RE: Greenways at Sand Creek
Colorado Springs, CO
Traffic Impact Study
LSC #194500

Dear Mr. Campbell,

LSC Transportation Consultants, Inc. has prepared this traffic impact study for the proposed Greenways at Sand Creek residential redevelopment. Currently, approximately 470 single-family homes, 140 townhome dwelling units, and 330 apartment dwelling units are proposed for the entire site, although these totals may change if the site plan is modified.

Located at El Paso County parcel numbers 5331200050 and 5330100020, the site consists of four areas with the following residential land uses:

- North Commons – north of North Carefree Circle, west of Peterson Road, east of Sand Creek
 - 127 single-family homes
- East Commons – east of Sand Creek, west of Pony Tracks Drive, west of Piros Drive
 - 41 single-family homes
- West Commons – south of North Carefree Circle, east of Tutt Boulevard, west of Sand Creek
 - 277 single-family homes, 70 townhomes
- South Commons – Tutt Sports Complex property boundary
 - 70 townhomes, 330 apartments

In addition to retaining the golf clubhouse access points on Tutt Boulevard for future development (not proposed at this time), the plan shows six new access points are proposed for the entire residential development:

- South access to Tutt Boulevard aligning with South Carefree Circle
- Pony Tracks Drive (approximately 780 feet northwest of Piros Drive)
- North Carefree Circle (approximately 500 feet west of Showhorse Court)
- Two new access points on Showhorse Court (one on each side of the street, approximately 290 feet south of Golf Club Drive)
- Golf Club Drive (approximately 270 feet west of Tee Shot Drive)

- Note: The applicant is requesting that the existing north golf clubhouse access point on Tutt Boulevard (located 250 feet north of the main golf clubhouse access point) be retained as a potential option for use with the commercial parcel development.

This report has been prepared for submittal to the City of Colorado Springs.

REPORT CONTENTS

The preparation of this report included the following:

- An inventory of existing roadway and traffic conditions on Tutt Boulevard, North Carefree Circle, South Carefree Circle, Constitution Avenue, and Pony Tracks Drive adjacent to the site, including surface conditions, functional classification, widths, pavement markings, traffic control signs, posted speed limits, intersection and access spacing, roadway and intersection alignments, roadway grades, and auxiliary turn lanes.
- Researching and gathering information of other planned nearby development.
- Weekday peak-hour turning movement traffic counts at the following intersections (referred to as the “study area intersections”):
 - North Carefree Circle/Tutt Boulevard
 - South Carefree Circle/Tutt Boulevard
 - Constitution Avenue/Tutt Boulevard
 - Tutt Boulevard/Holiday Inn site access/Springs Ranch Golf Club site access
 - Pony Tracks Drive/Piros Drive
 - North Carefree Circle>Showhorse Court
 - Note: The intersection of North Carefree Circle/Peterson Road was not included in the study area due to the minimal impacts the project would have on this intersection.
- Estimated average weekday traffic (AWT) volumes for all access points adjacent to the proposed residential development on Tutt Boulevard, North Carefree Circle, and Pony Tracks Drive.
- Projections of 20-year background traffic volumes on Tutt Boulevard, North Carefree Circle, South Carefree Circle, Constitution Avenue, and Pony Tracks Drive adjacent to the site.
- The proposed site land use and access plan.
- Estimates of average weekday and weekday peak-hour trip generation for the proposed Greenways at Sand Creek redevelopment and the estimated directional distribution of site-generated vehicle-trips on the streets and intersections adjacent to the site.

- Projected site-generated and resulting total peak-hour intersection traffic volumes at the site access points on Tutt Boulevard, North Carefree Circle, and Pony Tracks Drive.
- Projected total daily and peak-hour traffic volumes on Tutt Boulevard, North Carefree Circle, South Carefree Circle, Constitution Avenue, and Pony Tracks Drive adjacent to the site.
- Intersection level of service analysis at all access points adjacent to the proposed residential development on Tutt Boulevard, North Carefree Circle, South Carefree Circle, Constitution Avenue, and Pony Tracks Drive.
- Evaluation of existing and long-term projected intersection volumes to determine the short-term requirements for auxiliary right-/left-turn lanes on Tutt Boulevard adjacent to the site based on the criteria in Colorado Springs's *Traffic Criteria Manual*. Also included are potential long-term lane requirements.
- Street classification recommendations.
- A summary of findings and recommendations.

LAND USE AND ACCESS

Figure 1 shows the site location relative to the adjacent and nearby streets. Located at El Paso County parcel numbers 5331200050 and 5330100020, the site consists of four areas with the following residential land uses:

- North Commons – north of North Carefree Circle, west of Peterson Road, east of Sand Creek
 - 127 single-family homes
- East Commons – east of Sand Creek, west of Pony Tracks Drive, west of Piros Drive
 - 41 single-family homes
- West Commons – south of North Carefree Circle, east of Tutt Boulevard, west of Sand Creek
 - 277 single-family homes, 70 townhomes
- South Commons – Tutt Sports Complex property boundary
 - 70 townhomes, 330 apartments

A small commercial site is also planned northeast of Tutt Boulevard and the north access drive. A retail building of about 10,000 square feet is envisioned for this site, which could potentially contain a quick-serve restaurant.

Figure 1 shows the area circulation and access points to the public streets and Figure 2 contains the proposed site plan showing the individual residential units, on-site circulation, and the development entry points.

Six new access points are proposed for the entire residential development:

- South access to Tutt Boulevard aligning with South Carefree Circle
- Pony Tracks Drive (approximately 780 feet northwest of Piros Drive)
- North Carefree Circle (approximately 500 feet west of Showhorse Court)
- Two new access points on Showhorse Court (one on each side of the street, approximately 290 feet south of Golf Club Drive)
- Golf Club Drive (approximately 270 feet west of Tee Shot Drive)
- Note: The applicant is requesting that the existing north golf clubhouse access point on Tutt Boulevard (located 250 feet north of the main golf clubhouse access point) be retained as a potential option for use with the commercial parcel development.

ROAD AND TRAFFIC CONDITIONS

Figure 1 shows the streets adjacent to and in the vicinity of the site. Adjacent streets serving the site are identified below followed by a brief description of each:

Powers Boulevard (State Highway 21) is a six-lane median-divided Expressway (classified as a “Freeway” by CDOT), with planned north/south continuity throughout the Colorado Springs metropolitan area. Powers Boulevard is signalized at its intersections with North Carefree Circle, South Carefree Circle, and Constitution Avenue. The posted speed limit on Powers Boulevard adjacent to the site is 55 mph.

Tutt Boulevard is classified as a Minor Arterial that extends north/south from Constitution Avenue to Cowpoke Road on the east side of Powers Boulevard. Tutt Boulevard is planned to be extended north to Research Parkway. The intersections of Tutt Boulevard/Constitution Avenue and Tutt Boulevard/North Carefree Circle are signalized, while the intersections of Tutt Boulevard/South Carefree Circle and Tutt Boulevard/Springs Ranch golf course access are stop sign-controlled. Between North Carefree Circle and Constitution Avenue, Tutt Boulevard has a painted center two-way left-turn lane (TWLTL) and a posted speed limit of 35 mph. Auxiliary left- and right-turn lanes exist on all approaches at the intersections of Tutt Boulevard/North Carefree Circle and Tutt Boulevard/Constitution Avenue. The northbound approach at the intersection of Tutt Boulevard/South Carefree Circle has an auxiliary left-turn lane, while the eastbound approach on South Carefree Circle has exclusive left- and right-turn auxiliary turn lanes.

