1.0 EXECUTIVE SUMMARY

This report has been prepared to document the results of the Traffic Study for the Caliber at Constitution development proposed to be located on the southwest corner of Constitution Avenue and Marksheffel Road intersection in El Paso County, Colorado. For the purposes of this analysis, Caliber at Constitution is anticipated to include approximately 226 multifamily housing residences. It is expected that Caliber at Constitution will be completed in the next couple of years; therefore, analysis was conducted for the 2023 and 2045 horizons.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the El Paso County standards and requirements:

Please provide a description of these roadways, identifying the classification of the roadways per ECM Appendix B.8.

- Constitution Avenue and Akers Drive
- Constitution Avenue and Marksheffel Road

In addition, the proposed full movement access along the future extension of Akers Drive and a right-out access along Marksheffel Road were evaluated.

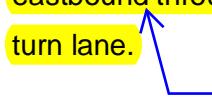

Regional access to the Caliber at Constitution project will be provided by US Highway 24 (US-24), Powers Boulevard (SH-21), and State Highway 94 (SH-94). Primary access will be provided by Constitution Avenue and Marksheffel Road. Direct access will be provided by a full movement access along Akers Drive located approximately 155 feet south of Constitution Avenue (measured edge line to centerline) and a right-out access along Marksheffel Road approximately 400 feet south of Constitution Avenue (measured edge line to center).

Caliber at Constitution is expected to generate approximately 1,230 weekday daily trips, with 76 of these trips occurring during the morning peak hour and 97 of these trips occurring during the afternoon peak hour.

Based on the analysis presented in this report, Kimley-Horn believes Caliber at Constitution will be successfully incorporated into the existing and future roadway network. Analysis of the existing

street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

2023 Recommendations:

- With construction of the Caliber at Constitution development, a south leg is proposed to be constructed at the existing Constitution Avenue and Akers Drive intersection. Based on configuration of the north leg of this intersection providing chevron striping for a future through lane, it is believed that this leg will provide a southbound through lane when the south leg is constructed. Based on El Paso County Engineering Criteria Manual (ECM), a northbound left turn lane will likely be warranted at the Constitution Avenue and Akers Drive intersection; however, a separate northbound right turn lane is not expected to be warranted with buildout future traffic projections. As such, it is recommended that the south leg of the Constitution Avenue and Akers Drive intersection provide a left turn lane and a shared through/right turn lane. It is also recommended that this intersection continue to operate with stop control and a R1-1 “STOP” sign be installed on the northbound approach. To meet El Paso County standards, an eastbound right turn lane should be provided at this intersection. To be consistent with the intersections in the surrounding area, it is recommended that the third eastbound through lane (outside through lane) at this intersection be dropped as a forced right turn lane.

An exclusive right turn lane may be required so as not to impact the through lanes. This will be brought to the attention of the ECM administrator. As this is a rezone, final decisions on these and other proposals will be provided at the subdivision stage.
- With completion of the Caliber at Constitution development, access is proposed along the new south leg of Akers Drive approximately 155 feet south of Constitution Avenue (measured edge line to center) and a right-out only access is proposed along Marksheffel Road approximately 400 feet south of Constitution Avenue (measured edge line to center). It is recommended that a R1-1 “STOP” sign be installed on the exiting approach of both accesses. To further identify the proposed access along Marksheffel Road as a right-out only driveway, it is recommended that a R3-2 “NO LEFT TURN” sign be placed underneath the STOP sign. Further, a R6-1(R) “ONE WAY” sign should also be installed within the raised center median of Marksheffel Road. To restrict right turn entrance as well, a R3-1 “NO RIGHT TURN” sign should be installed facing drivers traveling southbound along Marksheffel Road as well as a R5-1 “DO NOT ENTER” sign to be placed behind the STOP sign. The driveway throat at the proposed right-out only access should be oriented to further restrict entering movements.

Deviations Required

Please indicate that these deviations will be provided at the subdivision stage (i.e. preliminary plan/final plat) for the ECM administrators consideration.

FYI: Please be aware that submittal of deviation requests does not imply that they will be approved by the ECM administrator.

- A deviation will be provided to request full movement access from a future south leg of Akers Drive at Constitution Avenue. The future south leg of Akers Drive along Constitution Avenue will be located approximately 1,050 feet west of Marksheffel Road (measured edge line to center), and approximately 825 feet east of Hannah Ridge Drive. According to the El Paso Engineering Criteria Manual (ECM), spacing of roads accessing an urban principal arterial that will result in a full movement intersection shall be planned at one-half mile. However, as stated in the ECM, one parcel access shall be granted to each existing lot, if it does not create safety or operational problems. The intersection of Constitution Avenue and Akers Drive is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that a south leg of Akers Drive at Constitution Avenue should be granted to allow for one full movement access to the existing lot.
Please include the ECM section (ECM 2.2.5.B)
- A deviation will be provided in support of allowing a right-out only access along Marksheffel Road. The proposed right-out access along Marksheffel Road will be located approximately 400 feet south of Constitution Avenue (measured edge line to center). The proposed right-out only access along Marksheffel Road is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that this access should be granted to only allow right-turn exiting movements.
Please include the ECM section (ECM 2.2.5.D)
- The access along the new south leg of Akers Drive will be approximately 155 feet south of Constitution Avenue (measured edge line to center). According to the El Paso County Engineering Criteria Manual, spacing of intersections along urban local roadways from an arterial roadway should be 330 feet from the right-of-way line of the arterial to the centerline of the access roadway. Therefore, the proposed access along the new south leg of Akers Drive does not meet ECM standards. The access along Akers Drive is expected to meet operational, vehicle queue, and sight distance standards. However, the required northbound left turn lane at the Constitution Avenue and Akers Drive intersection will extend beyond the access to the proposed development. A deviation will need to be provided to request for this proposed access to remain at the proposed location.
- A southbound left turn lane is warranted at Akers Drive Access based on projected 2023 total traffic volumes being 59 northbound left turns during the peak hour and the threshold being

FYI: Staff is not inclined to allow removal of a warranted turn lane although this will be reviewed by the ECM administrator at the subdivision stage when the deviation request is submitted.

25 vehicles per hour. However, there are no traffic volumes conflicting with the turning vehicles and there are not any vehicle delays at this access intersection. Therefore, it is recommended that the left turn lane requirement be waived. Of note, according to Colorado Department of Transportation (CDOT) standards, a left turn lane may be dropped if the opposing traffic is predicted to be below 100 directional hourly volumes. There are not expected to be any opposing traffic volumes at buildout and 49 opposing traffic volumes during the peak hour in the long-term future with the potential buildout of the surrounding parcels. A deviation will be requested to allow for this access to operate without a designated southbound left turn lane.

2045 Recommendations:

- A traffic signal is warranted with 2045 traffic volume projections at the intersection of Constitution Avenue and Akers Drive. It is recommended that El Paso County monitor traffic volumes at this intersection in the future to determine if signalization is the appropriate control. It should be noted the north leg of this intersection is the controlling approach that triggers the need for signal control and project traffic is only expected to utilize the south leg of this intersection.

General Recommendations

- Any on-site or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the El Paso County and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

2.0 INTRODUCTION

Kimley-Horn and Associates, Inc. has prepared this report to document the results of the Traffic Study for the Caliber at Constitution development proposed to be located on the southwest corner of Constitution Avenue and Marksheffel Road intersection in El Paso County, Colorado. A vicinity map illustrating the Caliber at Constitution development is shown in **Figure 1**. For the purposes of this analysis, the project is anticipated to include approximately 226 multifamily housing units. A conceptual land use plan is attached in **Appendix G**. It is expected that Caliber at Constitution will be completed in the next two years; therefore, analysis was conducted for the 2023 and 2045 horizons.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study in accordance with the El Paso County standards and requirements:

- Constitution Avenue and Akers Drive
- Constitution Avenue and Marksheffel Road

In addition, the proposed full movement access along the future extension of Akers Drive and a right-out access along Marksheffel Road were evaluated.

Regional access to the Caliber at Constitution project will be provided by US Highway 24 (US-24), Powers Boulevard (SH-21), and State Highway 94 (SH-94). Primary access will be provided by Constitution Avenue and Marksheffel Road. Direct access will be provided by a full movement access along Akers Drive located approximately 155 feet south of Constitution Avenue (measured edge line to centerline) and a right-out access along Marksheffel Road approximately 400 feet south of Constitution Avenue (measured edge line to center).

