FOR STERLING RANCH ROAD

March 2022

ENGINEER'S STATEMENT:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Mike Bramlett, Colorado P.E. 32314
For and On Behalf of JR Engineering, LLC

DEVELOPER'S STATEMENT:

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

Business Name: SR Land, LLC

APPENDIX

Appendix A – Vicinity Map, Soil Descriptions, FEMA Floodplain Map

Appendix B – Hydrologic and Hydraulic Calculations

Appendix C – Reference Material

Appendix D – Drainage Maps

PURPOSE

This document is the Drainage Letter for Sterling Ranch Road and Briargate Parkway Interim Plan. The purpose of this report is to identify on-site and off-site drainage patterns, storm sewer, culvert and inlet locations, areas tributary to the site, and to safely route developed storm water to adequate outfall facilities during the interim condition of development and the construction of Sterling Ranch Road and Briargate Parkway.

GENERAL SITE DESCRIPTION

GENERAL LOCATION

Sterling Ranch and Briargate Parkway Interim Plan (hereby referred to as the “site”) is a proposed development within the Sterling Ranch master planned community with a total area of approximately 376 acres that are presently undeveloped.

The site is located in portions of Section 33 & 34, Township 12 South, Range 65 West of the Sixth Principal Meridian in El Paso County, State of Colorado. The site is bounded by Sand Creek to the west, Sterling Ranch Road cuts through the site, and future development land borders the site to the south, north and east. Refer to the vicinity map in Appendix A for additional information.

DESCRIPTION OF PROPERTY

In the interim condition, the property will be roadway (approximately 17 acres), open space and drainage tracts (approximately 359 acres). The site is comprised of variable sloping grasslands that generally slope(s) downward to the southwest at 1 to 6% towards the Sand Creek tributary basin.

Soils for this project are classified as Blakeland Loamy Sand (8) and Gravelly Sandy Loam (19). These soils are characterized as hydrologic soil types Type A. Group A soils exhibit high infiltration rates when thoroughly wet, and consist mainly of deep, well drained to excessively drained sands or gravelly sands. Pring Coarse Sandy Loam (71) is characterized as Hydrologic Soil Types “B”. Group B soils exhibit moderate infiltration rate when thoroughly wet, and consist primarily of deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. Refer to the soil survey map in Appendix A for additional information.

Sand Creek runs west of the site and crosses Briargate Parkway at the north edge and Sterling ranch Road at the southern edge. The site is a tributary to Sand Creek. Currently, Kiowa Engineering Corp. is performing studies and plans to address Sand Creek stabilization.

There are no known irrigation facilities located on the project site.

FLOODPLAIN STATEMENT

Based on the FEMA FIRM Maps number 08041C0533G, dated December 7, 2018, the far western portion of the project site that is adjacent to the existing drainage way lies within Zone AE. Zone AE is defined as area subject to inundation by the 1-percent-annual-chance flood event. All of the proposed development lies within Zone X. Zone X is defined as area outside the Special Flood Hazard Area (SFHA) and higher than the elevation of the 0.2-percent-annual-chance (or 500-year) flood. No grading operations are proposed within the Zone AE at this time. FIRM Maps have been presented in Appendix A.

EXISTING DRAINAGE CONDITIONS

MAJOR BASIN DESCRIPTIONS

The site lies within the upper Sand Creek Drainage Basin based on the "Sand Creek Drainage Basin Planning Study" (DBPS) completed by Kiowa Engineering Corporation in January 1993, revised March 1996. The Sand Creek Drainage Basin covers approximately 54 square miles and is divided into 7 major sub-basins. The site is within the respective upper basin Sand Creek sub-basin as shown in Appendix C. The Sand Creek DBPS assumed the Sterling Ranch East of Sand Creek property to have a "single family residential" use for the majority of the site.

The site was also previously studied in the Master Development Drainage Plan (MDDP) for Sterling Ranch prepared by M&S Civil Consultants, INC in October 2018. Excerpts from this report can be found in Appendix C. The Sterling Ranch MDDP assumed a mix of low density to medium density and single family residential lots ranging in size from 0.1 to 1.0 acres for the Sterling Ranch Phase 3 site. The proposed Sterling Ranch master plan is a mix of; school, multi-family, single-family, and parks and open space. The proposed drainage on the site closely follows the approved "Master Development Drainage Plan for Sterling Ranch", (MDDP). The site is tributary to Pond FSD14A, and Pond FSD11B as well as future ponds FSD16A AND FSD14B. Interim ponds will be developed before final site design and are shown in this report.

The site generally drains from north to southwest. Currently, the site is used as pasture land for cattle. Sand Creek is located west of the site running north to south. This reach of drainage conveyance is not currently improved. Currently, Kiowa is performing studies and plans to address Sand Creek stabilization adjacent to the site.

EXISTING SUB-BASIN DRAINAGE

The existing / predeveloped condition of the site was broken into four major basins. The basin and sub-basin delineation is shown in the existing drainage map in Appendix E and is described as follows:

Sub-basin EX1 ($Q_5 = 24.0\text{cfs}$, $Q_{100} = 176.3\text{cfs}$) is 178.68 acres and 2 percent impervious consists of the northern portion of Sterling Ranch Phase 3. Runoff from this basin sheet flows from the north to south to design point EX1 at the northern edge of future Briargate Parkway.

Sub-basin EX2 ($Q_5 = 2.8\text{cfs}$, $Q_{100} = 20.6\text{cfs}$) is 14.67 acres and 2 percent impervious and consists the northeast portion of Sterling Ranch Phase 3. Runoff from this basin sheet flows south to design point EX2 located just north of future Briargate Parkway.

Sub-basin EX3 ($Q_5 = 21.7\text{cfs}$, $Q_{100} = 159.2\text{cfs}$) is 160.58 acres and 2 percent impervious and is located onsite in the central part of the site. Runoff from this basin drains southwest to design point EX3 along the eastern edge of Sand Creek.

Sub-basin EX4 ($Q_5 = 6.0\text{cfs}$, $Q_{100} = 44.3\text{cfs}$) is 36.46 and is 2 percent impervious and is located on the eastern portion of the site. Runoff from this basin sheet flows southwest to design point EX4 located just east of future Sterling Ranch Road.

PROPOSED DRAINAGE CONDITIONS

PROPOSED SUB-BASIN DRAINAGE

The proposed site was broken into two major basins: Basin A (Briargate Parkway), Basin B (Sterling Ranch Road), and two offsite basins. The proposed basin (and sub-basin) delineation is shown on the drainage basin map within Appendix E and is described as follows.

Basin A1 ($Q_5 = 10.5\text{ cfs}$, $Q_{100} = 21.2\text{cfs}$) is 4.95 acres and 67 percent impervious and is comprised of Briargate Parkway. Runoff from this basin drains to design point 1, an on grade inlet at the northeast corner of the basin. Collected runoff is piped east to pond FSD16 and will outfall to Sand Creek.

Basin A2 ($Q_5 = 10.4\text{ cfs}$, $Q_{100} = 21.1\text{ cfs}$) is 4.97 acres and 68 percent impervious is comprised of Briargate Parkway. Runoff from this basin drains to design point 2, an on grade inlet on the southeast corner of the basin. Collected runoff is piped east to pond FSD16 and will outfall to Sand Creek.

Basin A3 ($Q_5 = 5.1\text{ cfs}$, $Q_{100} = 10.5\text{ cfs}$) is 2.01 acres and 62 percent impervious is comprised of Briargate Parkway. Runoff from this basin drains to an on grade inlet located at design point 6 in confluence with uncaptured upstream flows from basin A2. Collected runoff from the inlet as well as from DP5, will be piped to northeast pond FSD16 and will outfall to Sand Creek.

Basin A4 ($Q_5 = 4.1\text{ cfs}$, $Q_{100} = 8.5\text{ cfs}$) is 1.63 acres and 66 percent impervious is comprised of Briargate Parkway. Runoff from this basin drains to an on grade inlet located at design point 4 in

confluence with uncaptured upstream flows from basin A1, Collected runoff is piped north to a proposed manhole at design point 5. The flow will be piped to future detention pond FSD16 and will outfall to Sand Creek.

Basin B1 ($Q_5= 5.2$ cfs, $Q_{100}=10.7$ cfs) is 1.9 acres and 65 percent impervious is comprised of Sterling Ranch Road. Runoff from this basin drains to an on grade inlet at design point 8 in confluence with uncaptured upstream flows from basin A4. Collected runoff is piped southwest then conveyed via a proposed swale to pond FSD14A and will outfall to Sand Creek.

Basin B2 ($Q_5= 5.1$ cfs, $Q_{100}=10.9$ cfs) is 2.06 acres and 60 percent impervious is comprised of Sterling Ranch Road. Runoff from this basin drains to an on grade inlet at design point 7. Collected runoff is piped southwest then conveyed via a proposed swale to pond FSD14A and will outfall to Sand Creek.

Basin B3 ($Q_5= 3.3$ cfs, $Q_{100}=6.8$ cfs) is 1.27 acres and 64 percent impervious is comprised of Sterling Ranch Road. The runoff from this basin drains to an on grade inlet located at design point 11 in confluence with uncaptured upstream flows from basin B1. The flow will be piped northwest to design point 11 then conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B4 ($Q_5= 3.3$ cfs, $Q_{100}=6.8$ cfs) 1.33 acres and 61 percent impervious is comprised of Sterling Ranch Road. The runoff from this basin drains to an on grade inlet located at design point 10 in confluence with uncaptured upstream flows from basin B2. The flow will be piped northwest to design point 11 then conveyed via the proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B5 ($Q_5= 2.3$ cfs, $Q_{100}=4.9$ cfs) 0.89 acres and 61 percent impervious is comprised of Sterling Ranch Road. The runoff from this basin drains to an on grade inlet located at design point 15 in confluence with uncaptured upstream flows from basin B3. The flow will be piped northwest to design point 17 then conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B6 ($Q_5= 2.5$ cfs, $Q_{100}=5.2$ cfs) 0.91 acres and 63 percent impervious is comprised of a Sterling Ranch Road. The runoff from this basin drains to an on grade inlet located at design point 14 in confluence with uncaptured upstream flows from basin B4. The flow will be piped northwest to design point 17 then conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B7 ($Q_5= 2.4$ cfs, $Q_{100}=5.3$ cfs) is 1.08 acres and 52 percent impervious is comprised of Sterling Ranch Road. The runoff from basin B7 drains to an on grade inlet located at design point 19 in confluence with uncaptured upstream flows from basin B5. The flow will be piped northwest to

design point 20 then conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B8 ($Q_5=2.9$ cfs, $Q_{100}=6.2$ cfs) is 1.16 acres and 58 percent impervious is comprised of Sterling Ranch Road. Runoff from basin B8 drains to an on grade inlet located at design point 18 in confluence with uncaptured upstream flows from basin B6. The flow will be piped north to design point 20 then conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin B9 ($Q_5=4.3$ cfs, $Q_{100}=9.7$ cfs) is 1.98 acres and 51 percent impervious is comprised of Sterling Ranch Road. Runoff from basin B9 drains to a sump inlet located at design point 23 in confluence with uncaptured upstream flows from basin B7. The flow will be piped to detention pond FSD14A and will outfall to Sand Creek.

