# Waterview East Commercial Traffic Impact and Access Analysis PUDSP-22-009 

(LSD \#S214970)
July 11, 2023

## Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

## Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

RE: Waterview East Commercial<br>Traffic Impact and Access Analysis<br>El Paso County, CO<br>PUDSP-22-009<br>LSC \#S214970

Dear Mr. Herber,

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact and access analysis for proposed Waterview East Commercial development. As shown in Figure 1, the site is located southeast of the intersection of Powers Boulevard and Bradley Road in El Paso County, Colorado.

## REPORT CONTENTS

This report has been prepared to address the project's traffic impact at the proposed access points and adjacent intersections.

This report contains the following:

- The existing street and traffic conditions in the site's vicinity including the street widths, lane geometries, traffic controls, and existing traffic counts at key area intersections;
- The projected future background traffic volumes, which include estimates of traffic from other area development projects and increases in through traffic on the adjacent arterial streets;
- The estimated average weekday and peak-hour trip generation;
- The estimated directional distribution of site-generated trips and the projected site-generated traffic volumes;
- Estimates of the resulting total traffic volumes on the adjacent streets and intersections; and
- The projected levels of service at the site access point and adjacent intersections.

## PREVIOUS TRAFFIC REPORTS COMPLETED IN THE AREA

The site was included as part of the Springs at Waterview East Preliminary Traffic Impact Analysis dated August 24, 2018.

Appendix Table 1: Area Traffic Impact Studies includes a list of other traffic studies in the area of study completed within the past five years (that LSC is aware of) and is attached for reference. This study accounts for the land use, trip generation, and the roadway network included in these studies. Figure 2 shows the location of the other known developments in the area.

## LAND USE AND ACCESS

The site location is shown in Figure 1. Figure 2 presents a context map showing other area developments. The site plan for Waterview East Commercial is shown in Figure 3.

## Land Use

Figure 3 shows the proposed site plan for the 22-acre Waterview East Commercial development. The 2018 Springs at Waterview East TIS assumed the site would be developed with about 148,000 square feet of general-retail floor space. The site is now planned to be developed with about 174,000 square feet of floor space including a mix of general retail, fast food restaurant, gas station, and mini storage uses.

## Access

Two full-movement access points are proposed to Frontside Drive, an Urban Non-Residential Collector. As shown on Figure 3, the proposed access spacing exceeds 330 feet, which is the allowed spacing for Urban Non-Residential Collectors when intersecting local roadways. The Springs at Waterview East Preliminary Plan showed the southwest access as a modern roundabout. A roundabout intersection is no longer needed. The south end of this commercial site is now planned to be developed for mini-storage, which is a much less intense use (from a traffic standpoint) than typical shopping center/retail/service land uses that were previously planned for this area. Due to the topographic and grading conditions of the main commercial parcel to the north, the mini-storage parcel is separated by a grade barrier. This means these shopping center/retail/service uses and associated entering/exiting traffic turning movements will be separated from the proposed self-storage use. It is our understanding that Ensure TAR developer is Aspen Ridge developer is responsible for the design of Frontside Drive as part of th، aware of removal of the adjacent land. This will include the removal of the roundabout intersection at tr roundabout.

An additional right-in-only access is proposed to Legacy Hill Drive about 325 feet south of Bradley Road. This access will require a deviation to the El Paso County Access Code. An updated deviation was included with the prior submittal. Figure 4 shows the location of the proposed right-in only access.

## Pedestrian and Bicycle Accommodations

The El Paso County 2016 Major Transportation Corridors Plan Update shows Bradley Road as a future bicycle route.

As shown in Figure 2, sidewalks will be provided on Legacy Hill Drive and Frontside Drive adjacent to the site. Frontside Drive will have multi-use paved shoulders which are suitable for bicycles.

## Public Transportation

Per the El Paso County 2016 Major Transportation Corridors Plan Update:
The Pikes Peak Region's principal transit service provider is Mountain Metropolitan Transit, a department of the City of Colorado Springs. Mountain Metro currently provides fixed route bus service focused in Colorado Springs, and the 2040 Regional Transportation Plan - Transit (Appendix E of the 2040 Moving Forward Regional Transportation Plan) calls for the agency to continue with this service focus area. So, there are currently no plans to provide fixed route transit service to the unincorporated parts of EI Paso County.

The 2045 Regional Transportation Plan - Transit Mountain Metropolitan Transit also does not show any future plans to provide transit service to the area. The 2045 plan does suggest consideration of adding service to the nearby Colorado Springs Airport. However, the report also recommends that any airport service not be integrated with other traditional routes.