VICINITY MAP

FIGURE 1

3.0 EXISTING AND FUTURE CONDITIONS

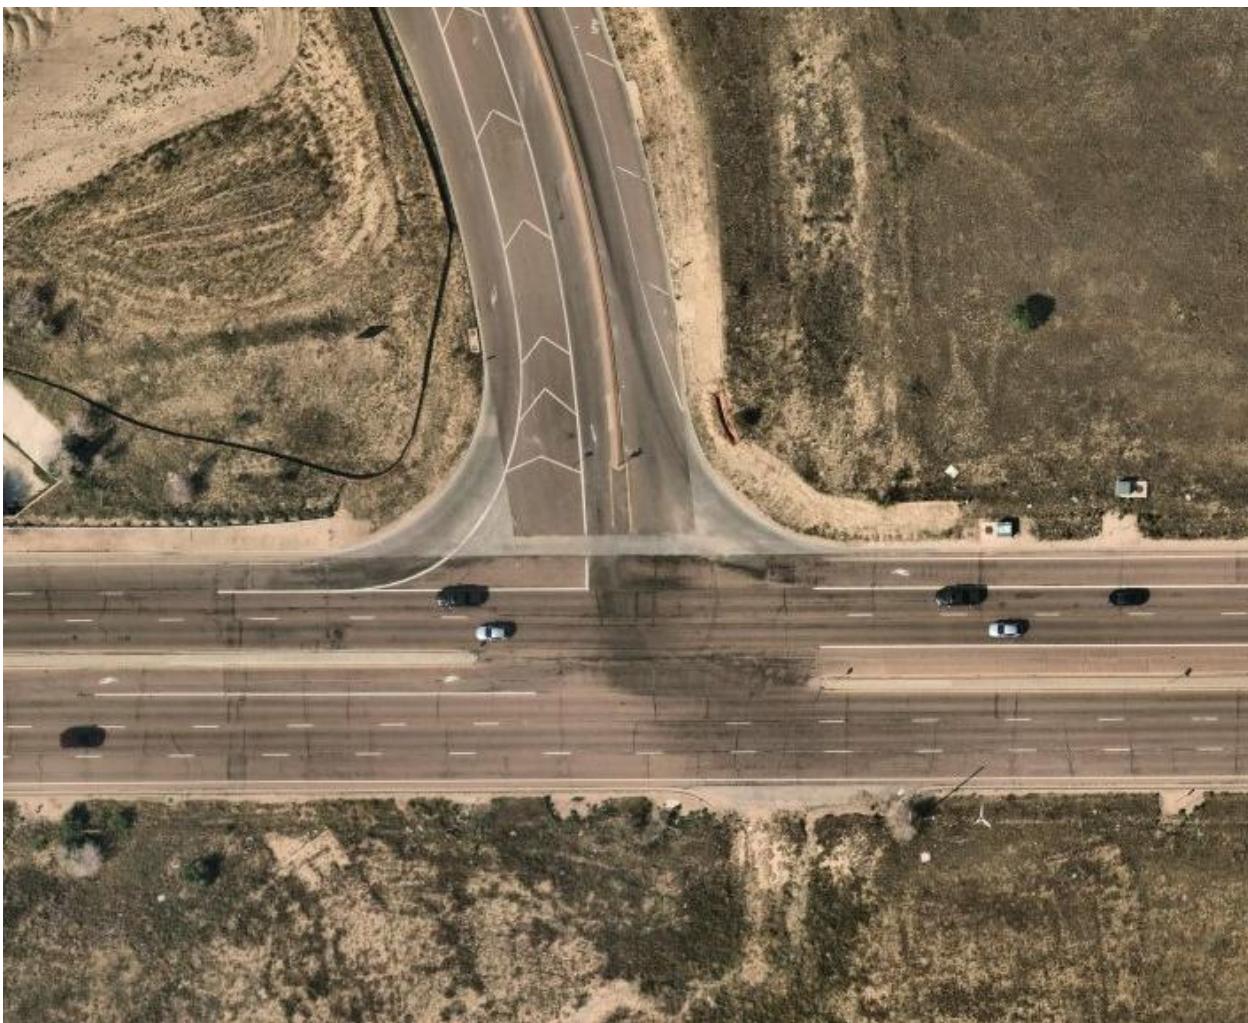

3.1 Existing Study Area

The existing site is comprised of vacant land. Industrial uses and some residential uses are located north and south of the site. A retail center and residential uses are located to the east while residential developments are located to the west of the project. The extended area consists primarily of single-family residences with undeveloped land to the east.

3.2 Existing Roadway Network

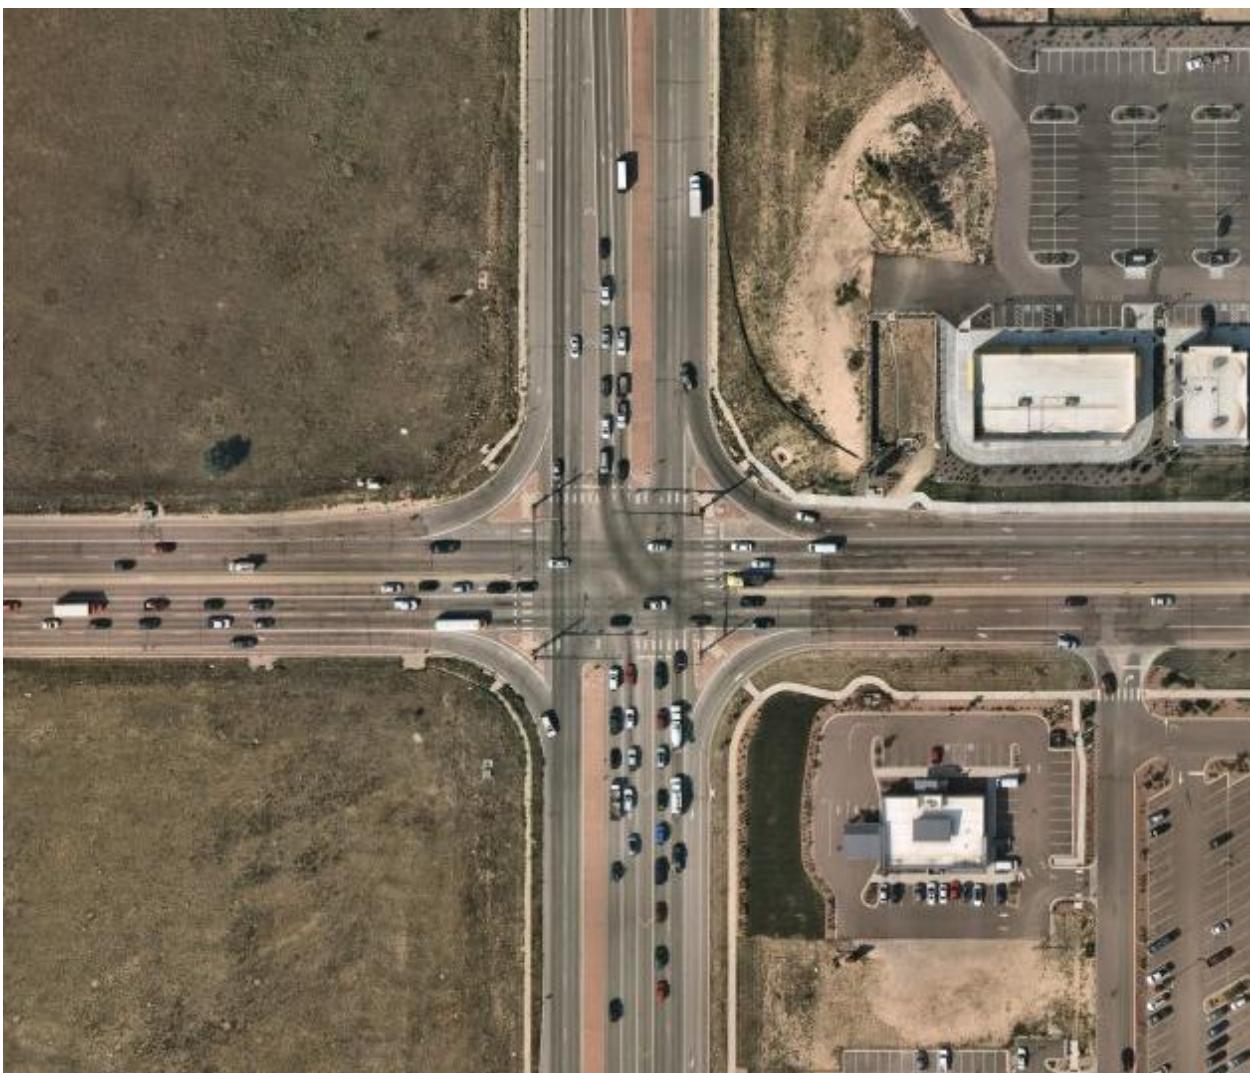

Constitution Avenue extends eastbound and westbound with two through lanes in each direction with a posted speed limit of 50 miles per hour. Marksheffel Road extends in the north-south direction with two through lanes in each direction and has a posted speed limit of 50 miles per hour.

The unsignalized T-intersection of Constitution Avenue and Akers Drive (#1) operates with stop control on the southbound approach. The eastbound approach of this intersection consists of a left turn lane and three through lanes while the westbound approach provides a left turn lane, two through lanes, and a right turn lane. The southbound approach includes a left turn lane and a channelized right turn lane operating with free movements. An aerial photo of the existing intersection configuration is below (north is up - typical).

