#### ▷ ENGINEER'S STATEMENT

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by negligent acts, errors, or omission on my part in preparing this report.

---

Ken Huhn, PE                      Date  
Registered Professional Engineer State of Colorado No. \_\_\_\_\_  
For and on behalf of HR Green Development, LLC

#### ▷ DEVELOPER'S STATEMENT

I, the developer, have read and will comply with all of the requirements specified in this drainage report and plan.

---

Name of Developer                      Authorized Signature                      Date

---

Printed Name                      Title                      Address

#### ▷ EL PASO COUNTY

Filed in accordance with the requirements of the El Paso County Land Development Code, Drainage Criteria Manual, Volumes 1 and 2 and Engineering Criteria Manual, as amended.

## I. General Purpose, Location and Description

### a. Purpose

The purpose of this Final Drainage Report (FDR) is to describe the onsite and offsite drainage patterns, existing and proposed storm infrastructure, and the planned stormwater management for The Cottages at Mesa Ridge. This report will support the development plan that is currently in review with El Paso County.

### b. Location

The Cottages at Mesa Ridge, referred to as ‘the site’ herein, is in a portion of the northeast quarter of section 29, the southeast quarter of section 20, the southwest quarter of section 21, and the northwest quarter of section 28, township 15 south, range 65 west of the 6<sup>th</sup> P.M., County of El Paso, Colorado. The site is bound by S. Powers Boulevard to the east, multi-family residential development to the south, single-family residential development to the west and undeveloped land to the north. Surrounding platted developments include Mesa Ridge Filing 8 and 9 to the south, Sunrise Ridge to the west and the Glen at Widefield to the east. A vicinity map is presented in Appendix A.

### c. Description of Property

The site is approximately 10.22 acres of undeveloped land with existing vegetation consisting of native grasses. Once developed, the site will include 122 dwelling units, a club house and open space tracts. The site will be platted as a single lot. In general, the site slopes south towards the Fountain Mutual Irrigation Co canal. Onsite elevations range from 5750' - 5795' with slopes ranging 1 – 33%. Per a NRCS soil survey, the site is made up of Type B Stoneham sandy loam and Type B Nelson-Tassel fine sand loams. The NRCS soil survey is presented in Appendix A.

There are no major drainageways or irrigation facilities that traverse the site nor does the site fall within the Streamside Overlay Zone. Onsite, existing utilities include water, sewer, fiberoptic, underground gas and underground electric/telecommunication. An existing drainage map is presented in Appendix F.

### d. Floodplain Statement

Based on FEMA Firm map 08041C0956G dated December 8, 2018, the site is Zone X, which are areas determined to be outside the 0.2% annual chance flood.

## II. Drainage Basins and Subbasins

### a. Major Basin Description

The site is located within West Fork Jimmy Camp Creek Drainage Basin. The site’s drainage characteristics were previously studied in the following reports:

1. “West Fork Jimmy Camp Creek Drainage Basin Planning Study” prepared by Kiowa Engineering Corporation, October 2003, revised.
2. “Master Development Drainage Plan Mesa Ridge Development” prepared by Kiowa Engineering Corporation, December 17, 2006. (2006 MDDP)
3. “Mesa Ridge Development Master Development Drainage Plan Update” prepared by Kiowa Engineering Corporation, January 15, 2013. (2013 MDDP)

In the 2006 MDDP, the site was identified as Basin 1040 and Basin 1030. Basin 1040 was planned to be routed to Detention Basin D (located within Mesa Ridge Subdivision Filing 8) while Basin 1030 was routed to

Detention Basin 1031 (located on the east side of S. Powers Boulevard adjacent to the site). The 2013 MDDP did not alter the planned detention scenario for the site.

## b. Existing Subbasin Description

The site's existing drainage is split into five basins. An existing drainage map is presented in Appendix B. See below for existing basin descriptions:

Basin EX1 is 5.69 acres of undeveloped area and existing single family residential lots. Existing stormwater from this basin ( $Q_5 = 2.5 \text{ cfs}$   $Q_{100} = 13.7 \text{ cfs}$ ) is conveyed onsite to DP1.

Basin EX2 is 3.12 acres of undeveloped area and a portion of S. Powers Boulevard. Existing stormwater from this basin ( $Q_5 = 4.2 \text{ cfs}$   $Q_{100} = 12.4 \text{ cfs}$ ) follows historic drainage patterns to an existing roadside swale to DP2. The flow is captured in an existing area inlet at DP2 and conveyed underneath S. Powers Boulevard in a 24" RCP culvert to an existing, temporary sediment basin.

Basin EX3 is 1.46 acres of undeveloped area. Existing stormwater from this basin ( $Q_5 = 1.6 \text{ cfs}$   $Q_{100} = 5.1 \text{ cfs}$ ) is conveyed to the existing irrigation canal to DP3.

Basin EX4 is 0.28 acres of undeveloped area. Existing stormwater from this basin ( $Q_5 = 0.1 \text{ cfs}$   $Q_{100} = 0.8 \text{ cfs}$ ) is conveyed in an existing roadside swale to DP4.

Basin EX5 is 3.38 acres of undeveloped area and existing single family residential lots. Existing stormwater from this basin ( $Q_5 = 2.8 \text{ cfs}$   $Q_{100} = 11.9 \text{ cfs}$ ) flows offsite along the site's southern boundary at DP5.

## c. Proposed Subbasin Description

The proposed site has been divided into 9 subbasins for analysis. All storm sewer and appurtenances are private. A drainage map has been presented in Appendix F. See below for basin descriptions:

Basin 1 is 3.67 acres of single-family residential lots, duplex homes, roadway and landscaping. Stormwater from this basin ( $Q_5 = 7.4 \text{ cfs}$   $Q_{100} = 15.3 \text{ cfs}$ ) is conveyed in curb and gutter to a 15' Type R on-grade inlet at DP5. Basin 1 stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

Basin 2 is 4.83 acres of single-family residential lots, duplex homes, roadway and landscaping. Stormwater from this basin ( $Q_5 = 9.7 \text{ cfs}$   $Q_{100} = 20.5 \text{ cfs}$ ) is conveyed in curb and gutter to a 15' Type R on-grade inlet at DP1. Basin 2 stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

Basin 2A is 0.13 acres of club house and patio area. Stormwater from this basin ( $Q_5 = 0.6 \text{ cfs}$   $Q_{100} = 1.1 \text{ cfs}$ ) is conveyed in curb and gutter to 3' Type C sump inlet at DP1A. Basin 2A stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

Basin 3 is 3.03 acres of existing roadway (S. Powers Boulevard) impacted breeze trail and undeveloped area. Stormwater from this basin ( $Q_5 = 3.4 \text{ cfs}$   $Q_{100} = 10.0 \text{ cfs}$ ) follows historic drainage patterns in an existing roadside swale to an existing Type C inlet at DP2. The flow is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention. Per Section I.7.1.B.7 and I.7.1.B.9 of the EPCDCM Appendix I – Stormwater

HR GREEN:  
ADDRESSED

EPC ECM

Quality Policy and Procedures, Basin 3 will not be routed to a permanent stormwater control measure. The trail improvements associated with Basin 3 will not increase existing stormwater flows.

Basin 4 is 0.48 acres of landscaping and a fire access road. Stormwater from this basin ( $Q_5 = 0.3 \text{ cfs } Q_{100} = 1.7 \text{ cfs}$ ) follows historic drainage patterns towards the Fountain Irrigation Ditch at DP3. From there, flow is conveyed under S. Powers Blvd in an existing box culvert (size unknown) to an existing, temporary sediment basin. Per Section I.7.1.B.7 and I.7.1.B.9 of the El Paso County Appendix I – Stormwater Quality Policy and Procedures, Basin 4 will not be routed to a permanent stormwater control measure. The basin will remain mostly undeveloped with a proposed trail and retaining wall. The trail and retaining wall improvements associated with Basin 4 will not increase existing stormwater flows.

Basin 5 is 1.63 acres of landscaping and a fire access road. Stormwater from this basin ( $Q_5 = 2.6 \text{ cfs } Q_{100} = 6.7 \text{ cfs}$ ) is captured in a grass-lined swale and captured in a Type C inlet at DP4. Basin 5 stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

Basin 6 is 0.60 acres of undeveloped area. Stormwater from this basin ( $Q_5 = 0.2 \text{ cfs } Q_{100} = 1.2 \text{ cfs}$ ) follows historic drainage patterns to an existing roadside swale along S. Powers Boulevard at DP6 and continues south along S. Powers in a roadside ditch that outfalls into existing Detention Basin D. Basin 6 will remain undeveloped and will not increase existing stormwater flows.

Basin 7 is 0.45 acres of landscaping and existing single family residential. Stormwater from this basin ( $Q_5 = 0.4 \text{ cfs } Q_{100} = 1.3 \text{ cfs}$ ) follows historic drainage patterns towards DP7. From there, the flow continues into Mesa Ridge Subdivision Filing 8 where it is captured and detained in Basin D. See Basin 1040 from the Mesa Ridge Filing No. 8 FDR for additional detail.

Basin 8 is 0.26 acres of roadway. Stormwater from this basin ( $Q_5 = 1.1 \text{ cfs } Q_{100} = 2.1 \text{ cfs}$ ) is conveyed in curb and gutter down Landover Lane to a 15' Type R inlet at DP8. Basin 8 stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

Basin 9 is 0.17 acres of roadway. Stormwater from this basin ( $Q_5 = 0.8 \text{ cfs } Q_{100} = 1.4 \text{ cfs}$ ) is conveyed in curb and gutter down Landover Lane to a 10' Type R inlet at DP9. Basin 9 stormwater is piped in proposed storm sewer along the north side of Landover Lane. From there, the flow is piped in an existing 48" culvert to the existing full spectrum detention pond (Basin D) for water quality and detention.

### III. Drainage Design Criteria

#### a. Development Criteria Reference

Storm drainage analysis and design criteria for the project were taken from the "Drainage Criteria Manual of EL Paso County, Colorado" Volumes 1 and 2 (EPCDCM), current adopted version, and Chapter 6 and Section 3.2.1 of Chapter 13 of the "Colorado Springs Drainage Criteria Manual" (CCSDCM), dated May 2014, as adopted by El Paso County, as well as the July 2019 El Paso County Engineering Criteria Manual update.

#### b. Hydrologic Criteria

Hydrologic data was obtained from the "City of Colorado Springs Drainage Criteria Manual – Chapter 6 Hydrology". Onsite drainage improvements are designed for the 5-year storm (minor event) and 100-year storm (major event) using rainfall values from CCSDCM Table 6-2 below. Runoff was calculated per CCSDCM Section 6.3.0 - Rational Method. Full spectrum pond design was completed using the latest version

of Mile High Flood District's (MHFD) UD-Detention per CCSDCM Section 13.3.2.1 – Full Spectrum Detention in addition to CUHP v.2.0.1 and EPA-SWMM v.5.1. Detention pond allowable release rate will be limited to less than or equal to those noted in the 2013 Mesa Ridge MDDP.

Table 6-2: Rainfall Depths for Colorado Springs		
Return Period (yr)	5	100
1-hr Rainfall Depth (in)	1.50	2.52

## IV. Drainage Facility Design

### a. General Concept

Onsite stormwater will be conveyed via Type 5 curb and gutter to Type R inlets. Captured stormwater will be piped to and detained in an existing, full spectrum detention pond located in Mesa Ridge Filing 9 south of the site. The full spectrum detention pond will outfall at less than historic values to the east side of S. Powers Boulevard and to the site's historic outfall. See below section regarding the existing detention basin analysis and retrofit. The ultimate outfall for the site is Jimmy Camp Creek, south of Hale Reservoir.

### b. Water Quality & Detention

The Cottages at Mesa Ridge will utilize the existing regional Full Spectrum Detention Basin D for water quality and detention. Detailed analysis performed with this Report indicates that in its existing condition, there is adequate 100-year volume in the Detention Basin D for development of The Cottages at Mesa Ridge site. However, there are some concerns regarding the detention pond drain times. See discussion below for details on the analysis completed on Detention Basin D.

This pond was included originally as flood control in the 2006 MDDP and was updated to provide Full Spectrum detention with the 2013 MDDP. In addition, the record drawings for the retrofit of the pond confirmed the use of an orifice plate to control the full spectrum volume. Record documents are titled: *Mesa Ridge Filings 8 & 9, Detention Basin 'D', Full Spectrum Detention Modifications, Final Design Drawings*, by Kiowa Engineering Corporation, dated October 2011. Both MDDPs show Basin 1040 routed to Full Spectrum Detention Basin D. However, the basin characteristics provided with the most recent MDDP included The Cottages at Mesa Ridge site as historic.

In order to confirm that the existing Full Spectrum Detention Basin D has capacity for development of The Cottages at Mesa Ridge, updated modeling with proposed basin 1040 characteristics is necessary and presented in Appendix D.

Hydrology and hydraulics included with the previous MDDPs utilized HEC-1 software to determine peak runoff quantities at specific design points and routing elements. These HEC-1 models were not available for use, so an effort was made to update them to the more current HEC-HMS program. However, there were too many unknown variables with the program to get it to provide reliable results.

Current CCSDCM V.1 CH.6 1.4 Selecting Methods for Estimating Design Flows notes in part that:

- For more complex drainage basins and routing requirements, the HEC-HMS model or the EPA SWMM method is better suited but requires more experience and expertise to properly apply. The EPA SWMM

method also provides hydrographs, reservoir routing, and the ability to evaluate runoff reduction practices in detail.

- If detention facilities are to be sized based on hydrograph routing, or if hydrograph information is desired for any other reason, the EPA SWMM or the NRCS method must be used.

Therefore, CUHP and EPA SWMM methodology were selected as appropriate modeling programs to confirm volumes and release rates for Full Spectrum Detention Basin D are in line with the intent of the previous MDDPs and current CCSDCM criteria.

### **CUHP**

A new CUHP model was prepared streamlined with only the MDDP basins being updated at this time and major basins tributary to Full Spectrum Detention Basin D. This includes Basin 1040, 6001, 6005, 6010, 6011 and 6020. Basin parameters included in the CUHP as follows:

- Basin parameters for Basin 1040 were updated based on the most current design information available and correspond to the Rational Method calculations noted elsewhere in this report. The area to Basin 1040 increased from what was accounted for in the previous MDDPs.
- Basins 6001, 6005, 6010, 6011 and 6020 used area and length parameters taken directly from the HEC-1 noted above.
- Basins 6001, 6005, 6010, 6011 and 6020 utilized percent impervious estimated from existing as-constructed land uses.
- All basins used the standard depression storage and infiltration parameters for Hydrologic Soil Type B.

Rainfall data was taken from NOAA Atlas 14 Point Precipitation for a 60-minute (1-hour) recurrence interval depth, 100=2.74 in. The 1-hour point precipitation was chosen in part because the MHFD-Detention worksheet uses the 1-hour depth as an input parameter to run the CUHP program in the background. This allows a more accurate review of the existing pond by using consistent storms across both the CUHP and MHFD-Detention software.

Input parameters and results for the 100-year event are included with Appendix D.

### **EPA SWMM**

Similar to the CUHP modeling, a simplified hydraulic routing model was prepared. In this case, the U.S. Environmental Protection Agency Stormwater Management Model (EPA SWMM) software was used for the proposed conditions with the development of The Cottages at Mesa Ridge.

The model includes a stage-storage curve for Pond D extracted directly from the pond grading shown on the 2011 Full Spectrum Detention Modifications Plan noted above. The proposed Pond D stage-release curve was developed through an iterative process, described more in depth below.

The other separate existing pond (Detention Basin 6002) which is tributary to Pond D provides storage for Basin 6001. Parameters for modeling Detention Basin 6002 were taken directly from the 2013 MDDP HEC-1. Additionally, EPA SWMM element routing parameters such as channel length and size were taken directly from the previous HEC-1 model with the exception of elevations (not used in HEC-1). For this a reasonable starting (downstream) elevation was used from the Pond D plans, and slope/length parameters from HEC-1 used to set all other upstream elevations. A back-check was completed to ensure resultant upstream elevations seem reasonable given rough elevations on 2013 MDDP Exhibit.

Input parameters and results for the 100-year event are included with Appendix D.

### Full Spectrum Detention Basin D

MHFD-Detention worksheets were set up using updated total watershed area and percent imperviousness for several reasons, they include:

- To confirm the updated full spectrum volume required within Pond D. Note, because an inflow hydrograph will be used for the 5-year and 100-year events only the resultant full spectrum volumes are relevant from this data.
- To review how the existing pond is functioning under the proposed condition by incorporating the as-built stage-storage and stage-release data into the workbook. Note, the release structure was surveyed to provide accurate structure parameters.
- To route the 5-year and 100-year hydrographs developed in the CUHP and EPA SWMM through the provided pond volume and as-built release structure.

