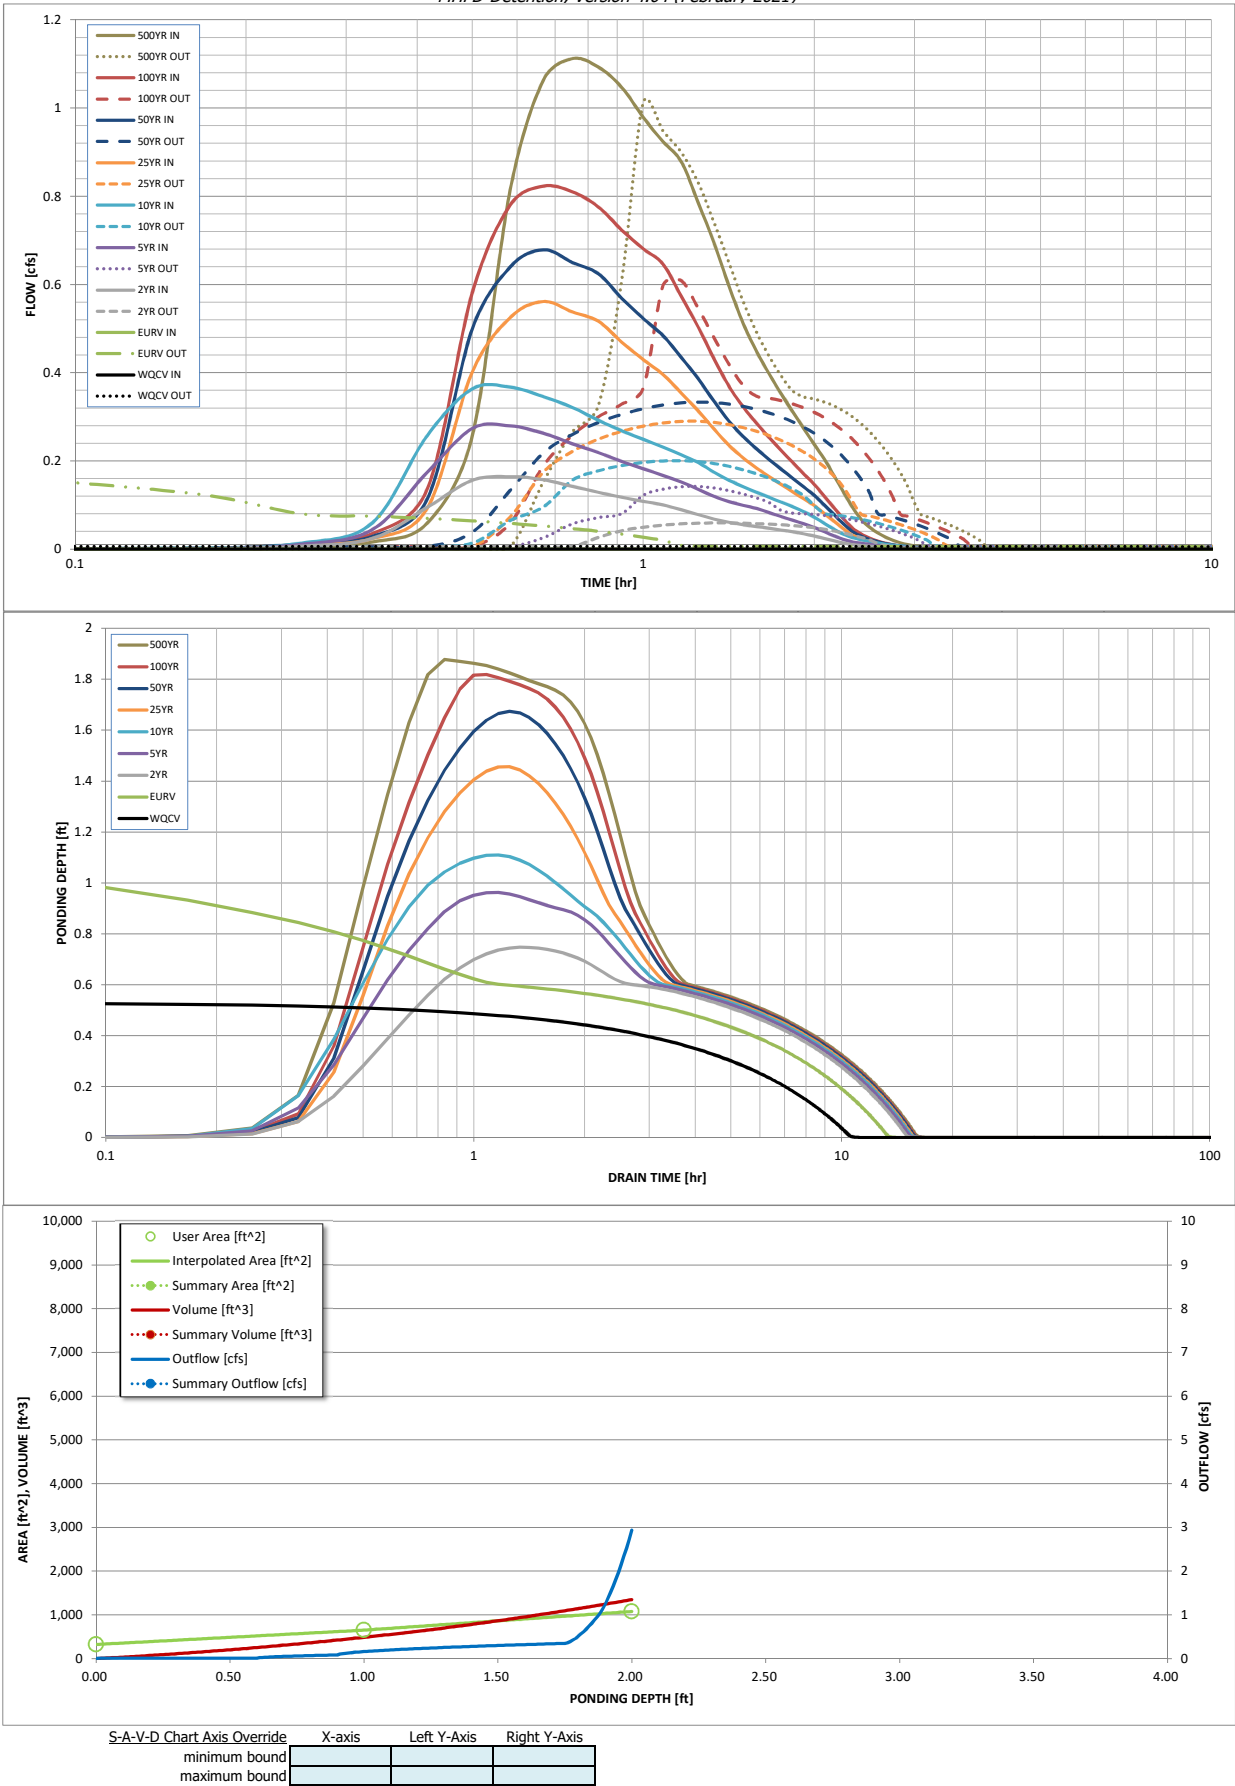

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

MHFD-Detention, Version 4.04 (February 2021)

Basin ID: Lot 143-144 Sand Filter

Example Zone Configuration (Retention Pond)

Selected BMP Type =	SF	
Watershed Area =	0.50	acres
Watershed Length =	260	ft
Watershed Length to Centroid =	100	ft
Watershed Slope =	0.017	ft/ft
Watershed Imperviousness =	25.00%	percent
Percentage Hydrologic Soil Group A =	0.0%	percent
Percentage Hydrologic Soil Group B =	100.0%	percent
Percentage Hydrologic Soil Groups C/D =	0.0%	percent
Target WQCV Drain Time =	12.0	hours
Location for 1-hr Rainfall Depths = User Input		

Optional User Overrides

Water Quality Capture Volume (WQCV) =	0.004	acre-feet
Excess Urban Runoff Volume (EURV) =	0.013	acre-feet
2-yr Runoff Volume ($P1 = 1.19$ in.) =	0.013	acre-feet
5-yr Runoff Volume ($P1 = 1.5$ in.) =	0.022	acre-feet
10-yr Runoff Volume ($P1 = 1.75$ in.) =	0.031	acre-feet
25-yr Runoff Volume ($P1 = 2$ in.) =	0.044	acre-feet
50-yr Runoff Volume ($P1 = 2.25$ in.) =	0.054	acre-feet
100-yr Runoff Volume ($P1 = 2.52$ in.) =	0.067	acre-feet
500-yr Runoff Volume ($P1 = 3.14$ in.) =	0.093	acre-feet
Approximate 2-yr Detention Volume =	0.009	acre-feet
Approximate 5-yr Detention Volume =	0.013	acre-feet
Approximate 10-yr Detention Volume =	0.020	acre-feet
Approximate 25-yr Detention Volume =	0.023	acre-feet
Approximate 50-yr Detention Volume =	0.025	acre-feet
Approximate 100-yr Detention Volume =	0.030	acre-feet