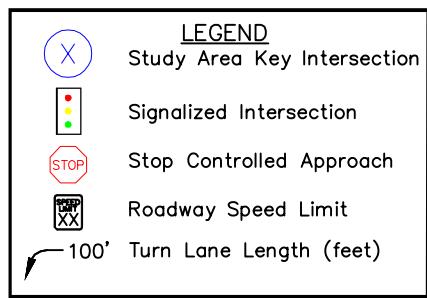

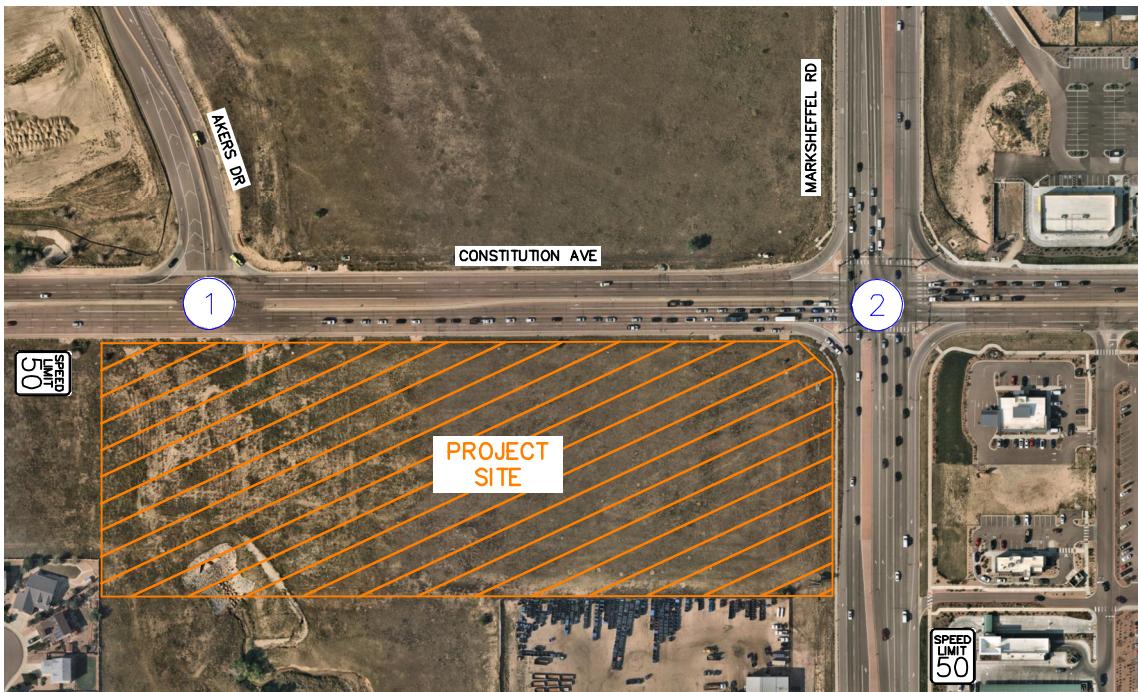

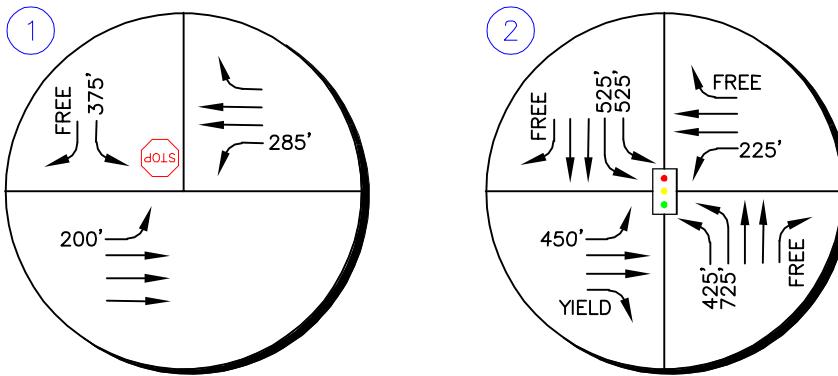

Constitution Avenue and Akers Drive (#1)

The signalized intersection of Constitution Avenue and Marksheffel Road (#2) operates with protected left turn phasing on the northbound and southbound approaches and protective-permissive left turn phasing on the eastbound and westbound approaches. The eastbound and westbound approaches of this intersection consist of a left turn lane, two through lanes, and a right turn lane. The eastbound right turn lane operates with yield control while the westbound right turn lane operates as a free movement. The northbound and southbound approaches consist of dual left turn lanes, two through lanes, and a free right turn lane. An aerial photo of the existing intersection configuration is below.

Constitution Avenue and Marksheffel Road (#2)

The intersection lane configuration and control for the study area intersections are shown in **Figure 2**.

CALIBER AT CONSTITUTION
EL PASO COUNTY, COLORADO
EXISTING GEOMETRY AND CONTROL

FIGURE 2

This appears low. Please use the El Paso County MTCP to calculate the growth rate. Per the recently approved Urban collection subdivision traffic study (<https://epcdevplanreview.com/Public/ProjectDetails/166845>) immediately to the west of this site, a 1.3 growth factor was identified from the MTCP and 1.5 growth factor was used to be conservative.

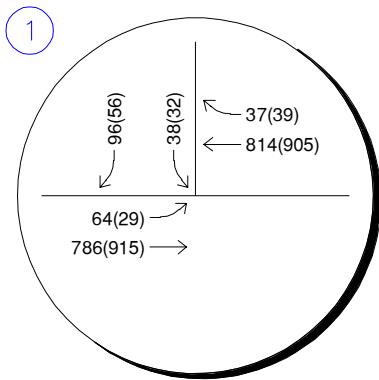

3.3 Existing Traffic Count

Existing turning movement counts were conducted at the study intersections on Tuesday, September 21, 2021 during the morning and afternoon peak hours. The counts were conducted during the morning and afternoon peak hours of adjacent street traffic in 15-minute intervals from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on this count date. The existing intersection traffic volumes are shown in **Figure 3** with count sheets provided in **Appendix A**.

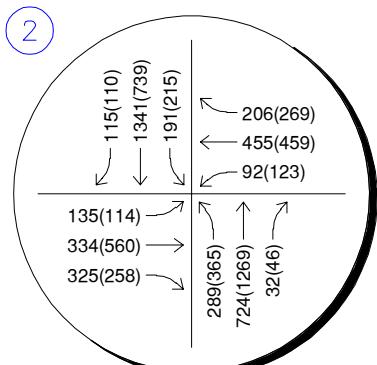

3.4 Unspecified Development Traffic Growth

According to traffic projections from the Pikes Peak Area Council of Governments (PPACOG) traffic model, the area surrounding the site is expected to have an average 25-year growth factor of 1.17. This growth factor equates to an annual growth rate of 0.62 percent. Future traffic volume projections and growth rate calculations are provided in **Appendix B**. Therefore, a 0.62 percent annual growth rate was used to calculate future traffic volumes at the study area key intersections. This annual growth rate was used to estimate short-term 2023 and long-term 2045 traffic volume projections at the key intersections. In addition, traffic volume potential from the undeveloped parcels surrounding the future Akers Drive south of Constitution Avenue was conservatively included as background traffic in 2045. In addition, it is believed that Akers Drive will eventually provide a connection with Talus Ridge Drive in the long-term future; therefore, some traffic was rerouted to the south leg of Akers Drive at Constitution Avenue due to this future connection. The calculated background traffic volumes for 2023 and 2045 are shown in **Figure 4** and **Figure 5**, respectively.

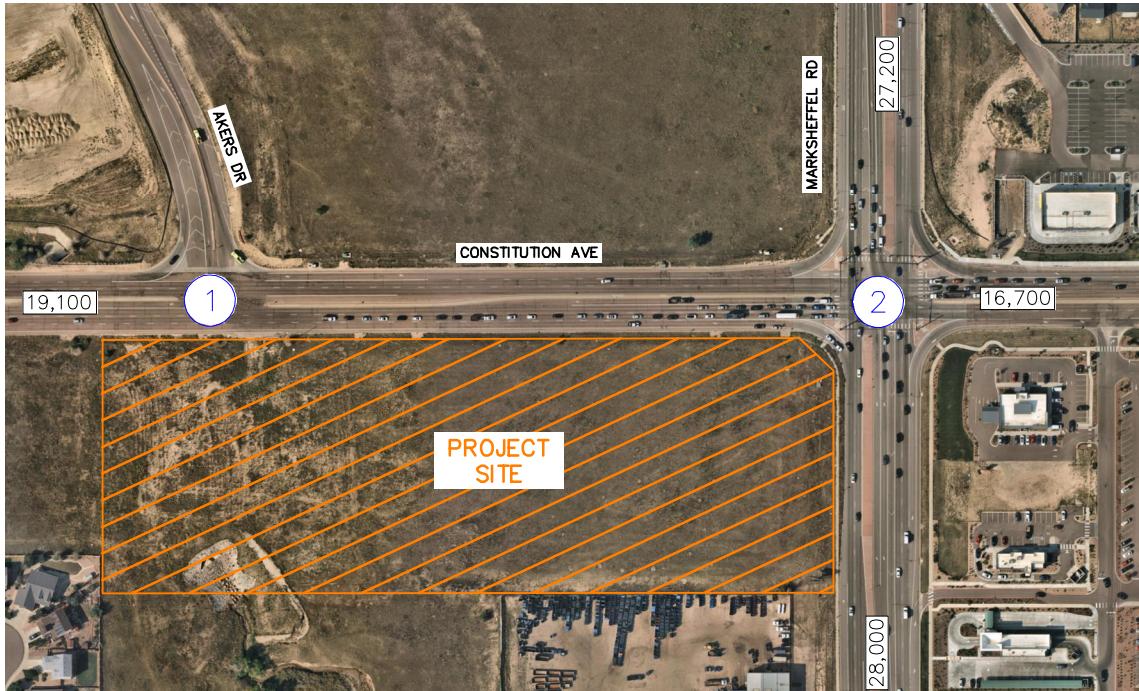

Where/How did these volumes come from?
Growth rate table in appendix only shows 2015 & 2040.

4.0 PROJECT TRAFFIC CHARACTERISTICS

4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*¹ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report fitted curve equations that apply to Mid-Rise Multifamily Housing (ITE Land Use Code 221), for traffic associated with the development.

Caliber at Constitution is expected to generate approximately 1,230 weekday daily trips, with 76 of these trips occurring during the morning peak hour and 97 of these trips occurring during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual, 10th Edition – Volume 1: User's Guide and Handbook*, 2017. **Table 1** summarizes the estimated trip generation for the Caliber at Constitution. The trip generation worksheets are included in **Appendix C**.

Table 1 – Caliber at Constitution Traffic Generation

Land Use and Size	Daily	Weekday Vehicle Trips					
		AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Mid-Rise Multifamily Housing (ITE 221) – 226 Dwelling Units	1,230	20	56	76	59	38	97

¹ Institute of Transportation Engineers, *Trip Generation Manual*, Tenth Edition, Washington DC, 2017.

Please elaborate on
your reasoning for the
distributions shown.