MHFD-Detention (as-built) results from routing the proposed 100-year hydrograph through the as-built pond volume and release structure indicate that there is adequate 100-year volume in the existing pond for development of The Cottages at Mesa Ridge site. However, results also indicate that the existing pond is exceeding drain time limitations noted in current MHFD criteria and Colorado Revised Statute 37-92-602(8).

To rectify the drain times discrepancy a separate MHFD-Detention (proposed) worksheet was set up matching the previously noted stage-storage curve and input hydrograph but altering the release structure (and corresponding stage-release curve). The drain times were revised by enlarging the orifice areas and updating the detention stages to correlate with the new Full Spectrum volume. Once the 100-year peak release rate was confirmed to be at or below the threshold established with the 2013 MDDP (233 cfs) the resultant stage-release curve was transferred back to the prepared SWMM and re-run to confirm the same results as found with the MHFD-Detention (proposed) analysis. Note the existing structure box size becomes the limiting element controlling release in the 100-year event, not the restrictor plate.

Key pond parameters from the 2011 Full Spectrum Detention Modifications Plan along with the values determined with this Final Drainage Report are summarized below.

Full Spectrum Detention Basin D Summary			
	2011 Full Spectrum Modifications	As-Built Pond D without Modifications	As-Built Pond D with Proposed Modifications
Tributary Area (acres)	not provided	98.8	98.9
% Impervious (%)	not provided	48.8	49.1
Full Spectrum Volume (acre-ft)	4.2	5.1	5.2
Full Spectrum WSEL (ft)	5686.8	5687.2	5687.3
Full Spectrum Drain Time (hrs)	not provided	> 120	71
100-yr volume (acre-ft)	8.3	11.6	14.3
Release Rate (cfs)	219	252	230
100-yr WSEL (ft)	5690.2	5691.2	5692.7
100-yr Drain Time (hrs)	not provided	> 120	70

Conclusions from the analysis presented with this Report are that Full Spectrum Detention Basin D will function as intended in the proposed conditions taking into consideration the Basin 1040 changes (including increase in basin area) that will occur with development of The Cottages at Mesa Ridge. No modifications to the as-built volume are anticipated at this time. Modifications are required to the release structure to bring the existing pond in conformance with current drain time and stage-storage requirements. The detailed extent of modifications to the existing structure have been presented in Appendix E.

### c. Operation and Maintenance

An Operation and Maintenance (O&M) manual was previously approved for Detention Basin D. The pond is privately maintained by Mesa Ridge Metropolitan District No. 1. The manual will be provided once made available. The manual specifies maintenance intervals and required actions to maintain the function of the extended detention basin and appurtenances.

### d. Grading and Erosion Control Plan

Due to the project disturbance area, a separate Grading and Erosion Control plan will be required. The Grading and Erosion Control Plan has been submitted to El Paso County and City of Fountain in conjunction with the Final Drainage Report and Construction Drawings.

### e. Four Step Method to Minimize Adverse Impacts of Urbanization

Step 1 – Reducing Runoff Volumes: Roof drains will route across landscape areas and grass lined swales are used for stormwater conveyance, whenever possible to promote infiltration.

Step 2 – Treat and slowly release the WQCV: An existing, regional full spectrum detention pond provides water quality for the site. The WQCV is released over a period of 41 hours.

Step 3 – Stabilize stream channels: Drainage swales will be lined with non-erosive soils and permanently seeded to provide stabilization. If required due to erosive velocities, additional protection will be provided in the form of riprap lining and drop structures to reduce stormwater velocities and provide stabilization.

Step 4 – Consider the need for source controls: No industrial or commercial uses are proposed within this development and therefore no source controls are proposed.

### f. Drainage and Bridge Fees

Cottages at Mesa Ridge is located within the West Fork Jimmy Camp Creek drainage basin. See below for drainage fees associated with The Cottages at Mesa Ridge development. Fees are due at time of platting.

2022 Drainage & Bridge Fees						
Site Acreage (ac)	Site Impervious (%)	Impervious Area (ac)	Drainage Fee/ Impervious Acre	Drainage Fee	Bridge Fee/ Impervious Acre	Bridge Fee
10.22	55	5.62	\$14,470	<b>\$81,336</b>	\$4,281	<b>\$24,060</b>

## V. Summary

The Cottages at Mesa Ridge development remains consistent with pre-development drainage conditions with the construction of the recommended drainage improvements. The proposed development will not adversely affect downstream stormwater infrastructure or surrounding developments. This report meets the latest El Paso County Drainage criteria and is in accordance with the Mesa Ridge MDDP.

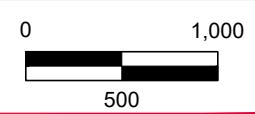

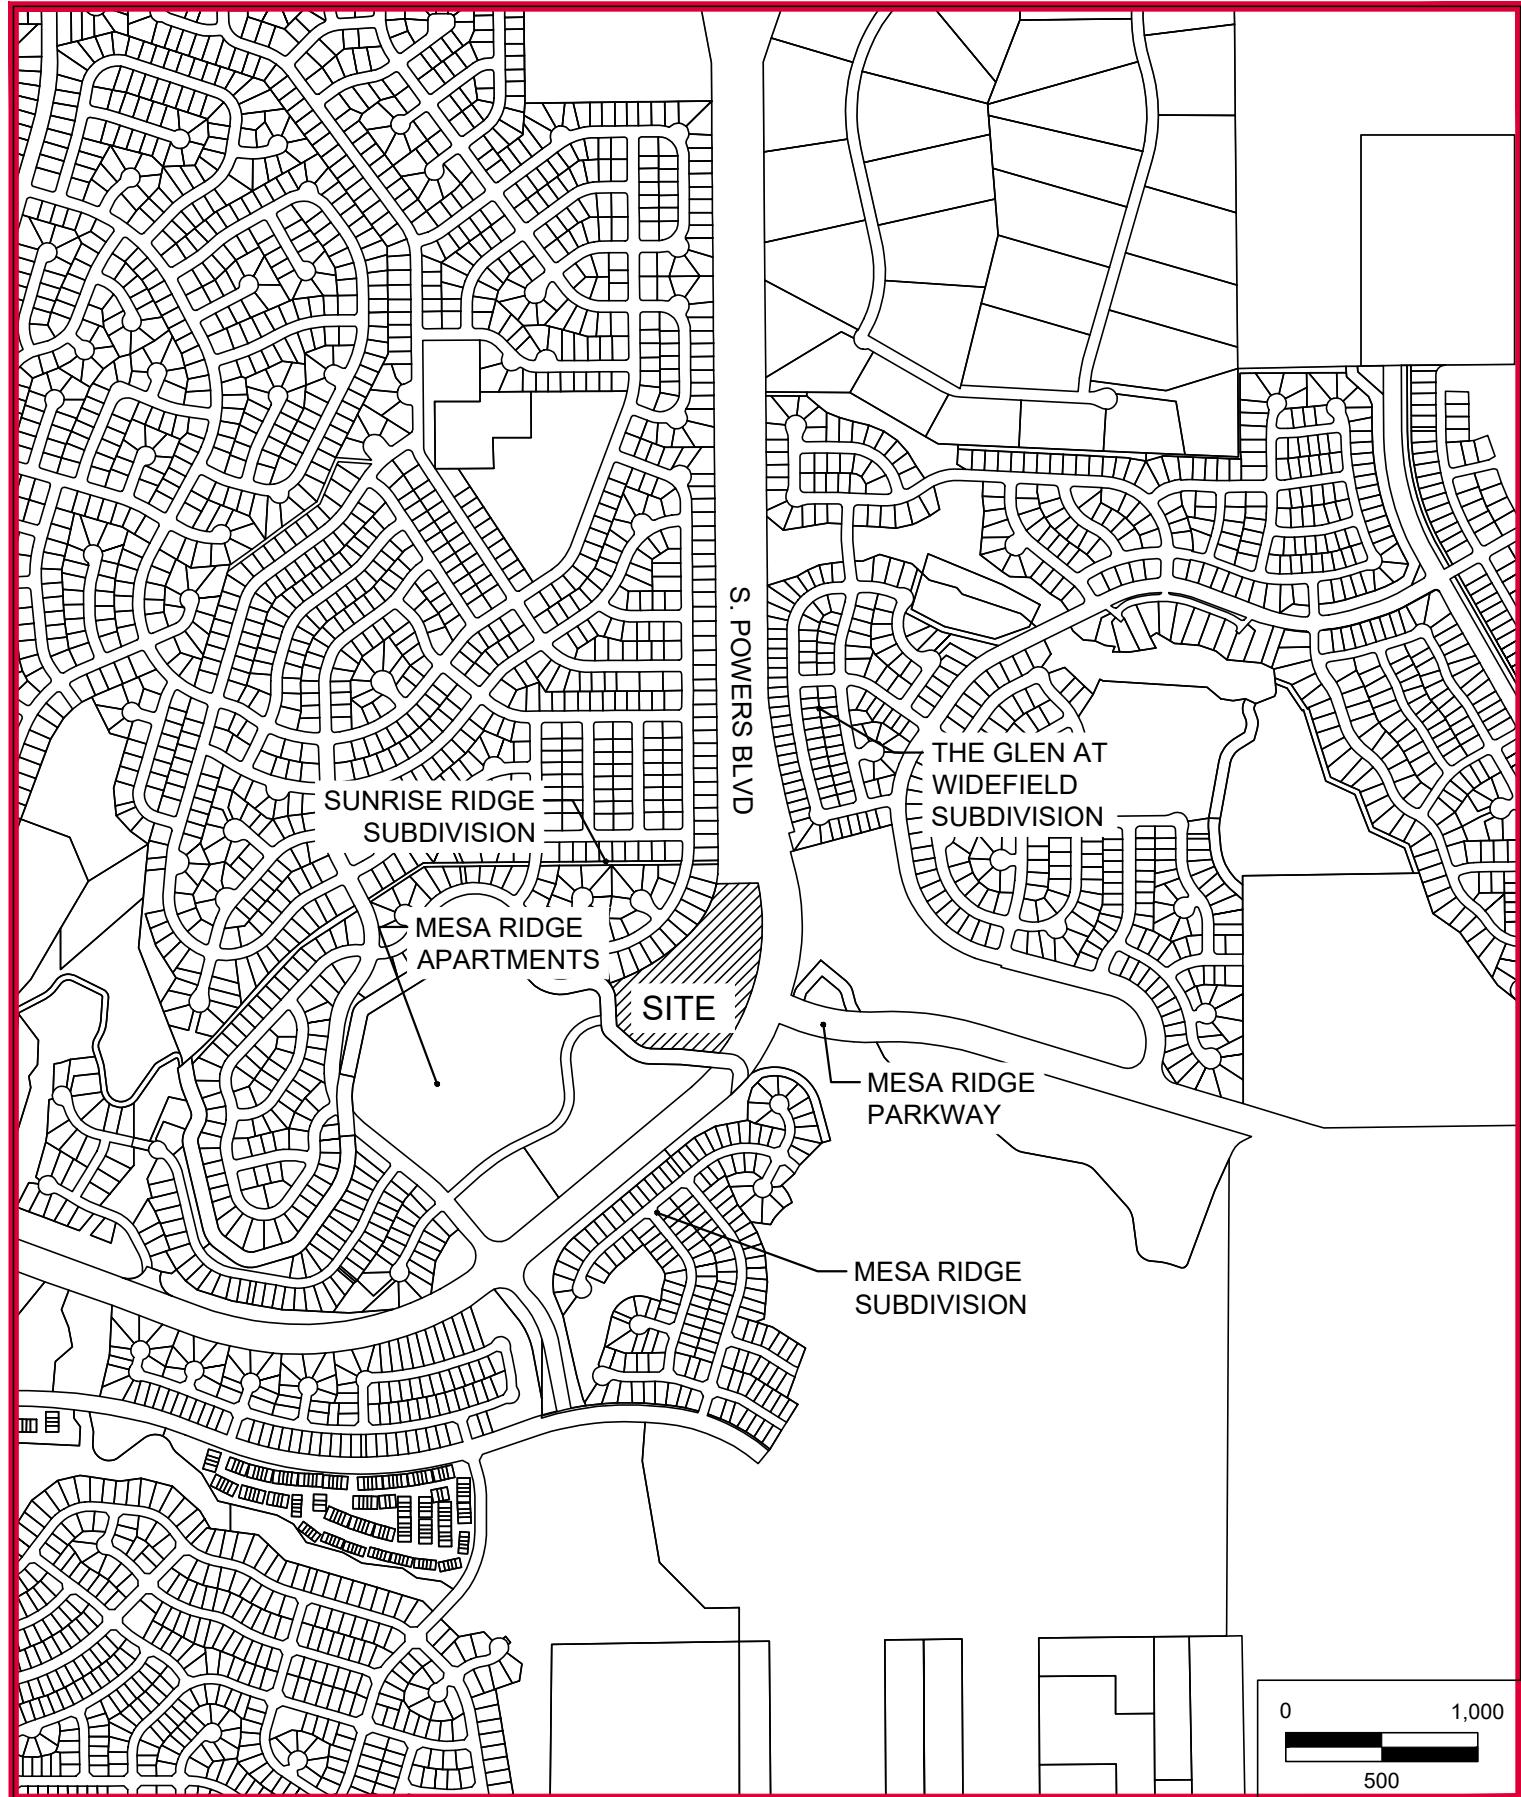

## VI. Drawings

Please refer to the Appendix F for existing and proposed drainage maps.

### Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

NOTES TO USERS

This may be used in addition to the information provided in the Flood Insurance Program booklet. It is recommended that you contact your insurance agent or broker for additional information.

The community map repository shall be consulted for sources of maps.

To obtain more detailed information about base flood elevations (BFEs) and other flood hazard information:

- If your community has been designated as a flood-prone area, you can request a copy of the Flood Insurance Study (FIS) report that accompanies a FIRM. The FIS report contains detailed information about the flood hazard potential of your community.
- If your community has not been designated as a flood-prone area, you can request a copy of the Flood Insurance Study (FIS) report that accompanies a FIRM. The FIS report contains detailed information about the flood hazard potential of your community.

Additional information about base flood elevations (BFEs) and other flood hazard information is available at the following websites:

- [www.floodsmart.gov](http://www.floodsmart.gov)
- [www.fema.gov](http://www.fema.gov)
- [www.floodmaps.com](http://www.floodmaps.com)

**Coastal Base Flood Elevations** shown on this map apply only to landward of the Mean High Water line (MHW) as defined by the U.S. Army Corps of Engineers. Base Flood elevations are determined by the National Flood Insurance Program (NFIP). Base Flood elevations are also referred to as the "One-Hundred-Year Flood." The one-hundred-year flood is the water level that has a 1% chance of being exceeded in any given year. Base Flood elevations are determined by the National Flood Insurance Program (NFIP). Base Flood elevations are also referred to as the "One-Hundred-Year Flood." The one-hundred-year flood is the water level that has a 1% chance of being exceeded in any given year.

The projection used in the preparation of the map was Universal Transverse Mercator (UTM) zone 13. The horizontal datum was NAD83, GRS80 spheroid. The vertical datum was NAD83, North American Vertical Datum of 1988 (NAVD88). Differences in UTM coordinates between the two zones are negligible, but differences in NAVD88 elevations are significant. These differences are due to the accuracy of the NAVD88.

