6001 E. Platte Special Use  
Transportation Memorandum  
PCD File No.: PPR2418  
(LSC #S244110)  
August 30, 2024

**Traffic Engineer's Statement**

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

**Developer's Statement**

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

RE: 6001 E. Platte Avenue Special Use  
Transportation Memorandum  
El Paso County, CO  
PCD File No.: [PPR2418](#)  
LSC #S244110

Dear Mr. Moore,

LSC Transportation Consultants, Inc. has prepared this transportation memorandum for the proposed development of the property located at 6001 East Platte Avenue in Colorado Springs, Colorado. Located at El Paso County parcel ID 5418000075, the 17.22-acre parcel is planned to be developed with 622 mini-warehouse storage units, 168 RV/boat storage spaces, and 58,000 square feet of warehouse buildings.

Access to the development will be from the south-side, US Hwy 24 (Platte Ave.) frontage road (Motel Road). No direct access would be provided to the “mainline” of US Hwy 24 (Platte Avenue).

This report has been prepared for submittal to El Paso County and CDOT. It is our understanding that the land use applications will include Preliminary Plan, Final Plat, special use, and Site Development plan.

## REPORT CONTENTS

The preparation of this report included the following:

- Inventory of existing adjacent and nearby area street system. This included surface conditions, functional classifications, roadway widths, lane configurations, traffic control, posted speed limits, pavement markings, intersection and access spacing, roadway and intersection alignments, auxiliary turn lanes, intersection sight distances, etc.;
- Summary of morning and late-afternoon peak-hour turning-movement traffic counts at the following intersections:
  - Platte Avenue/Motel Road (right-in/right out (RIRO) access)
  - Motel Road/Platte Avenue frontage road
  - Platte Avenue/Hathaway Drive
  - Hathaway Drive/Platte Avenue frontage road

- Estimates of short-term baseline traffic volumes, which have been revised to reflect the required closure of the Motel Road RIRO connection to the US Hwy 24 “mainline”; baseline volumes also include anticipated trips to be generated by other area developments;
- Review other recent studies completed in this area and use of applicable data/transferrable information/analysis etc. from these previous LSC studies adjacent to the site were also utilized;
- Estimates of average weekday and peak-hour trip generation for the proposed development;
- Estimation of directional distribution of site-generated vehicle trips on the area street system, the study-area intersections, and the proposed site-access points on Motel Road;
- Projections of site-generated turning-movement traffic volumes at the following “study-area” intersections:
  - Platte Avenue/Hathaway Drive
  - Hathaway Drive/Platte Avenue frontage road
- Estimates of long-term background-traffic volumes at the study-area intersections;
- Total traffic (site traffic-plus-baseline/background traffic) projections at the study-area intersections for the short and long term;
- Level of service (LOS) analysis at the study-area intersections;
- Evaluation of existing, short-term, and long-term projected intersection volumes to determine the potential need for any new auxiliary right-/left-turn lanes, based on the criteria in CDOT’s *State Highway Access Code*;
- Other recommended improvements/modifications to the study-area streets and intersections, including street system/intersection improvements, intersection traffic control, and/or signage and pavement-marking modifications as required; and
- Summary of compiled data, analysis, findings, and recommendations.

## **PRIOR AREA TRAFFIC REPORTS**

LSC utilized the following previous traffic reports to assist in the production of this report:

- *6435 E. Platte Avenue Special Use* – February 21, 2024 (by LSC, PCD File No. [AL2316](#))
- *WireNut* – August 10, 2023 (by LSC, PCD File No. [PPR2234](#))
- *HCD Drilling* – April 20, 2022 (by LSC, PCD File No. [MS218](#))
- *Freedom Springs* – July 2018 (by LSC, PCD File No. [PPR1840](#))

The following new project is also referenced in this report in the last paragraph of the short-term baseline traffic paragraph: PCD File No. [PPR2415](#).

## LAND USE AND ACCESS

### Site Land Use

Figure 1 shows the site location relative to the adjacent and nearby streets. The proposed special-use site located at 6001 East Platte Avenue in Colorado Springs, Colorado. Located at El Paso County parcel ID 5418000075, the 17.22-acre parcel is planned to be developed for 622 mini-warehouse storage units, 168 RV/boat storage spaces, and 58,000 square feet of warehouse buildings. Please refer to Table 1 below for a summary of the phasing for the overall development.