4.2 Trip Distribution

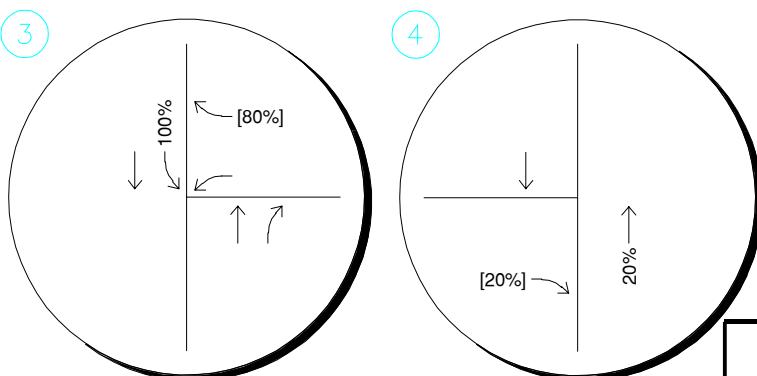

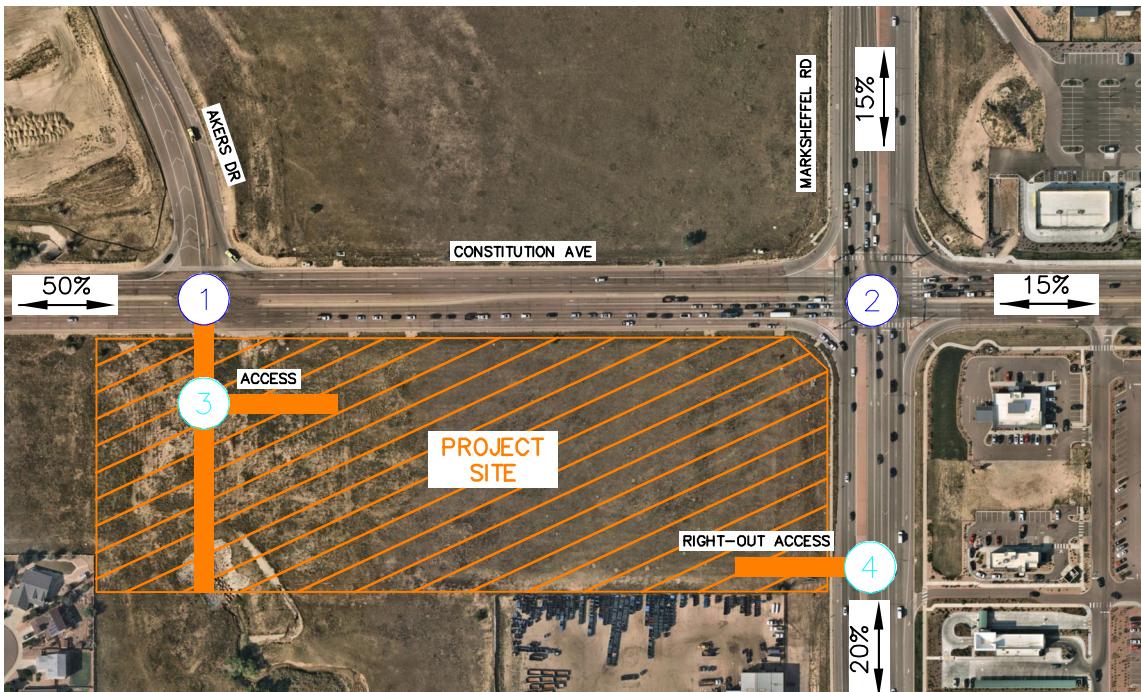

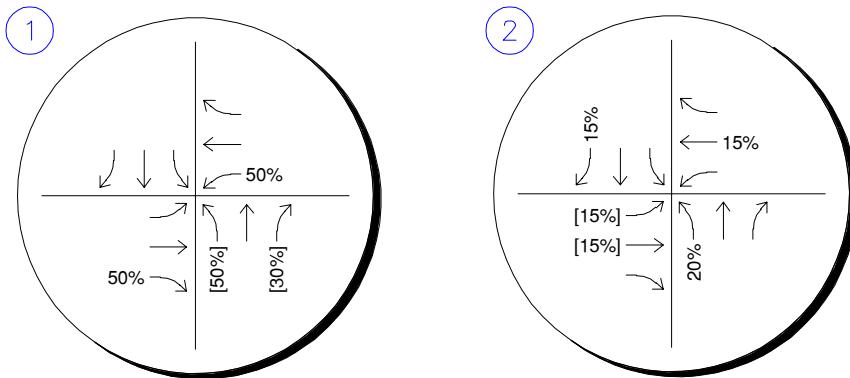

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution for the proposed development is illustrated in **Figure 6**.

4.3 Traffic Assignment

Caliber at Constitution traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Traffic assignment is shown in **Figure 7**.

4.4 Total (Background Plus Project) Traffic

Site traffic volumes were added to the background volumes to represent estimated traffic conditions for the short-term 2023 buildout horizon and long-term 2045 twenty-year planning horizon. These total traffic volumes for the study area are illustrated for the 2023 and 2045 horizon years in **Figures 8** and **9**, respectively.

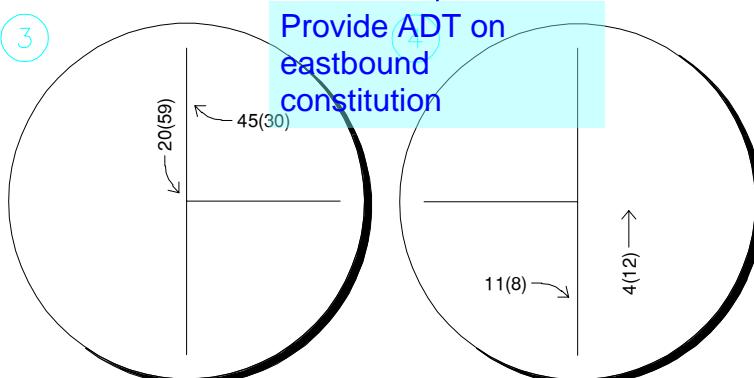

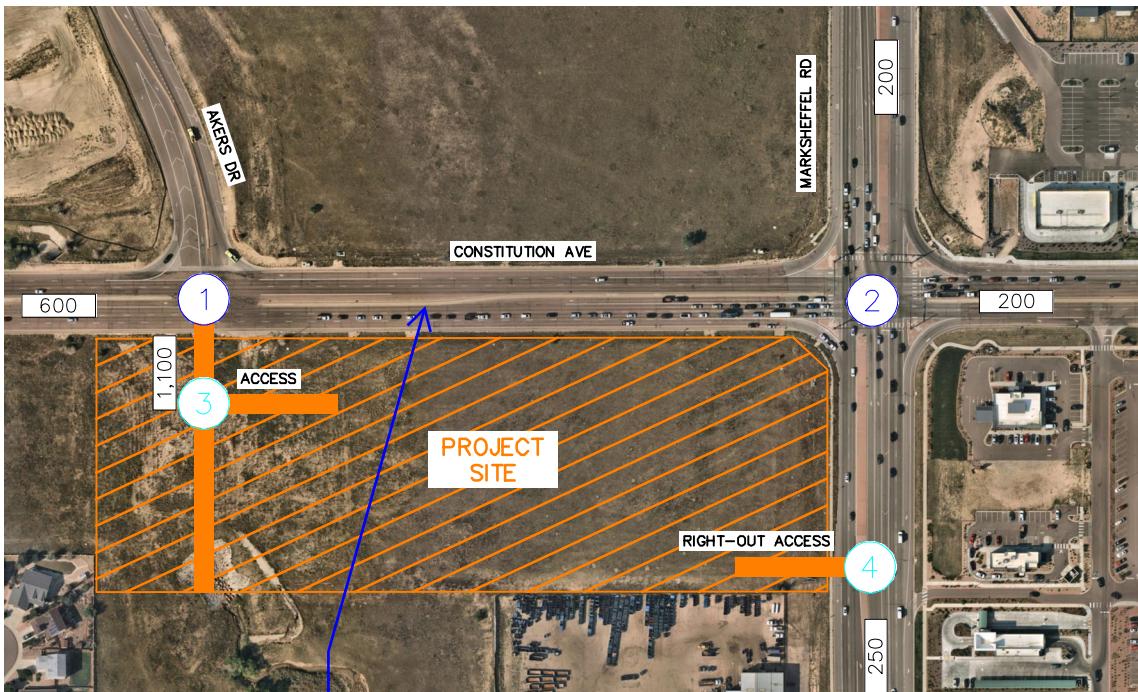

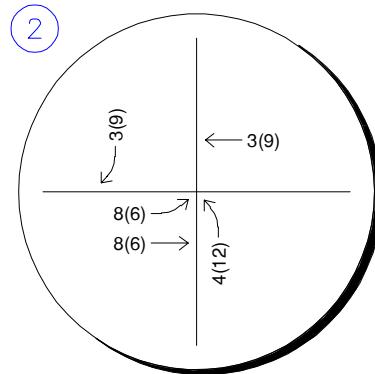

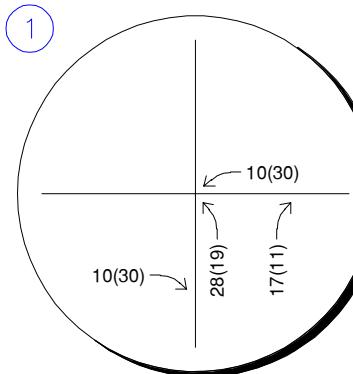

Where did distribution ratios come from?

5.0 TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2023 and 2045 development horizons at the identified key intersections. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual (HCM)*².

5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). Based on El Paso County standards, the threshold for acceptable LOS is not less than LOS D during peak hours. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

Table 2 – Level of Service Definitions

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 20	> 10 and ≤ 15
C	> 20 and ≤ 35	> 15 and ≤ 25
D	> 35 and ≤ 55	> 25 and ≤ 35
E	> 55 and ≤ 80	> 35 and ≤ 50
F	> 80	> 50

Definitions provided from the Highway Capacity Manual, Sixth Edition, Transportation Research Board, 2016.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and four-way stop controlled intersections are defined for each approach and for the overall intersection.

² Transportation Research Board, *Highway Capacity Manual*, Sixth Edition, Washington DC, 2016.

5.2 Key Intersection Operational Analysis

Calculations for the operational level of service at the key intersections for the study area are provided in **Appendix D**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 2**. Existing peak hour factors were utilized in the existing and 2023 horizon analysis years while the HCM urban standard of 0.92 was used for the long-term 2045 horizon analysis. The signalized intersection analysis utilizes the observed cycle lengths with optimized phasing and timing. Based on increased national attention given to establishing appropriate yellow and all-red clearance intervals to improve intersection safety, these have been calculated and are applied for approaches at the signalized intersections. The increase in yellow and all red time sacrifices intersection capacity for improved safety. Synchro traffic analysis software was used to analyze the signalized, and unsignalized key intersections for HCM level of service.

