Paint Brush Hills Filings 14 and 15
PCD File No.: P185
Traffic Impact Analysis
(LSC #184630)
October 24, 2018

Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

A handwritten signature in blue ink, appearing to read 'Jeff C. Hodson'.

Date

A handwritten date in blue ink, reading '10/24/18'.

Colorado Springs, CO 80903

RE: Paint Brush Hills Filings 14 and 15
PCD File No: P185
El Paso County, Colorado
Traffic Impact Analysis
LSC #184630

Dear Mr. Mark:

In response to your request, LSC Transportation Consultants, Inc. has prepared this traffic impact analysis for the proposed Paint Brush Hills Filings 14 and 15 residential development in El Paso County, Colorado. As shown in Figure 1, the site is located north-northwest of the Londonderry Drive/Rockingham Drive intersection in unincorporated El Paso County.

REPORT CONTENTS

This report is being prepared as part of a submittal to El Paso County. It identifies the traffic impacts of this development. The report contains the following:

- Existing street conditions.
- Projections of short-term (2023) and long-term (2040) baseline/background traffic volumes.
- The projected average weekday and peak-hour vehicle-trips to be generated by the site.
- The assignment of the site's projected traffic volumes to the key area streets and intersections for the short and long term and the resulting total traffic volumes for the short and long term.
- The resulting traffic impacts including level of service analysis at key intersections and average daily traffic volumes on key street sections in the vicinity of the site.
- Recommended classification for all subdivision streets.
- Recommended lane configuration for the site access points to Londonderry Drive.

PREVIOUS TRAFFIC IMPACT STUDIES

LSC has completed the following traffic studies for Paint Brush Hills (previously Falcon Hills):

- **Falcon Hills Traffic Impact Study** - April 8, 2004: This study included analysis of all of the vacant areas west of Meridian Road and north of Stapleton Drive. Since completion of that report, Falcon Middle School has been completed on the parcel shown as "Falcon High School" in the 2004 report. An elementary school will be constructed in this area; however, it will be placed just north of Falcon Middle School rather than northwest of the north Londonderry Drive/Towner intersection. The key tables and figures from that report have been attached for reference.
- **Paint Brush Hills Filing 13A** - May 14, 2014: The 17 single-family homes in Filing 13A located south of Londonderry Drive and east of Towner Avenue have all been constructed since completion of this report.
- **Paint Brush Hills Filing 13B** - March 26, 2014: This report assumed lots for 21 single-family homes to be located north of Londonderry Drive and west of Towner Avenue. This is the same number of units as assumed for this area in the 2004 overall study. Some of the lots in this filing are currently under construction but none are currently occupied.
- **Scenic View at Paint Brush Hills** - April 7, 2014: This report assumed lots for 90 single-family homes northeast of the intersection of Stapleton Drive and Towner Avenue. Since completion of that report all of the homes have been built in the Scenic View development.
- **Paint Brush Hills Filings 13C-13F** - September 25, 2014: This report was superseded by the Paint Brush Hills Filings 13C and 13D report described below.
- **Paint Brush Hills Filings 13C and 13D** - January 9, 2017: This report assumed lots for 232 single-family homes west of Towner Avenue between the north and south portions of Londonderry Drive. Some of the lots within these filings are currently under construction but none are currently occupied.
- **D-49 Elementary School** - May 30, 2017: This report analyzed an elementary school to be located southeast of the north intersection of Londonderry Drive and Towner Avenue. At buildout the school will support up to 900 students.
- **Paint Brush Hills Filing 13E** – September 28, 2018: This report assumed 158 single-family homes east of the currently proposed Paint Brush Hills Filings 14 and 15.

Table 1 contains a summary of the land uses assumed for the areas west of Meridian Road and north of Stapleton Drive in the 2004 report and the latest traffic impact study completed by LSC in the area (D-49 Elementary School). Figure 2 shows the site plan and traffic analysis zones (TAZ) assumed in the 2004 study. Figure 3 shows the site plan.