## Access Sight Distance

Figure 5 shows the sight distance analysis for the proposed access points to Frontside Drive. Based on a design speed of 40 miles per hour (mph) and the criteria contained in Table 2-21 of the Engineering Criteria Manual (ECM), the required intersection sight distance at these intersections is 445 feet. The required stopping sight distance from ECM Table 2-17 is 305 feet. As shown in Figure 5, the intersection sight-distance requirement can be met at both intersections. In order for the stopping sight distance requirement to be met for northbound traffic approaching the southwest access, the area between the curb and the sight line will need to be kept free of other obstructions (such as rear privacy fencing, landscaping, and backyard/patio amenities) that would restrict the drivers' line of sight. Landscaping should be low - about 18 inches or lower in height - to the east of the passenger vehicle lines of sight shown. Please refer to ECM Sections 2.3.6.G.1 and 2.

Figure 6 shows the sight-distance analysis for the proposed right-in-only access to Legacy Hill Drive. Based on a turning speed of 25 mph or less, the required stopping sight distance from Table 2-17 of the $E C M$ is 155 feet. This requirement can be met with the proposed spacing.

## STREET AND TRAFFIC CONDITIONS

## Area Streets

The adjacent streets are shown in Figure 1 and are described below. Copies of the 2016 El Paso County Major Transportation Corridors Plan (MTCP) 2040 Roadway Plan and 2016 MTCP 2060 Corridor Preservation Plan with the site location identified on them have been attached to this report.

- Powers Boulevard (State Highway 21) is classified as a Freeway (FW). Powers Boulevard is one of the region's main north/south corridors. Powers Boulevard has a center median and a posted speed limit of 60 miles per hour ( mph ) north of Crestera Parkway. South of this point, the posted speed limit is 65 mph . Powers Boulevard is ultimately planned to be converted to a Freeway with grade-separated intersections.
- Bradley Road is shown with a Minor Arterial classification east of Grinnell Boulevard on the 20162040 El Paso County Major Transportation Corridors Plan (MTCP). Adjacent to the site, Bradley Road is a four-lane roadway with a $50-\mathrm{mph}$ posted speed limit and has an edge-of-asphalt median, left-turn lanes, and rural paved shoulders. There is a short existing section of raised median approaching Powers Boulevard. The 2040 MTCP includes the construction of Bradley Road between Grinnell Boulevard and Powers Boulevard in the 2040 roadway improvement B-list projects.
- Marksheffel Road extends north from the Link Road/C\&S Road intersection in Fountain, Colorado to north of Woodmen Road. It has recently been upgraded north and south of Bradley Road with a PPRTA project and is shown as a four-lane Expressway on the MTCP. The posted speed limit on Marksheffel Road in the vicinity of Bradley Road is 55 mph .
- Legacy Hill Drive is a Non-Residential Collector Street which extends south from Bradley Road, through the Frontside Drive roundabout intersection and into the Trails at Aspen Ridge development. The street is planned to be extended north of Bradley Road with the Villages at Waterview North development. This intersection of Legacy Hill Drive/Bradley Road is planned to be signalized in the future. This site has frontage along Legacy Hill Drive between Bradley Road and Frontside Drive, and a right-in-only access is proposed.
- Frontside Drive is a planned Non-Residential Collector Street which will extend southwest from the roundabout at Legacy Hill Drive along the site frontage. The street will provide the primary access to this development. The roadway is planned to be constructed along the site frontage and connect to the Trails at Aspen Ridge residential subdivision to the south. Frontside Drive is also planned to extend east from Legacy Hill Drive as an Urban Local street to provide access to residential development on the east side of Legacy Hill Drive.

## Existing Traffic Volumes

Figure 7 shows the traffic volumes at the intersections of Powers Boulevard/Bradley Road, Legacy Hill Drive/Bradley Road, and Marksheffel Road/Bradley Road, based on the attached traffic counts conducted by LSC in March 2021 and February 2023. The 2021 traffic-count data for the intersections of Powers/Bradley and Marksheffel/Bradley have been adjusted based on the more recent counts conducted at Legacy Hill/Bradley in February 2023.

Figure 7 also shows the 2021 Colorado Department of Transportation (CDOT) Average Annual Daily Traffic Volume (AADT) on Powers Boulevard and estimates of the average daily traffic volume on Bradley Road based on the peak-hour traffic counts.

## Existing Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

Table 1: Intersection Levels of Service Delay Ranges

|  | Signalized Intersections | Unsignalized Intersections <br> Level of ServiceAverage Control Delay <br> (seconds per vehicle) |
| :---: | :---: | :---: |
| Average Control Delay (seconds per |  |  |
| vehicle) ${ }^{(1)}$ |  |  |$|$| 10.0 sec or less |  |  |
| :---: | :---: | :---: |
| B | $10.1-20.0 \mathrm{sec}$ | $10.1-15.0 \mathrm{sec}$ |
| C | $20.1-35.0 \mathrm{sec}$ | $15.1-25.0 \mathrm{sec}$ |
| D | $35.1-55.0 \mathrm{sec}$ | $25.1-35.0 \mathrm{sec}$ |
| E | $55.1-80.0 \mathrm{sec}$ | $35.1-50.0 \mathrm{sec}$ |
| F | 80.1 sec or more | 50.1 sec or more |

(1) For unsignalized intersections if $\mathrm{V} / \mathrm{C}$ ratio is greater than 1.0 the level of service is LOS F regardless of the projected average control delay per vehicle.