Basin B10 ($Q_5=5.0$ cfs, $Q_{100}=11.0$ cfs) is 2.19 acres and 53 percent impervious is comprised of Sterling Ranch Road. Runoff from basin B10 drains to a sump inlet located at design point 22 in confluence with uncaptured upstream flows from basin B8. The flow will be piped to detention pond FSD14A and will outfall to Sand Creek.

Basin B11 ($Q_5=16.6$ cfs, $Q_{100}=121.6$ cfs) is 126.23 acres and 2 percent impervious is comprised of open space. Runoff from basin B11 drains to a detention pond at design point 25. Runoff from Basin B11 sheet flow southwest and will be conveyed via a proposed swale to detention pond FSD14A and will outfall to Sand Creek.

Basin C1 ($Q_5=1.6$ cfs, $Q_{100}=11.8$ cfs) is 5.87 acres and 2 percent impervious is comprised of open space. Runoff from basin C1 will be conveyed via a proposed swale to design point 26 then piped southwest to detention pond FSD14A. The swale is to convey runoff from the east side of Sterling Ranch Road south to future pond PSD14B as well as to our interim pond FSD14A with ultimate outfall location of Sand Creek. Water quality will be provided in pond FSD14A, in the future water quality will be provide in pond FSD14SB.

Basin OS1 ($Q_5=23.8$ cfs, $Q_{100}=174.5$ cfs) is 176.86 acres and 2 percent impervious and is comprised of future development including open space area, single family residential lots and local roads. Basin OS1 is located north of Briargate Parkway. Runoff from this basin drains southeast and is conveyed via a proposed swale to Pond FSD16.

Basin OS2 ($Q_5=7.7$ cfs, $Q_{100}=56.7$ cfs) is 39.27 acres and 2 percent impervious and is comprised of open space area. Basin OS2 is located northeast of Sterling Ranch Road. Runoff from this basin drains southwest

JR responded: note added that final design for pond occur later

If Basin is to be developed, C-values should reflect that to ensure all storm facilities can handle final design flows. Same for Basins OS-2 & B-11. If Final design of ponds is occurring later, then add note regarding future conditions.

DRAINAGE DESIGN CRITERIA

DEVELOPMENT CRITERIA REFERENCE

Storm drainage analysis and design criteria for this project were taken from the “*City of Colorado Springs/El Paso County Drainage Criteria Manual*” Volumes 1 and 2 (EPCDCM), dated October 12, 1994, the “*Urban Storm Drainage Criteria Manual*” Volumes 1 to 3 (USDCM) and Chapter 6 and Section 3.2.1 of Chapter 13 of the “*Colorado Springs Drainage Criteria Manual*” (CSDCM), dated May 2014, as adopted by El Paso County.

HYDROLOGIC CRITERIA

All hydrologic data was obtained from the “*El Paso Drainage Criteria Manual*” Volumes 1 and 2, and the “*Urban Drainage and Flood Control District Urban Storm Drainage Criteria Manual*” Volumes 1, 2, and 3. Onsite drainage improvements were designed based on the 5 year (minor) storm event and the 100-year (major) storm event. Runoff was calculated using the Rational Method, and rainfall intensities for the 5-year and the 100-year storm return frequencies were obtained from Table 6-2 of the CSDCM. One hour point rainfall data for the storm events is identified in the chart below. Runoff coefficients were determined based on proposed land use and from data in Table 6-6 from the CSDCM. Time of concentrations were developed using equations from CSDCM. All runoff calculations and applicable charts and graphs are included in the Appendices.

Table 2 - 1-hr Point Rainfall Data

Storm	Rainfall (in.)
5-year	1.50
100-year	2.52

HYDRAULIC CRITERIA

The Rational Method and USDCM’s SF-2 and SF-3 forms were used to determine the runoff from the minor and major storms on the site. Sumps and on-grade inlets were sized using UDFCD UD-Inlet v4.06 as shown in Appendix C. Manning’s equation was used to size the proposed pipes in this report and StormCAD was used to model the proposed storm sewer system and to analyze the proposed HGL calculations for the Construction Drawings. Per ECM Section 3.3.1.b.2, all storm pipes located within Briargate Parkway will need to have an extended service life of 100 years.

Table 2 - StormCAD Standard Method Conversions

	90	1.52	

DRAINAGE FACILITY DESIGN

GENERAL CONCEPT

The proposed stormwater conveyance system was designed to convey the developed Sterling Ranch – East of Sand Creek roadway runoff and treat the interim condition in the interim, full spectrum water quality and detention ponds via storm sewer. The proposed interim ponds were designed to release at less than historic rates to minimize adverse impacts downstream. Treated water will outfall directly into the Sand Creek drainage way, where it will eventually outfall into Fountain Creek. A proposed drainage map is presented in Appendix D showing locations of the ponds.

FOUR STEP PROCESS TO MINIMIZE ADVERSE IMPACTS OF URBANIZATION

In accordance with the El Paso County Drainage Criteria Manual Volume 2, this site has implemented the four step process to minimize adverse impacts of urbanization. The four step process includes reducing runoff volumes, treating the water quality capture volume (WQCV), stabilizing drainage ways, and implementing long-term source controls.

Step 1 – Reducing Runoff Volumes: The Sterling Ranch East of Sand Creek development project consists of Sterling Ranch Road and Briargate Parkway with open spaces and lawn areas interspersed within the development which helps disconnect impervious areas and reduce runoff volumes.

Step 2 – Stabilize Drainageways: The site lies within the Sand Creek Drainage Basin. Basin and bridge fees will be due at time of platting. These funds will be used for the channel stabilization being designed by Kiowa adjacent to the site and on future projects within the basin to stabilize

drainageways. The site does not discharge directly into the open drainageway of Sand Creek, therefore no downstream stabilization will be accomplished with this project.

Step 3 – Treat the WQCV: Water Quality treatment for this site is provided in the proposed full spectrum water quality detention ponds. The runoff from this site will be collected within inlets and conveyed to the proposed ponds via storm sewer and/ or swales. The outlet structure will be designed to detain the water quality capture volume (WQCV) for 40 hours, and the extended urban runoff volume (EURV) for 72 hours. All flows released from the ponds will be reduced to less than historic rates.

Step 4 –BMPs will be utilized to minimize off-site contaminants and to protect the downstream receiving waters. The permanent erosion control BMPs include asphalt drives, storm inlets and storm pipe, four full spectrum water quality and detention ponds, and permanent vegetation.

WATER QUALITY

JR responded: future revisions comment added

Include note that there may need to be revisions to the interim ponds at final design, if not providing for what the full developed flows/areas are with this report. (Basins B11, OS1 & OS2 still show as undeveloped, when final ponds will have these basins as developed.) If not providing all the parts for full-spectrum at this pond, a deviation will be needed to address this.

CM, full spectrum water quality and detention into two temporary Full Spectrum Drainage as well as all pond volume, water quality, and C of this report. A summary of Interim Pond reference. Ponds FSD14A and ponding future development the construction of Briargate quality and 100yr detention for ds will be provided with the

OPERATION & MAINTENANCE

In order to ensure the function and effectiveness of the stormwater infrastructure, maintenance activities such as inspection, routine maintenance, restorative maintenance, rehabilitation and repair, are required. The district shall be responsible for the inspection, maintenance, rehabilitation and repair of stormwater and erosion control facilities located on the property unless another party accepts such responsibility in writing and responsibility is properly assigned through legal

JR Response: O&M
manual provided

This is construction documents.
Please provide O&M manual.

Documentation is provided from onsite facilities and easements for proposed infrastructure located offsite. We respectfully request that the Operation & Maintenance Manual be submitted in conjunction with the construction documents, prior to obtaining a grading permit.

DRAINAGE AND BRIDGE

JR RESPONDED: TITLE
CHANGED. VALUES
UPDATED

The site lies within the anticipated drainage and bridge fees are presented below and will be due at time of platting (depending on date of plat submittal):.

Use 2022 fees

17.38	\$21,814	\$8,923	\$379,127	\$6,589,233

SUMMARY

The proposed Sterling Ranch East of Sand Creek drainage improvements were designed to meet or exceed the El Paso County Drainage Criteria. The proposed development will not adversely affect the offsite drainage ways or surrounding development. This report is in conformance and meets the latest El Paso County Storm Drainage Criteria requirements for this site.

19	Columbine gravelly sandy loam, 0 to 3 percent slopes	A	464.8	65.6%
71	Pring coarse sandy loam, 3 to 8 percent slopes	B	153.8	21.7%
Totals for Area of Interest			708.4	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

NOTES:

$$t_c = t_i + t_t \quad (\text{Eq. 6-7}) \quad t_i = \frac{0.395(1.1 - C_s)\sqrt{L}}{S^{0.33}} \quad (\text{Eq. 6-8}) \quad V = C_v S_w^{0.5} \quad (\text{Eq. 6-9})$$

Where:

t_c = time of concentration (min)
 t_i = overland (initial) flow time (min)
 t_t = travel time in the ditch, channel, gutter, storm sewer, etc. (min)

Where:

t_i = overland (initial) flow time (min)
 C_s = runoff coefficient for 5-year frequency (see Table 6-6)
 L = length of overland flow (300 ft maximum for non-urban land uses, 100 ft maximum for urban land uses)
 S = average basin slope (ft/ft)

Where:

V = velocity (ft/s)
 C_v = conveyance coefficient (from Table 6-7)
 S_w = watercourse slope (ft/ft)

Use a minimum t_c value of 5 minutes for urbanized areas and a minimum t_c value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

$$t_t = \frac{L_t}{60K\sqrt{S_o}} = \frac{L_t}{60V_t} \quad (\text{Equation 6-4}) \quad t_t = \frac{L}{180} + 10 \quad (\text{Eq. 6-10})$$

Where:

t_t = channelized flow time (travel time, min)
 L_t = waterway length (ft)
 S_o = waterway slope (ft/ft)
 V_t = travel time velocity (ft/sec) = $K\sqrt{S_o}$
 K = NRCS conveyance factor (see Table 6-2)

Where:

t_t = maximum time of concentration at the first design point in an urban watershed (min)
 L = waterway length (ft)

Table 6-7. Conveyance Coefficient, C_v

Type of Land Surface	C_v
Heavy meadow	2.5
Tillage/field	5
Riprap (not buried)*	6.5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

*For buried riprap, select C_v value based on type of vegetative cover.

TOTAL	376.56											5.4%

These basins should be considered developed as storm infrastructure will need to accomodate developed flows.

