Ryan Howser El Paso County Development Services Department

 RE: Falcon Acres, Final Plat, Water Supply Plan – 2<sup>ND</sup> REVISED NE1/4 Section 4, T14S, R64W, 6th P.M.
 Water Division 2, Water District 10
 Upper Black Squirrel Creek Designated Basin

Dear Mr. Howser,

The following provides a second updated overview of the water supplies that are underlying and appurtenant to a 49.2-acre parcel, generally located in the NE1/4 of the NE1/4 and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West of the 6th P. M., El Paso County ("Subject Property"). This letter is based on amounts of groundwater quantified in Determination Nos. 1145-BD, 1146-BD, and 1147-BD, issued by the Colorado Ground Water Commission on April 16, 2007. This letter provides no opinion on the actual physical supply of groundwater available. This letter is not a title opinion and makes no conclusion about ownership of the Denver Basin groundwater described below.

#### **Determined Annual Amounts**

The following volumes were quantified for domestic, commercial, industrial, irrigation, and replacement supply on the Subject Property. The groundwater in the Laramie-Fox Hills Aquifer is nontributary ("NT"). The groundwater in the Denver, Arapahoe and is not-nontributary ("NNT").

Determination No.	Aquifer	Annual Volume (100 years) (acre-feet)	Annual Volume (300 years) (acre-feet)	Total Volume (acre-feet)
1145-BD	Laramie-Fox Hills (NT)	15.5	5.17	1,550
1146-BD	Arapahoe (NNT 4%)	14.2	4.73	1,420
1147-BD	Denver (NNT)	4.0	1.33	400
1147-BD	Denver (NNT 4%)	0.7	0.23	70

#### Water Supply Plan

The groundwater in the Arapahoe Aquifer has been approved for withdrawal and use according to Determination No. 1146-BD. NNT 4% groundwater does not require an approved replacement plan for use in small-capacity wells. The Arapahoe groundwater will be used in up to four (4) wells, each well withdrawing up to 1.1 acre-feet per year for 300 years, 4.4 acre-feet per year total, and each well will serve up to two lots, each lot receiving:

- 0.3 acre-feet per year for in-house use in 1 single-family home.
- 0.2 acre-feet per year for irrigation of up to 4,000 square-feet of lawn, garden, and trees.
- 0.05 acre-feet per year for water of up to 4 large domestic animals.
- 0.55 acre-feet per year total per lot.

All homes will be served by non-evaporative septic systems. The return flow from all eight (8) homes will be an estimated 2.16 acre-feet per year at full build-out, as follows: 0.27 acre-feet per year per well \* 8 single-family homes = 2.16 acre-feet per year. This exceeds the 4% replacement requirement for use of the Arapahoe Aquifer groundwater.

Applicants have also applied for a replacement plan under Division of Water Resources Receipt No. 10033812 to use Denver Aquifer Well Permit No. 74444-A pursuant to that proposed plan. The well will supply 0.55 acre-feet per year to one lot for the following uses:

- 0.3 acre-feet per year for in-house use in 1 single-family home.
- 0.2 acre-feet per year for irrigation of up to 4,000 square-feet of lawn, garden, and trees.
- 0.05 acre-feet per year for water of up to 4 large domestic animals.

#### Current Supply

There are currently two other Denver Aquifer wells on the Subject Property under Well Permit Nos. 113499 and 211298 (the "Existing Wells"). The Existing Wells are not expected to be used in the subdivision and will be abandoned. The Applicant is in the process of finding a contractor that can assist with the plugging the Existing Wells. Once plugging is complete, Applicant will file the appropriate abandonment forms with the Division of Water Resources.

If you have any questions or comments, please feel free to call.

Sincerely,

HAYES POZNANOVIC KORVER LLC

Fric K Trout

Eric K. Trout

Re: Application for Approval of a Replacement Plan for Thousand Hills Land & Cattle Co., LLC ("Applicant") In the Upper Black Squirrel Creek Designated Ground Water Basin

To Whom it May Concern:

This letter is provided as an attachment to the Application for Approval of a Replacement Plan in the Upper Black Squirrel Creek Designated Ground Water Basin filed on behalf of the Applicant. The application requests approval to use up to 0.55 acre-feet per year for 300 years of not-nontributary Denver Aquifer groundwater underlying 49.2 acres of land located in the NE1/4 of the NE1/4, and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West, also known as 14655 Davis Road, Peyton, El Paso County, CO, as described and shown on **Exhibit A** ("Subject Property"). The Denver Aquifer underlying the Subject Property has been the subject of a prior determination of water rights in Determination No. 1147-BD. The Denver Aquifer groundwater is not-nontributary and requires replacement of actual depletions. The Denver Aquifer groundwater will be used in one (1) well, existing Permit No. 74444-A, on the Subject Property, and Permit No. 74444-A will be re-permitted pursuant to this replacement plan. The well will be used for the following:

- Denver Well will withdraw 0.55 acre-feet per year for:
  - 0.3 acre-feet per year for 1 single-family home
  - 0.2 acre-feet per year for 4,000 sq-ft of irrigation
  - $\circ$  0.05 acre-feet per year for up to 4 large animals

The groundwater will be withdrawn at rates of flow necessary to withdraw the entire annual amount, and the residential in-house use will utilize a non-evaporative septic system, which will be permitted, constructed, and operated pursuant to the specifications of the El Paso County Public Health On-Site Wastewater Treatment System Regulations.