The intersections of Powers/Bradley and Marksheffel/Bradley have been analyzed using Synchro. Figure 7 shows the level of service analysis results. The intersection of Legacy Hill Drive/Bradley Road has been analyzed based on the unsignalized method of analysis from the Highway Capacity Manual, 6th Edition by the Transportation Research Board.

All movements at the signalized intersections of Powers/Bradley and Marksheffel/Bradley are currently operating at LOS D or better during the peak hours.

The northbound left-turn movement at the stop-sign-controlled intersection of Legacy Hill/Bradley is currently operating at LOS D during the morning peak hours and LOS E during the afternoon peak hour.

## BACKGROUND TRAFFIC

Background traffic is the traffic estimated to be on the adjacent roadways and at adjacent intersections without the proposed development's trip generation of site-generated traffic volumes. Background traffic includes the through traffic and the traffic generated by nearby developments but assumes zero traffic generated by the site.

Figure 8 shows the projected short-term (Year 2026) background traffic volumes. These traffic volumes are based on the existing traffic volumes shown in Figure 7, assuming a growth rate of 1 percent per year. The short-term background traffic volumes also include additional traffic projected to be generated by development of The Trails at Aspen Ridge Filing Nos. 1 and 2 taken from the Trails at Aspen Ridge Filing No. 2 Traffic Impact and Access Analysis by Matrix dated May 7, 2021

Figure 9 shows the projected 2043 background traffic volumes. The 2043 background traffic volumes were based on recent traffic studies completed by LSC in the vicinity of the site. These volumes assume buildout of The Trails at Aspen Ridge Filing No. 1, the Trails at Aspen Ridge PUD, Villages at Waterview North located north of Bradley Road, the Waterview North RM-12 rezone located on the southeast corner of Bradley/Legacy Hill (P-21), and Bradley Heights. The 2043 background traffic volumes do not include any traffic projected to be generated by Waterview East Commercial. The long-term background volumes assume Bradley Road has been constructed between Goldfield Drive and Powers Boulevard.

## TRIP GENERATION

The site-generated vehicle trips were estimated using the nationally-published trip-generation rates from Trip Generation, 11th Edition, 2021 by the Institute of Transportation Engineers (ITE). Table 2 shows the average weekday and peak-hour trip-generation estimates. Table 2 also shows a comparison to the trip-generation estimate assumed in the Waterview North Sketch Plan Master TIS.

The total number of external vehicle trips generated by the land uses has been reduced to account for the internal vehicle trips made within the site between land uses, without use of the external streets surrounding the site. The percentage of internal trips was estimated based on the NCHRP 684 Internal Trip Capture Estimation Tool. As shown on the attached output from the estimation tool based on the NCHRP 684 procedure, the percentage of internal trips is $13 \%$. To be conservative LSC has assumed an internal trip reduction of $10 \%$

The total number of vehicle trips generated has also been reduced to account for the "pass-by" phenomena. A pass-by trip is made by a motorist who would already be on the adjacent roadways regardless of the proposed development, but who stops in at the site while passing by. The motorist would then continue on his or her way to a final destination in the original direction. The pass-by percentages shown in Table 2 are from the Trip Generation Handbook - An ITE Proposed Recommended Practice, 3rd Edition, 2017 by ITE. When considering the ITE definitions of "pass-by" vs. "diverted" trips, pass-by trips from Bradley Road are technically considered "diverted" trips. However, this analysis treats the Legacy Hill Drive connection to Bradley Road as "the access" and treats diverted trips from Bradley Road as pass-by trips. This analysis assumes all pass-by trips will come from traffic on Bradley Road. This is likely conservative, as there will be some component of pass-by traffic turning in and out of the site from Legacy Hill Drive.

As there are limited existing mass-transit options in the vicinity of the site, no reductions were assumed to account for multimodal travel.

At buildout, Waterview East Commercial is projected to generate about 6,695 new external vehicle trips on the average weekday, with about half entering and half exiting the site. This is about 1,954 more trips than were assumed for the same area in the recent traffic studies completed by LSC in the area, including studies for the Trails at Aspen Ridge and Waterview North. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 425 vehicles would enter and 375 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:15 and 6:15 p.m., about 500 vehicles would enter and 514 vehicles would exit the site.

## TRIP DISTRIBUTION AND ASSIGNMENT

The directional distribution of the site-generated traffic volumes on the adjacent roadway system is one of the most important factors in determining the traffic impacts of the site. Figure 10a shows the short-term and long-term directional distributions of new, external traffic projected to be generated site. Figure 10b shows the directional distribution at the site-access points to Frontside Drive and Legacy Hill Drive by trip type.

The short-term directional-distribution estimates were based on the existing area roadway system and the traffic counts. The long-term directional-distribution estimates were based on the anticipated regional development and future roadway networks including the construction of Bradley Road between Grinnell Street and Powers Boulevard.