Zone 1 Volume (WQCV) =	0.004	acre-feet
Zone 2 Volume (EURV - Zone 1) =	0.008	acre-feet
Zone 3 Volume (100-year - Zones 1 & 2) =	0.017	acre-feet
Total Detention Basin Volume =	0.030	acre-feet
Initial Surge Volume (ISV) =	N/A	ft ³
Initial Surge Depth (ISD) =	N/A	ft
Total Available Detention Depth (H_{total}) =	user	ft
Depth of Trickle Channel (H_{TC}) =	N/A	ft
Slope of Trickle Channel (S_{TC}) =	N/A	ft/ft
Slopes of Main Basin Sides (S_{main}) =	user	H:V
Basin Length-to-Width Ratio ($R_{L/W}$) =	user	

Initial Surcharge Area (A_{SIV})	=	user	ft ²
Surcharge Volume Length (L_{SV})	=	user	ft
Surcharge Volume Width (W_{SV})	=	user	ft

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

MHFD-Detention, Version 4.04 (February 2021)

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-DETENTION, Version 4.04 (February 2021)

Project: Cloverleaf Filing No. 1

Basin ID: Lot 143-144 Sand Filter

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	0.49	0.004	Filtration Media
Zone 2 (EURV)	1.10	0.008	Orifice Plate
Zone 3 (100-year)	1.96	0.017	Weir&Pipe (Restrict)
Total (all zones)		0.030	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = 2.10 ft (distance below the filtration media surface)
Underdrain Orifice Diameter = 0.38 inches

Calculated Parameters for Underdrain
Underdrain Orifice Area = 0.0 ft²
Underdrain Orifice Centroid = 0.02 feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = 0.50 ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = 1.12 ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = N/A inches
Orifice Plate: Orifice Area per Row = N/A inches

Calculated Parameters for Plate
WQ Orifice Area per Row = N/A ft²
Elliptical Half-Width = N/A feet
Elliptical Slot Centroid = N/A feet
Elliptical Slot Area = N/A ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.60	0.60	0.90	0.90	0.90			
Orifice Area (sq. inches)	2.07	2.07	2.07	2.07	2.07			

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = Not Selected ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = Not Selected ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = Not Selected inches

Calculated Parameters for Vertical Orifice
Vertical Orifice Area = Not Selected ft²
Vertical Orifice Centroid = Not Selected feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

Overflow Weir Front Edge Height, H_o = 1.75 ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = 2.17 feet
Overflow Weir Grate Slope = 0.00 H:V
Horiz. Length of Weir Sides = 2.17 feet
Overflow Grate Type = Type C Grate
Debris Clogging % = 50%

Calculated Parameters for Overflow Weir
Height of Grate Upper Edge, H_u = 1.75 feet
Overflow Weir Slope Length = 2.17 feet
Grate Open Area / 100-yr Orifice Area = 4.17
Overflow Grate Open Area w/o Debris = 3.28 ft²
Overflow Grate Open Area w/ Debris = 1.64 ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = 2.20 ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = 12.00 inches
Restrictor Plate Height Above Pipe Invert = 13.00 inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate
Outlet Orifice Area = 0.79 ft²
Outlet Orifice Centroid = 0.50 feet
Half-Central Angle of Restrictor Plate on Pipe = 3.14 radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = 2.00 ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = 6.00 feet
Spillway End Slopes = 4.00 H:V
Freeboard above Max Water Surface = 0.12 feet

Calculated Parameters for Spillway
Spillway Design Flow Depth = 0.12 feet
Stage at Top of Freeboard = 2.24 feet
Basin Area at Top of Freeboard = 0.02 acres
Basin Volume at Top of Freeboard = 0.03 acre-ft