The Denver Aquifer groundwater is not-nontributary and actual depletions associated with the pumping of the well or wells must be replaced. Attached to this letter is a summary of actual depletions over a 300-year pumping period as a percentage of the annual amount withdrawn. After 300 years of pumping the total actual depletion to the designated groundwater basins is 27% of the annual amount withdrawn or 0.149 acre-feet, which is less than the consumption limit of 0.23 acre-feet referenced in the State Engineer's Guidelines for the Upper Black Squirrel Designated Basin.

Re: Application for Approval of a Replacement Plan for Thousand Hills Land & Cattle Co., LLC ("Applicant") In the Upper Black Squirrel Creek Designated Ground Water Basin

To Whom it May Concern:

This letter is provided as an attachment to the Application for Approval of a Replacement Plan in the Upper Black Squirrel Creek Designated Ground Water Basin filed on behalf of the Applicant. The application requests approval to use up to 0.55 acre-feet per year for 300 years of not-nontributary Denver Aquifer groundwater underlying 49.2 acres of land located in the NE1/4 of the NE1/4, and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West, also known as 14655 Davis Road, Peyton, El Paso County, CO, as described and shown on **Exhibit A** ("Subject Property"). The Denver Aquifer underlying the Subject Property has been the subject of a prior determination of water rights in Determination No. 1147-BD. The Denver Aquifer groundwater is not-nontributary and requires replacement of actual depletions. The Denver Aquifer groundwater will be used in one (1) well, existing Permit No. 74444-A, on the Subject Property, and Permit No. 74444-A will be re-permitted pursuant to this replacement plan. The well will be used for the following:

- Denver Well will withdraw 0.55 acre-feet per year for:
  - 0.3 acre-feet per year for 1 single-family home
  - 0.2 acre-feet per year for 4,000 sq-ft of irrigation
  - $\circ$  0.05 acre-feet per year for up to 4 large animals

The groundwater will be withdrawn at rates of flow necessary to withdraw the entire annual amount, and the residential in-house use will utilize a non-evaporative septic system, which will be permitted, constructed, and operated pursuant to the specifications of the El Paso County Public Health On-Site Wastewater Treatment System Regulations.

The Denver Aquifer groundwater is not-nontributary and actual depletions associated with the pumping of the well or wells must be replaced. Attached to this letter is a summary of actual depletions over a 300-year pumping period as a percentage of the annual amount withdrawn. After 300 years of pumping the total actual depletion to the designated groundwater basins is 27% of the annual amount withdrawn or 0.149 acre-feet, which is less than the consumption limit of 0.23 acre-feet referenced in the State Engineer's Guidelines for the Upper Black Squirrel Designated Basin.

Return flow from in-house use in one single-family residences (conservatively estimated to be 0.2 acre-feet per year per residence) is approximately 0.18 acre-feet per year, or approximately 90% of that use. Said return flows exceed the actual maximum depletion of 0.149 acre-feet at 300 years. Jimmy Camp Creek is approximately 22,500 feet west of the Subject Property, as shown on the map attached as **Exhibit A**, and septic system return flows accrue to that stream system. All return flows from use of the not-nontributary Denver Aquifer groundwater will be dedicated to this replacement plan and excess return flows will not be sold or leased to any other party. Operation of the wells, including the existing well, under this replacement plan will not cause material injury to alluvial wells located in stream systems in designated ground water basins.

Suggested terms and conditions for the proposed plan are as follows:

- 1. The total withdrawal from the Denver Aquifer shall not exceed 0.55 acre-feet annually during 300 years of pumping.
- 2. Each well shall have a totalizing flow meter that is kept in good repair, and the quantity of groundwater withdrawn will be monitored annually (Rule 5.6.2.E.9).
- 3. All replacements made to the Upper Black Squirrel Creek Designated Ground Water Basin, in which the wells permitted to operate under the replacement plan approved herein are located, will be aggregated in accordance with Guideline 2007-1.
- 4. Actual depletions caused by pumping of the Denver Aquifer groundwater herein shall be replaced by septic system return flow from use of the water on the Subject Property. Said septic system will be permitted, constructed, and operated pursuant to the specifications of El Paso County Public Health, which will satisfy monitoring of the quality of return flows (Rule 5.6.2.E.9). Excess return flow from use of the water on the Subject Property will be dedicated to this plan and will not be sold or leased to any other party.
- 5. Applicants or successors in interest will operate the terms of the replacement plan. Applicants will submit, upon request, the replacement plan accounting to the Commission demonstrating compliance with the plan.
- 6. Replacement water from in-house return flows will be of a quality so as not to degrade the alluvial water quality, as specified by El Paso County Public Health On-Site Wastewater Treatment System Regulations (Rule 5.6.1.B.1.a).
- 7. The Commission will retain jurisdiction to modify or change the replacement plan to mitigate any injury that may be demonstrated to occur to vested water rights on Black Squirrel Creek.
- 8. Once the replacement plan is approved, it will be recorded in the real property records of El Paso County.

9. An existing Denver Aquifer well will be re-permitted and used, with a septic system, and the approximate cost is \$1,000. The plan will begin to operate when the Denver well begins operating under the plan. (Rule 5.6.2.E.10).