North Carefree Circle extends east-to-west from North Academy Boulevard to Marksheffel Road and is classified as a Principal Arterial on the City of Colorado Springs’ *Major Thoroughfare Plan (MTP)*. Adjacent to the site, North Carefree Circle has three through lanes in each direction, a raised center median, and a posted speed limit of 40 miles per hour (mph). The signalized intersections of North Carefree Circle/Powers Boulevard, North Carefree Circle/Tutt Boulevard, and stop sign-controlled intersection of North Carefree Circle/Showhorse Court all consist of auxiliary left- and right-turn lanes.

South Carefree Circle extends generally east-to-west from Village Road South to Tutt Boulevard and is classified as a Minor Arterial on the *MTP*. The northbound approach at Tutt Boulevard/South Carefree Circle has an auxiliary left-turn lane, while the eastbound approach on South Carefree Circle has exclusive left- and right-turn auxiliary turn lanes. Tutt Boulevard/South Carefree Circle is stop sign-controlled T-intersection, and the posted speed limit on South Carefree Circle is 30 mph.

Constitution Avenue extends generally east-to-west from Paseo Road to US Highway 24 and is classified as a Principal Arterial on the *MTP*. Adjacent to the site, Constitution Avenue has three through lanes in each direction and a posted speed limit of 40 miles per hour (mph). The signalized intersection of Constitution Avenue/Tutt Boulevard consists of auxiliary left- and right-turn lanes on all approaches.

Pony Tracks Drive is a two-lane, non-arterial street looping between Ascendant Drive and Bonnie Brae Lane. Adjacent to the proposed north site access point, Pony Tracks Drive is a two-lane street with a posted speed limit of 25 miles per hour (mph) in the vicinity of the site. The street width is 34 feet.

Showhorse Court is a two-lane non-arterial street that extends between Golf Club Drive and North Carefree Circle. The stop sign-controlled, full-movement intersection of North Carefree Circle>Showhorse Court consists of auxiliary left- and right-turn lanes. Showhorse Court has a posted speed limit of 25 mph.

Existing Traffic Volumes

Vehicular turning movement counts were conducted at the following intersections, dates, and times, as shown in Table 1:

Table 1: Vehicular Turning Movement Count Information

Major Street	Minor Street	Day	Date	Start	End
North Carefree	Tutt	Wednesday	May 29, 2019	6:30 a.m.	8:30 a.m.
		Tuesday	June 11, 2019	4:00 p.m.	6:00 p.m.
Tutt	Holiday Inn/ Golf Course	Wednesday	May 22, 2019	6:30 a.m.	8:30 a.m.
		Wednesday	May 22, 2019	4:00 p.m.	6:00 p.m.
North Carefree	South Carefree	Tuesday	May 28, 2018	6:30 a.m.	8:30 a.m.
		Tuesday	July 9, 2019	11:00 a.m.	1:00 p.m.
		Tuesday	July 9, 2019	1:30 a.m.	3:30 p.m.
		Tuesday	May 28, 2019	4:00 p.m.	6:00 p.m.
Constitution	Tutt	Thursday	May 23, 2019	6:30 a.m.	8:30 a.m.
		Thursday	May 23, 2019	4:00 p.m.	6:00 p.m.
North Carefree	Showhorse	Thursday	June 27, 2019	6:30 a.m.	8:30 a.m.
		Wednesday	June 26, 2019	4:00 p.m.	6:00 p.m.
Pony Tracks	Piros	Tuesday	June 25, 2019	6:30 a.m.	8:30 a.m.
		Thursday	June 27, 2019	4:00 p.m.	6:00 p.m.

Figure 3 shows these turning movement volumes, as well as the average weekday traffic volumes (estimated based on factored peak-hour count data) on the study area streets. Raw count data is attached.

TRIP GENERATION

Estimates of the vehicle-trips projected to be generated by the Greenways at Sand Creek redevelopment residential development have been made using the nationally published trip generation rates from *Trip Generation, 10th Edition, 2017* by the Institute of Transportation Engineers (ITE). ITE Land Use Categories “210 – Single-Family Detached Housing,” “220 – Multi-Family Housing (Low-Rise),” and “820 – Shopping Center,” along with corresponding trip generation rates, have been used to develop the trip generation estimates for site buildout. Figure 2 shows the site plan with all dwelling units and retail shopping space within the proposed development.

Table 2 below presents a summary of the estimated site trip generation. A detailed trip generation estimate for the development, including ITE rates for the proposed land uses, is presented in Table 14 (attached).

Table 2: Estimated Site Vehicle-Trip Generation

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	225	464	688
Evening Peak Hour	473	301	773
Daily/24-hour	4,405	4,405	8,809

The proposed Greenways at Sand Creek redevelopment residential development is projected to generate about 8,809 vehicle-trips on the average weekday during a 24-hour period, with approximately half entering and half exiting the site. During the morning peak hour, approximately 225 entering vehicles and 464 exiting vehicles would be generated. Approximately 473 entering and 301 exiting vehicles would be generated by the site during the evening peak hour.

TRIP DISTRIBUTION AND ASSIGNMENT

Trip Directional Distribution

Estimating the directional distribution of site-generated vehicle-trips to the study area roads and intersections is a necessary component in determining the site's traffic impacts. Figure 5 shows the percentages of the site-generated vehicle-trips projected to be oriented to and from the site's major approaches. Estimates have been based on the following factors: the proposed new land use, the area street and road system serving the site, and the site's geographic location relative to unincorporated El Paso County and the City of Colorado Springs.

Site-Generated Traffic

Site-generated traffic volumes at the proposed site access points on Tutt Boulevard, North Carefree Circle, and Pony Tracks Drive have been calculated by applying the directional distribution percentages estimated by LSC (from Figure 5) to the trip generation estimates (from Table 14). Figure 6 shows the projected site-generated traffic volumes for the weekday morning and evening peak hours.

Existing-Plus-Site-Generated Traffic Volumes

Figure 7 shows the sum of the existing traffic volumes (from Figure 3) and site-generated peak-hour traffic volumes (shown in Figure 6). These volumes represent the projected short-term total traffic following site buildout.

Estimated Future 2040 Background Traffic Volumes

Figure 8 shows the projected 20-year background traffic volumes for the year 2040. Background volumes include increases in through traffic and trips generated by other area future development, but do **not** include projected traffic to be generated by the proposed Greenways at Sand Creek development.

Future 2040 Total Traffic Volumes

Figure 9 shows the projected 2040 total traffic volumes, which are the sum of 2040 background traffic volumes (from Figure 8) plus the site-generated traffic volumes (from Figure 6).

LEVEL OF SERVICE ANALYSIS

The following intersections have been analyzed to determine the projected intersection levels of service for short- and long-term traffic scenarios for the morning and evening peak-hour time periods:

- North Carefree Circle/Tutt Boulevard
- South Carefree Circle/Tutt Boulevard
- Constitution Avenue/Tutt Boulevard
- Tutt Boulevard/Holiday Inn site access/Springs Ranch Golf Club site access
- Pony Tracks Drive/Piros Drive
- North Carefree Circle>Showhorse Court

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 3 shows the level of service delay ranges for signalized and unsignalized intersections.

Table 3: Intersection Levels of Service Delay Ranges

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (Seconds per Vehicle)	Average Control Delay (Seconds per Vehicle) ¹
A	≤ 10.0	≤ 10.0
B	10.1 - 20.0	10.1 - 15.0
C	20.1 - 35.0	15.1 - 25.0
D	35.1 - 55.0	25.1 - 35.0
E	55.1 - 80.0	35.1 - 50.0
F	≥ 80.1	≥ 50.1

¹ For unsignalized intersections, if v/c is > 1.00, then LOS is LOS F, regardless of the projected average control delay per vehicle

Detailed Synchro and SimTraffic reports are attached. A summary of LOS during the weekday morning and evening peak hours for the following unsignalized intersections is shown in the following figures:

- Figure 3: 2019 Existing
- Figure 7: 2019 Existing + Site
- Figure 8: 2040 Background
- Figure 9: 2040 Background + Site

Note: all unmentioned individual turning movements at the intersections below currently operate at and are projected to operate at LOS D or better through 2040 during both peak hours, with or without the addition of site-generated traffic. No modifications have been assumed to the existing lane geometry or traffic control at each intersection unless described below.