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 10% ANNUAL CHANCE FLOOD

**THE ANALYTICAL APPROACH**  
The first step in the analysis of a food product is to determine its composition. This is done by a process called "analysis". The composition of a food product is determined by the following steps:  
1. **Sample Preparation:** A sample of the food product is taken and prepared for analysis. This involves cutting the food into small pieces, washing it, and then drying it.  
2. **Chemical Analysis:** The sample is analyzed using various chemical methods. These include titration, colorimetry, and spectrophotometry.  
3. **Physical Analysis:** The sample is analyzed using physical methods. These include microscopy, X-ray diffraction, and infrared spectroscopy.  
4. **Statistical Analysis:** The results of the analyses are used to calculate the nutritional value of the food product.  
**RESULTS AND DISCUSSION**  
The results of the analysis show that the food product contains the following nutrients:  

Nutrient	Amount
Protein	10 g
Fat	5 g
Carbohydrates	20 g
Vitamins	10 mg
Minerals	5 mg

  
The results also show that the food product is a good source of protein and carbohydrates. It is also a good source of vitamins and minerals.  
**CONCLUSION**  
The analysis of the food product has shown that it is a nutritious food. It is recommended that people eat this food as part of a balanced diet.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

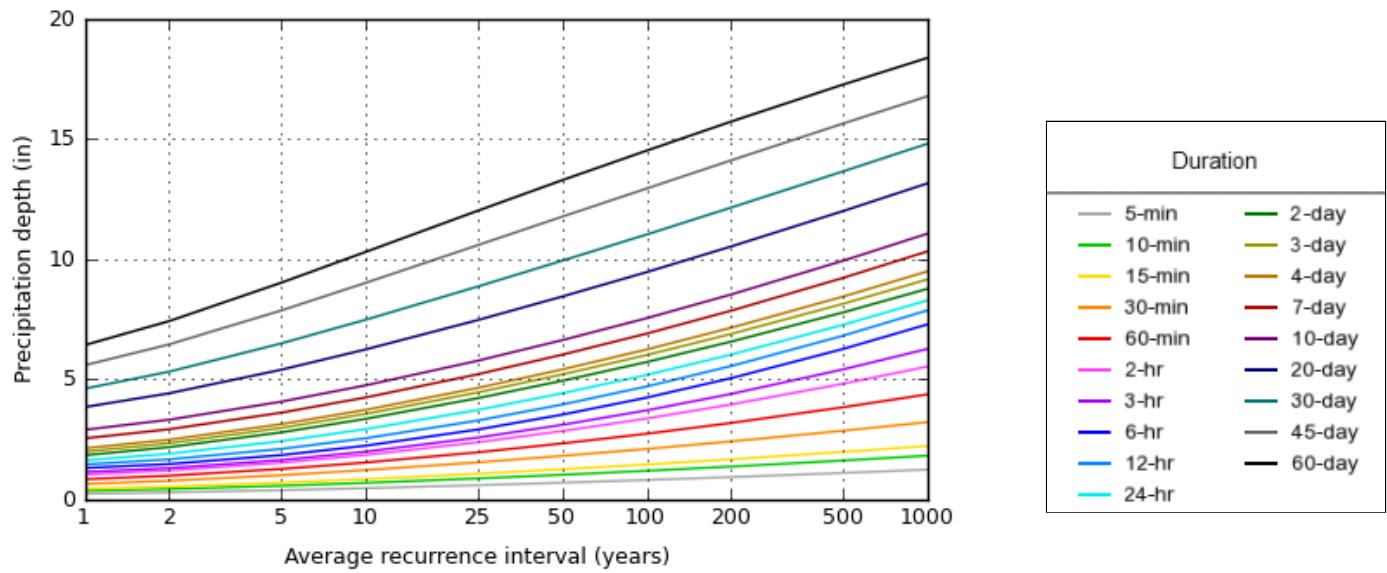

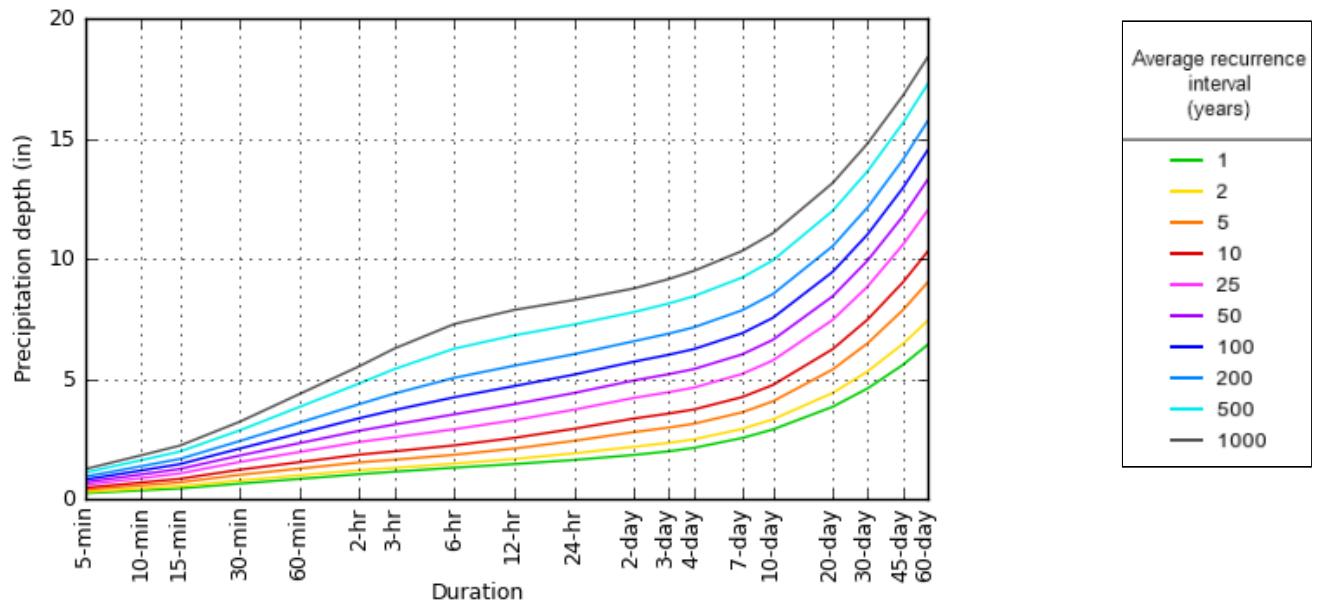

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

## ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: COTTAGES AT MESA RIDGE  
Inlet ID: DP1

**Gutter Geometry:**

Maximum Allowable Width for Spread Behind Curb  
Side Slope Behind Curb (leave blank for no conveyance credit behind curb)  
Manning's Roughness Behind Curb (typically between 0.012 and 0.020)

T_BACK =	5.5	ft
S_BACK =	0.020	ft/ft
nBACK =	0.020	

Height of Curb at Gutter Flow Line  
Distance from Curb Face to Street Crown

H_CURB =	6.00	inches
T_CROWN =	25.0	ft

Gutter Width

W =	1.00	ft
S_x =	0.020	ft/ft
S_w =	0.083	ft/ft
S_o =	0.010	ft/ft
nSTREET =	0.016	

Street Transverse Slope  
Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)  
Street Longitudinal Slope - Enter 0 for sump condition  
Manning's Roughness for Street Section (typically between 0.012 and 0.020)

	Minor Storm	Major Storm
T_MAX =	25.0	25.0
d_MAX =	6.7	6.7

Max. Allowable Spread for Minor &amp; Major Storm

Max. Allowable Depth at Gutter Flowline for Minor &amp; Major Storm

Allow Flow Depth at Street Crown (check box for yes, leave blank for no)

MINOR STORM Allowable Capacity is based on Depth Criterion

MAJOR STORM Allowable Capacity is based on Depth Criterion

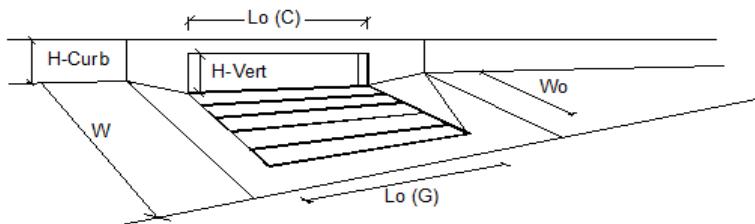

Minor storm max. allowable capacity GOOD - greater than the design flow given on sheet 'Inlet Management'

Major storm max. allowable capacity GOOD - greater than the design flow given on sheet 'Inlet Management'

**Warning 02:** Max Allowable Depth for Minor Storm is greater than the Curb Height.

## INLET ON A CONTINUOUS GRADE

MHFD-Inlet, Version 5.01 (April 2021)

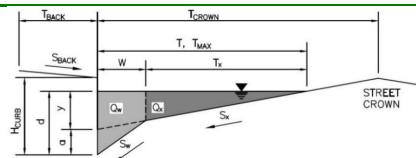

Design Information (Input)		CDOT Type R Curb Opening	MINOR	MAJOR
Type of Inlet	Type = CDOT Type R Curb Opening			
Local Depression (additional to continuous gutter depression 'a')	a_LOCAL =	3.0	3.0	inches
Total Number of Units in the Inlet (Grate or Curb Opening)	No =	3	3	
Length of a Single Unit Inlet (Grate or Curb Opening)	L_o =	5.00	5.00	ft
Width of a Unit Grate (cannot be greater than W, Gutter Width)	W_o =	N/A	N/A	ft
Clogging Factor for a Single Unit Grate (typical min. value = 0.5)	C_f-G =	N/A	N/A

24" RCP Outfall Riprap Sizing			
S (ft/ft)	C <sub>f</sub>	q (cfs/ft)	D <sub>50</sub> (in)
0.04	2	18.90	11.85

Type M Riprap (D<sub>50</sub> = 12") will be utilized for the riprap energy dissipation protection