The following is a proposed summary of the replacement plan for publication purposes:

"Applicant has submitted an application for a Denver Aquifer replacement plan to use up to 0.55 acre-feet of groundwater per year through one (1) well to allow in-house use, outdoor irrigation, and watering of domestic animals, on 49.2 acres of land located in the NE1/4 of the NE1/4, and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West, El Paso County, Colorado. After 300 years of pumping, the total actual depletion to the designated basins is 27% of the annual amount withdrawn or 0.149 acre-feet which occurs to Black Squirrel Creek. Annual actual depletions will be replaced by claiming credit for septic system return flows from in-house use of Denver Aquifer groundwater in one (1) single-family residence. Said return flows will be approximately 0.18 acre-feet annually and is sufficient to replace actual depletions to the designated basin stream systems at 300 years of pumping. The replacement water accrues to Jimmy Camp Creek and is sufficient in amount, time, and place to replace actual depletions, and no material injury will occur to vested water rights. The replacement water will be of a quality that would not degrade water quality."

If you have any questions or comments or require additional information for processing this application, please call.

Sincerely,

ric K Trout

Re: Application for Approval of a Replacement Plan for Thousand Hills Land & Cattle Co., LLC ("Applicant") In the Upper Black Squirrel Creek Designated Ground Water Basin

To Whom it May Concern:

This letter is provided as an attachment to the Application for Approval of a Replacement Plan in the Upper Black Squirrel Creek Designated Ground Water Basin filed on behalf of the Applicant. The application requests approval to use up to 0.55 acre-feet per year for 300 years of not-nontributary Denver Aquifer groundwater underlying 49.2 acres of land located in the NE1/4 of the NE1/4, and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West, also known as 14655 Davis Road, Peyton, El Paso County, CO, as described and shown on **Exhibit A** ("Subject Property"). The Denver Aquifer underlying the Subject Property has been the subject of a prior determination of water rights in Determination No. 1147-BD. The Denver Aquifer groundwater is not-nontributary and requires replacement of actual depletions. The Denver Aquifer groundwater will be used in one (1) well, existing Permit No. 74444-A, on the Subject Property, and Permit No. 74444-A will be re-permitted pursuant to this replacement plan. The well will be used for the following:

- Denver Well will withdraw 0.55 acre-feet per year for:
  - 0.3 acre-feet per year for 1 single-family home
  - 0.2 acre-feet per year for 4,000 sq-ft of irrigation
  - $\circ$  0.05 acre-feet per year for up to 4 large animals

The groundwater will be withdrawn at rates of flow necessary to withdraw the entire annual amount, and the residential in-house use will utilize a non-evaporative septic system, which will be permitted, constructed, and operated pursuant to the specifications of the El Paso County Public Health On-Site Wastewater Treatment System Regulations.

The Denver Aquifer groundwater is not-nontributary and actual depletions associated with the pumping of the well or wells must be replaced. Attached to this letter is a summary of actual depletions over a 300-year pumping period as a percentage of the annual amount withdrawn. After 300 years of pumping the total actual depletion to the designated groundwater basins is 27% of the annual amount withdrawn or 0.149 acre-feet, which is less than the consumption limit of 0.23 acre-feet referenced in the State Engineer's Guidelines for the Upper Black Squirrel Designated Basin.

Return flow from in-house use in one single-family residences (conservatively estimated to be 0.2 acre-feet per year per residence) is approximately 0.18 acre-feet per year, or approximately 90% of that use. Said return flows exceed the actual maximum depletion of 0.149 acre-feet at 300 years. Jimmy Camp Creek is approximately 22,500 feet west of the Subject Property, as shown on the map attached as **Exhibit A**, and septic system return flows accrue to that stream system. All return flows from use of the not-nontributary Denver Aquifer groundwater will be dedicated to this replacement plan and excess return flows will not be sold or leased to any other party. Operation of the wells, including the existing well, under this replacement plan will not cause material injury to alluvial wells located in stream systems in designated ground water basins.

Suggested terms and conditions for the proposed plan are as follows:

- 1. The total withdrawal from the Denver Aquifer shall not exceed 0.55 acre-feet annually during 300 years of pumping.
- 2. Each well shall have a totalizing flow meter that is kept in good repair, and the quantity of groundwater withdrawn will be monitored annually (Rule 5.6.2.E.9).
- 3. All replacements made to the Upper Black Squirrel Creek Designated Ground Water Basin, in which the wells permitted to operate under the replacement plan approved herein are located, will be aggregated in accordance with Guideline 2007-1.
- 4. Actual depletions caused by pumping of the Denver Aquifer groundwater herein shall be replaced by septic system return flow from use of the water on the Subject Property. Said septic system will be permitted, constructed, and operated pursuant to the specifications of El Paso County Public Health, which will satisfy monitoring of the quality of return flows (Rule 5.6.2.E.9). Excess return flow from use of the water on the Subject Property will be dedicated to this plan and will not be sold or leased to any other party.
- 5. Applicants or successors in interest will operate the terms of the replacement plan. Applicants will submit, upon request, the replacement plan accounting to the Commission demonstrating compliance with the plan.
- 6. Replacement water from in-house return flows will be of a quality so as not to degrade the alluvial water quality, as specified by El Paso County Public Health On-Site Wastewater Treatment System Regulations (Rule 5.6.1.B.1.a).
- 7. The Commission will retain jurisdiction to modify or change the replacement plan to mitigate any injury that may be demonstrated to occur to vested water rights on Black Squirrel Creek.
- 8. Once the replacement plan is approved, it will be recorded in the real property records of El Paso County.

9. An existing Denver Aquifer well will be re-permitted and used, with a septic system, and the approximate cost is \$1,000. The plan will begin to operate when the Denver well begins operating under the plan. (Rule 5.6.2.E.10).