North Carefree Circle/Tutt Boulevard

Overall, the intersection of North Carefree Circle/Tutt Boulevard would operate at LOS D or better during both peak hours, whether or not site-generated trips are considered. The following turning movements currently operate at and are projected to remain at LOS E or worse through the 20-year horizon, with or without site buildout:

- Westbound left (AM and PM)
- Southbound left (PM peak only)
- Southbound through (AM and PM)
- Northbound through (AM and PM)

Tutt Boulevard/Holiday Inn Site Access/Springs Ranch Golf Club Site Access

Currently, the southeast shared through/left turning movement operates at LOS E during the PM peak hour and is projected to operate at LOS F in the future for the northwest and southeast left-turning movements (if the intersection were to remain stop sign-controlled). However, all individual turning movements at this intersection would operate at LOS D or better through the 20-year horizon if the intersection were to be signalized, with the intersection operating at LOS B overall during both peak hours. Additionally, in order to facilitate safe pedestrian and bicycle crossing of Tutt, the developer proposes the installation of a full traffic signal at this intersection.

South Carefree Circle/Tutt Boulevard

Currently, the intersection of South Carefree Circle/Tutt Boulevard is a T-intersection, but a new westbound approach would be constructed as part of this development. The following lane geometry modifications are recommended upon site buildout:

- Eastbound approach – exclusive left-turn lane and a shared right/through turn lane
- Westbound approach – exclusive left-turn lane and a shared right/through turn lane
- Northbound approach – exclusive left-turn lane, through lane, and exclusive right-turn lane
- Southbound approach – exclusive left-turn lane and a shared right/through turn lane

Unsignalized

All individual turning movements would remain at LOS D or better during both peak hours through the 20-year horizon without the addition of site-generated traffic (as a T-intersection). However, the following turning movements are projected to operate at LOS E or worse upon site buildout (as a full-movement intersection with four approaches):

- Westbound shared right/through (PM peak only)
- Westbound left (PM peak only)
- Eastbound left (PM peak only)

Signalized

All individual turning movements are projected to operate at LOS D or better through 2040 during both peak hours if the intersection of South Carefree Circle/Tutt Boulevard were to be signalized.

Constitution Avenue/Tutt Boulevard

Overall, the intersection of Constitution Avenue/Tutt Boulevard would operate at LOS D or better during both peak hours, whether or not site-generated trips are considered. The following turning movements currently operate at and are projected to remain at LOS E or worse through the 20-year horizon, with or without site buildout:

- Southwest-bound through (PM peak only)
- Southwest-bound left (PM peak only)
- Northeast-bound shared through/right (PM peak only)

Pony Tracks Drive/Piros Drive and Pony Tracks Drive/Site Access

All turning movements/intersection approaches at the intersection of Pony Tracks Drive/Piros Drive and the proposed site access intersection with Pony Tracks Drive are projected to operate at LOS A during both peak periods through the 20-year horizon.

North Carefree Circle>Showhorse Court

The southbound shared left/through turn lane currently operate at LOS E during the PM peak hour and is projected to remain at LOS E or worse through the 2040 horizon year, with or without additional traffic from this development. The northbound single-lane approach currently operates at LOS D during the afternoon peak hour but is projected to operate at LOS E during all

other afternoon peak-hour traffic scenarios through the 2040 horizon year with or without the additional traffic from this development.

Despite these E or worse individual movement level of service on the northbound approach, analysis results show a volume-to-capacity (v/c) ratio to be well below 1.00 for all turning movements/approaches during the short-term buildout traffic scenario. This is not uncommon for minor street approaches on arterial streets to operate at levels of service E or even F during peak periods. It is unlikely that a signal warrant would be met at this intersection.

North Carefree Circle/North Commons Access

All individual turning movements at the proposed North Commons access to North Carefree Circle (right-in/right-out) are projected to operate at LOS C or better during both peak hours through 2040 as a stop sign-controlled intersection.

TRAFFIC SIGNAL WARRANT ANALYSIS – TUTT BOULEVARD/SOUTH CAREFREE CIRCLE

The intersection of **Tutt Boulevard/South Carefree Circle** has been analyzed to evaluate the potential for meeting a warrant(s) for a traffic control signal in the future. The combination of major street approach volumes (includes the sum of northbound and southbound approach volumes) and minor street left-turn volumes (greater of the eastbound or westbound approach volume each hour) were analyzed to determine if the combination would exceed the threshold criteria for Four-Hour Vehicular Volume Traffic Signal Warrants and applicable other warrants in the *2009 Manual on Uniform Traffic Control Devices (MUTCD)*.

Eight separate one-hour periods within the following morning, early-afternoon, and late-afternoon/evening periods have been analyzed:

- 6:30 a.m. – 7:30 a.m.
- 7:30 a.m. -- 8:30 a.m.
- 11:00 a.m. – 12:00 p.m.
- 12:00 p.m. – 1:00 p.m.
- 1:30 p.m. – 2:30 p.m.
- 2:30 p.m. – 3:30 p.m.
- 4:00 p.m. – 5:00 p.m.
- 5:00 p.m. - 6:30 p.m.

Warrant No. 1 - Eight-Hour Vehicular Warrant

According to “Warrant 1, Eight-Hour Vehicular Warrant,” as described in Section 4C.02 of the 2009 MUTCD:

Standard:

*04 The need for a traffic control signal shall be considered if an engineering study finds that **one** of the following conditions exist for each of any 8 hours of an average day:*

- A. The vehicles per hour given in both of the **100** percent columns of Condition A in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection; or
 - B. The vehicles per hour given in both of the **100** percent columns of Condition B in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection.

Table 4C-1 of the MUTCD contains the minimum vehicular volumes (Condition A) and the interruption of continuous traffic volumes (Condition B) required to satisfy “Warrant 1, Eight-Hour Vehicular Volume.”

Warrant 1 – Eight-Hour Vehicular Volume Warrant

Details of this warrant are contained in Section 4C.02 of the MUTCD.

Condition A

All eight of the eight studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for the existing-plus-site traffic scenario. A minimum of 500 vehicles on the major street (total of both approaches) and 150 vehicles (higher-volume minor street approach, one direction only) are required to satisfy “Condition A” during each of the eight hours analyzed. Refer to Table 4 for the major/minor street volume combinations used for the “Condition A” Eight-Hour Vehicular Volume Warrant analysis during the existing plus site-generated traffic condition.

Table 4: Major/Minor Volumes for Signal Warrant No. 1 (Condition A) – Existing Plus Site

During the 2040 background plus site-generated traffic scenario, all eight of the eight studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for Condition A, as shown in Table 5.