LAND USE AND ACCESS

Figure 2 shows the currently existing, approved, and currently proposed developments in the areas west of Meridian Road and north of Stapleton Drive. The currently proposed Paint Brush Hills Filings 14 and 15 are located in the northwest corner of the development. There are existing single-family homes north, west, and south of the site. The currently vacant area east of the site is planned to contain 158 lots for single-family homes to be platted as Paint Brush Hills Filing 13E.

Filings 14 and 15 are planned to contain 224 single-family homes. Access is proposed via an extension of Keating Drive north of Rockingham Drive and through Paint Brush Hills Filing 13E to an intersection with Londonderry Drive aligning with Devoncove Drive.

The Paint Brush Hills Filings 14 and 15 area was included as part of TAZ 11 in the 2004 overall TIA. As shown in Table 1 the currently proposed plan for these filings includes about 114 more lots in this area than was assumed in the 2004 overall TIA. Including other changes to the residential land uses within Paint Brush Hills made since completion of the 2004 report, the total number of dwelling units within the entire study area represents an increase of 14 dwelling units.

Changes have also been made to the commercial and educational land uses within the Paint Brush Hills development. The 2004 overall TIA included 93 lots for single-family homes and an elementary school in TAZ 12. The school site is now located southeast of the north intersection of Towner Avenue and Londonderry Drive and the newly constructed Bennett Ranch Elementary School is now open. The 2004 study included 8.8 acres on the north end of Towner Avenue that were assumed to be developed as a “shopping center” with 85,000 square feet of floor space. A 2.2-acre portion of this area is now included in the D-49 elementary school site and it is now thought that the remaining six acres will most likely be developed with a lower intensity land use such as a church with a daycare. The 2004 study assumed a high school with about 700 students and an elementary school with 500 students. Since completion of that study, Falcon Middle School was relocated to the former Falcon High School campus. The middle school current enrollment is about 900 students. The new Bennett Ranch Elementary School is planned to serve up to 900 students.

Sight Distance

Figure 4 shows the sight distance analysis for the existing intersection of Rockingham Drive/Londonderry Drive and the future intersection that will align with Devoncove Drive/Londonderry Drive. Based on the design speed of 40 miles per hour, the required intersection sight distance at these intersections is 445 feet and the required stopping sight distance for westbound traffic on Londonderry Drive is 305 feet. As shown on the figure there is adequate sight distance for both of these intersections.

Pedestrian and Bicycle Route Analysis

Figure 5 shows a pedestrian and bicycle route analysis for the school. There are currently no sidewalks adjacent to Londonderry Drive. Sidewalks may need to be constructed on the north side of Londonderry Drive from Rockingham Drive to the school crossing for Bennett Ranch Elementary School just west of Tottenham Court. A designated school pedestrian crossing should be added on the west leg of the Londonderry/Towner intersection or the west leg of the east site access to Londonderry.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The area roadways in the site's vicinity are shown on Figures 1 and are described below.

- **Londonderry Drive** is a two-lane Urban Residential Collector that currently extends west from Eastonville Road to Towner Avenue and then loops to the south to intersect Towner Avenue again about one-half mile to the south. The posted speed limit adjacent to the site is 35 miles per hour (mph).
- **Meridian Road** extends north from South Blaney Road to County Line Road. Meridian Road is shown as a four-lane Minor Arterial south of Rex Road and north of Stapleton Drive and a two-lane Minor Arterial north of Rex Road on the *El Paso County Major Transportation Corridors Plan (MTCP)* and *El Paso County Corridor Preservation Plan (CPP)*. Meridian has been upgraded to four lanes between Stapleton and Indian Paint Trail with a PPRTA project.
- **Stapleton Drive** is classified as a four-lane Urban Principal Arterial on the El Paso County MTCP. However, Stapleton Drive in the vicinity of the site is a two-lane roadway. Stapleton Drive extends east from just west of Towner Drive across US Highway 24 to Curtis Road. Longer-term plans show Stapleton extended west to connect with Briargate.
- **Towner Avenue** is a 40-foot-wide Urban Residential Collector street (within Paint Brush Hills) that extends south from Londonderry Drive to just south of Woodmen Hills Drive. The posted speed limit is 35 miles per hour.
- **Keating Drive** is a north/south local street that serves Paint Brush Hills Filing 11 in the southwest area of the Paint Brush Hills development. Keating Drive is planned to be extended north to serve Filing 13E and Filings 14 and 15.
- **Devoncove Drive** is a planned north/south local street that will serve Paint Brush Hills Filing 13D located on the inside of the west Londonderry Loop. Devoncove Drive is planned to be extended north of Londonderry Drive through Paint Brush Hills Filings 14 and 15 and connecting to Paint Brush Hills Filing 13E.

