ENGINEER'S STATEMENT

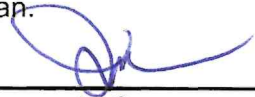

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Richard L. Schindler, P.E. #33997
For and on Behalf of Core Engineering Group, LLC

OWNER'S STATEMENT

I, the Owner, have read and will comply with all the requirements specified in the drainage report and plan.

Lorson, LLC

FLOODPLAIN STATEMENT

To the best of my knowledge and belief, this development is not located within a designated floodplain as shown on Flood Insurance Rate Map Panel No. 08041C0957G and 08041C0976G, dated December 7, 2018. (See Appendix A, FEMA FIRM Exhibit)

Richard L. Schindler, #33997
Date

EL PASO COUNTY

Filed in accordance with the requirements of the El Paso County Land Development Code, Drainage Criteria Manual, Volume 1 and 2, and Engineering Criteria Manual, As Amended.

County Engineer/ECM Administrator Date

Conditions: _____

1.0 LOCATION and DESCRIPTION

Hillside at Lorson Ranch is located east of the East Tributary of Jimmy Camp Creek. The site is located on approximately 128.328 acres of vacant land. This project will develop this site into single-family residential developments. The land for the residential lots is currently owned by Lorson LLC or its nominees for Lorson Ranch.

The site is located in the North ½ of Section 23 and 24, Township 15 South and Range 65 West of the 6th Principal Meridian. The site is bounded on the west by Lorson Ranch East Filing No. 4, on the north by The Hills at Lorson Ranch and The Ridge at Lorson Ranch, on the east by unplatted lands, and the south by Peaceful Valley Lake Estates 1st Filing. For reference, a vicinity map is included in Appendix A of this report.

Conformance with applicable Drainage Basin Planning Studies

There is an existing (unapproved) DBPS for Jimmy Camp Creek prepared by Wilson & Company in 1987, and is referenced in this report. The only major drainage improvements for this study area according to the 1987 Wilson study was the reconstruction of the East Tributary of Jimmy Camp Creek (East Tributary). In 2014 and in 2018 the East Tributary was reconstructed from downstream of Lorson Boulevard north to the northern property line of Lorson Ranch in accordance with the 1987 study. The last section of the East Tributary (to the south property line of Lorson Ranch) has been designed by Kiowa Engineering and will be completed in 2020. There are no further improvements to be made on the East Tributary. On March 9, 2015, a new DBPS for Jimmy Camp Creek and the East Tributary was completed by Kiowa Engineering. The Kiowa Engineering DBPS for Jimmy Camp Creek has not been adopted by El Paso County but is allowed for concept design. The concept design includes the East Tributary armoring concept and the full spectrum detention pond requirements. The Kiowa DBPS did not calculate drainage fees so current El Paso County drainage/bridge fees apply to this development.

A portion of the site is located in the Upper Williams Drainage Basin which is an unstudied basin. Lorson Ranch has provided detention and water quality ponds for Hillside at Lorson Ranch runoff within this basin and the existing/proposed flows are the same at the south property line of Lorson Ranch.

Conformance with Lorson East MDDP by Core Engineering Group

Core Engineering Group has an approved MDDP for Lorson East, which covers this study area. This PDR conforms to the MDDP for Lorson East and is referenced in this report. The major infrastructure to be constructed in conjunction with this site includes offsite Detention/WQ Ponds C1 and D2 and on-site Ponds E1, G and H. Offsite Pond C1 was completed with The Hills at Lorson Ranch Filing No. 1. Offsite Pond D2 was completed with Lorson Ranch East Filing No. 1. On-site Pond E1 was graded in the Early Grading Plans for Lorson Ranch East under PUDSP-16-003 but will be increased in size to accommodate this project. On-site Ponds G and H will be constructed with this project. There are also two bridges over the East Tributary that were built in 2018 to provide access to this development across the East Tributary. The bridges are located at Fontaine Boulevard and Lorson Boulevard.

Hillside at Lorson Ranch is located within the ***“Jimmy Camp Creek Drainage Basin”***, which is a fee basin in El Paso County and Upper Williams Creek which is not a fee basin.

2.0 DRAINAGE CRITERIA

The supporting drainage design and calculations were performed in accordance with the City of Colorado Springs and El Paso County “Drainage Criteria Manual (DCM)”, dated November, 1991, the El Paso County “Engineering Criteria Manual”, Chapter 6 and Section 3.2.1 Chapter 13 of the City of Colorado Springs Drainage Criteria Manual dated May 2014, and the UDFCD “Urban Storm Drainage Criteria Manual” Volumes 1, 2 and 3 for inlet sizing and full spectrum ponds. No deviations from these published criteria are requested for this site.

The Rational Method as outlined in Section 6.3.0 of the May 2014 “Drainage Criteria Manual” and in Section 3.2.8.F of the El Paso County “Engineering Criteria Manual” was used for basins less than 130 acres to determine the rainfall and runoff conditions for the proposed development of the site. The runoff rates for the 5-year initial storm and 100-year major design storm were calculated.

Current updates to the Drainage Criteria manual for El Paso County states the if detention is necessary, Full Spectrum Detention will be included in the design, based on this criteria, Full Spectrum Detention will be required for this development.

3.0 EXISTING HYDROLOGICAL CONDITIONS

This site is currently undeveloped with native vegetation (grass with no shrubs) and moderate to steep slopes in a westerly direction the East Tributary of Jimmy Camp Creek and a small portion southerly in the Upper Williams Creek Drainage Basin.

The Soil Conservation Service (SCS) classifies the soils within the Hillside at Lorson Ranch property as Nelson-Tassel fine Sandy loam; and Wiley silt loam [3]. The sandy and silty loams are considered hydrologic soil group B soils with moderate to moderately rapid permeability. All of these soils are susceptible to erosion by wind and water, have low bearing strength, moderate shrink-swell potential, and high frost heave potential (see table 3.1 below). Weathered bedrock may be encountered beneath some of the site but it can be excavated using conventional techniques.

Table 3.1: SCS Soils Survey

Soil	Hydro. Group	Shrink/Swell Potential	Permeability	Surface Runoff Potential	Erosion Hazard
56-Nelson – Tassel Fine Sandy Loam	B	Moderate	Moderately Rapid	Slow	Moderate
108-Wiley Silt Loam	B	Moderate	Moderate	Medium	Moderate

Excerpts from the SCS “Soil Survey of El Paso County Area, Colorado” are provided in **Appendix A** for further reference.

For preparing hydrologic calculations for this report, the soil of each basin are assumed to be wholly comprised of the majority soil hydrologic group.

An existing electrical easement, with existing transmission towers, is located west side of this site and will be set aside as open space. It is the intent to utilize some of the open space under the towers for detention of storm flow.

This site is not located within the delineated 100-year floodplain of the East Tributary of Jimmy Camp Creek per the Federal Emergency Management Agency (FEMA) Flood Rate Insurance Map (FIRM) number 08041C10957 G and 08041C10976 G, effective December 7, 2018.

Basin C1.1-ex

This existing basin consists of existing flow from undeveloped areas north of the PUD boundary. Runoff flows overland northwesterly and drains into Existing Pond C1 excavated as part of Lorson Ranch East Filing No. 4 grading. The existing runoff is 2.9cfs and 19.5cfs for the 5-year and 100-year events.

Basin D1-ex

This existing basin consists of existing flow within the northerly area of the PUD site. Runoff flows overland westerly to Lorson Boulevard constructed as part of Lorson Ranch East Filing No. 1. The existing runoff is 2.6cfs and 17.6cfs for the 5-year and 100-year events.

Offsite Basin OS-E1.1

This existing offsite basin consists of existing flow from the Peaceful Valley Lake Estates subdivision located to the south of the PUD site. Runoff is directed overland northwesterly through basin EX-E1.2 to existing pond E1. The existing runoff is 2.0cfs and 13.4cfs for the 5-year and 100-year events.

Basin EX-E1.2

This existing basin consists of existing flow within the southerly area of the PUD site. Runoff flows overland westerly to existing pond E1. The existing runoff is 12.1cfs and 81.5cfs for the 5-year and 100-year events.

Offsite Basin OS-E2.1

This existing offsite basin consists of existing flow from the Peaceful Valley Lake Estates subdivision located to the south of the PUD site. Runoff is routed northwesterly via overland and swale to Lorson Ranch East Filing No. 4. The existing runoff is 4.5cfs and 30.2cfs for the 5-year and 100-year events.

Basin EX-F2

This existing basin consists of existing flow within the easterly area of the PUD site. Runoff is routed east toward the future Meridian Road. The existing runoff is 3.0cfs and 19.9cfs for the 5-year and 100-year events respectively.

Basin EX-G

This existing basin consists of existing flow within the easterly area of the PUD site. Runoff is routed southerly to the Peaceful Valley Lake Estates subdivision in the Upper Williams Creek Drainage Basin. The existing flows are 3.1cfs and 20.2cfs for the 5-year and 100-year storm events respectively.

Basin EX-H

This existing basin consists of existing flow within the center area of the PUD site. Runoff is routed southerly to the Peaceful Valley Lake Estates subdivision in the Upper Williams Creek Drainage Basin. The existing runoff is 5.5cfs and 31.8cfs for the 5-year and 100-year events respectively.

4.0 DEVELOPED HYDROLOGICAL CONDITIONS

Hydrology for **Hillside at Lorson Ranch** drainage report was based on the City of Colorado Springs/El Paso County Drainage Criteria. Sub-basins that lie within this project were determined and the 5-year and 100-year peak discharges for the developed conditions have been presented in this report. Based on these flows, storm inlets will be added when the street capacity is exceeded.

Soil type B has been assumed for the developed hydrologic conditions. See Appendix A for SCS Soils Map.

The time of concentration for each basin and sub-basin was developed using an overland, ditch, street and pipe flow components. The maximum overland flow length for developed conditions was limited to 100 feet. Travel time velocities ranged from 2 to 6 feet per second. The travel time calculations are included in the back of this report.

Runoff coefficients for the various land uses were obtained from Table 6-6 dated May, 2014 from the updated City of Colorado Springs/El Paso County Drainage Criteria Manual. See Appendix B.

Drainage concepts for each of the basins are briefly discussed as follow:

Basin B1

This basin consists of runoff from residential development, Tin Mountain Trail and Wahluke Drive. Runoff will be directed west to Tin Mountain Trail and south to Wahluke Drive, flow is then routed south and west via curb/gutter to Design Point 2 where it will be collected by a Type R inlet. The developed flow from this basin is 5.4cfs and 11.8cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin B2

This basin consists of runoff from residential development, Tin Mountain Trail and Wahluke Drive. Runoff will be directed south to Wahluke Drive, flow is then routed west in Wahluke Drive via curb/gutter to Design Point 2 where it will be collected by a Type R inlet. The developed flow from this basin is 5.5cfs and 12.0cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin B3

This basin consists of runoff from residential development, Hackberry Hill Street and Wahluke Drive. Runoff will be directed northerly to Hackberry Hill Street then routed west to Wahluke Drive via curb/gutter then south in Wahluke Drive to Design Point 2 where it will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 3.0cfs and 6.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin B4

This basin consists of runoff from residential development, Wahluke Drive and Pond "H". Runoff will be directed to Wahluke Drive, flow is then routed west and south in Wahluke Drive via curb/gutter to Design Point 4 where it will be collected by a Type R inlet. The developed flow from this basin is 4.3cfs and 9.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin B

This total basin consists of peak flow from residential development. Runoff will be directed to the interior streets and routed via curb/gutter to Design Points 2 and 4 where it will be collected by Type R inlets; flow is then directed through a storm pipe to Pond "H". The peak developed flow from this basin is 15.2cfs and 33.4cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C1

This basin consists of runoff from residential development and Hackberry Hill Street. Runoff will be directed southerly to Hackberry Hill Street then routed northwesterly via curb/gutter in Hackberry Hill Street through basin C2 to Design Point 6 where it will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 3.1cfs and 6.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C2