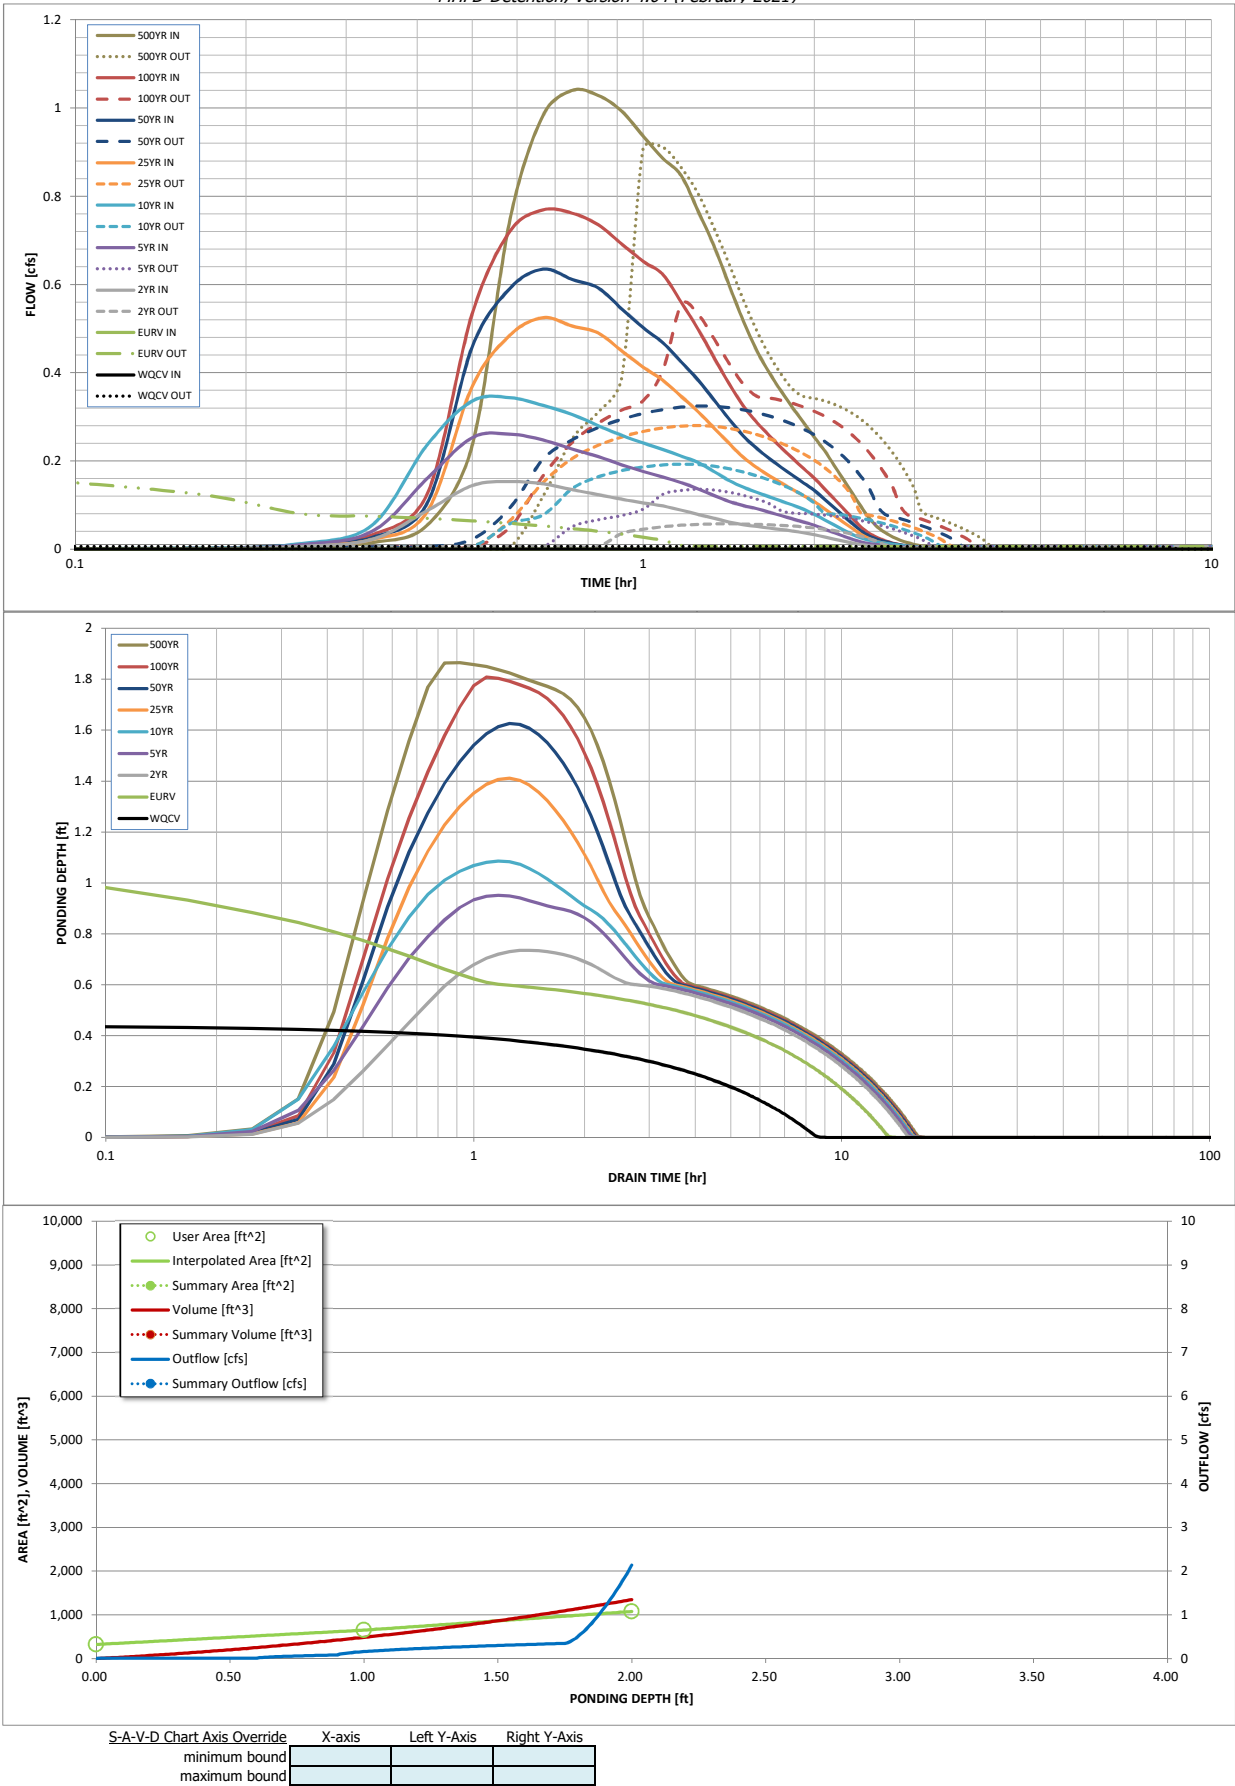

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year
Design Storm Return Period =	N/A	N/A	1.19	1.50	1.75	2.00	2.25	2.52	3.14

SAND FILTER OVERFLOW INLET CAPACITY

Nyloplast 18" Dome Grate Inlet Capacity Chart

The sand filter design includes 0.25' of head over the dome grate, which corresponds to about 1.8 cfs of capacity. The 100-year flow into the sand filters ranges from 1.3 to 1.6 cfs, so an 18" dome grate has adequate capacity.

Mr. Thomas Russell
El Paso County Engineer
County Office Building
Colorado Springs, Colorado

Dear Mr. Russell:

In compliance with the subdivision regulations of El Paso County, Colorado, we are transmitting the following drainage plan and report for the Woodmoor Greens Subdivision. The Woodmoor Greens is a development of the Woodmoor Corporation, located in the Northeast quarter of Section 23, the North half of Section 24 and the South 1/2 Southwest 1/4 of Section 13, all in T. 11 South, Range 67 West of the 6th Principal Meridian and contains 245.51 acres.

The Woodmoor Greens subdivision lies North of the Higby County Road and adjacent to the West boundary of Woodmoor Summit and Nugget. This proposed subdivision will contain 222 single-family residences and a future golf course.

