Meridian Ranch Fieldhouse  
Traffic Impact Study  
PCD File No. PPR246  
(LSC #S234410)  
August 20, 2024

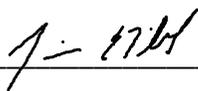

**Traffic Engineer's Statement**

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

**Developer's Statement**

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

RE: Meridian Ranch Fieldhouse  
El Paso County, CO  
Traffic Impact Analysis  
PCD File No.: PPR246  
LSC #S234410

Dear Mr. Nikkel,

In response to your request, LSC Transportation Consultants, Inc. has prepared this traffic impact analysis for the currently-proposed Meridian Ranch Fieldhouse. As shown in Figure 1, the site of the proposed Meridian Ranch fieldhouse is located east of Rainbow Bridge Drive about a half mile north of Londonderry Drive in El Paso County, Colorado.

The fieldhouse facility is proposed as the second recreation center to serve Meridian Ranch residents and will provide space for recreational sports and exercise. Two full-movement vehicular-access points are proposed to Rainbow Bridge Drive. Pedestrian/bicycle connections are also proposed for non-motorized access to the facility from the surrounding Meridian Ranch neighborhoods.

## REPORT CONTENTS

This report is being prepared as part of a submittal to El Paso County. The report identifies the traffic impacts of the proposed site on the streets and roadways in the vicinity of the site and presents recommendations for the transportation system. The report contains the following:

- The existing roadway and traffic conditions in the site's vicinity, including the roadway widths, lane geometries, and traffic controls, etc.;
- The peak-hour turning-movement traffic counts at key intersections in the vicinity of the site;
- The average week-day and peak-hour vehicle trips to be generated by the site;

- The assignment of these trips to the area streets, roadways, and intersections; projections of long-term background traffic volumes;
- Resulting total traffic volumes on the area roadways;
- The projected levels of service at the key area intersections, following buildout; and
- The recommended transportation system, including functional classification of streets and roadways, number of lanes, intersection lane geometry/auxiliary turn lanes, and intersection traffic control.

## **PREVIOUS TRAFFIC REPORTS COMPLETED IN THE AREA**

LSC completed the *Meridian Ranch Sketch Plan 2017 Amendment Traffic Impact Study (TIS)* ([SKP-171](#)) October 3, 2017 and the *Meridian Ranch Sketch Plan 2021 Amendment Traffic Impact Study (SKP-213)* June 25, 2021. Both sketch plan studies assumed this site developed as a community park with four soccer fields and access to Rainbow Bridge Drive.

A list of other traffic studies in the area of study completed within the past five years (that LSC is aware of) is attached for reference. This study accounts for the land use, trip generation, and the roadway network included in these studies.

A traffic report, entitled Eastonville Road Project Conceptual Design Report, was also recently completed for Eastonville Road by Wilson & Company (for El Paso County).

## **LAND USE AND ACCESS**

### **Land Use**

Figure 1 shows the site location. The site for the fieldhouse building, parking areas, and fields is part of a district-owned 19-acre parcel (EPC parcel no. 4220303093). The 2017 Meridian Ranch Sketch Plan showed a “Community Park & Possible Recreation Center” on this parcel. See the attached key pages from the Sketch Plan TIS.

Figure 2 shows the proposed site plan for the Meridian Ranch Fieldhouse. The fieldhouse will provide space for recreational sports and exercise as an extension of the Meridian Ranch Recreation Center located on the northeast of the intersection of Londonderry Drive and Angels Road. The site is planned to include a 53,965-square-foot building that will include an indoor soccer field, a basketball/volleyball court, an exercise studio, a cardio/weights floor, a walking track, a childcare area, offices, and locker rooms. The site plan also includes a future 2,488-square-foot office building and a future outdoor soccer field.

The facility will not be open to the general-public use as a for-profit business, but rather for use by Meridian Ranch residents.

## **Access**

Two full-movement access points are proposed to Rainbow Bridge Drive. The first access will be located about 397 feet southeast of Culebra Peak Drive and the second access will be located about 340 feet southeast of the first access.

Although the 2017 Meridian Ranch Sketch Plan does not show an access point for the “Community Park & Possible Recreation Center”, the locations of the access points to the currently-proposed fieldhouse are generally consistent with those assumed for the same parcel in analysis done for the 2017 Sketch Plan TIA.