JR RESPONDED: These basins will be conveyed to detention ponds before reaching the proposed storm network. the proposed storm network is designed to accommodate max release rates from ponds and the developed basin runoff from Sterling Ranch Road and Briargate Parkway

NOTES:

$$t_c = t_i + t_t$$

(Eq. 6-7)

$$t_i = \frac{0.395(1.1 - C_s)\sqrt{L}}{S^{0.775}}$$

(Eq. 6-8)

$$F = C_s S_w^{0.5}$$

(Eq. 6-9)

Where:

t_c = time of concentration (min)

t_i = overland (initial) flow time (min)

t_t = travel time in the ditch, channel, gutter, storm sewer, etc. (min)

Where:

t_i = overland (initial) flow time (min)

C_s = runoff coefficient for 3-year frequency (see Table 6-6)

L = length of overland flow (300 ft maximum for non-urban land uses, 100 ft maximum for urban land uses)

S = average basin slope (ft/ft)

Where:

F = velocity (ft/s)

C_s = conveyance coefficient (from Table 6-7)

S_w = watercourse slope (ft/ft)

Use a minimum t_c value of 5 minutes for urbanized areas and a minimum t_c value of 10 minutes for areas that are not considered urban. Use minimum values even when calculations result in a lesser time of concentration.

$$t_t = \frac{L_t}{60K\sqrt{S_w}} = \frac{L_t}{60F}$$

Equation 6-4

$$t_t = \frac{L_t}{140} + 10$$

(Eq. 6-10)

Where:

t_t = maximum time of concentration at the first design point in an urban watershed (min)

L_t = waterway length (ft)

Where:

t_t = channel/land flow time (travel time, min)

L_t = waterway length (ft)

S_w = waterway slope (ft/ft)

F = travel time velocity (ft/sec) = $K\sqrt{S_w}$

K = NRCS conveyance factor (see Table 6-3)

Table 6-7. Conveyance Coefficient, C_s

Type of Land Surface	C_s
Heavy meadow	2.5
Tillage/field	5
Riprap (not buried)*	6.5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

*For buried riprap, select C_s value based on type of vegetative cover.

PIPE OUTFALL RIPRAP SIZING CALCULATIONS

Division: Sterling Ranch Rd & Briargate Pkwy
Location: El Paso County

Project Name: Sterling Ranch Phase 3

Project No.: 25188.03

Calculated By: CGV

Checked By: RAB

Date: 12/2/21

Flows shown are less than flows in proposed hydrology spreadsheet. Future flows are not included to compare against

JR RESPONDED: In the future condition these outfall locations will not exist and will be connected with storm piped through the subdivision to the proposed ponds. Future storm pipe and outfall riprap will be sized with future condition.

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

MHFD-Detention, Version 4.04 (February 2021)

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Project: **Sterling Ranch - East of Sand Creek**

Basin ID: **Interim Pond FS14A (Total of B & C)**

Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	0.80	0.669	Orifice Plate
Zone 2 (100-year)	4.90	4.197	Weir&Pipe (Restrict)
Zone 3			
Total (all zones)		4.866	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain

Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = inches
Orifice Plate: Orifice Area per Row = sq. inches (use rectangular openings)

Calculated Parameters for Plate

WQ Orifice Area per Row = ft²
Elliptical Half-Width = feet
Elliptical Slot Centroid = feet
Elliptical Slot Area = ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.75	1.50	2.25				
Orifice Area (sq. inches)	12.06	12.06	12.06	12.06				

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = inches

Calculated Parameters for Vertical Orifice

Vertical Orifice Area = ft²
Vertical Orifice Centroid = feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe)

Overflow Weir Front Edge Height, H_o = ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = feet
Overflow Weir Grate Slope = H:V
Horiz. Length of Weir Sides = feet
Overflow Grate Type =
Debris Clogging % = %

Calculated Parameters for Overflow Weir

Height of Grate Upper Edge, H_u = feet
Overflow Weir Slope Length = feet
Grate Open Area / 100-yr Orifice Area =
Overflow Grate Open Area w/o Debris = ft²
Overflow Grate Open Area w/ Debris = ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = inches
Restrictor Plate Height Above Pipe Invert = inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

Outlet Orifice Area = ft²
Outlet Orifice Centroid = feet
Half-Central Angle of Restrictor Plate on Pipe = radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = feet
Spillway End Slopes = H:V
Freeboard above Max Water Surface = feet

Calculated Parameters for Spillway

Spillway Design Flow Depth = feet
Stage at Top of Freeboard = feet
Basin Area at Top of Freeboard = acres
Basin Volume at Top of Freeboard = acre-ft

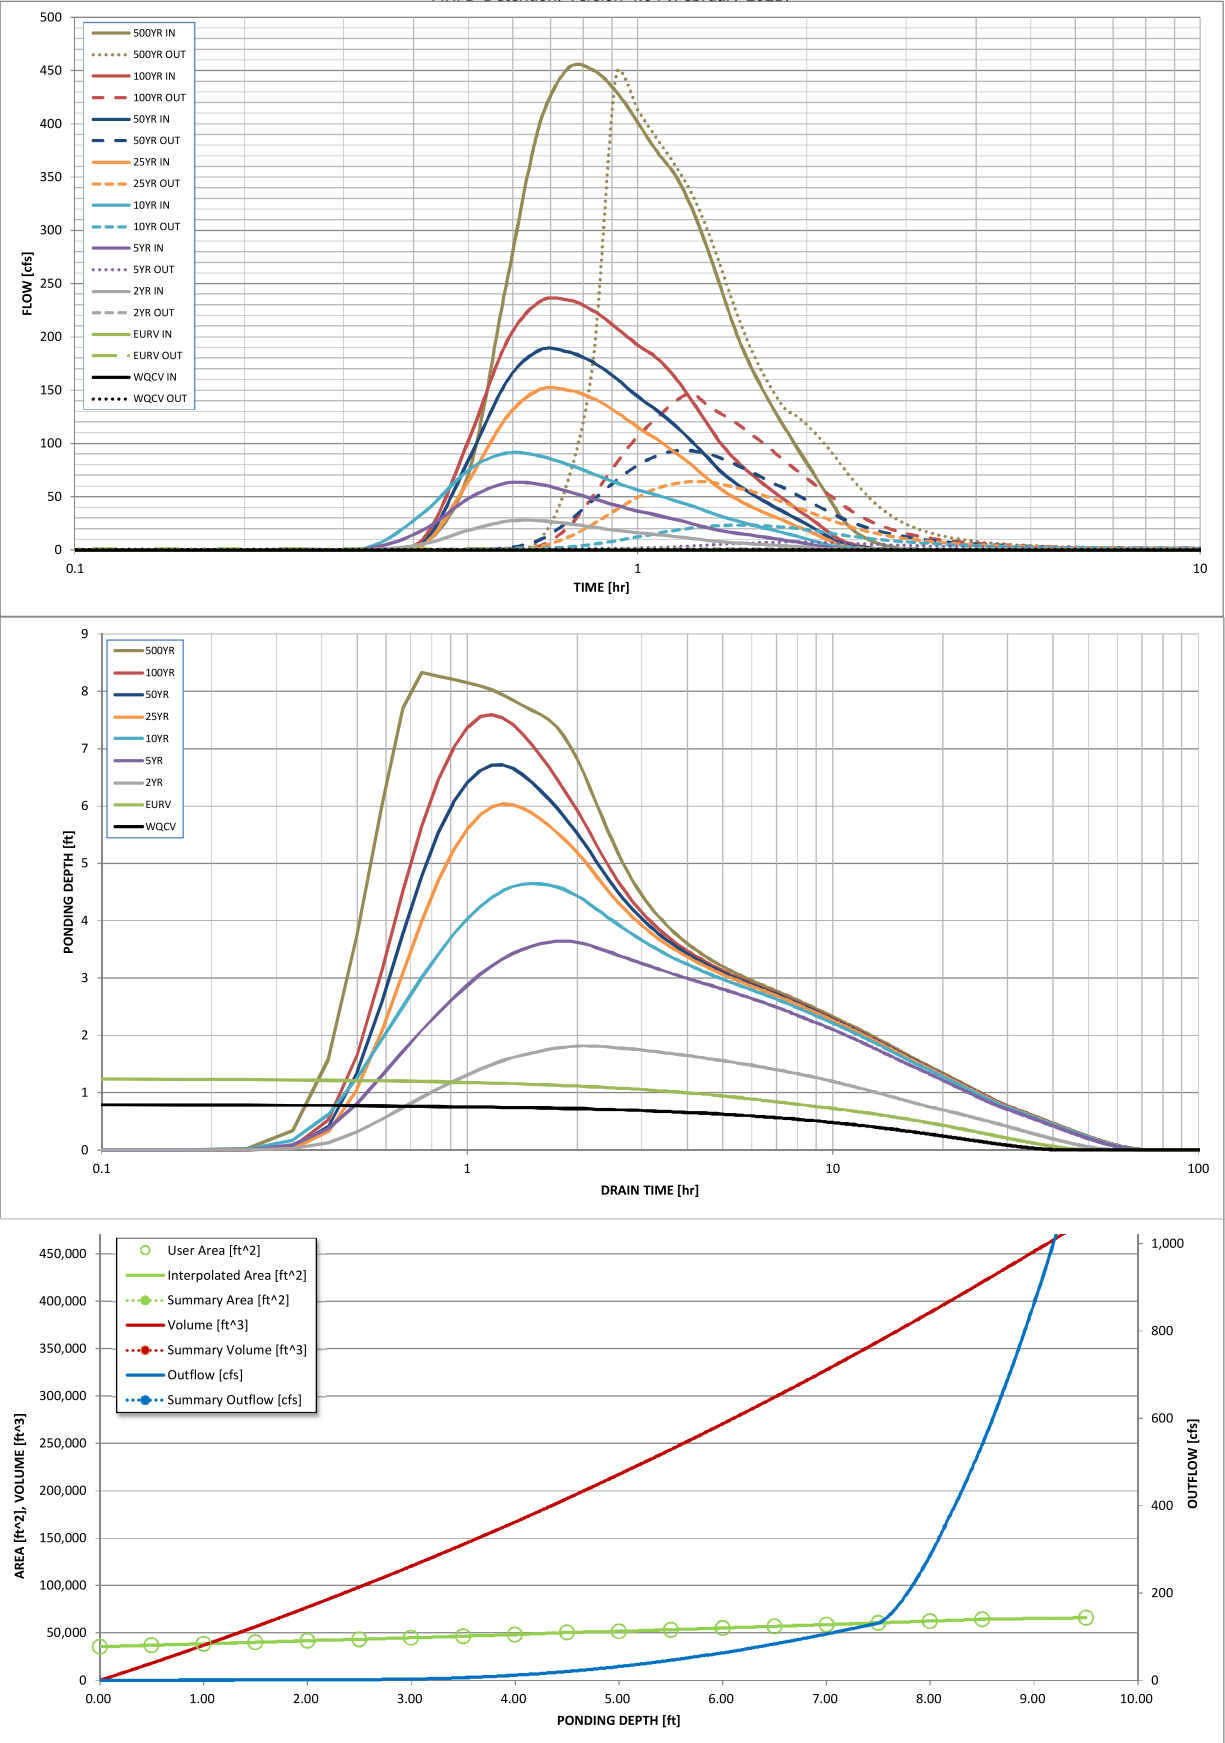

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

[illegible]

