STORMWATER MANAGEMENT PLAN NOTES

All references to specification sections, subsections, and definitions are for CDOT Road and Bridge Construction Manual (2021).

1. SITE DESCRIPTION

The Contractor shall comply with all contractual requirements, and all requirements associated with the CDPS-SCP on this project. The SWMP Administrator for Construction shall update the SWMP to reflect current project site conditions.

A. PROJECT SITE LOCATION:

Location or address of construction office: Monument Academy is located in \$13, T11S, R67W just outside the limits of the Town of Monument, CO. The project is located north of Highway 105, and east of Knollwood Drive at 1150 Village Ridge Point, Monument, CO.

- B. <u>PROJECT SITE DESCRIPTION</u>: This project is for the addition of new private internal roads to improve circulation of traffic within the school property. It also includes modular block walls, and storm system extensions. Construction activities include erosion control, and re-establishing vegetation.
- C. PROPOSED SCHEDULE FOR SEQUENCE FOR MAJOR CONSTRUCTION ACTIVITIES: This project will be constructed in two separate phases with the back of the school private road being constructed with the first phase during the summer of 2022, and the front of school private road being constructed with the second phase during the summer of 2023. The back of school first phase shall include installation of initial erosion control measures, clearing and grubbing, drainage, wall construction, roadway construction, site improvements, striping, signing, landscaping and permanent stabilization. The front of school second phase shall include installation of initial erosion control measures, clearing and grubbing, drainage, roadway construction, site improvements, striping, signing, landscaping and permanent stabilization.

D. ACRES OF DISTURBANCE:

- 1. Total area of construction site (LOC (PERMITTED AREA)): 3.50 acres
- 2. Total area of proposed disturbance (LDA): 1.52 acres
- 3. Total area of seeding: 0.68 acres
- E. <u>EXISTING SOIL DATA</u>: Soil data for the project site is obtained from the USDA NRCS Soil Survey. Reported existing soils are in Hydrologic Soil groups B and D. Floodplain and riparian meadow areas are expected to be Alamosa loams, while upland areas and hillsides are expected to be Tomah-Crowfoot loamy sands. Each of these has slight to moderate erosion potential and may impact both the existing grades and contribute to polluted stormwater runoff flow.

F.	EXISTING VEGETATION, INCLUDING PERCENT OF VEGETATIVE COVER:	The SWMP Administrator for
С	onstruction shall document existing vegetation where all work will be occurri	na.

Pre-Construction Date of survey:	Percent Existing Vegetative Cover:
Description of existing vegetation:	Tay have not a firmer.
Method for determining percent vegetative cover:	
Include a map or table showing locations, photos of methodology used to determine existing vegetative	documenting pre-Construction vegetative cover, and e cover to SWMP tab 17:
Post-Construction Date of survey: Description of vegetation:	Percent Vegetative Cover:
Date of CDPS-SCP Closure:	
The method used to determine pre-construction pe	ercent cover shall be used to determine post construct

The method used to determine pre-construction percent cover shall be used to determine post construction percent cover.

Include map or table showing transect locations, photos documenting post-Construction vegetative cover, and methodology used to determine existing vegetative cover in SWMP Notebook.

G. <u>POTENTIAL POLLUTANTS SOURCES:</u> Refer to Potential Pollutant Sources in SWMP Section 4A. The SWMP Administrator for Construction shall prepare a list of all potential pollutants and their locations in accordance with subsection 107.25.

H. RECEIVING WATER:

- 1. Outfall locations: See SWMP Site Maps for existing and proposed outfall locations. Stormwater system for the project is privately owned and not connected to a municipal storm sewer system. All discharges outfall overland to Dirty Woman Creek.
- 2. Names of immediate receiving water(s) on site: Dirty Woman Creek is located adjacent to the project site and is the receiving water for the entire site.
- 3. Ultimate receiving water(s): Dirty Woman Creek
- 4. Description of all stream crossings located within the Construction Site Boundary: No streams cross the project area.