Existing Conditions:

The Woodmoor Green's area has an existing ground cover composed of medium to dense native grasses. The soil in this area is generally sandy in nature, allowing for a medium infiltration rate. The historical drainage pattern for this area is as follows: Runoff flowing Westerly and Southwesterly from the Woodmoor Summit and Woodmoor Nugget flows through the Woodmoor Greens area, into Teachout Creek and eventually reaches Monument Creek.

Developed Conditions

The future surface runoff of the developed Woodmoor Greens Subdivision will follow the historical drainage pattern of the area. The developed runoff generated from this subdivision was calculated on the basis of the Rational Formula.

Mr. Thomas Russell - Page 2 continued

$Q = CiA$, where

Q = The surface runoff in cubic feet per second

C = Runoff factor based upon character of soil
and percentage of impervious area

i = Intensity of rainfall

A = Contributing area

The runoff factor C is based upon the following calculations:

222 lots X 2,500 square feet per house ÷ 43,560 = 12.74
acres

12.74 acres of impervious area X 0.90 = 11.50

232.77 acres with grass cover X 0.30 = 69.71

245.51 acres 81.21

$C = 81.21 ÷ 245.51 = 0.33$

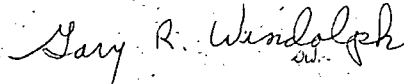

A design storm of 25 years was used in calculations.
(Exhibit 2).

During the construction of roadways in the Woodmoor Greens
Subdivision, corrugated metal pipe culverts will be installed
at street intersections and natural drainage ways to accommodate
the expected runoff (refer to exhibit 2).

Should there be any questions relative to this report, please
contact us at your convenience.

Very truly yours,

NELSON, HALEY, PATTERSON AND QUIRK

Gary R. Windolph, P. E.

containing 245.51 Acres.

DEDICATION:
The above parties in interest have caused said tract of land to be platted into lots, streets, and
easements as shown on the plat, which plat sets forth the boundary and dimensions thereof. Said lots as platted
shall be known as "Woodmoor Greens." All streets so platted are hereby dedicated to public use. The aforementioned
parties in interest do hereby covenant and agree that they will, at their own expense, grade and gravel all platted
streets, and provide proper drainage for same, all to the satisfaction of the Board of County Commissioners of
El Paso County, Colorado, and upon acceptance by resolution, all streets and drainage ways so dedicated will become
matters of maintenance by El Paso County, Colorado.

IN WITNESS WHEREOF: The undersigned have executed their presents this 14 day of January, 1972 A. D.

VICINITY MAP

PROTECTIVE COVENANTS FOR WOODMOOR GREENS

1. In non-vehicular easements, as abbreviated on the plat, N.V.E., the Woodmoor Corporation reserves the right to construct gravel surfaced pathways for non-vehicular community use, which shall be for the sole and exclusive use of owners within the subdivision. The Woodmoor Corporation will maintain improvements on non-vehicular easements until a Home Owners Association assumes responsibility for maintenance.
2. Private driveways shall not be permitted access to Fairplay Drive or Higby Road.
3. The Woodmoor Corporation will maintain median strips in the road rights of ways until maintenance is assumed by the Home Owners Association.

I, Thomas J. Russell, County Engineer, El Paso County, Colorado, do hereby approve the accompanying plat as to drainage of the streets as shown hereon.

Thomas J. Russell
County Engineer

Approved by the El Paso County Planning Commission this 14 day of February, 1972 A.D.

Shane D. Hann
Chairman

Approved by the El Paso County Planning Department this 9th day of February, 1972 A.D.

Dee E. Eriksen
County Planning Engineer

CERTIFICATION:

The undersigned Registered Land Surveyor in the State of Colorado does hereby certify that the accompanying plat was calculated and prepared under his supervision in accordance with Chapter 136 of the Colorado Revised Statutes, as amended July 1, 1968, and that said plat does accurately show the described tract of land and the subdivision thereof to the best of his knowledge and belief.