This basin consists of runoff from residential development and Hackberry Hill Street. Runoff will be directed southwesterly to Hackberry Hill Street then routed northwesterly via curb/gutter in Hackberry Hill Street to Design Point 6 where it will be collected by a Type R inlet. Flowby continues northwesterly then northerly to Salt Spring Way. For more detailed information, see the design point discussions. The developed flow from this basin is 3.9cfs and 8.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C3

This basin consists of runoff from residential development, Whiskey Hill Lane, Shuksan Lane and Salt Spring Way. Runoff will be directed to the previously mentioned streets, and then routed northwesterly via curb/gutter in Salt Spring Way to Design Point 7 where it will be collected by a Type R inlet. For

more detailed information, see the design point discussions. The developed flow from this basin is 7.2cfs and 15.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C4

This basin consists of runoff from residential development and Salt Spring Way. Runoff will be directed southwesterly to Salt Spring Way then routed northwesterly via curb/gutter in Salt Spring Way, then northerly to Design Point 10 in Elk Hills Drive where it will be collected by a sump Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 4.8cfs and 10.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C5

This basin consists of runoff from residential development and Lorson Boulevard. Runoff will be directed northwesterly to Lorson Boulevard, then westerly in Lorson Boulevard in curb/gutter where it will be collected by an existing 10' Type R inlet near Walleye Dr. For more detailed information, see the design point discussions. The developed flow from this basin is 3.2cfs and 7.0cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C6

This basin consists of runoff from residential development and Lorson Boulevard. Runoff will be directed northwesterly to Lorson Boulevard, then westerly in Lorson Boulevard to Elk Hills Drive, then south to Design Point 10 in curb/gutter where it will be collected by a Type R sump inlet. Runoff from this inlet is routed via the storm drain system to the existing pond C1 in The Hills at Lorson Ranch. For more detailed information, see the design point discussions. The developed flow from this basin is 5.3cfs and 11.6cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin D1.1

This basin consists of runoff from residential development and Crafton Court. Runoff will be directed to Crafton Court, then routed north via curb/gutter in Crafton Court to Design Point 13 and will be collected by a Type R sump inlet. Runoff from this inlet is routed via the storm drain system to the existing pond D2 in Lorson Ranch East Filing No. 1. For more detailed information, see the design point discussions. The developed flow from this basin is 3.8cfs and 8.4cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin D1.2

This basin consists of runoff from residential development and Keynot Court. Runoff will be directed to Keynot Court, then routed north via curb/gutter in Keynot Court to Design Point 14 and will be collected by a Type R sump inlet. Runoff from this inlet is routed via the storm drain system to the existing pond D2 in Lorson Ranch East Filing No. 1. For more detailed information, see the design point discussions. The developed flow from this basin is 6.2cfs and 13.8cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin D1.3

This basin consists of runoff from a small portion of residential development, a portion of the westerly side of Elks Hills Drive, and the south side of Lorson Boulevard. Runoff will be directed northerly, then westerly via curb/gutter in Elks Hills Drive and Lorson Boulevard towards Design Point 47c and will be collected by an existing 10' Type R inlet. Runoff from this inlet is routed via the storm drain system to the existing pond D2 in Lorson Ranch East Filing No. 1. For more detailed information, see the design point discussions. The developed flow from this 0.88 acre basin is 3.2cfs and 5.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin D1.4

This offsite is included for information only and consists of runoff from the north side of Lorson Blvd, backyard runoff from The Hills at Lorson Ranch, and open space runoff. Runoff will be directed southerly, then westerly via curb/gutter in Lorson Boulevard towards Design Point 47d and will be

collected by an existing 10' Type R inlet. Runoff from this inlet is routed via the storm drain system to the existing pond D2 in Lorson Ranch East Filing No. 1. The developed flow from this 1.92 acre basin is 3.5cfs and 7.6cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin D1.5

This basin consists of runoff from the south side of Lorson Blvd, backyard runoff, and open space runoff under the electric transmission line. Runoff will be directed northerly, then westerly via curb/gutter in Lorson Boulevard towards Design Point 12 and will be collected by an existing 10' Type R inlet in Lorson Boulevard. Runoff from this inlet is routed via the storm drain system to the existing pond D2 in Lorson Ranch East Filing No. 1. The developed flow from this basin is 2.6cfs and 9.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin OS-E1.1

This existing offsite basin consists of existing flow from the Peaceful Valley Lake Estates subdivision located to the south of the Hillside at Lorson Ranch site. Runoff is directed overland northwesterly, flow then continues through basin E1.3 to Sawtooth Ridge Way. Flow is routed west via curb/gutter in Sawtooth Ridge Way to Design Point 16 and will be collected by a Type R at-grade inlet. For more detailed information, see the design point discussions. The developed flow from this offsite basin is 2.0cfs and 13.4cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E1.2

This basin consists of runoff from residential development, Hackberry Hill Street, Yamsay Way, and Sawtooth Ridge Way. Runoff will be directed to the interior streets southerly, then westerly via curb/gutter to Design Point 15 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 4.7cfs and 10.4cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E1.3

This basin consists of runoff from large lot residential lots and Sawtooth Ridge Way. Runoff will be directed northwesterly to Sawtooth Ridge Way, then westerly via curb/gutter to Design Point 16 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this 6.39 acre basin is 3.1cfs and 14.2cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E1.4

This basin consists of runoff from residential development and Sawtooth Ridge Way. Runoff will be directed to Sawtooth Ridge Way, then westerly via curb/gutter in Sawtooth Ridge Way to Design Point 17 and will be collected by a Type R sump inlet. Runoff from this inlet is routed via the storm drain system to existing pond E1. For more detailed information, see the design point discussions. The developed flow from this basin is 1.1cfs and 5.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin OS-E2.1

This existing offsite basin consists of existing flow from the Peaceful Valley Lake Estates subdivision located to the south of the Hillside at Lorson Ranch site. Runoff is routed northwesterly via overland and swale flow through basin E2.2 to design point 18. For more detailed information, see the design point discussions. The flow from this 21.39 offsite acre basin is 13.0cfs and 46.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E2.2

This basin consists of runoff from large lot residential lots located to the south and west of Sawtooth Ridge Way. Runoff is routed northwesterly via overland flow to design point 18, then continues to an existing double type D inlet in Lorson Ranch East Filing 4, adjacent to Trappe Drive. For more detailed information, see the design point discussions. The developed flow from this basin is 4.2cfs and 15.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E3

This basin consists of runoff from residential development, Yamsay Way, Hocking Trail and Sawtooth Ridge Way. Runoff will be directed to the interior streets easterly, westerly, and southerly, then flow continues westerly in Sawtooth Ridge Way via curb/gutter through basin E4 to Design Point 19 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 6.9cfs and 15.3cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E4

This basin consists of runoff from residential development, Salt Springs Way and Sawtooth Ridge Way. Runoff will be directed to the interior streets easterly, westerly, and southerly, then flow continues westerly in Sawtooth Ridge Way via curb/gutter to Design Point 19 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 3.0cfs and 6.7cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E5

This basin consists of runoff from residential development, Whiskey Hill Lane, Shuksan Lane and Sawtooth Ridge Way. Runoff will be directed to the interior streets easterly, westerly, and southerly, then flow continues westerly in Sawtooth Ridge Way via curb/gutter to Design Point 20 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 12.0cfs and 26.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E6

This basin consists of runoff from residential development, Sawtooth Ridge Way and Beacon Butte Place. Runoff will be directed to the interior streets, westerly and southerly, then flow continues westerly in Sawtooth Ridge Way, then northerly in Beacon Butte Place via curb/gutter to Design Point 23 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 2.8cfs and 6.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E7

This basin consists of runoff from residential development, Sperry Terrace and Trappe Drive. Runoff will be directed to the interior streets southwesterly, and northwesterly, then flow continues southerly in Sperry Terrace, then westerly in Trappe Drive via curb/gutter to Design Point 25 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 9.1cfs and 20.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E8

This basin consists of runoff from residential development, Sperry Terrace, Elk Hills Drive and Trappe Drive. Runoff will be directed to the interior streets southwesterly, and southeasterly, then flow continues southerly in Sperry Terrace and Elk Hills Drive, then westerly in Trappe Drive via curb/gutter to Design Point 26 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 8.1cfs and 17.8cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E9

This basin consists of runoff from residential development and Trappe Drive. Runoff will be directed northwesterly to Trappe Drive, then westerly in Trappe Drive via curb/gutter to Design Point 28 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 2.5cfs and 5.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E10

This basin consists of runoff from residential development Crafton Court and Trappe Drive. Runoff will be directed to the interior streets southwesterly, and southeasterly, then flow continues southerly in Crafton Court, then westerly in Trappe Drive via curb/gutter to Design Point 29 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 7.2cfs and 16.0cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E11

This basin consists of runoff from residential development, Beacon Butte Terrace and Trappe Drive. Runoff will be directed to Beacon Butte Terrace and northwesterly to Trappe Drive, then routed westerly in Trappe Drive via curb/gutter to Design Point 32 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 5.2cfs and 11.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E12

This basin consists of runoff from residential development, Keynot Court and Trappe Drive. Runoff will be directed to the interior streets then flow continues southerly in Keynot Court, then westerly in Trappe Drive via curb/gutter to Design Point 34 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 7.3cfs and 16.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E13

This basin consists of runoff from residential development and Trappe Drive. Runoff will be directed northwesterly to Trappe Drive, then routed southwesterly in Trappe Drive via curb/gutter to Design Point 36 and will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 1.4cfs and 3.2cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E14

This basin consists of runoff from residential development, Keynot Court and Long Ridge Court. Runoff will be directed southeasterly to Keynot Court, southwesterly and northwesterly to Longridge Court, flows are routed southerly in Keynot Court and westerly in Long Ridge Court via curb/gutter to Design Point 39 and will be collected by a Type R sump inlet. Runoff from this inlet is routed via the storm drain system to existing pond E1. For more detailed information, see the design point discussions. The developed flow from this basin is 4.7cfs and 10.3cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E15

This basin consists of runoff from a small portion of residential development, open space and pond E1. Runoff is routed overland via sheet flow to pond E1. For more detailed information, see the design point discussions. The developed flow from this basin is 3.9cfs and 16.6cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin E16

This basin consists of runoff from Trappe Drive. Runoff is routed southerly and westerly in Trappe Drive via curb/gutter to Basin E1.4 (Lorson Ranch East Fil. 4) and collected by an existing 15' type R inlet in Lorson Ranch East Filing No. 4. This runoff flows to existing full spectrum/WQ Pond E2 constructed as part of Lorson Ranch East Filing No. 4. The developed flow from this basin is 3.5cfs and 6.3cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin F

This basin consists of runoff from a small portion of residential development and runoff reduction area open space, and a ROW tract for future Meridian Road. Runoff is routed easterly and southerly

overland via sheet flow to the east boundary line of Lorson Ranch. For more detailed information, see the design point discussions. The developed flow from this basin is 8.0cfs and 15.9cfs for the 5/100-year storm event. See the appendix for detailed calculations. The future Meridian Road drains east to Upper Williams Creek and water quality for the future road will be determined by that project.

Basin G1

This basin consists of runoff from residential development, Lorson Boulevard, Hackberry Hill Street and Tin Mountain Trail. Runoff will be directed to the interior streets, then routed westerly in Lorson Boulevard and Hackberry Hill Street, and southerly in Tin Mountain Trail via curb/gutter to Design Point 41 where it will be collected by a Type R inlet. For more detailed information, see the design point discussions. The developed flow from this basin is 7.9cfs and 17.3cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin G2

This basin consists of runoff from large residential lots. Runoff will be directed southerly overland via sheet flow across a runoff reduction area before sheet flowing into Peaceful Valley Lake Estates subdivision as in existing conditions. For more detailed information, see the design point discussions. The developed flow from this basin is 2.4cfs and 11.5cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin H1

This basin consists of runoff from large residential lots. Runoff will be directed southerly overland via sheet flow to an existing drainage swale located in Peaceful Valley Estates subdivision. Runoff from Pond H will be outletted via storm drain system to a proposed concrete spreader channel, these flows will then continue to the previously mentioned existing drainage swale. For more detailed information, see the design point discussions. The developed flow from this basin is 4.0cfs and 18.7cfs for the 5/100-year storm event. See the appendix for detailed calculations.