Location	Stream Name	Description Of Any Disturbed Upland Areas

Uncontaminated Springs	t.b.d.	
Concrete Washout Water (in-ground washout	t.b.d.	
structure)#		
Landscape Irrigation Return Flows	t.b.d.	
Discharges from Diversions of State Waters	t.b.d.	
Emergency Fire Fighting	t.b.d.	

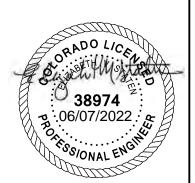

#Concrete washout water associated with the washing of concrete tools and concrete mixer chutes can be discharged to the ground if site is managed accordingly to prevent the water from leaving the site as surface runoff or reaching receiving waters.

- J. <u>DESCRIPTION OF DRAINAGE PATTERNS FROM THE SITE:</u> Dirty Woman Creek is located adjacent to the project site and is the receiving water for the entire site. The site drains typically from southeast to northwest with the private storm system outfalls discharging to the fields and floodplains between the project site and Dirty Woman Creek.
- K. <u>ALTERNATIVE DIVERSION CRITERIA:</u> When applicable, The Contractor is to provide a method statement based on data provided by the Hydraulic Engineer. The alternative diversion must be approved by CDPHE's Water Quality Control Division prior to implementation. The diversion method must be designate to minimize the discharge of pollutants and prevent the potential for pollution or degradation to state waters as a result of the diverted flow through the diversion structure. In addition, the alternative diversion method must minimize the discharge of pollutants throughout the installation, implementation and removal of the diversion.]
- L. ALTERNATIVE TEMPORARY STABILIZATION SCHEDULE: [If applicable, provide a description of the alternative temporary stabilization schedule. If temporary stabilization exceeds the 14-day schedule, then the SWMP must document the constraints necessitating the alternative schedule, provide the alternative schedule, and identify all the locations where the alternative schedule is applicable on the site map.]

DEWATERING (Contractor is responsible for obtaining a permit from Colorado Dept. of Health and Environment.)	Shall be done in such a manner to prevent potential pollutants from entering state waters.		Х	х	
CLEAN WATER DIVERSION	Placed to divert clean surface or groundwater around the disturbance area to prevent it from mixing with construction runoff.		х	х	
OTHER					

NON-STRUCTURAL Control Measures that may be potentially used on the project for erosion and sediment control; practices may include, but are not limited to: Erosion control devices are used to limit the amount of soil loss on site. Sediment control devices are designed to capture sediment on the project site. Construction controls are control measures related to construction access and stagging. Control Measure locations are indicated on the SWMP Site Map.

* Use of vegetative buffer strip requirements. The CDPHE Water Quality Control Division Technical Memorandum dated August 27, 2015 clarifies the requirements for utilization of existing vegetation as a buffer type of sediment control measure, while maintaining compliance with the CDPS permit for Stormwater Discharges Associated with Construction Activity – CDPS Permit No. COR4000000. In general, the division does not recommend that vegetated buffers be implemented as a sediment removal control measure for runoff from disturbed areas at construction sites, unless implemented as a "finishing" component of a treatment train comprised of additional, adequate up-gradient Control Measures. The entire memorandum can be found at: https://www.colorado.gov/pacific/sites/default/files/Vegetative%208uffer%20Memo.pdf