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Project: **Sterling Ranch - East of Sand Creek**

Basin ID: **Interim Pond FSD 16 (Total of A and Offsite)**

Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.73	0.793	Orifice Plate
Zone 2 (100-year)	6.76	5.843	Weir&Pipe (Restrict)
Zone 3			
Total (all zones)		6.636	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain
Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = inches
Orifice Plate: Orifice Area per Row = sq. inches (diameter = 2 inches)

Calculated Parameters for Plate
WQ Orifice Area per Row = ft²
Elliptical Half-Width = feet
Elliptical Slot Centroid = feet
Elliptical Slot Area = ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.00	2.00					
Orifice Area (sq. inches)	3.11	3.11	3.11					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = inches

Calculated Parameters for Vertical Orifice
Vertical Orifice Area = ft²
Vertical Orifice Centroid = feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe)

Overflow Weir Front Edge Height, H_o = ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = feet
Overflow Weir Grate Slope = H:V
Horiz. Length of Weir Sides = feet
Overflow Grate Type =
Debris Clogging % = %

Calculated Parameters for Overflow Weir
Height of Grate Upper Edge, H_u = feet
Overflow Weir Slope Length = feet
Grate Open Area / 100-yr Orifice Area =
Overflow Grate Open Area w/o Debris = ft²
Overflow Grate Open Area w/ Debris = ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = inches
Restrictor Plate Height Above Pipe Invert = inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate
Outlet Orifice Area = ft²
Outlet Orifice Centroid = feet
Half-Central Angle of Restrictor Plate on Pipe = radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = feet
Spillway End Slopes = H:V

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

[illegible]

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: Sterling Ranch Road & Briargate Parkway - East of Sand Creek

Inlet ID: DP1

**Gutter Geometry:**

Maximum Allowable Width for Spread Behind Curb

Side Slope Behind Curb (leave blank for no conveyance credit behind curb)

Manning's Roughness Behind Curb (typically between 0.012 and 0.020)

Height of Curb at Gutter Flow Line

Distance from Curb Face to Street Crown

Gutter Width

Street Transverse Slope

Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)

Street Longitudinal Slope - Enter 0 for sump condition

Manning's Roughness for Street Section (typically between 0.012 and 0.020)

$T_{BACK} =$	17.5	ft
$S_{BACK} =$	0.020	ft/ft
$n_{BACK} =$	0.013	

$H_{CURB} =$	6.00	inches
$T_{CROWN} =$	39.0	ft
$W =$	2.00	ft
$S_x =$	0.020	ft/ft
$S_w =$	0.083	ft/ft
$S_o =$	0.009	ft/ft
$n_{STREET} =$	0.013	

Max. Allowable Spread for Minor & Major Storm

Max. Allowable Depth at Gutter Flowline for Minor & Major Storm

Allow Flow Depth at Street Crown (check box for yes, leave blank for no)

	Minor Storm	Major Storm	
$T_{MAX} =$	27.0	27.0	ft
$d_{MAX} =$	6.0	8.0	inches
	<input type="checkbox"/>	<input type="checkbox"/>	

MINOR STORM Allowable Capacity is based on Depth Criterion

MAJOR STORM Allowable Capacity is based on Spread Criterion

	Minor Storm	Major Storm	
$Q_{allow} =$	16.1	42.8	cfs

Minor storm max. allowable capacity GOOD - greater than the design flow given on sheet 'Inlet Management'**WARNING: MAJOR STORM max. allowable capacity is less than the design flow given on sheet 'Inlet Management'**

INLET ON A CONTINUOUS GRADE

JR Response: it is hard to fit the long runs on one sheet with the labels readable. an overall map provided with labels for each run

Each Storm Layout should be on single sheet.

Coordinate between Storm design and CD's. Storm CD's have more detailed comments on discrepancies between the 2 documents.

Worksheet for Proposed Swale - Cross Section AA

Project Description	
Friction Method	Manning
Solve For	Formula
	Normal Depth
Input Data	
Channel Slope	0.009 ft/ft
Discharge	269.40 cfs

Section Definitions

Station (ft)	Elevation (ft)
-0+13	7,103.00
0+00	7,099.50
0+05	7,099.50
0+18	7,103.00
0+37	7,109.00

With 4:1 side slopes,
edge of swales should
be at -0+14 & 0+19

JR UPDATED

Roughness Segment Definitions

Start Station	Ending Station	Roughness Coefficient
(-0+13, 7,103.00)	(0+00, 7,099.50)	0.040
(0+00, 7,099.50)	(0+18, 7,103.00)	0.040
(0+18, 7,103.00)	(0+37, 7,109.00)	0.020

Options

Current Roughness Weighted Method	Pavlovskii's Method
Open Channel Weighting Method	Pavlovskii's Method
Closed Channel Weighting Method	Pavlovskii's Method

Results

Normal Depth	37.5 in
Roughness Coefficient	0.040
Elevation	7,102.63 ft
Elevation Range	7,099.5 to 7,109.0 ft
Flow Area	51.9 ft ²
Wetted Perimeter	29.0 ft
Hydraulic Radius	21.4 in
Top Width	28.22 ft
Normal Depth	37.5 in
Critical Depth	31.1 in
Critical Slope	0.021 ft/ft
Velocity	5.19 ft/s
Velocity Head	0.42 ft
Specific Energy	3.54 ft

Worksheet for Proposed Swale - Cross Section AA

Results	
Froude Number	0.675
Flow Type	Subcritical
GVF Input Data	
Downstream Depth	0.0 in
Length	0.0 ft
Number Of Steps	0
GVF Output Data	
Upstream Depth	0.0 in
Profile Description	N/A
Profile Headloss	0.00 ft
Downstream Velocity	Infinity ft/s
Upstream Velocity	Infinity ft/s
Normal Depth	37.5 in
Critical Depth	31.1 in
Channel Slope	0.009 ft/ft
Critical Slope	0.021 ft/ft

Project #09-002
SKP-18-003
SF-17-024

at DP87 culminating in peak runoff rates within Sand Creek of $Q_5 = 374.6$ cfs, $Q_{100} = 1905.9$ cfs.

Basin SC3-16A ($Q_5 = 120.4$ cfs, $Q_{100} = 351.8$ cfs) consists of a 168.1 acre area located within Sterling Ranch, that is located north of Briargate Parkway and east of Sand Creek Channel. This portion of Sterling Ranch is planned to house residential development that ranges from low density rural lots 1 acres in size to medium density urban residential with lots ranging in size from 0.1 to 0.2 acres. Runoff from the basin shall be collected and conveyed within street and storm sewer systems to a full spectrum detention pond (FSD16A), at the northwest corner of Briargate Parkway and Sterling Ranch Road. The treated detained flows from the pond will discharge to DP22 at peak flow rates of 8.8 cfs and 128.3 cfs in the 5 and 100 year events respectively.

Basin SC3-16B ($Q_5 = 53.7$ cfs, $Q_{100} = 143.8$ cfs) consists of a 50.7 acre area located within Sterling Ranch, that is located north of Briargate Parkway and east of Sand Creek Channel. This portion of Sterling Ranch is planned for a low to medium density residential lots ranging in size from 0.1 to 0.2 acres lots and portions of roadways. Runoff from the basin shall be collected and conveyed within street and storm sewer systems to a full spectrum detention pond (FSD16B), at the northeast corner of Briargate Parkway and Sterling Ranch Road. The treated detained flows from the pond will discharge to DP22 at peak flow rates of 0.4 cfs and 28.1 cfs in the 5 and 100 year events respectively. The combined peak flow rates from SC3-16B and FSD14A (DP22, $Q_5=8.8$ cfs and $Q_{100}=174.9$ cfs) will be conveyed south via storm sewer system to DP21.

Basin SC3-14B ($Q_5 = 34.3$ cfs, $Q_{100} = 94.1$ cfs) consists of a 34.7 acre area located within of Sterling. Ranch, that is located between south of Briargate Parkway and east of Sterling Ranch Road, east of Sand Creek. This portion of Sterling Ranch is planned for a low to medium density residential lots ranging in size from 0.1 to 0.33 acres lots and portions of roadways. Runoff from the basin shall be collected and conveyed within street and storm sewer systems to a full spectrum detention pond (FSD14B), at the south end of the basin. The treated detained flows from the pond will discharge to DP21 at peak flow rates of 0.3 cfs and 19.3 cfs in the 5 and 100 year events respectively. The combined peak flow rates from DP22 and FSD14B (DP21, $Q_5=8.8$ cfs and $Q_{100}=174.9$ cfs) will be conveyed to Pond W3 above the intersection of Sand Creek channel and Sterling Ranch Road.

Basin SC3-14A ($Q_5 = 175.4$ cfs, $Q_{100} = 466.3$ cfs) consists of a 164.9 acre area located within of Sterling. Ranch, that is located between south of Briargate Parkway and east of Sterling Ranch Road, east of Sand Creek. This portion of Sterling Ranch is planned for a k-8 school site, several single family residential lots ranging in size from 0.2 to 0.33 acres lots as well as portions of park and open space. Runoff from the basin shall be collected and conveyed within street and storm sewer systems and directed to a full spectrum detention pond (FSD14A), at the southwest corner of the basin. The treated detained flows from the pond will discharge to Pond W3 at peak flow rates of 7.5 cfs and 142.2 cfs in the 5 and 100 year events respectively.

Basin SC3-13 ($Q_5 = 57.8$ cfs, $Q_{100} = 136.9$ cfs) consists of a 41.0 acre area located within of Sterling. Ranch, that is located just the east of the Barbarick Subdivision and north of Sterling Ranch Road. This portion of Sterling Ranch is planned for residential lots ranging in size from 0.1 to 0.2 acres in size. Runoff from the basin shall be collected by storm sewer systems and conveyed to a full spectrum detention pond (FSD13) located in the south end of the basin, adjacent to sand creek. The treated detained flows from the pond will discharge into Sand Creek at peak flow rates of 4.2 cfs and 47.2 cfs in the 5 and 100 year events respectively.

Runoff from DP87, DP21 and from FSD Ponds 13, and 14A will combine within the Sand Creek Channel at proposed Regional Pond Detention Facility W3. The purpose of the regional pond is to reduce the post development flow rates within the Sand Creek Channel at the Southern Sterling Ranch boundary to at or below the existing flow rates calculated by this report. The pond is also necessary due to the drainage basin diversion, as discussed in other parts of this report. The total combined discharge reaching the regional facility (Pond W-3) has been calculated at 374.5 cfs and 2204.1 cfs in the 5 and 100 year events respectively.