See the Developed Conditions Hydrology Calculations in the back of this report and the Developed Conditions Drainage Map (Map Pocket) for the 5-year and 100-year storm event amounts.

5.0 HYDRAULIC SUMMARY

The sizing of the hydraulic structures and detentions ponds were prepared by using the *StormSewers* and *Hydrographs* computer software programs developed by Intellisolve, which conforms to the methods outlined in the “City of Colorado Springs/El Paso County Drainage Criteria Manual”. Street capacities and Inlets were sized by Denver Urban Drainage’s xcel spreadsheet UD-Inlet.

It is the intent of this drainage report to use the proposed curb/gutter and storm sewer in the streets to convey runoff to detention and water quality ponds then to the East Tributary of Jimmy Camp Creek. Inlet size and location are preliminary only as shown on the storm sewer layout in the appendix. See Appendix C for detailed hydraulic calculations and the storm sewer model.

Table 1: Street Capacities (100-year capacity is only ½ of street)

Street Slope	Residential Local		Residential Collector		Principal Arterial	
	5-year	100-year	5-year	100-year	5-year	100-year
0.5%	6.3	26.4	9.7	29.3	9.5	28.5

5.0%	19.9	33.4	15.2	37.1	15.2	37.1

Note: all flows are in cfs (cubic feet per second)

Design Point 1

Design Point 1 is located in the NE corner of a knuckle in Wahluke Dr and it the total street flow from the east from Basins B1 and B2. The total street flow is 8.9cfs/19.5cfs in the 5/100-year storm events for this basin.

Design Point 2

Design Point 2 is located at the NE corner of a knuckle in Wahluke Drive and accepts flows from Basins B1-B3 and bypass flow from Design Point 41.

(5-year storm)

Tributary Basins: B1+B2+B3 **Inlet/MH Number:** Inlet DP2
Upstream flowby: 0.1cfs from Des. Pt 41 **Total Street Flow:** 11.3cfs

Flow Intercepted: 11.3cfs **Flow Bypassed:** 0
Inlet Size: 20' type R, sump

Street Capacity: Street slope = 1.8%, capacity = 12.0cfs, okay

(100-year storm)

Tributary Basins: B1+B2+B3 **Inlet/MH Number:** Inlet DP2
Upstream flowby: 4.3cfs from Des. Pt 41 **Total Street Flow:** 29.0cfs

Flow Intercepted: 25.4cfs **Flow Bypassed:** 3.6cfs to Des.Pt 4
Inlet Size: 20' type R, sump

Street Capacity: Street slope = 1.8%, capacity = 45.4cfs (half street) is okay

Design Point 3

Design Point 3 is the storm sewer pipe flow in Wahluke Drive. The total pipe flow is 11.3cfs/25.4cfs in the 5/100-year storm events in the storm sewer.

Design Point 4

Design Point 4 is located at the SE corner of a knuckle in Wahluke Drive and accepts flows from Basin B4 and bypass flow from Design Point 2.

(5-year storm)

Tributary Basins: B4
Upstream flowby: 0

Inlet/MH Number: Inlet DP2
Total Street Flow: 4.3cfs

Flow Intercepted: 4.3cfs
Inlet Size: 10' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1.8%, capacity = 12.0cfs, okay

(100-year storm)

Tributary Basins: B4
Upstream flowby: 3.6cfs from Des. Pt 2

Inlet/MH Number: Inlet DP2
Total Street Flow: 13.1cfs

Flow Intercepted: 13.1cfs
Inlet Size: 10' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1.8%, capacity = 45.4cfs (half street) is okay

Design Point 5

Design Point 5 is the storm sewer pipe flow to Pond H. The total pipe flow is 15.6cfs/38.5cfs in the 5/100-year storm events in the storm sewer.

Design Point 5a

Design Point 5a is the total developed outflow from Pond H calculated using the Full Spectrum EDB Xcel design spreadsheet. The total outflow is 1.5cfs/13.1cfs in the 5/100-year storm events in the 18" storm sewer pipe. Equation GB-1 from the Grass Buffer worksheet determines the length of the spreader ($W=Q/.05$) required to convert point discharges into sheet flow to reduce the erosion potential. For a flow of 13.1cfs, the length of the spreader from the storm sewer outfall is required to be 262' long with 1.5" wide openings every 2' along the curb spreader. The curb spreader will be 4' wide with 8" tall curbs. In addition to the curb spreader, the flows will drain and additional 25' overland before exiting the Lorson Ranch property. Also included is a Type 1 distribution MH located in the middle of the spreader channel which is designed to distribute the flows evenly to both sides of the spreader channel. The Type 1 distribution MH has two 6" high x 36" wide openings on the sides that discharge 13.1cfs into the 4' wide concrete spreader channel. Because the pond is located upstream of residential lots to the south, we have included a Type R emergency overflow structure connected to a 24" storm sewer designed to capture the incoming 100-yr developed pond flows (22.5cfs from xcel spreadsheet pond inflow) before flowing over the emergency overflow weir. Even though the 100-year pond inflow from Design Point 5 (38.5cfs) and from the xcel full spectrum spreadsheets (22.5cfs) differ, the Type R overflow weir is able to accommodate either flow. The Type R emergency overflow structure is 10' wide with a 14" high throat opening. The Type R throat opening elevation is above the 100-yr WSEL of the pond of 5810.35 and will flow at a depth of 0.77' deep for 22.5cfs and 1.10' deep for 38.5cfs. The Distribution MH is capable of discharging 22.5cfs through the side openings at a depth of 2.65' inside the manhole. The pond emergency overflow is a standard trapezoid weir with an invert elevation of 5811.90.

Design Point 5b

Design Point 5b is the total developed sheet flow from Pond H and Basin H1 that exits Lorson Ranch on the south property line. The total outflow is $(1.5+4.0) = 5.5$ cfs in the 5-year storm event and

(13.1+18.7) = 31.8cfs in the 100-year storm event flowing offsite to the south. The developed flow matches the existing flow (Ex. Basin H) of 5.5cfs/31.8cfs in the 5/100-year storm events. By using the spreader channel the runoff exiting Lorson Ranch mimics existing conditions.

Design Point 6

Design Point 6 is located on the north side of Hackberry Hill Street east of Salt Spring Way

<u>(5-year storm)</u>	
Tributary Basins: C1,C2	Inlet/MH Number: Inlet DP6
Upstream flowby:	Total Street Flow: 5.9cfs
Flow Intercepted: 5.9cfs	Flow Bypassed:
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 1%, capacity = 9.0cfs, okay	
<u>(100-year storm)</u>	
Tributary Basins: C1,C2	Inlet/MH Number: Inlet DP6
Upstream flowby:	Total Street Flow: 12.9cfs
Flow Intercepted: 10.9cfs	Flow Bypassed: 2.0cfs to Inlet DP10
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 1%, capacity = 37.3cfs (half street) is okay	

Design Point 6a

Design Point 6a is the pipe flow into the existing 24" storm sewer stub from Lorson Blvd constructed as part of The Ridge at Lorson Ranch . The total storm sewer flow is 5.9cfs in the 5-year storm event and 10.9cfs in the 100-year storm event flowing from the south. The allowable flow in the existing 24" storm sewer is 12.8cfs/28.3cfs in the 5/100-year storm events.

Design Point 7

Design Point 7 is located on the south side of Salt Spring Way west of Sperry Terrace

<u>(5-year storm)</u>	
Tributary Basins: C3	Inlet/MH Number: Inlet DP7
Upstream flowby:	Total Street Flow: 7.2cfs
Flow Intercepted: 7.2cfs	Flow Bypassed:
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 3.6%, capacity = 16.7cfs, okay	
<u>(100-year storm)</u>	
Tributary Basins: C3	Inlet/MH Number: Inlet DP7
Upstream flowby:	Total Street Flow: 15.9cfs
Flow Intercepted: 12.5cfs	Flow Bypassed: 3.4cfs to Des. Pt. 8
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 3.6%, capacity = 37.2cfs (half street) is okay	

Design Point 8

Design Point 8 is the total developed flow on the east side of Elk Hills Drive from the south. Flow is from Basin C4 and flowby from Design Point 6 and 7. The total flow from the south is $(0+0+4.8) = 4.8\text{cfs}$ in the 5-year storm event and $(2+3.4+10.5) = 15.9\text{cfs}$ in the 100-year storm event flowing from the south. The street capacity at 1% is okay for minor and major storm events.

(5-year storm)

Tributary Basins: C4
Upstream flowby:

Inlet/MH Number: Inlet DP8
Total Street Flow: 4.8cfs

Flow Intercepted: 2.8cfs
Inlet Size: 5' type R, on-grade

Flow Bypassed: 2.0cfs to Des.Pt.10

Street Capacity: Street slope = 1.%, capacity = 9.0cfs, okay

(100-year storm)

Tributary Basins: C4
Upstream flowby: 5.4cfs from Des. Pt 6/7

Inlet/MH Number: Inlet DP8
Total Street Flow: 15.9cfs

Flow Intercepted: 4.7cfs
Inlet Size: 5' type R, on-grade

Flow Bypassed: 11.2cfs to Des.Pt 10

Street Capacity: Street slope = 1.%, capacity = 37.3cfs (half street) is okay

Design Point 9

Design Point 9 is the total developed flow on the east side of Elk Hills Drive from Lorson Blvd. Flow is from Basin C6 and flowby from Design Point 9a. The total flow from Lorson Blvd is $(0+5.3) = 5.3\text{cfs}$ in the 5-year storm event and $(1.1+11.6) = 12.7\text{cfs}$ in the 100-year storm event flowing from Lorson Blvd. The street capacity at 1% is okay for minor and major storm events.

Design Point 9a (existing inlet)

Design Point 9a is located in the SE corner of Lorson Blvd and Walleye Drive at an existing 10' type R inlet

(5-year storm)

Tributary Basins: C5
Upstream flowby:

Inlet/MH Number: existing 10' inlet
Total Street Flow: 3.2cfs

Flow Intercepted: 3.2cfs
Inlet Size: 10' type R, on-grade

Flow Bypassed:

Street Capacity: Street slope = 1%, capacity = 9.0cfs, okay

(100-year storm)

Tributary Basins: C5
Upstream flowby:

Inlet/MH Number: existing 10' inlet
Total Street Flow: 7.0cfs

Flow Intercepted: 5.9cfs
Inlet Size: 10' type R, on-grade

Flow Bypassed: 1.1cfs to Des. Pt 9

Street Capacity: Street slope = 1%, capacity = 37.3cfs (half street) is okay

Design Point 10

Design Point 10 is located at the SE corner of Salt Spring Way and Lorson Blvd and accepts flows from Design Point 8 and 9.

(5-year storm)

Tributary Basins:

Upstream flowby: 2.0cfs from des.pt.8

Inlet/MH Number: Inlet DP10

Total Street Flow: 7.3cfs

Flow Intercepted: 7.3cfs

Inlet Size: 30' type R, sump

Flow Bypassed: 0

(100-year storm)

Tributary Basins:

Upstream flowby: 11.2cfs from des.pt.8

Inlet/MH Number: Inlet DP10

Total Street Flow: 23.9cfs

Flow Intercepted: 23.9cfs

Inlet Size: 30' type R, sump

Flow Bypassed: 0

Notes: Should this inlet become plugged, runoff will flow west in Lorson Boulevard.

Design Point 10 (pipe flow)

Design Point 10 (pipe flow) is the total flow from Inlet DP8 and DP10 since they are connected by an 18" storm sewer. The total pipe flow is $(2.8+7.3)$ 10.1cfs in the 5-yr storm event and $(4.7+23.9)$ 28.6cfs in the 100-yr storm event.