Table 5: Major/Minor Volumes for Signal Warrant No. 1 (Condition A) – 2040 Total

Start Time	End Time	Volumes		Condition A Threshold		Meets 8-Hr Warrant Thresholds?
		Major Street	Minor Street	Major Street (One Lane)	Minor Street (Two Lanes)	
6:30 AM	7:30 AM	570	190	500	150	Yes
7:30 AM	8:30 AM	706	190	500	150	Yes
11:00 AM	12:00 PM	746	251	500	150	Yes
12:00 PM	1:00 PM	806	280	500	150	Yes
1:30 PM	2:30 PM	904	297	500	150	Yes
2:30 PM	3:30 PM	1006	313	500	150	Yes
4:00 PM	5:00 PM	1312	307	500	150	Yes
5:00 PM	6:00 PM	1384	339	500	150	Yes
Number of hours meeting warrant thresholds/ hours required to satisfy the warrant						8 / 8
Note: Condition A thresholds are based on MUTCD Table 4C-1 (100% values)						

Condition B

Five of the eight studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for the short-term background-plus-site traffic condition. A minimum of 750 vehicles on the major street (total of both approaches) and 75 vehicles (higher-volume minor street approach, one direction only) are required to satisfy "Condition B" during each of the eight hours. Refer to Table 6 for the major/minor street volume combinations used for the "Condition B" Eight-Hour Vehicular Volume Warrant analysis during the existing plus site-generated traffic condition.

Table 6: Major/Minor Volumes for 8-Hour Signal Warrants (Condition B) – Existing Plus Site

Start Time	End Time	Volumes		Condition B Threshold		Meets 8-Hr Warrant Thresholds?
		Major Street	Minor Street	Major Street (One Lane)	Minor Street (Two Lanes)	
6:30 AM	7:30 AM	505	190	750	75	No
7:30 AM	8:30 AM	621	190	750	75	No
11:00 AM	12:00 PM	736	210	750	75	No
12:00 PM	1:00 PM	866	250	750	75	Yes
1:30 PM	2:30 PM	859	234	750	75	Yes
2:30 PM	3:30 PM	829	215	750	75	Yes
4:00 PM	5:00 PM	1159	215	750	75	Yes
5:00 PM	6:00 PM	1220	259	750	75	Yes
Number of hours meeting warrant thresholds/ hours required to satisfy the warrant						5 / 8
Note: Condition B thresholds are based on MUTCD Table 4C-1 (100% values)						

During the 2040 background plus site-generated traffic scenario, five of the eight studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for Condition B, as shown in Table 7.

Table 7: Major/Minor Volumes for Signal Warrant No. 1 (Condition B) – 2040 Total

Start Time	End Time	Volumes		Condition B Threshold		Meets 8-Hr Warrant Thresholds?
		Major Street	Minor Street	Major Street (One Lane)	Minor Street (Two Lanes)	
6:30 AM	7:30 AM	570	190	750	75	No
7:30 AM	8:30 AM	706	190	750	75	No
11:00 AM	12:00 PM	746	251	750	75	No
12:00 PM	1:00 PM	806	280	750	75	Yes
1:30 PM	2:30 PM	904	297	750	75	Yes
2:30 PM	3:30 PM	1006	313	750	75	Yes
4:00 PM	5:00 PM	1312	307	750	75	Yes
5:00 PM	6:00 PM	1384	339	750	75	Yes
Number of hours meeting warrant thresholds/ hours required to satisfy the warrant						5 / 8
Note: Condition B thresholds are based on MUTCD Table 4C-1 (100% values)						

Conditions A + B

As shown in the analysis above, eight-hour vehicular warrant criteria for the 100 percent columns is **not** satisfied for either Condition A or Condition B during the existing plus site-generated and 2040 background plus site-generated traffic scenarios. However, warrant criteria from the 80

percent columns in MUTCD Table 4C-1 may be used to determine if a combination of Condition A **and** Condition B major street and minor street volumes would meet warrant thresholds. Per Section 4C.02 of the 2009 MUTCD:

Standard:

- 07 *The need for a traffic control signal shall be considered if an engineering study finds that **both** of the following conditions exist for each of any 8 hours of an average day:*
- A. *The vehicles per hour given in both of the **80** percent columns of Condition A in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection; **and***
 - B. *The vehicles per hour given in both of the **80** percent columns of Condition B in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection*

A minimum of 400 vehicles on the major street (total of both approaches) and 120 vehicles (higher-volume minor street approach, one direction only) are required to satisfy “Condition A” during each of the eight hours analyzed using 80-percent criteria. In order to satisfy “Condition B” 80-percent criteria, a minimum of 600 vehicles are required on the major street (total of both approaches) and 60 vehicles (higher-volume minor street approach, one direction only) are required. All eight analyzed hours must meet **both** “Condition A” and “Condition B” thresholds in order to satisfy the 80-percent combination warrant criteria.

During the existing plus site-generated traffic scenario, only seven one-hour analysis periods are projected to satisfy Condition B 80-percent criteria, as shown in Table 8. Thus, the eight-hour vehicular warrant for the combination of Conditions A and B would **not** be met in the short term.

Table 8: Major/Minor Volumes for 8-Hour Signal Warrants (Conditions A + B) – Existing + Site

Start Time	End Time	Volumes		Condition A Threshold		Condition B Threshold		Meets 8-Hr Warrant Thresholds?
		Major Street	Minor Street	Major Street (One Lane)	Minor Street (Two Lanes)	Major Street (One Lane)	Minor Street (Two Lanes)	
6:30 AM	7:30 AM	505	190	400	120	600	60	No
7:30 AM	8:30 AM	621	190	400	120	600	60	Yes
11:00 AM	12:00 PM	736	210	400	120	600	60	Yes
12:00 PM	1:00 PM	866	250	400	120	600	60	Yes
1:30 PM	2:30 PM	859	234	400	120	600	60	Yes
2:30 PM	3:30 PM	829	215	400	120	600	60	Yes
4:00 PM	5:00 PM	1159	215	400	120	600	60	Yes
5:00 PM	6:00 PM	1220	259	400	120	600	60	Yes
Number of hours meeting warrant thresholds/ hours required to satisfy the warrant								7 / 8
Note: Condition A and B thresholds are based on MUTCD Table 4C-1 (80% values)								

Seven of the one-hour analysis periods studied are projected to satisfy 80-percent Condition A vehicular volume during the 2040 background plus site-generated traffic scenario. However, only

six one-hour analysis periods are projected to satisfy Condition B 80-percent criteria, as shown in Table 9. Thus, the eight-hour vehicular warrant for the combination of Conditions A and B would not be met in the short term.

Table 9: Major/Minor Volumes for 8-Hour Signal Warrants (Conditions A + B) – 2040 Total

Start Time	End Time	Volumes		Condition A Threshold		Condition B Threshold		Meets 8-Hr Warrant Thresholds?
		Major Street	Minor Street	Major Street (One Lane)	Minor Street (Two Lanes)	Major Street (One Lane)	Minor Street (Two Lanes)	
6:30 AM	7:30 AM	570	190	400	120	600	60	No

5:00 PM	6:00 PM	1384	339	400	120	600	60	Yes
Number of hours meeting warrant thresholds/ hours required to satisfy the warrant								7 / 8
Note: Condition A and B thresholds are based on MUTCD Table 4C-1 (80% values)								

Warrant 2 - Four-Hour Vehicular Warrant

The MUTCD Warrant 2 (Four-Hour Vehicular Volume) contains a graph with threshold curves based on major and minor street traffic volumes, the number of intersection approach lanes on the major and minor streets, and the speed of the major street. This graph is shown in MUTCD Figure 4C-1. Details of this warrant are contained in Section 4C.03 of the MUTCD.