**Table 1: Land Use Summary**

Land Use	Units	Phase 1	Phase 2	Phase 3	Total
Warehouse	Square Feet	0	0	58,000	58,000
Mini-Warehouse	Storage Units	358	264	0	622
RV/Vehicle/Boat Storage	Parking Spaces	85	83	0	168

A copy of the site plan is shown in Figure 2.

### Site Access

Access to the development will be from the south-side, US Highway 24 (Platte Avenue) frontage road (Motel Road). No direct access would be provided to Platte Avenue. Moreover, per CDOT, the mid-block right-in/right-out (RIRO) access on Platte Avenue to the frontage road will need to be permanently closed. All traffic using this RI/RO, including this project's traffic, would need to use the three-quarter-movement access connection to the "mainline" of US Highway 24, the frontage road at Hathaway Drive.

Recent TIS reports for parcels within this area have reflected a CDOT directive to the applicant for the "HCD Drilling" to close the existing right-in/right-out (RIRO) vehicular connection to the US Highway (Hwy) 24 "mainline." This RIRO connection is located 925 feet west of the frontage road/three-quarter-movement intersection and approximately 790 feet east of this site's access (centerline distance). With the closure of the RIRO, the existing three-quarter-movement connection to the US Hwy 24 mainline will remain open to provide access to this area. The short- and long-term (20-year horizon) scenarios assume closure of the RIRO.

## SITE ACCESS SIGHT DISTANCE

### Existing Conditions

Sight distance to the east at the east site access is limited by vegetation (overgrown weeds) within the existing guardrail on the south side of the frontage road. This vegetation must be removed for sight distance to be acceptable at the east site access. An easement adjacent to the existing

guardrail will likely be needed for this area to be kept clear of landscaping and other potential obstructions to sight distance.

### **CDOT Requirements**

The proposed site-access point must meet *Colorado State Highway Access Code* standards for sight distance. Please refer to Exhibit 1 and Exhibit 2 for more details.

### **Entering Sight Distance**

With an assumed 25-mph posted speed limit (unposted in the vicinity of the site), the minimum required entering/intersection sight distance for the westbound approach at the proposed site-access locations is 300 feet for passenger vehicles and 390 feet for single-unit trucks (per Table 4-2 of the *State Highway Access Code*). An adjustment factor of 1.20 was applied to the required sight distances (per Table 4-4 of the *State Highway Access Code*), as the field-measured roadway gradient adjacent to the site driveways ranged from 3.7-4.1 percent downgrade. The site-access driveway is at the west end of the south frontage road. Therefore, entering sight distance may not be necessary (with essentially no through traffic on the frontage road).

### **Sight Distance Along Highway**

The minimum required “sight distance along a highway” for both approaches at the proposed site-access locations is 150 feet for passenger vehicles (per Table 4-1 of the *State Highway Access Code*). Sight-distance field measurements for the eastbound approach to the proposed site-access location to the frontage road meets the required 150-foot requirement.

### **ROAD AND TRAFFIC CONDITIONS**

Figure 1 shows the streets adjacent to and in the vicinity of the site. Adjacent roads serving the site are identified below, followed by a brief description of each:

**Platte Avenue (US Highway 24)** is a four-lane east/west state highway that locally extends from Colorado Springs to Falcon. US Hwy 24 is classified as an Expressway by the Colorado Department of Transportation and is shown as an Expressway on the County *Major Transportation Corridors Plan (MTCP)*. The US Hwy 24/Road intersection is grade-separated. There is an existing at-grade three-quarter-movement intersection in the vicinity of the site at Hathaway Drive. Figure 28 of CDOT’s *US 24 Planning and Environmental Linkage (PEL) Study* shows that the three-quarter access intersection at US Hwy 24 just south of Hathaway Drive will remain unchanged through 2040. Please refer to the “Site Access” section above regarding the anticipated/assumed closure of the existing RIRO connection to the US Hwy 24 mainline.

**Motel Road** is a two-lane Urban Local street without a posted speed limit in the vicinity of the site. Eastbound right-turn auxiliary turn lanes currently exist at both stop-sign-controlled frontage-road connections to Platte Avenue.