$$D_{50} = 5.23 S^{0.43} (1.35 C_f q)^{0.56}$$

Equation 13-9

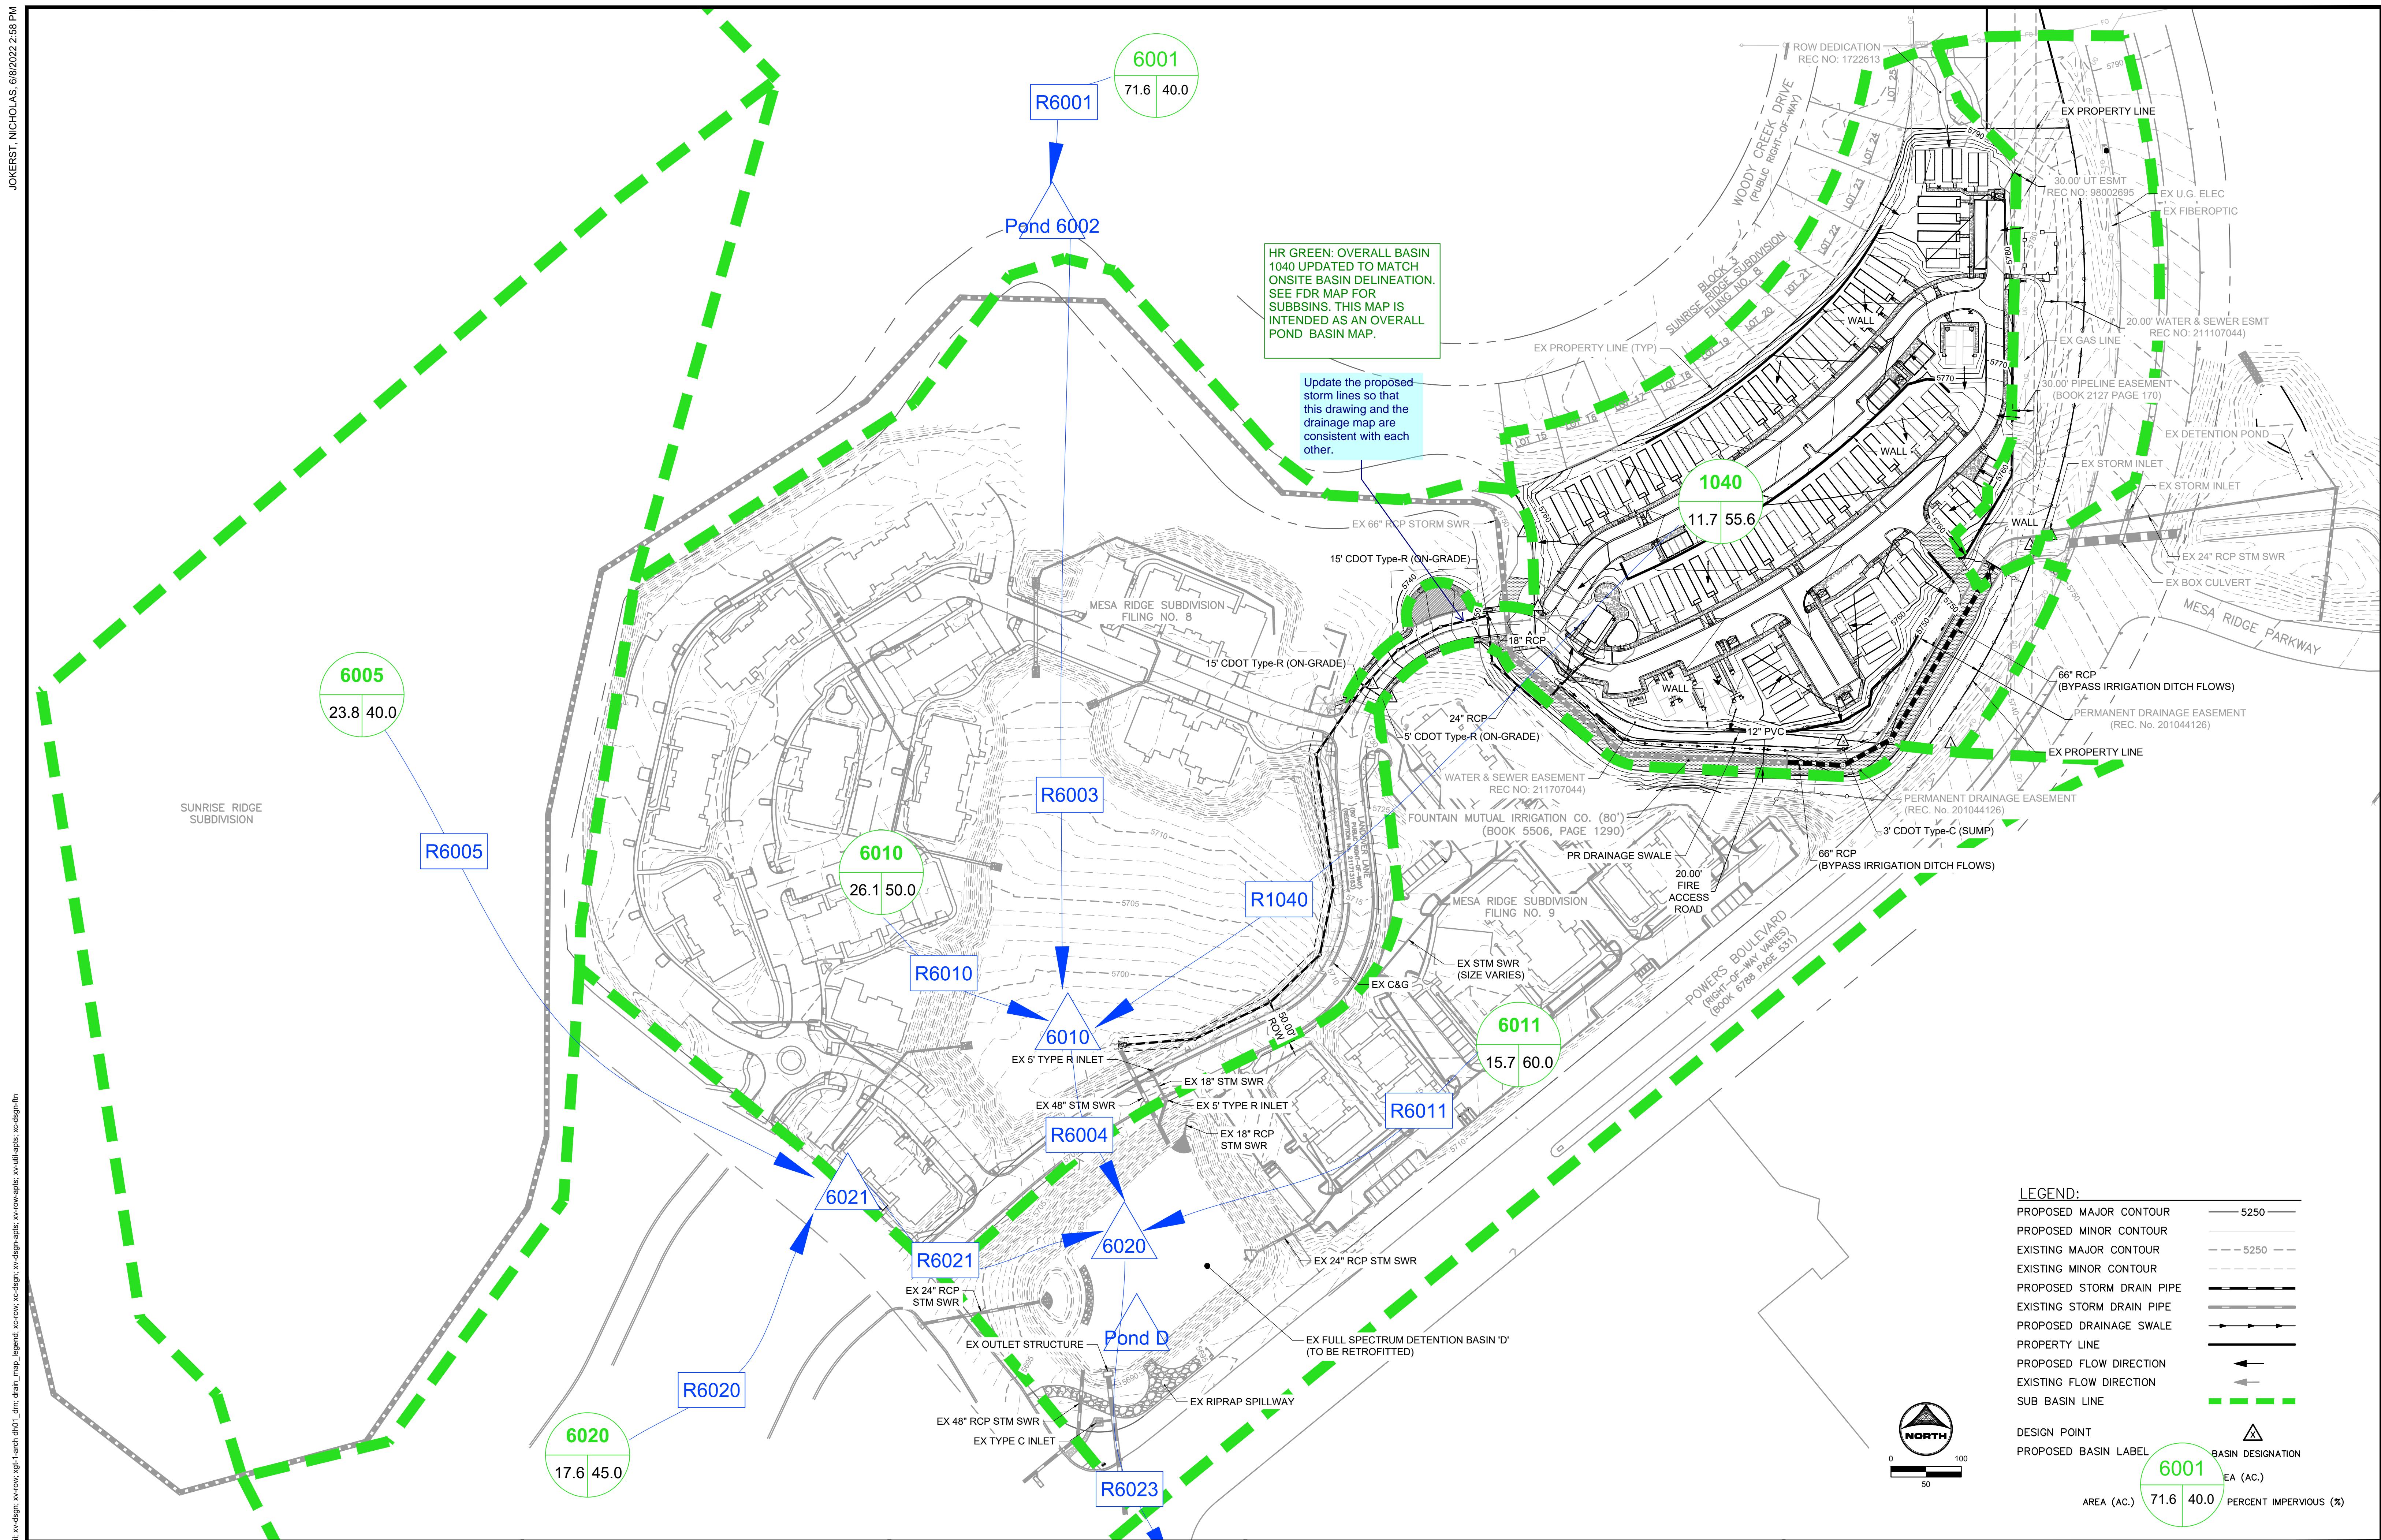

Where:

- $D_{50}$  = median rock size (in)
- $S$  = longitudinal slope (ft/ft)
- $C_f$  = concentration factor (1.0 to 3.0)
- $q$  = unit discharge (cfs/ft)

When:

$$\eta \text{ (porosity)} = 0.0 \text{ (i.e., for buried soil riprap)}$$

# DETENTION BASIN STAGE-STORAGE TABLE BUILDER

MHFD-Detention, Version 4.04 (February 2021)

**Project:** Mesa Ridge Cottages

**Basin ID:** Existing Pond D Sizing Confirmation

**Example Zone Configuration (Retention Pond)**

## Watershed Information

Selected BMP Type = **EDB**

Watershed Area = **98.80** acres

Watershed Length = **4,090** ft

Watershed Length to Centroid = **2,000** ft

Watershed Slope = **0.035** ft/ft

Watershed Imperviousness = **48.80%** percent

Percentage Hydrologic Soil Group A = **0.0%** percent

Percentage Hydrologic Soil Group B = **100.0%** percent

Percentage Hydrologic Soil Groups C/D = **0.0%** percent

Target WQCV Drain Time = **40.0** hours

Location for 1-hr Rainfall Depths = User Input

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

Water Quality Capture Volume (WQCV) = **1.671** acre-feet

Excess Urban Runoff Volume (EURV) = **5.144** acre-feet

2-yr Runoff Volume (P1 = 1 in.) = **3.741** acre-feet

5-yr Runoff Volume (P1 = 1.28 in.) = **5.462** acre-feet

10-yr Runoff Volume (P1 = 1.55 in.) = **7.357** acre-feet

25-yr Runoff Volume (P1 = 1.97 in.) = **11.295** acre-feet

50-yr Runoff Volume (P1 = 2.34 in.) = **14.367** acre-feet

100-yr Runoff Volume (P1 = 2.74 in.) = **18.116** acre-feet

500-yr Runoff Volume (P1 = 3.84 in.) = **27.672** acre-feet

Approximate 2-yr Detention Volume = **3.247** acre-feet

Approximate 5-yr Detention Volume = **4.538** acre-feet

Approximate 10-yr Detention Volume = **6.263** acre-feet

Approximate 25-yr Detention Volume = **7.639** acre-feet

Approximate 50-yr Detention Volume = **8.436** acre-feet

Approximate 100-yr Detention Volume = **9.873** acre-feet

## Define Zones and Basin Geometry

Zone 1 Volume (User Defined) = **5.14** acre-feet

Zone 2 Volume (User Defined - Zone 1) = **0.32** acre-feet

Zone 3 Volume (User Defined - Zones 1 & 2) = **6.10** acre-feet

Total Detention Basin Volume = **11.57** acre-feet

## Optional User Overrides

# DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

**Project:** Mesa Ridge Cottages  
**Basin ID:** Existing Pond D Sizing Confirmation

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (User)	4.79	5.144	Orifice Plate
Zone 2 (User)	5.01	0.318	Orifice Plate
Zone 3 (User)	8.76	6.104	Weir&Pipe (Rect.)
Total (all zones)		11.566	

User Input: Orifice at Underdrain Outlet (typically used to drain WOCV in a Filtration BMP)

Underdrain Orifice Invert Depth =  ft (distance below the filtration media surface)  
 Underdrain Orifice Diameter =  inches

Calculated Parameters for Underdrain  
 Underdrain Orifice Area =  ft<sup>2</sup>  
 Underdrain Orifice Centroid =  feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WOCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =  ft (relative to basin bottom at Stage = 0 ft)  
 Depth at top of Zone using Orifice Plate =  ft (relative to basin bottom at Stage = 0 ft)  
 Orifice Plate: Orifice Vertical Spacing =  inches  
 Orifice Plate: Orifice Area per Row =  inches

Calculated Parameters for Plate  
 WQ Orifice Area per Row =  ft<sup>2</sup>  
 Elliptical Half-Width =  feet  
 Elliptical Slot Centroid =  feet  
 Elliptical Slot Area =  ft<sup>2</sup>

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.85	1.19	1.52	1.85	2.19	2.52	2.85

Stage of Orifice Centroid (ft)	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Orifice Area (sq. inches)							

User Input: Vertical Orifice (Circular or Rectangular)

Not Selected	Not Selected	Not Selected	Not Selected
Invert of Vertical Orifice = <input type="text"/> ft (relative to basin bottom at Stage = 0 ft)	N/A	N/A	N/A
Depth at top of Zone using Vertical Orifice = <input type="text"/> ft (relative to basin bottom at Stage = 0 ft)	N/A	N/A	N/A
Vertical Orifice Diameter = <input type="text"/> inches	N/A	N/A	N/A

Calculated Parameters for Vertical Orifice  
 Vertical Orifice Area =  ft<sup>2</sup>  
 Vertical Orifice Centroid =  feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe))

Zone 3 Weir	Not Selected	Not Selected	Not Selected
Overflow Weir Front Edge Height, Ho = <input type="text"/> ft (relative to basin bottom at Stage = 0 ft)	4.46	N/A	N/A
Overflow Weir Front Edge Length = <input type="text"/> feet	12.00	N/A	N/A
Overflow Weir Grate Slope = <input type="text"/> H:V	3.00	N/A	N/A
Horiz. Length of Weir Sides = <input type="text"/> feet	6.00	N/A	N/A
Overflow Grate Type = <input type="text"/> Close Mesh Grate	N/A	N/A	N/A
Debris Clogging % = <input type="text"/> %	0%	N/A	N/A

Calculated Parameters for Overflow Weir  
 Height of Grate Upper Edge, H<sub>t</sub> =  feet  
 Overflow Weir Slope Length =  feet  
 Grate Open Area / 100-yr Orifice Area =  3.34  
 Overflow Grate Open Area w/o Debris =  ft<sup>2</sup>  
 Overflow Grate Open Area w/ Debris =  ft<sup>2</sup>

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Zone 3 Rectangular	Not Selected	Not Selected	Not Selected
Depth to Invert of Outlet Pipe = <input type="text"/> ft (distance below basin bottom at Stage = 0 ft)	1.21	N/A	N/A
Rectangular Orifice Width = <input type="text"/> inches	72.00	N/A	N/A
Rectangular Orifice Height = <input type="text"/> inches	36.00	N/A	N/A

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate  
 Outlet Orifice Area =  ft<sup>2</sup>  
 Outlet Orifice Centroid =  feet  
 Half-Central Angle of Restrictor Plate on Pipe =  radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = <input type="text"/> ft (relative to basin bottom at Stage = 0 ft)	11.00	N/A	N/A
Spillway Crest Length = <input type="text"/> feet	185.00	N/A	N/A
Spillway End Slopes = <input type="text"/> H:V	4.00	N/A	N/A
Freeboard above Max Water Surface = <input type="text"/> feet	0.40	N/A	N/A

Calculated Parameters for Spillway  
 Spillway Design Flow Depth =  feet  
 Stage at Top of Freeboard =  feet  
 Basin Area at Top of Freeboard =  acres  
 Basin Volume at Top of Freeboard =  acre-ft