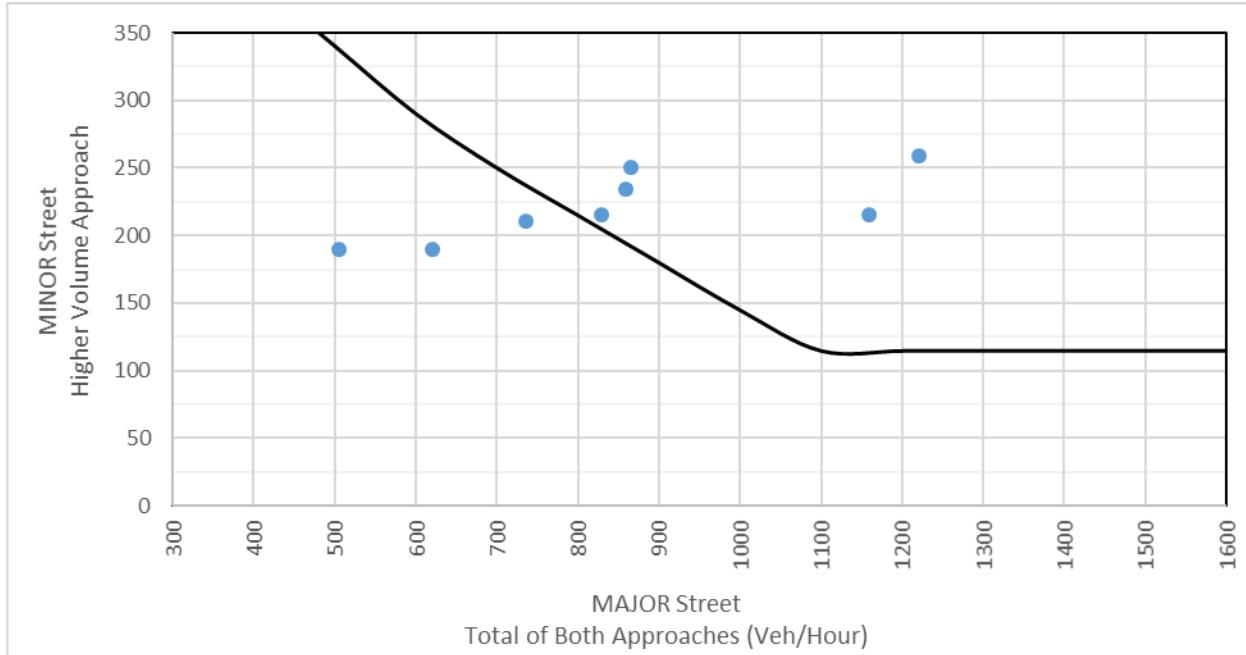

MUTCD Warrant 2 (Four-Hour Vehicular Volume) contains a graph (shown in MUTCD Figure 4C-1) with threshold curves based on major and minor street traffic volumes, the number of intersection approach lanes on the major and minor streets, and the speed of the major street.

Short-Term Baseline Plus Site-Generated Traffic

Results from the four-hour traffic signal warrant analysis for the short-term baseline plus site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 10. Five separate major/minor street volume data points exceeded the minimum threshold curve for an intersection with one lane for the major approach and two lanes for the minor approach (higher-volume minor street). As a result, the Four-Hour Vehicular Volume Traffic Signal Warrant threshold at the intersection of South Carefree Circle/Tutt Boulevard is projected to be exceeded based on the short-term baseline plus site-generated traffic scenario.

Note: all turning movements have been included in the side-street volumes.

Figure 10: MUTCD Warrant 2, Four-Hour Vehicular Volume (2019 Existing + Site)

Major and minor street volumes shown in Figure 10 above are summarized in Table 10 below.

Table 10: Major/Minor Volumes for 4-Hour Signal Warrants (Existing + Site)

Start	End	Major Street Volume	Minor Street Volume	4-Hour Warrant Threshold Met?
6:30	7:30	505	190	No
7:30	8:30	621	190	No
11:00	12:00	736	210	No
12:00	13:00	866	250	Yes
13:30	14:30	859	234	Yes
14:30	15:30	829	215	Yes
16:00	17:00	1159	215	Yes
17:00	18:00	1220	259	Yes
<i># of hours meeting respective warrant thresholds/hours required to satisfy the warrant (warrant satisfied?)</i>				5 / 4 (Yes)

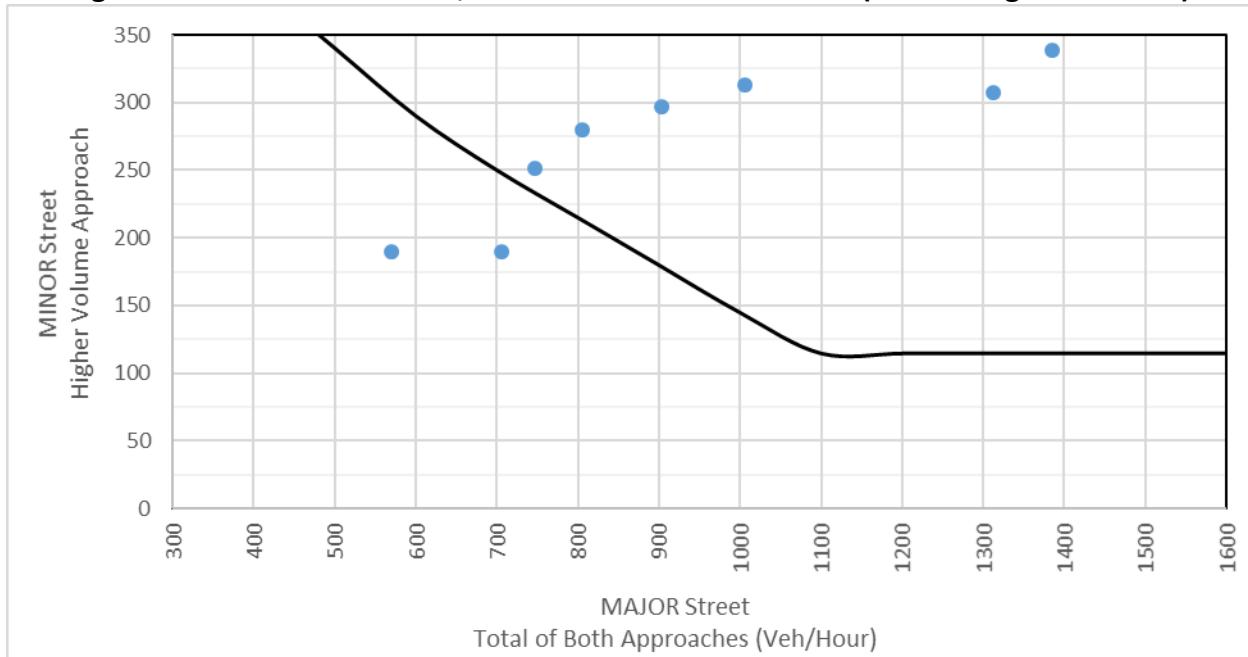

2040 Total Traffic

Results from the four-hour traffic signal warrant analysis for the 2040 background-plus-site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 11. Greater than four (six) separate major/minor street volume data points exceeded the minimum threshold curve to meet a signal warrant. As a result,

the Four-Hour Vehicular Volume Traffic Signal Warrant is projected to be met at the intersection of South Carefree Circle/Tutt Boulevard for the 2040 background plus site-generated traffic scenario.

Note: all turning movements have been included in the side-street volumes.

Figure 11: MUTCD Warrant 2, Four-Hour Vehicular Volume (2040 Background + Site)

Major and minor street volumes shown in Figure 11 above are summarized in Table 11 below.