**Hathaway Drive** is a two-lane Urban Local street that functions as the north leg/connection to the three-quarter-movement intersection with US Hwy 24. Approximately 50 feet north of US Hwy 24, there is a yield-sign-controlled T-intersection.

### Existing Traffic Volumes

Vehicular turning-movement counts were conducted at the following intersections and dates/times:

- Platte Avenue/Hathaway Drive (three-quarter-movement access)
  - Thursday, April 11, 2024 from 6:30 – 8:30 a.m.
  - Wednesday, April 10, 2022 from 4:00 - 6:00 p.m.
- Motel Road/Hathaway Drive (south of Platte Avenue)
  - Thursday, April 11, 2024 from 6:30 – 8:30 a.m.
  - Wednesday, April 10, 2022 from 4:00 - 6:00 p.m.
- Platte Avenue/RIRO access to Motel Road
  - Thursday, April 18, 2024 from 6:30 – 8:30 a.m.
  - Thursday, April 18, 2022 from 4:00 - 6:00 p.m.
- Motel Road/frontage road RIRO access (south of Platte Avenue)
  - Thursday, April 18, 2024 from 6:30 – 8:30 a.m.
  - Thursday, April 18, 2022 from 4:00 - 6:00 p.m.

Existing morning and evening weekday peak-hour traffic volumes at these intersections are shown in Figure 3. Raw count reports are attached.

### 2024 Short-Term Baseline Traffic Volumes

Figure 4 shows estimated “2024 short-term baseline” traffic volumes on the study-area streets and at the study-area intersections (short-term peak-hour turning-movement volumes). These baseline volumes take into account 2024 traffic count data, previous LSC traffic counts from LSC’s recent nearby studies, and traffic projections for new developments south of Platte Avenue contained within those studies. These include assumed completion of the 6435 East Platte Storage, HCD Drilling, and WireNut developments, and associated site-generated traffic.

The 2024 short-term baseline volumes also reflect LSC adjustments accounting for the required closure of the existing RIRO connection to the US Hwy 24 mainline, located approximately 925 feet west the US Hwy 24/three-quarter access intersection. The short-term baseline scenario assumes all existing traffic using this RIRO reassigned to the existing three-quarter access to reflect adjusted traffic patterns. Anticipated future area trips generated were also assigned to the three-quarter-only.

El Paso County comments indicate a recent new project on the north side of Platte Avenue (EPC File No. [PPR2415](#)). This has been noted here and on the figure for reference. However, due to the planned closure of the right-in/right-out access on the south side of Platte, the added turning movements associated with that new project located north of Platte (on the opposite side of Platte from this project) have not been specifically added to these baseline volumes as they will have minimal relevance to the impacts, recommendations and CDOT requirements for this project and the **south** leg of the 3/4 intersection.

### **Field Observations at US Highway 24/Three-Quarter Access**

LSC conducted field observations of operations at the three-quarter access to US Hwy 24 during both the morning and afternoon peak hours. The eastbound-left/U-turn-lane queue was consistently 6-12 vehicles, with multiple occurrences of additional vehicles arriving at the back of queue as the queue began to clear. In general, drivers making an eastbound-U-turn contributed more towards control delay for this turning movement, often waiting 3-5 minutes before enough of a gap formed upstream on Platte Avenue for them to safely conduct a U-turn.

Several vehicles (mostly heavy vehicles from businesses located on the Motel Road/Platte Avenue frontage road) were observed to turn eastbound-left onto Hathaway Drive rather than waiting in the eastbound-U-turn queue. After turning eastbound-left onto Hathaway Drive, these drivers would immediately make a northbound-U-turn in the wider intersection of Hathaway Drive/Ford Road before turning 180 degrees back towards Platte Avenue to turn southbound-right onto Platte Avenue. This turning-movement combination was observed to be noticeably quicker for vehicles wishing to travel back towards downtown Colorado Springs compared to those drivers completing a standard eastbound-U-turn movement at Platte Avenue/Hathaway Drive.

Northbound and southbound right-turning vehicles were seen using their respective right-turn acceleration lane to merge into through traffic on Platte Avenue. The eastbound right-turn acceleration lane is continuous to Peterson Boulevard (approximately one-quarter mile to the east), while on the north side of Platte, the westbound right-turn acceleration lane is continuous to Valley Drive (about one-quarter mile to the west).