Design Point 11

Design Point 11 is the pipe flowing into the existing 30" storm sewer stub from Lorson Blvd constructed as part of The Hills at Lorson Ranch. Flow is from Basins C3, C4, C6 from the xcel spreadsheet and runoff from Design Point 6 and Design Point 9a. The total storm sewer flow is $(0+0+15.7) = 15.7$ cfs in the 5-year storm event and $(2+1.1+34.5) = 37.6$ cfs in the 100-year storm event flowing from the south. The allowable flow in the existing 30" storm sewer is 14.3cfs/38.0cfs in the 5/100-year storm events. The 5-year storm is slightly above allowable but the HGL is still below the top of pipe and will not adversely affect downstream pipe flow.

Design Point 12

Design Point 12 is located on Lorson Blvd at an existing 10' Type R inlet constructed as part of The Hills at Lorson Ranch. The inlet was sized to accept 2.6cfs/9.0cfs in the 5/100-year storm events from upstream overland flow and Lorson Blvd. The flow at this design point is from Basin D1.5 and is 2.6cfs/9.9cfs in the 5/100-year storm events. The existing inlet has capacity for this basin.

Design Point 13

Design Point 13 is located at the north end of Crafton Court in a cul-de-sac. The inlet connects to an existing 18" storm sewer with a capacity of 4.6cfs/10.1cfs in the 5/100-year storm events per The Hills fdr.

(5-year storm)

Tributary Basins: D1.1
Upstream flowby: 0

Inlet/MH Number: Inlet DP13
Total Street Flow: 3.8cfs

Flow Intercepted: 3.8cfs
Inlet Size: 5' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1%, capacity = 9.0cfs (half street) is okay

(100-year storm)

Tributary Basins: D1.1
Upstream flowby:

Inlet/MH Number: Inlet DP13
Total Street Flow: 8.4cfs

Flow Intercepted: 8.4cfs
Inlet Size: 5' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1%, capacity = 37.3cfs (half street) is okay
The emergency overflow for this inlet is overland to the northwest to Lorson Boulevard

Design Point 14

Design Point 14 is located at the north end of Keynot Court in a cul-de-sac. The inlet connects to an existing 18" storm sewer with a capacity of 5.9cfs/13.0cfs in the 5/100-year storm events per The Hills fdr. The 5-yr HGL of the storm sewer is 6" below top of pipe and the 100-yr HGL is 3' below finished grade and the pipe has excess capacity for the additional flow.

(5-year storm)

Tributary Basins: D1.2
Upstream flowby: 0

Inlet/MH Number: Inlet DP14
Total Street Flow: 6.2cfs

Flow Intercepted: 6.2cfs
Inlet Size: 10' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1%, capacity = 9.0cfs (half street) is okay

(100-year storm)

Tributary Basins: D1.2
Upstream flowby:

Inlet/MH Number: Inlet DP14
Total Street Flow: 13.8cfs

Flow Intercepted: 13.8cfs
Inlet Size: 10' type R, sump

Flow Bypassed: 0

Street Capacity: Street slope = 1%, capacity = 37.3cfs (half street) is okay
The emergency overflow for this inlet is overland to the northwest to Lorson Boulevard

Design Point 15

Design Point 15 is located on the south side of Sawtooth Ridge Way at Shuksan Lane.

(5-year storm)

Tributary Basins: E1.2
Upstream flowby: 0

Inlet/MH Number: Inlet DP15
Total Street Flow: 4.7cfs

Flow Intercepted: 2.8cfs
Inlet Size: 5' type R, on-grade

Flow Bypassed: 1.9cfs to Des. Pt 16

Street Capacity: Street slope = 1.9%, capacity = 12.0cfs (half street) is okay

(100-year storm)

Tributary Basins: E1.2
Upstream flowby:

Inlet/MH Number: Inlet DP15
Total Street Flow: 10.4cfs

Flow Intercepted: 4.0cfs
Inlet Size: 5' type R, on-grade

Flow Bypassed: 6.4cfs to Des. Pt 16

Street Capacity: Street slope = 1.9%, capacity = 45.4cfs (half street) is okay

Design Point 16

Design Point 16 is located on the south side of Sawtooth Ridge Way at Beacon Butte Place.

(5-year storm)

Tributary Basins: E1.3 + OS-E1.1
Upstream flowby: 1.9cfs from Des.Pt.15

Inlet/MH Number: Inlet DP16
Total Street Flow: 7.0cfs

Flow Intercepted: 7.0cfs
Inlet Size: 25' type R, on-grade

Flow Bypassed: 0

Street Capacity: Street slope = 1.3%, capacity = 10.4cfs (half street) is okay

(100-year storm)

Tributary Basins: E1.3 + OS-E1.1
Upstream flowby: 6.4cfs from Des.Pt.15

Inlet/MH Number: Inlet DP16
Total Street Flow: 34.0cfs

Flow Intercepted: 26.7cfs
Inlet Size: 25' type R, on-grade

Flow Bypassed: 7.3cfs to Des. Pt 17

Street Capacity: Street slope = 1.3%, capacity = 44.0cfs (half street) is okay

Design Point 17

Design Point 17 is located on the west end of Sawtooth Ridge Way at a cul-de-sac.

<u>(5-year storm)</u>	
Tributary Basins: E1.4	Inlet/MH Number: Inlet DP17
Upstream flowby: 0	Total Street Flow: 1.1cfs
Flow Intercepted: 1.1cfs	Flow Bypassed: 0
Inlet Size: 10' type R, sump	
Street Capacity: Street slope = 1.3%, capacity = 10.4cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E1.4	Inlet/MH Number: Inlet DP17
Upstream flowby: 7.3cfs from Des.Pt.16	Total Street Flow: 12.4cfs
Flow Intercepted: 12.4cfs	Flow Bypassed: 0
Inlet Size: 10' type R, sump	
Street Capacity: Street slope = 1.3%, capacity = 44.0cfs (half street) is okay The emergency overflow for this inlet is overland to the west to Des. Pt. 18	

Design Point 18

Design Point 18 is located southeast of Trappe Drive and Horton Drive. An existing double Type D inlet and swale captures overland runoff from Basin E2.2 and Basin OS-E2.1. The total overland flow at this design point is 21.9cfs/ 77.7cfs in the 5/100-year storm events. The existing inlet and swale was designed with a capacity of 26cfs/91cfs in the 5/100-year storm events per Lorson Ranch East Filing 4 fdr. The reason the flow has decreased from the Lorson Ranch East Filing No. 4 fdr is that Sawtooth Ridge Way diverts a portion of the offsite flow into Pond E1. Water quality for Basin E2.2 is provided in Pond E2 in Creekside South at Lorson Ranch.

Design Point 19

Design Point 19 is located on the north side of Sawtooth Ridge Way at Whiskey Hill Lane.

<u>(5-year storm)</u>	
Tributary Basins: E3 + E4	Inlet/MH Number: Inlet DP19
Upstream flowby:	Total Street Flow: 9.1cfs
Flow Intercepted: 8.7cfs	Flow Bypassed: 0.4cfs to Des. Pt 20
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 2.7%, capacity = 14.4cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E3 + E4	Inlet/MH Number: Inlet DP19
Upstream flowby:	Total Street Flow: 20.0cfs
Flow Intercepted: 14.1cfs	Flow Bypassed: 5.9cfs to Des. Pt 20

Flow Intercepted: 13.3cfs

Inlet Size: 15' type R, on-grade

Flow Bypassed: 4.5cfs to Des. Pt 29

Street Capacity: Street slope = 4.3%, capacity = 35.0cfs (half street) is okay

Design Point 27

Design Point 27 is the storm sewer pipe flow from Design Points 25 and 26 in Trappe Drive at Elk Hills Drive. The total pipe flow is 14.9cfs/23.5cfs in the 5/100-year storm events in the storm sewer.

Design Point 28

Design Point 28 is located on the south side of Trappe Drive at Keynot Court.

<u>(5-year storm)</u>	
Tributary Basins: E9	Inlet/MH Number: Inlet DP28
Upstream flowby: 2.2cfs from Des.Pt.25	Total Street Flow: 4.7cfs
Flow Intercepted: 4.5cfs	Flow Bypassed: 0.2cfs to Des. Pt 32
Inlet Size: 10' type R, on-grade	
Street Capacity: Street slope = 4.3%, capacity = 18.0cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E9	Inlet/MH Number: Inlet DP28
Upstream flowby: 9.9cfs from Des.Pt.25	Total Street Flow: 15.4cfs
Flow Intercepted: 9.0cfs	Flow Bypassed: 6.4cfs to Des. Pt 32
Inlet Size: 10' type R, on-grade	
Street Capacity: Street slope = 4.3%, capacity = 35.0cfs (half street) is okay	

Design Point 29

Design Point 29 is located on the north side of Trappe Drive at Keynot Court.

<u>(5-year storm)</u>	
Tributary Basins: E10	Inlet/MH Number: Inlet DP29
Upstream flowby: 0.1cfs from Des.Pt.26	Total Street Flow: 7.3cfs
Flow Intercepted: 7.3cfs	Flow Bypassed: 0cfs to Des. Pt 34
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 3.8%, capacity = 16.7cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E10	Inlet/MH Number: Inlet DP29
Upstream flowby: 4.5cfs from Des.Pt.26	Total Street Flow: 20.5cfs
Flow Intercepted: 14.4cfs	Flow Bypassed: 6.1cfs to Des. Pt 34
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 3.8%, capacity = 37.2cfs (half street) is okay	

Design Point 30

Design Point 30 is the storm sewer pipe flow from Design Points 27, 28, and 29 in Trappe Drive at Keynot Court. The total pipe flow is 26.7cfs/46.9cfs in the 5/100-year storm events in the storm sewer.

Design Point 31

Design Point 31 is the storm sewer pipe flow from Design Points 24 and 30 in Trappe Drive at Beacon Butte Place. The total pipe flow is 60.4cfs/120.2cfs in the 5/100-year storm events in the storm sewer.

Design Point 32

Design Point 32 is located on the south side of Trappe Drive at the electric powerlines

(5-year storm)

Tributary Basins: E11 **Inlet/MH Number:** Inlet DP32
Upstream flowby: 0.2cfs from Des.Pt.23 & 28 **Total Street Flow:** 5.4cfs

Flow Intercepted: 5.4cfs **Flow Bypassed:** 0
Inlet Size: 25' type R, on-grade

Street Capacity: Street slope = 1.5%, capacity = 10.6cfs (half street) is okay

(100-year storm)

Tributary Basins: E11 **Inlet/MH Number:** Inlet DP32
Upstream flowby: 16.4cfs from Des.Pt.23 & 28 **Total Street Flow:** 27.9cfs

Flow Intercepted: 23.9cfs **Flow Bypassed:** 4.0cfs to Des.Pt.36
Inlet Size: 25' type R, on-grade

Street Capacity: Street slope = 1.5%, capacity = 44.2cfs (half street) is okay

Design Point 33

Design Point 33 is the storm sewer pipe flow from Design Points 31 and 32 in Trappe Drive at the electric lines. The total pipe flow is 65.8cfs/144.1cfs in the 5/100-year storm events in the storm sewer.

Design Point 34

Design Point 34 is located on the north side of Trappe Drive west of Beacon Butte Place.

(5-year storm)

Tributary Basins: E12 **Inlet/MH Number:** Inlet DP34
Upstream flowby: 0 **Total Street Flow:** 7.3cfs

Flow Intercepted: 7.3cfs **Flow Bypassed:** 0
Inlet Size: 25' type R, on-grade

Street Capacity: Street slope = 1.5%, capacity = 10.6cfs (half street) is okay

(100-year storm)

Tributary Basins: E12 **Inlet/MH Number:** Inlet DP34
Upstream flowby: 6.1cfs from Des. Pt. 29 **Total Street Flow:** 22.2cfs

Flow Intercepted: 20.6cfs **Flow Bypassed:** 1.6cfs to LRE4 in Trappe
Inlet Size: 25' type R, on-grade

Street Capacity: Street slope = 1.5%, capacity = 44.2cfs (half street) is okay

Design Point 35

Design Point 35 is the storm sewer pipe flow from Design Point 33 and 34. The 100-year flow has been adjusted for time of concentration. See xcel spreadsheet for design point. The total pipe flow is 73.1cfs/157.9cfs in the 5/100-year storm events in the storm sewer.