Table 11: Major/Minor Volumes for 4-Hour Volume Signal Warrants (2040 Background + Site)

Start	End	Major Street Volume	Minor Street Volume	4-Hour Warrant Threshold Met?
6:30	7:30	570	190	No
7:30	8:30	706	190	No
11:00	12:00	746	251	Yes
12:00	13:00	806	280	Yes
13:30	14:30	904	297	Yes

16:00	17:00	1312	307	Yes
17:00	18:00	1384	339	Yes
<i># of hours meeting respective warrant thresholds/hours required to satisfy the warrant (warrant satisfied?)</i>				<i>6 / 4 (Yes)</i>

TRAFFIC SIGNAL WARRANT ANALYSIS – TUTT BOULEVARD/ GOLF CLUB SITE ACCESS

The intersection of **Tutt Boulevard/Holiday Inn Site Access/Site Access** has been analyzed to evaluate the potential for meeting a warrant(s) for a traffic control signal in the future. The combination of major street approach volumes (includes the sum of northbound and southbound approach volumes) and minor street left-turn volumes (greater of the eastbound or westbound approach volume each hour) were analyzed to determine if the combination would exceed the threshold criteria for Four-Hour Vehicular Volume Traffic Signal Warrants in the *2009 MUTCD*.

Four separate one-hour periods within the following morning, early-afternoon, and late-afternoon/evening periods have been analyzed:

- 6:30 a.m. – 7:30 a.m.
- 7:30 a.m. -- 8:30 a.m.
- 4:00 p.m. – 5:00 p.m.
- 5:00 p.m. - 6:30 p.m.

Short-Term Baseline Plus Site-Generated Traffic

Results from the four-hour traffic signal warrant analysis for the short-term baseline plus site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 12. Two separate major/minor street volume data points exceeded the minimum threshold curve for an intersection with one lane for the major approach and two lanes for the minor approach (higher-volume minor street). The two late afternoon/evening peak period data points analyzed are shown to exceed the Four-Hour Vehicular Volume Traffic Signal Warrant threshold at the intersection of Tutt Boulevard/Holiday Inn Site Access/Springs Ranch Golf Club Site Access. The morning peak period data points are not shown to exceed the threshold based on the short-term baseline plus site-generated traffic scenario. There is the potential for a warrant to be met based on additional hours of the day – such as the midday period and mid-afternoon period due to the high commercial/retail nature of the area served by Tutt Boulevard.

Note: all turning movements have been included in the side-street volumes.

Figure 12: MUTCD Warrant 2, Four-Hour Vehicular Volume (2019 Existing + Site)

Major and minor street volumes shown in Figure 12 above are summarized in Table 12 below.

Table 12: Major/Minor Volumes for 4-Hour Signal Warrants (Existing + Site)

Start	End	Major Street Volume	Minor Street Volume	4-Hour Warrant Threshold Met?
6:30	7:30	573	184	No
7:30	8:30	797	185	No
16:00	17:00	1391	132	Yes
17:00	18:00	1495	126	Yes
<i># of hours meeting respective warrant thresholds/hours required to satisfy the warrant (warrant satisfied?)</i>				2 / 4 (No)

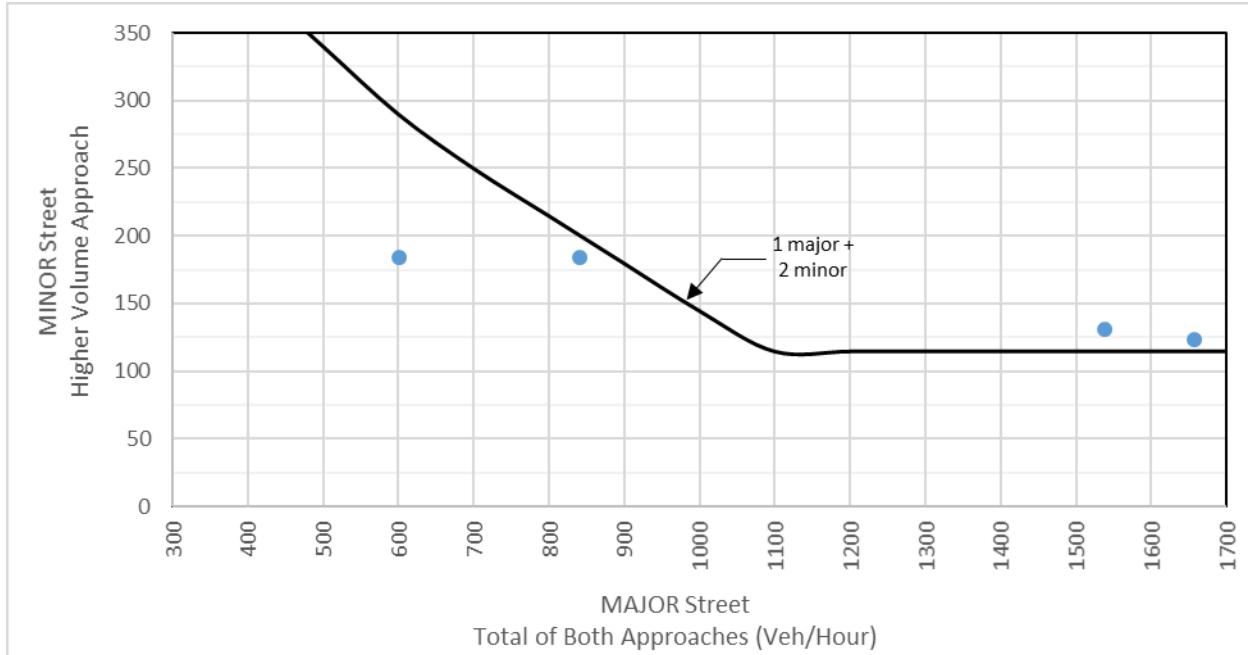

2040 Total Traffic Scenario

Results from the four-hour traffic signal warrant analysis for the short-term baseline plus site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 13. Two separate major/minor street volume data points exceeded the minimum threshold curve for an intersection with one lane for the major approach and two lanes for the minor approach (higher-volume minor street). The two late afternoon/evening peak period data points analyzed are shown to exceed the Four-Hour Vehicular Volume Traffic Signal Warrant threshold at the intersection of Tutt Boulevard/Holiday Inn Site Access/Springs Ranch Golf Club Site Access. The morning peak period data points are not shown to exceed the threshold based on the 2040 background plus site-generated traffic

scenario. There is the potential for a warrant to be met based on additional hours of the day – such as the midday period and mid-afternoon period due to the high commercial/retail nature of the area served by Tutt Boulevard.

Note: all turning movements have been included in the side-street volumes.

Figure 13: MUTCD Warrant 2, Four-Hour Vehicular Volume (2040 Background + Site)

Major and minor street volumes shown in Figure 13 above are summarized in Table 13 below.

Table 13: Major/Minor Volumes for 4-Hour Signal Warrants (Existing + Site)

Start	End	Major Street Volume	Minor Street Volume	4-Hour Warrant Threshold Met?
6:30	7:30	601	184	No
7:30	8:30	841	184	No
16:00	17:00	1538	131	Yes
17:00	18:00	1657	123	Yes
<i># of hours meeting respective warrant thresholds/hours required to satisfy the warrant (warrant satisfied?)</i>				<i>2 / 4 (No)</i>

The Tutt Boulevard/North First & Main/Internal Loop Street intersection is projected to be close to meeting a traffic signal warrant based on projected late afternoon peak period volumes. The proposed Greenways at Sand Creek development is located adjacent to a busy shopping plaza

with several restaurants, so it would likely experience an increase in entering/exiting traffic during mid-day peak period.