### **TRIP GENERATION**

Estimates of the vehicle trips projected to be generated by the proposed development have been made using the nationally published trip-generation rates from *Trip Generation, 11<sup>th</sup> Edition, 2021* by the Institute of Transportation Engineers (ITE). Corresponding trip-generation rates from the following ITE Land Use categories have been used to develop trip-generation estimates for the proposed site:

- “150 – Warehouse”
- “151 – Mini-Warehouse”

RV/Boat Storage trip-generation rates are not available for the proposed land use. As such, trip-generation rates for this site have been based on other studies completed for RV-storage facilities. Please refer to Appendix A for details.

Table 2 below presents a summary of the estimated site trip generation. A detailed trip-generation estimate for the site, including ITE rates land uses, is presented Table 3 (attached). The proposed sketch plan is attached for reference.

The proposed land uses are projected to generate about 275 total vehicle trips on the average weekday during a 24-hour period, with approximately half entering and half exiting the site. During the morning peak hour, approximately 31 entering vehicles and 13 exiting vehicles are estimated to be generated. Approximately 18 entering and 34 exiting vehicles are estimated to be generated by the site during the afternoon peak hour.

**Table 2: Estimated Site Vehicle-Trip Generation (Total Driveway Trips)**

Analysis Period	Trips Generated		
	Entering	Exiting	Total
Morning Peak Hour (veh./hour)	31	13	44
Afternoon Peak Hour (veh./hour)	18	34	52
Daily/24-hour (veh./day)	138	138	275

## **TRIP DISTRIBUTION AND ASSIGNMENT**

### **Trip Directional Distribution**

Estimating the directional distribution of site-generated vehicle trips to the study-area roads and intersections is a necessary component in determining the site's traffic impacts. Figure 5 shows the percentages of the site-generated vehicle trips projected to be oriented to and from the site's major approaches. This report utilizes a similar directional distribution as the outdoor storage, HCD Drilling and WireNut reports, with localized trip-routing adjustments specific to the location of and access to/from this proposed outdoor storage site.

### **Site-Generated Traffic**

Figure 6 shows the projected site-generated traffic volumes for the weekday morning and evening peak hours. Site-generated traffic volumes at the study-area intersections have been calculated by applying the directional-distribution percentages estimated by LSC (from Figure 5) to the trip-generation estimates (from Table 2).

### **2024 Short-Term Baseline-Plus-Site-Generated Traffic Volumes**

Figure 7 shows the sum of the short-term baseline traffic volumes (from Figure 4) and site-generated peak-hour traffic volumes (shown in Figure 6). These volumes represent the projected short-term total traffic, assuming completion of the site development.

### **Estimated Future 2044 Background Traffic Volumes**

Figure 9 shows the projected 20-year background traffic volumes for the year 2044. Estimated 2044 background through traffic volumes on Platte Avenue, Hathaway Drive, and Motel Road are based on projected background growth of undeveloped parcels in the vicinity of the site. Estimates include the completion of the 6435 Platte Outdoor Storage, HCD Drilling, and WireNut developments in the vicinity that are assumed to have been completed.

Note: The trips shown turning to and from the east leg of the US Hwy 24/three-quarter access intersection were included in prior TIS reports and were intended to account for potential changes in land use on this parcel (now accounted for in this study by “site-generated” traffic) and/or trips to/from the district water/wastewater facility accessed at the east end of the frontage road. This report retains these turning-movement estimates, but this is likely a conservative assumption if the water/wastewater facility (present and future) average peak-hour traffic is accurately represented by the existing counts in Figure 3.

CDOT’s 20-year growth factor for Platte Avenue is 1.27, representing a 1.35 percent annual growth rate. These growth rates were published on CDOT’s Online Transportation Information System (OTIS) for the segment of roadway on SH24G between mile posts 311-312 (CDOT count station ID 100849). Projected 20-year background traffic volumes do **not** include projected traffic to be generated by this proposed outdoor storage site.

The 2044 background volumes also account for the anticipated closure of the existing RIRO connection between the frontage road and the US Hwy 24 (mainline). All projected traffic at the RIRO has been assigned to the three-quarter access located to the east.