The following is a proposed summary of the replacement plan for publication purposes:

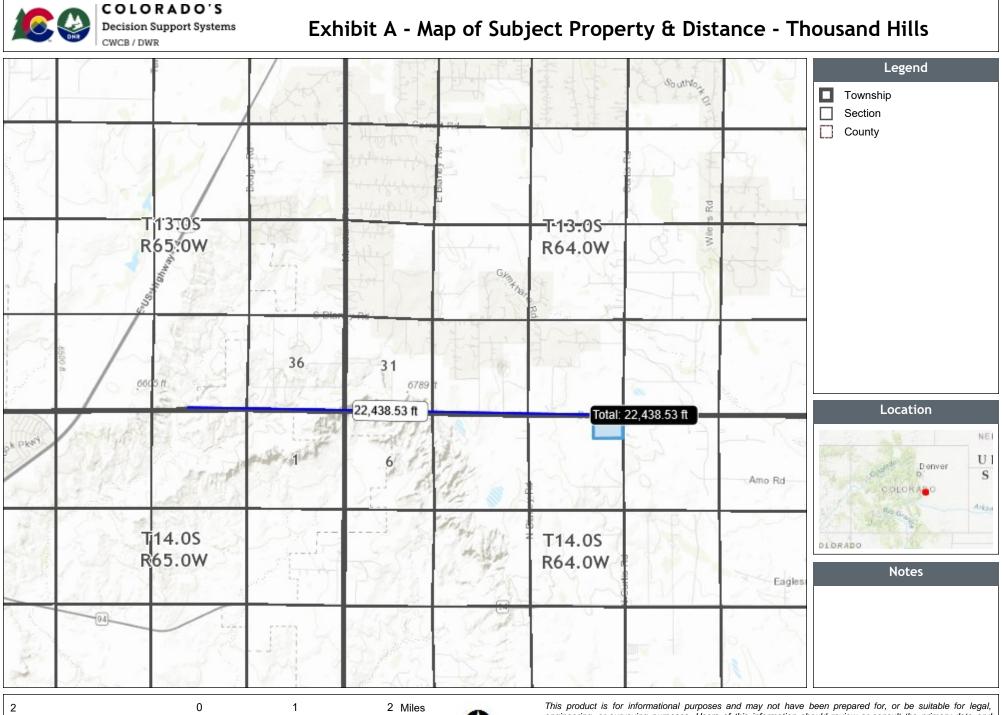

"Applicant has submitted an application for a Denver Aquifer replacement plan to use up to 0.55 acre-feet of groundwater per year through one (1) well to allow in-house use, outdoor irrigation, and watering of domestic animals, on 49.2 acres of land located in the NE1/4 of the NE1/4, and the E1/2 of the E1/2 of the NW1/4 of the NE1/4 of Section 4, Township 14 South, Range 64 West, El Paso County, Colorado. After 300 years of pumping, the total actual depletion to the designated basins is 27% of the annual amount withdrawn or 0.149 acre-feet which occurs to Black Squirrel Creek. Annual actual depletions will be replaced by claiming credit for septic system return flows from in-house use of Denver Aquifer groundwater in one (1) single-family residence. Said return flows will be approximately 0.18 acre-feet annually and is sufficient to replace actual depletions to the designated basin stream systems at 300 years of pumping. The replacement water accrues to Jimmy Camp Creek and is sufficient in amount, time, and place to replace actual depletions, and no material injury will occur to vested water rights. The replacement water will be of a quality that would not degrade water quality."

If you have any questions or comments or require additional information for processing this application, please call.

Sincerely,

ric K Trout

Eric K Trout

#### COLORADO GROUND WATER COMMISSION FINDINGS AND ORDER

IN THE MATTER OF AN APPLICATION FOR DETERMINATION OF WATER RIGHT TO ALLOW THE WITHDRAWAL OF GROUND WATER IN THE UPPER BLACK SQUIRREL CREEK DESIGNATED GROUND WATER BASIN

APPLICANT:	THOUSAND HILLS LAND & CATTLE CO., LLC	and the second s	
AQUIFER:	DENVER		
DETERMINA	TION NO.: 1147-BD		ГСГ-)
\$			<u>``</u>

In compliance with Section 37-90-107(7), C.R.S., and the Designated Basin Rules, 2 CCR 410-1, Thousand Hills Land & Cattle Co., LLC (hereinafter "applicant") submitted an application for determination of water right to allow the withdrawal of designated ground water from the Denver Aquifer.

#### FINDINGS

- 1. The application was received complete by the Colorado Ground Water Commission on January 24, 2007.
- 2. The applicant requests a determination of rights to designated ground water in the Denver Aquifer (hereinafter "aquifer") underlying 49.2 acres, generally described as the NE¼ of the NE¼ and the E½ of the E½ of the NW¼ of the NE¼ of Section 4, Township 14 South, Range 64 West of the 6th Principal Meridian, in El Paso County. According to a signed statement dated January 23, 2007, the applicant owns the 49.2 acres of land, as further described in said affidavit which is attached hereto as Exhibit A, and claims control of the ground water in the aquifer underlying this land area.
- 3. The proposed annual amount of ground water to be allocated and withdrawn from the aquifer for intended beneficial uses is the maximum allowable amount.
- 4. The above described land area overlying the ground water claimed by the applicant is located within the boundaries of the Upper Black Squirrel Creek Designated Ground Water Basin and within the Upper Black Squirrel Creek Ground Water Management District. The Colorado Ground Water Commission (hereinafter "Commission") has jurisdiction.