This distribution was estimated with a focus on peak-hour trip assignment, as the intersection analysis is based on peak-hour volumes.

- The distribution percentages to/from the east account for:
o Some longer trip lengths by commuters;
o The proximity of this development to Marksheffel Road;
o Anticipated use of Marksheffel Road north as a viable alternative to Powers to/from many destinations east of and within the Powers Boulevard corridor. Powers Boulevard intersections experience congestion during peak hours. Marksheffel has recently been upgraded north and south of Bradley with a PPRTA project, which has increased its attractiveness as a north/south travel route;
- Bradley to/from the east being the route to Schriever Air Force Base and the improved east gate of Peterson Air Force Base; and
o Development occurring in the Marksheffel corridor and, over time, the number of trip destinations continuing to increase.
- The distribution percentages to/from the Bradley Heights connection account for:
o Planned alternative street connections within Bradley Heights to Bradley Road and Marksheffel Road (south);
o Future trip destinations within Bradley Heights;
o The school and some potential future commercial within Lorson Ranch to the southeast;
o The long-term distribution split accounts for a north-south road connection between Bradley Heights and Fontaine Boulevard, as shown on the Banning Lewis Master Plan and the City of Colorado Springs Intermodal Transportation Plan. This includes trips oriented to the south and southeast.
- The percentages to/from the south on Powers account for trips from the south and southwest, paired with destinations primarily in Fountain and Fort Carson, as well as the south connection to Interstate 25.
- The percentages to/from the north on Powers primarily account for trips using Milton Proby Parkway and the Powers Boulevard corridor for travel.

The pass-by trips were assigned separately based on the existing traffic volumes on Bradley Road adjacent to the site shown in Figure 7 and the pass-by trips shown in Table 2. Figure 11 shows the assignment of pass-by trips estimated to be generated by the site.

When the distribution percentages (from Figure 10a and 10b) are applied to the trip-generation estimates (from Table 2), the resulting new-external site-generated traffic volumes can be determined. Figure 12a show the projected short-term new, external site-generated traffic volumes. Figure 12b shows the projected short-term total external site-generated traffic volumes. These volumes are the sum of the pass-by trips from Figure 11 plus the new, external site-generated trips from Figure 12a. Figure 13a shows the projected long-term new, external site-generated traffic volumes. Figure 13b shows the projected long-term total, external site-generated traffic volumes. These volumes are the sum of the pass-by trips from Figure 11 plus the new, external site-generated trips from Figure 12a.

## BUILDOUT TOTAL TRAFFIC

Figure 14 shows the projected short-term total traffic volumes. The short-term total traffic volumes are the sum of the short-term background traffic volumes (from Figure 8) plus the short-term total, external site-generated traffic volumes (from Figure 12b).

Figure 15 shows the projected 2043 total traffic volumes. The 2043 total traffic volumes are the sum of the 2043 background traffic volumes (from Figure 9) plus the long-term total, external site-generated traffic volumes (from Figure 13b).

## SIGNAL WARRANT ANALYSIS

The intersection of Bradley Road/Legacy Hill Drive was analyzed to determine when Four-Hour and/or Eight-Hour Vehicular-Volume Traffic-Signal Warrant thresholds would be reached or exceeded, based on the projected traffic volumes. The satisfaction of warrants does not indicate that a signal must be installed. The decision to require a signal to be installed rests with the City of Colorado Springs

Table 3 shows the results of the analysis. The off-peak traffic volumes were based on traffic counts conducted by LSC in February 2023 and vehicle time of day distribution data for gas station, shopping center, and mini-warehouse land uses published by the Institute of Transportation Engineers.

As shown in Table 3, based on traffic counts conducted in February 2023, none of the hours analyzed currently meet the thresholds for either a Four-Hour or an Eight-Hour Vehicular-Volume Traffic-Signal Warrant. Both of these warrants are projected to be met with either full buildout of Trails at Aspen Ridge Filing Nos. 1 and 2 or once about 14,254 square feet of retail floor space is developed within the currently proposed Waterview East Commercial site. As development of these two sites is anticipated to occur concurrently, signal warrants will likely be met with some combination of the buildout of these two developments. LSC recommends the traffic-signal warrant analysis be updated with each final plat within Waterview East Commercial that is submitted prior to construction of the signal.

## PROJECTED LEVELS OF SERVICE

The key area intersections have been analyzed to determine the projected levels of service for the short-term and 2043 background and short-term and 2043 total traffic volumes. The signalized intersections of Powers/Bradley, Legacy Hill/Bradley, and Marksheffel/Bradley were analyzed using Synchro. The site access points to Frontside Drive and the intersection of Legacy Hill/Frontside were analyzed based on the unsignalized method of analysis from the Highway Capacity Manual, 6th Edition by the Transportation Research Board. Figures 8, 9, 14 and 15 show the results of the level of service analysis. The level of service reports are attached.

