- 20. Water in the Denver Basin aquifers is allocated based on a 100 year aquifer life; however, for El Paso County planning purposes, water in the Denver Basin aquifers is evaluated based on a 300 year aquifer life. Applicants and all future owners in the subdivision should be aware that the economic life of a water supply based on wells in a given Denver Basin aquifer may be less than either the 100 years or 300 years used for allocation indicated due to anticipated water level declines. Furthermore, the water supply plan should not rely solely upon non-renewable aquifers. Alternative renewable water resources should be acquired and incorporated in a permanent water supply plan that provides future generations with a water supply.
- 21. The water supply for the subdivision is by individual on-lot wells into the noncontributory Arapahoe aquifer pursuant to the Colorado Ground Water Commission Findings and Order re: Determination of Water Right No. 3344-BD dated October 12, 2016 ("Determination") and associated Replacement Plan No. 3344-BD dated June 12, 2018 ("Replacement Plan"). The allowed annual withdrawal of water shall not exceed 0.5 acre-feet per lot. Lot owners shall comply with all requirements of the Determination and Replacement Plan including, but not limited to, use of non-evaporative septic systems and above ground spray irrigation systems, and use return flows therefrom to replace annual depletions to the alluvial aquifer of the Upper Black Squirrel Creek Ground Water Basin.