SEDIMENT BASIN INSTALLATION NOTES

- 1. SEE PLAN VIEW FOR

 - -LOCATION OF SEDIMENT BASIN. -TYPE OF BASIN (STANDARD BASIN OR NONSTANDARD BASIN).
- -FOR STANDARD BASIN, BOTTOM WIDTH W, CREST LENGTH CL, AND HOLE
- -FOR NONSTANDARD BASIN, SEE CONSTRUCTION DRAWINGS FOR DESIGN OF BASIN INCLUDING RISER HEIGHT H, NUMBER OF COLUMNS N, HOLE DIAMETER HD AND PIPE
- 2. FOR STANDARD BASIN, BOTTOM DIMENSION MAY BE MODIFIED AS LONG AS BOTTOM AREA
- 3. SEDIMENT BASINS SHALL BE INSTALLED PRIOR TO ANY OTHER LAND-DISTURBING ACTIVITY THAT RELIES ON ON BASINS AS A STORMWATER CONTROL.
- 4. EMBANKMENT MATERIAL SHALL CONSIST OF SOIL FREE OF DEBRIS, ORGANIC MATERIAL, AND ROCKS OR CONCRETE GREATER THAN 3 INCHES AND SHALL HAVE A MINIMUM OF 15 PERCENT BY WEIGHT PASSING THE NO. 200 SIEVE.
- 5. EMBANKMENT MATERIAL SHALL BE COMPACTED TO AT LEAST 95 PERCENT OF MAXIMUM DENSITY IN ACCORDANCE WITH ASTM D698.
- 6. PIPE SCH 40 OR GREATER SHALL BE USED.
- 7. THE DETAILS SHOWN ON THESE SHEETS PERTAIN TO STANDARD SEDIMENT BASIN(S) FOR DRAINAGE AREAS LESS THAN 15 ACRES. SEE CONSTRUCTION DRAWINGS FOR EMBANKMENT, STORAGE VOLUME, SPILLWAY, OUTLET, AND OUTLET PROTECTION DETAILS FOR ANY SEDIMENT BASIN(S) THAT HAVE BEEN INDIVIDUALLY DESIGNED FOR DRAINAGE AREAS

SEDIMENT BASIN MAINTENANCE NOTES

- 1. INSPECT BMPs EACH WORKDAY, AND MAINTAIN THEM IN EFFECTIVE OPERATING CONDITION. MAINTENANCE OF BMPs SHOULD BE PROACTIVE, NOT REACTIVE. INSPECT BMPs AS SOON AS POSSIBLE (AND ALWAYS WITHIN 24 HOURS) FOLLOWING A STORM THAT CAUSES SURFACE
- 2. FREQUENT OBSERVATIONS AND MAINTENANCE ARE NECESSARY TO MAINTAIN BMPs IN EFFECTIVE OPERATING CONDITION. INSPECTIONS AND CORRECTIVE MEASURES SHOULD BE DOCUMENTED THOROUGHLY.
- 3. WHERE BMPs HAVE FAILED, REPAIR OR REPLACEMENT SHOULD BE INITIATED UPON DISCOVERY OF THE FAILURE.
- 4. SEDIMENT ACCUMULATED IN BASIN SHALL BE REMOVED AS NEEDED TO MAINTAIN BMP EFFECTIVENESS, TYPICALLY WHEN SEDIMENT DEPTH REACHES ONE FOOT (I.E., TWO FEET BELOW THE SPILLWAY CREST).
- 5. SEDIMENT BASINS ARE TO REMAIN IN PLACE UNTIL THE UPSTREAM DISTURBED AREA IS STABILIZED AND GRASS COVER IS ACCEPTED BY THE LOCAL JURISDICTION.
- 6. WHEN SEDIMENT BASINS ARE REMOVED, ALL DISTURBED AREAS SHALL BE COVERED WITH TOPSOIL, SEEDED AND MULCHED OR OTHERWISE STABILIZED AS APPROVED BY LOCAL JURISDICTION.

(DETAILS ADAPTED FROM DOUGLAS COUNTY, COLORADO)

NOTE: MANY JURISDICTIONS HAVE BMP DETAILS THAT VARY FROM UDFCD STANDARD DETAILS. CONSULT WITH LOCAL JURISDICTIONS AS TO WHICH DETAIL SHOULD BE USED WHEN DIFFERENCES ARE NOTED.