## Powers/Bradley

The intersection of Powers/Bradley is currently signalized and is operating at a satisfactory level of service. All movements at this intersection are projected to operate at LOS D or better during the peak hours, based on the short-term total traffic volumes. The short-term analysis assumes the addition of a second southbound left-turn lane. By 2043, it was assumed that the section of Bradley Road between Goldfield Drive and Powers Boulevard would be constructed. Based on the 2043 total traffic volumes shown and the lane geometry shown in Figure 14, the intersection is projected to operate at an overall LOS D during the peak hours. However, some of the minor movements are projected to operate at LOS E during the peak hours. It is common for left-turn and side-street through movements to have projected delays in the LOS E or F range, as signal-coordination timing plans generally give priority to moving through traffic. This often results in higher delay for left-turn and side-street movements and can result in movement/approach delays in the E or F range even though they are projected to have sufficient capacity for the projected traffic volumes. Note: This intersection is planned to be converted to a grade-separated interchange in the long-term future.

## Legacy Hill/Bradley

The intersection of Bradley Road/Legacy Hill Drive is projected to operate at LOS D or better during the peak hours for all movements as a signal-controlled intersection, based on the projected short-term and 2043 total traffic volumes. By 2043, the eastbound left-turn movement is projected to operate at LOS E during the morning peak hour.

## Legacy Hill/Right-in only Access

The access to Legacy Hill is planned to be restricted to right-in only and will operate freely.

## Marksheffel/Bradley

The intersection of Marksheffel/Bradley is currently signalized and is operating at a satisfactory level of service. All movements are projected to continue to operate at an acceptable level of service (LOS D or better), based on the projected short-term total traffic volumes. By 2043, the eastbound left-turn movement is projected to operate at LOS E during the peak hours, even with the addition of dual eastbound left-turn lanes and protected phasing.

## Legacy Hill/Frontside

The intersection of Legacy Hill/Frontside is a one-lane modern roundabout. All approaches are projected to operate at LOS C or better during the peak hours, based on the projected short-term and 2043 total traffic volumes.

## Frontside Access Points

All of the proposed access points to Frontside Drive are projected to operate at an acceptable level of service (LOS B or better for all movements) as stop-sign-controlled intersections.

## QUEUING ANALYSIS

A queuing analysis was performed using Synchro/SimTraffic to determine the storage length needed to accommodate the projected northbound queues on Legacy Hill Drive approaching Bradley Road, based on the 2043 total traffic volumes. The 2043 total morning and afternoon peak-hour traffic volumes were entered into the Synchro model. The simulation was run five times. The queuing reports are attached.

The projected maximum northbound left-turn queue on Legacy Hill Drive approaching Bradley Road is about 302 feet during the morning peak hour and 292 feet in the afternoon peak hour.

## SH 21A (POWERS BOULEVARD)/BRADLEY ROAD INTERSECTION/FUTURE INTERCHANGE

A CDOT access permit will be required as part of this application. As part of that access permit, CDOT has indicated in comments dated April 21, 2023 for a nearby project (prior comments were dated August 3,2020 (for another adjacent project), that in addition to several auxiliary turn-lane improvements (included as recommendations in this report), "a collection of escrow funds shall be required for the developments fair share percentage for future intersection/interchange improvements." It is our understanding that the requirements will be detailed as part of the access permit process.

The following information regarding dedication of ROW for the future SH 21A (Powers Boulevard)/Bradley Road interchange was received from Shane Ferguson, P.E. Region 2 Transportation Director:

Colorado Department of Transportation (CDOT) staff have looked into the issue of proposed future development at State Highway 21 (Powers) and Bradley Road. There are no funds within the current fiscally constrained 10-year plan and CDOT does not have the funds to acquire Right of Way or design the interchange at this time.

Please disregard any previous request by CDOT to reserve or otherwise limit development within the footprint of the proposed future interchange at SH21 and Bradley Road. If and when this interchange is funded in the future, the project will handle the existing or planned development at that time.

If any determination to reserve or limit development for future interchange is made, it needs to be voluntary on the part of the developer.

## DEVIATIONS

A deviation to the El Paso County Engineering Criteria Manual for the proposed right-in-only access to Legacy Hill Drive about 305 feet south of Bradley Road was submitted as part of this application.

## LEGACY HILL/BRADLEY SIGNAL ESCROW

The intersection of Legacy Hill/Bradley has recently been transferred to the City of Colorado Springs. The City will require the applicant to escrow $\$ 200,000$ towards the future signal at the intersection of Legacy Hill/Bradley prior to construction plan approval. LSC recommends that the escrow amount called out by the City for the southeast and southwest corners (one half of the signal cost), should be shared by this development, Aspen Ridge, and the future multi-family development on the SE corner. The cost sharing could be based on peak-hour trips creating the need for a signal at this intersection (generally, traffic on the northbound approach) this cost-sharing agreement should consider any amount already escrowed by the Aspen Ridge Development. Since this intersection was approved as an eligible intersection by the El Paso County Roadway Improvement Fee program, amounts escrowed by county developments on the south side of Bradley should be eligible for credit, based on fee program unit costs for signals once the signal is installed.