Design Point 36

Design Point 36 is located on the south side of Trappe Drive at the electric powerlines

<u>(5-year storm)</u>	
Tributary Basins: E13	Inlet/MH Number: Inlet DP36
Upstream flowby: 0	Total Street Flow: 1.4cfs
Flow Intercepted: 1.4cfs	Flow Bypassed: 0
Inlet Size: 10' type R, on-grade	
Street Capacity: Street slope = 4.3%, capacity = 18.0cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E13	Inlet/MH Number: Inlet DP36
Upstream flowby: 4.0cfs from Des.Pt.32	Total Street Flow: 7.2cfs
Flow Intercepted: 6.0cfs	Flow Bypassed: 1.2cfs to LRE4 in Trappe
Inlet Size: 10' type R, on-grade	
Street Capacity: Street slope = 4.3%, capacity = 35.0cfs (half street) is okay	

Design Point 37

Design Point 37 is the storm sewer pipe flow from Design Points 17 and 36 in Trappe Drive at the electric lines. The total pipe flow is 2.5cfs/18.4cfs in the 5/100-year storm events in the storm sewer.

Design Point 38

Design Point 38 is the storm sewer pipe flow into Pond E1 (from the south) from Basins OS-E1.1, E1.2-E1.4, E3-E13 taken from the xcel spreadsheet which accounts for the time of concentrations. The total pipe flow is 75.6cfs/164.2cfs in the 5/100-year storm events in the storm sewer.

Design Point 39

Design Point 39 is located at the west end of Long Ridge Court in a cul-de-sac.

<u>(5-year storm)</u>	
Tributary Basins: E14	Inlet/MH Number: Inlet DP39
Upstream flowby: 0	Total Street Flow: 4.7cfs
Flow Intercepted: 4.7cfs	Flow Bypassed: 0
Inlet Size: 10' type R, sump	
Street Capacity: Street slope = 1%, capacity = 9.0cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: E14	Inlet/MH Number: Inlet DP39
Upstream flowby:	Total Street Flow: 10.3cfs
Flow Intercepted: 10.3cfs	Flow Bypassed: 0
Inlet Size: 10' type R, sump	
Street Capacity: Street slope = 1%, capacity = 37.3cfs (half street) is okay	

Design Point 40

Design Point 40 is pond outflow for Pond E1 calculated at 9.6cfs/36.3cfs in the 5/100-year storm events by the xcel spreadsheet for extended detention basins including water quality. The pond outlet structure connects to an existing 24" storm sewer constructed as part of Lorson Ranch East Filing No. 4 and the allowable storm sewer capacity is 12.8cfs/36.3cfs in the 5/100-year storm events

Design Point 40a

Design Point 40a is the runoff in Trappe Drive and is 3.5cfs/6.3cfs in the 5/100-year storm events. This basin area was included in the final drainage report for Lorson Ranch East Filing No. 4 and the detention/WQ was included in Pond E2 constructed as part of Lorson Ranch East Filing No. 4.

Design Point 41

Design Point 41 is located on the east side of Tin Mountain Trail north of Wahluke Drive.

<u>(5-year storm)</u>	
Tributary Basins: G1	Inlet/MH Number: Inlet DP41
Upstream flowby:	Total Street Flow: 7.9cfs
Flow Intercepted: 7.8cfs to Pond G	Flow Bypassed: 0.1cfs to Des. Pt. 2
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 2.0%, capacity = 12.5cfs (half street) is okay	
<u>(100-year storm)</u>	
Tributary Basins: G1	Inlet/MH Number: Inlet DP41
Upstream flowby:	Total Street Flow: 17.3cfs
Flow Intercepted: 13.0cfs to Pond G	Flow Bypassed: 4.3cfs to Des. Pt. 2
Inlet Size: 15' type R, on-grade	
Street Capacity: Street slope = 2.0%, capacity = 45.5cfs (half street) is okay	

Design Point 42

Design Point 42 is the total developed outflow from Pond G calculated using the Full Spectrum EDB Xcel design spreadsheet. The total outflow is 0.7cfs/8.7cfs in the 5/100-year storm events in the 18" storm sewer pipe. Equation GB-1 from the Grass Buffer worksheet determines the length of the spreader ($W=Q/.05$) required to convert point discharges into sheet flow to reduce the erosion potential. For a flow of 8.7cfs, the length of the spreader from the storm sewer outfall is required to be 175' long with 1.5" wide openings every 2' along the curb spreader. The curb spreader will be 4' wide with 8" tall curbs. The pond emergency overflow is a standard trapezoid weir.

Design Point 43

Design Point 43 is the total developed sheet flow from Pond G and Basin G2 that exits Lorson Ranch on the south property line. The total outflow is $(0.7+2.4) = 3.1$ cfs in the 5-year storm event and $(8.7+11.5) = 20.2$ cfs in the 100-year storm event flowing offsite to the south. The developed flow matches the existing flow (Ex. Basin G) of 3.1cfs/20.2cfs in the 5/100-year storm events. By using the spreader channel the runoff exiting Lorson Ranch mimics existing conditions.

6.0 DETENTION AND WATER QUALITY PONDS

Detention and Storm Water Quality for Hillside at Lorson Ranch is required per El Paso County criteria. We have implemented the Full Spectrum approach for detention per the Denver Urban Drainage Districts specifications. Offsite Ponds C1 and D2 which have been previously constructed will be utilized to treat/detain storm runoff for small portions of this site. The three proposed on-site permanent full spectrum ponds will incorporate storm water quality features and comply with the Lorson Ranch East MDDP. The three proposed ponds will treat runoff from the majority of this site and have been sized and include access roads, outlet pipes, overflow structures, and low flow channels. This drainage report provides design information on the outlet structure, trickle channel, and the forebays.

Full Spectrum Pond Construction Requirements

Pond E1 which has been previously graded will be increased in size and the remaining two ponds will be graded with this development (Pond G, Pond H). Each pond will be discussed in this section including what type of structure is proposed. Structures built under the first plat in Hillside will occur in 2022-2023.

Design calculations for all proposed full spectrum ponds are included in this report. Grading of the ponds is shown on the Early Grading plans for Hillside at Lorson Ranch at this time in the Preliminary Plan submittal. The final design of the full spectrum ponds will consist of an outlet structure, storm sewer outfall, concrete low flow channels, sediment forebays, and overflow weirs. Soil borings, embankment, slope, and compaction requirements for detention ponds can be found in the geotechnical report for the Hillside at Lorson Ranch prepared by RMG.

Detention Pond E1

This is an on-site permanent full spectrum detention pond that includes water quality and discharges downstream to a storm sewer system in Trappe Drive. Pond E1 was graded in 2020 as part of Lorson Ranch East and will be made larger with this grading plan. The outlet Structure, low flow channel, forebays, and overflow wall will be built as part of the early grading plan. Pond E1 is designed in the UDCF Full Spectrum spreadsheets for Water Quality and EURV volumes. The 5-year and 100-year flow rates meet the Lorson East MDDP and have been modeled in the full spectrum worksheets. The outlet structure is a standard full spectrum extended detention basin structure. The full spectrum print outs are in the appendix of this report. See Design Point 40 for discussion on outflow comparisons between the Lorson Ranch East Filing No. 4 and this final design. See map in appendix for watershed areas.

- Watershed Area: 69.2 acres
- Watershed Imperviousness: 52%
- Hydrologic Soils Group B
- Zone 1 WQCV: 1.226ac-ft, WSEL: 5731.75
- Zone 2 EURV: 3.873ac-ft, WSEL: 5733.72, Top outlet structure set at 5733.72, 6'x6' outlet structure with type C grate
- (5-yr): 4.249ac-ft, WSEL: 5733.96, 9.6cfs
- Zone 3 (100-yr): 8.297ac-ft, WSEL: 5736.21, 36.3cfs
- Pipe Outlet: 24" RCP at 1.0%
- Overflow Spillway: 100' wide bottom, elevation=5736.80
- Micropool Elevation: 5728.10

Detention Pond G

This is an on-site permanent full spectrum detention pond that includes water quality and discharges downstream to the south property line of Lorson Ranch. Pond G will be constructed with this grading plan. Pond G is designed in the UDCF Full Spectrum spreadsheets for Water Quality and EURV volumes. The 5-year and 100-year flow rates meet the Lorson East MDDP and have been modeled in the modeled in the full spectrum worksheets. The outlet structure is a standard full spectrum extended detention basin structure and will include an emergency overflow spillway. The full spectrum print outs are in the appendix of this report. See Design Point 43 for discussion on outflow comparisons between the Lorson Ranch East MDDP, existing flows, and this final design. See map in appendix for watershed areas.

- Watershed Area: 4.76 acres
- Watershed Imperviousness: 55%
- Hydrologic Soils Group B
- Zone 1 WQCV: 0.087ac-ft, WSEL: 5838.01
- Zone 2 EURV: 0.283ac-ft, WSEL: 5839.41, Top outlet structure set at 5839.40, 6'x3' outlet structure with type C grate
- (5-yr): 0.286ac-ft, WSEL: 5839.43, 0.7cfs
- Zone 3 (100-yr): 0.354ac-ft, WSEL: 5839.83, 8.7cfs
- Pipe Outlet: 18" RCP at 1.0%
- Overflow Spillway: 10' wide bottom, elevation=5840.00, 4:1 side slopes, flow depth=0.5' 0.5' freeboard
- Micropool Elevation: 5835.77

Detention Pond H

This is an on-site permanent full spectrum detention pond that includes water quality and discharges downstream to the south property line of Lorson Ranch. Pond H will be constructed with this grading plan. Pond H is designed in the UDCF Full Spectrum spreadsheets for Water Quality and EURV volumes. The 5-year and 100-year flow rates meet the Lorson East MDDP and have been modeled in the modeled in the full spectrum worksheets. The outlet structure is a standard full spectrum extended detention basin structure and will include an emergency overflow spillway. The full spectrum print outs are in the appendix of this report. See Design Point 5b for discussion on outflow comparisons between the Lorson Ranch East MDDP, existing flows, and this final design. See map in appendix for watershed areas.

- Watershed Area: 10.41 acres
- Watershed Imperviousness: 55%
- Hydrologic Soils Group B
- Zone 1 WQCV: 0.191ac-ft, WSEL: 5807.35

- Zone 2 EURV: 0.619ac-ft, WSEL: 5809.24, Top outlet structure set at 5809.82, 6'x3' outlet structure with type C grate
- (5-yr): 0.619ac-ft, WSEL: 5809.24, 1.5cfs
- Zone 3 (100-yr): 0.969ac-ft, WSEL: 5810.35, 13.1cfs
- Pipe Outlet: 18" RCP at 1.0%
- Overflow Spillway: 15' wide bottom, elevation=5811.90, 4:1 side slopes, flow depth=0.58' 0.72' freeboard
- Micropool Elevation: 5804.40

Water Quality Design

Water quality will be provided by three offsite existing detention basins and three on-site permanent extended detention basins for the almost all of the PUD area with the exception of Basin H1/Basin G2 which flow south offsite of Lorson Ranch and Basin F which flows east offsite of Lorson Ranch. The "C" basins flow to existing Pond C1 located in The Hills at Lorson Ranch Filing No. 1, the "D" basins flow to existing Pond D2 located in Lorson Ranch East Filing No. 1, and a portion of the "E" basins flow to existing Pond E2 located in Lorson Ranch East Filing No. 4. On-site proposed Ponds E1, H, and G provide on-site detention and WQ for the majority of the proposed areas within this development. See map in appendix for pond areas.