## **Pedestrian Facilities**

Figure 3 shows the location of existing bicycle lanes, marked pedestrian crossings, and trail connections in the vicinity of the site. There are currently detached sidewalks along both sides of all the streets in the vicinity of the site. As shown in Figure 2, an existing trail that currently goes through the site to the Rolling Hills Ranch subdivision to the west is planned to be rerouted through the parking areas along new sidewalks.

There are existing pedestrian crosswalk markings on all legs of the all-way, stop-sign-controlled intersection of Londonderry Drive/Rainbow Bridge and a crossing guard is posted at this intersection during school arrival and dismissal times.

## **Sight Distance**

Figure 4 shows an analysis of the required sight-distance at the proposed access points to Rainbow Bridge Drive. Based on a design speed of 25 miles per hour (mph) on Rainbow Bridge Drive and the information contained in Table 2-21 of the *Engineering Criteria Manual (ECM)*, the required intersection sight distance at these intersections is 280 feet. Based on the criteria contained in Table 2-17 of the *ECM*, the required stopping sight distance approaching these intersections is 155 feet. As shown in Figure 3, these criteria can be met at both intersections.

The available sight distance at the access points was measured in the field. The available sight distance at the north access is about 444 feet to the north and 533 feet to the south. The available sight distance at the south access is about 675 feet to the north and 635 feet to the south. The available sight distance exceeds the required sight distance at both access points.

## ROADWAY AND TRAFFIC CONDITIONS

### Area Roadways

The major area roadways within and adjacent to Meridian Ranch are described below. Copies of the 2016 *El Paso County Major Transportation Corridors Plan (MTCP) 2040 Roadway Plan* and 2016 MTCP 2060 Corridor Preservation Plan with the site location identified on them have been attached to this report.

**Londonderry Drive** is a two-lane Collector extending east from the Falcon Hills neighborhood to Eastonville Road. Londonderry Drive has one through lane in each direction and a raised center median. The posted speed limit on Londonderry Drive is 35 miles per hour (mph)

**Rex Road** extends east from Goodson Road to Estate Ridge Drive within the Meridian Ranch development. Rex Road is classified as an Urban Minor Arterial in the *2016 El Paso County Major Transportation Corridors Plan (MTCP) 2040 Roadway Plan*. The posted speed limit on Rex Road is 45 mph between Meridian Road and Mount Gateway Drive and 35 mph east of Mount Gateway Drive. Rex Road is currently being constructed as a 2-lane Urban Minor Arterial from its existing terminus at Estate Ridge Drive to Eastonville Road. The new section is anticipated to be open to traffic by spring 2024. A short section is also proposed to be constructed east of Eastonville Road in the short-term future as part of the approved Grandview Reserve Phase 1 development. The west leg of Rex Road approaching Eastonville Road will be a temporary asphalt connection until a roundabout is constructed as part of the Grandview Reserve Phase 1 development. In the future, Rex Road is planned to be constructed southeast through Grandview Reserve and will intersect US Highway 24 as part of future development within the Grandview Reserve Sketch Plan area, coordination with El Paso County, the Colorado Department of Transportation (CDOT), other local agencies, and associated applications to CDOT.

**Rainbow Bridge Drive** is a two-lane Collector extending north from Lambert Road to Mount Antero Drive. Rainbow Bridge Drive has a posted speed limit of 25 mph north of Londonderry Drive. Rainbow Bridge Drive has a three-lane cross section (one through lane in each direction and a center two-way left-turn lane) from Londonderry Drive to Mount Harvard Drive. The section of Rainbow Bridge Drive adjacent to the site has one through lane in each direction.

**Mount Antero Drive** is an Urban Local which extends northwest from the terminus of Rainbow Bridge Drive to Pyramid Peak Drive.

**Pyramid Peak Drive** is an Urban Local which extends northeast from Mount Evans Drive to just north of Rex Road.

### Existing Traffic Volumes

Figure 5 shows the existing morning, mid-afternoon (3:00-4:00 p.m.), and late-afternoon peak-hour traffic volumes at the key intersections from the attached traffic counts conducted by LSC in December 2023 and April 2024.