## COUNTY ROAD IMPACT FEE PROGRAM

The applicant will be required to participate in the County Road Impact Fee Program. The PID option will be identified with a future Preliminary Plan/Plat submittal.

## ROADWAY IMPROVEMENTS

A list of area roadway system improvements in the vicinity of the site is presented in Table 4. Figure 16 shows the recommended improvements to the northbound right-turn deceleration lane on Powers Boulevard approaching Bradley Road, based on a memorandum from CDOT dated July 2, 2021 regarding Trails at Aspen ridge - Access Submittal Planning Comments. A copy of this memorandum has been attached.

## Frontside Drive

As identified above, Frontside Drive is a planned Non-Residential Collector Street which will extend southwest from the roundabout at Legacy Hill Drive along the site frontage. The street will provide the primary access to this development. The roadway is planned to be constructed along the site frontage and connect to the Trails at Aspen Ridge residential subdivision to the south. This will provide another street connection for the Trails at Aspen Ridge residential subdivision to the south. About 325 feet south of the mini storage access for this project, Frontside Drive will intersect the local street network in Trails at Aspen Ridge Filing No. 3.

It is our understanding that the Trails at Aspen Ridge developer is responsible for the design of Frontside Drive as part of the final plat of the adjacent land. This will include the removal of the roundabout intersection at this location.

Given the significantly reduced traffic volumes southwest of the main access to this development, the horizontal curve with a 200-foot radius, the relatively short distance through the curve to the Moose Meadow Street/Sidewinder Drive intersection (Frontside Drive will form the north leg of this intersection and there will be about 200' between the south end of the horizontal curve to the intersection), LSC suggests consideration of the following as part of the design of Frontside Drive:

- The segment adjacent to the mini-storage parcel south to the Moose Meadow Street/Sidewinder Drive intersection should be considered a "transition segment" approaching the residential neighborhood.
- Posting a $25-\mathrm{mph}$ speed limit sign for southwest-bound traffic just upstream of the horizontal curve near the mini-storage access, potentially with the "NEIGHBORHOOD" supplemental panel above the sign. The reduced regulatory speed would be consistent with the entry to the neighborhood and the 200-foot radius curve near the mini-storage access.
- For added emphasis of the horizontal curve and to supplement the recommended speed limit sign prior to the curve, LSC recommends posting Chevron Alignment signs (MUTCD W1-8) for southwest-bound traffic per MUTCD Section 2C. 09 on the outside of the curve.
- LSC recommends the future subdivision on the east side of Frontside drive be designed such that privacy fences, landscaping, structures, etc. on the inside of the horizontal curve near the mini-storage access on the inside of the curve allow sight distance along Frontside Drive to meet the criteria in ECM section 2.3.3 Horizontal Alignment and section 2.3.6.C Stopping Sight Distance on Horizontal Curve. The $35-\mathrm{mph}$ speed limit sign in the northbound direction should be placed just downstream of this horizontal curve, rather than upstream of it.

> Unresolved Review 2 Comment: The original prelim and the PUDSP for Trails at Aspen Ridge anticipated a roundabout at Frontside Drive.
> This commercial development is revising the plan to omit the roundabout. Provide analysis and discussion of the impact the current layout has in omitting the roundabout. Disscuss traffic patterns/counts and compare to submitted TIS done in the area.
> Provide documentation that this development has contacted the developer for Trails at Aspen Ridge regarding the modification. Final plats associated with TAR show a proposed roundabout and account for that in their TIS.

Please contact me if you have any questions regarding this report.
Respectfully Submitted, LSC TRANSPORTATION CONSULTANTS, INC.