Existing Traffic

Figure 6 shows the recent traffic volumes at the intersections of Londonderry Drive and Towner Avenue (north and south) and Stapleton Drive and Towner Avenue. These traffic volumes are based on traffic counts conducted by LSC in May and September 2018. The traffic count reports are attached.

Existing Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 2 shows the level of service delay ranges.

| Table 2 | | | |
|------------------|--|--------------------|---|
| Level of Service | Signalized Intersections | | Unsignalized Intersections |
| | Average Control Delay (seconds per vehicle) | V/C ⁽¹⁾ | Average Control Delay (seconds per vehicle) ⁽²⁾ |
| A | 10.0 sec or less | less than 0.60 | 10.0 sec or less |
| B | 10.1-20.0 sec | 0.60-0.69 | 10.1-15.0 sec |
| C | 20.1-35.0 sec | 0.70-0.79 | 15.1-25.0 sec |
| D | 35.1-55.0 sec | 0.80-0.89 | 25.1-35.0 sec |
| E | 55.1-80.0 sec | 0.90-0.99 | 35.1-50.0 sec |
| F | 80.1 sec or more | 1.00 and greater | 50.1 sec or more |

(1) Source: *Transportation Research Circular 212*
(2) For unsignalized intersections if V/C ratio is greater than 1.0 the level of service is LOS F regardless of the projected average control delay per vehicle.

The intersections of Londonderry Drive and Towner Avenue (north and south intersections) and Stapleton Drive and Towner Avenue were analyzed to determine the existing levels of service using the unsignalized method of analysis procedures outlined in the *Highway Capacity Manual, 6th Edition* by the Transportation Research Board. Figure 6 shows the level of service analysis results. As shown on the figure, all movements these intersections are level of service C or better during the peak hours. The level of service (LOS) reports are attached.

TRIP GENERATION

The site-generated vehicle-trips were estimated using the nationally published trip generation rates from *Trip Generation, 10th Edition, 2017* by the Institute of Transportation Engineers (ITE).

Table 3 shows a comparison of the trip generation estimates for the portion of the Paint Brush Hills development served by Londonderry Drive from the *Falcon Hills Traffic Impact Analysis* by LSC dated April 8, 2004, a trip generation estimate for those same areas assumed in the *D-49 Elementary School Traffic Impact Analysis* by LSC dated May 30, 2017 and an estimate based on the existing, approved, currently proposed and future land uses for this area. As shown on the table the current trip generation estimate is much lower than the estimate assumed in the *Falcon Hills Traffic Impact Analysis*. The largest differences are due to the land use assumptions for the commercial parcel located southwest of the Towner/Londonderry (north) intersection. The current trip generation estimate shows about 935 more vehicles per day than the estimate assumed in the D49 Elementary School report. This increase is due to a currently proposed increase in the number of lots for Filing 14 located just west of the site.

Table 4 shows the trip generation estimate for Filings 14 and 15 only. Filings 14 and 15 are expected to generate about 2,115 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 41 vehicles would enter and 124 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:15 and 6:15 p.m., about 140 vehicles would enter and 82 vehicles would exit the site.

