Re: AT&T Telecommunication Facility Modification
AT&T Site ID: COL02359 Widefield Water Tank Relo / LTE 3C, 4C FNET, 5C, 4T4R / 13380989
Site Address: 82 Widefield Blvd, Colorado Springs, CO 80911

Dear Nina,

AT&T requests your review and approval to modify their existing telecommunication facility. The modifications being made to this stealth facility will provide relief to capacity issues being encountered by upgrading it with the latest LTE technology. This upgrade will improve phone and broadband service to the surrounding community as well as provide service to FirstNet Responders which is new to AT&T's network. The full scope of work is as follows:

- Remove 1 existing antennas per sector – 3 total
- Remove 3 remote radioheads (RRH's) per sector – 9 total
- Install 2 new antennas per sector – 6 total
- Install 4 new RRH's per sector – 12 total
- Remove 2 existing HVAC units
- Install 6 new rectifiers
- Install 2 new 4 ton HVAC units with DC blowers
- Install 6 new cards in existing LTE rack

Please let me know if you have any questions.

Kind regards,

Valerie Cardenas | Real Estate Specialist