- 5. The applicant intends to apply the allocated ground water to the following beneficial uses: domestic, commercial, industrial, irrigation, and replacement supply. The applicant states that these uses may be supplied with a central system. The applicant's proposed place of use of the allocated ground water is the above described 49.2 acre land area.
- 6. The replacement water requirement for withdrawal of ground water from the aquifer underlying the 49.2 acres of overlying land claimed by the applicant consists of two different requirements, which effectively divides the claimed land into two areas. The amount of ground water in the aquifer and a maximum annual amount available for allocation will be determined specifically for the aquifer underlying each of the two areas. These areas are designated and described as follows:

Area A – 45.0 acres, generally described as the majority of the applicant's claimed overlying land area, excluding the southwest corner thereof.

Area B – 4.2 acres, generally described as the southwest corner of the applicant's claimed overlying land area.

These two areas are depicted in a map attached hereto as Exhibit B.

7. The quantity of water in the aquifer underlying the 49.2 acres of land claimed by the applicant is as follows: Area A = 803 acre-feet; Area B = 71.4 acre-feet. This determination was based on the following as specified in the Designated Basin Rules:

a. The average specific yield of the saturated permeable material of the aquifer underlying the land under consideration that could yield a sufficient quantity of water that may be extracted and applied to beneficial use is 17 percent.

b. The average thickness of the saturated permeable material of the aquifer underlying the land under consideration that could yield a sufficient quantity of water that may be extracted and applied to beneficial use is as follows: Area A = 105 feet; Area B = 100 feet.

- 8. At this time, there is no substantial artificial recharge that would affect the aquifer within a one hundred year period.
- 9. Pursuant to Section 37-90-107(7), C.R.S., and in accordance with the Designated Basin Rules, the Commission shall allocate ground water in the aquifer based on ownership of the overlying land and an aquifer life of one hundred years. Therefore, the maximum allowed average annual amount of ground water in the aquifer that may be allocated for withdrawal pursuant to the data in the paragraphs above for the 49.2 acres of overlying land claimed by the applicant is as follows: Area A = 8.0 acre-feet; Area B = 0.7 acre-feet.
- 10. In accordance with Rule 5.3.2.4 of the Designated Basin Rules, the maximum average annual amount of ground water available for allocation from the aquifer underlying the 45.0 acre/portion of land claimed by the applicant, designated Area A, is reduced to 4.0 acre-feet to allow for the annual withdrawal of two small capacity wells which are completed in the aquifer, Permit Nos. 74444-A and 113499. Except for these wells, review of the records in the Office of the State Engineer has disclosed that none of the water in the aquifer underlying the land claimed by the applicant has been previously allocated or permitted for withdrawal.
- 11. Pursuant to Section 37-90-107(7)(c)(III), C.R.S., an approved determination of water right shall be considered a final determination of the amount of ground water so determined; except that the Commission shall retain jurisdiction for subsequent adjustment of such amount to conform to the actual local aquifer characteristics from adequate information obtained from well drilling or test holes.
- 12. The ability of wells permitted to withdraw the authorized amount of water from this non-renewable aquifer may be less than the one hundred years upon which the amount of water in the aquifer is allocated, due to anticipated water level declines.

13. In accordance with Rule 5.3.6 of the Designated Basin Rules, it has been determined that the replacement water requirements for withdrawal of ground water from the aquifer underlying the subject land area are as follows:

Area A – Withdrawal of ground water from the aquifer underlying the 45.0 acre portion of land claimed by the applicant will, within one hundred years, deplete the flow of a natural steam or its alluvial aquifer at an annual rate greater than one-tenth of one percent of the annual rate of withdrawal and, therefore, the ground water is considered to be not-nontributary ground water. Also, the location of the 45.0 acre portion of the land claimed by the applicant is closer than one mile from the aquifer contact with the alluvium. Withdrawal of water from the aquifer underlying the 45.0 acre portion of the claimed land area would impact the alluvial aquifer of Upper Black Squirrel Creek or its tributaries, which has been determined to be over-appropriated. Commission approval of a replacement plan - pursuant to Section 37-90-107.5, C.R.S., and Rule 5.6 of the Designated Basin Rules - providing for the actual depletion of the alluvial aquifer and adequate to prevent any material injury to existing water rights, would be required prior to approval of well permits for wells to be located on this portion of the land area to withdraw the allocated ground water from the aquifer.

Area B – Withdrawal of ground water from the aquifer underlying the 4.2 acre portion of the land claimed by the applicant will, within one hundred years, deplete the flow of a natural steam or its alluvial aquifer at an annual rate greater than one tenth of one percent of the annual rate of withdrawal and, therefore, the ground water is considered to be not-nontributary ground water. Also, the location of the 4.2 acre portion of the land claimed by the applicant is farther than one mile from the aquifer contact with the alluvium. The Designated Basin Rules require that at least four percent (4%) of the amount of water withdrawn annually must be returned to the uppermost aquifer in the vicinity of the permitted point or points of withdrawal.

- 14. In accordance with Section 37-90-107(7), C.R.S., upon Commission approval of a determination of water right, well permits for wells to withdraw the authorized amount of water from the aquifer shall be available upon application, subject to the conditions of this determination and the Designated Basin Rules and subject to approval by the Commission.
- 15. On February 15, 2007, in accordance with Rule 9.1 of the Designated Basin Rules, a letter was sent to the Upper Black Squirrel Creek Ground Water Management District requesting written recommendations concerning this application. No written recommendations from the district were received.
- 16. The Commission Staff has evaluated the application relying on the claims to control of the ground water in the aquifer made by the applicant.
- 17. In accordance with Sections 37-90-107(7) and 37-90-112, C.R.S., the application was published in the Ranchland News newspaper on February 22 and March 1, 2007.
- 18. No objections to the determination of water right and proposed allocation of ground water were received within the time limit set by statute.

