Re: Colorado Centre Addition No. 3 Annexation (Rezoning Application)
Trip Generation Comparison Cover Letter
NWC Bradley Road and Foreign Trade Zone Boulevard
Colorado Springs, Colorado

Dear Mr. McLean:

This traffic study cover letter documents a trip generation comparison for the uses evaluated in the Colorado Centre Addition No. 3 Annexation Traffic Study (rezoning traffic study) dated January 11, 2024 to the uses in the current bubble plan associated with the Aerospace Business Center. The subject site is comprised of approximately 32 acres and is located on the northwest corner of Bradley Road and Foreign Trade Zone Boulevard intersection in Colorado Springs, Colorado. The Aerospace Business Center (future site development plan submittals) is planned to be developed in the next 10 years to occupy the same 32 acres as the Colorado Centre Addition No.3 Annexation (rezoning process). The rezoning traffic study was recently updated with the known initial phase plans associated with the Aerospace Business Center. However, the remaining plan for the Aerospace Business Center is unknown at this time and currently filled with placeholder uses that could be expected in the future. The first building being proposed is Building A located in the northeast corner of the overall development area. Building A is anticipated to include 84,750 square feet of industrial use. The purpose of this letter is to document higher trips associated with the rezoning plan (Colorado Centre Addition No.3 Annexation) compared to conceptual plan currently being planned associated with the Aerospace Business Center.

TRIP GENERATION COMPARISON

The current rezoning plan utilized within the *Colorado Centre Addition No. 3 Annexation Traffic Study* prepared by Kimley-Horn in January 2024 included a gas station with 10 passenger fueling positions and four (4) truck fueling positions, 50,000 square feet of retail uses, 80,000 square feet of office space, 234,750 square feet of light industrial uses, and a 4,300 square foot restaurant. Building A is currently being proposed as part of the Aerospace Business Center as an industrial use with 84,750 square feet of building space. The remaining plan for Aerospace Business Center is unknown but has been identified with 238,650 square feet (323,400 square feet total when including known Building A) of industrial use and 71,610 square feet of retail use as a placeholder.

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*¹ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. The trip generation for the rezoning plan was based on ITE Trip Generation, 11th Edition average rate and fitted-curve equations for General Light Industrial (ITE Code 110), General Office Building (ITE 710), Strip Retail Plaza (ITE 822), Fast

¹ Institute of Transportation Engineers, *Trip Generation: An Information Report*, Eleventh Edition, Washington DC, 2021.

Casual Restaurant (ITE 930), Gas Station with Convenience Store (ITE 945), and Truck Stop (ITE 950) land uses. The trip generation for the Aerospace Business Center plan was based on ITE Trip Generation, 11th Edition average rate and fitted-curve equations for General Light Industrial (ITE Code 110) and Strip Retail Plaza (ITE 822) land uses. The following **Table 1** summarizes the anticipated trip generation for the rezoning plan compared to the trip generation for the conceptual plan associated with the Aerospace Business Center.

Table 1 – Trip Generation Comparison

Use and Size	Daily Vehicle Trips	Weekday Vehicle Trips					
		AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Original Traffic Study (Rezoning Plan) – Colorado Centre No. 3 Annexation							
Light Industrial (ITE 110) 234,750 Square Feet	934	143	20	163	9	65	74
Office Building (ITE 710) 80,000 Square Feet	956	121	17	138	23	115	138
Strip Retail (ITE 822) – 50,000 Square Feet	2,722	71	47	118	165	164	329
Fast-Casual Restaurant (ITE 930) – 4,300 Square Feet	418	3	3	6	30	24	54
Gas Station w/ Convenience (ITE 945)– 10 Fueling Positions	3,458	158	158	316	134	135	269
Truck Stop (ITE 950) 4 Fueling Positions	896	27	29	56	33	29	62
Total Project Trips	9,384	523	274	798	395	531	926
Current Proposal – Aerospace Business Center							
General Light Industrial (ITE 110) 323,400 SF	1,574	210	29	239	29	181	210
Strip Retail (ITE 822) – 71,610 Square Feet	3,900	101	68	169	236	236	472
Total Project Trips	5,474	311	97	408	265	417	682
Net Difference in Trips	-3,910	-212	-177	-390	-130	-114	-244

As summarized in **Table 1**, the current rezoning plan (including the initial known phase of the Aerospace Business Center) is expected to generate 3,910 more daily trips, 390 more morning peak hours trips, and 244 more afternoon peak hour trips than the conceptual plan currently provided for the Aerospace Business Center. Since the initial phase of the Aerospace Business Center is the only known plan at this point and trips are higher for the rezoning plan, the rezoning traffic study has remained with the more conservative plan to allow additional flexibility with future development plans. Therefore, the rezoning traffic study has been updated with known initial phase of the Aerospace Business Center but not the placeholder bubble plan associated with the remaining development.

CONCLUSION

In summary, the current proposal for the initial phase (Building A) within the future Aerospace Business Center and other placeholder development is expected to generate the fewer trips than the rezoning plan. Since the remaining development within Aerospace Business Center is unknown, the rezoning traffic study (Colorado Centre Addition No. 3 Annexation) has utilized the more conservative plan to allow additional flexibility with future development plans. Therefore, it is respectfully requested that the City of Colorado Springs allow the more conservative plan within the traffic study of the rezoning application due to only one of the parcels within the Aerospace Business Center being prepared for a development application at this time. The updated rezoning traffic study which included the plans for the initial phase of the Aerospace Business Center is attached. If you have any questions or require anything further, please feel free to call me.

Sincerely,

KIMLEY-HORN AND ASSOCIATES, INC.

1.0 EXECUTIVE SUMMARY

The Colorado Centre Addition No. 3 Annexation mixed-use development is proposed to be located on the northwest corner of the Bradley Road and Foreign Trade Zone Boulevard intersection in Colorado Springs, Colorado. For the purposes of this analysis, the project is anticipated to include a gas station with 10 passenger fueling positions and four (4) truck fueling positions, 50,000 square feet of retail uses, 80,000 square feet of office space, 234,750 square feet of light industrial uses, and a 4,300 square foot restaurant. It is expected that the northeast parcel of the overall development will be completed in the next couple of years; therefore, analysis was conducted for the initial phase 2025 horizon. The remaining development is proposed to be completed by 2030, therefore analysis was conducted for 2030 full buildout as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Springs and State of Colorado Department of Transportation (CDOT) standards and requirements:

- Bradley Road and Powers Boulevard (SH-21)
- Bradley Road and Foreign Trade Zone Boulevard
- Bradley Road and Marksheffel Road
- Aerospace Boulevard/Project Access and Foreign Trade Zone Boulevard

In addition, the proposed right-in/right-out accesses along Bradley Road and Foreign Trade Zone Boulevard and the full movement access along Foreign Trade Zone Boulevard were evaluated. Further, a full movement project access is proposed to align with Aerospace Boulevard along Foreign Trade Zone Boulevard.

Regional access to the Colorado Centre Addition No. 3 Annexation mixed use project will be provided by Interstate 25 (I-25), US-24, State Highway 21 (SH-21), SH-16, and SH-94. Primary access will be provided by Powers Boulevard (SH-21) and Marksheffel Road. Direct access will be provided by a full movement access and a right-in/right-out access along Foreign Trade Zone Boulevard and a right-in/right-out access along Bradley Road. Additionally, a future west leg at

the Aerospace Boulevard and Foreign Trade Zone Boulevard intersection will provide access to the site.

Colorado Centre Addition No. 3 Annexation is expected to be completed with a Phase I including the northeast development area and full build out for the whole development area. Phase I is anticipated to generate approximately 370 weekday daily trips, with 61 of these trips occurring during the morning peak hour and 36 of these trips occurring during the afternoon peak hour. Accounting for internal capture, the full build out of the development is expected to generate 8,522 weekday daily trips, with 749 of these trips occurring during the morning peak hour and 816 of these trips occurring during the afternoon peak hour with internal capture.

Based on the analysis presented in this report, Kimley-Horn believes Colorado Centre Addition No. 3 Annexation will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

2025 Recommendations

- Based on traffic projections, the addition of the entire development on the east leg of Bradley Road along SH-21 (Powers Boulevard) is anticipated to increase existing traffic by more than 20 percent. Therefore, an access permit is anticipated to be needed at this intersection with project development.
- Phase I is anticipated to be built by 2025 and be provided by two (2) accesses. The west leg of Aerospace Boulevard will be constructed at the intersection with Foreign Trade Zone Boulevard and will serve as the primary access to the site. A R1-1 “STOP” sign is recommended to be placed on the eastbound approach of this access. Additionally, access to the site is proposed by a full movement access along the west side of Foreign Trade Zone Boulevard, approximately 700 feet north of the Aerospace Boulevard intersection. This north access is recommended to operate with stop control and an R1-1 “STOP” sign should be installed on the eastbound exiting approach. A northbound left turn lane with 150 feet of length is recommended at both of these accesses and will be constructed by the developer. Of note, the existing pavement width along Foreign Trade Zone Boulevard can accommodate a three-lane roadway with a center two-way left turn center lane extending from Aerospace Boulevard

to the north property limits; therefore, the developer will construct this center lane along Foreign Trade Zone Boulevard.