### **Future 2044 Total Traffic Volumes**

Figure 9 shows the projected 2044 total traffic volumes, which are the sum of 2044 background traffic volumes (from Figure 8) plus the site-generated traffic volumes (from Figure 6).

### **LEVEL OF SERVICE ANALYSIS**

The following intersections have been analyzed to determine the projected intersection levels of service for short- and long-term traffic scenarios for the morning and evening peak-hour periods:

- Motel Road/Platte Avenue frontage road
- Platte Avenue/Hathaway Drive

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from “A” to “F.” LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 4 shows the level of service delay ranges for signalized and unsignalized intersections.

**Table 4: Intersection Levels of Service Delay Ranges**

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	Average Control Delay (seconds per vehicle) <sup>(1)</sup>
A	10.0 sec or less	10.0 sec or less
B	10.1-20.0 sec	10.1-15.0 sec
C	20.1-35.0 sec	15.1-25.0 sec
D	35.1-55.0 sec	25.1-35.0 sec
E	55.1-80.0 sec	35.1-50.0 sec
F	80.1 sec or more	50.1 sec or more

(1) For unsignalized intersections, if V/C ratio is greater than 1.0 the level of service is LOS F, regardless of the projected average control delay per vehicle.

Detailed Synchro reports are attached. A summary of LOS during the weekday morning and evening peak hours for the following unsignalized intersections is shown in the following figures:

- Figure 3: Existing Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 4: Short-Term Baseline Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 7: Short-Term Total Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 8: 2044 Background Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 9: 2044 Background + Site Traffic, Lane Geometry, Traffic Control, and LOS

### **Platte Avenue/Hathaway Drive (Three-Quarter Intersection)**

#### Short Term

The eastbound left-turning movement at this three-quarter-movement intersection currently operates at LOS F and is projected to remain at LOS F during at least one short-term peak-hour traffic scenario. Note: No site-generated traffic would be added to this turning movement, as the RIRO access to Motel Road will be closed. All other individual turning movements would operate at LOS F during at least one short-term peak hour, with or without the addition of site-generated traffic.

Although the *Highway Capacity Manual (HCM)* LOS analysis indicates LOS E or worse, field observations indicate that upstream signals at US Hwy 94 and Marksheffel Road produce gaps in the westbound traffic stream that allow left-turning movements to occur. Please refer to the “Field Observations at US Hwy 24/Hathaway Drive” section above for more detail.

### Long Term

*HCM* analysis indicates that the following individual turning movements at this three-quarter-movement intersection would operate at LOS F during all long-term scenarios, with or without the addition of site-generated traffic:

- Eastbound-left/U-turn, westbound-left/U-turn, northbound-right, and southbound-right

Synchro *HCM*-calculated control delays are in the LOS F range for this intersection. However, the formula-calculated values likely exceed realistic levels. For additional detail, please refer to the attached *HCM* calculation sheets.

Northbound-to-eastbound right-turn acceleration lanes exist at this access point to Platte Avenue. However, these are not accounted for in the *HCM* LOS results, even though the acceleration lanes would likely reduce delay, assuming drivers used them properly.

Field observations indicate that upstream signals at the US Hwy 94, Marksheffel Road, and Powers Boulevard cross-street intersections produce gaps in the westbound traffic stream that allow left-turning and right-turning movements to occur. Until grade-separated interchanges replace the upstream signalized intersections in the future, these traffic gaps will continue to be generated.

### **Frontage Road/Hathaway Drive (Adjacent to the Three-Quarter Intersection with US Highway 24)**

All approaches and individual turning movements at the Hathaway Drive/frontage road intersection south of Platte Avenue currently operate at and are projected to remain at LOS B or better through 2044 during both peak hours, with or without the addition of site-generated traffic.

### **AUXILIARY TURN-LANE ANALYSIS**

The *State Highway Access Code* contain turning-volume thresholds which require auxiliary left- or right-turn lanes by roadway classifications. Roadway classifications for key thoroughfares in the vicinity of the site are based on the *State Highway Access Category Assignment Schedule*.