BACKGROUND TRAFFIC

Background traffic is the traffic estimated to be on the area streets and roadways without consideration of the proposed development. Figure 7 shows the projected background traffic volumes for the short term (2023). These background traffic volumes were based on estimates of traffic projected to be generated (or currently generated) by Paint Brush Hills Filing 4 through Filing 13E, Scenic View at Paint Brush Hills, Falcon Middle School, and the recently opened D49 elementary school. The traffic volumes for the developments not yet built out were taken from their respective traffic studies completed by LSC. The short-term scenario assumes Stapleton Drive not yet extended west from its current terminus.

Figure 8 shows the projected 2040 background traffic volumes. These volumes assume buildout of the Paint Brush Hills development. The 2040 background traffic volumes also assume Stapleton Drive has been extended west. Although future background volumes are often estimated using growth rates, this method is not applicable for this study. Only traffic generated by uses within the Paint Brush Hills development are anticipated to use Towner Drive north of Stapleton Drive and Londonderry Drive west of Towner Drive. Future traffic using these streets was estimated by first adjusting the existing traffic volumes to reroute them to new paths following the extension of Stapleton Drive to the east and second adding estimates of future traffic to be generated by buildout of parcels within Paint Brush Hills. Estimates of future traffic has been based on the trip

generation estimate shown in Table 3. A growth factor is also not able to be applied to Stapleton Drive as it currently terminates at Towner Avenue. Through traffic on Stapleton Drive has been estimated by LSC based on traffic studies completed in the area and the current *Major Transportation Corridors Plan*.

DIRECTIONAL DISTRIBUTION

The directional distribution of the site-generated traffic volumes on the area roadways is an important factor in determining the site's traffic impacts. Figure 9 shows the short-term and long-term external directional distribution estimates for the site-generated traffic volumes. The estimates have been based on the following factors: the site's location with respect to the nearby employment, commercial, schools, and activity centers and the balance of the Falcon and Colorado Springs metropolitan area; the site's proposed land use; the site's proposed access points; and the phasing of the existing and future roadway system serving the site. The long-term distribution takes into account the extension of Stapleton west to Briargate Parkway.

SITE-GENERATED TRAFFIC

Figures 10 and 11 show the projected short-term and long-term site-generated traffic volumes, respectively. The site-generated traffic volumes were calculated by applying the directional distribution percentages (from Figure 9) to the trip generation estimates from Table 4.

TOTAL TRAFFIC

Figure 12 shows the projected short-term total traffic volumes. The short-term total traffic volumes are the sum of the short-term background traffic volumes (from Figure 7) plus the short-term site-generated traffic volumes from Figure 10.

Figure 13 shows the projected 2040 total traffic volumes. The 2040 total traffic volumes are the sum of the 2040 background traffic volumes (from Figure 8) plus the long-term site-generated traffic volumes from Figure 11.

PROJECTED LEVELS OF SERVICE

The key area intersections were analyzed to determine the projected levels of service for the background and total traffic volumes based on the unsignalized method of analysis procedures from the *Highway Capacity Manual, 6th Edition* by the Transportation Research Board. Figures 7, 8, 12, and 13 show the level of service analysis results. The level of service reports are attached.

Towner/Stapleton

The intersection of Towner/Stapleton is currently all-way Stop-sign controlled. All movements at this intersection are projected to operate at LOS B or better during peak hours based on the projected short-term total traffic volumes. By 2040 it was assumed that Stapleton Drive would

be extended west as Briargate Parkway and this intersection would become four-way signal controlled. As a signalized intersection all movements are projected to operate at LOS D or better for all movements during the peak hours.

Towner/Londonderry

All movements at the north and south intersections of Towner/Londonderry are projected to operate at LOS D or better during the peak hours based on the projected short-term and 2040 total traffic volumes.