| Trafic Signals |  |  |  |  |
| Traffic Signal Installation - Installation of the traffic signal at Legacy Hill Drive/Bradley Road. | As determined by The City of Colorado Springs - typically this is when traffic signal warrants are met, however traffic signal warrants are guidelines and the actual timing of installation is at the discretion of The City of Colorado Springs. <br> Eight-Hour and Four-Hour Vehicular Volume Traffic Signal Warrants are projected to be met with either full buildout of Trails at Aspen Ridge Filing Nos. 1 and 2 or once about 14,254 square feet of retail floor space is developed within the currently proposed Waterview East Commercial site. As development of these two sites is anticipated to occur concurrently, signal warrants will likely be met with some combination of the buildout of these two developments. LSC recommends the traffic-signal warrant analysis be updated with each final plat within Waterview East Commercial that is submitted prior to construction of the signal. | -. | ... | The City will require the applicant to escrow $\$ 200,000$ towards the future signal at the intersection of Legacy Hill/Bradley prior to construction plan approval. LSC Hill/Bradley prior to construction plan approval. LSC recommends that the escrow amount called out by the City for the southeast and southwest corners (one half the signal cost), should be shared by this development, Aspen Ridge, and the future multi-family development on the SE corner. The cost sharing could be based on peak-hour trips creating the need for a signal at this intersection (generally, traffic on the northbound approach) this cost-sharing agreement should consider any amount already escrowed by the Aspen Ridge Development. Since this intersection was approved as an eligible intersection by the El Paso County Roadway Improvement Fee program, amounts escrowed by county developments on the south side of Bradley should be eligible for credit, based on fee program unit costs for signals once the signal is installed. installed. |
| Auxiliary Turn Lanes |  |  |  |  |
| Powersisiratiley |  |  |  |  |
| Reconstruct the Powers Boulevard median north of Bradley Road to provide dual southbound left-turn lanes. The existing mast arm will need to be lengthened for the second left turn. |  | ... | ... | Applicant and other area developments; also, this could potentially be considered a "regional improvement (potentially eligible for credit within the fee program)." To be evaluated with each final plat if not completed sooner by another development |
| Northbound dual right-turn deceleration and acceleration lane improvements as noted in a memo from CDOT dated July 2, 2021 regarding Trails at Aspen Ridge - Access Submittal Planning Comments ${ }^{(1)}$ | With this development if not completed by other development(s) as part of the CDOT access permit process. | -.. | ... | Applicant and other area developments; also, this could potentially be considered a "regional improvement potentially eligible for credit within the fee program). To be evaluated with each final plat if not completed sooner by another development |
| The CDOT comment letter dated July 2, 2021 regarding the Trails at Aspen Ridge indicates the following requirement: CDOT requests additional right of way dedication for the required improvements and the future interchange from the SE qudrant, the SW quadrant and the NW quadrant of the development | It is our understanding based on information provided by the applicant that this request has been resolved with CDOT and the land dedication will not be required. |  | -. | NA |
| Bradey/Marssheffel |  |  |  |  |
| Potential (if required) fair-share contribution or reconstruction to provide dual eastbound left-turn lanes on Bradley Road approaching Marksheffel Road | The timing of this improvement could be evaluated with each final plat. | ... | ... | Applicant and potentially other area developments; also, this could potentially be considered a "regional improvement (potentially eligible for credit within the fee program) ." |

TRANSPORTATION CONSULTANTS, INC.

# Road Impact Fee Advisory Committee <br> Meeting Minutes 

## Date: April 23, 2019 (1:30 PM - 3:30 PM)

Where: Remote meeting
Members Present: Jeff Mark, Jennifer Irvine, Craig Dossey, Ryan Watson, Randy Case, Steve Hicks, Joan Lucia-Treese, Jerry Novak, Nikki Simmons

Others Present: Victoria Chavez, Lori Seago, Jason Alwine, Tim Buschar, Jeff Hodsdon, Matt Dunston, Duncan Bremer, Brian Long

1. Call to order

Mr. Case called the meeting to order at 1:39 PM.
2. Introductions
3. Fee Advisory Committee Approved the Agenda

The Fee Committee unanimously approved the agenda with the date corrected for the meeting notes.
4. Approval of minutes, January 30 Meeting - Vote

Mr. Dossey moved, and Ms. Irvine seconded the motion to approve the January meeting minutes as amended. The vote was unanimous.
5. Eligible Improvements Requests - Discussion/Vote It was determined that the Furrow Road extension was already included in the fee program as potentially eligible. There may or may not be potentially eligible improvements at the intersection of Furrow and Higby. There may be potentially eligible improvements on Walker Road. However, it is likely that the roundabout as the access to the school is not is not eligible. As listed improvements, there is no role for the committee at this time. The applicants and staff should work together to develop a preliminary credit agreement. After construction and acceptance of the improvements by EPC, the applicant can apply for credits per the process outlined in the Implementation Document.
6. Signal Request for Bradley Road and Legacy Hill Drive - Discussion/Vote

Mr. Alwine described the Trails at Aspen Ridge Filing 2. As part of the filing is built, it is likely that a signal will be needed on Bradley Road and Legacy Hill Drive. There are many acres of vacant land both north and south of Bradley Roads that may develop. Mr. Alwine presented the percent of traffic from nearby developments that will contribute to the need for the signal at this location. Mr. Dossey moved that the signal meets the criteria in the Implementation Document and recommends that the signal be included as an eligible improvement. Ms. Lucia-Treese seconded the motion and it passed unanimously.
7. Public comments on items not on the agenda

There were no public comments.
8. Items for Future Agendas

The committee would like to discuss a format for presentation of improvement requests to the committee, reimbursement requests, bringing credit agreements to the committee as an information item and reevaluating the unit cost prices.
9. Adjourn

Mr. Case closed the meeting.

RE: Trails at Aspen Ridge - Access Permit Submittal Planning Comments

Dear Gilbert and Victoria,

I am in receipt of an access permit application for The Trails at Aspen Ridge formerly Springs East at Waterview and is located to the east of the development of Waterview East Preliminary Plan, but still within the existing boundary of that development. Vehicular access to the development is from the intersection and future interchange at SH 21 /Powers Blvd. and Bradley Rd. and then east approximately 550-feet from the curvature touchdown point to the new signalized full movement intersection of Bradley Rd and Legacy Hill Dr.