As conceptually designed the proposed facility will utilize a check/diversion wall located upstream of the existing stock pond and proposed detention facility that will function to divert base flows within the channel to aid in retaining a fixed water surface within the existing stock pond and in larger storm events diverted flows safely around the amenity to the west side to detention Pond W3. A small controlled outlet structure along with an improved downstream embankment will be added to the existing stock pond to stabilize it and retain a fixed maximum water surface elevation. In the larger detention pond eight (8) small 24" storm sewer pipe located within a separate embankment will allow for free flow discharge of 2 year runoff and begin to detain flows of 5 years and larger events. Flows exiting the small storm pipes or overtopping the separated embankment will enter a concrete forebay that conveys drainage to two (2) cell 8'h x 10'w concrete box culvert (CBC) under Proposed Sterling Ranch Road to DP68. As the anticipated flow rate leaving the pond is planned to be less than 1,500 cfs, and the proposed culvert crossing is conceptually planned to have an open area of less than 200 ft sq of open area and thus will need to meet the headwater requirements of Table 6-5 of the DCM, which in this concept design is a ratio of about ~1.3. The total combined discharge calculated to leave the regional facility (Pond W-3) has been calculated at 200.3 cfs and 1,350.6 cfs in the 5 and 100 year events respectively, with a maximum 100 year water surface of 7017.3, a

HW/D ratio of ~1.3. The peak detained volume has been estimated at 78.2 ac-ft. A low point in Sterling Ranch Road will be designed adjacent to the facility to provide a safe overflow route. An exhibit showing the concept design and its various elements is included in the appendix of this report.

As previously discussed a Condition Letter of Map Revision and Letter of Map Revision (CLOMR/LOMR) will need to be processed through the Federal Emergency Management Agency (FEMA) to revise the hydrology to the Sand Creek Channel and allow for the remapping of the revised floodplains. It should be noted that the DBPS flow rates for Reach SC-8 (Reach 163) adjacent to this location were estimate to be 2,630 cfs and that the effective FEMA 100 year flow rate is 2,600cfs. A comparison table of the various flow rates is provided later in this text and on the accompanying drainage maps.

The final design of the culvert crossing and final determination of approved rates as well as the final pond design will be discussed within the future Sterling Ranch Channel Design Report and Sand Creek CLOMR/LOMR documents. No deviations for this pond and accompanying outlet structure are anticipated at this time.

It is important to note that the planned discharge outlet pipe for the FSD pond located to the west of the pond W3 will need to be extended to the downstream outlet side of the culvert to ensure that the 100 year water surface elevation with W3 does not affect the functionality of the adjacent FSD and its storm sewer systems.

