Re: Pike Solar Project Commitment Letter

Dear Sophie:

Based on the Pike Solar project, the original commitment letter and conditions still applies to this project as we are still committed to provide service to this project. This updated letter applies to the battery storage containers, hazmat containment supplies and air quality equipment needs. During the original commitment letter there were still questions on what storage system they were going to use and the type of battery system they would be installing at this location.

During the meeting at Hanover station 2 there were discussions about fire and hazmat response plans and response times. We discussed equipment needs to be considered during battery storage container for fires and hazmat spills. The equipment needs would be dictated off the type of building that would be used for the battery storage system, the type of batteries that will be used and if there would be built-in hazmat containment systems. Most of this equipment would be store at their maintenance building. The air monitors would be maintained in the engine out of Station 2. That equipment would be able to monitor the air quality of the air around the building to help set up establish safety zones and establish the hazmat response plans. I have attached the list of items and cost of the items for you to review. This list was designed by the El Paso County Hazmat coordinator. This is unique to our area as this will be first large-scale battery storage system in El Paso County. The cost has increased about 44% since our last meeting where the cost was at \$9,678.00.

If you have any questions, please give me a call.