- Platte Avenue (US Hwy 24 Mainline) – EX- Expressway/Major Bypass
- “Motel Road”/south frontage road – FR-Frontage Road

### **US Highway 24/Hathaway (Three-Quarter Intersection with US Highway 24 “Mainline”)**

#### Eastbound Left-Turn Deceleration Lane

With the closure of the RIRO connection to the mainline of Platte (US Hwy 24), this turn lane will not be utilized by site-generated traffic. As such, no modifications to the lane will be required by this developer. Also, CDOT did not indicate a requirement of other projects served by the south frontage road to improve this lane.

### Westbound Left-Turn Deceleration Lane

The existing westbound-left turn lane length is 600 feet, consisting of approximately 300 feet of full-width lane plus stacking distance and a 300-foot taper.

CDOT “EX – Expressway” left-turn deceleration lane requirements for a 55-mph posted limit at this approach are 862 feet:

- 600 feet of full-width deceleration length
- 40 feet of stacking for turning vehicles (based on projected 2044 volumes)
- 222-foot lane transition taper (18.5:1 ratio)

The existing turn lane does not currently meet CDOT Access Code standards. As such, the existing westbound left-turn lane would need to be lengthened 262 feet (from its existing 600-foot length) in order to meet CDOT turn-lane design requirements. There may be constraints to lengthening this lane, such as the grade difference between eastbound and westbound lanes and/or large sign structures in the center median just to the east of this access location.

**March 16, 2022:** Per a meeting with CDOT staff on March 16, 2022 for the HCD Drilling development application, CDOT indicated that the HCD Drilling project would not be required to improve this lane. CDOT indicated that the HCD Drilling project will have the obligation to close the RIRO connection to US Hwy 24 and restripe/resign the eastbound right-turn deceleration lanes.

**Current (Spring 2024):** The current requirements of CDOT have been identified in a comment letter and comments posted to EDARP. These are included in the section below.

### Eastbound Right-Turn Deceleration Lane

Currently, the eastbound right-turn lane is a continuous deceleration lane extending for approximately 815 feet between the RIRO access (to the west/**to be closed**) and the three-quarter movement intersection at Hathaway Drive. Following the closure of the RIRO access to the west, this lane will need to be restriped/resigned and combined with the current right-turn deceleration lane for the RIRO intersection. This will result in a longer right-turn deceleration lane for the three-quarter access. **The detailed current requirements of CDOT have been identified in a comment letter and comments posted to EDARP. These are included in the section below.**

### Northbound-to-Eastbound Right-Turn Acceleration Lane

Currently, the northbound-to-eastbound right-turn acceleration lane is a continuous lane extending for approximately one-quarter mile between this three-quarter access at Hathaway Drive and the eastbound off-ramp to Peterson Boulevard (to the east). No modifications would be required to the existing eastbound right-turn acceleration lane design at this intersection.

### **Platte Avenue/RIRO Movement Intersection**

Per CDOT, this RIRO “access” connection to the US Hwy 24 “mainline” will need to be permanently closed and removed. Following the removal of this RIRO access, the eastbound right-turn deceleration lane for this access will be added to the current continuous eastbound right-turn lane extending to the three-quarter access to the east (through restriping/resigning). The result will be a longer right-turn deceleration lane for the three-quarter access. **The detailed current requirements of CDOT have been identified in a comment letter and comments posted to EDARP. These are included in the section below.**

### **CDOT Requirements**

**The detailed current requirements of CDOT have been identified in a comment letter (July 2024 CDOT letter attached) and comments posted to EDARP. These are included in the section below**

- A CDOT Access Permit will be required for this development.
- Removal of the existing RIRO access to State Highway 024G. The removal of the existing access shall include, but not be limited to, the return of highway right-of-way slopes, ditches, and fences to match existing adjacent conditions, including removal of asphalt aprons and culverts. Any asphalt removed from the highway shall result in a smooth finished edge [thus the only access to the south frontage road (Motel Road)] will be to the east at the intersection with Hathaway Drive/Motel Road (Frontage Road).
- The existing asphalt turn-lane apron shall be sawcut and removed to form a straight line west-to-east leaving a 4-foot shoulder for the creation of the extended right-turn lane to the south to access Motel Road.
- The existing roadway solid striping shall be removed to include the solid median triangle and lane dash lines to be replaced with a solid white shoulder line and 8-inch-wide dotted lines for the extended right-turn lane per CDOT Standards.
- Additional pavement markings including right-turn arrows are required of this construction per CDOT Standards.
- Existing signage shall be removed and become property of the Permittee to dispose of ((1) right-turn lane must turn right near the asphalt removal section and (1) stop sign)).
- Additional delineator posts are required of this permit and the signage for the beginning of the right-turn lane.
- Fill slopes and cut slopes shall be constructed to current Department minimum standards.
- The median shall be regarded to match the adjacent, surrounding areas. Drainage shall be considered while regrading not to allow for ponding of storm water drainage flows.
- The existing subgrade or base course material below the asphalt mat shall be removed and become property of the Permittee to be disposed of.
- Seeding and mulching is required of this permit to re-establish the roadway median vegetation.