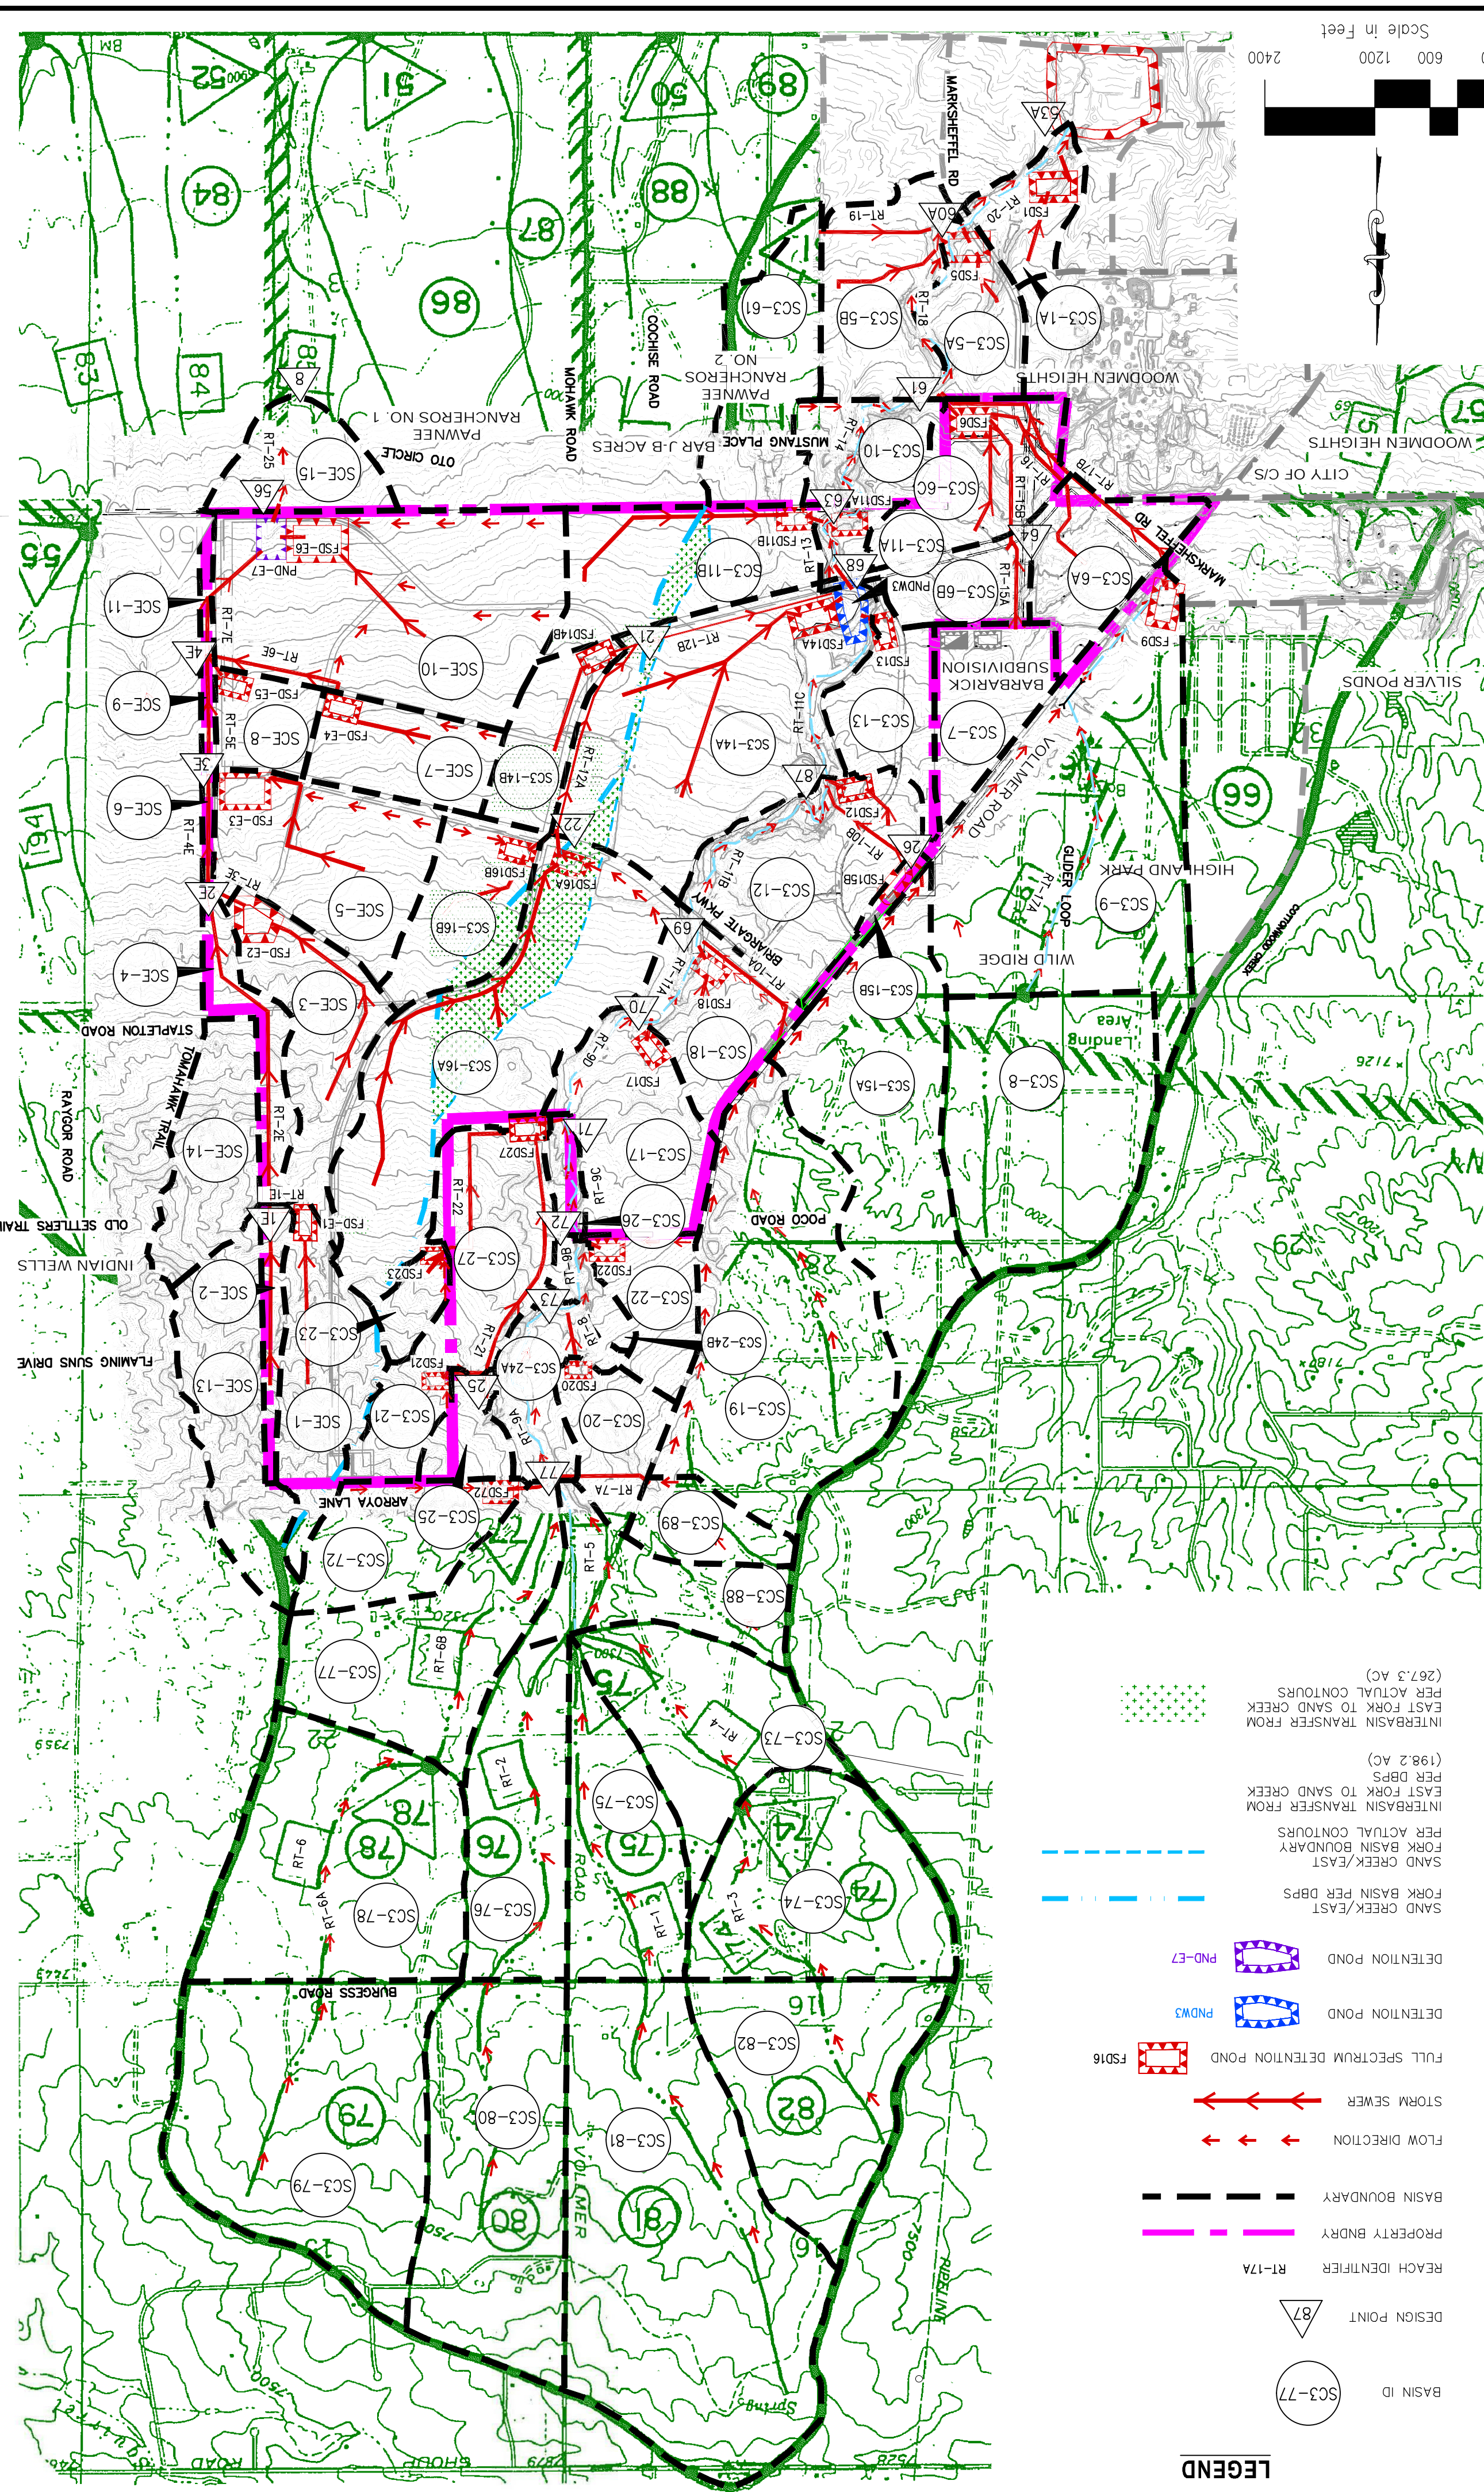

In regards to timing, the need to construction this facility can be tied to the Sand Creek Channel improvements which is discussed within this report and also within the Subdivision Improvements Agreement. In no case should runoff from the East Fork of Sand Creek be diverted to the Main Branch of the Sand Creek Channel prior to the construction and of this facility.

Basin SC3-11A ($Q_5 = 7.8$ cfs, $Q_{100} = 24.3$ cfs) consists of a 10.7 acre area located within of Sterling. Ranch, that is south of Sterling Ranch Road, west of Sand Creek. This portion of Sterling Ranch consists of single family residential for lots ranging in size from 0.2 to 0.3 acres in size and open space associated with the Sand Creek Channel. Runoff from the developed portion of the basin shall be collected and conveyed within street and storm sewer systems to a full spectrum detention pond FSD11A. The treated detained flows from the pond will discharge into Sand Creek at peak flow rates of 0.9 cfs and 12.3 cfs in the 5 and 100 year events respectively just upstream of DP-63. It should be noted that this detention facility may not be necessary if grading can be oriented to force surface runoff to the west.

Basin SC3-11B ($Q_5 = 81.3$ cfs, $Q_{100} = 213.7$ cfs) consists of a 76.6 acre area located within of Sterling. Ranch, that is south of Sterling Ranch Road, east of Sand Creek. This portion of Sterling Ranch consists of single family residential planned for lots ranging in size from 0.2 to 0.3 acres in size and a portion of a park site and collector roadways. Runoff from the developed portion of the basin shall be collected and conveyed within street and storm sewer systems westward to a full spectrum detention pond FSD11B. The treated detained flows from the pond will discharge into Sand Creek at peak flow rates of 4.5 cfs and 69.5 cfs in the 5 and 100 year events respectively. The runoff from DP68 and from FSD ponds 11A and 11B combine at DP63 at peak flow rates of $Q_5 = 201.0$ cfs, $Q_{100} = 1385.1$, which is less than the anticipated existing modeled flow rates of $Q_5 = 430.7$ cfs, $Q_{100} = 1911.5$ at DP63. Runoff from DP63 continues south within the Sand Creek Channel toward DP61.

Basin SC3-7 ($Q_5 = 69.9$ cfs, $Q_{100} = 157.2$ cfs) consists of a 45.7 acre industrial zoned area, referred to as the Barbarick Subdivision, located outside of Sterling Ranch. Per the Final Drainage Report for Barbarick Subdivision, Portions of Lots 1, 2 and Lots 3 and 4 the filing consists of four lots which upon which development will be constructed which will include adding a proposed Extended Detention Basin within Lot 4. This detention basin will provide water quality treatment for portions of Lots 1 & 2, and Lots 3 & 4. The EBD will structure will outfall at the south end of Lot 4 at the Barbarick Subdivision/Sterling Ranch property line. Per the report the proposed total outflow from the EDB pond will be $Q_5 = 0.3$ cfs, $Q_{100} = 45.9^{**}$ cfs(**which includes pass through flows of 29.4 cfs). A second Sand Filter Basin water quality detention catchment will be provided at the southeast/downstream end of Lot 2. The SFB will outfall at the southeast corner of the Lot 2 at the Barbarick Subdivision/Sterling Ranch property line. Per the report the proposed total outflow the SFB pond will be $Q_5 = 0.1$ cfs, $Q_{100} = 3.6$ cfs. At the initial writing of this report, neither EDB nor SFB structure has been fully constructed, and thus the assumption was made to utilize the full un-detained untreated runoff from the offsite development for onsite drainage planning purposes. Thus the downstream facilities planned within Sterling Ranch will account for the total un-detained runoff from the parcel of $Q_5 = 69.9$ cfs, $Q_{100} = 157.2$ cfs and will plan to treat the total runoff onsite facilities. This provides a conservative approach for master planning. Runoff discharged from the property will be collected by proposed storm sewer within Sterling Ranch and routed to DP64. These facilities and their effects on drainage will be re-reviewed with subsequent drainage report and shall be implemented into final design and construction.

Basin SC3-6B ($Q_5=43.4$ cfs, $Q_{100}=102.7$ cfs) consists of a 30.9 acre area located within of Sterling Ranch, that is north of Sterling