This mixed use, multi phased development is on a total of approximately 195.25-acres with proposed 852 -single-family residential lots within six different filings. There are 166.89-acres of residential lots and 28.36 -acres of commercial parcels. The development is located east of SH 21 /Powers Blvd between the intersection with Bradley Rd. and Fontaine Blvd. on the southeast portion of the Waterview East Preliminary Plan area in El Paso County. CDOT staff comments are as follows;

Traffic Operations:
Previous planning comments were never addressed and the roadway improvements listed below are required at the intersection of SH 21 /Power Blvd. and Bradley Rd intersection and future interchange.
a) An additional left turn lane from southbound SH21A/Powers Blvd. to eastbound Bradley Rd. shall be required. This requirement creates a southbound dual left traffic movement. The construction plans will require adjustment to the existing traffic signal, extending the arm to cover the additional southbound left turn lane. The Engineer will need to confirm that the existing traffic signal pole and caisson can support a longer arm. Otherwise, the entire signal pole will need replaced with the access permit.
b) Once the forth leg of the intersection is introduced, additional right and left turn lanes/aux lanes and through lanes eastbound will be required and roadway widening in mainline SH21 may be required.
c) An additional right turn lane from northbound SH21/Powers Blvd. to eastbound Bradley Rd. shall be required. This requirement creates a northbound dual right turn traffic movement.
d) Both northbound right turning traffic lanes from SH21/Powers Blvd onto eastbound Bradley Rd. shall be signalized controlled.
e) Highway widening shall be required to add the additional auxiliary lane along SH21/Powers Blvd. and on Bradley Rd.
f) The northbound right turn lane shall be extended further south to allow for additional queuing for the dual right turn movement onto eastbound Bradley Rd. from SH21a/Powers Blvd.
g) The eastbound to northbound free right turn acceleration lane from Bradley Rd. onto SH21/Powers Blvd. shall be extended to the north to allow for additional merging traffic; refer to CDOT access code for proper acceleration lane length and taper.
h) Additional traffic controlling devices shall be installed while the roadway improvements are being constructed. This may require additional signal heads, longer mast arms, updated traffic controller.
i) CDOT requests additional right of way dedication for the required improvements and the future interchange from the SE quadrant, the SW quadrant and the NW quadrant of the development.

## Hydraulics:

The Master Development Drainage Report for Trails at Aspen Ridge dated September 2020 has been reviewed by a CDOT Hydraulics Engineer. Their comments follow:
a) No impacts to CDOT infrastructure.

## Access:

I have reviewed the submitted access application packet and have the following comments.
a) Section 2.6(3) of the State Highway Access Code, states that if the proposed vehicle volumes increase by 20 percent or more a State Highway Access Permit will be required for the connection of Bradley Road east to SH21A between Developer, El Paso County and CDOT. El Paso County will be the Permittee and the Development will be the Applicant as directed by EPC. An Access Permit has been submitted to CDOT on 04/15/2021 and the Department has deemed the submittal acceptable.
b) There will be no direct access from the north/south traveling roadways section of SH21 to the western boundary of the Trails at Aspen Ridge development. The only access points will be from local roadways off of Bradley Rd. and Fontaine Blvd. onto Legecy Hills Blvd. a proposed signalized intersection.
c) The Bradley Rd. and Legacy Hill Drive intersection may be converted to RI/RO in the future if traffic issues arise or future traffic warrants are met to close this proposed full movement intersection.
d) Escrow funds will be required for a portion of the future $\mathrm{SH} 21 \mathrm{~A} /$ Powers Blvd. and Bradley Rd. interchange based on a pro-rata share determined by the traffic impact study. Please add Excel spreadsheet to view and track the escrow required.
e) Intersection improvements will be required of the development and recorded as part of the Access Permit.
f) Right of Way donations shall be recorded as part of the Access Permitting process in coordination with CDOT Right of Way.

Additionally,
a) On-premise and off-premise signing shall comply with the current Colorado Outdoor Advertising Act, sections 43-1-401 to 421, C.R.S., and all rules and regulations pertaining to outdoor advertising. Please contact Mr. Todd Ausbun at (719) 696-1403 for any questions regarding advertising devices.
b) Any utility work within the state highway right of way will require a utility permit from the CDOT. Information for obtaining a utility permit can also be obtained by contacting Mr. Ausbun.

Please contact me in Pueblo at (719) 546-5732 or (719) 248-0905 with any questions.

## ${ }^{1}$ Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-P

## ${ }^{2}$ Person-Trips

${ }^{3}$ Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator *Indicates computation that has been rounded to the nearest whole number.

[^0]:    ${ }^{1}$ Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A
    ${ }^{2}$ Person-Trips
    ${ }^{3}$ Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator
    *Indicates computation that has been rounded to the nearest whole number.