- To meet CDOT turn lane lengths, the northbound right turn lane at Bradley Road/Powers Boulevard (SH-21) is recommended to provide a length of 800 feet with a 300-foot taper. Likewise, the southbound left turn lane will need to be extended to 1,275 feet with a 300-foot taper.
- The south leg of the Bradley Road and Foreign Trade Zone intersection is currently being constructed by others. The traffic study for the development to the south identified a separate eastbound right turn lane, westbound left turn lane, and separate left, through, and right turn lanes on the north and south approaches of this intersection.

2030 Recommendations

- The full Foreign Trade Zone development is anticipated to be constructed by 2030 and include two (2) additional accesses. A right-in/right-out access is proposed along the west side of Foreign Trade Zone Boulevard between Bradley Road and Aerospace Boulevard. A R1-1 “STOP” sign is recommended to be provided on the eastbound exiting approach of this right-in/right-out access along Foreign Trade Zone Boulevard. Further, a R3-2 No Left Turn Sign could be placed below the R1-1 sign at the right-in/right-out access. Additionally, a right-in/right-out access is proposed along Bradley Road. It is recommended that a R1-1 “STOP” sign be installed on the exiting southbound approach. A R3-2 No Left Turn sign could be placed below the R1-1 sign and a R6-1L “ONE WAY” sign could be placed within the center median along Bradley Road to further inform drivers of the restricted movement. Through coordination with the City of Colorado Springs, the existing southbound to westbound right turn acceleration lane at Foreign Trade Boulevard along Bradley Road will be extended by the developer and drop as a forced right turn lane at the project access along Bradley Road.
- As stated in the adjacent developments’ traffic studies, the intersection of Bradley Road/Powers Boulevard (SH-21) is recommended to provide dual southbound left turn lanes. The dual southbound left turn lanes will operate with protected-only left turn phasing.

- The intersection of Bradley Road/Foreign Trade Zone Boulevard is anticipated to warrant signalization with buildout of the residential development to the south.

2045 Recommendations

- If 2045 volumes are realized at Bradley Road/Powers Boulevard (SH-21) intersection, the intersection may need to explore further improvements. The ConnectCOS identifies Powers Boulevard (SH-21) as being a freeway through the Bradley Road intersection. Therefore, a future grade separated interchange could be explored by CDOT and the City.
- The Bradley Road and Foreign Trade Zone Boulevard intersection is recommended to provide dual eastbound left turn lanes. These turn lanes can be accommodated within the existing pavement allocated to the second eastbound left turn lane. Two northbound receiving lanes will need to be provided with construction of dual eastbound left turn lanes. These can be accommodated within the existing pavement width with the inside through lane being dropped as a forced northbound left turn lane at the Aerospace Boulevard intersection.
- The Aerospace Boulevard and Foreign Trade Zone Boulevard intersection does not meet signal warrants but may have longer vehicle delays on the westbound approach by 2045. Therefore, a single-lane roundabout could be explored with build out of the development to the east.

General Recommendations

- Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs, Colorado Department of Transportation, and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

2.0 INTRODUCTION

Kimley-Horn has prepared this report to document the results of a Traffic Impact Study for the Colorado Centre Addition No. 3 Annexation located on the northwest corner of the Bradley Road and Foreign Trade Zone Boulevard intersection in Colorado Springs, Colorado. A vicinity map illustrating the development location is shown in **Figure 1**. For the purposes of this analysis, the project is anticipated to include a gas station with 10 passenger fueling positions and four (4) truck fueling positions, 50,000 square feet of retail uses, 80,000 square feet of office space, 234,750 square feet of light industrial uses, and a 4,300 square foot restaurant. A conceptual site plan is attached in **Appendix G**. It is expected that the northeast parcel of the overall development will be completed in the next couple of years; therefore, analysis was conducted for the initial phase 2025 horizon. The remaining development is proposed to be completed by 2030, therefore analysis was conducted for 2030 full buildout as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Springs and CDOT standards and requirements:

- Bradley Road and Powers Boulevard (SH-21)
- Bradley Road and Foreign Trade Zone Boulevard
- Bradley Road and Marksheffel Road
- Aerospace Boulevard/Project Access and Foreign Trade Zone Boulevard

In addition, the proposed right-in/right-out accesses along Bradley Road and Foreign Trade Zone Boulevard and the full movement access along Foreign Trade Zone Boulevard were evaluated. Further, a full movement project access is proposed to align with Aerospace Boulevard along Foreign Trade Zone Boulevard.

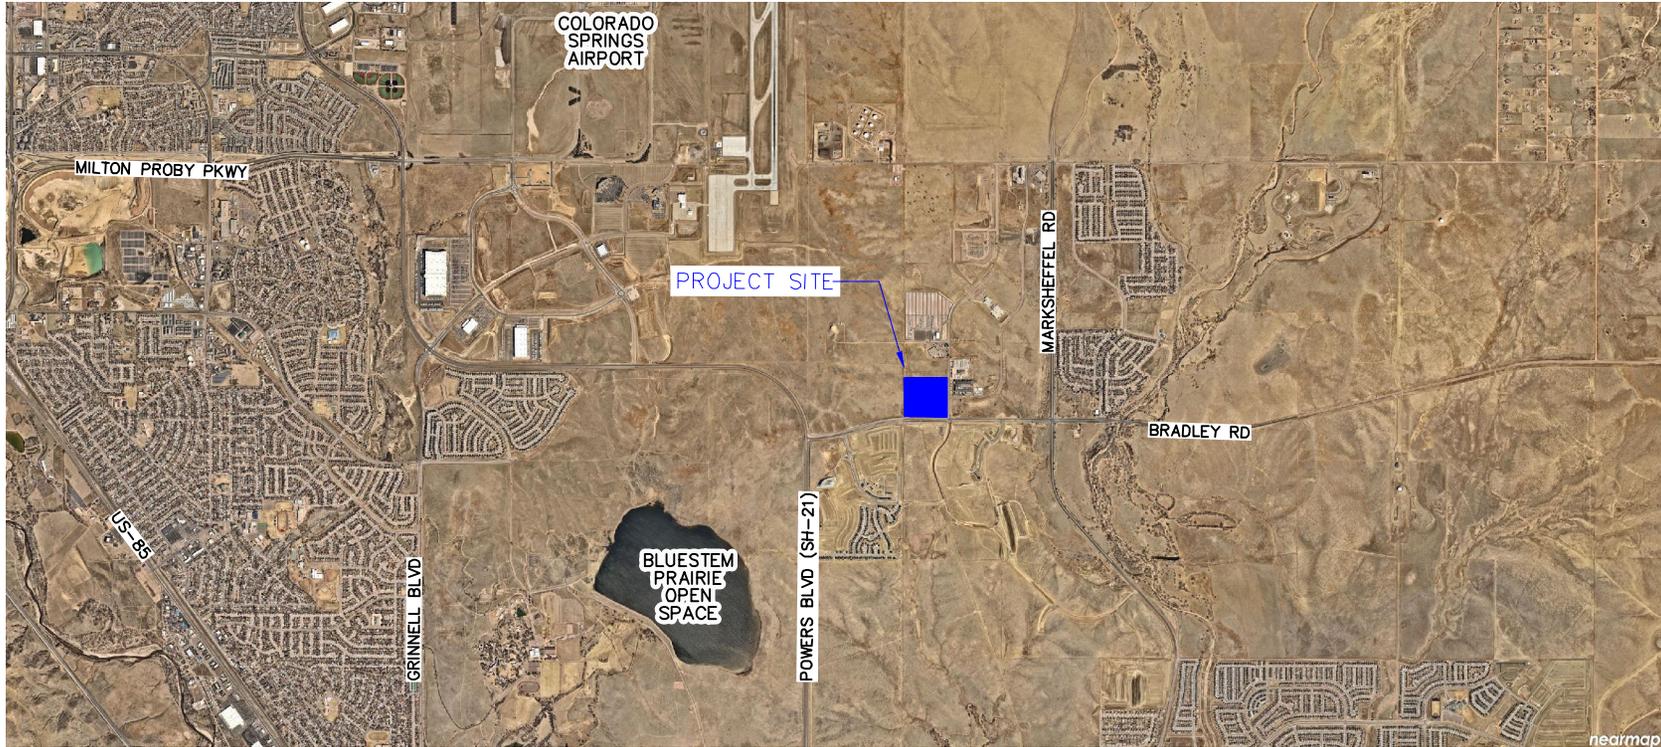

FIGURE 1
COLORADO CENTRE ADDITION NO. 3 ANNEXATION
COLORADO SPRINGS, COLORADO
VICINITY MAP

3.0 EXISTING AND FUTURE CONDITIONS

3.1 Existing Study Area

The existing site is vacant. The surrounding area is mostly vacant or being developed as residential neighborhoods and mixed-use commercial. Single family communities currently exist east of the project and in the surrounding area to the southeast. Approximately three (3) miles northwest is the Colorado Springs Municipal Airport (COS).

3.2 Existing and Future Roadway Network

Regional access to the Colorado Centre Addition No. 3 Annexation will be provided by I-25, US-24, SH-21, SH-16, and SH-94. Primary access will be provided by Powers Boulevard (SH-21) and Marksheffel Road. Direct access will be provided by one full movement access and a right-in/right-out access along Foreign Trade Zone Boulevard and a right-in/right-out access along Bradley Road. Additionally, a future west leg at the Aerospace Boulevard and Foreign Trade Zone Boulevard intersection will provide access to the site.