Constitution Avenue & Akers Drive (#1)

The unsignalized T-intersection of Constitution Avenue and Akers Drive (#1) operates with stop control on the southbound approach. The intersection movements operate acceptably at LOS C or better during both peak hours under existing conditions. With construction of the Caliber at Constitution development, a south leg is proposed to be constructed at this intersection to align with Akers Drive to the north. Based on configuration of the north leg of this intersection providing chevron striping for a future through lane, it is believed that this leg will provide a southbound through lane when the south leg is constructed. Based on El Paso County Engineering Criteria Manual (ECM), a northbound left turn lane will likely be warranted at this intersection; however, a separate northbound right turn lane is not expected to be warranted with buildout future traffic projections. As such, it is recommended that the south leg of the Constitution Avenue and Akers Drive intersection provide a left turn lane and a shared through/right turn lane. It is also recommended that this intersection continue to operate with stop control and a R1-1 "STOP" sign be installed on the northbound approach. To meet El Paso County standards, an eastbound right turn lane should be provided at this intersection. To be consistent with the intersections in the surrounding area, it is recommended that the third eastbound through lane (outside through lane) at this intersection be dropped as a forced right turn lane. With these improvements and project traffic, all movements at this intersection are anticipated to continue operating at an acceptable LOS D or better during the peak hours in 2023.

What about the other signal warrants? Do those warrants also indicate that a signal is needed?
Please address.

Since there are currently not any known plans to develop the surrounding parcels on the south side of Constitution Avenue, evaluation scenarios with and without the trip generation potential of the surrounding parcels was provided in 2045 to better understand the impacts if the surrounding land is developed. With future traffic projections in 2045 without the development of the surrounding parcels south of Constitution Avenue, the northbound and southbound left turn movements at this intersection are expected to operate with LOS E during the peak hours in 2045.

With future traffic projections in 2045 including the development of the surrounding parcels south of Constitution Avenue and Akers Drive connecting to Talus Ridge Drive, the southbound left turn movement at this intersection may operate with LOS F during the afternoon peak hour in 2045.

To meet El Paso County standards for acceptable intersection operations, a four-hour vehicular volume signal warrant was completed at this intersection and it was found that a signal is warranted in 2045 (warrant Figure attached in **Appendix E**). It should be noted that the signal warrant was met due to traffic on the north leg of the intersection and not project traffic. With signalization, this intersection is anticipated to operate acceptably in 2045 with project traffic.

Table 3 provides the results of the LOS analysis conducted at this intersection.

Table 3 – Constitution Avenue & Akers Drive LOS Results

= # + Signalized

Constitution Avenue & Marksheffel Road (#2)

The signalized intersection of Constitution Avenue and Marksheffel Road (#2) operates with protected left turn phasing on the northbound and southbound approaches and protective-permissive left turn phasing on the eastbound and westbound approaches. The intersection operates acceptably at LOS D during both peak hours under existing conditions. With project traffic and the existing lane configurations and control, this intersection is anticipated to continue operating at an acceptable level of service during the peak hours throughout the 2045 horizon.

Table 4 provides the results of the LOS analysis conducted at this intersection.

Table 4 – Constitution Avenue & Marksheffel Road LOS Results

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
2021 Existing	41.2	D	43.2	D
2023 Background	41.8	D	43.7	D
2023 Background Plus Project	43.4	D	43.8	D
2045 Background	43.6	D	54.6	D
2045 Background Plus Project	43.9	D	55.0	D

Project Accesses

With completion of the Caliber at Constitution project, a full movement access is proposed along the new south leg of Akers Drive approximately 155 feet south of Constitution Avenue (measured edge line to center) and a right-out only access is proposed along Marksheffel Road approximately 400 feet south of Constitution Avenue (measured edge line to center). It is recommended that a R1-1 “STOP” sign be installed on the exiting approach of both accesses. To further identify the proposed access along Marksheffel Road as a right-out only driveway, it is recommended that a R3-2 “NO LEFT TURN” sign be placed underneath the STOP sign. Further, a R6-1(R) “ONE WAY” sign should also be installed within the raised center median of Marksheffel Road. To restrict right turn entrance as well, a R3-1 “NO RIGHT TURN” sign should be installed facing drivers traveling southbound along Marksheffel Road as well as a R5-1 “DO NOT ENTER” sign to be placed behind the STOP sign. The driveway throat at the proposed right-out only access should be oriented to further restrict entering movements. **Table 5** provides the results of the level of service for these project street accesses. As shown in the table, the project access intersections are anticipated to have all movements operating with acceptable LOS C or better during the peak hours in both the buildout year 2023 and the 2045 long term horizons. It should be noted that the access along Akers Drive will not have any conflicting movements in the short-term; therefore, vehicle delays are not reported at this access intersection.

Table 5 – Project Access Level of Service Results

Intersection	2023 Total Traffic				2045 Total Traffic			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Delay (sec/ veh)	LOS	Delay (sec/ veh)	LOS	Delay (sec/ veh)	LOS	Delay (sec/ veh)	LOS
Akers Dr Access (#3) Westbound Approach Southbound Left	0.0 0.0	A A	0.0 0.0	A A	8.5 7.3	A A	8.7 7.4	A A
Marksheffel Rd Access (#4) Eastbound Approach	16.7	C	11.0	B	22.6	C	11.9	B

Please be sure to update your analysis per comments provided by staff in the meeting on 12/2/2021 such as (but not limited to) analyzing for a roundabout and moving the proposed access further to the south.

Please account for the development of the parcels to the south in your anticipated classification of this roadway. They are currently zoned industrial which would lead to a large amount of truck traffic on Akers Drive. Additionally these may be rezoned to high dense residential which may add a large amount of trips to Akers. The El Paso County ECM was used to determine if left and right turn lanes are warranted along

Constitution Avenue and Marksheffel Road. El Paso County classifies Constitution Avenue and Marksheffel Road as Principal Arterial roadways. According to El Paso County ECM guidelines for Principal Arterials, a left turn lane is required for any access with a projected peak hour left turning volume of 10 vehicles per hour or greater, a right turn lane is required for any access with a projected peak hour right turning volume of 25 vehicles per hour or greater, and a right turn acceleration lane is required for any access with a projected peak hour right turning volume of 50 vehicles per hour or greater when the posted speed on the roadway is greater than 40 miles per hour.

It is anticipated that the south leg of Akers Drive will be classified as local roadway. According to El Paso County ECM guidelines for Minor Arterials and Lower Classifications, a left turn lane is required for any access with a projected peak hour left turning volume of 25 vehicles per hour or greater, a right turn lane is required for any access with a projected peak hour right turning volume of 50 vehicles per hour or greater, and a right turn acceleration lane is generally not required.

fix typo

Constitution Avenue and Akers Drive:

- A westbound left turn lane exists and is warranted at this intersection based on projected 2023 total traffic volumes being 30 westbound left turns during the peak hour and the threshold being 10 vehicles per hour. The existing westbound left turn lane is 28525 feet with a 200-foot taper. Based on the 50-mile per hour speed limit, the deceleration lane length is 235 feet, plus a 200-foot taper. Additionally, 50 feet of storage is required by El Paso County due to the peak hour volume. Therefore, this left turn lane should provide a length of 285 feet plus a 200-foot taper which is the current length of this turn lane.
- A northbound left turn lane is warranted at this intersection based on projected 2023 total traffic volumes being 28 northbound left turns during the peak hour and the threshold being 25 vehicles per hour. Based on an anticipated 30-mile per hour speed limit, the deceleration lane length is 115 feet, plus a 120-foot taper. Additionally, 50 feet of storage is required by El Paso County due to the peak hour volume. Therefore, this left turn lane is recommended to provide a length of 165 feet plus a 120-foot taper. It should be noted that this turn lane will extend beyond the access to the proposed development.

Please revise per
comment above
regarding the
classification of Akers

- An eastbound right turn lane **is** warranted at this intersection based on projected 2023 total traffic volumes being 30 eastbound right turns during the peak hour and the threshold being 25 vehicles per hour. Based on the 50-mile per hour speed limit, the deceleration lane length is 235 feet, plus a 200-foot taper. Additionally, 50 feet of storage is required by El Paso County due to the peak hour volume. Therefore, this right turn lane should provide a length of 285 feet plus a 200-foot taper. However, to be consistent with the intersections in the surrounding area, it is recommended that the third eastbound through lane (outside through lane) at this intersection be dropped as a forced right turn lane.
- A northbound right turn lane **is not** warranted at this intersection based on projected 2023 total traffic volumes being 17 northbound right turns during the peak hour and the threshold being 25 vehicles per hour.
- A northbound right to eastbound acceleration lane **is not** warranted at this intersection based on projected 2023 total traffic volumes being 17 northbound right turns during the peak hour and the threshold being 50 vehicles per hour.

Akers Drive Access:

- A southbound left turn lane **is** warranted at Akers Drive Access based on projected 2023 total traffic volumes being 59 northbound left turns during the peak hour and the threshold being 25 vehicles per hour. However, there are no traffic volumes conflicting with the turning vehicles and there are not any vehicle delays at this access intersection. Therefore, it is recommended that the left turn lane requirement be waived. Of note, according to Colorado Department of Transportation (CDOT) standards, a left turn lane may be dropped if the opposing traffic is predicted to be below 100 directional hourly volumes. There are not expected to be any opposing traffic volumes at buildout and 49 opposing traffic volumes during the peak hour in the long-term future with the potential buildout of the surrounding parcels. A deviation will be requested to allow for this access to operate without a designated southbound left turn lane.

Marksheffel Road Access:

- An eastbound right to southbound acceleration lane is not warranted at this intersection based on projected 2023 total traffic volumes being 11 eastbound right turns during the peak hour and the threshold being 50 vehicles per hour.

5.4 Vehicle Queuing Analysis

A vehicle queuing analysis was conducted for the study area intersections. The queuing analysis was performed using Synchro presenting the results of the 95th percentile queue lengths. Results are shown in the following **Table 6** with calculations provided within the level of service operational sheets of **Appendix D** for unsignalized intersections and **Appendix F** for signalized intersections.