It was understood that HCD Drilling was developing to the east with Parcel #5418000069 - 6201 Platte Avenue and would be required to share cost for this through El Paso County rules and

regulations. If this is not a possibility, the first development will be required to construct the new improvements.

CDOT Access Comments:

- **[8/30/2024] The CDOT Comment Letter dated 7/2/2024 is attached for reference.**
- Two CDOT Access Permits will be required for this development. (1) for the closure work at the right in/right out and (2) for the actual access connection on the Frontage Road (Motel Road).
- H24G is Categorized as EX-Expressway and a single point of access can be granted off the Frontage Road (Motel Road). The approximate mile marker for this development is at MM311.018, right along the frontage road.

**CDOT Escrow Calculation**

Should this development follow one of the other area developments, escrow percentages for future improvements identified as needed by CDOT should be calculated as part of the access permit process, for cost-sharing purposes. LSC suggests the percentages reflect this project's percentage toward two project elements: 1) closure of the right-in/right-out access connection to US Hwy 24 mainline and 2) a signing/stripping modification plan. These percentages are based on relative AM and PM peak-hour traffic impact. Costs of these projects can be estimated as part of the CDOT access-permit process.

**EL PASO COUNTY ROAD IMPACT FEE PROGRAM**

This project will be required to participate in the El Paso County Road Improvement Fee Program. The site's square footage was applied to the current fee-program rates for the applicable land uses and results in a fee amount of \$255,519. Please refer to Table 5 for more details.

**Table 5: El Paso County Road Improvement Fee**

Land Use	Size	Units	\$ per Unit	Cost
Warehouse	58	KSF	\$1,865	\$108,170
RV/Boat Storage	73.44*	KSF	\$725	\$53,244
Mini-Warehouse	129.8	KSF	\$725	\$94,105
<b>Total</b>				<b>\$255,519</b>
*RV storage is based on the footprint area of the "stalls" at the same rate as the mini-warehouse of \$725/1000 sf				8/30/2024

## CONCLUSIONS

- The site is projected to generate about 275 new driveway vehicle trips on the average weekday.
- During the weekday morning peak hour of adjacent street traffic, 31 vehicles would enter the site while 13 vehicles would exit.
- During the weekday evening peak hour of adjacent street traffic, 18 vehicles would enter the site while 34 vehicles would exit.
- Please refer to the “Level of Service” section above for detailed LOS analysis results for individual turning movements and approaches at all studied intersections, during both peak hours for the short term and the 2044 horizon year.
- CDOT has identified the requirements for this and other projects in this area served by Motel Road (the SH 24G south-side frontage road).
- CDOT access permits will be required for this project as indicated in the section above.
- Please refer to the “Auxiliary Turn Lane Needs” section for information about turn-lane modifications at the study-area intersections as well as details about CDOT’s required RIRO access closure on Platte Avenue.
- With respect to roadway improvements needed within the project area, please refer to the “CDOT Requirements” section above and the attached copy of the attached July 2024 CDOT letter.