Powers Boulevard (SH-21) is a four-lane divided roadway providing two through lanes of travel, northbound and southbound, with a posted speed limit of 65 miles per hour through the study area. There are plans for future additional grade separation along Powers Boulevard (SH-21) to continue to improve the roadway towards a freeway facility in coming years, with the ConnectCOS major thoroughfare plan showing the roadway as a freeway facility throughout the entire Colorado Springs metropolitan area in the long-term horizon.

Bradley Road exists as an east-west four-lane divided roadway within the study area with a posted speed limit of 50 miles per hour. According to the ConnectCOS major thoroughfare plan, Bradley Road is anticipated to operate as a principal arterial through the 2045 horizon.

Marksheffel Road is a north-south roadway that provides two through lanes in each direction to the south of Bradley Road as well as from the Peterson Space Force Base – East Gate through US-24, with one through lane provided in each direction from Bradley Road to the Peterson Space Force Base – East Gate. The posted speed limit is 45 miles per hour near the Bradley Road intersection. This roadway is anticipated to operate as a principal arterial through the 2045 horizon according to ConnectCOS.

Foreign Trade Zone Boulevard is a north-south roadway that connects from Bradley Road to Drennan Road with one through lane in each direction and a posted speed limit of 25 miles per hour.

The Bradley Road and Powers Boulevard (SH-21) T-intersection is signalized with protected-permissive left turn phasing on the southbound Powers Boulevard (SH-21) approach. The westbound Bradley Road approach provides dual left turn lanes and a right turn lane that operates under free condition. The northbound approach provides two through lanes and a right turn lane with a northbound right to eastbound through acceleration lane. The southbound approach provides a left turn lane and two through lanes. By the long-term horizon, it is anticipated that a west leg of the intersection may be constructed. An aerial photo of the existing intersection configuration is below (north is up - typical).

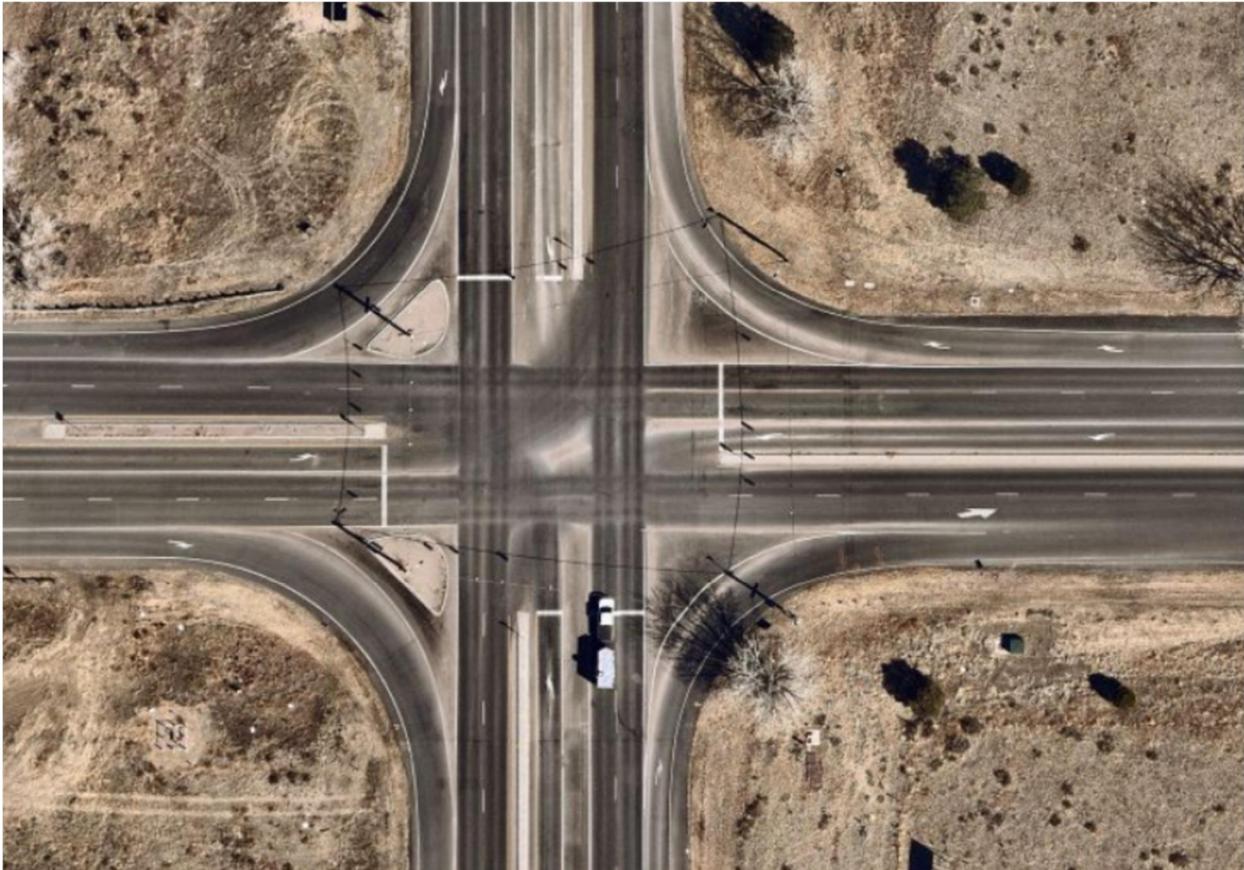

Bradley Road & Powers Boulevard (SH-21)

The unsignalized 'T'-intersection of Bradley Road and Foreign Trade Zone Boulevard operates with stop control on the southbound Foreign Trade Zone Boulevard approach. The eastbound Bradley Road approach provides a left turn lane and two through lanes while the westbound approach provides two through lanes a right turn lane. The southbound approach provides a stop-controlled left turn lane a right turn lane operating under free conditions. The south leg will soon be open for traffic to access the future developments to the south of Bradley Road. An aerial photo of the existing intersection configuration is below.

Bradley Road & Foreign Trade Zone Boulevard

The intersection of Bradley Road and Marksheffel Road is signalized with protected-permitted left turn phasing on all four approaches to the intersection. All four approaches to the intersection provide a left turn lane, two through lanes, and a right turn lane. The right turn movements for the eastbound, westbound, and southbound approaches operate with free right turning movements while the northbound right turn movement on Marksheffel Road operates with yield control. An aerial photo of the existing intersection configuration is below.

Bradley Road & Marksheffel Road

The 'T'-intersection of Aerospace Boulevard and Foreign Trade Zone Boulevard operates with stop control on the westbound Aerospace Boulevard approach. All three approaches provide a single lane for shared movements. An aerial photo of the existing intersection configuration is below.

Bradley Road & Marksheffel Road

The intersection lane configuration and control for the study area intersections are shown in **Figure 2**.