Londonderry Intersections

All of the site access intersections to Londonderry Drive are projected to operate at LOS B or better for all movements based on the projected short-term and 2040 total traffic volumes as two-way stop-sign-controlled intersections.

STREET CLASSIFICATIONS

All of the Paint Brush Hills Filings 14 and 15 internal streets should be classified as Urban Local.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

- Filings 14 and 15 are expected to generate about 2,115 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour about 41 vehicles would enter and 124 vehicles would exit the site. During the afternoon peak hour about 140 vehicles would enter and 82 vehicles would exit the site.
- The current trip generation estimate for the overall Paint Brush Hills development is much lower than the estimate assumed in the *Falcon Hills Traffic Impact Analysis*. The largest differences are due to the land use assumptions for the commercial parcel located southwest of the Towner/Londonderry (north) intersection. The current trip generation estimate shows about 935 more vehicles per day than the estimate assumed in the D49 Elementary School report.

Street Link Average Daily Traffic (ADT)

- Londonderry Drive and Towner Avenue are both classified as Urban Residential Collector streets. The design ADT for an Urban Residential Collector is 10,000 vehicles per day. As shown in Figure 12 the projected buildout ADT on Londonderry Drive is about 4,015 vehicles per day just west of the north Towner Avenue intersection and 7,960 vehicles per day just east of that intersection. The projected buildout ADT on Towner Avenue is 5,175 just south

of the north intersection of Londonderry/Towner and 9,575 vehicles per day just north of Stapleton Drive.

Level of Service

- The intersection of Stapleton/Towner is currently all-way Stop-sign controlled. All movements at this intersection are projected to operate at LOS B or better during peak hours based on the projected short-term total traffic volumes. By 2040 it was assumed that Stapleton Drive would be extended west as Briargate Parkway and this intersection would become a four-way signal controlled. As a signalized intersection all movements are projected to operate at LOS D or better for all movements during the peak hours.
- All movements at the north and south intersections of Towner/Londonderry are projected to operate at LOS D or better during the peak hours based on the projected short-term total traffic volumes.
- The intersections of Rockingham Drive/Londonderry Drive and Devoncove Drive/Londonderry Drive are projected to operate at LOS B or better for all movements based on the projected short-term and 2040 total traffic volumes as two-way stop-sign-controlled intersections.

Intersection Lane Configurations

- Based on the criteria contained in the *El Paso County Engineering Criteria Manual (ECM)* and the projected short-term and 2040 total traffic volumes, no auxiliary turn lanes would be required on Londonderry Drive approaching Devoncove Drive.
- Based on the criteria contained in the *El Paso County Engineering Criteria Manual (ECM)* and the projected short-term total traffic volumes, a northbound left-turn lane would be required on Londonderry Drive approaching Rockingham Drive. Londonderry Drive is currently 40 feet wide in the vicinity of this intersection and could be restriped to provide a northbound left-turn lane, if necessary.
- Based on the criteria contain in the ECM and the projected 2040 total traffic volumes, a southbound right-turn deceleration lane would be required on Londonderry Drive approaching Rockingham Drive based on the projected right-turn volume. However, at this particular location, the westbound through volume is low and is projected to remain low at buildout. Although the ECM does not have a provision for waiving the need for a right-turn deceleration lane when the through traffic is below a certain level, the State of Colorado Highway Access code provides a waiver to right-turn lane requirements when the 20th year predicted volume in the travel lane is below 150 vehicles per hour. As the southbound traffic volume is projected to be only 77 vehicles per hour, LSC recommends that the requirement for a right-turn deceleration lane be waived. A deviation request form for this was submitted with Filing 13E on October 24, 2018.

Proposed Subdivision Street Classifications

- As shown in Figure 14 all proposed subdivision streets will be classified as Urban Local Low Volume or Urban Local streets. Note: The connecting street Keating Drive to the south is a Local street even though it has a 60-foot right-of-way width. It is our understanding that this older street was platted prior to the ECM Local street right-of-way criteria of 50-foot right-of-way widths plus two five-foot public improvement easements.