### Existing Levels of Service

Level of service (LOS) is a quantitative measure of the level of delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

**Table 1: Level of Service Delay Ranges**

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	Average Control Delay (seconds per vehicle) <sup>(1)</sup>
A	10.0 sec or less	10.0 sec or less
B	10.1-20.0 sec	10.1-15.0 sec
C	20.1-35.0 sec	15.1-25.0 sec
D	35.1-55.0 sec	25.1-35.0 sec
E	55.1-80.0 sec	35.1-50.0 sec
F	80.1 sec or more	50.1 sec or more

(1) For unsignalized intersections, if V/C ratio is greater than 1.0 the level of service is LOS F, regardless of the projected average control delay per vehicle.

Figure 5 presents the results of the existing intersection level of service analysis. The levels of service are based on the unsignalized method of analysis procedures from the *Highway Capacity Manual, 6th Edition* by the Transportation Research Board. The level of service reports are attached.

### Londonderry Drive/Rainbow Bridge Drive

The intersection of Londonderry/Rainbow Bridge is currently all-way, stop-sign controlled. All approaches are currently operating at LOS C or better during the peak hours.

### Rex Road/Pyramid Peak Drive

The intersection of Rex Road/Pyramid Peak is currently two-way, stop-sign controlled. All approaches at this intersection are currently operating at LOS B or better during the peak hours.

### **Londonderry Drive/Lambert Road**

The intersection of Londonderry/Lambert Road is currently all-way, stop-sign controlled. All approaches are currently operating at LOS C or better during the peak hours.

### **Existing Traffic-Signal Warrant Analysis**

The intersection Londonderry Drive/Lambert Road has been analyzed to estimate whether Eight-Hour or Four-Hour Vehicular-Volume Traffic-Signal Warrant thresholds are currently met, based on the existing peak-hour traffic volumes.

Based on the criteria contained in Table 4C-1, Warrant 1, Eight-Hour Vehicular-Volume from the *Manual of Uniform Traffic Control Devices* (MUTCD) December 2023 for an intersection with two lanes on both approaches, the minimum major street volume is 600 vehicles per hour for Condition A – Minimum Vehicular Volume and 900 vehicles per hour for Condition B – Interruption of Continuous Traffic. The major-street volume at the intersection of Londonderry/Lambert is currently 480 vehicles per hour during the morning peak hour, which occurred from 6:45 a.m. to 7:45 a.m., and 359 vehicles per hour during the afternoon peak hour, which occurred from 4:30 p.m. to 5:30 p.m. Both of these volumes are well below the required major street threshold.

Figure 6 shows the analysis of the existing peak-hour traffic volumes based on the MUTCD criteria for Warrant 2, Four-Hour Vehicular Volume. As shown in Figure 6, the existing morning and afternoon peak-hour volumes are both well below the thresholds for this warrant to be met.

Future analysis at this intersection was not included in this TIA because this intersection has already been addressed as part of recent residential subdivisions, the existing traffic volumes at the intersection of Londonderry/Lambert are currently well below the thresholds where a vehicular-volume traffic-signal warrant would be met, and all approaches are currently operating at LOS C or better during the peak hours,

### **2043 BACKGROUND TRAFFIC**

Background traffic is the traffic estimated to be on the study-area streets without consideration of the proposed fieldhouse. It includes through traffic and traffic generated by adjacent/nearby developments.

Figure 7 shows the projected 20-year background traffic volumes for the year 2043. These volumes assume that Rex Road has been extended east to US Highway 24. The 2043 background traffic volumes were based on previous work completed by LSC in the area, including the *Meridian Ranch Sketch Plan 2021 Amendment Traffic Impact Study* ([SKP-213](#)), dated June 25, 2021.

## **TRIP GENERATION**

The site-generated vehicle trips were estimated using nationally-published trip-generation rates for Land Use 495: Recreational Community Center from *Trip Generation, 11th Edition, 2021* by the Institute of Transportation Engineers (ITE). Note that the data for this land use are based on public facilities, but membership at the proposed fieldhouse is planned to be restricted to residents of Meridian Ranch. The ITE estimates may be conservative.

The ITE trip-generation estimates for land use No. 495 are for vehicle trips. Limited/no ITE data is available for trips by alternate transportation modes. To be conservative, no reductions to the trip-generation estimate were made due to mode split. However, due to the location of the proposed site within a residential area and the availability of existing pedestrian and bicycle facilities as shown on Figure 3, it is likely that some visitors will choose to walk or ride their bicycle to and from the site. Table 2 shows the results of the trip-generation estimate. Table 2 also shows the trip-generation estimate from the Sketch Plan report completed by LSC in October 2017.