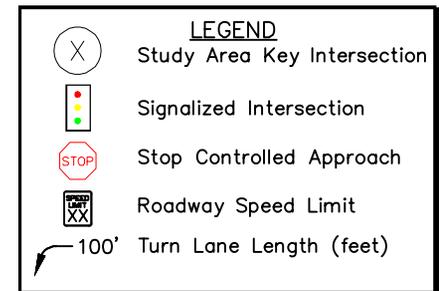

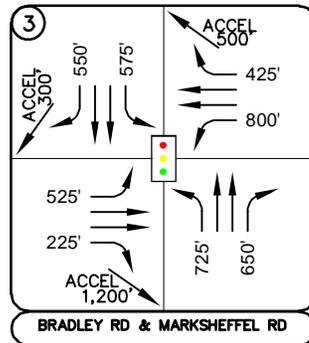

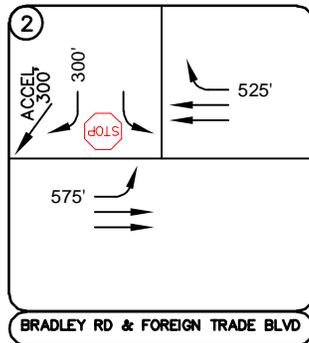

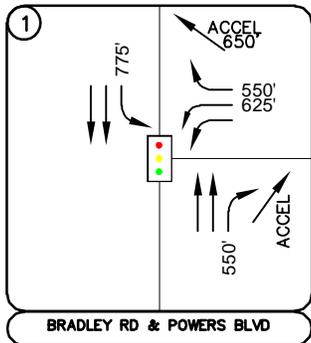

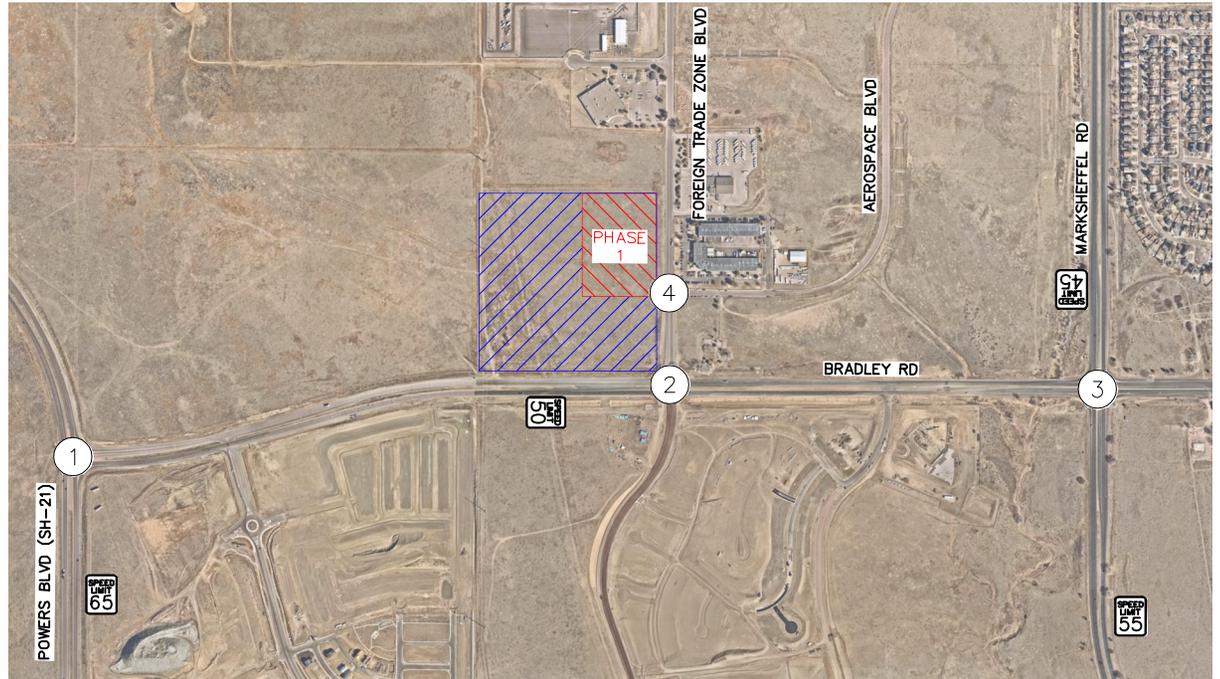

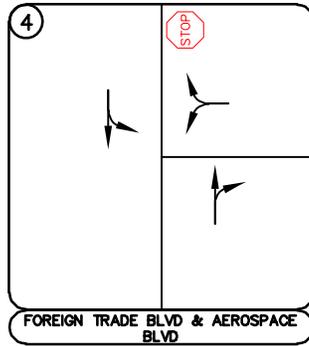

FIGURE 2
 COLORADO CENTRE ADDITION NO. 3 ANNEXATION
 COLORADO SPRINGS, COLORADO
 2023 EXISTING GEOMETRY AND CONTROL

3.3 Existing Traffic Volumes

Existing turning movement counts along Bradley Road were conducted at the study intersections on Wednesday, October 10, 2022 and at the Aerospace Boulevard/Foreign Trade Zone Boulevard intersection on Thursday, June 22, 2023 during the weekday morning and afternoon peak hours. The counts were conducted during the morning and afternoon peak hours of adjacent street traffic in 15-minute intervals from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on this count date. The existing intersection traffic volumes are shown in **Figure 3** with count sheets provided in **Appendix A**.

3.4 Unspecified Development Traffic Growth

According to information provided on the website for the Colorado Department of Transportation (CDOT), the 20-year growth factor along Powers Boulevard (SH-21) is 1.14. This 20-year growth factor equates to annual growth rate of 0.66 percent. Traffic information from the CDOT Online Transportation Information System (OTIS) website is included in **Appendix B**. This annual growth rate was used to estimate background traffic volumes at the study area key intersections. In addition to this background growth rate and to account for anticipated known future developments, the project volumes associated with the following traffic studies completed by Kimley-Horn were added into the background traffic volumes at each of the study area intersections, as applicable:

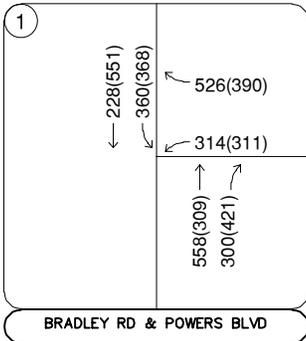

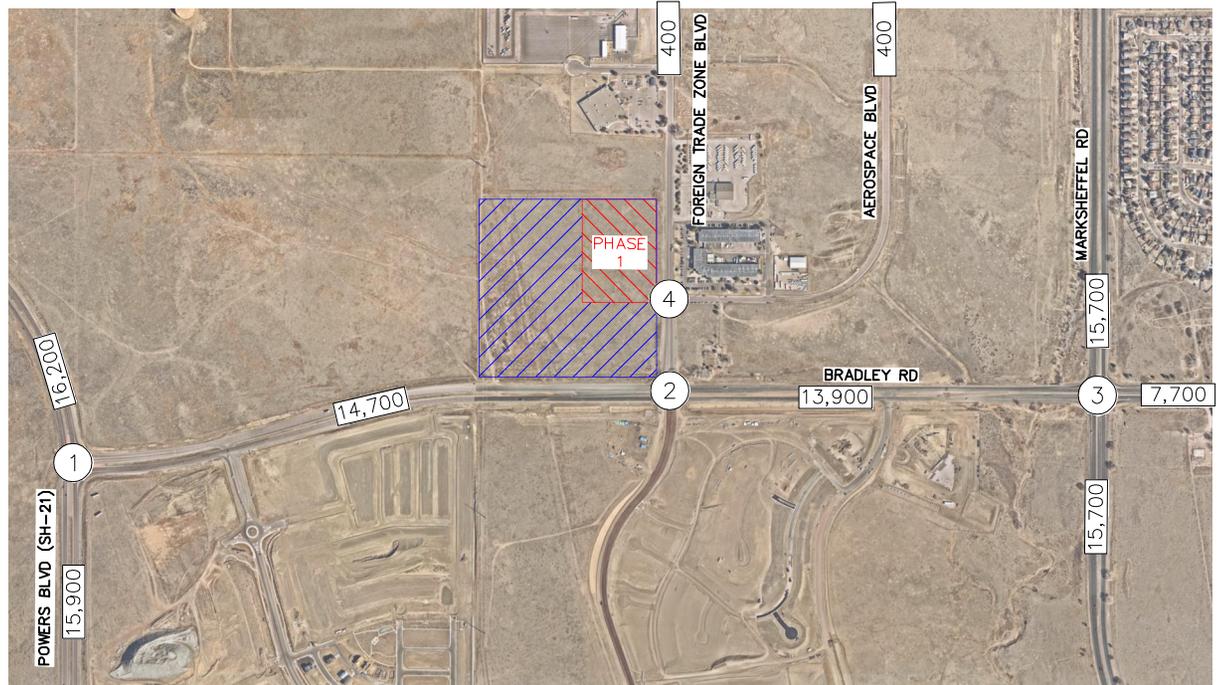

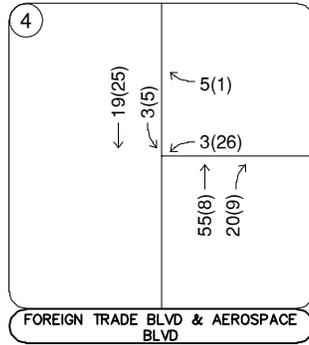

- Peak Airport East, completed in January 2023
- Peak Innovation Park, completed in May 2020
- Crossroads-Meadowbrook-Reagan Ranch, completed in February 2022
- Peak Innovation Park – Proby North, completed in November 2022

Additionally, the Bradley Heights Filing #1 Traffic Impact Analysis completed in April 2021, Waterview East Commercial Traffic Impact and Access Analysis completed in March 2023, Meadowworks Filing 1-4 Development Plan traffic Impact Study completed in March 2022, and the draft Villages at Waterview North Traffic Impact and Access Analysis completed in October 2022 were all included in the respective background traffic volumes associated with the buildout year for each development. A summary of the background traffic volumes and completion years is provided below.

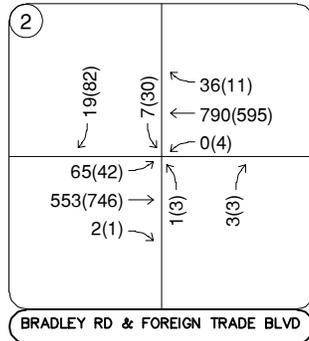

Traffic Study Development	Date of Study	Project Buildout Year
Bradley Heights Filing #1	April 2021	2026, 2040
Waterview East Commercial	March 2023	2026, 2043
Meadoworks Filing 1-4	March 2022	2024
Villages at Waterview North	October 2022	2026, 2040
Peak Airport East	January 2023	(20% in 2030) 2045
Peak Innovation Park	May 2020	2030, 2045
Crossroads-Meadowbrook-Reagan Ranch	February 2022	2026, 2040
Peak Innovation Park – Proby North	November 2022	2025, 2045

It should be noted that these eight (8) anticipated development areas are assumed to account for a substantial portion of the anticipated growth at these intersections over the next several years as development continues in the area. As such, with the use of these background traffic studies in addition to the 0.66 annual background traffic growth rate, it is anticipated that the intersection traffic volumes used in this study are conservative. The Phase I 2025 horizon development traffic volumes include Meadoworks Filing 1-4 and the initial phase of Peak Innovation Park – Proby North and are shown in **Figure 4**. The full buildout 2030 horizon background volumes include traffic volumes associated with all developments listed for the 2025 horizon, as well as Bradley Heights Filing #1, Waterview East Commercial Villages at Waterview North, a portion of Peak Airport East, Phase I of Peak Innovation Park, and Crossroads-Meadowbrook-Reagan Ranch and are shown in **Figure 5**. The anticipated 2045 background traffic volumes with the background studies are shown in **Figure 6**. Excerpts from each background study that was used in the traffic volume determination is included in **Appendix B**.