In order to facilitate safe pedestrian and bicycle crossing of Tutt, the developer proposes the installation of a full traffic signal at this intersection. Advantages to signalizing this intersection include:

- The level of service for would be significantly better
- The access is on the inside of a horizontal curve
- The intersection is a four-leg intersection
- A traffic signal would provide pedestrian/bicycle crossing capability between North Carefree and the proposed signalized intersection to the south at S. Carefree Circle
- A traffic signal would create traffic gaps in north/south traffic, which could be utilized by motorists exiting numerous apartment complexes and other businesses (with unsignalized access points) to the north and south of this intersection.
- If a Mountain Metro Transit bus pullout were constructed on the north side of this intersection, the traffic signal would be beneficial to the bus in reentering the northbound through lane

TRAFFIC SIGNAL WARRANT ANALYSIS – NORTH CAREFREE CIRCLE/SHOWHORSE DRIVE

The projected combinations of major plus minor street peak-hour traffic volumes would **not** exceed Four-Hour Vehicular Volume traffic signal warrant thresholds. Minor street approaches at this should remain stop sign-controlled upon site buildout.

AUXILIARY TURN LANE ANALYSIS

Table 2 of the City of Colorado Springs' *Traffic Criteria Manual* contains turning volume thresholds which require auxiliary left or right turn lanes by roadway classifications. Roadway classifications for key thoroughfares in the vicinity of the site are based on the City of Colorado Springs' *Major Thoroughfare Plan (MTP)*:

- Principal Arterial – North Carefree Circle, Constitution Avenue
- Minor Arterial – Tutt Boulevard, South Carefree Circle
- Non-arterial street – Pony Tracks Drive, Piros Drive, Showhorse Court

Principal Arterial

Left-turn auxiliary turn lanes are required for an access with a projected peak-hour left ingress turning volume of 10 vehicles per hour (vph) or greater. Right-turn auxiliary turn lanes are required for an access with a projected peak-hour left ingress turning volume of 25 vph or greater. Left-turn and right-turn acceleration lanes are generally not required.

The posted speed limit on North Carefree Circle and Constitution Avenue is 40 mph. Per the *Traffic Criteria Manual*, the required turn lane length on these Principal Arterials is 315 feet, consisting of 155 feet of lane length and a 160-foot approach taper.

North Carefree Circle/Tutt Boulevard

All existing auxiliary left- and right-turn lanes at the intersection of North Carefree Circle/Tutt Boulevard currently meet the *Traffic Criteria Manual's* 315-foot turn lane length criteria. No lane geometry modifications are required.

North Carefree Circle>Showhorse Court

All existing auxiliary left- and right-turn lanes at the intersection of North Carefree Circle>Showhorse Court currently meet the *Traffic Criteria Manual's* 315-foot turn lane length criteria. No lane geometry modifications are required.

North Carefree Circle/Proposed North Site Access

An auxiliary westbound right-turn lane would **not** be required on North Carefree Circle at its intersection with the proposed north site access. The projected morning and afternoon right-turn volumes (4 and 14, respectively) would **not** exceed the 25 vph threshold for a right-turn lane for this turning movement. Eastbound left turns will not be permitted at this intersection, as this access point will be restricted to right-in/right-out (RIRO) movements.

Constitution Avenue/Tutt Boulevard

Due to existing intersection spacing constraint for back-to-back left-turn lanes on Constitution Avenue between New Center Point and Tutt Boulevard, the existing southeast-bound left-turn lane at the intersection of Constitution Avenue/Tutt Boulevard does not meet the *Traffic Criteria Manual's* 315-foot criteria.

Additionally, the outermost southeast-bound lane at the intersection of Constitution Avenue/Tutt Boulevard is a shared through/right lane. The existing morning and afternoon right-turn volumes (84 and 52, respectively) both exceed the 25 vph threshold for a right-turn lane for this turning movement. However, despite this turn lane deficiency, this project will not create additional traffic to this turning movement.

All other existing turn lanes at the intersection of Constitution Avenue/Tutt Boulevard currently meet the *Traffic Criteria Manual's* 315-foot turn lane length criteria.

Minor Arterials

Left-turn auxiliary turn lanes are required for an access with a projected peak-hour left ingress turning volume of 25 vph or greater. Right-turn auxiliary turn lanes are required for an access with a projected peak-hour left ingress turning volume of 50 vph or greater. Left-turn and right-turn acceleration lanes are generally not required.

The posted speed limit on South Carefree Circle is 30 mph, while the posted speed limit on Tutt Boulevard is 35 mph. Per the *Traffic Criteria Manual*, the required total lane length on South Carefree Circle is 235 feet, consisting of full-width 115 feet of lane length and a 120-foot approach taper. The required total auxiliary lane length on Tutt Boulevard is 260 feet, consisting of 120 feet of full-width lane length and a 140-foot approach taper.

Tutt Boulevard/Holiday Inn Site Access/Springs Ranch Golf Club Site Access

Projected northbound right-turn volumes would exceed the 50-vph *Traffic Criteria Manual* threshold during the PM peak hour. The required total auxiliary lane length for the proposed northbound right-turn lane on Tutt Boulevard at this access is 260 feet, consisting of 120 feet of full-width lane length and a 140-foot approach taper.

Tutt Boulevard is striped for a center two-way left-turn lane (TWLTL) at this access.

South Carefree Circle/Tutt Boulevard

Currently, the northbound approach at Tutt Boulevard/South Carefree Circle has an auxiliary left-turn lane, while the eastbound approach on South Carefree Circle has exclusive left- and right-turn auxiliary turn lanes.

A new westbound approach would be constructed as part of this development, converting the intersection of South Carefree Circle/Tutt Boulevard from a T-intersection to a full-movement, four-leg intersection. The following lane geometry is recommended:

- Eastbound approach – shared right/through lane and an exclusive left-turn lane
- Westbound approach – shared right/through lane and an exclusive left-turn lane
- Northbound approach – exclusive left, through and right lanes
- Southbound approach – left-turn lane and a shared right/through lane

Projected northbound right-turn volumes would exceed the 50-vph *Traffic Criteria Manual* threshold during the PM peak hour. The required total auxiliary lane length for the proposed northbound right-turn lane on Tutt Boulevard at its proposed access with South Carefree Circle is 260 feet, consisting of 120 feet of full-width lane length and a 140-foot approach taper.

The southbound approach at the intersection of South Carefree Circle/Tutt Boulevard is a shared through/right lane. The existing painted median could be (and should be) restriped for a

southbound left turn lane. Regarding the southbound right turning volume, the existing morning and afternoon right-turn volumes (86 and 145, respectively) both exceed the 50 vph threshold for a right-turn lane for this turning movement. Although this is an existing deficiency and there is not sufficient ROW to add a southbound right turn lane on the west side of Tutt, there is a relatively large radius on the corner which allows right turning vehicles to turn at a higher speed than if this were a tighter radius. Therefore, the speed differential between through traffic and southbound right turning traffic is lower. Additionally, with planned traffic signal and the relatively high right turn volume, drivers expect right turning movements at this intersection.

Per the City *Traffic Criteria Manual*, the required total lane length for both the eastbound and westbound approach on South Carefree Circle is 235 feet, consisting of full-width 115 feet of lane length and a 120-foot approach taper.

Non-Arterial Streets

Per Table 2 of the *Traffic Criteria Manual*, “Turn lane requirements on lower classification roads (than Minor Arterial) to be determined on a case-by-case basis depending on recommendations from a traffic impact study and approved by City Engineering.”

Pony Tracks Drive and Piros Drive are currently both two-lane, non-arterial streets without auxiliary turn lanes. Turn lanes are **not** required at either of the proposed site accesses on Pony Tracks Drive or at the intersection of Pony Tracks Drive/Piros Drive based on projected background plus site-generated traffic volumes.