SAND CREEK DRAINAGE BASIN PLANNING STUDY

PRELIMINARY DESIGN REPORT

CITY OF COLORADO SPRINGS, EL PASO COUNTY, COLORADO

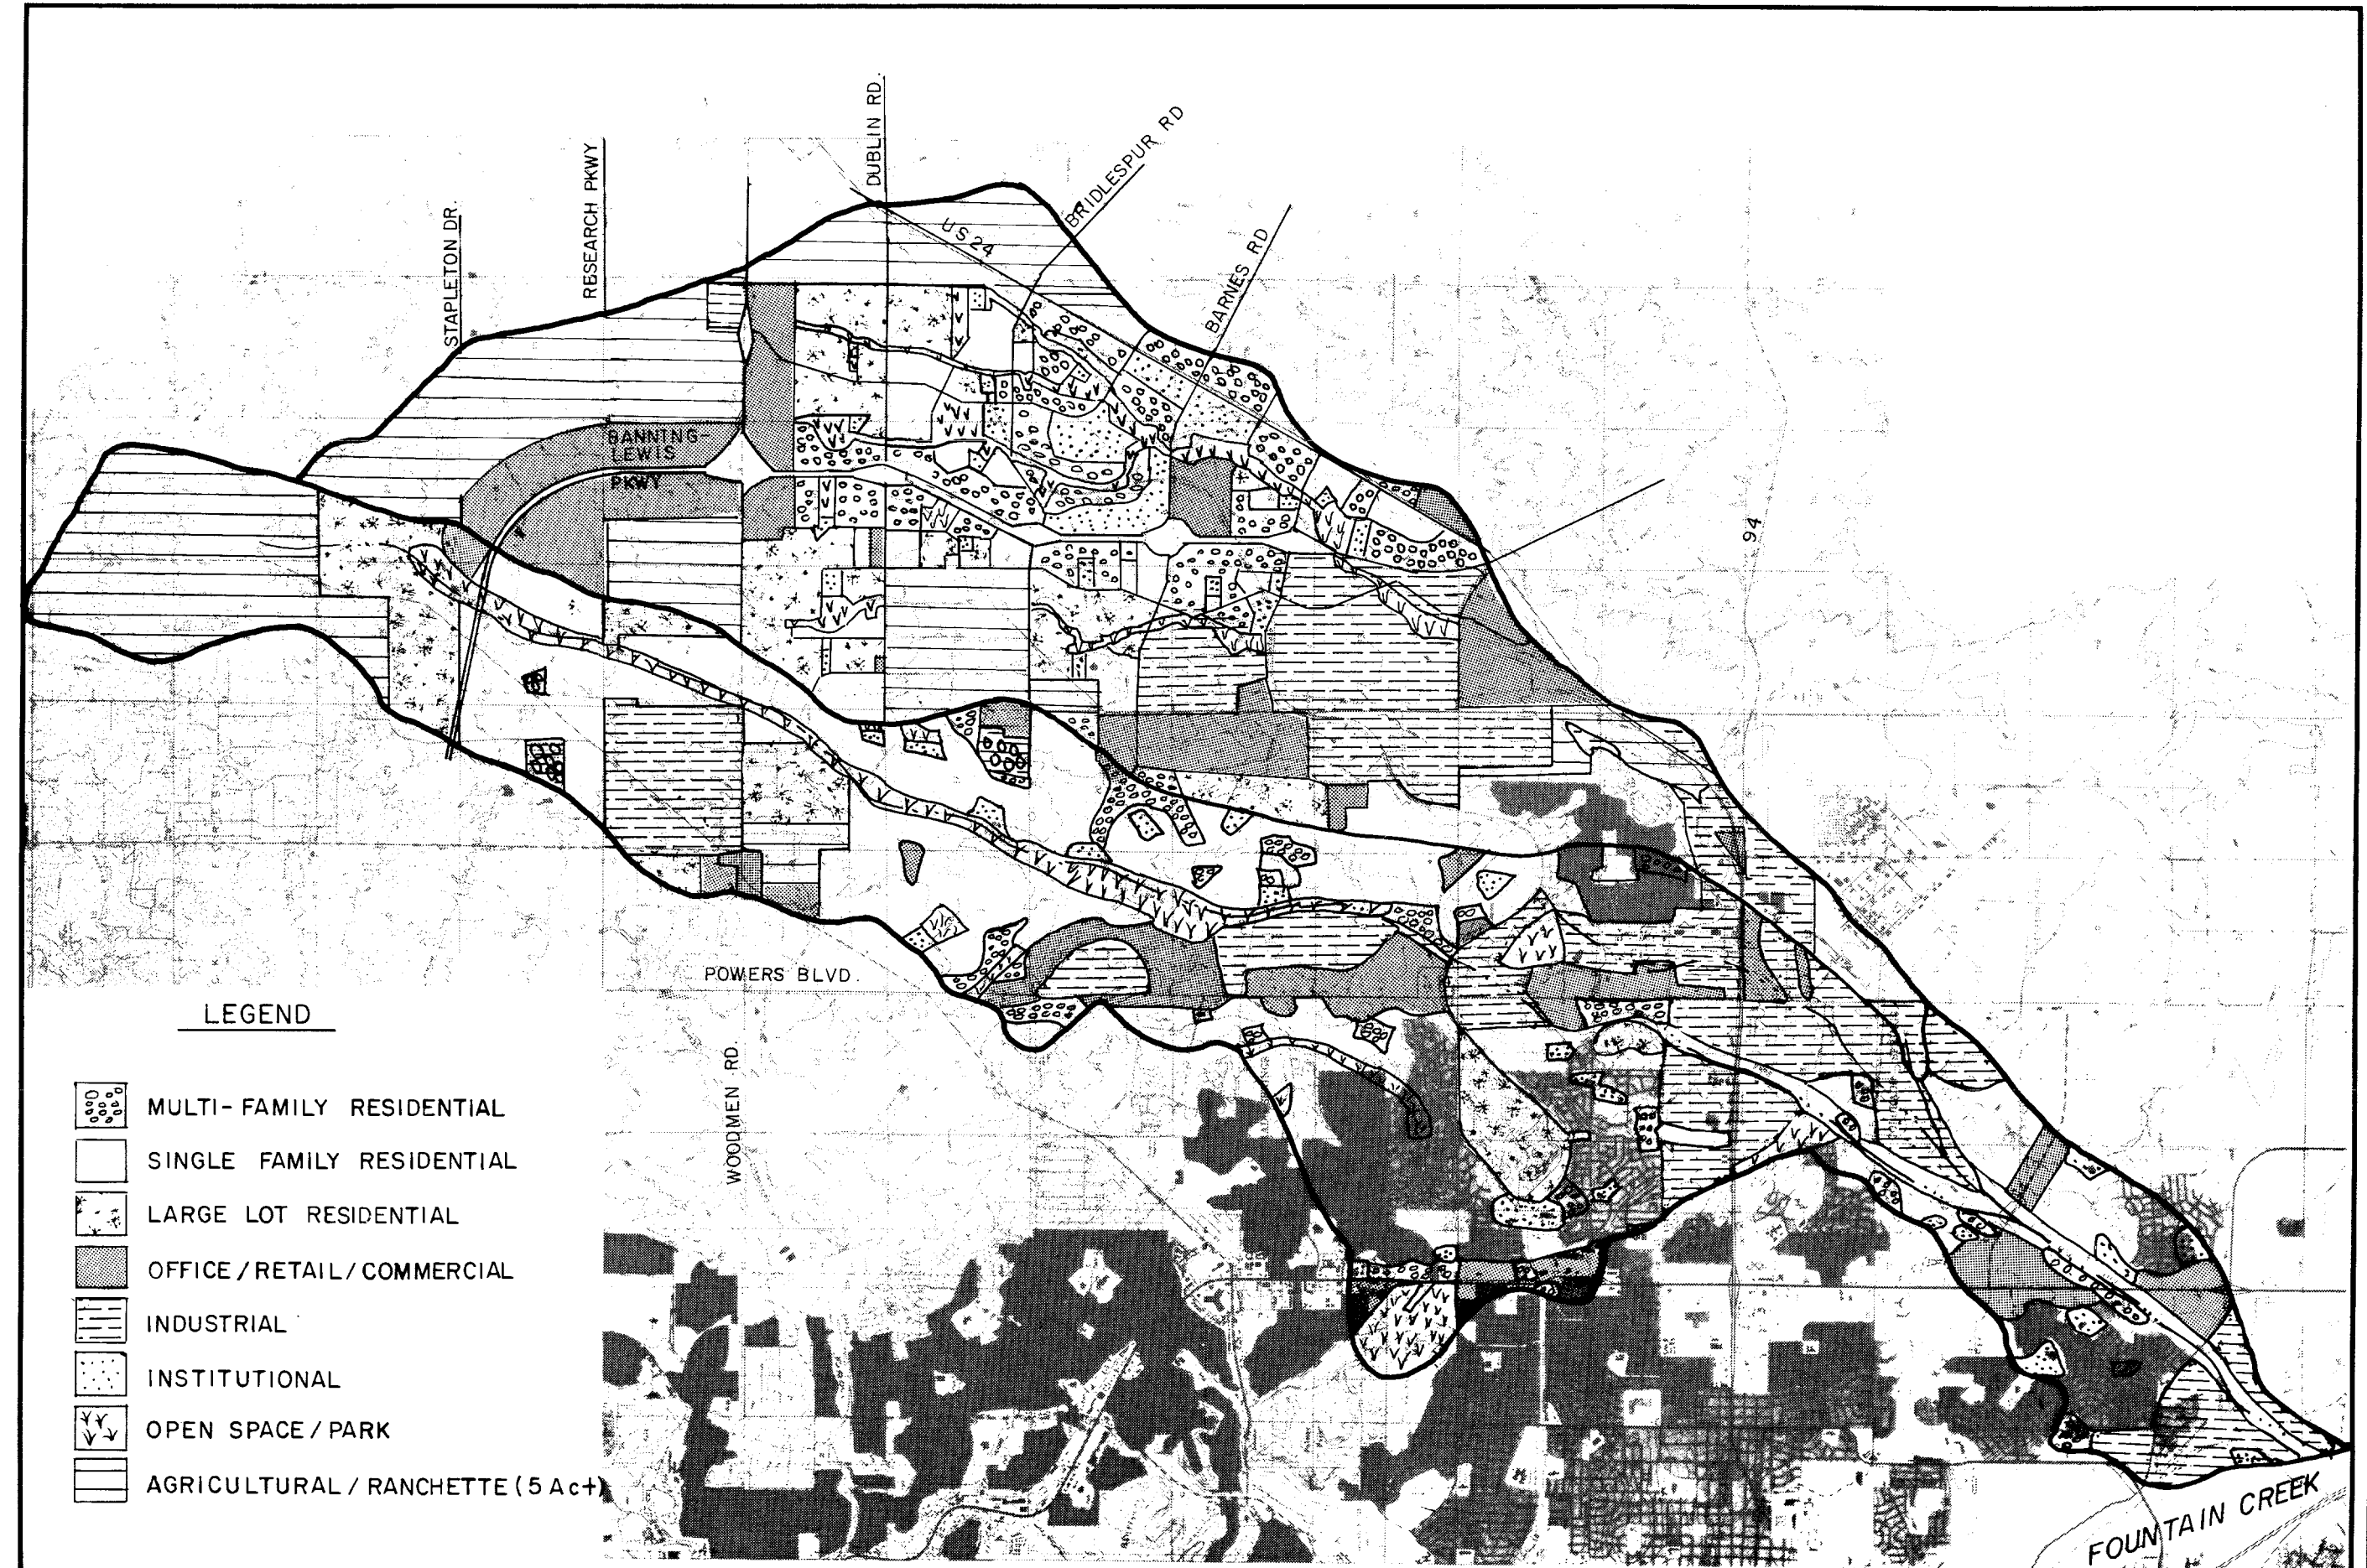

PREPARED FOR:

City of Colorado Springs
Department of Comprehensive Planning, Development and Finance
Engineering Division
30 S. Nevada
Colorado Springs, Colorado 80903

PREPARED BY:

Kiowa Engineering Corporation
1011 North Weber
Colorado Springs, CO 80903

Kiowa Engineering Corporation
419 W. Bijou Street
Colorado Springs, Colorado
80905-1308

SAND CREEK DRAINAGE
BASIN PLANNING STUDY
PROPOSED LAND USE

Project No. 90-04-09
Date: 9/90
Design:
Drawn: EAK
Check:
Revisions:

Table III-1. Percent Impervious Values.