4.0 PROJECT TRAFFIC CHARACTERISTICS

4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*¹ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report average rates that apply to Strip Retail Plaza (ITE Land Use Code 822), Fast Casual Restaurant (ITE 930), Gas Station with Convenience Store (ITE 945), and Truck Stop (ITE 950) and fitted curve equations that apply to Light Industrial (ITE 110) and General Office Building (ITE 822) for traffic associated with the development.

Since the full buildout of the Colorado Centre Addition No. 3 Annexation is proposed to contain a mix of uses, internal capture trips are expected to occur on site as well.. These internal capture trips are shared trips from vehicles already within the internal street network. These shared trips reduce the number of total external trips and were calculated directly per the ITE procedure. Of note, Phase I in 2025 will not have internal capture trips with a single building proposed.

Colorado Centre Addition No. 3 Annexation is expected to be completed with a Phase I including the northeast development area and full build out for the whole development area. Phase I is anticipated to generate approximately 370 weekday daily trips, with 61 of these trips occurring during the morning peak hour and 36 of these trips occurring during the afternoon peak hour. Accounting for internal capture, the full build out of the development is expected to generate 8,522 weekday daily trips, with 749 of these trips occurring during the morning peak hour and 816 of these trips occurring during the afternoon peak hour with internal capture. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual, 11th Edition – Volume 1: User’s Guide and Handbook*, 2021. **Table 1** summarizes the estimated trip generation for the Colorado Centre Addition No. 3 Annexation. The trip generation worksheets are included in **Appendix C**.

¹ Institute of Transportation Engineers, *Trip Generation Manual*, Eleventh Edition, Washington DC, 2021.

Total Trips with Internal Capture	8,522	499	250	749	340	476	816

4.2 Trip Distribution

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution for the Phase I development is illustrated in **Figure 7**.and for the full buildout is illustrated in **Figure 8**.

4.3 Traffic Assignment

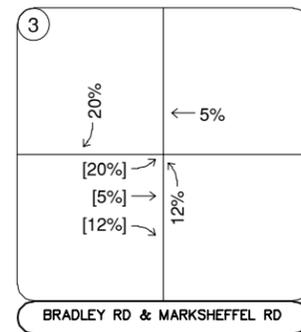

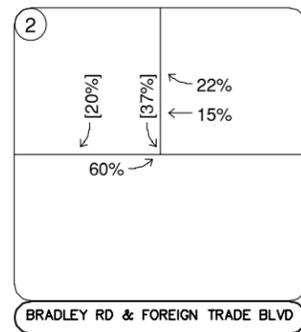

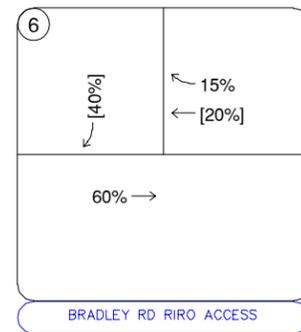

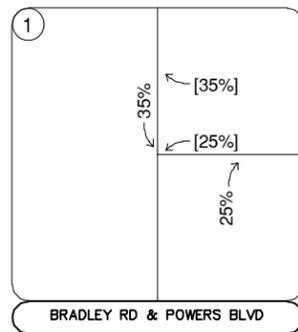

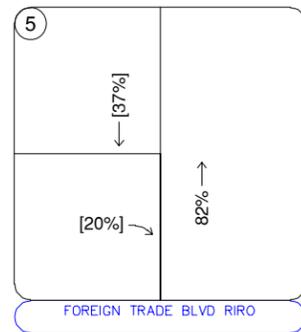

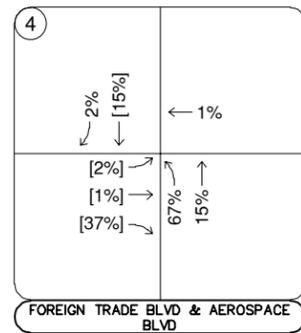

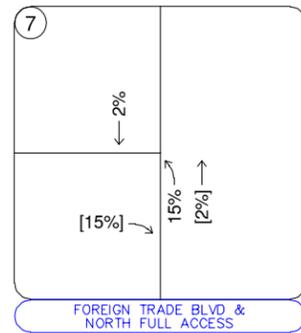

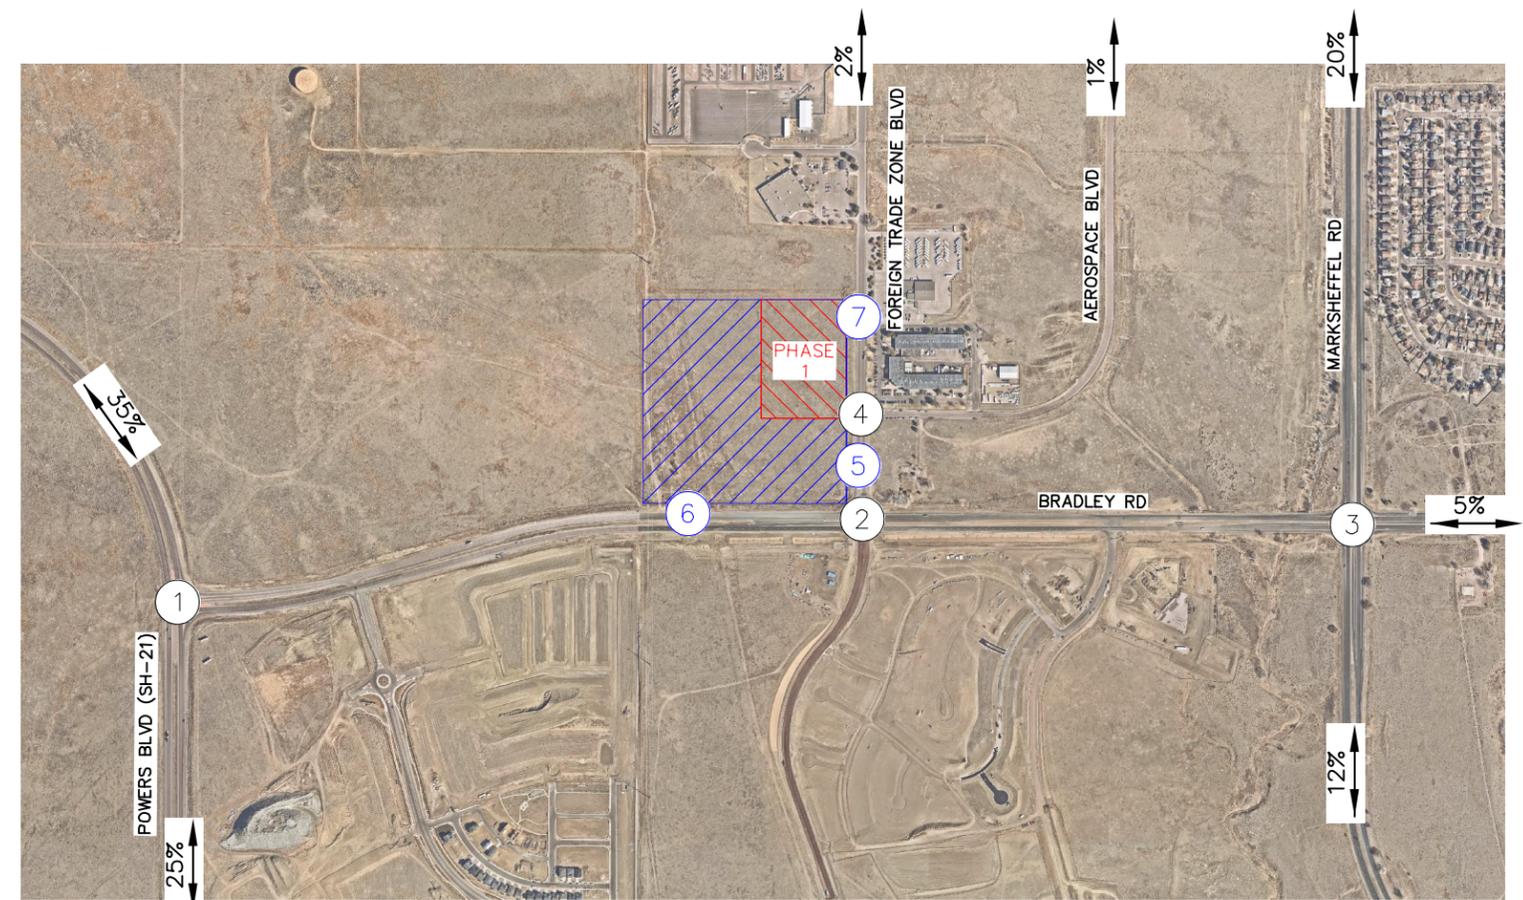

Colorado Centre Addition No. 3 Annexation traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Traffic assignment is shown in **Figure 9** for Lot 5 and **Figure 10** for Lot 4.

 COLORADO SPRINGS, COLORADO
 2045 TOTAL TRAFFIC VOLUMES

5.0 TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2025, 2030, and 2045 development horizons at the identified key intersections. The acknowledged source for determining overall capacity is the *Highway Capacity Manual (HCM)*².

5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). For intersections and roadways in this study area, standard traffic engineering practice recommends overall intersection LOS D and movement/approach LOS E as the minimum desirable thresholds for acceptable operations. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

Table 2 – Level of Service Definitions

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 20	> 10 and ≤ 15
C	> 20 and ≤ 35	> 15 and ≤ 25
D	> 35 and ≤ 55	> 25 and ≤ 35
E	> 55 and ≤ 80	> 35 and ≤ 50
F	> 80	> 50

Definitions provided from the Highway Capacity Manual, Sixth Edition, Transportation Research Board, 2016.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and all-way stop controlled intersections are defined for each approach and for the overall intersection.