RE: Self-Storage - Platte Frontage Rd. (PPR2418)

Dear Scott,

I am in receipt of a request for comments for Platte Self Storage. The proposed development will be to convert a Garden Supply commercial lot to a Self-Storage/RV/Boat Storage Facility. The proposed draft exhibit proposes the construction of 9 single story self-storage building (622-mini storage units), 168 RV/boat storage spaces, and 58,000 SF warehouse buildings with future expansion of 5 single self-storage buildings on approximately 63,300-SF in phase 1. Phase 2 calls for 2 Canopy structures and subdivision to 5 parcels (4 lots and 1 tracts) on 17.22-acres at Parcel #5418000075. Questions pertaining to water pond is unknown. The commercial subdivision of the lots is located within El Paso County, Colorado. After review of all documentation, we have the following comments:

### Traffic

- TIS is approved and requires the removal of the existing RIRO mid-block access to State Highway 024G and turned into a right turn lane collector to the intersection of 24G and Motel Rd. The removal of the existing access shall include, but not be limited to, the return of highway right-of-way slopes, ditches, and fences to match existing adjacent conditions, including removal of asphalt aprons and culverts. Any asphalt removed from the highway shall result in a smooth finished edge [thus the only access to the south frontage road (Motel Road)] will be to the east at the intersection with Hathaway Drive/Motel Road (Frontage Road).
- The existing asphalt turn-lane apron shall be sawcut and removed to form a straight line west-to-east leaving a 4-foot shoulder for the creation of the extended right-turn lane to the south to access Motel Road.
- The existing roadway solid striping shall be removed to include the solid median triangle and lane dash lines to be replaced with a solid white shoulder line and 8-inch-wide dotted lines for the extended right-turn lane per CDOT Standards.
- Additional pavement markings including right-turn arrows are required of this construction per CDOT Standards.
- Existing signage shall be removed and become property of the Permittee to dispose of ((1) right-turn lane must turn right near the asphalt removal section and (1) stop sign)). Additional delineator posts are required of this permit and the signage for the beginning of the right-turn lane.

- Fill slopes and cut slopes shall be constructed to current Department minimum standards.
- The median shall be regarded to match the adjacent, surrounding areas. Drainage shall be considered while regrading not to allow for ponding of storm water drainage flows.
- The existing subgrade or base course material below the asphalt mat shall be removed and become property of the Permittee to be disposed of.
- Seeding and mulching is required of this permit to re-establish the roadway median vegetation.

#### Hydraulics

- Each access shall be constructed in a manner that shall not cause water to enter onto the roadway or shoulder and shall not interfere with the existing drainage system in the right-of-way or any adopted municipal system and drainage plan.
- The highway drainage system is for the protection of the state highway right-of-way, structures, and appurtenances. It is not designed nor intended to serve the drainage requirement of abutting or other properties beyond undeveloped historical flow. Drainage to the state highway right-of-way shall not exceed the undeveloped historical rate of flows.
- All drainage appurtenances required for detention and release shall be located and fully maintainable outside the state highway right-of-way.

#### Access

- Two CDOT Access Permit will be required for this development. (1) for the closure work at the right in/right out and (2) for the actual access connection on the Frontage Rd (Motel Rd.).
- SH24G is Categorized as EX-Expressway, and a single point of access can be granted off the Frontage Road (Motel Rd.). The approximate mile marker for this development is at MM311.018, right along the frontage road.
- Section 1.4(1) of the State Highway Access Code, states in part that no person, shall construct any access providing direct vehicular movement to or from any state highway from or to property in close proximity or abutting a state highway without an access permit issued by the designated issuing authority with the written approval of the Department.
- Under Section 2.6 (Change in Land Use and Access Use) of the State Highway Access Code, states the requirements of a new access permit. It states in part that if any significant changes are made or will be made in the use of the property which will affect access operation, traffic volume increases by 20% and or vehicle type, the permittee or property owner will coordinates with the local authority and the Department to determine if a new access permit and modifications to the access are required.
- Roadway improvements will be required and detailed in the terms and conditions of the access permit(s).

#### Additionally,

- On-premise and off-premise signing shall comply with the current Colorado Outdoor Advertising Act, sections 43-1-401 to 421, C.R.S., and all rules and regulations pertaining to outdoor advertising. Please contact Mr. Adam Lancaster at (719) 562-5540 for any questions regarding advertising devices.
- Any utility work within the state highway right of way will require a utility permit from the CDOT. Information for obtaining a utility permit can also be obtained by contacting Mr. Lancaster.

Please contact me in Pueblo at (719) 546-5732 or by email [arthur.gonzales@state.co.us](mailto:arthur.gonzales@state.co.us) with any questions.

Sincerely,

  
Arthur Gonzales  
CDOT R2 - Access Manager