Table 6 – Turn Lane Queuing Analysis Results

Intersection Turn Lane	Existing Turn Lane Length (feet)	2023 Calculated Queue (feet)	2023 Recommended Length (feet)	2045 Calculated Queue (feet)	2045 Recommended Length (feet)
Constitution Ave & Akers Dr (#1)					
Eastbound Left	200'	25'	200'	47'	200'
Eastbound Right	DNE	25'	C (EC)	25'	C (EC)
Westbound Left	285'	25'	285'	25'	285'
Southbound Left	375'	25'	375'	63'	375'
Northbound Left	DNE	25'	165'+120'T (EC)	44'	165'+120'T (EC)
Constitution Ave & Marksheffel Rd (#2)					
Eastbound Left	450'	126'	450'	243'	450'
Westbound Left	225'	133'	225'	174'	225'
Northbound Left	425/725'DL	208'	425/725'DL	243'	425/725'DL
Southbound Left	525' DL	157'	525' DL	189'	525' DL

DNE = Does Not Exist; C = Continuous; EC = El Paso County Standards; DL = Dual Left Turn Lanes; **Blue Text** = Recommendation

As shown in the table above, all vehicle queues are expected to be managed in the available turn lane lengths throughout 2045.

see previous
comments above and
adjust accordingly.

5.5 Access Spacing Requirements and Internal Roadway Classifications

According to El Paso County 2016 Major Transportation Corridors Plan Update, Constitution Avenue and Marksheffel Road are classified as Principal Arterials while the south leg of Akers Drive will have the character of a local roadway. The following identifies the intersection spacing requirements for the access intersections associated with the project:

Constitution Avenue and Akers Drive

The future south leg of Akers Drive along Constitution Avenue will be located approximately 1,050 feet west of Marksheffel Road (measured edge line to center), and approximately 825 feet east of Hannah Ridge Drive. According to the El Paso Engineering Criteria Manual (ECM), spacing of roads accessing an urban principal arterial that will result in a full movement intersection shall be planned at one-half mile and should the one-half mile spacing not be “viable or practical” for providing access to adjacent lane, a deviation may be considered by the ECM administrator. However, as stated in the ECM, one parcel access shall be granted to each existing lot, if it does not create safety or operational problems. The intersection of Constitution Avenue and Akers Drive is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that a south leg of Akers Drive at Constitution Avenue should be granted to allow for one full movement access to the existing lot. A deviation will be provided to request full movement access from a future south leg of Akers Drive at Constitution Avenue.

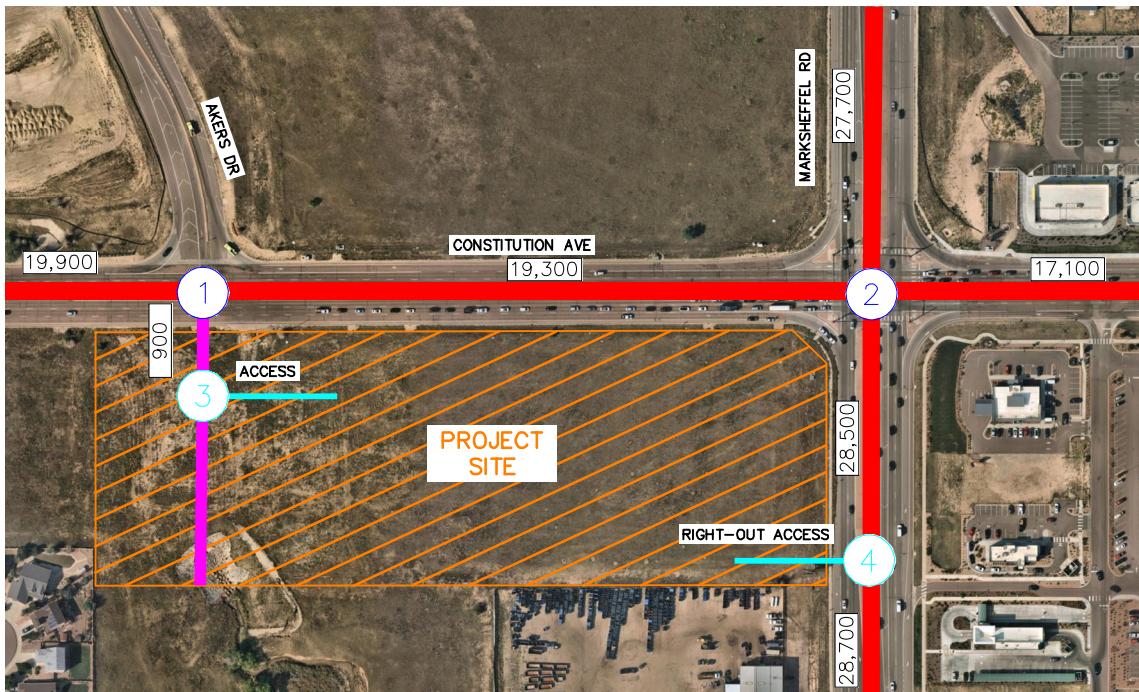

Akers Drive Access

The access along the new south leg of Akers Drive will be approximately 155 feet south of Constitution Avenue (measured edge line to center). According to the El Paso County Engineering Criteria Manual, spacing of intersections along urban local roadways from an arterial roadway should be 330 feet from the right-of-way line of the arterial to the centerline of the access roadway. Therefore, the proposed access along the new south leg of Akers Drive does not meet ECM standards. The access along Akers Drive is expected to meet operational, vehicle queue, and sight distance standards. However, and as stated previously, the required northbound left turn lane at the Constitution Avenue and Akers Drive intersection will extend beyond the access to the proposed development. A deviation will need to be provided to request for this proposed access to remain at the proposed location.

Marksheffel Road Right-Out Only Access

The proposed right-out access along Marksheffel Road will be located approximately 400 feet south of Constitution Avenue (measured edge line to center). The proposed right-out only access along Marksheffel Road is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that this access should be granted to only allow right-turn exiting movements. A deviation will be provided in support of allowing a right-out only access along Marksheffel Road.

The future segment of Akers Drive south of Constitution Avenue and the Project Access meets El Paso County average daily traffic threshold standard of 3,000 vehicles per day for an Urban Local street. Specifically, Akers Drive south of Constitution Avenue is expected to have approximately 1,100 vehicles per day. Constitution Avenue and Marksheffel Road meet the El Paso County average daily threshold standard of 40,000 vehicles per day for an Urban Arterial 4-lane roadway. Attached **Figure 10** illustrates the circulation plan and street classification map for roadways internal and external to the Caliber at Constitution project.

CALIBER AT CONSTITUTION
EL PASO COUNTY, COLORADO
CIRCULATION PLAN

FIGURE 10

5.6 Sight Distance Evaluation

It is recommended that sight triangles be provided at all site access points to give drivers exiting the site a clear view of oncoming traffic. Landscaping and objects within sight triangles must not obstruct drivers' views of the adjacent travel lanes. ECM design intersection sight distances for left turn from stop were evaluated at the accesses along Constitution Avenue, Akers Drive, and Marksheffel Road. ECM does not provide sight distances for right-turning vehicles from stop; therefore, AASHTO standards were used for right-turn from stop distances at the project accesses. The following identifies sight distance requirements for the access intersections associated with Marksheffel Road.

Please refer to ECM table 2-35 for entering sight distance values and revise accordingly. Please be aware that the sight distance in the table is based on posted speed.

With AASHTO standards, the sight distance for a vehicle turning right from stop is 480 feet per hour along Marksheffel Road, the intersection sight distance for a vehicle turning right from stop is 480 feet. Therefore, all obstructions for right turning vehicles from stop should be clear to the left within the triangle created with a vertex point located 13 feet from the edge of the major road traveled way and a line-of-sight distance of 480 feet located in the middle of the nearest southbound through lane along Marksheffel Road for the right-out access. It is believed that the proposed right-out only access along Marksheffel Road is appropriately located to provide the necessary sight distance needed for through volumes along Marksheffel Road. As this access is located approximately 400 feet from Constitution Avenue, sight distances of 480 feet will not be provided for vehicles turning from Constitution Avenue to southbound Marksheffel Road; however, these vehicles will be traveling at speeds much slower than 50 miles per hour. Therefore, it is believed that the proposed access along Marksheffel Road is appropriately located to provide necessary sight distances.

table 2-21

Constitution Avenue and Akers Drive

According to Table 2-22 from ECM and a roadway design speed of 50 miles per hour along Constitution Avenue, the intersection sight distance for a vehicle turning left from stop is 555 feet. With AASHTO standards, the sight distance for a vehicle turning right from stop is 480 feet. Therefore, all obstructions for left turning vehicles from stop should be clear to the right within the triangle created with a vertex point located 13 feet from the edge of the major road traveled way (typical position of the minor road driver's eye when stopped) and a line-of-sight distance of 555 feet located in the middle of the nearest westbound through lane along Constitution Avenue for the Constitution Avenue and Akers Drive intersection. Likewise, all obstructions for right turning

Please update accordingly the location of the access per comments provided in the meeting with staff. Please be aware that ECM table 2-21 is **roadway** intersection sight distance and table 2-35 is sight distance for driveways (access design).

should be 555 ft.
revise accordingly.

~~Vehicles from stop should be clear to the left within the triangle created with a vertex point located 13 feet from the edge of the major road traveled way and a line-of-sight distance of 480 feet located in the middle of the nearest eastbound through lane along Constitution Avenue. Therefore, it is believed that the intersection of Constitution Avenue and Akers Drive is appropriately located to provide necessary sight distances.~~

Akers Drive Access

With El Paso County standards and a roadway design speed of 25 miles per hour along Akers Drive, the intersection sight distance for a vehicle turning left from stop is 280 feet, while with AASHTO standards, the sight distance for a vehicle turning right from stop is 240 feet. Therefore, all obstructions for left turning vehicles from stop should be clear to the right within the triangle created with a vertex point located 13 feet from the edge of the major road traveled way and a line-of-sight distance of 280 feet located in the middle of the southbound through lane along Akers Drive. Likewise, all obstructions for right turning vehicles from stop should be clear to the left within the triangle created with a vertex point located 13 feet from the edge of the major road traveled way and a line-of-sight distance of 240 feet located in the middle of the northbound through lane along Akers Drive. This access is located approximately 155 feet from Constitution Avenue; therefore, sight distances of 280 feet will not be provided for vehicles turning from Constitution Avenue to southbound Akers Drive. However, vehicles turning from Constitution Avenue will be traveling at speeds much slower than 25 miles per hour. Further, there is not any project traffic expected to perform westbound to southbound left turn movements from the access along Akers Drive. Therefore, it is believed that the proposed access along Akers Drive is appropriately located to provide necessary sight distances.

update as necessary
per previous comments
regarding the
classification of akers

5.7 Bicycle and Pedestrian Access

Sidewalks are provided along both sides of the Marksheffel Road. A sidewalk is provided on the south side of Constitution Avenue east of Marksheffel Road. Adjacent to the site, there are no bicycle lanes along Marksheffel Road or Constitution Avenue. Sidewalks are proposed with the project adjacent to the property frontages along Constitution Avenue and Akers Drive.