² Transportation Research Board, *Highway Capacity Manual*, Sixth Edition, Washington DC, 2016.

5.2 Key Intersection Operational Analysis

Calculations for the operational level of service at the key intersections for the study area are provided in **Appendix D**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 2**. Existing peak hour factors were utilized in the existing and 2025 horizon analysis years while the HCM urban standard of 0.92 was used for the long-term 2045 horizon analysis. The existing heavy vehicle percentages obtained from the turning movement counts were also used in each horizon year. The signalized intersection analysis utilizes the observed cycle lengths with optimized phasing and timing. Synchro traffic analysis software was used to analyze the signalized and unsignalized key intersections for HCM level of service.

Bradley Road and Powers Boulevard (SH-21)

The Bradley Road and Powers Boulevard (SH-21) T-intersection is signalized with protected-permissive left turn phasing on the southbound Powers Boulevard (SH-21) approach. The intersection operates acceptably at LOS B during both peak hours under existing conditions.

By 2030, the surrounding traffic studies identified improving the intersection with dual southbound left turn lanes operating under protected-only left turn phasing. With this configuration the intersection is anticipated to operate with LOS D during the morning and afternoon peak hours.

It is anticipated that the west leg of this intersection will be constructed prior to 2045 as is shown in the ConnectCOS major thoroughfare plan. With the ultimate lane configuration with three northbound and southbound through lanes and two eastbound/westbound through lanes, the intersection is not expected to operate acceptably. The projected traffic volumes for the surrounding area will require the intersection to be grade separated. Of note, the ConnectCOS identifies Powers Boulevard (SH-21) as being a freeway through the Bradley Road intersection. Therefore, this intersection should be studied further in the future to determine the appropriate timing and configuration of the future grade separated intersection. **Table 3** provides the results of the LOS analysis conducted at this intersection.

Table 3 – Bradley Rd & Powers Blvd (SH-21) LOS Results

 \$ = Ultimate Configuration

Bradley Road and Foreign Trade Zone Boulevard

The unsignalized ‘T’-intersection of Bradley Road and Foreign Trade Zone Boulevard operates with stop control on the southbound Foreign Trade Zone Boulevard approach. Under existing conditions, the intersection movements operate with LOS B or better during the morning and afternoon peak hours.

The Bradley Heights development is currently constructing the south leg of the intersection with a separate left, through, and right turn lane by the short-term 2025 horizon. Additionally, the eastbound right turn lane and westbound left turn lanes will be provided. The north leg will match the south leg with three approach lanes designated as a separate left turn lane, one through lane, and a right turn lane. With this configuration, the intersection movements are anticipated to operate with LOS D or better with or without the project traffic in 2025.

By 2030, the intersection is expected to warrant signalization based future traffic projections and MUTCD Four Hour warrants. This recommendation is consistent with the Bradley Height development to the south. As a signalized intersection, the left turn movements should operate with protected-permitted phasing. The intersection is anticipated to operate with LOS c or better as a signal with or without project traffic. The signal warrant sheet is attached in **Appendix F**.

If 2045 volumes are realized, dual eastbound left turn lanes may be needed with traffic volume projections significantly exceeding 300 vehicles per hour. Two northbound receiving lanes will need to be provided with construction of dual eastbound left turn lanes. These can be accommodated within the existing pavement width with the inside through lane becoming dropped

as a forced northbound left turn lane at the Aerospace Boulevard intersection. The intersection is anticipated to operate at an acceptable level of service through the 2045 horizon with the addition of project traffic. **Table 4** provides the results of the LOS analysis conducted at this intersection.

Bradley Road and Marksheffel Road

The intersection of Bradley Road and Marksheffel Road is signalized with protected-permitted phasing on all four approaches to the intersection. As requested by the City of Colorado Springs, the yellow clearance time was set to 5.5 seconds and the all-red time was set to 2.0 seconds for this intersection. The intersection operates at LOS C during both peak hours under existing conditions and is expected to continue to operate acceptably through the 2025 horizon. However,

by 2030, dual eastbound left turn lanes are recommended at this intersection with future traffic volumes exceeding 300 vehicles per hour. With dual eastbound left turn lanes, the intersection may operate at LOS D during both peak hours. By 2045, dual northbound left turn lanes are recommended to be striped within the existing pavement provided. With this recommended intersection configuration, the intersection is anticipated to operate at an acceptable level of service through the 2045 horizon with the addition of project traffic. **Table 5** provides the results of the LOS analysis conducted at this intersection.

Table 5 – Bradley Rd & Marksheffel Rd LOS Results

= Dual EB Left Turn Lanes

= # + Dual NB Left Turn Lanes

Aerospace Boulevard and Foreign Trade Zone Boulevard

The 'T'-intersection of Aerospace Boulevard and Foreign Trade Zone Boulevard operates with stop control on the westbound Aerospace Boulevard approach. The intersection movements operate at LOS A during both peak hours under existing conditions. With development of the project, the west leg will be constructed to access the site. A R1-1 "STOP" sign is proposed to be installed on the eastbound approach, exiting the development. A northbound left turn lane and southbound left turn lane will be striped within the existing pavement width. Of note, Foreign Trade Zone Boulevard provides sufficient pavement width to accommodate a two-way left turn center lane instead of providing turn lane storage pavement markings at the intersections. Separate eastbound and westbound left turn lanes could be provided to decrease the delay on the minor approaches if desired.

If 2045 volumes are realized, the minor westbound approach is expected to operate with long vehicle delays. Therefore, a single lane roundabout may be explored to accommodate future

traffic volumes and potential development on the east leg of the intersection. However, the long delay is reported on the westbound approach, which the project only contributes five (5) peak hours trips. As a single lane roundabout, the intersection is anticipated to operate with LOS B or better during both peak hours. **Table 6** provides the results of the LOS analysis conducted at this intersection.

5.3 Project Accesses

With completion of the Foreign Trade Zone project, two full movement accesses are proposed along the west side of Foreign Trade Zone Boulevard with the first phase of development with one access being located approximately 700 feet north of the Aerospace Boulevard intersection and the second access aligning with Aerospace Boulevard. It is recommended that R1-1 “STOP” signs be provided on the eastbound exiting approaches at both of these accesses. A northbound left turn lane with 150 feet of length is recommended at both of these accesses. Of note, the existing pavement width along Foreign Trade Zone Boulevard can accommodate a three-lane roadway with a center two-way left turn center lane extending from Aerospace Boulevard to the north property limits.

As mentioned above, the west leg of Aerospace Boulevard will be constructed at the intersection with Foreign Trade Zone Boulevard and will serve as primary access to the second phase (buildout) of the site. A right-in/right-out access is also proposed along Foreign Trade Zone Boulevard. An R1-1 “STOP” sign is recommended to be provided on the exiting eastbound approach of the right-in/right-out access with a R3-2 No Left Turn Sign placed below the R1-1 sign. Additionally, a right-in/right-out access is proposed along Bradley Road. It is recommended that a R1-1 “STOP” sign be installed on the exiting southbound approach. A R3-2 No Left Turn sign could be placed below the R1-1 sign and a R6-1L “ONE WAY” sign could be placed within the center median along Bradley Road to further inform drivers of the restricted movement. The existing southbound to westbound right turn acceleration lane at Foreign Trade Boulevard along Bradley Road will be extended as part of the project and drop as a forced right turn lane at the project access along Bradley Road. **Table 7** provides the results of the level of service for the project access intersections. As shown in the table, the project access intersections are anticipated to have all movements operating acceptably during the peak hours in all three (3) horizons.

Table 7 – Project Access Level of Service Results

5.4 CDOT Turn Bay Length Analysis

The threshold for requiring an access permit along Colorado Department of Transportation (CDOT) roadways occurs when project traffic is anticipated to increase the existing access traffic volumes by more than 20 percent. Based on traffic projections, the addition of project traffic on the east leg of Bradley Road along SH-21 (Powers Boulevard) is anticipated to increase existing traffic by more than 20 percent. Therefore, an access permit is anticipated to be needed at this intersection.

SH-21 is categorized as an E-X roadway with a 65 miles per hour speed limit, as such turn lanes requirements are to be designed per the State Highway Access Code (SHAC). According to the State Highway Access Code for category Expressway (E-X) roadways the turn lane warrants are as follows:

- A left turn deceleration lane is required for any access for any access with a projected daily left turn ingress volumes greater than 10. The transitions taper length will be included within the required deceleration length.
- A right turn lane with deceleration and taper lengths is required for any access with a projected peak hour right turn ingress turning volume greater than 10 vph.
- A right turn lane with acceleration and taper lengths is required for any access with a projected peak hour right turning volume greater than 10 vph.