A VACATION AND REPLAT OF LOTS 496-500

WOODMOOR GREENS

A PART OF SECTION 23, T11S, R67W OF 6th P.M.
EL PASO COUNTY, COLORADO

NELSON, HALEY, PATTERSON and QUIRK INC.
ENGINEERING CONSULTANTS

KNOW ALL MEN BY THESE PRESENTS:
THAT THE WOODMOOR CORPORATION, A COLORADO CORPORATION, JOHN A. THOMPSON EXEC. VP, DALE D. WHEELER, AST. SECRETARY, JAMES E. HIGBY, HOLDER OF A DEED OF TRUST, BEING THE PARTIES IN INTEREST TO THE FOLLOWING DESCRIBED TRACT OF LAND:
TO WIT: A VACATION AND REPLAT OF LOTS 496, 499, 500 OF WOODMOOR GREENS AS FILED AND RECORDED IN BOOK U-2 PAGE 51 OF THE RECORDS OF EL PASO COUNTY, COLORADO, SAID LOTS ALSO BEING LOCATED IN THE NORTHWEST QUARTER OF NORTHEAST QUARTER (NW1/4NE1/4) OF SECTION 23, TOWNSHIP 11 SOUTH, RANGE 67 WEST OF THE SIXTH PRINCIPAL MERIDIAN, EL PASO COUNTY, COLORADO, DESCRIBED IN PARTICULAR AS FOLLOWS:
COMMENCING AT THE NORTHWEST CORNER (NW COR) SAID SECTION 23 AND CONSIDERING THE NORTH LINE OF THE NORTHEAST QUARTER (NE1/4) OF SAID SECTION 23 TO BEAR NORTH 89° 21' 28" EAST, ALL BEARINGS CONTAINED THEREIN BEING RELATIVE THERETO:
THENCE SOUTH 82° 32' 53" WEST, 1921.10 FEET TO THE TRUE POINT OF BEGINNING, SAID POINT ALSO BEING THE NORTHEAST CORNER (NE COR) OF SAID LOT 500;
THENCE SOUTH 19° 23' 00" EAST, 223.61 FEET;
THENCE SOUTH 38° 10' 20" WEST, 148.41 FEET;
THENCE SOUTH 01° 40' 36" EAST, 125.00 FEET;
THENCE SOUTH 34° 28' 59" EAST, 141.58 FEET;
THENCE SOUTH 21° 45' 09" WEST, 225.61 FEET;
THENCE NORTH 81° 03' 06" WEST, 107.82 FEET TO A POINT OF CURVATURE;
THENCE ALONG THE ARC OF A CURVE TO THE RIGHT 180.10 FEET, SAID CURVE HAVING A RADIUS OF 130.00 FEET AND A LONG CHORD WHICH BEARS NORTH 41° 51' 51" WEST, 166.04 FEET TO A POINT OF TANGENCY;
THENCE NORTH 01° 40' 36" WEST, 483.36 FEET TO A POINT OF CURVATURE;
THENCE ALONG THE ARC OF A CURVE TO THE RIGHT 187.41 FEET, SAID CURVE HAVING A RADIUS OF 130.00 FEET AND A LONG CHORD WHICH BEARS NORTH 39° 37' 21" EAST, 171.60 FEET TO A POINT OF TANGENCY;
THENCE NORTH 80° 55' 18" EAST, 140.00 FEET TO THE TRUE POINT OF BEGINNING
SAID PARCEL CONTAINS 4.382 ACRES.

DEDICATION:
THE ABOVE PARTIES IN INTEREST HAVE CAUSED SAID TRACT OF LAND TO BE PLATTED INTO LOTS, STREETS, AND EASEMENTS AS SHOWN ON THE PLAT, WHICH PLAT SETS FORTH THE BOUNDARY AND DIMENSIONS THEREOF. SAID LOTS AS PLATTED SHALL BE KNOWN AS "A REPLAT OF LOTS 496-500 WOODMOOR GREENS". ALL STREETS SO PLATTED ARE HEREBY DEDICATED TO PUBLIC USE. THE AFOREMENTIONED PARTIES IN INTEREST DO HEREBY COVENANT AND AGREE THAT THEY WILL AT THEIR OWN EXPENSE, GRADE AND GRAVEL ALL PLATTED STREETS, AND PROVIDE PROPER DRAINAGE FOR SAME, ALL TO THE SATISFACTION OF THE BOARD OF COUNTY COMMISSIONERS OF EL PASO COUNTY, COLORADO, AND UPON ACCEPTANCE BY RESOLUTION, ALL STREETS AND DRAINAGE WAYS SO DEDICATED WILL BECOME MATTERS OF MAINTENANCE BY EL PASO COUNTY, COLORADO.

IN WITNESS WHEREOF: THE UNDERSIGNED HAVE EXECUTED THEIR PRESENTS THIS 18 DAY OF July, 1972 A.D.
THE WOODMOOR CORPORATION
John A. Thompson EXEC. VP.