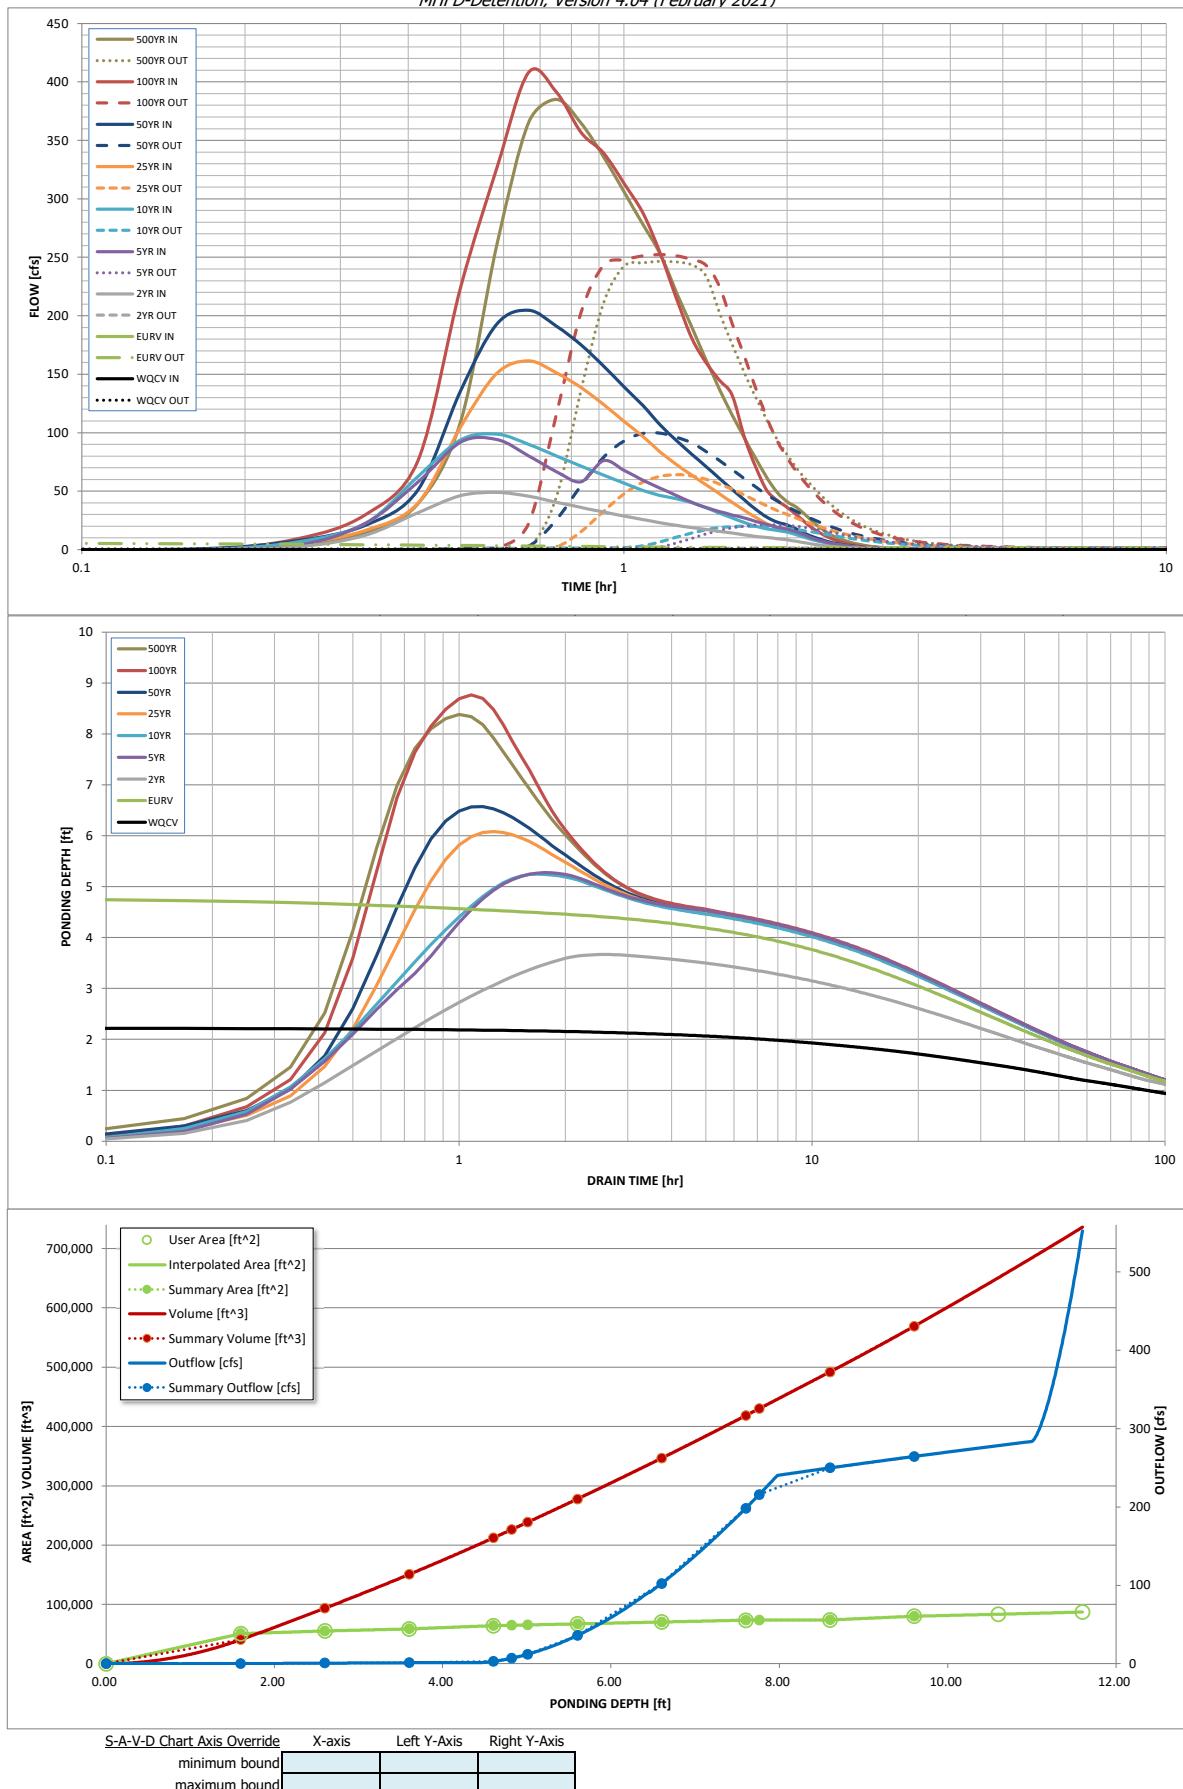

## Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

## DETENTION BASIN OUTLET STRUCTURE DESIGN

*MHFD-Detention, Version 4.04 (February 2021)*

## Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

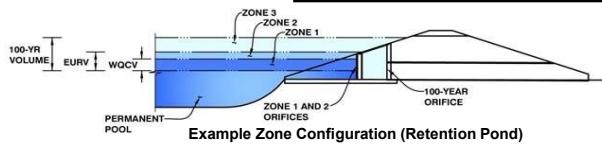

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

*MHFD-Detention, Version 4.04 (February 2021)*

## **Project: Mesa Ridge Cottages**

**Basin ID: Existing Pond D Sizing Confirmation - with Structure Modifications**

#### **Example Zone Configuration (Retention Pond)**

## Watershed Information

Selected BMP Type =	<b>EDB</b>
Watershed Area =	98.90
Watershed Length =	4,090
Watershed Length to Centroid =	2,000
Watershed Slope =	0.035
Watershed Imperviousness =	49.08%
Percentage Hydrologic Soil Group A =	0.0%
Percentage Hydrologic Soil Group B =	100.0%
Percentage Hydrologic Soil Groups C/D =	0.0%
Target WQCV Drain Time =	40.0

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

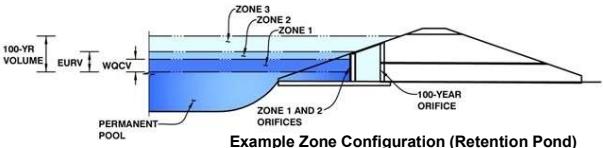

Water Quality Capture Volume (WQCV) =	1.679	acre-feet
Excess Urban Runoff Volume (EURV) =	5.181	acre-feet
2-yr Runoff Volume ( $P_1 = 1$ in.) =	3.768	acre-feet
5-yr Runoff Volume ( $P_1 = 1.28$ in.) =	5.495	acre-feet
10-yr Runoff Volume ( $P_1 = 1.55$ in.) =	7.395	acre-feet
25-yr Runoff Volume ( $P_1 = 1.97$ in.) =	11.334	acre-feet
50-yr Runoff Volume ( $P_1 = 2.34$ in.) =	14.409	acre-feet
100-yr Runoff Volume ( $P_1 = 2.74$ in.) =	18.159	acre-feet
500-yr Runoff Volume ( $P_1 = 3.84$ in.) =	27.727	acre-feet
Approximate 2-yr Detention Volume =	3.272	acre-feet
Approximate 5-yr Detention Volume =	4.571	acre-feet
Approximate 10-yr Detention Volume =	6.303	acre-feet
Approximate 25-yr Detention Volume =	7.685	acre-feet
Approximate 50-yr Detention Volume =	8.485	acre-feet
Approximate 100-yr Detention Volume =	9.924	acre-feet

## Define Zones and Basin Geometry

Zone 1 Volume (User Defined) =	5.19	acre-feet
Zone 2 Volume (User Defined - Zone 1) =	1.37	acre-feet
Zone 3 Volume (User Defined - Zones 1 & 2) =	7.93	acre-feet
Total Detention Basin Volume =	14.49	acre-feet