19. In order to prevent unreasonable impairment to the existing water rights of others within the Upper Black Squirrel Creek Designated Ground Water Basin it is necessary to impose conditions on the determination of water right and proposed allocation of ground water. Under conditions as stated in the following Order, no unreasonable impairment of existing water rights will occur from approval of this determination of water right or from the issuance of well permits for wells to withdraw the authorized amount of allocated ground water from the aquifer.

#### ORDER

In accordance with Section 37-90-107(7), C.R.S., and the Designated Basin Rules, the Colorado Ground Water Commission orders that the application for determination of rights to designated ground water in the Denver Aquifer underlying 49.2 acres of land, generally described as as the NE¼ of the NE¼ and the E½ of the E½ of the NW¼ of the NE¼ of Section 4, Township 14 South, Range 64 West of the 6th Principal Meridian, is approved subject to the following conditions:

- 20. The allowed average annual amount of withdrawal of ground water from the aquifer shall not exceed the following: Area A = 4.0 acre-feet; Area B = 0.7 acre-feet. The allowed maximum annual amount of withdrawal may exceed the allowed average annual amount of withdrawal as long as the total volume of water withdrawn does not exceed the product of the number of years since the date of approval of this determination times the allowed average annual amount of withdrawal.
- 21. To conform to actual aquifer characteristics, the Commission may adjust the allowed average annual amount of ground water to be withdrawn from the aquifer based on analysis of geophysical logs or other site-specific data if such analysis indicates that the initial estimate of the volume of water in the aquifer was incorrect.
- 22. The applicant may pump the allowed average annual amount of withdrawal and the allowed maximum annual amount of withdrawal from one or more wells of a well field in any combination, so long as the total combined withdrawal of the wells does not exceed the amounts described in this Order.
- 23. Replacement water requirements shall be as follows:

a. For the aquifer underlying the above-described 45.0 acres of Area A, Commission approval of a replacement plan, providing for actual depletion of affected alluvial aquifers and adequate to prevent any material injury to existing water rights in such alluvial aquifers is required prior to approval of well permits for wells to be located on the overlying land area to withdraw ground water from the aquifer.

i. Upon withdrawal of the allowed maximum annual amount of withdrawal underlying Area A through wells located within Area A, the allowed maximum annual amount of withdrawal underlying the above-described Area B may be withdrawn through wells located on Area A, subject to the conditions of an approved replacement plan.

b. For the aquifer underlying the above-described 4.2 acres of Area B, at least four percent (4%) of the amount of water withdrawn annually must be returned to the uppermost aquifer in the vicinity of the permitted point or points of withdrawal.

i. Upon withdrawal of the allowed maximum annual amount of withdrawal underlying Area B through wells located within Area B, the allowed maximum annual amount of withdrawal underlying the above-described Area A may be withdrawn through wells located on Area B, subject to the conditions of an approved replacement plan.

- 24. The use of ground water from this allocation shall be limited to the following beneficial uses: domestic, commercial, industrial, irrigation, and replacement supply. The place of use shall be limited to the above described 49.2 acre land area.
- 25. The applicant, or subsequent persons controlling this water right, shall record in the public records of the county in which the claimed overlying land is located notice of transfer of any portion of this water right to another within sixty days after the transfer, so that a title examination of the above described 49.2 acre land area, or any part thereof, shall reveal the changes affecting this water right. Such notice shall consist of a signed and dated deed which indicates the determination number, the aquifer, a description of the above described land area, the annual amount of ground water (acre-feet) transferred, name of the recipient, and the date of transfer.
- 26. Subject to the above conditions, well permits for wells to withdraw the allocated annual amount of water from the aquifer shall be available upon application subject to approval by the Commission and the following conditions:
  - a. The wells shall be located on the above described 49.2 acre overlying land area.

b. The wells must be constructed to withdraw water from only the Denver Aquifer. Upon application for a well permit to construct such a well, the estimated top and base of the aquifer at the proposed well location will be determined by the Commission and indicated on the approved well permit. Plain non-perforated casing must be installed, grouted and sealed to prevent diversion of ground water from other aquifers and the movement of ground water between aquifers.

c. The entire depth of each well must be geophysically logged <u>prior</u> to installing the casing as set forth in Rule 9 of the Statewide Nontributary Ground Water Rules, 2 CCR 402-7.

d. Each well shall be constructed within 200 feet of the location specified on the approved well permit, but must be more than 600 feet from any existing large-capacity well completed in the same aquifer.

e. A totalizing flow meter or other Commission approved measuring device shall be installed on each well and maintained in good working order by the well owner. Annual diversion records shall be collected and maintained by the well owner and submitted to the Commission or the Upper Black Squirrel Creek Ground Water Management District upon their request.

f. The well owner shall mark the well in a conspicuous place with the permit number and the name of the aquifer. The well owner shall take necessary means and precautions to preserve these markings.

27. A copy of this Findings and Order shall be recorded by the applicant in the public records of the county in which the claimed overlying land is located so that a title examination of the above described 49.2 acre overlying land area, or any part thereof, shall reveal the existence of this determination.