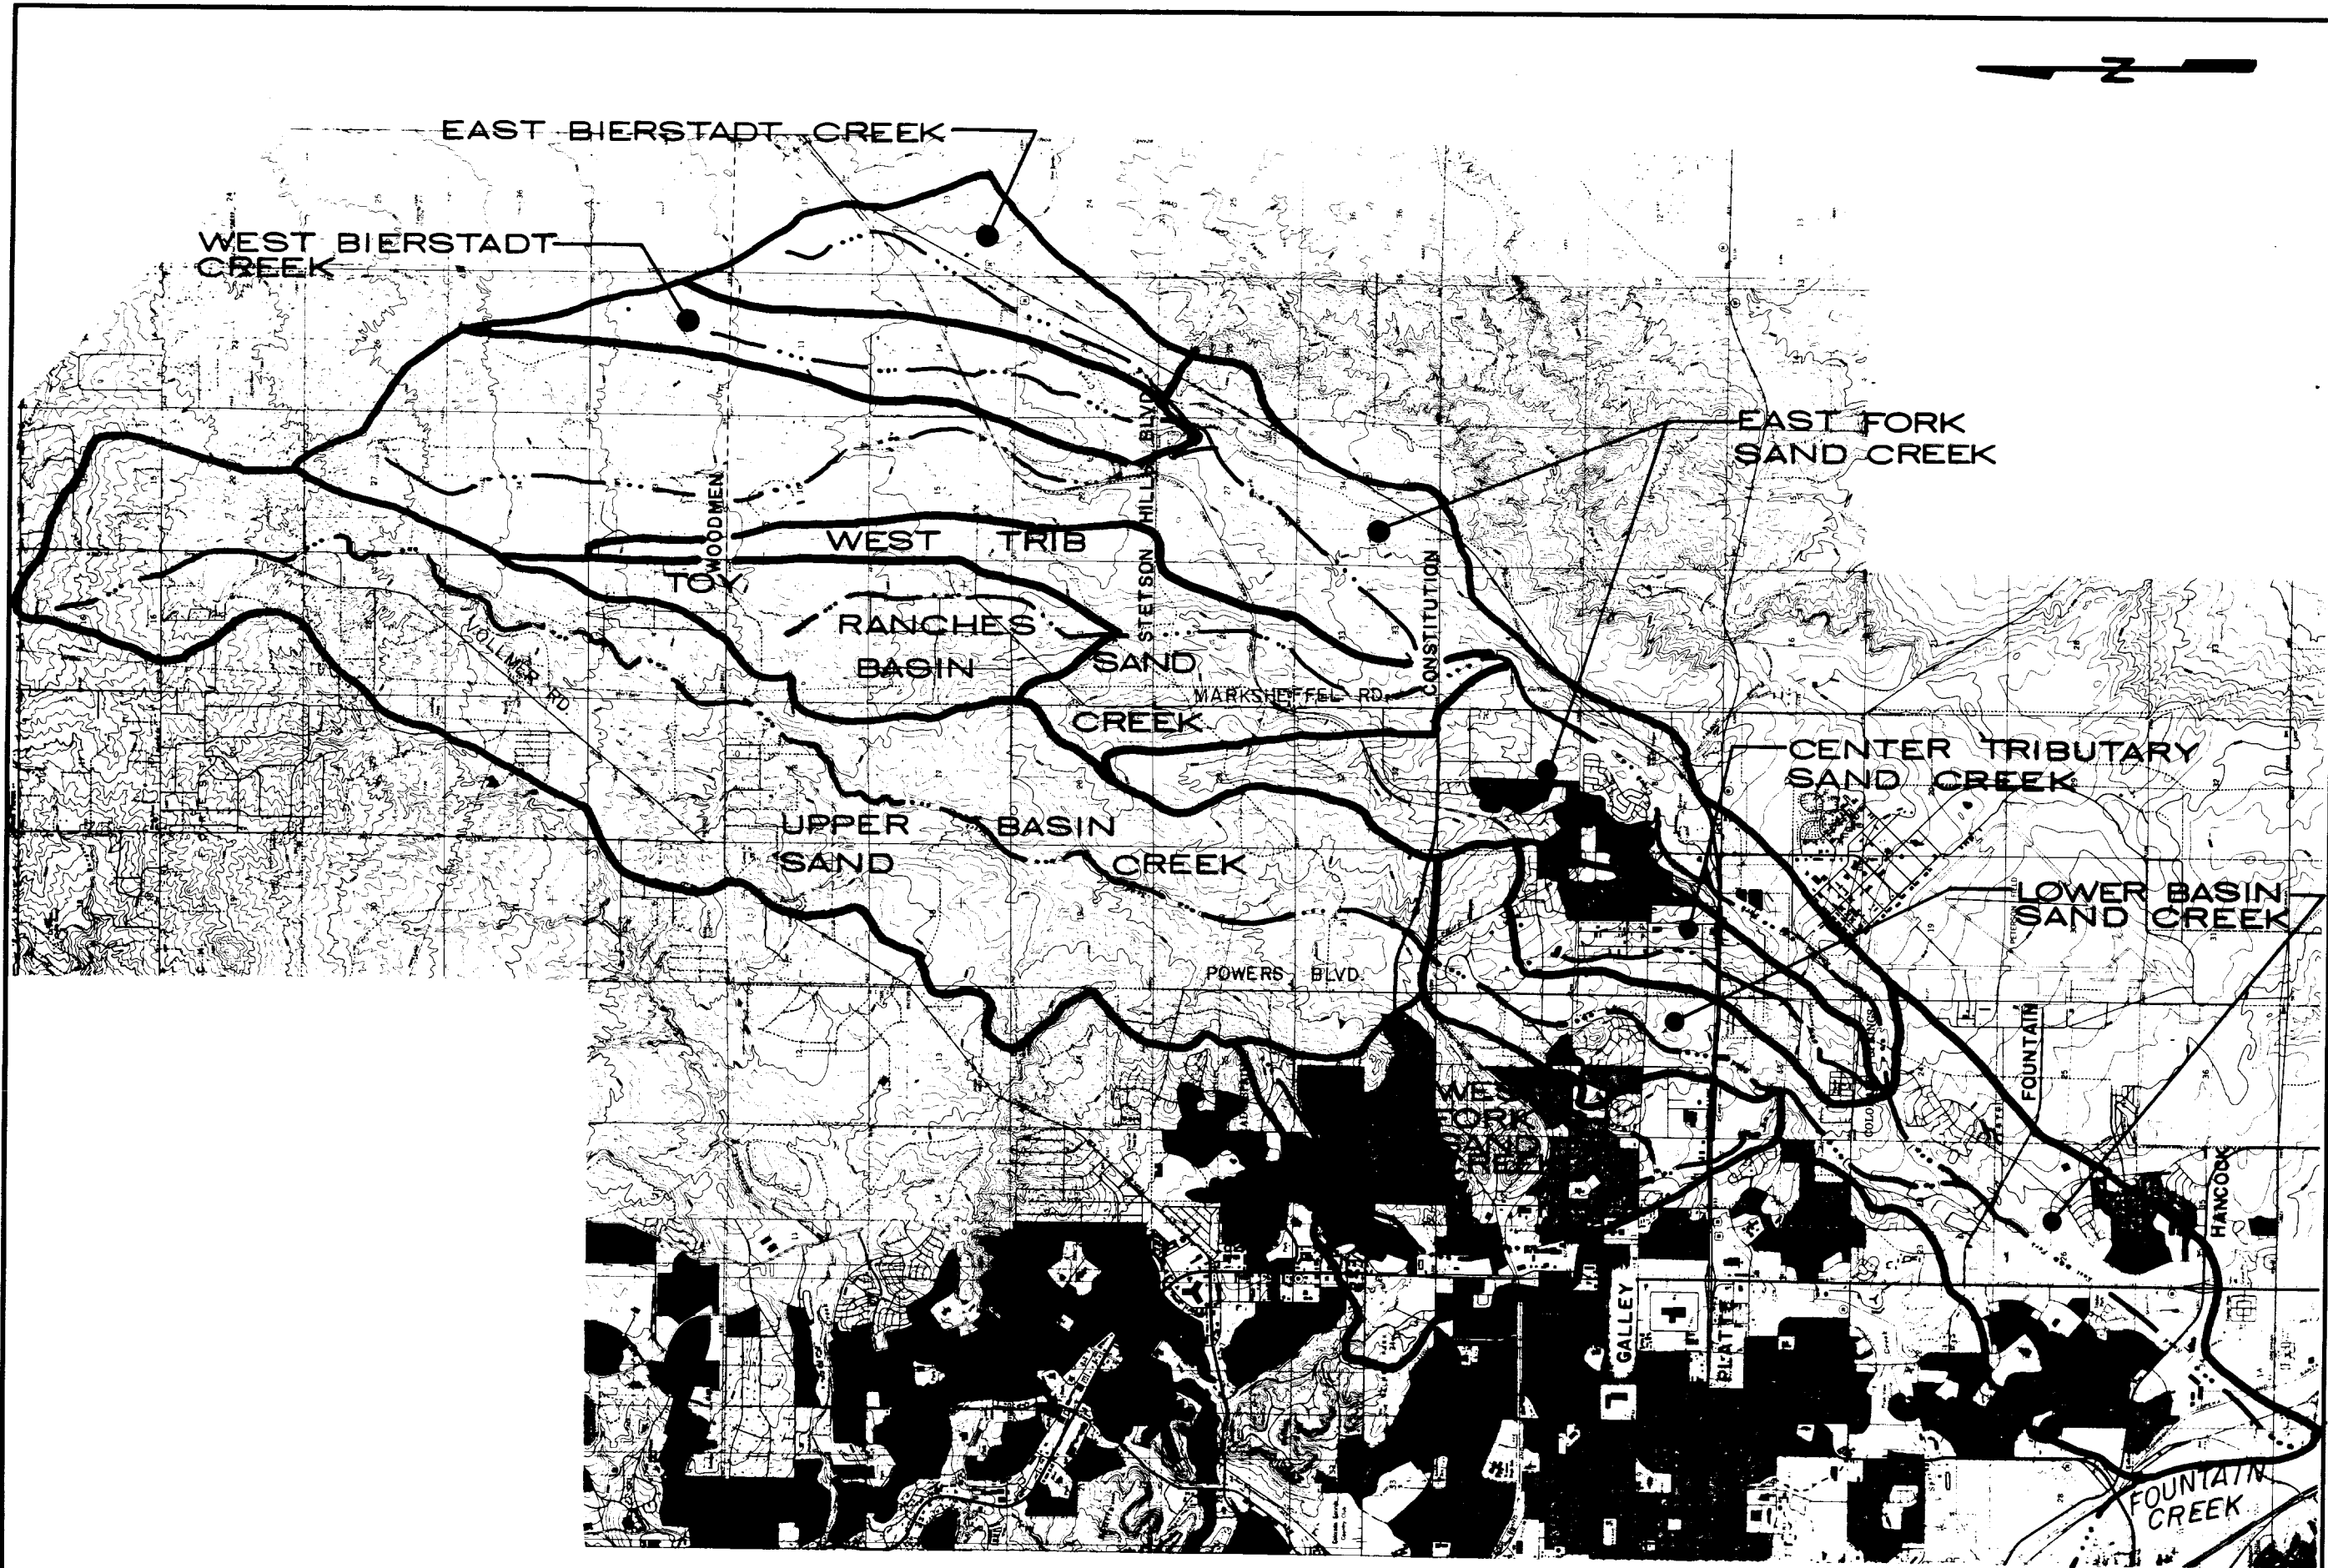

Land Use Classification	Percent Impervious	Land Use Density
Multi-Family Residential	65-80	10-24 DU/AC
Single-Family Residential	45-65	6-10 DU/AC
Low Density Residential	30-45	1-6 DU/AC
Large Lot Residential/ Agricultural	5-20	1 DU/AC
Office/Commercial	80-90	
Industrial	85-95	
Institutional	50-75	
Dedicated Open Space/Park	5-10	
Rangeland - Poor to Good Condition	5- 20	

NOTE: The above data was used in the preparation of the hydrologic analysis for the Sand Creek Drainage Basin Planning Study. These data are not intended to reflect future land use planning within the City or the County.

Table III-2: Summary of Peak Discharges
24-hour Duration Storm, AMC-II
Baseline Hydrologic Conditions

Design Point	Location	Area s.m.	100-year (cfs) Existing	Future	10-year (cfs) Existing	Future
SAND CREEK (1)						
1	@ Fountain Creek	54.1	16900	25800	7470	11800
12	Hancock Blvd.	53.1	16100	25000	7250	11600