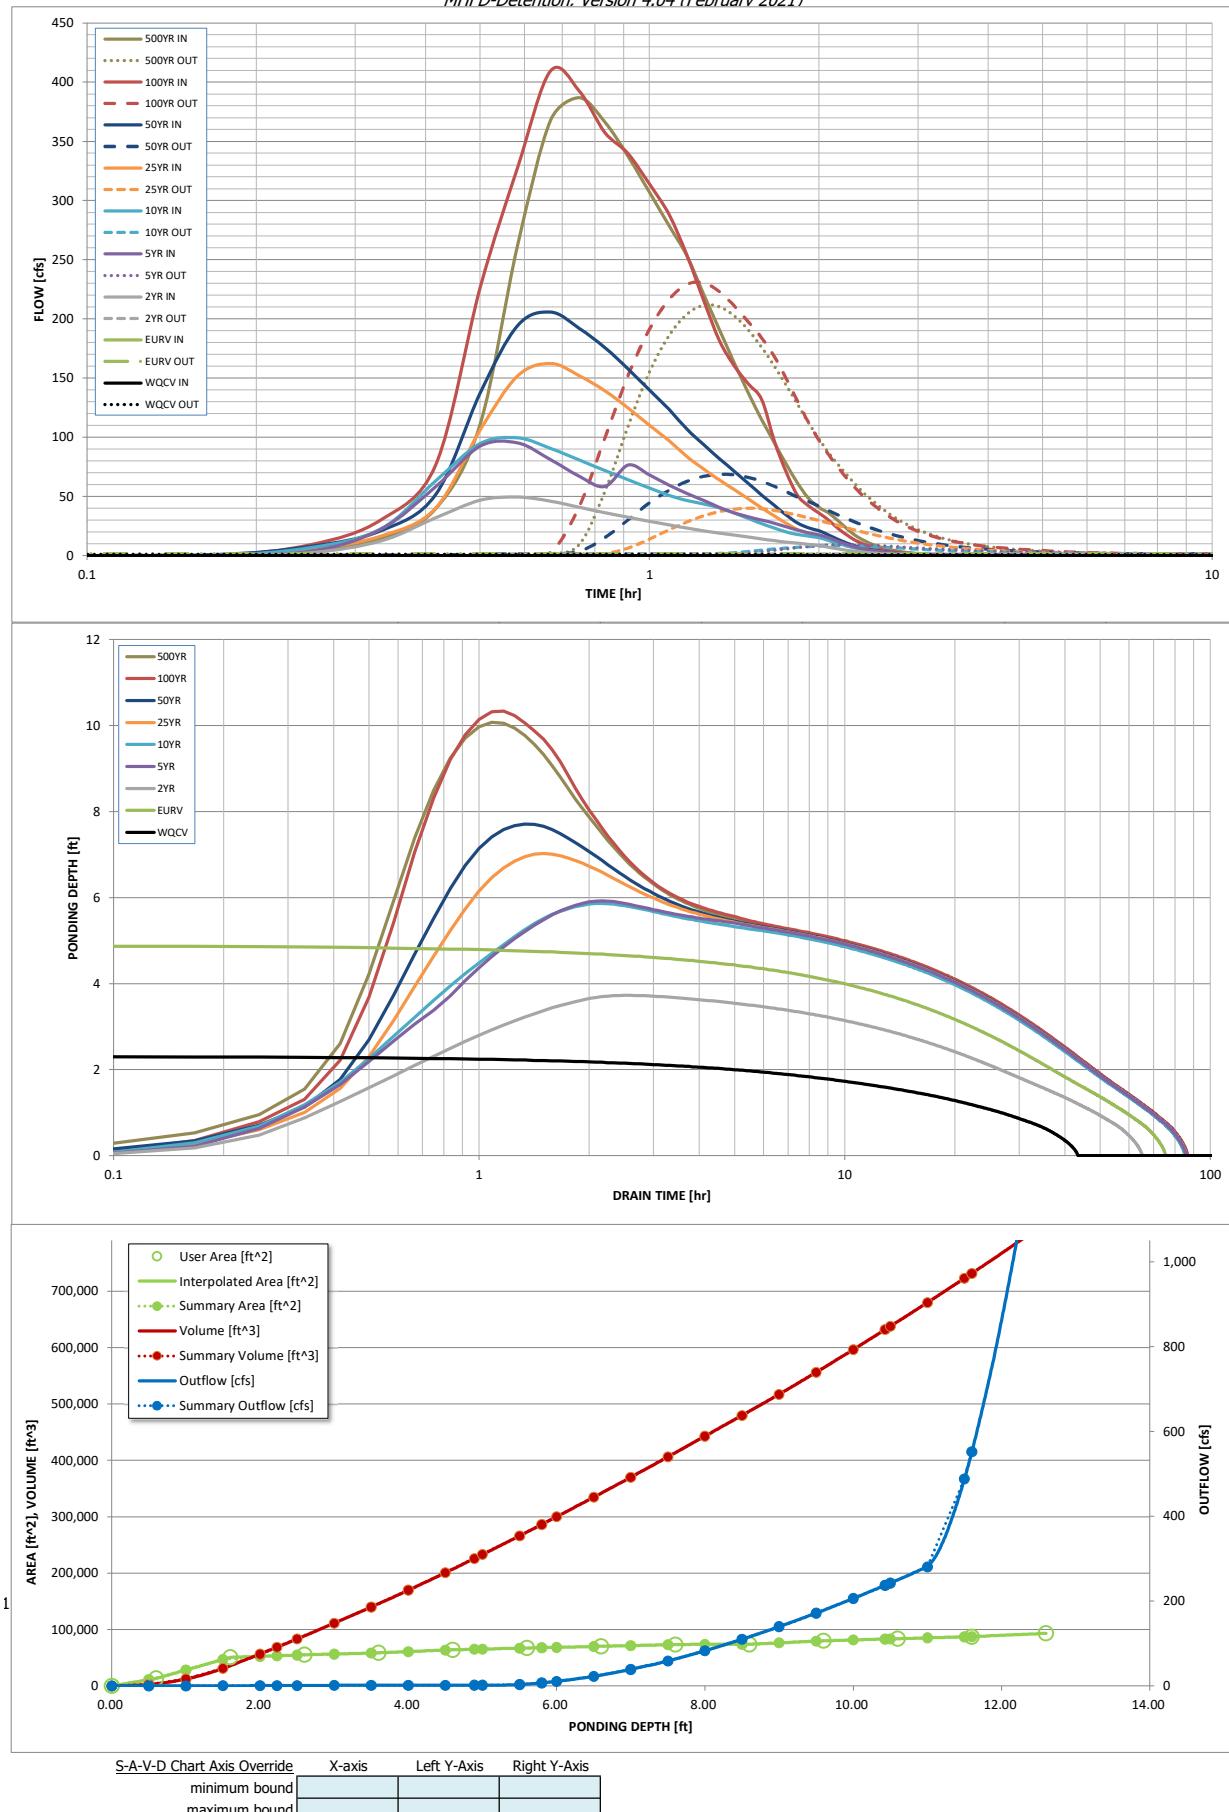

# DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

## Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

## Stormwater Detention and Infiltration Design Data Sheet

Workbook Protected

Worksheet Protected

**Stormwater Facility Name: EXISTING DETENTION BASIN D W/ PROPOSED OUTLET STRUCTURE MODIFICATIONS**

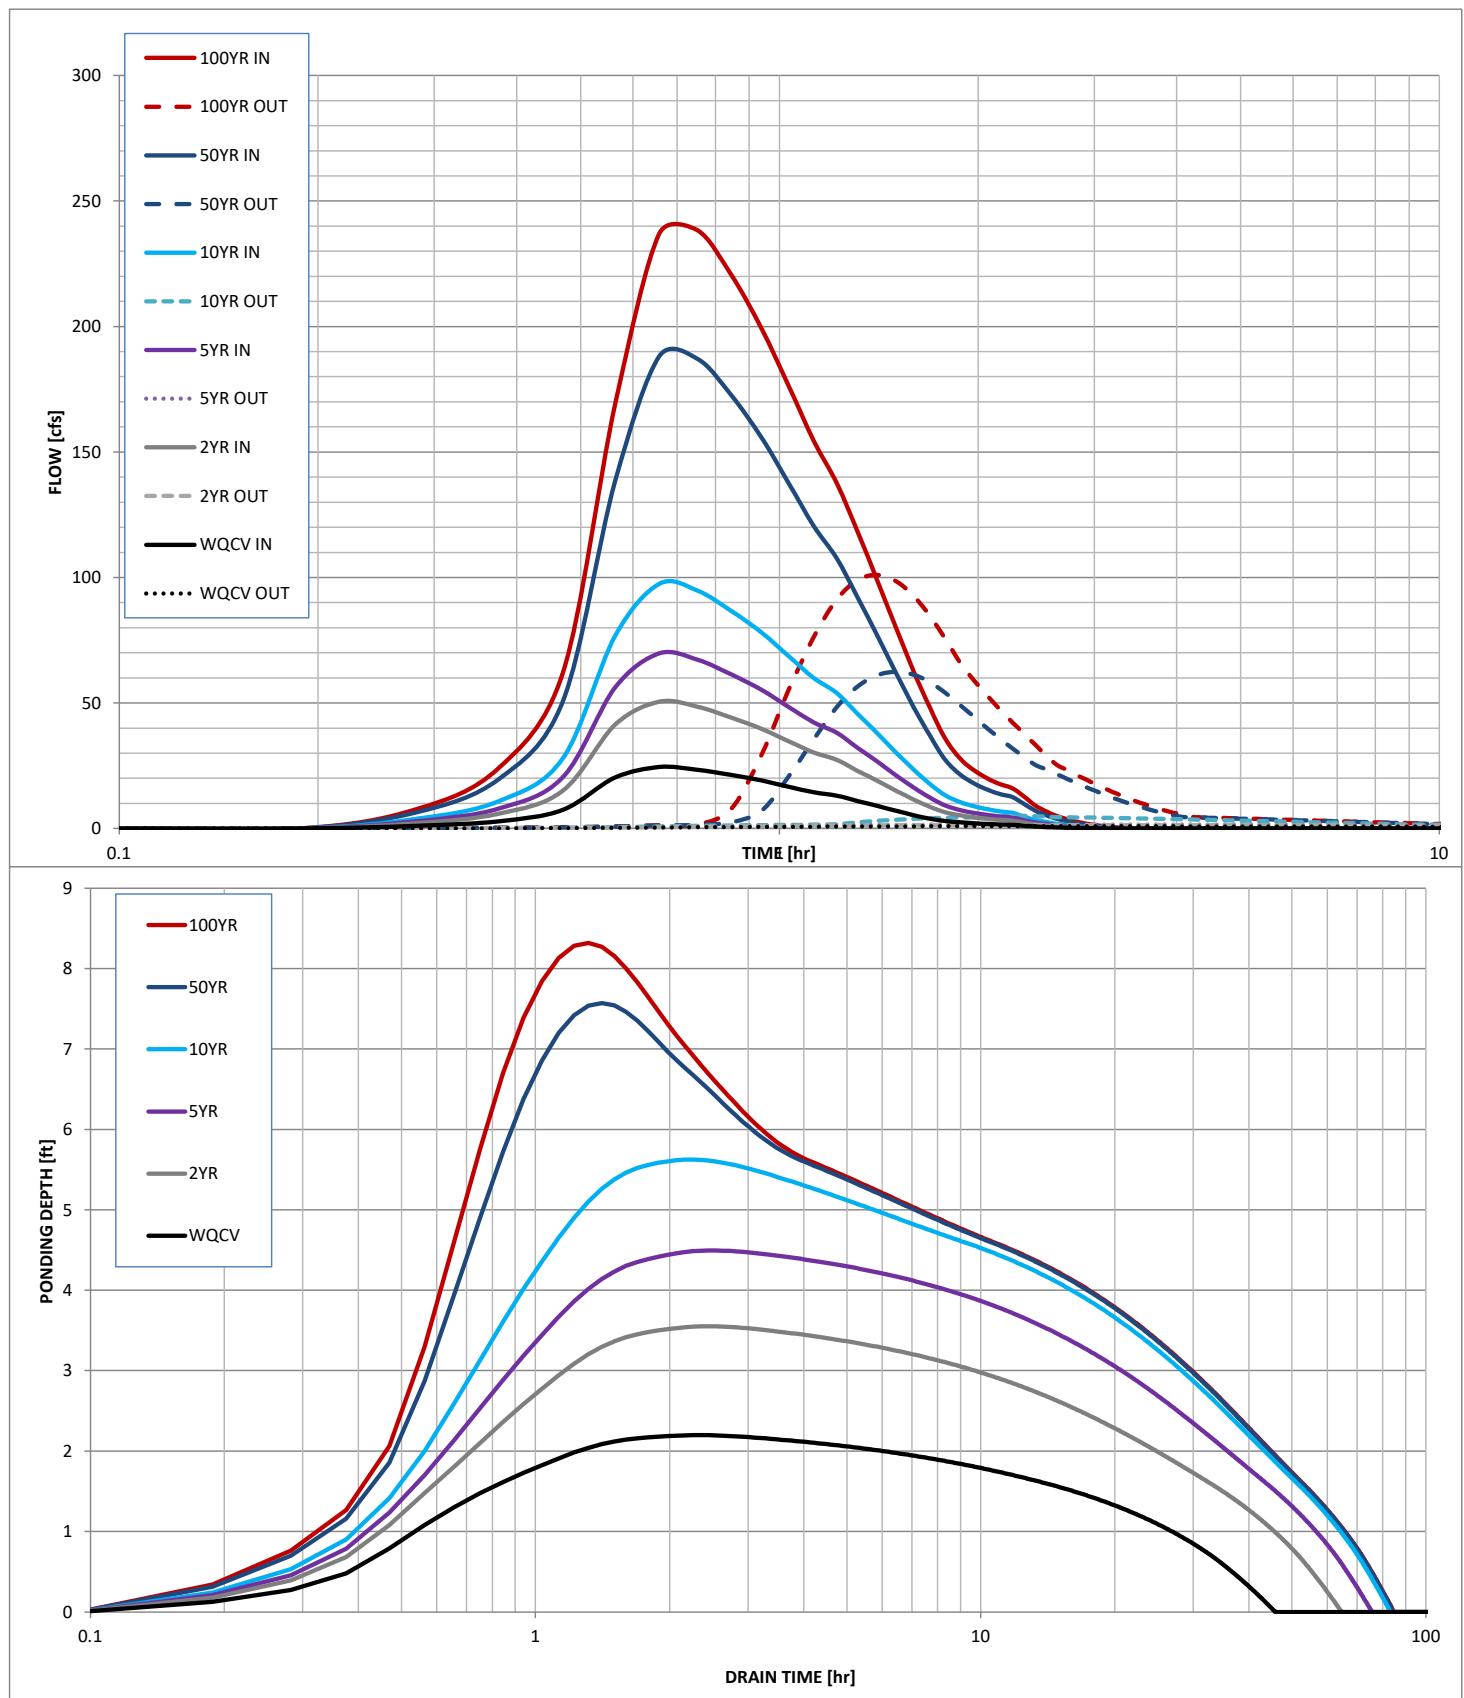

**Facility Location & Jurisdiction:** LOCATED: NW CORNER OF SNEFFLES ST & MESA RIDGE PKWY; JURISDCTION: MESA RDIGE METRO DIST, NO. 1

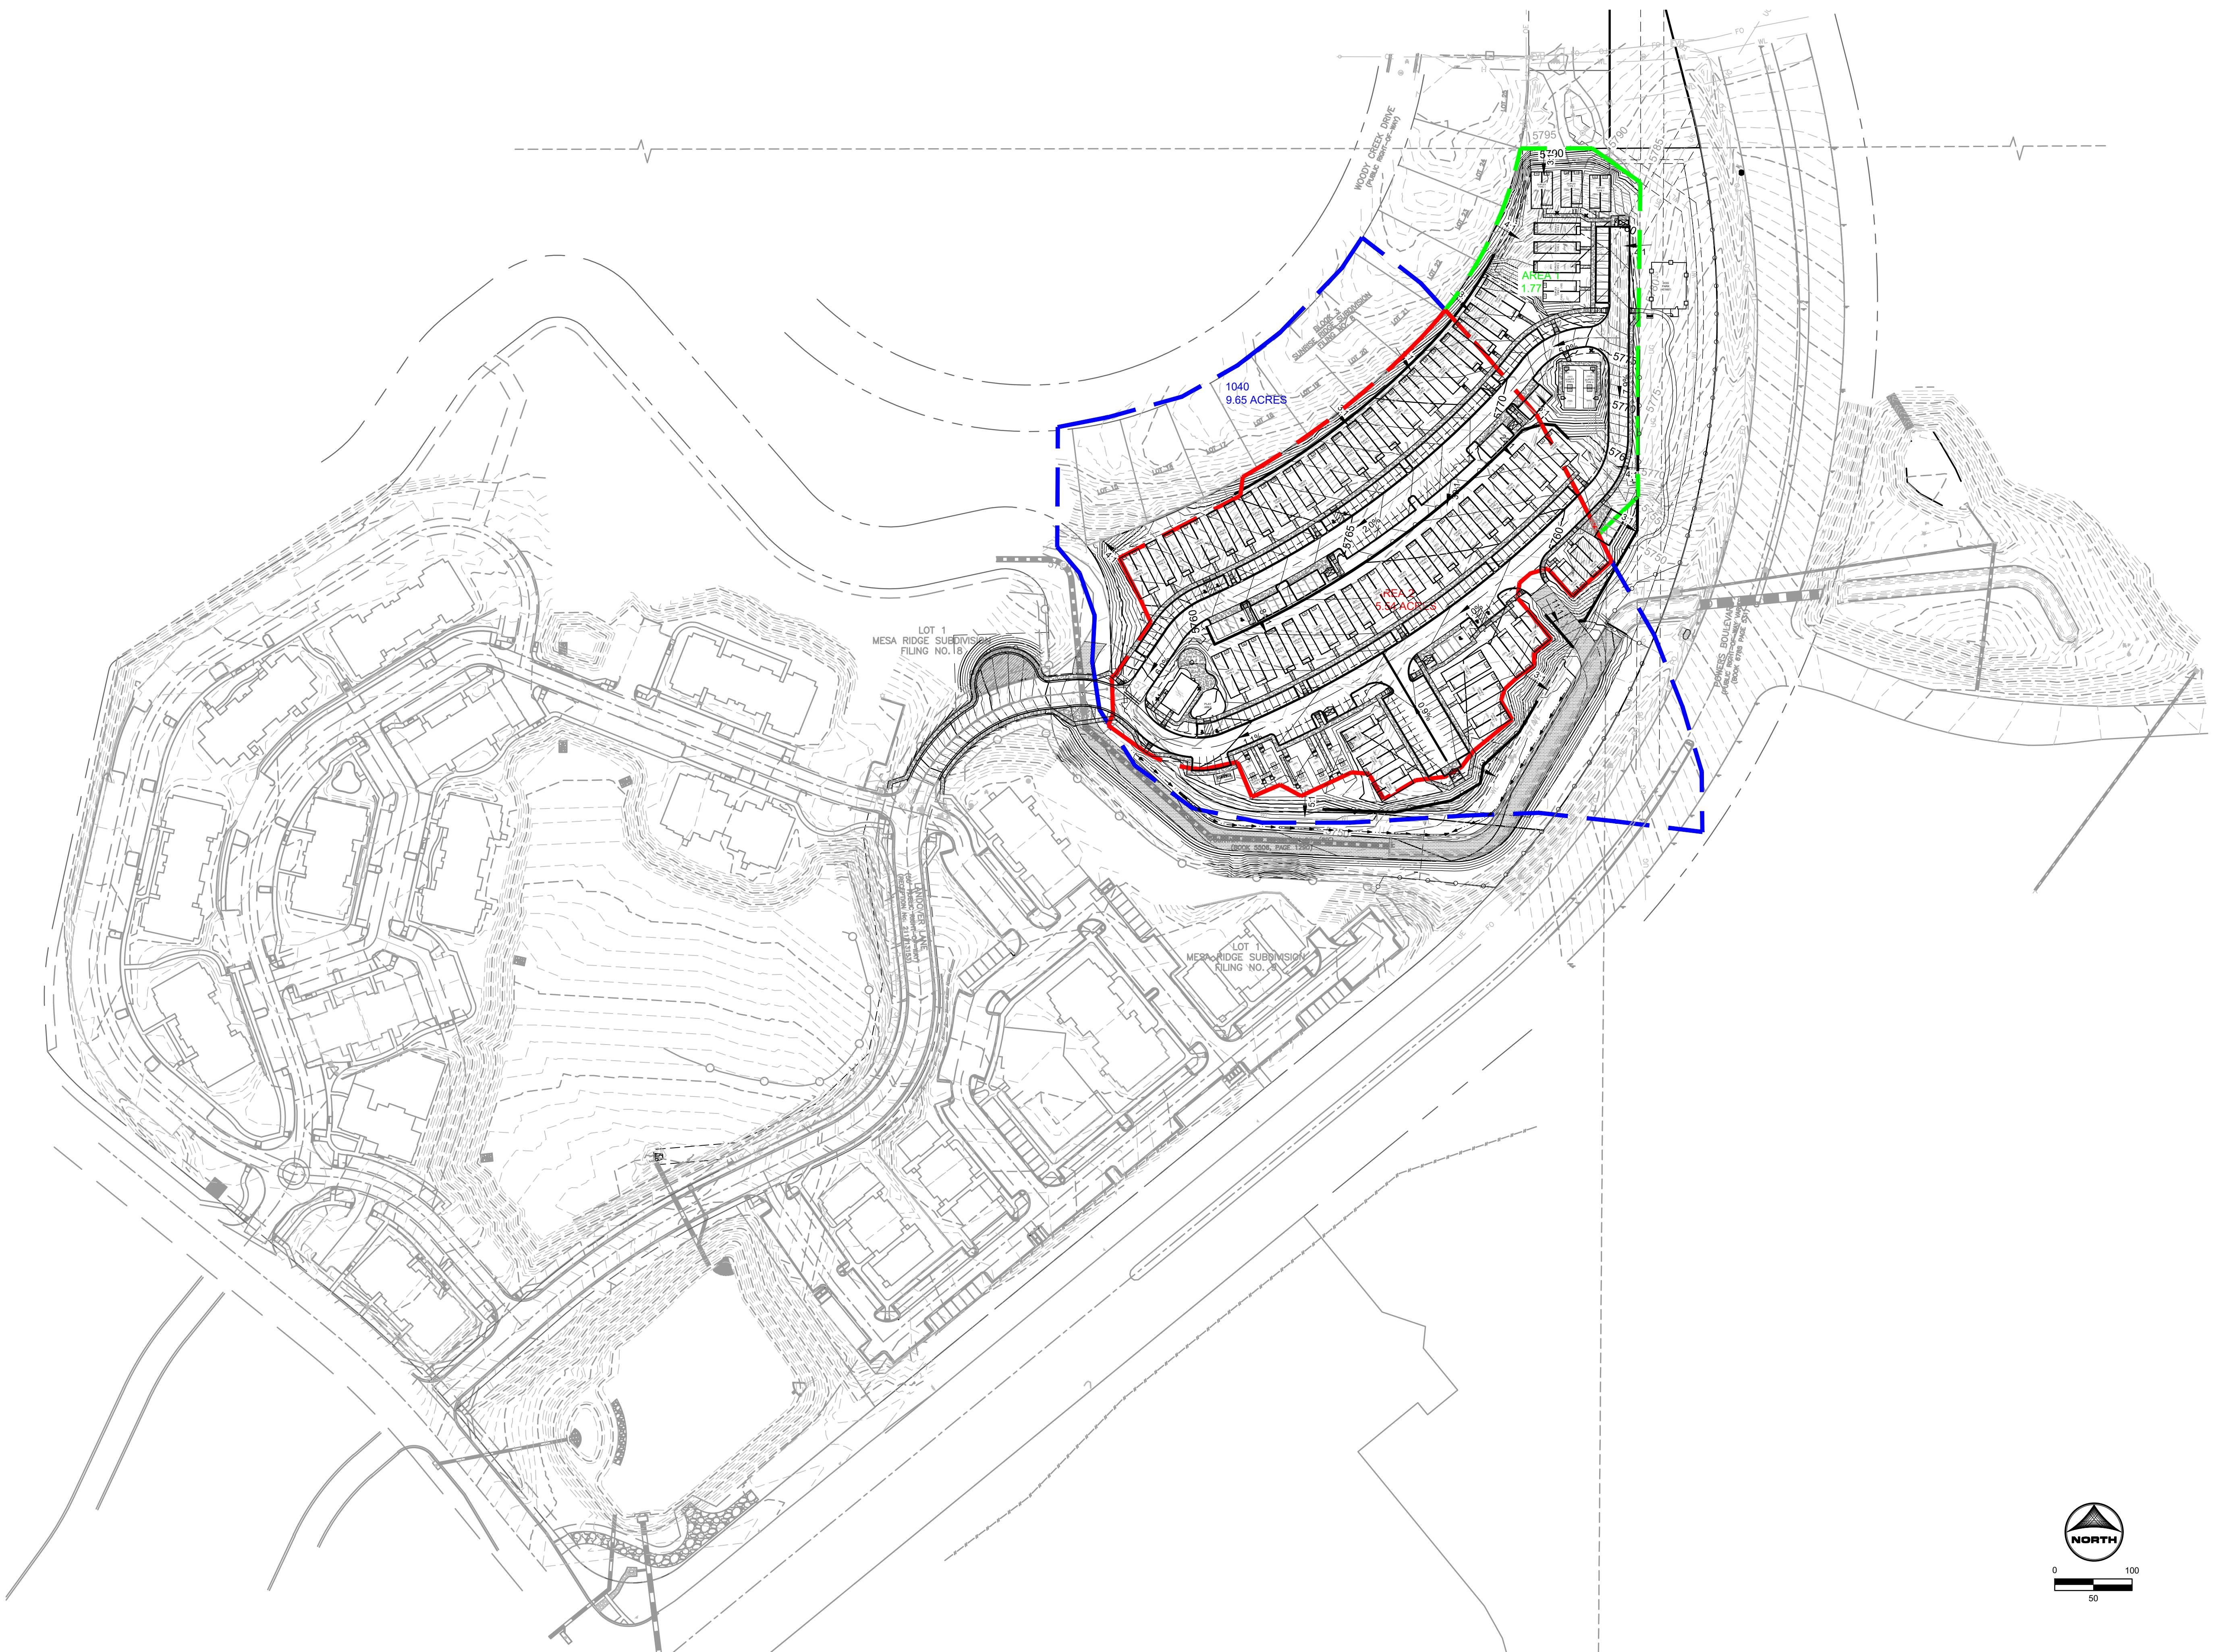

User Input: Watershed Characteristics	
Watershed Slope =	0.035
Watershed Length =	4090
Watershed Area =	98.90
Watershed Imperviousness =	49.1%
Percentage Hydrologic Soil Group A =	0.0%
Percentage Hydrologic Soil Group B =	100.0%
Percentage Hydrologic Soil Groups C/D =	0.0%
Location for 1-hr Rainfall Depths (use dropdown):	
User Input	▼

After completing and printing this worksheet to a pdf, go to:  
<https://maperture.digitaldataservices.com/gvh/?viewer=cswdif>  
create a new stormwater facility, and  
attach the pdf of this worksheet to that record.