Water Quality for Basin H1 and G2 draining south offsite

Developed runoff from these basins flows south offsite (shallow sheet flow) and does not include a water quality pond. Runoff from these basins is from 2.5-acre lots that are 195' deep. The building envelope is 95' deep and the southern 100 feet of the lot adjacent to Peaceful Valley Lake Estates is in a building setback zone. The Runoff Reduction Method procedure from the Mile High Flood Control District spreadsheet (UD-BMP-V3.07) calculations have been applied to a 100' wide section of each to address water quality provisions for development in these basins (see appendix). The UIA area is 9500sf (100'x95') and the RPA area is 5000sf (100'x50') for a 100' wide section which can then be applied to the remaining lots within the basin. The 50' deep "no-build" area adjacent to Peaceful Valley Lake Estates provides a 100% reduction in the water quality requirements for this basin. Grading within this basin should not channelize flow from backyards and flow should be allowed to pass under any backyard fencing without obstructing or channelizing the overland flow.

Water Quality for Basin F draining east offsite

Developed runoff from this basin flows east offsite (shallow sheet flow) and does not include a water quality pond. Runoff from this basin is from a standard 50'x110' lot with the back 90 feet of the residential lots which flows overland east across a wide open space tract prior to discharging to the east. The Runoff Reduction Method procedure from the Mile High Flood Control District spreadsheet (UD-BMP-V3.07) calculations have been applied to a standard 50' wide lot to address water quality provisions for development in this basin (see appendix). The UIA area is 4500sf (50'x90') and the RPA area is 6250sf (50'x125') per lot which can then be applied to the remaining lots within the basin. The large open space tract provides a 100% reduction in the water quality requirements for this basin. Grading within this basin should not channelize flow from backyards and flow should be allowed to pass under any backyard fencing without obstructing or channelizing the overland flow.

7.0 DRAINAGE AND BRIDGE FEES

Hillside at Lorson Ranch is located within the Jimmy Camp Creek drainage basin which is currently a fee basin in El Paso County and Upper Williams Creek which is an unstudied basin. Current El Paso County regulations require drainage and bridge fees to be paid for platting of land as part of the plat recordation process.

Hillside at Lorson Ranch Filing No. 1 contains 128.328 acres which 85.1 acres is in the JCC drainage basin and 43.228 acres is in the Upper Williams Creek Drainage Basin. 2023 drainage fees are \$23,078, bridge fees are \$1,079 per impervious acre per Resolution 22-442 and 23-35 and the Upper Williams Creek Drainage Basin does not have fees. The drainage and bridge fees are calculated when the final plat is submitted and are due at plat recordation. Lorson Ranch intends to use the Bridge Fee credits for the bridge fees and pay drainage fees unless the Jimmy Camp Creek DBPS drainage fee structure is updated by El Paso County. The following table details the drainage fees for this filing:

Table 7.1: 2023 Drainage/Bridge Fees (85.100ac in JCC, 43.228ac in Upper Williams)

Type of Land Use	Total Area (ac)	Imperviousness	Drainage Fee	Bridge Fee	
Residential Area	54.437	51%	\$640,711	\$29,956	
Large Lots	9.478	11%	\$24,060	\$1,124	
Open Space, Landscape Tracts, (Tracts A-J)	21.185	2%	\$9,778	\$457	
Upper Williams	43.228		0	0	
Total			\$674,549	\$31,537	

Table 7.2: Public Drainage Facility Costs (non-reimbursable)

Item	Quantity	Unit	Unit Cost	Item Total
Rip Rap	150	CY	\$50/CY	\$7,500
Inlets/Manholes	42	EA	\$3000/EA	\$126,000
18" Storm	1108	LF	\$35	\$38,780
24" Storm	2275	LF	\$40	\$91,000
30" Storm	345	LF	\$45	\$106,525
36" Storm	185	LF	\$55	\$10,175
42" Storm	462	LF	\$65	\$30,030
48" Storm	117	LF	\$85	\$9,945
54" Storm	171	LF	\$100	\$17,100
			Subtotal	\$346,055
			Eng/Cont (10%)	\$34,605
			Total Est. Cost	\$380,660

Table 7.3: Lorson Ranch Metro District Drainage Facility Costs (non-reimbursable)

Item	Quantity	Unit	Unit Cost	Item Total
Full Spectrum Ponds and Outlet	3	EA	\$50,000	\$150,000
			Subtotal	\$150,000
			Eng/Cont (15%)	\$22,500
			Total Est. Cost	\$172,500

8.0 FOUR STEP PROCESS

The site has been developed to minimize wherever possible the rate of developed runoff that will leave the site and to provide water quality management for the runoff produced by the site as proposed on the development plan. The following four step process should be considered and incorporated into the storm water collection system and storage facilities where applicable.

Step 1: Employ Runoff Reduction Practices

Hillside at Lorson Ranch has employed several methods of reducing runoff.

- The street configuration was laid out to minimize the length of streets. Many streets are straight and perpendicular resulting in lots with less wasted space.
- There are large open space buffers under the 325' wide electric transmission easement and a "no-build" setback on the south side.
- Construct outlet structures for three Full Spectrum Detention Ponds. The full spectrum detention mimics existing storm discharges and includes water quality.

Step 2: Stabilize Drainageways

East Tributary of Jimmy Camp Creek is a major drainageway located west of this site. In 2014 and in 2018 the East Tributary of JCC was reconstructed and stabilized per county criteria. The design included a natural sand bottom and armored sides.

Step 3: Provide Water Quality Capture Volume

Treatment of the water quality capture volume (WQCV) is required for all new developments. Hillside at Lorson Ranch will construct three full spectrum stormwater extended detention basins which include Water Quality Volumes and WQ outlet structures.

Step 4: Consider Need for Industrial and Commercial BMP's

There are no commercial or industrial areas within this site.

9.0 CONCLUSIONS

This drainage report has been prepared in accordance with the City of Colorado Springs/El Paso County Drainage Criteria Manual. The proposed development and drainage infrastructure will not cause adverse impacts to adjacent properties or properties located downstream. Several key aspects of the development discussed above are summarized as follows:

- Developed runoff will be conveyed via curb/gutter and storm sewer facilities
- The East Tributary of Jimmy Camp Creek has been reconstructed west of this study area
- Bridges over the East Tributary at Lorson Boulevard and Fontaine Boulevard and have been constructed providing access to this site.

- Detention and water quality for this site area will be provided in permanent ponds
- Existing runoff rates into the Upper Williams Creek Drainage basin have been maintained

El Paso County Area, Colorado

56—Nelson-Tassel fine sandy loams, 3 to 18 percent slopes

Map Unit Setting

National map unit symbol: 3690
Elevation: 5,600 to 6,400 feet
Mean annual precipitation: 12 to 14 inches
Mean annual air temperature: 48 to 52 degrees F
Frost-free period: 135 to 155 days
Farmland classification: Not prime farmland

Map Unit Composition

Nelson and similar soils: 55 percent
Tassel and similar soils: 40 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Nelson

Setting

Landform: Hills
Landform position (three-dimensional): Side slope, crest
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Calcareous residuum weathered from interbedded sedimentary rock

Typical profile

A - 0 to 5 inches: fine sandy loam
Ck - 5 to 23 inches: fine sandy loam
Cr - 23 to 27 inches: weathered bedrock

Properties and qualities

Slope: 3 to 12 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to high (0.06 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Very low (about 2.8 inches)

Interpretive groups

Land capability classification (irrigated): 4e
Land capability classification (nonirrigated): 6e

Hydrologic Soil Group: B
Ecological site: R067BY045CO - Shaly Plains
Other vegetative classification: SHALY PLAINS (069AY046CO)
Hydric soil rating: No

Description of Tassel

Setting

Landform: Hills
Landform position (three-dimensional): Side slope, crest
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Calcareous slope alluvium over residuum
weathered from sandstone

Typical profile

A - 0 to 4 inches: fine sandy loam
C - 4 to 10 inches: fine sandy loam
Cr - 10 to 14 inches: weathered bedrock

Properties and qualities

Slope: 3 to 18 percent
Depth to restrictive feature: 6 to 20 inches to paralithic bedrock
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water
(Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Available water supply, 0 to 60 inches: Very low (about 1.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6s
Hydrologic Soil Group: D
Ecological site: R067BY045CO - Shaly Plains
Other vegetative classification: SHALY PLAINS (069AY046CO)
Hydric soil rating: No

Minor Components

Other soils

Percent of map unit: 4 percent
Hydric soil rating: No

Pleasant

Percent of map unit: 1 percent
Landform: Depressions

Hydric soil rating: Yes

Data Source Information

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 19, Aug 31, 2021

El Paso County Area, Colorado

108—Wiley silt loam, 3 to 9 percent slopes

Map Unit Setting

National map unit symbol: 367b

Elevation: 5,200 to 6,200 feet

Mean annual precipitation: 12 to 14 inches

Mean annual air temperature: 48 to 52 degrees F

Frost-free period: 135 to 155 days

Farmland classification: Not prime farmland

Map Unit Composition

Wiley and similar soils: 95 percent

Minor components: 5 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wiley

Setting

Landform: Hills

Landform position (three-dimensional): Side slope

Down-slope shape: Linear

Across-slope shape: Linear

Parent material: Calcareous silty eolian deposits

Typical profile

A - 0 to 4 inches: silt loam

Bt - 4 to 16 inches: silt loam

Bk - 16 to 60 inches: silt loam

Properties and qualities

Slope: 3 to 9 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Well drained

Runoff class: Medium

Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Calcium carbonate, maximum content: 15 percent

Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)

Available water supply, 0 to 60 inches: High (about 11.5 inches)

Interpretive groups

Land capability classification (irrigated): 4e

Land capability classification (nonirrigated): 6e

Hydrologic Soil Group: B

Ecological site: R067BY002CO - Loamy Plains

Other vegetative classification: LOAMY PLAINS (069AY006CO)

Hydric soil rating: No

Minor Components

Other soils

Percent of map unit: 4 percent

Hydric soil rating: No

Pleasant

Percent of map unit: 1 percent

Landform: Depressions

Hydric soil rating: Yes

Data Source Information

APPENDIX C – HYDRAULIC CALCULATIONS

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: Hillside at Lorson Ranch
 Inlet ID: Inlet I-2, DP-2 (B2&B3)

Gutter Geometry (Enter data in the blue cells)																	
Maximum Allowable Width for Spread Behind Curb	$T_{BACK} = 8.0$ ft																
Side Slope Behind Curb (leave blank for no conveyance credit behind curb)	$S_{BACK} = 0.020$ ft/ft																
Manning's Roughness Behind Curb (typically between 0.012 and 0.020)	$n_{BACK} = 0.015$																
Height of Curb at Gutter Flow Line	$H_{CURB} = 6.00$ inches																
Distance from Curb Face to Street Crown	$T_{CROWN} = 17.0$ ft																
Gutter Width	$W = 2.00$ ft																
Street Transverse Slope	$S_x = 0.020$ ft/ft																
Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)	$S_w = 0.083$ ft/ft																
Street Longitudinal Slope - Enter 0 for sump condition	$S_o = 0.000$ ft/ft																
Manning's Roughness for Street Section (typically between 0.012 and 0.020)	$n_{STREET} = 0.017$																
Max. Allowable Spread for Minor & Major Storm	<table border="1" style="display: inline-table; border-collapse: collapse;"> <thead> <tr> <th style="width: 50%;"></th> <th style="width: 50%; text-align: center;">Minor Storm</th> <th style="width: 50%; text-align: center;">Major Storm</th> <th style="width: 50%;"></th> </tr> </thead> <tbody> <tr> <td style="text-align: right;">$T_{MAX} =$</td> <td style="text-align: center;">16.5</td> <td style="text-align: center;">17.0</td> <td style="text-align: right;">ft</td> </tr> <tr> <td style="text-align: right;">$d_{MAX} =$</td> <td style="text-align: center;">6.0</td> <td style="text-align: center;">7.7</td> <td style="text-align: right;">inches</td> </tr> <tr> <td></td> <td style="text-align: center;"><input type="checkbox"/></td> <td style="text-align: center;"><input type="checkbox"/></td> <td></td> </tr> </tbody> </table>		Minor Storm	Major Storm		$T_{MAX} =$	16.5	17.0	ft	$d_{MAX} =$	6.0	7.7	inches		<input type="checkbox"/>	<input type="checkbox"/>	
	Minor Storm	Major Storm															
$T_{MAX} =$	16.5	17.0	ft														
$d_{MAX} =$	6.0	7.7	inches														
	<input type="checkbox"/>	<input type="checkbox"/>

