PRELIMINARY/FINAL DRAINAGE REPORT FOR MIDTOWN COLLECTION AT HANNAH RIDGE FILINGS 1 AND 2 (A Replat of Tracts AA and BB, Hannah Ridge at Feathergrass Subdivision Filing No. 1)

DRAINAGE REPORT STATEMENT

DESIGN ENGINEER'S STATEMENT:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Kyle R. Campbell, Colorado P.E. #29794

FINAL DRAINAGE REPORT FOR MIDTOWN COLLECTION AT HANNAH RIDGE FILINGS 1 AND 2 (A Replat of Tracts AA and BB, Hannah Ridge at Feathergrass Subdivision Filing No. 1)

PURPOSE

This document is the Preliminary and Final Drainage Report for Midtown Collection at Hannah Ridge Filings 1 and 2. The purpose of this report is to identify onsite and offsite drainage patterns, storm sewer, inlet locations, and areas tributary to the site, and to safely route developed storm water runoff to adequate detention and water quality facilities while releasing storm water at or below historic rates and in accordance with all applicable master drainage plans. This report will discuss the proposed storm system to be built with Filings 1 and 2 and discuss the final construction details, and more specifically, the final design details of the proposed sub-regional public detention/water quality facilities located within Filing 1 that will handle the treatment for Filings 1 and 2. Final design information for the Filings No. 1 and 2 detention/water quality facilities are included in this report.

GENERAL DESCRIPTION

The Hannah Ridge at Feathergrass development is a 121.2 acre residential and commercial district within the south half of Section 32, Township 13 South, Range 65 West of the 6th Principal Meridian in El Paso County, Colorado. The site is located on the west side of Akers Drive just north of Constitution Avenue. The existing abandoned Chicago Rock Island and Pacific Railroad sits directly north and west of the site, with Akers Drive bordering the east side and Constitution adjoining the south side of the site. The development includes a total of 345 single-family residences that will be developed in seven filings, as well as one commercial parcel, Tract CC and the two previously anticipated multi-family parcels, Tracts AA and BB, that are now proposed for a small lot PUD single family development. Midtown Collection at Hannah Ridge Filing No. 1 (Tract BB) is 9.123 acres in size and contains 61 small lot, single-family lots. Midtown Collection at Hannah Ridge Filing No. 2 (Tract AA) is 3.260 acres in size and contains 28 proposed small lot, single-family lots.

The average soil condition of the entire site and tributary area to the proposed ponds reflects Hydrologic Group "A" (Blakeland, loamy sand) as determined by the "Soil Survey of El Paso County Area," prepared by the National Cooperative Soil Survey (see map in Appendix).

EXISTING DRAINAGE CONDITIONS

The site is located within the Sand Creek Drainage Basin. More specifically, it is situated in the far south portion of the overall Hannah Ridge at Feathergrass development. These two proposed residential filings are comprised of Basin E9 for Filing No. 1 and Basin F5 for Filing No. 2, as shown on the developed drainage map provided by MVE, Inc. (See Appendix). The abandoned railroad bed along the west edge of the development serves as the westerly basin boundary and Hunter Jumper Drive to the north as the northerly basin boundary. The construction of Filing 2, 3 and 4 improvements included the public storm under Shawnee Drive out-falling into the existing 60" RCP storm that runs parallel to Constitution. The 84" RCP public storm from Hunter Jumper Drive to Hannah Ridge Drive was also previously constructed. The on-site pre-development drainage patterns are generally sheet flowing towards Shawnee Drive where existing inlets intercept the flows and transfer them to an existing stormwater quality only facility located on the east side of Shawnee Drive and constructed with Filing No. 4 (Filing No. 2). Filing No. 1 existing flows generally drain as sheet flow in an easterly direction towards the existing drainage channel west of Hannah Ridge Drive.

DEVELOPED DRAINAGE CONDITIONS

Given some recent changes in City/County Drainage Criteria, the calculations for this development now reflects current criteria for stormwater quality and detention requirements. Proposed Pond 1 will be designed as a full spectrum facility to accommodate the developed flows from the west portion of Filing No. 1 and all of Filing No. 2. Pond 2 will accommodate the easterly portion of Filing No. 1. This will include the design of concrete forebays, concrete trickle channels, concrete micropool and an outlet structure designed to release flows based on full spectrum criteria. The attached developed conditions drainage map contains many design points related to proposed sump conditions. All public Type R inlets have been designed at these various locations to accept both the 5-yr. and 100-yr. developed flows.