Dated this 16th day of April 2007. Hal D. Simpson Executive Director Colorado Ground Water Commission By: Keith Vander Horst, P.E. Supervisor, Designated Basins

#### COLORADO GROUND WATER COMMISSION FINDINGS AND ORDER

IN THE MATTER OF AN APPLICATION FOR DETERMINATION OF WATER RIGHT TO ALLOW THE WITHDRAWAL OF GROUND WATER IN THE UPPER BLACK SQUIRREL CREEK DESIGNATED GROUND WATER BASIN

APPLICANT:	THOUSAND I	HILLS LAND & CATTLE CO., LLC	Contraction of the second	· · · · · ·
AQUIFER	ARAPAHOE			
DETERMINA		1146-BD		
			\$	~

In compliance with Section 37-90-107(7), C.R.S., and the Designated Basin Rules, 2 CCR 410-1, Thousand Hills Land & Cattle Co., LLC (hereinafter "applicant") submitted an application for determination of water right to allow the withdrawal of designated ground water from the Arapahoe Aquifer.

#### FINDINGS

- 1. The application was received complete by the Colorado Ground Water Commission on January 24, 2007.
- 2. The applicant requests a determination of rights to designated ground water in the Arapahoe Aquifer (hereinafter "aquifer") underlying 49.2 acres, generally described as the NE¼ of the NE¼ and the E½ of the E½ of the NW¼ of the NE¼ of Section 4, Township 14 South, Range 64 West of the 6th Principal Meridian, in El Paso County. According to a signed statement dated January 23, 2007, the applicant owns the 49.2 acres of land, as further described in said affidavit which is attached hereto as Exhibit A, and claims control of the ground water in the aquifer underlying this land area.
- 3. The proposed annual amount of ground water to be allocated and withdrawn from the aquifer for intended beneficial uses is the maximum allowable amount.
- 4. The above described land area overlying the ground water claimed by the applicant is located within the boundaries of the Upper Black Squirrel Creek Designated Ground Water Basin and within the Upper Black Squirrel Creek Ground Water Management District. The Colorado Ground Water Commission (hereinafter "Commission") has jurisdiction.
- 5. The applicant intends to apply the allocated ground water to the following beneficial uses: domestic, commercial, industrial, irrigation, and replacement supply. The applicant states that these uses may be supplied with a central system. The applicant's proposed place of use of the allocated ground water is the above described 49.2 acre land area.
- 6. The quantity of water in the aquifer underlying the 49.2 acres of land claimed by the applicant is 1,422 acre-feet. This determination was based on the following as specified in the Designated Basin Rules:

a. The average specific yield of the saturated permeable material of the aquifer underlying the land under consideration that could yield a sufficient quantity of water that may be extracted and applied to beneficial use is 17 percent.

b. The average thickness of the saturated permeable material of the aquifer underlying the land under consideration that could yield a sufficient quantity of water that may be extracted and applied to beneficial use is 170 feet.

- 7. At this time, there is no substantial artificial recharge that would affect the aquifer within a one hundred year period.
- 8. Pursuant to Section 37-90-107(7), C.R.S., and in accordance with the Designated Basin Rules, the Commission shall allocate ground water in the aquifer based on ownership of the overlying land and an aquifer life of one hundred years. Therefore, the maximum allowed average annual amount of ground water in the aquifer that may be allocated for withdrawal pursuant to the data in the paragraphs above for the 49.2 acres of overlying land claimed by the applicant is 14.2 acre-feet.
- A review of the records in the Office of the State Engineer has disclosed that none of the water in the aquifer underlying the land claimed by the applicant has been previously allocated or permitted for withdrawal.
- 10. Pursuant to Section 37-90-107(7)(c)(III), C.R.S., an approved determination of water right shall be considered a final determination of the amount of ground water so determined; except that the Commission shall retain jurisdiction for subsequent adjustment of such amount to conform to the actual local aquifer characteristics from adequate information obtained from well drilling or test holes.
- 11. The ability of wells permitted to withdraw the authorized amount of water from this non-renewable aquifer may be less than the one hundred years upon which the amount of water in the aquifer is allocated, due to anticipated water level declines.
- 12. In accordance with Rule 5.3.6 of the Designated Basin Rules, it has been determined that withdrawal of ground water from the aquifer underlying the land claimed by the applicant will, within one hundred years, deplete the flow of a natural steam or its alluvial aquifer at an annual rate greater than one-tenth of one percent of the annual rate of withdrawal and, therefore, the ground water is considered to be not-nontributary ground water. Also, the location of the land claimed by the applicant is farther than one mile from the aquifer contact with the alluvium. The Designated Basin Rules require that at least four percent (4%) of the amount of water withdrawn annually must be returned to the uppermost aquifer in the vicinity of the permitted point or points of withdrawal.
- 13. In accordance with Section 37-90-107(7), C.R.S., upon Commission approval of a determination of water right, well permits for wells to withdraw the authorized amount of water from the aquifer shall be available upon application, subject to the conditions of this determination and the Designated Basin Rules and subject to approval by the Commission.
- 14. On February 15, 2007, in accordance with Rule 9.1 of the Designated Basin Rules, a letter was sent to the Upper Black Squirrel Creek Ground Water Management District requesting written recommendations concerning this application. No written recommendations from the district were received.