Routed Hydrograph Results						
Design Storm Return Period =	WQCV	2 Year	5 Year	10 Year	50 Year	100 Year
One-Hour Rainfall Depth =	0.53	1.00	1.28	1.55	2.34	2.74
Calculated Runoff Volume =	1.680	3.506	4.870	6.863	13.542	17.231
OPTIONAL Override Runoff Volume =						
Inflow Hydrograph Volume =	1.680	3.505	4.869	6.862	13.535	17.224
Time to Drain 97% of Inflow Volume =	37.7	52.8	61.7	66.9	62.0	59.4
Time to Drain 99% of Inflow Volume =	41.2	57.8	67.6	73.7	71.2	69.7
Maximum Ponding Depth =	2.20	3.55	4.49	5.63	7.57	8.32
Maximum Ponded Area =	1.23	1.34	1.46	1.54	1.68	1.69
Maximum Volume Stored =	1.532	3.276	4.601	6.300	9.440	10.693

## GENERAL NOTES

- ALL WORK REQUIRED OF THESE PLANS SHALL BE COMPLETED IN ACCORDANCE WITH CITY OF COLORADO SPRINGS, ENGINEERING DIVISION, STANDARD SPECIFICATIONS, AND WITH THE APPLICABLE SECTIONS OF THE COLORADO DEPARTMENT OF TRANSPORTATION, STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.
- THE CONTRACTOR IS RESPONSIBLE FOR THE FIELD VERIFICATION OF ALL PUBLIC AND PRIVATE UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. THE UTILITIES SHOWN ON THESE PLANS HAVE BEEN LOCATED USING THE BEST AVAILABLE INFORMATION. SHOULD A UTILITY BE DAMAGED AS A RESULT OF THIS CONSTRUCTION, IT SHALL BE REPAIRED IMMEDIATELY BY EITHER THE CONTRACTOR OR THE AFFECTED UTILITY OWNER. THE FULL COST OF SUCH A REPAIR SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR.
- SURFACE AND GROUNDWATER AT THE SITE MAY CREATE A NEED FOR Dewatering DURING THE CONSTRUCTION OF THE DRAINAGE FACILITIES. CONTRACTOR SHALL BE RESPONSIBLE FOR THE MAINTENANCE OF TEMPORARY Dewatering STRUCTURES, AND PROVIDE FOR THE SAFE AND STABLE DISCHARGE OF WATER FROM THE CONSTRUCTION SITE. THE COST OF Dewatering IS CONSIDERED INCIDENTAL TO THE CONSTRUCTION AND WILL NOT BE PAID FOR UNDER A SPECIFIC ITEM IN THE BID DOCUMENTS.
- CLASS III RCP SHALL BE USED FOR ALL STORM SEWERS UNLESS OTHERWISE SPECIFIED.
- THE CONTRACTOR SHALL NOTIFY THE CITY OF FOUNTAIN DEPARTMENT OF PUBLIC WORKS 48 HOURS PRIOR TO THE START OF CONSTRUCTION TO OUTLINE METHODS OF CONSTRUCTION, SCHEDULING, AND ISSUING OF INSPECTION PERMITS.

## STRUCTURAL CONCRETE NOTES

- ALL CONSTRUCTION INVOLVING THE PLACEMENT OF STRUCTURAL CONCRETE SHALL BE COMPLETED IN ACCORDANCE WITH SECTION 600 OF THE CITY OF COLORADO SPRINGS ENGINEERING DIVISION STANDARD SPECIFICATIONS.
- STEEL REINFORCING SHALL BE GRADE 60 FOR ALL REINFORCING STEEL GREATER THAN #4. A TABLE SPECIFYING MINIMUM SPLICE LENGTHS HAS BEEN PROVIDED ON THE STRUCTURAL DETAIL SHEETS. ALL REINFORCING SHALL HAVE A 2-INCH MINIMUM COVER UNLESS OTHERWISE SPECIFIED. REBAR SHOP DRAWINGS SHALL BE SUBMITTED TO THE ENGINEER FOR REVIEW PRIOR TO FABRICATION.
- CAST-IN-PLACE CONCRETE SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH (F'c) OF 4,000 PSI AT 28 DAYS. ALL CONCRETE PLACED AGAINST SOIL SHALL BE TYPE II/V PORTLAND CEMENT. ALL EXPOSED CORNERS SHALL BE FORMED WITH A 3/4" CHAMFER UNLESS OTHERWISE SPECIFIED.
- EXPANSION JOINT MATERIAL SHALL MEET AASHTO SPECIFICATION M-213.
- BACKFILL AGAINST STRUCTURES SHALL NOT COMMENCE UNTIL ALL SUPPORTING DIAPHRAGMS ARE IN PLACE AND CONCRETE HAS OBTAINED ITS FULL SEVEN DAY STRENGTH. BACKFILL SHALL BE PLACED EQUALLY ON EACH SIDE OF CHECK STRUCTURES AND CUTOFF WALLS UNTIL THE FINAL GRADE IS REACHED.
- FOOTING EXCAVATIONS SHALL BE EXAMINED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE FORMING AND PLACING OF CONCRETE.
- CONTRACTOR IS RESPONSIBLE FOR PROVIDING THE ENGINEER AND GEOTECHNICAL ENGINEER WITH A 24-HOUR MINIMUM NOTIFICATION FOR REBAR OBSERVATION, SOIL AND/OR CONCRETE TESTING. PLACEMENT OF CONCRETE IN THE ABSENCE OF TESTING SHALL BE COMPLETED AT THE SOLE RISK OF THE CONTRACTOR.

## 8. CONCRETE:

- NO ADMIXTURES PERMITTED WITHOUT THE REVIEW OF ENGINEER. SUBMIT DESIGN MIX FOR ENGINEER APPROVAL.
- CONTRACTOR IS RESPONSIBLE FOR THE ADEQUACY OF FORMS AND SHORING AND FOR SAFE PRACTICE IN THEIR USE AND REMOVAL.
- COMPRESSIVE STRENGTH SHALL BE 4,000 psi, MIN.

## 9. REINFORCING STEEL:

- TO BE BILLET STEEL CONFORMING TO THE LATEST A.S.T.M./ A615 GRADE 60 SPECIFICATION, FABRICATED IN ACCORDANCE WITH MANUAL OF STANDARD PRACTICE OF THE C.R.S.I. AND PLACED IN ACCORDANCE WITH A.C.I. 315 AND A.C.I. MANUAL OF PRACTICE.
- MINIMUM OF CONCRETE COVER UNLESS OTHERWISE DETAILED ON DRAWINGS: FOOTINGS 3 INCHES, WALLS 3 INCHES, SLABS EXPOSED TO WEATHER 1-1/12 INCHES, SLABS ON GRADE 1-1/2 INCHES MEASURED FROM TOP OF SLAB.
- SLAB REINFORCEMENT: LAPPED 36 BAR DIAMETER OR MINIMUM 18 INCHES. BOTTOM BARS SPliced ONLY AT SUPPORTS, TOP BARS SPliced ONLY AT MID-SPAN. ALL TOP BARS HOOKED AT NON-CONTINUOUS EDGES (U.O.N.) ALL HOOKS TO BE STANDARD 90 DEGREE OR 180 DEGREE HOOKS AS REQUIRED (U.O.N.), DOWELS IN FOUNDATION TO MATCH REINFORCING ABOVE.

## D. SUBMIT SHOP DRAWINGS FOR REINFORCING PRIOR TO FABRICATION.

## 10. FOUNDATIONS:

- STRUCTURES SHALL BEAR ON SOIL HAVING A MINIMUM BEARING CAPACITY OF 2,000 P.S.F. COMPACTION FOR SUBGRADE PREPARATION SHALL BE IN ACCORDANCE WITH REQUIREMENTS OF THE SOILS REPORT. SUBGRADE PREPARATION SHALL BE MONITORED BY THE SOILS ENGINEER.

## 11. BACKFILL AND STABILIZATION MATERIAL:

- BACKFILL MATERIAL CONSISTING OF SELECT, GRANULAR, NON-SWELLING MATERIAL TO BE PLACED ALONG THE SIDES OF THE VAULTS EXTENDING 3 FEET OUTSIDE THE VAULT WALLS.
- 3/4-INCH ROCK, 12-INCHES DEEP, TO BE PLACED UNDER ALL VAULTS.
- 2-INCH TO 4-INCH STABILIZATION MATERIAL SHALL BE PLACED UNDER THE 3/4" ROCK IF SUBGRADE STABILIZATION IS REQUIRED.