PROTECTIVE COVENANTS FOR WOODMOOR GREENS
1. IN NON-VEHICULAR EASEMENTS, AS ABBREVIATED ON THE PLAT, N.V.E., THE WOODMOOR CORPORATION RESERVES THE RIGHT TO CONSTRUCT GRAVEL SURFACED PATHWAYS FOR NON-VEHICULAR COMMUNITY USE, WHICH SHALL BE FOR THE SOLE AND EXCLUSIVE USE OF OWNERS WITHIN THE SUBDIVISION. THE WOODMOOR CORPORATION WILL MAINTAIN IMPROVEMENTS ON NON-VEHICULAR EASEMENTS UNTIL A HOME OWNERS ASSOCIATION ASSUMES RESPONSIBILITY FOR MAINTENANCE.
2. PRIVATE DRIVEWAYS SHALL NOT BE PERMITTED ACCESS TO FAIRPLAY DRIVE OR HIGBY ROAD.
3. THE WOODMOOR CORPORATION WILL MAINTAIN MEDIAN STRIPS IN THE ROAD RIGHTS OF WAYS UNTIL MAINTENANCE IS ASSUMED BY THE HOME OWNERS ASSOCIATION.

1. THOMAS J. RUSSELL, COUNTY ENGINEER, EL PASO COUNTY, COLORADO, DO HEREBY APPROVE THE ACCOMPANYING PLAT AS TO DRAINAGE OF THE STREETS AS SHOWN HEREON.

APPROVED BY THE EL PASO COUNTY PLANNING COMMISSION THIS 9th DAY OF August, 1972, A.D.
Chairman
County Engineer

APPROVED BY THE EL PASO COUNTY PLANNING DEPARTMENT THIS 22 DAY OF August, 1972, A.D.
Chairman
County Engineer

CERTIFICATION:
THE UNDERSIGNED REGISTERED LAND SURVEYOR IN THE STATE OF COLORADO DOES HEREBY CERTIFY THAT THE ACCOMPANYING PLAT WAS CALCULATED AND PREPARED UNDER HIS SUPERVISION IN ACCORDANCE WITH CHAPTER 136 OF THE COLORADO REVISED STATUTES, AS AMENDED JULY 1, 1968, AND THAT SAID PLAT DOES ACCURATELY SHOW THE DESCRIBED TRACT OF LAND AND THE SUBDIVISION THEREOF TO THE BEST OF HIS KNOWLEDGE AND BELIEF.

Ronald B. McRae
REGISTERED LAND SURVEYOR
STATE OF COLORADO, 6616

NOTES:
WATER AND SANITATION TO BE PROVIDED BY THE WOODMOOR WATER AND SANITATION DISTRICT.
UTILITY AND DRAINAGE EASEMENTS -- ALL SIDE AND REAR LOT LINES ARE SUBJECT TO A 16-FOOT EASEMENT, LYING 8 FEET ON EITHER SIDE OF LOT LINES AND 16 FEET ALONG AND ADJACENT TO ALL BOUNDARY LINES, EXCEPT THOSE SIDE LOT LINES ADJACENT TO PUBLIC STREETS.

● DESIGNATES BOUNDARY MONUMENTS FOUND--
1/2" REBAR WITH PLASTIC CAP STAMPED "N.H.P.Q. 2682"
⊙ DESIGNATES BOUNDARY MONUMENTS SET--
1/2" REBAR WITH PLASTIC CAP STAMPED "N.H.P.Q. 2682"

STATE OF COLORADO
COUNTY OF EL PASO
I HEREBY CERTIFY THAT THIS INSTRUMENT WAS FILED FOR RECORD IN MY OFFICE AT 3:36 O'CLOCK P.M. THIS 23rd DAY OF August, 1972, A.D. AND IS DULY RECORDED IN PLAT BOOK U-2 AT PAGE 26 OF THE RECORDS OF EL PASO COUNTY, COLORADO.

RECEPTION NO: 912153
FEE: \$10.00
HARRIET BEALS, RECORDER
BY: Dorothy Rosemond DEPUTY

APPROVED BY THE EL PASO COUNTY BOARD OF COMMISSIONERS THIS 14th DAY OF August, 1972 A.D.
Chairman