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017

Design Information (Input)	MINOR	MAJOR	
Type of Inlet	CDOT Type R Curb Opening		
Local Depression (additional to continuous gutter depression 'a' from above)	3.00	3.00	inches
Number of Unit Inlets (Grate or Curb Opening)	1	1	
Water Depth at Flowline (outside of local depression)	4.9	6.5	inches
Grate Information	MINOR	MAJOR	<input checked="" type="checkbox"/> Override Depths
Length of a Unit Grate	N/A	N/A	feet
Width of a Unit Grate	N/A	N/A	feet
Area Opening Ratio for a Grate (typical values 0.15-0.90)	N/A	N/A	
Clogging Factor for a Single Grate (typical value 0.50 - 0.70)	N/A	N/A	
Grate Weir Coefficient (typical value 2.15 - 3.60)	N/A	N/A	
Grate Orifice Coefficient (typical value 0.60 - 0.80)	N/A	N/A	
Curb Opening Information	MINOR	MAJOR	
Length of a Unit Curb Opening	10.00	10.00	feet
Height of Vertical Curb Opening in Inches	6.00	6.00	inches
Height of Curb Orifice Throat in Inches	6.00	6.00	inches
Angle of Throat (see USDCM Figure ST-5)	63.40	63.40	degrees
Side Width for Depression Pan (typically the gutter width of 2 feet)	2.00	2.00	feet
Clogging Factor for a Single Curb Opening (typical value 0.10)	0.10	0.10	
Curb Opening Weir Coefficient (typical value 2.3-3.7)	3.60	3.60	
Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)	0.67	0.67	
Low Head Performance Reduction (Calculated)	MINOR	MAJOR	
Depth for Grate Midwidth	N/A	N/A	ft
Depth for Curb Opening Weir Equation	0.24	0.38	ft
Combination Inlet Performance Reduction Factor for Long Inlets	0.46	0.62	
Curb Opening Performance Reduction Factor for Long Inlets	0.86	0.96	
Grated Inlet Performance Reduction Factor for Long Inlets	N/A	N/A	
Total Inlet Interception Capacity (assumes clogged condition)	MINOR	MAJOR	
Q_a	4.7	10.3	cfs
Q_{PEAK REQUIRED}	4.7	10.3	cfs

Inlet Capacity IS GOOD for Minor and Major Storms(>Q PEAK)

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: Hillside at Lorson Ranch
 Inlet ID: Inlet I-41, DP-41 (G1)

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Project: Hillside at Lorson Ranch
Basin ID: Pond E1

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	3.65	1.221	Orifice Plate
Zone 2 (EURV)	5.62	2.638	Rectangular Orifice
Zone 3 (100+1/2WQCV)	7.56	3.412	Weir&Pipe (Restrict)
Total (all zones)		7.271	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)
Underdrain Orifice Diameter =	N/A	inches

Calculated Parameters for Underdrain	
Underdrain Orifice Area =	N/A ft ²
Underdrain Orifice Centroid =	N/A feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate =	3.65	ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing =	14.60	inches
Orifice Plate: Orifice Area per Row =	3.42	sq. inches (use rectangular openings)

Calculated Parameters for Plate	
WQ Orifice Area per Row =	2.375E-02 ft ²
Elliptical Half-Width =	N/A feet
Elliptical Slot Centroid =	N/A feet
Elliptical Slot Area =	N/A ft ²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.22	2.43					
Orifice Area (sq. inches)	3.42	3.42	3.42					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

	Zone 2 Rectangular	Not Selected	
Invert of Vertical Orifice =	3.65	N/A	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice =	5.62	N/A	ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Height =	6.00	N/A	inches
Vertical Orifice Width =	15.67		inches

Calculated Parameters for Vertical Orific	
Zone 2 Rectangular	Not Selected
Vertical Orifice Area =	0.65 N/A
Vertical Orifice Centroid =	0.25 N/A

User Input: Overflow Weir (Dropbox with Flat or Sloped Gate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe)

	Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	5.62	N/A	ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length =	6.00	N/A	feet
Overflow Weir Gate Slope =	0.00	N/A	H:V
Horiz. Length of Weir Sides =	6.00	N/A	feet
Overflow Gate Type =	Type C Gate	N/A	
Debris Clogging % =	50%	N/A	%

Calculated Parameters for Overflow Weir	
Zone 3 Weir	Not Selected
Height of Gate Upper Edge, H ₁ =	5.62 N/A
Overflow Weir Slope Length =	6.00 N/A
Gate Open Area / 100-yr Orifice Area =	8.92 N/A
Overflow Gate Open Area w/o Debris =	25.06 N/A
Overflow Gate Open Area w/ Debris =	12.53 N/A

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	0.00	N/A	ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter =	24.00	N/A	inches
Restrictor Plate Height Above Pipe Invert =	20.10		inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate	
Zone 3 Restrictor	Not Selected
Outlet Orifice Area =	2.81 N/A
Outlet Orifice Centroid =	0.90 N/A
Half-Central Angle of Restrictor Plate on Pipe =	2.31 N/A

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage =	8.20	ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length =	50.00	feet
Spillway End Slopes =	10.00	H:V
Freeboard above Max Water Surface =	0.50	feet

Calculated Parameters for Spillway	
Spillway Design Flow Depth =	1.02 feet
Stage at Top of Freeboard =	9.72 feet
Basin Area at Top of Freeboard =	2.05 acres
Basin Volume at Top of Freeboard =	11.51 acre-ft

micropool=5728.10=stage 0

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF)

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.04 (February 2021)

Project: Hillside at Lorson Ranch
Basin ID: Pond G

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.25	0.087	Orifice Plate
Zone 2 (EURV)	3.64	0.195	Rectangular Orifice
Zone 3 (100+1/2WQCV)	4.91	0.239	Weir&Pipe (Restrict)
Total (all zones)		0.521	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)
Underdrain Orifice Diameter =	N/A	inches

Calculated Parameters for Underdrain	
Underdrain Orifice Area =	N/A ft ²
Underdrain Orifice Centroid =	N/A feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate =	2.25	ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing =	9.00	inches
Orifice Plate: Orifice Area per Row =	0.37	sq. inches (diameter = 11/16 inch)

Calculated Parameters for Plate	
WQ Orifice Area per Row =	2.569E-03 ft ²
Elliptical Half-Width =	N/A feet
Elliptical Slot Centroid =	N/A feet
Elliptical Slot Area =	N/A ft ²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.80	1.60					
Orifice Area (sq. inches)	0.37	0.37	0.37					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

	Zone 2 Rectangular	Not Selected	
Invert of Vertical Orifice =	2.27	N/A	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice =	3.64	N/A	ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Height =	1.00	N/A	inches
Vertical Orifice Width =	12.00	N/A	inches

Calculated Parameters for Vertical Orific	
Zone 2 Rectangular	Not Selected
Vertical Orifice Area =	0.08
Vertical Orifice Centroid =	0.04

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe)

	Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	3.63	N/A	ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length =	6.00	N/A	feet
Overflow Weir Grate Slope =	0.00	N/A	H:V
Horiz. Length of Weir Sides =	3.00	N/A	feet
Overflow Grate Type =	Type C Grate	N/A	
Debris Clogging % =	50%	N/A	%

Calculated Parameters for Overflow Weir	
Zone 3 Weir	Not Selected
Height of Grate Upper Edge, H ₁ =	3.63
Overflow Weir Slope Length =	3.00
Grate Open Area / 100-yr Orifice Area =	7.09
Overflow Grate Open Area w/o Debris =	12.53
Overflow Grate Open Area w/ Debris =	6.26

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	0.00	N/A	ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter =	18.00	N/A	inches
Restrictor Plate Height Above Pipe Invert =	18.00	N/A	inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate	
Zone 3 Restrictor	Not Selected
Outlet Orifice Area =	1.77
Outlet Orifice Centroid =	0.75
Half-Central Angle of Restrictor Plate on Pipe =	3.14

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage =	4.23	ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length =	10.00	feet
Spillway End Slopes =	4.00	H:V
Freeboard above Max Water Surface =	0.50	feet

Calculated Parameters for Spillway		
Spillway Design Flow Depth =	0.50	feet
Stage at Top of Freeboard =	5.23	feet
Basin Area at Top of Freeboard =	0.22	acres
Basin Volume at Top of Freeboard =	0.59	acre-ft

top micropool = 5835.77 = stage 0

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF)

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
Design Storm Return Period =	N/A	N/A	1.19	1.50	1.75	2.00	2.25	2.52
One-Hour Rainfall Depth (in) =	N/A	N/A	0.257	0.361	0.451	0.569	0.666	0.788

CHECKED: RLS

DATE: JULY, 2022
PROJECT NO. 100.065
SHEET NUMBER C9.4
TOTAL SHEETS: 20

NOTE:
AFTER CONCRETE STRUCTURE HAS BEEN POURED
ALL GRATE DIMENSIONS SHALL BE FIELD VERIFIED
PRIOR TO GRATE CONSTRUCTION

OUTLET STRUCTURE, FOREBAY, AND DRAIN CHANNEL NOTES:

- PRIOR TO CONSTRUCTION, CONTRACTOR SHALL PROVIDE SHOP DRAWINGS FOR ALL COMPONENTS OF THE OUTLET STRUCTURE.
 - GRADE 60 REINFORCING STEEL REQUIRED. SEE TABLE FOR THE MINIMUM LAP SPLICE LENGTH FOR REINFORCING BARS. ALL REINFORCING STEEL SHALL HAVE A TWO-INCH MINIMUM CLEARANCE FROM EDGE OF CONCRETE, UNLESS OTHERWISE NOTED.
- | BAR SIZE | #4 | #5 | #6 |
|--------------------|-------|-------|-------|
| MIN. SPLICE LENGTH | 1'-3" | 1'-7" | 2'-0" |
- CONCRETE FOR THE OUTLET STRUCTURE AND FOREBAY SHALL BE CDOT CLASS D CONCRETE.
 - CONCRETE FOR DRAIN CHANNELS SHALL BE CDOT CLASS B CONCRETE
 - EXPANSION JOINT MATERIAL SHALL MEET AASHTO SPECIFICATION M-213. EXPANSION JOINT MATERIAL SHALL BE 1/2" THICK, SHALL EXTEND THE FULL DEPTH OF CONTACT SURFACE AND THE JOINT SHALL BE SEALED, REFER TO DETAILS.
 - ALL EXPOSED CONCRETE CORNERS SHALL HAVE A 3/8" CHAMFER UNLESS OTHERWISE NOTED.
 - SUBGRADE TO BE 12" THICK CLEAN FILL COMPACTED TO 95% STANDARD PROCTOR DENSITY PER ASTM M698 UNDER STRUCTURE.
 - REFER TO POND DETAILS FOR PRESEDIMENTATION/FOREBAY DESIGN.
 - ENGINEER SHALL BE NOTIFIED PRIOR TO BEGINNING CONSTRUCTION OF OUTLET STRUCTURE TO SCHEDULE OBSERVATION VISITS FOR STRUCTURES.