County Road Impact Fee

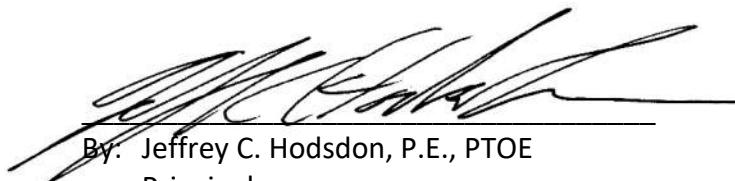

- The applicant will be required to participate in the County Road Impact Fee Program. Assuming this development joins the ten-mil PID, the building permit fee portion is \$923 per single-family dwelling unit. The net fee for the proposed 224 lots in Filings 14 and 15 would be \$206,752.

Colorado Springs, CO 80903

RE: Falcon Hills
Updated March 2004
LSC #036080

Dear Mr. Fong:

In response to your request, we have prepared this updated traffic impact analysis report for Falcon Hills. A previous traffic study was prepared for Falcon Hills entitled *Traffic Impact Report For Falcon Hills* dated May 3, 2000 by URS Corporation. Falcon Hills is located west of Meridian Road and north of Stapleton Road in El Paso County, Colorado. The site location and vicinity are shown in Figure 1. The purpose of this report is to present an updated study based on the current land use plan, including the specific separate traffic impacts for each of the various landowners within Falcon Hills as well as for the area as a whole, and to identify the short- and long-term transportation system improvements adjacent to Falcon Hills.