ROADWAY CLASSIFICATIONS

Per the City of Colorado Springs’ *Engineering Criteria Manual*, “mid-block traffic analyses shall be based on volume-to-capacity ratios using the following capacity values:”

- Minor Arterials – 25,000 ADT
- Major Collectors – 10,000 ADT
- Minor Collectors – 3,500 ADT
- Local – 1,500 ADT
- Minor Local – 300 ADT

Tutt Boulevard

Tutt Boulevard is classified as a Minor Arterial street. Existing weekday volumes are about 11,000 vehicles per day (vpd) north of the intersection with Constitution and about 11,000 vpd to 12,000 vpd between S. Carefree Circle and N. Carefree Circle. Projected 2040 total average weekday traffic volumes between North Carefree Circle and Constitution Avenue are projected to reach about 16,000 vpd north of the north site access and 15,000 vpd south of the south site access. These volumes include the addition of trips to projected for this development. These volumes can be accommodated by the three-lane street cross section (one through lane each direction

plus left turn lanes at intersections and access points) plus bike lanes. LSC is also recommending the addition of a northbound right turn deceleration lanes at the site access points on Tutt. This will allow site traffic arriving from the south to turn into the development from a separate lane rather than from the northbound through lane.

Proposed Loop Street East of Tutt Boulevard

The south portion of the proposed loop street on the east side of Tutt Boulevard (extending into the site from the Tutt/South Carefree intersection) is projected to have an ADT of 2,727 vehicles per day (just east of Tutt), as shown on Figure 10a. The north portion of the proposed loop street of Tutt Boulevard (extending into the site from the Tutt Boulevard/Holiday Inn Site Access intersection) is projected to have an ADT of 4,532 vehicles per day (just east of Tutt), as shown on Figure 10a.

Given the above projected daily volumes, the continuity and function of this street, this access should be classified as a Collector.

The proposed cross-section and parking configuration is shown on the Concept PUD title sheet.

Pony Tracks Drive

The estimated current daily traffic volume on Pony Tracks is about 650 vehicles per day north of Piros. This project with 41 single family homes and a street connection to Pony Tracks would add about 200 vehicles per day between Piros and the proposed access connection to existing Pony Tracks. The estimated resulting total of 850 vehicles per day north of Piros would be below the 1,500 design ADT for a city Residential (Local) street.

Showhorse Drive

Showhorse Drive was essentially built as a Collector street from N. Carefree Circle north about 650 feet (north of N. Carefree Circle). This cross-section will be able to accommodate the additional traffic generated by the added development.

CONCLUSIONS

- The site is projected to generate about 8,809 new driveway vehicle-trips on the average weekday.
- During the weekday morning peak hour of adjacent street traffic, 225 vehicles would enter the site while 464 vehicles would exit.

- During the weekday evening peak hour of adjacent street traffic, 473 vehicles would enter the site while 301 vehicles would exit.
- Please refer to the “Level of Service” section above for detailed LOS analysis results for individual turning movements and approaches at all studied intersections during both peak hours through the 2040 horizon year.
- Projected future volumes at the currently unsignalized intersection of South Carefree Circle/Tutt Boulevard would exceed the MUTCD threshold criteria for Four-Hour Vehicular Volume Traffic Signal Warrants based on the eight hours analyzed. Please refer to the “Traffic Signal Warrant Analysis” section for additional details.
- The Tutt Boulevard/North First & Main/Internal Loop Street intersection is projected to be close to meeting a traffic signal warrant based on projected late afternoon peak period hourly volumes. In order to facilitate safe pedestrian and bicycle crossing of Tutt, the developer proposes the installation of a full traffic signal at this intersection. Advantages to signalizing this intersection include:
 - The level of service for would be significantly better
 - The access is on the inside of a horizontal curve
 - The intersection is a four-leg intersection
 - A traffic signal would provide pedestrian/bicycle crossing capability between North Carefree and the proposed signalized intersection to the south at S. Carefree Circle
 - A traffic signal would create traffic gaps in north/south traffic, which could be utilized by motorists exiting numerous apartment complexes and other businesses (with unsignalized access points) to the north and south of this intersection.
 - If a Mountain Metro Transit bus pullout were constructed on the north side of this intersection, the traffic signal would be beneficial to the bus in reentering the northbound through lane
- Based on **existing turning movement volumes**, an exclusive southbound right-turn lane is currently warranted at the intersection of South Carefree Circle/Tutt Boulevard based on the City *Traffic Criteria Manual* threshold turning volume. Although this is an existing deficiency and there is not enough ROW to add a southbound right turn lane on the west side of Tutt, there is a relatively large radius on the corner which allows right turning vehicles to turn at a higher speed than if this were a tighter radius. Therefore, the speed differential between through traffic and southbound right turning traffic is lower. Additionally, with planned traffic signal and the relatively high right turn volume, drivers expect right turning movements at this intersection.
- The turning volume threshold for northbound right-turn lanes **would** be met at the intersections of South Carefree Circle/Tutt Boulevard and at the north access across from the north First & Main access drive based on projected background plus site-generated volumes.

Right turn lanes would be beneficial in separating right turning traffic from the through traffic in the single northbound through lane.

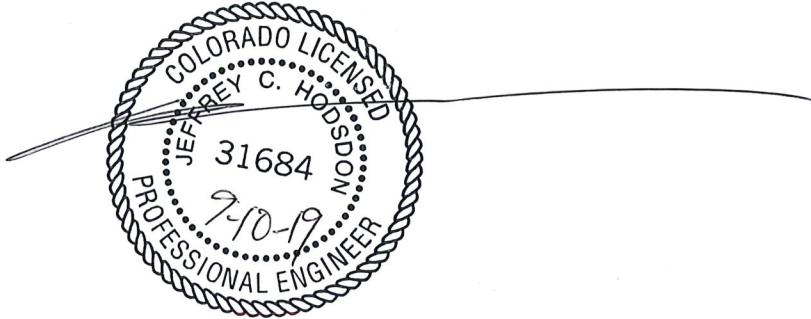

- Auxiliary turn lanes are **not** required at the proposed site access on Pony Tracks Drive or at the intersection of Pony Tracks Drive/Piros Drive based on projected background plus site-generated traffic volumes.
- The turning volume threshold for a westbound right-turn deceleration lane would **not** be met at the proposed site access intersection on North Carefree Circle based on projected total traffic volumes.

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 64 (44%), Referenced to phase 2:EBTL and 6:WBT, Start of Yellow

Natural Cycle: 45

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.68

Intersection Signal Delay: 25.1

Intersection LOS: C

Intersection Capacity Utilization 45.2%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 6: Tutt Blvd & N Carefree Cir

Intersection Summary

Area Type: Other

Cycle Length: 146

Actuated Cycle Length: 146

Offset: 137 (94%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.40

Intersection Signal Delay: 19.0

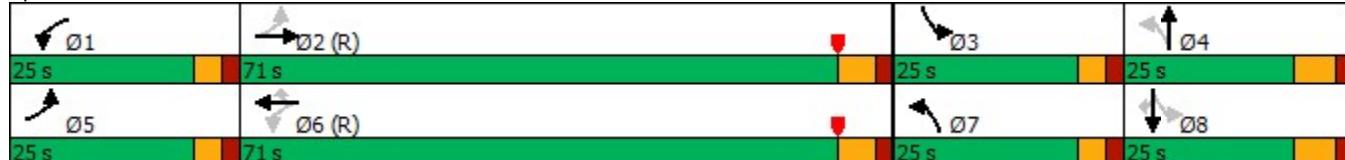

Intersection LOS: B

Intersection Capacity Utilization 50.6%

ICU Level of Service A

Analysis Period (min) 15

Splits and Phases: 53: Tutt Blvd & Constitution Ave

Intersection Summary

Area Type: Other

Cycle Length: 138

Actuated Cycle Length: 138

Offset: 120 (87%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.20

Intersection Signal Delay: 38.0

Intersection LOS: D

Intersection Capacity Utilization 75.0%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 53: Tutt Blvd & Constitution Ave