Based on the 2025 and 2030 traffic volume projections, turn lane requirements at the Bradley Road and Powers Boulevard (SH-21) intersection are as follows:

- A southbound left turn lane **is** warranted and exists at the SH-21 and Bradley Road intersection based on projected 2025 background plus project traffic volumes being 475 southbound left turns during the peak hour and the threshold being 10 vpd. Based on the 65 mile per hour speed limit, the deceleration length is 800 feet plus 475 feet of storage (1,275 feet of total turn lane length), plus a 300-foot taper. The existing southbound left turn lane provides 775 feet of length. Therefore, the left turn lane should be extended to meet CDOT turn lane standards. However, dual southbound left turn lanes should be provided with 2030 background plus project traffic volumes reaching 1,126 southbound lefts per hour. Therefore, the dual southbound left turn lanes are recommended to each provide a deceleration length of 800 feet with 530 feet of storage (1,330 feet of total turn lane length) and 300 feet of taper.
- A northbound right turn lane **is** warranted and exists at the SH-21 and Bradley Road intersection based on projected 2025 background plus project traffic volumes being 511 northbound right turns during the peak hour and the threshold being 10 vph. The existing northbound right turn lane provides 550 feet of storage. Based on the 65 mile per hour speed limit, the deceleration length is recommended to provide 800 feet, plus a 300-foot taper. Therefore, the existing turn lane needs to be extended to meet CDOT turn lane standards.
- A northbound acceleration lane along SH-21 from the Bradley Road westbound right turn exists and **is** warranted based on projected 2025 background plus project traffic volumes being 631 westbound right turns during the peak hour and the threshold being 10 vph. The existing acceleration lane provides a length of 650 feet. Based on the 65 mile per hour speed limit, the acceleration lane length is recommended to provide 1,380 feet, plus a 220-foot taper. Therefore, the acceleration lane needs to be extended to meet CDOT turn lane lengths.

5.5 Vehicle Queuing Analysis

A vehicle queuing analysis was conducted for the study area intersections. The queuing analysis was performed using Synchro presenting the results of the 95th percentile queue lengths. Results are shown in the following **Table 8** with calculations provided within the level of service operational sheets of **Appendix D** for unsignalized intersections and **Appendix E** for signalized intersections.

Table 8 – Turn Lane Queuing Analysis Results

Intersection Turn Lane	Existing Turn Lane Length (feet)	2025 Calculated Queue (feet)	2025 Rec. Length (feet)	2030 Calculated Queue (feet)	2030 Rec Length (feet)	2045 Calculated Queue (feet)	2045 Rec Length (feet)

DNE = Does Not Exist; C = Continuous Lane; **Blue** Text = Recommendation; DL = Dual Left Turn Lanes; DR = Dual Right Turn Lanes; T = Taper

The vehicle queues are all anticipated to remain within the existing or recommended turn lane lengths through the 2045 horizon. The new turn lanes along Bradley Road and Foreign Trade Zone Boulevard are based on the turn lane lengths outlined in the City of Colorado Springs Traffic Criteria Manual. The posted speed limit along Bradley Road is 50 miles per hour with a

deceleration length of 235 feet and Foreign Trade Zone Boulevard has a posted speed limit of 25 miles per hour with a deceleration length of 115 feet. The left turn lane storage lengths were determined by the number of peak hour volumes (1 vehicle = 1 foot of storage).

5.6 Improvement Summary

Based on the results of the intersection operational and vehicle queuing analysis, the key intersection recommended improvements and control are shown in **Figure 14** for 2025, **Figure 15** for 2030, and **Figure 16** for 2045 horizons.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analysis presented in this report, Kimley-Horn believes Colorado Centre Addition No. 3 Annexation will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

2025 Recommendations

- Based on traffic projections, the addition of the entire development on the east leg of Bradley Road along SH-21 (Powers Boulevard) is anticipated to increase existing traffic by more than 20 percent. Therefore, an access permit is anticipated to be needed at this intersection with project development.
- Phase I is anticipated to be built by 2025 and be provided by two (2) accesses. The west leg of Aerospace Boulevard will be constructed at the intersection with Foreign Trade Zone Boulevard and will serve as the primary access to the site. A R1-1 “STOP” sign is recommended to be placed on the eastbound approach of this access. Additionally, access to the site is proposed by a full movement access along the west side of Foreign Trade Zone Boulevard, approximately 700 feet north of the Aerospace Boulevard intersection. This north access is recommended to operate with stop control and an R1-1 “STOP” sign should be installed on the eastbound exiting approach. A northbound left turn lane with 150 feet of length is recommended at both of these accesses and will be constructed by the developer. Of note, the existing pavement width along Foreign Trade Zone Boulevard can accommodate a three-lane roadway with a center two-way left turn center lane extending from Aerospace Boulevard to the north property limits; therefore, the developer will construct this center lane along Foreign Trade Zone Boulevard.
- To meet CDOT turn lane lengths, the northbound right turn lane at Bradley Road/Powers Boulevard (SH-21) is recommended to provide a length of 800 feet with a 300-foot taper. Likewise, the southbound left turn lane will need to be extended to 1,275 feet with a 300-foot taper.

- The south leg of the Bradley Road and Foreign Trade Zone intersection is currently being constructed by others. The traffic study for the development to the south identified a separate eastbound right turn lane, westbound left turn lane, and separate left, through, and right turn lanes on the north and south approaches of this intersection.

2030 Recommendations

- The full Foreign Trade Zone development is anticipated to be constructed by 2030 and include two (2) additional accesses. A right-in/right-out access is proposed along the west side of Foreign Trade Zone Boulevard between Bradley Road and Aerospace Boulevard. A R1-1 “STOP” sign is recommended to be provided on the eastbound exiting approach of this right-in/right-out access along Foreign Trade Zone Boulevard. Further, a R3-2 No Left Turn Sign could be placed below the R1-1 sign at the right-in/right-out access. Additionally, a right-in/right-out access is proposed along Bradley Road. It is recommended that a R1-1 “STOP” sign be installed on the exiting southbound approach. A R3-2 No Left Turn sign could be placed below the R1-1 sign and a R6-1L “ONE WAY” sign could be placed within the center median along Bradley Road to further inform drivers of the restricted movement. Through coordination with the City of Colorado Springs, the existing southbound to westbound right turn acceleration lane at Foreign Trade Boulevard along Bradley Road will be extended by the developer and drop as a forced right turn lane at the project access along Bradley Road.
- As stated in the adjacent developments’ traffic studies, the intersection of Bradley Road/Powers Boulevard (SH-21) is recommended to provide dual southbound left turn lanes. The dual southbound left turn lanes will operate with protected-only left turn phasing.
- The intersection of Bradley Road/Foreign Trade Zone Boulevard is anticipated to warrant signalization with buildout of the residential development to the south.

2045 Recommendations

- If 2045 volumes are realized at Bradley Road/Powers Boulevard (SH-21) intersection, the intersection may need to explore further improvements. The ConnectCOS identifies Powers Boulevard (SH-21) as being a freeway through the Bradley Road intersection. Therefore, a future grade separated interchange could be explored by CDOT and the City.

- The Bradley Road and Foreign Trade Zone Boulevard intersection is recommended to provide dual eastbound left turn lanes. These turn lanes can be accommodated within the existing pavement allocated to the second eastbound left turn lane. Two northbound receiving lanes will need to be provided with construction of dual eastbound left turn lanes. These can be accommodated within the existing pavement width with the inside through lane being dropped as a forced northbound left turn lane at the Aerospace Boulevard intersection.
- The Aerospace Boulevard and Foreign Trade Zone Boulevard intersection does not meet signal warrants but may have longer vehicle delays on the westbound approach by 2045. Therefore, a single-lane roundabout could be explored with build out of the development to the east.

General Recommendations

- Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs, Colorado Department of Transportation, and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

- UA 11: General Light Industrial, 425,000 SF
- UA 12: Airport Parking Area
- UA 13: General Light Industrial, 215,000 SF
- UA 14: General Light Industrial, 750,000 SF
- UA 15: Hangar, 1,217,000 SF

During the short-term 2025 horizon, only Peak Innovation Park - Proby North UA 4 is anticipated to be completed, with the other areas developing afterwards. As such, the Peak Innovation Park - Proby North development is anticipated to generate 4,168 weekday daily trips, with 624 of these trips occurring during the morning peak hour and 546 of these trips occurring during the afternoon peak hour in 2025. The project traffic generation for this horizon is shown in **Table 1**.