The proposed fieldhouse, based on ITE trip-generation rates for land use No.495, is estimated to generate about 1,662 vehicle trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. This is about 1,377 more weekdays trips than was assumed for this same parcel in the 2017 *Sketch Plan Update TIS*.

During the morning peak hour, which generally occurs for one hour between 6:30 a.m. and 8:30 a.m., about 72 vehicles would enter and 36 vehicles would exit the site. During the mid-afternoon school peak hour (3:00 – 4:00 p.m.), about 45 vehicles would enter and 54 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:15 p.m. and 6:15 p.m., about 76 vehicles would enter and 80 vehicles would exit.

## **TRIP DISTRIBUTION AND ASSIGNMENT**

### **Trip Distribution**

The area/directional distribution of the trips to be generated by the proposed fieldhouse on the area roadways is an important factor in determining the traffic impacts. Figure 8 shows the overall trip-distribution estimate for the trips estimated to be generated by the proposed fieldhouse. The estimates were based on the following factors: the location of the Meridian Ranch fieldhouse with respect to Meridian Ranch neighborhoods and number of housing units, area schools, and the Meridian Ranch street network. The trip distribution assumes a majority of the trips generated by the proposed fieldhouse would have origins or destinations within the overall Meridian Ranch development. Figure 8 has been updated to show additional detail regarding the estimated percentages of routes to be utilized by vehicle trips paired with existing and future Meridian Ranch residential areas to the north, northeast, and east. The figure adds the percentage of trips that would utilize Rolling Mesa Drive and Sunrise Ridge Drive. Percentages of trips utilizing Rex Road east of Sunrise Ridge Drive and Sunrise Ridge Drive north of Rex Road

are also shown. The specific site-generated traffic-volume estimates at these intersections are presented in Figure 9 (which is covered in the next subsection), but LSC estimates of the specific localized travel routes through these intersections are reflected in the through and turning-movement volume estimates.

Trips projected to pass through the Rex Road/Sunrise Ridge Drive intersection would primarily be eastbound and westbound through movements. Trips arriving from and departing to the east using Rex east of Sunrise Ridge Drive are more likely to turn to/from the south at the Rex/Pyramid Peak to avoid a second "stop" (or turn) at Sunrise Ridge/Pyramid Peak. Some trips paired with the Rolling Hills Ranch residential areas south of Rex Road, which are not included, would likely use a path from Rolling Mesa Drive/Sunrise Ridge Drive rather than turning left onto Rex Road and then making another left onto Sunrise Ridge Drive.

The distribution estimate accounts for diverted or "chained" trips, such as residents traveling to the facility in the morning from home, then departing for a workplace destination after using the facility.

### **Assignment of Site-Generated Trips**

When the trip-distribution percentages (from Figure 8) are applied to the trip-generation estimates (from Table 2), the resulting site-generated traffic volumes can be determined. Figure 9 shows the site-generated traffic volumes.

## **TOTAL TRAFFIC**

### **Short Term**

Figure 10 shows the sum of the existing traffic volumes (from Figure 5) and site-generated traffic volumes (from Figure 9). These volumes represent the short-term impacts of the fieldhouse-generated trips.

### **Long Term**

Figure 11 shows the projected 2043 total traffic volumes. These volumes are the sum of the 2043 background traffic volumes (from Figure 7) and the site-generated traffic volumes (from Figure 9).

## **PROJECTED LEVELS OF SERVICE**

The key area intersections and access points were analyzed to determine the projected levels of service for the short-term and 2043 background and total traffic volumes, based on the unsignalized-intersection analysis procedures from the Highway Capacity Manual and the

signalized-intersection analysis procedures from the Synchro computer program. Figures 7, 10, and 11 show the level of service analysis results. The level of service reports are attached.

### **Londonderry Drive/Rainbow Bridge Drive**

The intersection of Londonderry/Rainbow Bridge is currently all-way, stop-sign controlled. All approaches are projected to operate at LOS D or better during the peak hours through 2043.