- 15. The Commission Staff has evaluated the application relying on the claims to control of the ground water in the aquifer made by the applicant.
- 16. In accordance with Sections 37-90-107(7) and 37-90-112, C.R.S., the application was published in the Ranchland News newspaper on February 22 and March 1, 2007.
- 17. No objections to the determination of water right and proposed allocation of ground water were received within the time limit set by statute.
- 18. In order to prevent unreasonable impairment to the existing water rights of others within the Upper Black Squirrel Creek Designated Ground Water Basin it is necessary to impose conditions on the determination of water right and proposed allocation of ground water. Under conditions as stated in the following Order, no unreasonable impairment of existing water rights will occur from approval of this determination of water right or from the issuance of well permits for wells to withdraw the authorized amount of allocated ground water from the aquifer.

#### ORDER

In accordance with Section 37-90-107(7), C.R.S., and the Designated Basin Rules, the Colorado Ground Water Commission orders that the application for determination of rights to designated ground water in the Arapahoe Aquifer underlying 49.2 acres of land, generally described as as the NE¼ of the NE¼ and the E½ of the E½ of the NW¼ of the NE¼ of Section 4, Township 14 South, Range 64 West of the 6th Principal Meridian, is approved subject to the following conditions:

- 19. The allowed average annual amount of withdrawal of ground water from the aquifer shall not exceed 14.2 acre-feet. The allowed maximum annual amount of withdrawal may exceed the allowed average annual amount of withdrawal as long as the total volume of water withdrawn does not exceed the product of the number of years since the date of approval of this determination times the allowed average annual amount of withdrawal.
- 20. To conform to actual aquifer characteristics, the Commission may adjust the allowed average annual amount of ground water to be withdrawn from the aquifer based on analysis of geophysical logs or other site-specific data if such analysis indicates that the initial estimate of the volume of water in the aquifer was incorrect.
- 21. The applicant may pump the allowed average annual amount of withdrawal and the allowed maximum annual amount of withdrawal from one or more wells of a well field in any combination, so long as the total combined withdrawal of the wells does not exceed the amounts described in this Order.
- 22. At least four percent (4%) of the amount of water withdrawn annually must be returned to the uppermost aquifer in the vicinity of the permitted point or points of withdrawal.

- 23. The use of ground water from this allocation shall be limited to the following beneficial uses: domestic, commercial, industrial, irrigation, and replacement supply. The place of use shall be limited to the above described 49.2 acre land area.
- 24. The applicant, or subsequent persons controlling this water right, shall record in the public records of the county in which the claimed overlying land is located notice of transfer of any portion of this water right to another within sixty days after the transfer, so that a title examination of the above described 49.2 acre land area, or any part thereof, shall reveal the changes affecting this water right. Such notice shall consist of a signed and dated deed which indicates the determination number, the aquifer, a description of the above described land area, the annual amount of ground water (acre-feet) transferred, name of the recipient, and the date of transfer.
- 25. Subject to the above conditions, well permits for wells to withdraw the allocated annual amount of water from the aquifer shall be available upon application subject to approval by the Commission and the following conditions:

a. The wells shall be located on the above described 49.2 acre overlying land area.

b. The wells must be constructed to withdraw water from only the Arapahoe Aquifer. Upon application for a well permit to construct such a well, the estimated top and base of the aquifer at the proposed well location will be determined by the Commission and indicated on the approved well permit. Plain non-perforated casing must be installed, grouted and sealed to prevent diversion of ground water from other aquifers and the movement of ground water between aquifers.

c. The entire depth of each well must be geophysically logged <u>prior</u> to installing the casing as set forth in Rule 9 of the Statewide Nontributary Ground Water Rules, 2 CCR 402-7.

d. Each well shall be constructed within 200 feet of the location specified on the approved well permit and, except for wells permitted pursuant to this determination of water right, must be more than 600 feet from any existing large-capacity well completed in the same aquifer.

e. A totalizing flow meter or other Commission approved measuring device shall be installed on each well and maintained in good working order by the well owner. Annual diversion records shall be collected and maintained by the well owner and submitted to the Commission or the Upper Black Squirrel Creek Ground Water Management District upon their request.

f. The well owner shall mark the well in a conspicuous place with the permit number and the name of the aquifer. The well owner shall take necessary means and precautions to preserve these markings.

26. A copy of this Findings and Order shall be recorded by the applicant in the public records of the county in which the claimed overlying land is located so that a title examination of the above described 49.2 acre overlying land area, or any part thereof, shall reveal the existence of this determination.

Applicant: Thousand Hills Land & Cattle Co., LLC Aquifer: Arapahoe Determination No.: 1146-BD

Dated this 16th day of April 2007. Hal D. Simpson Executive Director Colorado Ground Water Commission Hal D. Simpson - VO 102. By: Keith Vander Horst, P.E. Supervisor, Designated Basins

# NONTRIBUTARY GROUND WATER LANDOWNERSHIP STATEMENT

I (we) Thousand Hills Land & Cattle Co., LLC

(Name)

claim and say that I (we) am (are) the owner(s) of the following described property consisting of 49.2 \_\_\_\_\_\_\_\_\_ acres in the County of El Paso \_\_\_\_\_\_\_\_, State of Colorado:

Northeast Quarter of the Northeast Quarter and the East Half of the East Half of the Northwest

Quarter of the Northeast Quarter, Section 4, Township 14 South, range 64 West

and, that the ground water sought to be withdrawn from the Arapahoe aquifer underlying the above-described land has not been conveyed or reserved to another, nor has consent been given to it's withdrawal by another.

Further, I (we) claim and say that I (we) have read the statements made herein; know the contents hereof; and that the same are true to my (our) own knowledge.