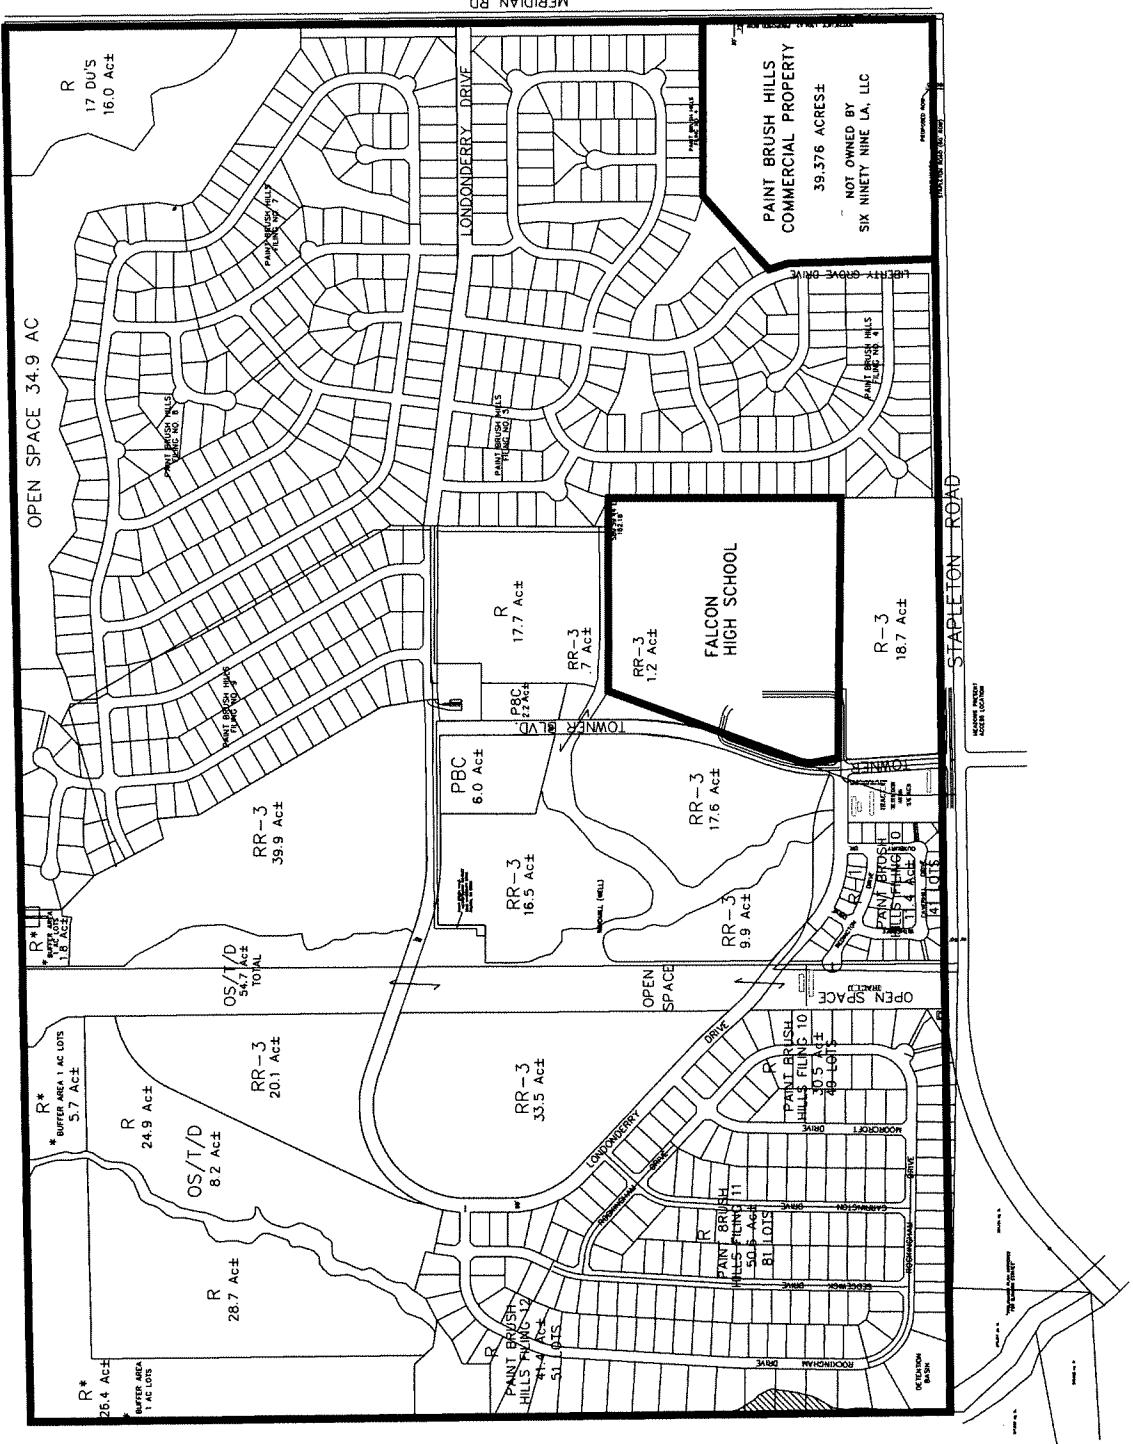

This report contains an analysis of the traffic estimated to be generated by each of the existing and future proposed development parcels within Falcon Hills, estimates of the projected site-generated traffic volumes on the existing and future adjacent roadway system, and the impacts of additional traffic on the area roadways and intersections by ownership land use type. The report also identifies recommendations for auxiliary turn lanes, traffic signals, and other roadway system improvements for the short and long term.

LAND USE PLAN AND OWNERSHIP

Falcon Hills is located west of Meridian Road and north of Stapleton Road. Aside from existing developed individual lots, of which there were about 497 in August 2003, there are three major owners of developing and undeveloped land within Falcon Hills. These owners are **Six Ninety Nine LA, LLC; School District 49; and Roger Barrack/Scott Smith**. These three owners will each contribute to a portion of the total traffic impacts of future development within Falcon Hills. Thus, the idea is that each would contribute to an equitable portion of the total cost of street improvements necessitated by the traffic generated.