5.8 Road Impact Fees

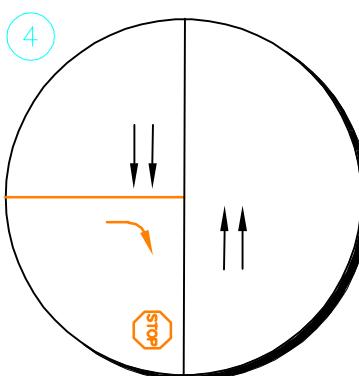

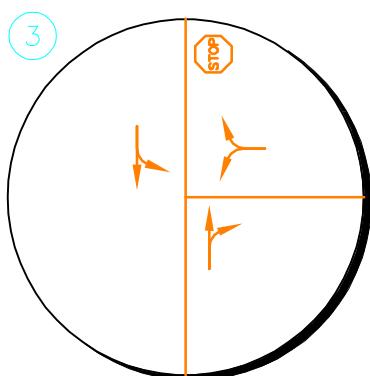

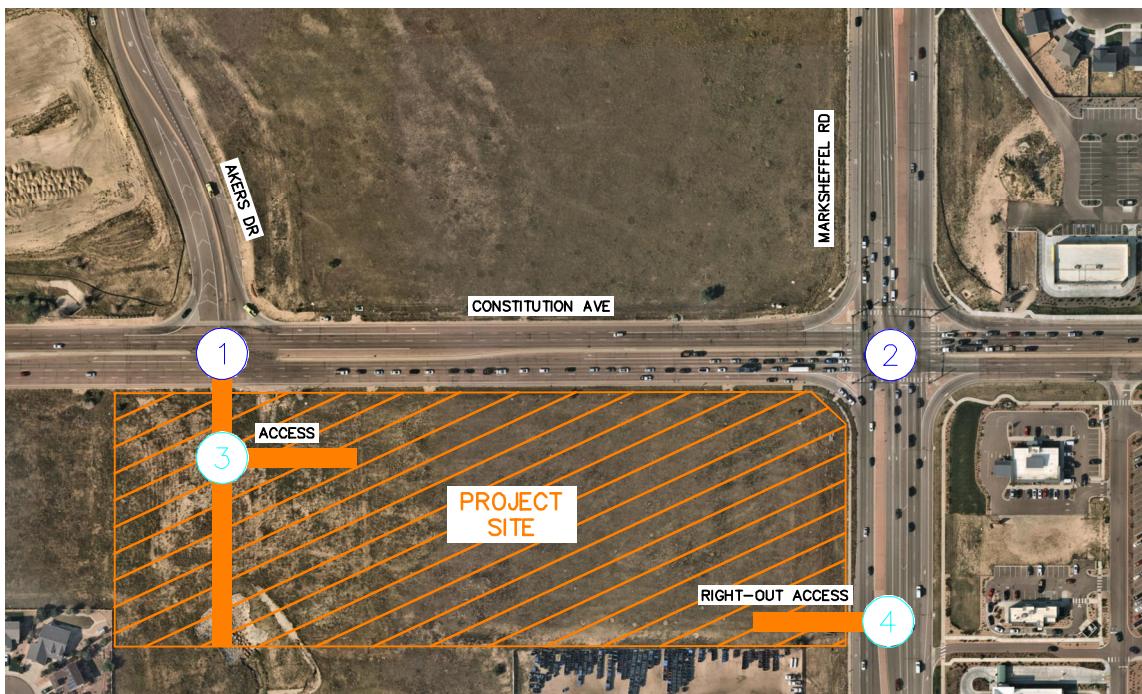

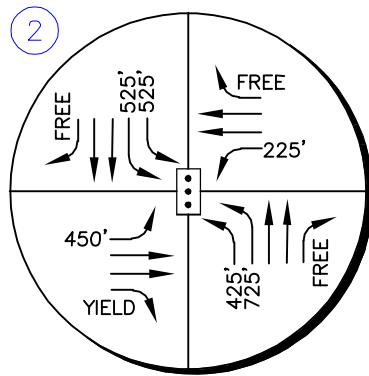

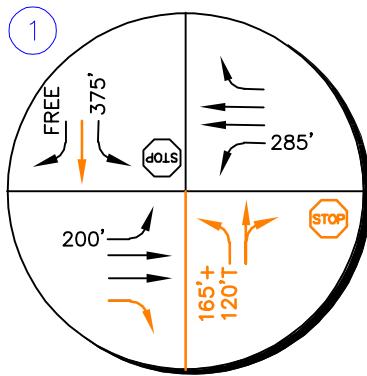

Road impact fees were evaluated based on the El Paso County Road Impact Fee Schedule. Based on these fee schedule guidelines, the fee per multi-family dwelling unit is \$2,407. Therefore, the road impact fee for the proposed 226 multi-family residences is expected to be \$543,982. Road impact fee calculations are shown in **Table 7**. During the final plat process, the project team will determine if the impact fees are paid up front or if the property will be included in one of the available public improvement districts with reduced upfront costs. The project team will determine payment methods with the final plat.

Table 7 – Road Impact Fees

Use	Units	Fee / Unit	Total Fee
Multi-Family Housing	226	\$2,407	\$543,982

5.9 Improvement Summary

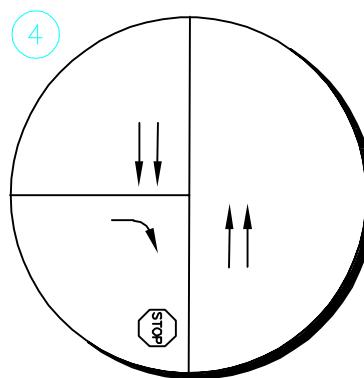

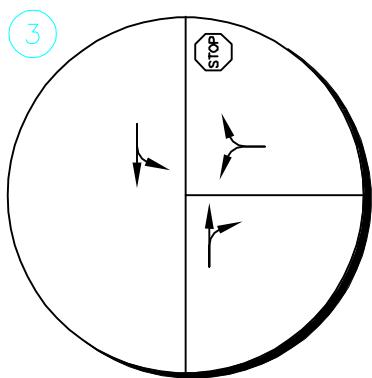

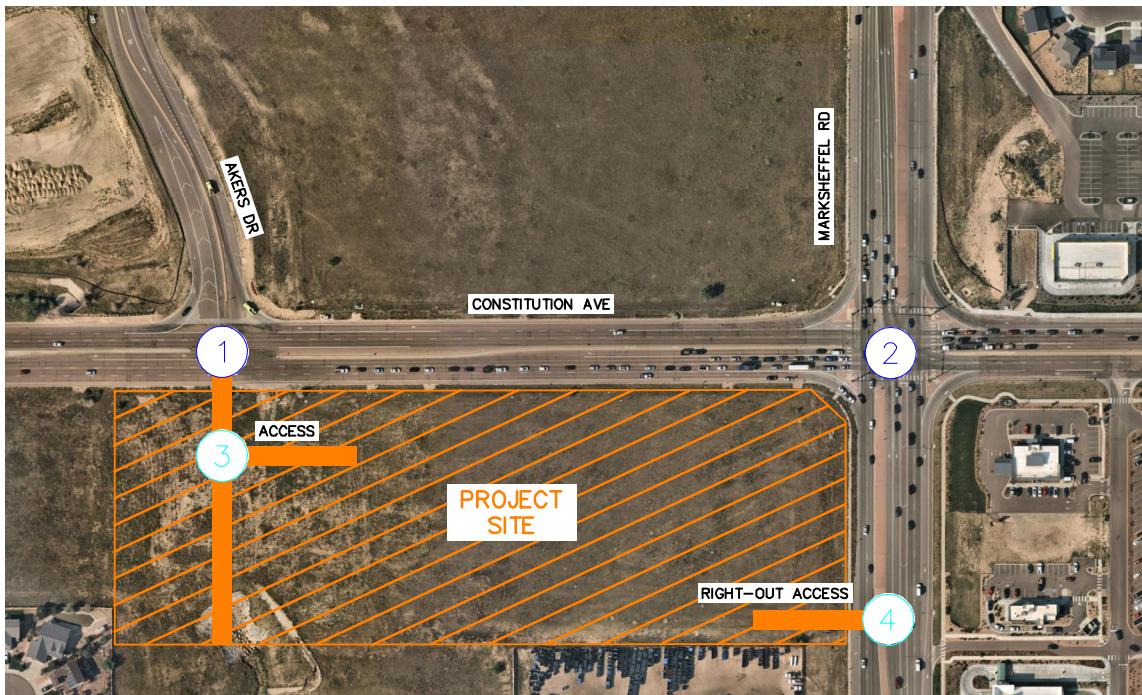

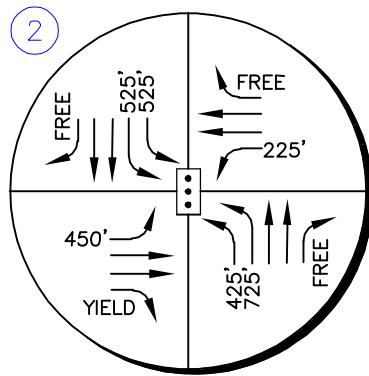

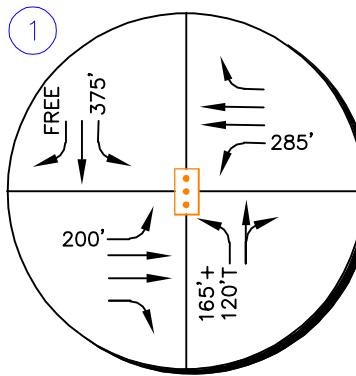

Based on the results of the intersection operational, turn lane evaluations, and vehicle queuing analysis, the key intersection recommended improvements and control are shown in **Figure 11** for 2023 and **Figure 12** for 2045.