- WQCV WELL-SCREEN NOTES:
- Well-Screen shall be stainless steel and attached by stainless steel bolts along edge of the mounting frame.
 - WQCV Well Screen
 - Type of Screen: Stainless steel #93 Vee Wire (Johnson Vee Wire (tm) Stainless Steel Screen or equivalent with 60% open area)
 - Screen slot opening dimension: 0.139" (Screen #93 Vee Wire Slot Opening)
 - Type and Size of Support Rod: 1E 0.074"x0.50"
 - Spacing of Support Rod (O.C.): 1.0 Inch
 - Total Screen Thickness: 0.655"
 - Carbon Steel Holding Frame Type: 3/4" x 1.0" angle

PROJECT NO. 100.065
SHEET NUMBER **C9.5**
TOTAL SHEETS: 20

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-*Detention, Version 4.04 (February 2021)*

Project: Hillside at Lorson Ranch
Basin ID: Pond H

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.95	0.191	Orifice Plate
Zone 2 (EURV)	4.84	0.426	Rectangular Orifice
Zone 3 (100+1/2WQCV)	6.42	0.523	Weir&Pipe (Restrict)
Total (all zones)		1.140	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)
Underdrain Orifice Diameter =	N/A	inches

Calculated Parameters for Underdrain

Underdrain Orifice Area =	N/A	ft ²
Underdrain Orifice Centroid =	N/A	feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate =	2.95	ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing =	11.80	inches
Orifice Plate: Orifice Area per Row =	0.63	sq. inches (diameter = 7/8 inch)

Calculated Parameters for Plate

WQ Orifice Area per Row =	4.375E-03	ft ²
Elliptical Half-Width =	N/A	feet
Elliptical Slot Centroid =	N/A	feet
Elliptical Slot Area =	N/A	ft ²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.98	1.97					
Orifice Area (sq. inches)	0.63	0.63	0.63					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

	Zone 2 Rectangular	Not Selected	
Invert of Vertical Orifice =	2.95	N/A	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice =	4.84	N/A	ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Height =	3.00	N/A	inches
Vertical Orifice Width =	10.00	N/A	inches

Calculated Parameters for Vertical Orific

	Zone 2 Rectangular	Not Selected
Vertical Orifice Area =	0.21	N/A
Vertical Orifice Centroid =	0.13	N/A

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe)

	Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	5.42	N/A	ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length =	6.00	N/A	feet
Overflow Weir Grate Slope =	0.00	N/A	H:V
Horiz. Length of Weir Sides =	3.00	N/A	feet
Overflow Grate Type =	Type C Grate	N/A	
Debris Clogging % =	50%	N/A	%

Calculated Parameters for Overflow Weir

	Zone 3 Weir	Not Selected
Height of Grate Upper Edge, H ₁ =	5.42	N/A
Overflow Weir Slope Length =	3.00	N/A
Grate Open Area / 100-yr Orifice Area =	7.09	N/A
Overflow Grate Open Area w/o Debris =	12.53	N/A
Overflow Grate Open Area w/ Debris =	6.26	N/A

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	0.00	N/A	ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter =	18.00	N/A	inches
Restrictor Plate Height Above Pipe Invert =	18.00	N/A	inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

	Zone 3 Restrictor	Not Selected
Outlet Orifice Area =	1.77	N/A
Outlet Orifice Centroid =	0.75	N/A
Half-Central Angle of Restrictor Plate on Pipe =	3.14	N/A

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage =	7.50	ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length =	15.00	feet
Spillway End Slopes =	4.00	H:V
Freeboard above Max Water Surface =	0.50	feet

Calculated Parameters for Spillway

Spillway Design Flow Depth =	0.58	feet
Stage at Top of Freeboard =	8.58	feet
Basin Area at Top of Freeboard =	0.49	acres
Basin Volume at Top of Freeboard =	2.09	acre-ft

micropool=5804.40=stage 0

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF)

	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year
Design Storm Return Period =	N/A	N/A	1.19	1.50	1.75	2.00	2.25	2.52
One-Hour Rainfall Depth (in) =	N/A	N/A	0.578	0.811	1.014	1.278	1.496	1.769
CUHP Runoff Volume (acre-ft) =	0.191	0.617	0.578	0.811	1.014	1.278	1.496	1.769
Inflow Hydrograph Volume (acre-ft) =	N/A	N/A	0.578	0.811	1.014	1.278	1.496	1.769
CUHP Predevelopment Peak Q (cfs) =	N/A	N/A	0.8	2.2	3.3	6.2	7.8	9.9
OPTIONAL Override Predevelopment Peak Q (cfs) =	N/A	N/A						
Predevelopment Unit Peak Flow, q (cfs/acre) =	N/A	N/A	0.07	0.21	0.32	0.59	0.75	0.96
Peak Inflow Q (cfs) =	N/A	N/A	7.0	10.0	12.2	16.3	19.1	22.5
Peak Outflow Q (cfs) =	0.1	1.4	1.1	1.5	1.7	5.6	8.6	13.1
Ratio Peak Outflow to Predevelopment Q =	N/A	N/A	N/A	0.7	0.5	0.9	1.1	1.3
Structure Controlling Flow =	Vertical Orifice 1	Vertical Orifice 1	Vertical Orifice 1	Vertical Orifice 1	Vertical Orifice 1	Overflow Weir 1	Overflow Weir 1	Overflow Weir 1
Max Velocity through Gate 1 (fps) =	N/A	N/A	N/A	N/A	N/A	0.3	0.5	0.9
Max Velocity through Gate 2 (fps) =	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Time to Drain 97% of Inflow Volume (hours) =	38	41	42	42	41	39	37	35
Time to Drain 99% of Inflow Volume (hours) =	41	46	47	47	48	47	46	45
Maximum Ponding Depth (ft) =	2.95	4.84	4.14	4.84	5.39	5.68	5.80	5.95

Design Procedure Form: Extended Detention Basin (EDB)

UD-BMP (Version 3.07, March 2018)

Sheet 1 of 3

Designer: R. Schindler
Company: Core Engineering Group
Date: April 13, 2022
Project: Hillside at Lorson Ranch
Location: Pond H - WQ pond

1. Basin Storage Volume

A) Effective Imperviousness of Tributary Area, I_a

B) Tributary Area's Imperviousness Ratio ($i = I_a / 100$)

C) Contributing Watershed Area

D) For Watersheds Outside of the Denver Region, Depth of Average Runoff Producing Storm

E) Design Concept
(Select EURV when also designing for flood control)

F) Design Volume (WQCV) Based on 40-hour Drain Time
($V_{DESIGN} = (1.0 * (0.91 * i^3 - 1.19 * i^2 + 0.78 * i) / 12 * Area)$)

G) For Watersheds Outside of the Denver Region, Water Quality Capture Volume (WQCV) Design Volume
($V_{WQCV\ OTHER} = (d_6 * V_{DESIGN} * 0.43)$)

H) User Input of Water Quality Capture Volume (WQCV) Design Volume
(Only if a different WQCV Design Volume is desired)

I) NRCS Hydrologic Soil Groups of Tributary Watershed
 i) Percentage of Watershed consisting of Type A Soils
 ii) Percentage of Watershed consisting of Type B Soils
 iii) Percentage of Watershed consisting of Type C/D Soils

J) Excess Urban Runoff Volume (EURV) Design Volume
 For HSG A: $EURV_A = 1.68 * i^{1.28}$
 For HSG B: $EURV_B = 1.36 * i^{1.08}$
 For HSG C/D: $EURV_{C/D} = 1.20 * i^{1.08}$

K) User Input of Excess Urban Runoff Volume (EURV) Design Volume
(Only if a different EURV Design Volume is desired)

$I_a =$ %
 $i =$
 Area = ac
 $d_6 =$ in

Choose One

Water Quality Capture Volume (WQCV)
 Excess Urban Runoff Volume (EURV)

$V_{DESIGN} =$ ac-ft
 $V_{DESIGN\ OTHER} =$ ac-ft
 $V_{DESIGN\ USER} =$ ac-ft

$HSG_A =$ %
 $HSG_B =$ %
 $HSG_{C/D} =$ %

$EURV_{DESIGN} =$ ac-ft
 $EURV_{DESIGN\ USER} =$ ac-ft

2. Basin Shape: Length to Width Ratio
(A basin length to width ratio of at least 2:1 will improve TSS reduction.)

$L : W =$: 1

3. Basin Side Slopes

A) Basin Maximum Side Slopes
(Horizontal distance per unit vertical, 4:1 or flatter preferred)

$Z =$ ft / ft

4. Inlet

A) Describe means of providing energy dissipation at concentrated inflow locations:

energy dissipation from storm sewer flow dissipated via a concrete block attenuator located in the forebay.

5. Forebay

A) Minimum Forebay Volume
($V_{MIN} =$ of the WQCV)

B) Actual Forebay Volume

C) Forebay Depth
($D_F =$ inch maximum)

D) Forebay Discharge

i) Undetained 100-year Peak Discharge

ii) Forebay Discharge Design Flow
($Q_F = 0.02 * Q_{100}$)

E) Forebay Discharge Design

F) Discharge Pipe Size (minimum 8-inches)

G) Rectangular Notch Width

$V_{MIN} =$ ac-ft
 $V_F =$ ac-ft
 $D_F =$ in
 $Q_{100} =$ cfs
 $Q_F =$ cfs

Choose One

Berm With Pipe
 Wall with Rect. Notch
 Wall with V-Notch Weir

Flow too small for berm w/ pipe

Calculated $D_P =$ in
 Calculated $W_N =$ in

Design Procedure Form: Extended Detention Basin (EDB)

Sheet 2 of 3

OUTLET STRUCTURE, FOREBAY, AND DRAIN CHANNEL NOTES:

- PRIOR TO CONSTRUCTION, CONTRACTOR SHALL PROVIDE SHOP DRAWINGS FOR ALL COMPONENTS OF THE OUTLET STRUCTURE.
 - GRADE 60 REINFORCING STEEL REQUIRED. SEE TABLE FOR THE MINIMUM LAP SPLICE LENGTH FOR REINFORCING BARS. ALL REINFORCING STEEL SHALL HAVE A TWO-INCH MINIMUM CLEARANCE FROM EDGE OF CONCRETE, UNLESS OTHERWISE NOTED.
- | BAR SIZE | #4 | #5 | #6 |
|--------------------|-------|-------|-------|
| MIN. SPLICE LENGTH | 1'-3" | 1'-7" | 2'-0" |
- CONCRETE FOR THE OUTLET STRUCTURE AND FOREBAY SHALL BE CDOT CLASS D CONCRETE.
 - CONCRETE FOR DRAIN CHANNELS SHALL BE CDOT CLASS B CONCRETE.
 - EXPANSION JOINT MATERIAL SHALL MEET AASHTO SPECIFICATION M-213. EXPANSION JOINT MATERIAL SHALL BE 1/2" THICK, SHALL EXTEND THE FULL DEPTH OF CONTACT SURFACE AND THE JOINT SHALL BE SEALED, REFER TO DETAILS.
 - ALL EXPOSED CONCRETE CORNERS SHALL HAVE A 3/8" CHAMFER UNLESS OTHERWISE NOTED.
 - SUBGRADE TO BE 12" THICK CLEAN FILL COMPACTED TO 95% STANDARD PROCTOR DENSITY PER ASTM M698 UNDER STRUCTURE.
 - REFER TO POND DETAILS FOR PRESEDIMENTATION/FOREBAY DESIGN.
 - ENGINEER SHALL BE NOTIFIED PRIOR TO BEGINNING CONSTRUCTION OF OUTLET STRUCTURE TO SCHEDULE OBSERVATION VISITS FOR STRUCTURES.

WQCV WELL-SCREEN NOTES:

- Well-Screen shall be stainless steel and attached by stainless steel bolts along edge of the mounting frame.
- WQCV Well Screen
 - Type of Screen: Stainless steel #93 Vee Wire (Johnson Vee Wire (tm) Stainless Steel Screen or equivalent with 60% open area)
 - Screen slot opening dimension: 0.139" (Screen #93 Vee Wire Slot Opening)
 - Type and Size of Support Rod: TE 0.074"x0.50"
 - Spacing of Support Rod (O.C.): 1.0 Inch
 - Total Screen Thickness: 0.655"
 - Carbon Steel Holding Frame Type: 3/4" x 1.0" angle