### **Rex Road/Pyramid Peak Drive**

The intersection of Rex Road/Pyramid Peak is currently two-way, stop-sign controlled. All movements at this intersection are projected to operate at LOS D or better during the peak hours through 2043.

### **Rainbow Bridge Drive Access Points**

Both full-movement access points to Rainbow Bridge Drive are projected to operate at LOS A for all movements during the peak hours through 2043 as stop-sign-controlled intersections.

## **QUEING ANALYSIS**

Table 3 shows the projected 95<sup>th</sup> percentile queue lengths at the intersection of Londonderry/Rainbow Bridge based on the based on the unsignalized method of analysis procedures from the *Highway Capacity Manual, 6th Edition (HCM)* by the Transportation Research Board. As shown in Table 3, based on the projected 2043 total traffic volumes, the existing eastbound, westbound, and southbound left-turn lanes can accommodate the projected 95<sup>th</sup> percentile queues.

## **AUXILIARY TURN-LANE NEEDS ANALYSIS**

### **Londonderry Drive/Rainbow Bridge Drive**

- Based on the **existing and future** traffic volumes shown in Figure 5 and the criteria contained in the *ECM*, the turning movements have projected turning volumes which fall above the thresholds requiring auxiliary lanes:
  - A westbound right-turn lane on Londonderry Drive approaching Rainbow Bridge Drive
  - A northbound left-turn lane on Rainbow Bridge Drive approaching Londonderry Drive (note: no site-generated traffic would be added to this turning movement).
  - A southbound right-turn lane on Rainbow Bridge Drive approaching Londonderry Drive.

**However**, these turn lanes would not be necessary given site-specific conditions.

Not Needed for mitigation of turning vehicle “speed differential”

- General Background: The auxiliary turn-lane criteria in the ECM was derived from the Colorado State Highway Access Code and auxiliary turn-lane requirements in the Access Code are for the purposes of mitigating “speed-change differential” between through traffic on a major road (without a stop condition) and turning traffic from the major road onto a minor road.
- Auxiliary turn lanes for purposes of mitigating speed differential are not necessary at this intersection, as it is all-way, stop-sign controlled and all vehicles approaching the intersection decelerate to a stop.
- It is very unlikely they will go back to a TWSC or convert to a signalized intersection in the future (not shown in the Master TIS report). Therefore, it is reasonable to assume that the AWSC control will remain.

Conformance with the Master TIS Report

- The current laneage and traffic control matches the Master TIS.
- The projected total entering volume at the intersection is lower than the sketch plan report dated October 17, 2017, with more balanced approach volumes than the sketch plan which showed more east/west and less north/south. The Sketch Plan report showed AWSC for the Long Term.

Not Required for Traffic Operations

- With the AWSC, the LOS is projected to be acceptable with the existing laneage.
- Projected queues aren't anticipated to overspill the existing left-turn bays or result in queuing and blocking issues.

Negatives To Unnecessarily Widening the Street for Additional Vehicle Lanes

- The widening of the street would detract from the streetscape and established pedestrian corridor along the roadway. This community roadway would become more auto centric at the expense of the established pedestrian “space” along the roadway.
- It is not recommended to unnecessarily tear out some of the walking paths and space for peds.
- This would make the AWSC more “driver workload intensive” with more lanes of approach traffic.
- This would result in longer crossing distances for pedestrians.

For these reasons, LSC does not recommend any improvements at this intersection. A deviation request to waive the requirement for adding westbound and southbound right-turn lanes has been submitted as part of this application.

### **Rex Road/Pyramid Peak Road**

- At the intersection of Rex Road/Pyramid Peak Road, the existing traffic volume during the school peak hour (shown in Figure 5) currently exceeds the 50-vph threshold in the ECM above which an eastbound right-turn deceleration lane is prescribed. The threshold is not currently exceeded during the morning and evening peak hours. Regarding the projected traffic impact of this project: This project is anticipated to add less than one vehicle per hour to that turning movement during the peak hours and, further, the diverted-trip component during the afternoon peak may actually reduce the net increase in right-turning trips.
- The minimal additional site-generated eastbound right-turning volume during the school peak hour would represent less than a one-percent increase over the existing turning volume during the school peak hour, which is the time period during which the 50 vph is exceeded.
- Also note that although the existing right-turning volume during the school peak hour currently exceeds the 50 vph threshold, the road has been built and infrastructure is in place - including sidewalk and storm-sewer inlet.
- Based on the above reasons, LSC does not recommend a requirement of this project to add an eastbound right-turn deceleration lane at the intersection of Rex Road/Pyramid Peak Road.