Kiowa Project No. 09061  
October 25, 2011

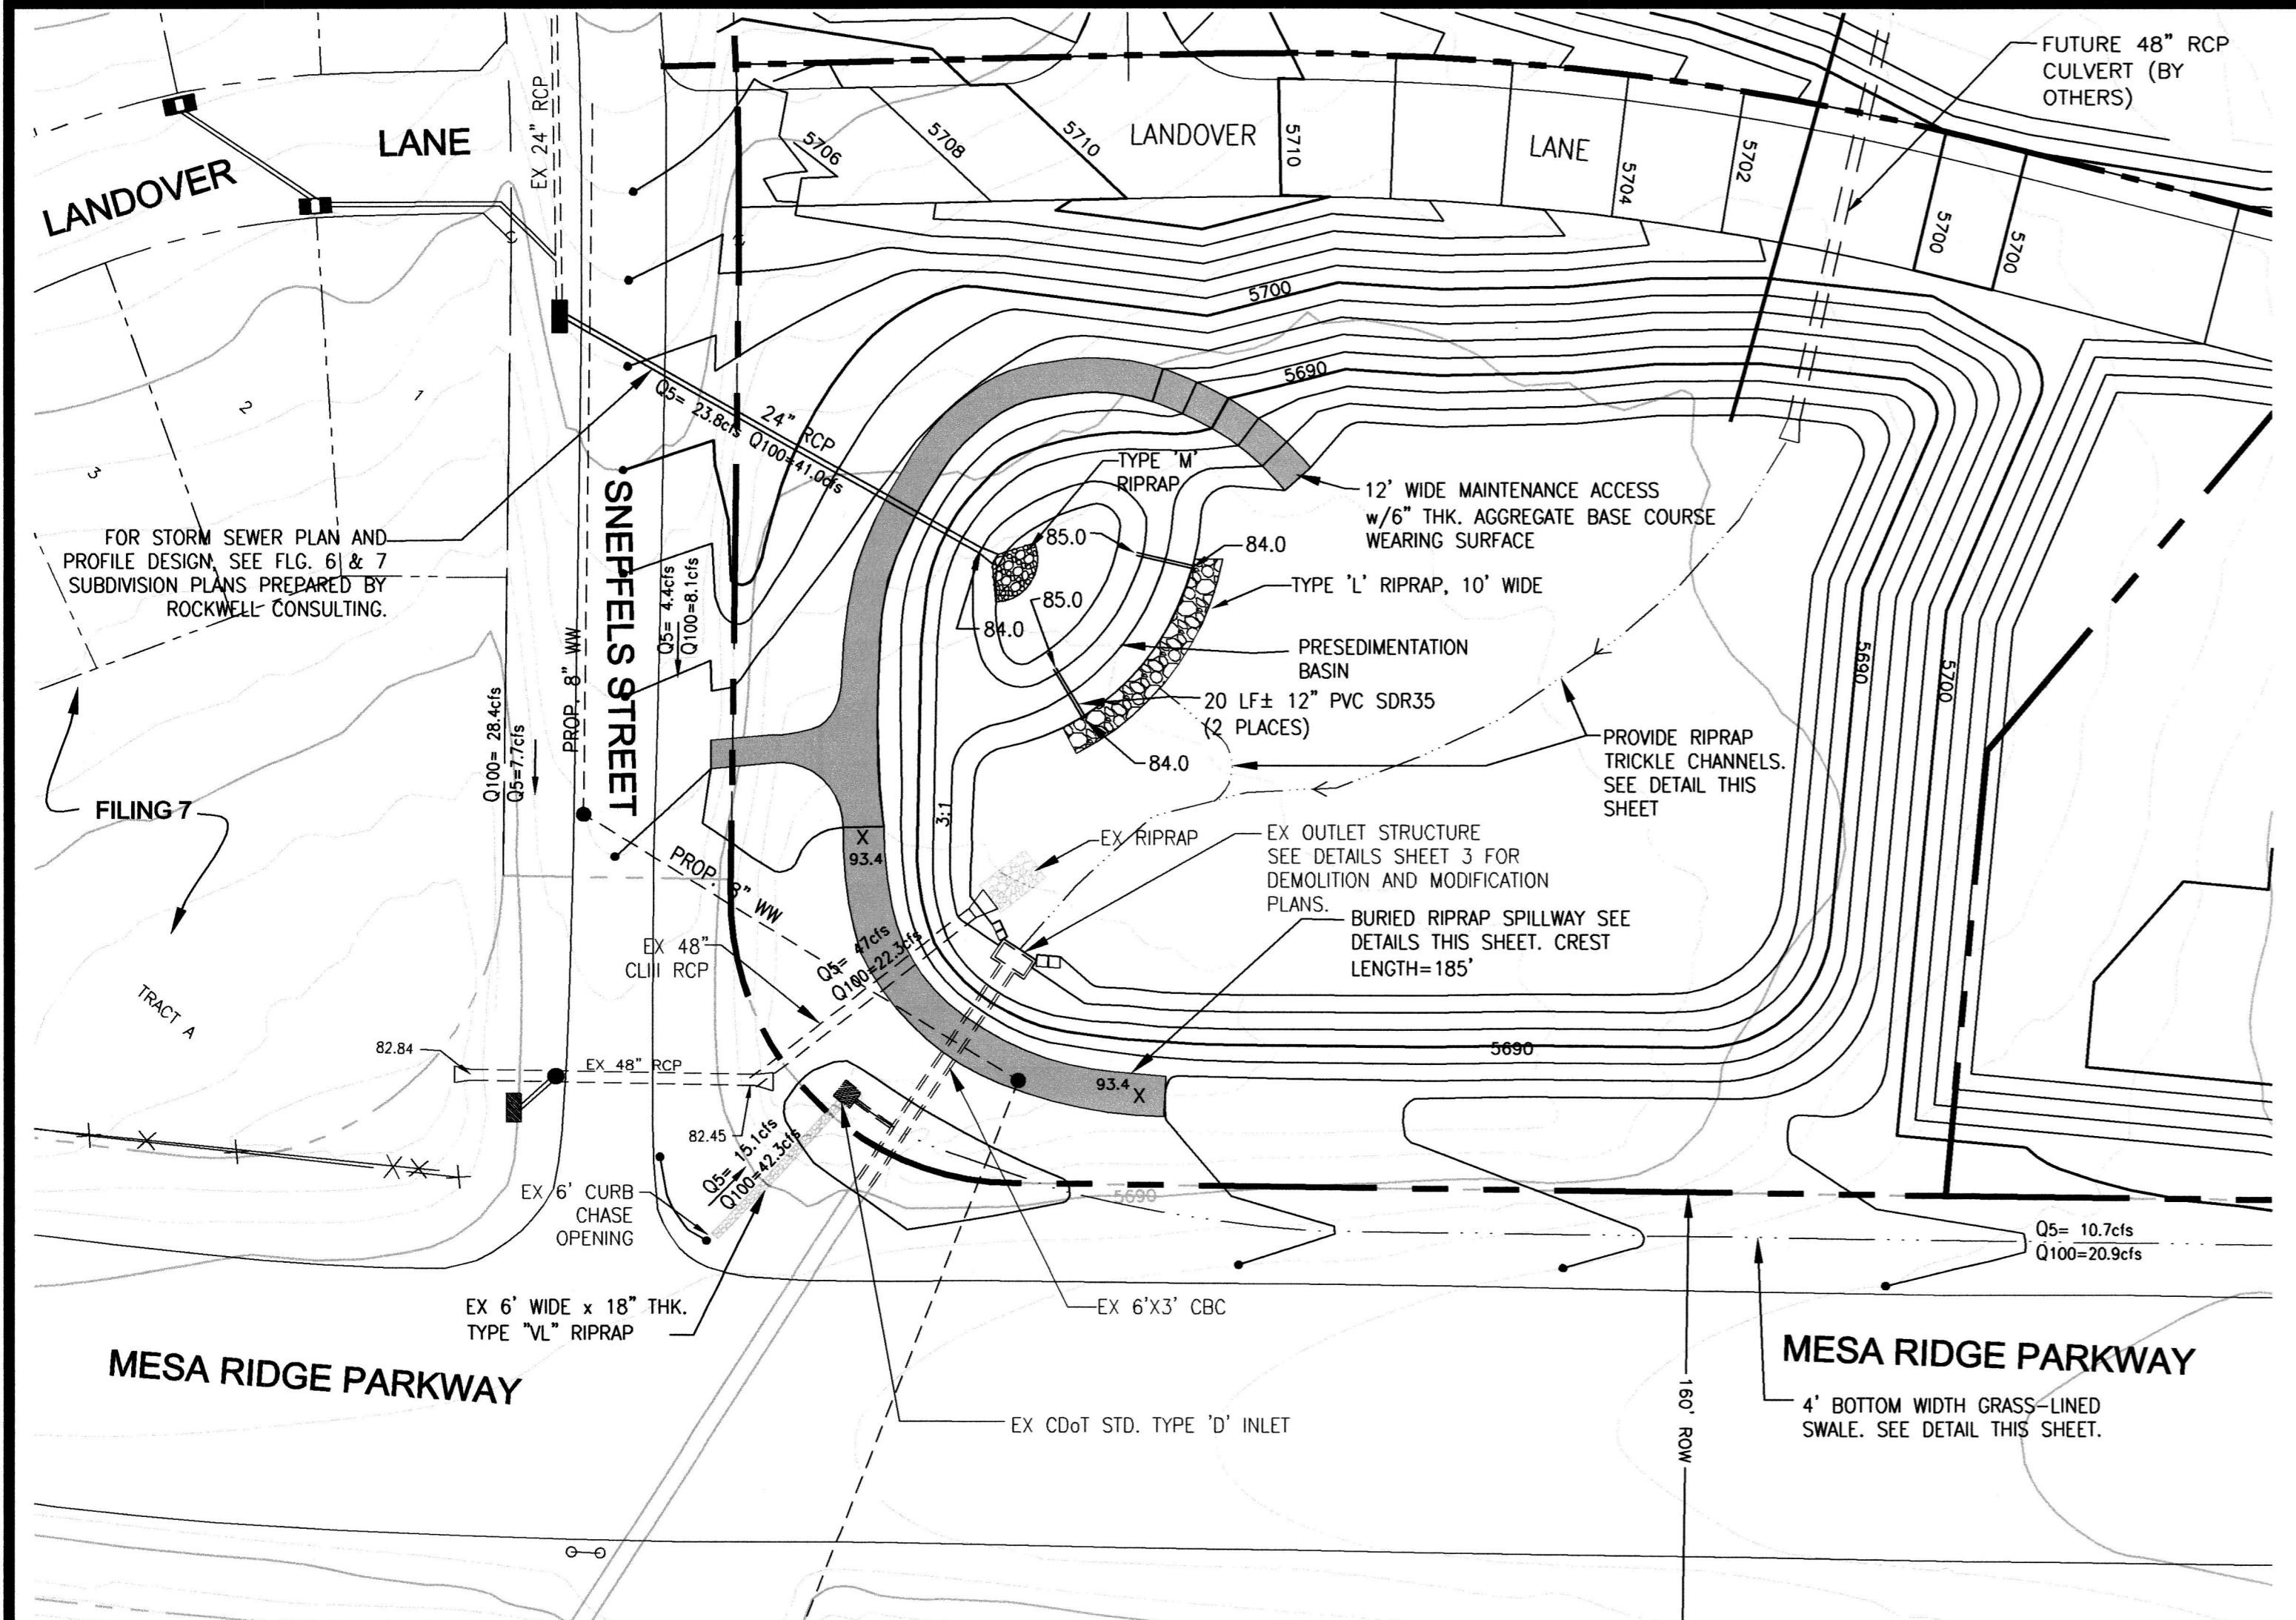

## PROJECT SPECIFIC GRADING AND EROSION CONTROL NOTES

- All earthwork required of this construction shall be completed in accordance with all applicable sections of the Project Specifications and Soil Investigation Report (Geotechnical Report).
- Rubbish including timber, concrete rubble, trees, brush, and asphalt shall not be backfilled adjacent to any of the structures or be in the placement of any unclassified fill. The Contractor shall be responsible for the removal and hauling of such materials to a suitable area. Costs associated with the removal of such materials shall be paid for as documented in the Project Specifications.
- Excess excavation shall become the property of the Contractor and shall be disposed of at the Contractor's expense. The cost of haulage and spoiling of excess excavated materials shall be paid for as documented in the Project Specifications.
- Water shall be used as a dust palliative as required and shall be included in the cost for earthwork item(s). No separate payment will be made for dust control associated with the site construction.
- The road grades shall be cleared of vegetation and the topsoil stockpiled for later use.
- All grading shall be in conformance with the Geotechnical Report for the area.
- Placement of fill for roadway embankments shall be completed in conformance with the Geotechnical Report.
- Grading contours shown on this plan are to final grade.
- Compaction under filled areas, including roadway and detention basin embankments, shall be 95 percent of the maximum Standard Proctor Density (ASTM D698) at two (2) percent of optimum moisture content.
- No rubble or debris shall be placed in the backfill under any of the proposed buildings, streets, curbs & gutters, sidewalks and drainage structures or within five (5) feet of a building footprint. Properly graded rubble may be used in some locations as specified and verified by the Geotechnical Engineer.
- Contractor is responsible for reviewing the site prior to bidding to verify site conditions.
- Contractor is responsible for providing erosion control measures as approved by the City of Fountain Dept. of Public Works Division and as may be required by the El Paso County Inspector.
- All slopes equal to or greater than 3:1 shall require erosion control blanket, single netted fabric, American Excelsior or equal.
- The Developer is responsible for maintaining erosion control measures until a mature stage of vegetation is established.
- All soils used for fill must be approved by a representative of the Geotechnical Engineer.
- All natural ground to receive fill must be properly scarified, watered and compacted prior to placing fill.
- The Contractor is solely responsible for the design, maintenance and operation of any required dewatering system. The Contractor shall perform such independent investigation as he deems necessary to satisfy himself as to the subsurface groundwater conditions and unstable soil conditions to be encountered throughout the construction.
- No fill shall be placed, spread or rolled while it is frozen, thawing or during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations shall not be resumed until a representative of the Geotechnical Engineer indicates that the moisture content and density of the previously placed fill are as specified. Fill surfaces may be scarified and recompacted after rainfall if necessary, to obtain proper moisture density relation.
- Additional erosion control structures and/or grading may be required at the time of construction.
- Sediment removal for erosion control facilities shall be performed continuously for proper function.
- Base mapping was provided by Rockwell Consulting. The date of the survey was January 2008.
- Proposed Construction Schedule:
  - Begin Construction: OCTOBER 25, 2011
  - End Construction: FEBRUARY 28, 2012
  - Total Site Area = 3.6 Acres
- Area to be disturbed = 3.6 Acres (est)
  - Existing 100-year runoff coefficient = 0.40
  - Proposed 100-year runoff coefficient = 0.40
  - Existing Hydrological Soil Groups: B & C
- Site is currently undeveloped and covered with native grasses on mild slopes (2%-7%).
- Site is located in the Jimmy Camp Creek Drainage Basin.
- All grading and erosion control shall be completed in accordance with the City of Fountain Municipal Code Sections 12.04.160 and 12.10.

## GRADING AND EROSION CONTROL NOTES

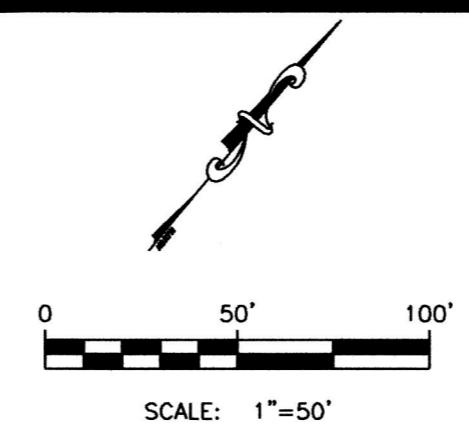

- ALL GRADING AND EROSION CONTROL SHALL BE COMPLETED IN ACCORDANCE WITH THE CITY OF FOUNTAIN MUNICIPAL CODE SECTIONS 12.04.160 AND 12.10.
- ALL FILL AREAS SHALL BE COMPACTED IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
- SOIL EROSION CONTROL MEASURES FOR ALL SLOPES, CHANNELS, DITCHES, OR ANY DISTURBED LAND AREA SHALL BE COMPLETED WITHIN TWENTY ONE (21) CALENDAR DAYS AFTER FINAL GRADING, OR FINAL EARTH DISTURBANCE HAS BEEN COMPLETED. AN AREA THAT IS GOING TO REMAIN IN AN INTERIM STATE FOR MORE THAN 60 DAYS SHALL ALSO BE SEEDED. ALL TEMPORARY SOIL EROSION CONTROL MEASURES AND BMPs SHALL BE MAINTAINED UNTIL PERMANENT SOIL EROSION CONTROL MEASURES ARE IMPLEMENTED.
- EROSION CONTROL SHALL CONSIST OF SILT FENCES AND HY BALES AS SHOWN ON THE DRAWING, AND TOPSOIL WITH GRASS SEED WHICH WILL BE WATERED UNTIL VEGETATION HAS BEEN REESTABLISHED.
- EROSION CONTROL BALES OR SILT FENCE SHALL BE PLACED AT THE TOE AND DRAINAGE OUTfall POINTS OF ALL SLOPES 4:1 OR STEEPER TO PREVENT SILTATION ON STREETS. REFER TO STORM WATER MANAGEMENT PLAN FOR DETAIL AND LOCATION OF EROSION CONTROL MEASURES.
- CONTRACTOR SHALL COMPLY WITH ALL LOCAL, COUNTY AND STATE REGULATIONS PERTAINING TO GRADING, DUST AND EROSION.
- NATURAL VEGETATION SHALL BE RETAINED AND PROTECTED WHEREVER POSSIBLE. EXPOSURE OF SOIL TO EROSION BY REMOVAL OR DISTURBANCE OF VEGETATION SHALL BE LIMITED TO THE AREA REQUIRED FOR IMMEDIATE CONSTRUCTION OPERATIONS AND FOR THE SHORTEST PRACTICAL PERIOD OF TIME.
- TOPSOIL SHALL BE STOCKPILED TO THE EXTENT PRACTICABLE ON THE SITE FOR USE ON AREAS TO BE REVEGETATED. ANY AND ALL STOCKPILES SHALL BE LOCATED AND PROTECTED FROM EROSION ELEMENTS.
- AT ALL TIMES, THE PROPERTY SHALL BE MAINTAINED AND/OR WATERED TO PREVENT WIND-CaUSED EROSION. EARTHWORK OPERATIONS SHALL BE DISCONTINUED WHEN FUGITIVE DUST SIGNIFICANTLY IMPACTS ADJACENT PROPERTY. IF EARTHWORK IS COMPLETE OR DISCONTINUED AND DUST FROM THE SITE CONTINUES TO CREATE PROBLEMS, THE OWNER/DEVELOPER SHALL IMMEDIATELY INSTITUTE MITIGATIVE MEASURES AND SHALL CORRECT DAMAGE TO ADJACENT PROPERTY.
- ALL PERSONS ENGAGED IN EARTH DISTURBANCE SHALL IMPLEMENT AND MAINTAIN ACCEPTABLE SOIL EROSION AND SEDIMENT CONTROL MEASURES INCLUDING BMPs IN CONFORMANCE WITH THE EROSION CONTROL TECHNICAL STANDARDS OF THE MANUAL AND IN ACCORDANCE WITH THE EROSION AND STORMWATER QUALITY CONTROL PLAN APPROVED BY THE CITY OF FOUNTAIN, IF REQUIRED.
- ALL EARTH DISTURBANCE SHALL BE DESIGNED, CONSTRUCTED, AND COMPLETED IN SUCH A MANNER SO AS TO EFFECTIVELY REDUCE ACCELERATED SOIL EROSION.
- ALL EARTH DISTURBANCE SHALL BE DESIGNED, CONSTRUCTED, AND COMPLETED IN SUCH A MANNER SO AS TO EFFECTIVELY REDUCE EXPOSED AREA OF ANY DISTURBED LAND SHALL BE LIMITED TO THE SHORTEST PRACTICAL PERIOD OF TIME.
- ALL EARTH DISTURBANCE SHALL BE DONE IN A MANNER THAT MINIMIZES POLLUTION OF ANY ON-SITE OR OFF-SITE WATERS.
- SUSPENDED SEDIMENT CAUSED BY ACCELERATED SOIL EROSION SHALL BE MINIMIZED IN RUNOFF WATER BEFORE IT LEAVES THE SITE.
- TEMPORARY SOIL EROSION CONTROL FACILITIES SHALL BE REMOVED AND EARTH DISTURBANCE AREAS GRADED AND STABILIZED WITH PERMANENT SOIL EROSION CONTROL MEASURES PURSUANT TO THE STANDARDS AND SPECIFICATIONS PRESCRIBED IN THE MANUAL AND IN ACCORDANCE WITH THE PERMANENT EROSION CONTROL FEATURES SHOWN ON THE EROSION AND STORMWATER CONTROL PLANS APPROVED BY THE CITY OF FOUNTAIN, IF REQUIRED.
- ANY STREET OR DRAINAGE FACILITY WHICH HAS HAD EROSION SEDIMENT DEPOSITED IN IT DUE TO CONSTRUCTION, GRADING, OR OTHER DEVELOPMENT ACTIVITY, MUST BE CLEANED IMMEDIATELY AT THE EXPENSE OF THE CONTRACTOR, DEVELOPER, HOMEOWNER, OR WHOEVER IS RESPONSIBLE FOR THE CONSTRUCTION, GRADING, OR LAND DEVELOPMENT ACTIVITY. IF THE FACILITY IS NOT CLEANED IMMEDIATELY OR WITHIN A RESPONSIBLE PERIOD OF TIME AFTER NOTIFICATION BY THE CITY, THE CITY MAY PERFORM THE WORK OR HAVE THE WORK DONE AND BILL THE RESPONSIBLE PARTY.
- IT IS THE RESPONSIBILITY OF THE OWNER TO ENSURE THAT VEHICLE TRACKING CONTROL IS IN PLACE, FUNCTIONAL, AND MAINTAINED THROUGHOUT THE CONSTRUCTION PHASE OF THIS PROJECT.
- INDIVIDUALS SHALL COMPLY WITH THE "COLORADO WATER QUALITY CONTROL ACT" (TITLE 25, ARTICLE 8, CRS), AND THE "CLEAN WATER ACT" (34USC 1344), REGULATIONS PROMULGATED, CERTIFICATIONS OR PERMITS ISSUED, IN ADDITION TO CITY OF FOUNTAIN REQUIREMENTS. IN THE EVENT OF CONFLICTS BETWEEN THESE REQUIREMENTS, THE MORE RESTRICTIVE LAWS, RULES, OR REGULATIONS SHALL APPLY.

DESIGN POINT	UPSTREAM BASIN	ΣQ <sub>5</sub> (cfs)	ΣQ <sub>100</sub> (cfs)
1	EX1	2.5	13.4
2	EX2	3.5	10.0
3	EX3	1.4	4.1
4	EX4	0.1	0.5
5	EX5	2.1	8.7

EX PROPERTY LINE  
EX 30.00' UT ESMT REC NO: 98002695  
EX U.G. ELEC  
EX FIBEROPTIC  
EX 20.00' WATER & SEWER ESMT REC NO: 211107044  
EX GAS LINE  
EX 30.00' PIPELINE EASEMENT (BOOK 2127 PAGE 170)  
EX SEDIMENTATION POND  
EX STORM INLET  
EX STORM INLET  
EX BOX CULVERT  
PERMANENT DRAINAGE EASEMENT (REC. No. 201044126)  
EX PROPERTY LINE  
EX 66' RCP (BYPASS IRRIGATION DITCH FLOWS)  
EX 66' RCP (BYPASS IRRIGATION DITCH FLOWS)

1A 2A 0.6 1.1  
1 2 9.7 20.5  
1.1 DP1A & DP1 8.1 14.2  
2 3 3.4 9.7  
3 4 0.3 1.7  
4 5 2.6 6.7  
4.1 DP1.1 & DP4 10.4 19.8  
5 2 8.4 17.8  
5.1 DP4.1 & DP5 18.0 32.7  
6 6 0.2 1.2  
7 7 0.4 1.3  
8 8 1.5 5.8  
9 9 1.5 4.4  
9.1 DP6.1, DP8 & DP3 20.4 42.0

#### BASIN SUMMARY

BASIN	AREA (ac)	% IMPERVIOUS	Q <sub>5</sub> (cfs)	Q <sub>100</sub> (cfs)
1A	3.67	61	7.4	15.3
1	4.83	62	9.7	20.5
2A	0.13	100	0.6	1.1
2	3.03	29	3.4	9.7
3	0.48	8	0.3	1.7
4	1.63	37	2.6	6.7
5	0.60	2	0.2	1.2
6	0.45	26	0.4	1.3
7	0.26	92	1.1	2.1
8	0.17	100	0.8	1.4

#### DESIGN POINT SUMMARY

DESIGN POINT	UPSTREAM BASIN	Σ Q <sub>5</sub> (cfs)	Σ Q <sub>100</sub> (cfs)
1A	2A	0.6	1.1
1	2	9.7	20.5
1.1	DP1A & DP1	8.1	14.2
2	3	3.4	9.7
3	4	0.3	1.7
4	5	2.6	6.7
4.1	DP1.1 & DP4	10.4	19.8
5	2	8.4	17.8
5.1	DP4.1 & DP5	18.0	32.7
6	6	0.2	1.2
7	7	0.4	1.3