CALIBER AT CONSTITUTION
EL PASO COUNTY, COLORADO
2045 RECOMMENDATIONS

FIGURE 12

Please also discuss the ROW that will be provided/required along Constitution. it should match what was done on the site to the west (Urban Collection PCD File No. SF2028).

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analysis presented in this report, Kimley-Horn believes Caliber at Constitution will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following conclusions and recommendations:

2023 Recommendations:

- With construction of the Caliber at Constitution development, a south leg is proposed to be constructed at the existing Constitution Avenue and Akers Drive intersection. Based on configuration of the north leg of this intersection providing chevron striping for a future through lane, it is believed that this leg will provide a southbound through lane when the south leg is constructed. Based on El Paso County Engineering Criteria Manual (ECM), a northbound left turn lane will likely be warranted at the Constitution Avenue and Akers Drive intersection; however, a separate northbound right turn lane is not expected to be warranted with buildout future traffic projections. As such, it is recommended that the south leg of the Constitution Avenue and Akers Drive intersection provide a left turn lane and a shared through/right turn lane. It is also recommended that this intersection continue to operate with stop control and a R1-1 “STOP” sign be installed on the northbound approach. To meet El Paso County standards, an eastbound right turn lane should be provided at this intersection. To be consistent with the intersections in the surrounding area, it is recommended that the third eastbound through lane (outside through lane) at this intersection be dropped as a forced right turn lane.
- With completion of the Caliber at Constitution project, a full movement access is proposed along the new south leg of Akers Drive approximately 155 feet south of Constitution Avenue (measured edge line to center) and a right-out only access is proposed along Marksheffel Road approximately 400 feet south of Constitution Avenue (measured edge line to center). It is recommended that a R1-1 “STOP” sign be installed on the exiting approach of both accesses. To further identify the proposed access along Marksheffel Road as a right-out only driveway, it is recommended that a R3-2 “NO LEFT TURN” sign be placed underneath the STOP sign. Further, a R6-1(R) “ONE WAY” sign should also be installed within the raised center median of Marksheffel Road. To restrict right turn entrance as well, a R3-1 “NO RIGHT

TURN" sign should be installed facing drivers traveling southbound along Marksheffel Road as well as a R5-1 "DO NOT ENTER" sign to be placed behind the STOP sign. The driveway throat at the proposed right-out only access should be oriented to further restrict entering movements.

Deviations Required

- A deviation will be provided to request full movement access from a future south leg of Akers Drive at Constitution Avenue. The future south leg of Akers Drive along Constitution Avenue will be located approximately 1,050 feet west of Marksheffel Road (measured edge line to center), and approximately 825 feet east of Hannah Ridge Drive. According to the El Paso Engineering Criteria Manual (ECM), spacing of roads accessing an urban principal arterial that will result in a full movement intersection shall be planned at one-half mile. However, as stated in the ECM, one parcel access shall be granted to each existing lot, if it does not create safety or operational problems. The intersection of Constitution Avenue and Akers Drive is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that a south leg of Akers Drive at Constitution Avenue should be granted to allow for one full movement access to the existing lot.
- A deviation will be provided in support of allowing a right-out only access along Marksheffel Road. The proposed right-out access along Marksheffel Road will be located approximately 400 feet south of Constitution Avenue (measured edge line to center). The proposed right-out only access along Marksheffel Road is expected to meet operational, vehicle queue, and sight distance standards; therefore, it is believed that this access should be granted to only allow right-turn exiting movements.
- The access along the new south leg of Akers Drive will be approximately 155 feet south of Constitution Avenue (measured edge line to center). According to the El Paso County Engineering Criteria Manual, spacing of intersections along urban local roadways from an arterial roadway should be 330 feet from the right-of-way line of the arterial to the centerline of the access roadway. Therefore, the proposed access along the new south leg of Akers Drive does not meet ECM standards. The access along Akers Drive is expected to meet operational, vehicle queue, and sight distance standards. However, the required northbound left turn lane at the Constitution Avenue and Akers Drive intersection will extend beyond the

access to the proposed development. A deviation will need to be provided to request for this proposed access to remain at the proposed location.

- A southbound left turn lane is warranted at Akers Drive Access based on projected 2023 total traffic volumes being 59 northbound left turns during the peak hour and the threshold being 25 vehicles per hour. However, there are no traffic volumes conflicting with the turning vehicles and there are not any vehicle delays at this access intersection. Therefore, it is recommended that the left turn lane requirement be waived. Of note, according to Colorado Department of Transportation (CDOT) standards, a left turn lane may be dropped if the opposing traffic is predicted to be below 100 directional hourly volumes. There are not expected to be any opposing traffic volumes at buildout and 49 opposing traffic volumes during the peak hour in the long-term future with the potential buildout of the surrounding parcels. A deviation will be requested to allow for this access to operate without a designated southbound left turn lane.

2045 Recommendations:

- A traffic signal is warranted with 2045 traffic volume projections at the intersection of Constitution Avenue and Akers Drive. It is recommended that El Paso County monitor traffic volumes at this intersection in the future to determine if signalization is the appropriate control. It should be noted the north leg of this intersection is the controlling approach that triggers the need for signal control and project traffic is only expected to utilize the south leg of this intersection.

General Recommendations

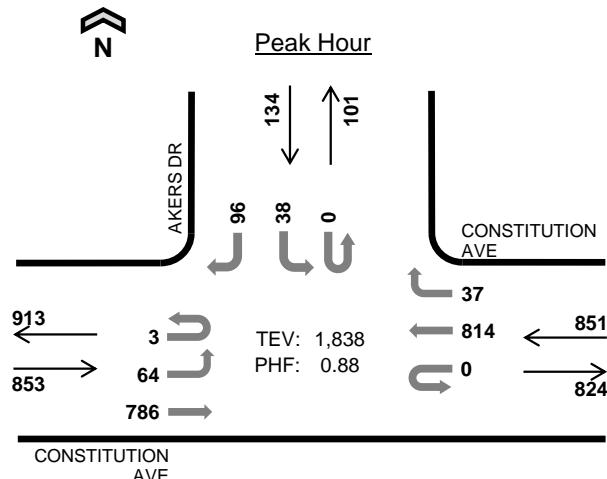

- Any on-site or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the El Paso County and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

Please state whether the MTCP or other corridor study calls for the construction of improvements in the immediate area (ECM B.8).

Note: U-Turn volumes for bikes are included in Left-Turn, if any.

APPENDIX B

Future Traffic Projections

PPACOG Growth Rate: El Paso Constitution

Location	2015 AADT	2040 AADT	Growth Factor	Growth Rate
Constitution Ave E/O Marksheffel Rd	6910	7451	1.08	0.30%
Marksheffel Rd N/O Constitution Ave	10100	10381	1.03	0.11%
Marksheffel Rd S/O Constitution Ave	8840	12336	1.40	1.34%
Total	25850	30168	1.17	0.62%

APPENDIX C

Trip Generation Worksheets

Kimley»Horn

Project Caliber at Constitution
 Subject Trip Generation for Multifamily Housing (Mid-Rise)
 Designed by TES Date September 21, 2021 Job No. 96481004
 Checked by _____ Date _____ Sheet No. 1 of 1

TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 10th Edition, Fitted Curve Equations

Land Use Code - Multifamily Housing (Mid-Rise) (221)

Independent Variable - Dwelling Units (X)

$$X = 226$$

T = Average Vehicle Trip Ends

Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (Series 200 Page 74)

$\ln(T) = 0.98 \ln(X) - 0.98$ $\ln(T) = 0.98 * \ln(226.0) - 0.98$	Directional Distribution: 26% ent. 74% exit. T = 76 Average Vehicle Trip Ends 20 entering 56 exiting 20 + 56 = 76
--	---

Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (Series 200 Page 75)

$\ln(T) = 0.96 \ln(X) - 0.63$ $\ln(T) = 0.96 * \ln(226.0) - 0.63$	Directional Distribution: 61% ent. 39% exit. T = 97 Average Vehicle Trip Ends 59 entering 38 exiting 59 + 38 = 97
--	---

Weekday (Series 200 Page 73)

$(T) = 5.45 * (X) - 1.75$ $(T) = 5.45 * 226 - 1.75$	Directional Distribution: 50% ent. 50% exit. T = 1230 Average Vehicle Trip Ends 615 entering 615 exiting 615 + 615 = 1230
--	---

Peak Hour of Generator, Saturday (Series 200 Page 79)

$(T) = 0.42 * (X) + 6.73$ $(T) = 0.42 * 226 + 6.73$	Directional Distribution: 49% ent. 51% exit. T = 102 Average Vehicle Trip Ends 50 entering 52 exiting 50 + 52 = 102
--	---

Intersection Summary

HCM 6th Ctrl Delay	41.2
HCM 6th LOS	D

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR, EBR, WBR, SBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

- ~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
- # 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Queue shown is maximum after two cycles.

APPENDIX G

Conceptual Site Plan

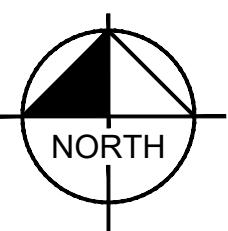

Note: 2 of the ADA stalls will need to be van accessible per LDC Chapter 6.2.5.d.2.c

PARKING TABLE	
ATTACHED GARAGES	30
DETACHED GARAGES	36
REGULAR SURFACE SPACES	269
COMPACT SURFACE SPACES	77
ADA SURFACE STALLS	9
TOTAL	421

FULL STALL = 9'x18"
COMPACT STALLS = 9'x16'

REQUIRED = 458
NEEDED REDUCTION = 37 STALLS (9%)

GRAPHIC SCALE IN FEET
0 20 40 80

Per table 6-5 in LDC compact space dimensions need only be 8' x 15'

EL PASO CONSTITUTION
PARKING EXHIBIT