### **Rainbow Bridge Drive/Site Access Points**

- Based on the projected 2043 total traffic volumes shown in Figure 9 and the criteria contained in the ECM, no auxiliary turn lanes are required on Rainbow Bridge Drive approaching the site-access points.

### **FUNCTIONAL CLASSIFICATION**

Figure 11 shows the functional classifications for the roadways in the vicinity of the site. Figure 11 also shows a comparison of the projected 2043 average weekday traffic volumes and the design average weekday traffic volume by classification per the criteria contained in Tables 2-6 and 2-7 of the *El Paso County Engineering Criteria Manual (ECM)* on key street segments. As shown in Figure 10, all the projected average weekday traffic volumes are less than the design volumes.

### **DEVIATIONS**

A deviation request to waive the requirement for adding westbound and southbound right-turn lanes has been submitted as part of this application.

### **CONCLUSIONS AND RECOMMENDATIONS**

- The proposed fieldhouse, based on ITE trip-generation rates for land use No.495, is estimated to generate about 1,662 vehicle trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. This is about 1,377 more weekdays trips than was assumed for this same parcel in the 2017 Sketch Plan Update TIS.

- During the morning peak hour, which generally occurs for one hour between 6:30 a.m. and 8:30 a.m., about nine vehicles would enter and four vehicles would exit the site. During the mid-afternoon school peak hour (3:00 – 4:00 p.m.) about 45 vehicles would enter and 54 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:15 p.m. and 6:15 p.m., about 76 vehicles would enter and 80 vehicles would exit the amendment area.
- The intersection of Londonderry/Rainbow Bridge is projected to continue to operate at a satisfactory level of service as an all-way, stop-sign-controlled intersection through 2043.
- The intersection of Rex/Pyramid Peak is projected to continue to operate at a satisfactory level of service as two-way, stop-sign-controlled intersections through 2043.
- Both proposed full-movement access points to Rainbow Bridge Drive are projected to operate at a satisfactory level of service as two-way, stop-sign-controlled intersections through 2043.
- Please refer to the Auxiliary Turn Lane Analysis for analysis, but no offsite improvements are recommended.

# Meridian Ranch Sketch Plan 2017 Amendment Traffic Impact Analysis (LSC #174350) October 3, 2017

## Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

  
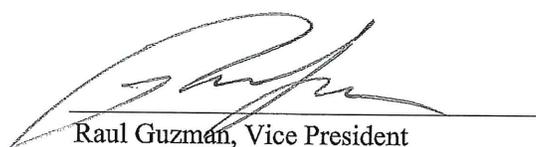

Jeffrey C. Hodsdon, P.E., #31684

  
Date

## Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

Approximate Scale  
1"=1000'

**\*Note:**  
Alternate, and potential new (with this plan) School Pedestrian Crossing locations:  
Depending on coordination between El Paso County Public Works and the School District, one of these crossing locations may be marked and signed as designated school pedestrian crossing locations with MUTCD standard school crosswalk markings, school pedestrian crossing signs, and advance school pedestrian crossing signs. This exhibit shows most possible routes to/from the area schools, however, the school district in cooperation/coordination with El Paso County public works and other departments may designate more specific routes to be used for non-motorized travel to/from the area schools - likely in accordance with latest federal Safe Routes to School and CDOT guidelines. Any specific routes established may affect crossing locations and/or "treatments"/design of crossings.  
  
While these locations are over a mile from Falcon High School, the following enhanced treatments may be considered once the new school is developed, if not as part of a route to Falcon High School. Some or all may be staffed with crossing guards prior to the start time of schools and following the school end times. If trained crossing guards are not an option, or if the ability to staff with crossing guards is limited, one or more pedestrian signal or other actuated devices and or pedestrian refuge islands (or other crossing treatments) may be agreed upon by EPC Public Works and the school district. Additionally, a 20mph school zone(s) may be needed at selected intersections. Flashing beacon systems with 20 mph school speed limit signs would be optimal, but supplemental panels indicating specific times of day could be an option in lieu of beacon systems.