Table 1 – Peak Innovation Park - Proby North 2025 Traffic Generation

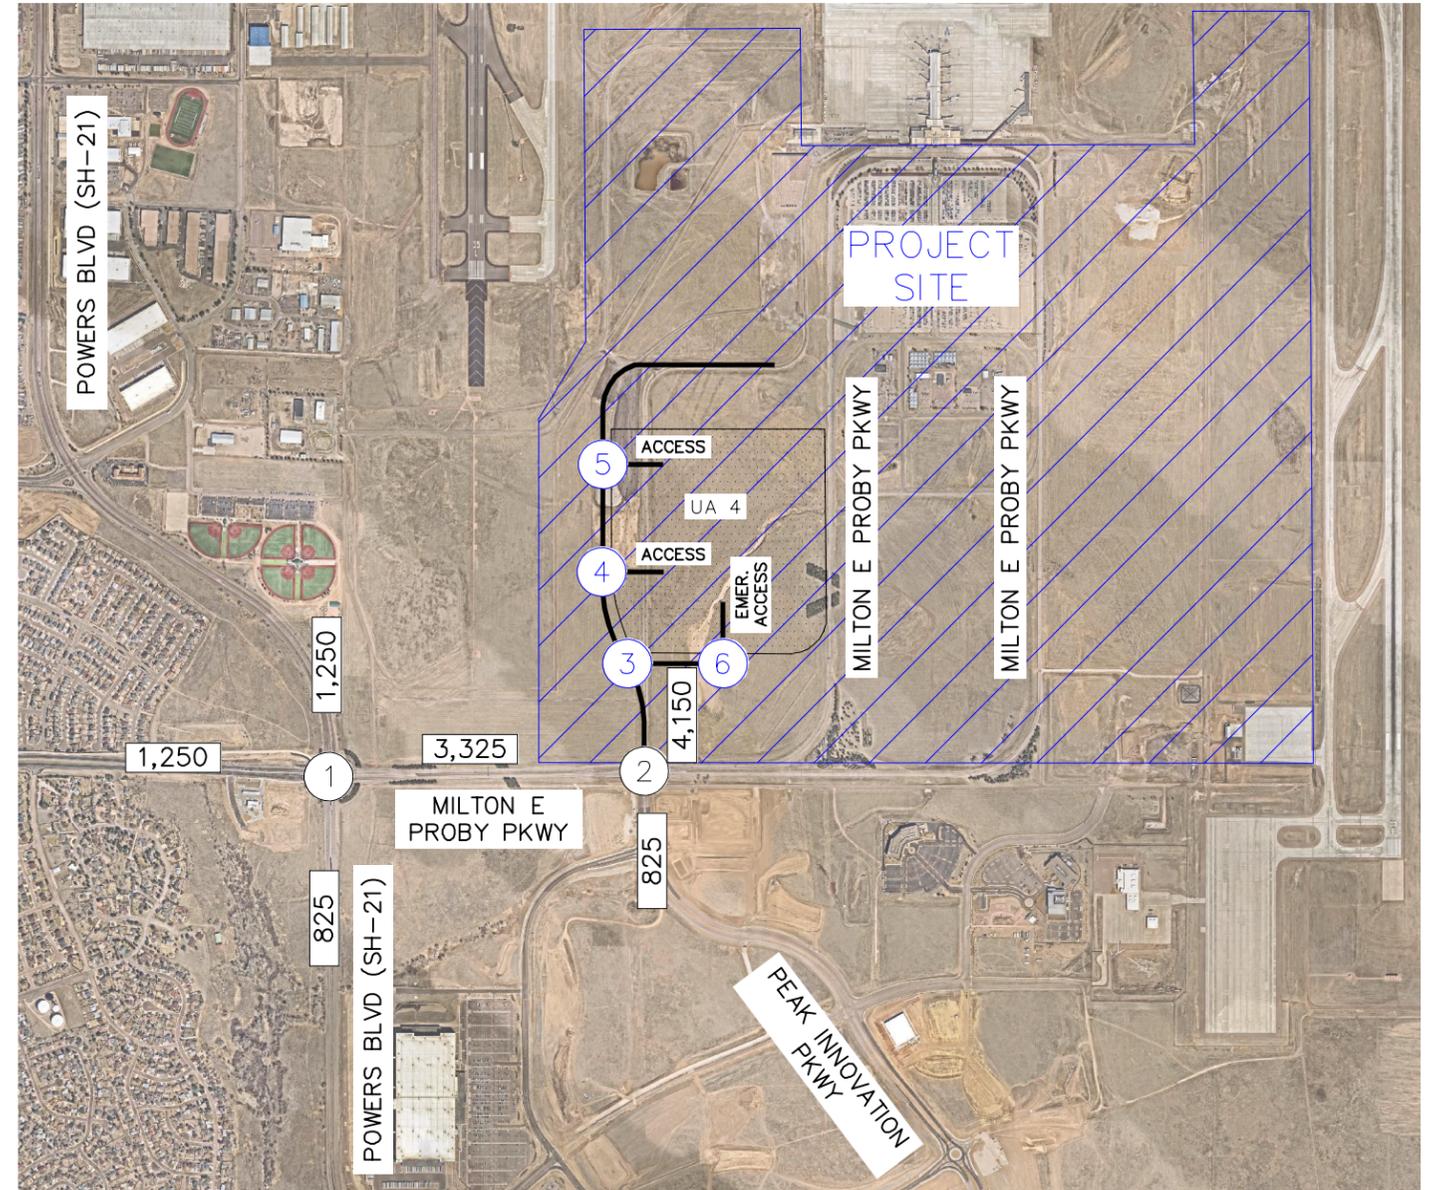

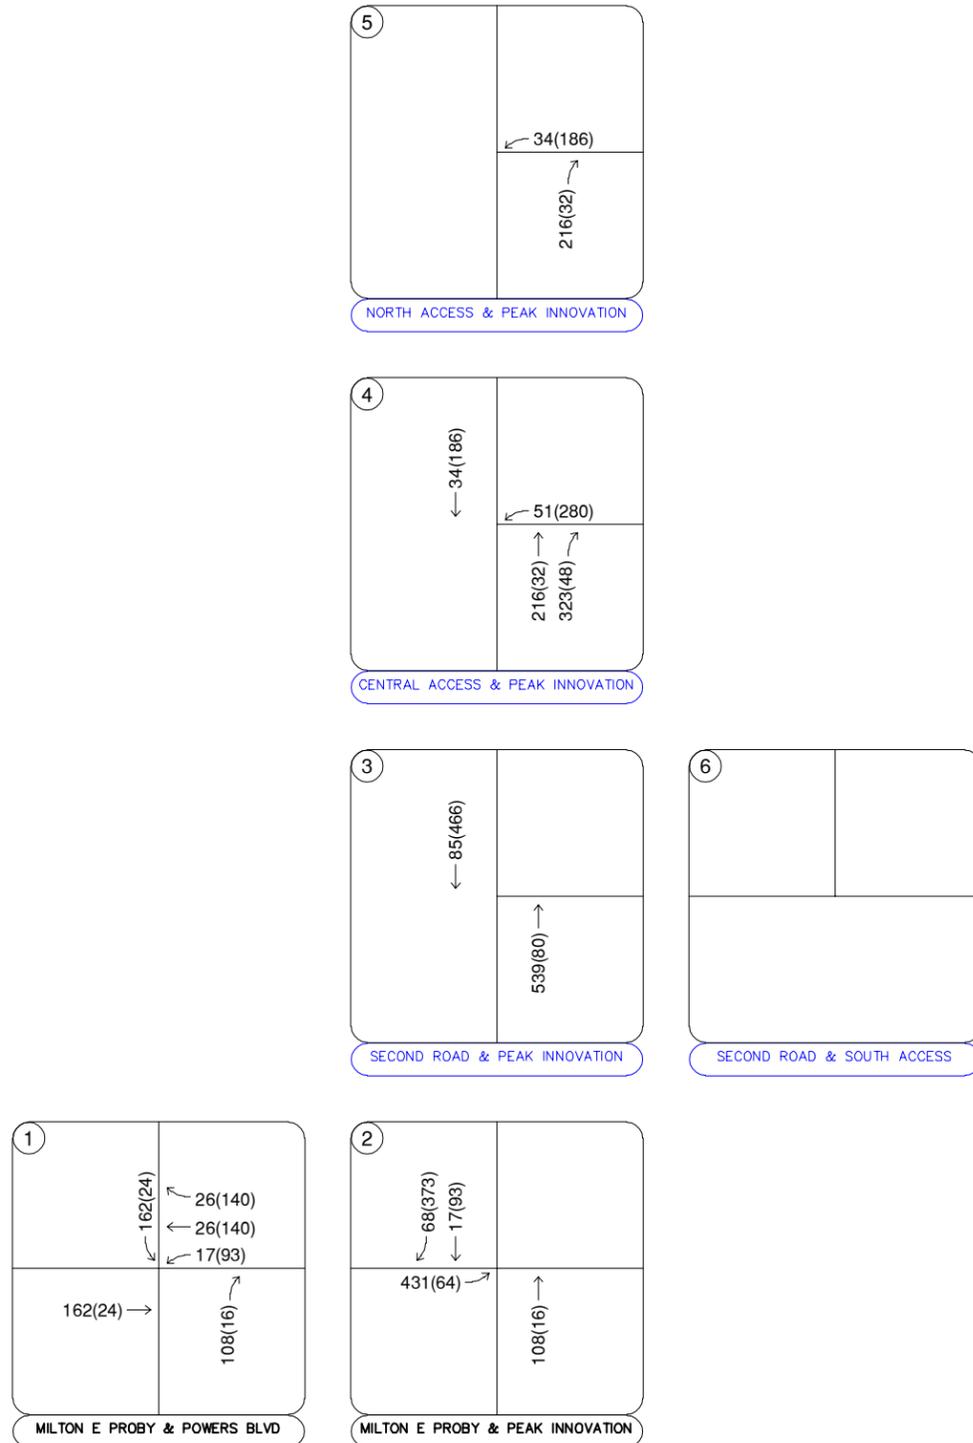

Land Use and Size	Weekday Vehicle Trips						
	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
General Light Industrial (ITE 110) – 805,000 Square Feet	3,920	524	72	596	73	450	523
Data Center (ITE 160) – 250,000 Square Feet	248	15	13	28	7	16	23
Total Project Trips	4,168	539	85	624	80	466	546

With full project buildout, Peak Innovation Park - Proby North is expected to generate approximately 75,036 weekday daily trips, with 4,060 of these trips occurring during the morning peak hour and 7,408 of these trips occurring during the afternoon peak hour. Accounting for pass-by trips, expected net new trips (non pass-by) to the surrounding street network results in approximately 61,360 weekday daily new trips, of which 3,731 are anticipated to be during the morning peak hour and 6,245 during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual, 11th Edition – Volume 1: User's Guide and Handbook*, 2021. **Table 2** summarizes the estimated total trip generation for full buildout of the Peak Innovation Park - Proby North project. The trip generation worksheets are included in **Appendix C**.