All proposed storm facilities within the public Right-of-way will be public with ownership and maintenance by El Paso County. All other proposed storm facilities are within easements or tracts and the proposed Pond 1 and Pond 2 will be owned and maintained by the Hannah Ridge HOA. All existing public storm facilities are located within existing easements as reflected on the drainage map.

Design Point 1A ($Q_5 = 12 \text{ cfs}$ and $Q_{100} = 26 \text{ cfs}$) collect developed and overland flows from Basin A & offsite Basin OSF2 shown in the Hannah Ridge at Feathergrass Filing No. 1 Final Drainage Report. At this sump condition, a 30" FES will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 30" RCP storm sewer in a southerly direction towards the existing 36" storm sewer that outfalls along Constitution Avenue. The total flow within the pipe at this location is given by **Pipe Run 11 ($Q_5 = 12 \text{ cfs}$ and $Q_{100} = 26 \text{ cfs}$)**. The emergency overflow route at this location is in the easterly direction in Tract A directly into a drainage tract that will route the flows towards Constitution Avenue. Basin A contains 0.48 acres and the developed runoff will be untreated as it outfalls into the existing storm sewer system. This acreage is below the 1 acre per filing requirement for developed flows without treatment.

Design Point 1 ($Q_5 = 3 \text{ cfs}$ and $Q_{100} = 5 \text{ cfs}$) collect developed flows from Basin B. At this sump condition, a 5' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 18" RCP storm sewer in a southerly direction towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 1 ($Q_5 = 3 \text{ cfs}$ and $Q_{100} = 5 \text{ cfs}$)**. The emergency overflow route at this location is in the southerly direction in Tract A directly into a drainage tract that will route the flows towards Constitution Avenue.

Design Point 2 ($Q_5 = 2 \text{ cfs}$ and $Q_{100} = 3 \text{ cfs}$) and **Design Point 3** ($Q_5 = 1 \text{ cfs}$ and $Q_{100} = 2 \text{ cfs}$) collect developed flows from Basins C & D. At this sump condition, a 5' and a 5' Type R sump inlets, respectively, will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and then be conveyed via a 18" RCP storm

sewer towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 3 ($Q_5 = 3$ cfs and $Q_{100} = 6$ cfs)**. The emergency overflow route at this location is via Tract A directly and then to Constitution Avenue. **Pipe Run 4 ($Q_5 = 6$ cfs and $Q_{100} = 11$ cfs)** represents the combined pipe flows from Design Points 1-3. This 24" RCP storm sewer will route these combined developed flows directly into Pond 1. This pond inflow is designated later in this report.

Design Point 4 ($Q_5 = 1$ cfs and $Q_{100} = 2$ cfs) collects developed flows from Basin F. At this sump condition, a 5' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows being collected have a maximum ponding depth of 1.0' and then be conveyed via a 18" RCP storm sewer towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 5 ($Q_5 = 1$ cfs and $Q_{100} = 2$ cfs)**. The emergency overflow route at this location is via Tract A directly and then to Shawnee Drive. **Pipe Run 6 ($Q_5 = 7$ cfs and $Q_{100} = 13$ cfs)** represents the combined pipe flows from Design Points 1, 2, 3 & 4. This 24" RCP storm sewer will route these combined developed flows directly into Pond 1. This pond inflow is designated later in this report.

Runoff from Basin E (0.35 Acres) and Basin G (0.32 Acres) flow directly into Hunter Jumper Drive and Shawnee Drive. The water quality treatment for Basin E and Basin G will be provided by the existing facility designed and installed within Hannah Ridge at Feathergrass Filing No. 4.

Design Point 5 ($Q_5 = 9$ cfs and $Q_{100} = 19$ cfs) collect developed flows from Basins I. At this sump condition, a 15' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows being collected have a maximum ponding depth of 1.0' and then be conveyed via a 24" RCP storm sewer towards Pond 1. The total flow within the pipe at this location is given by **Pipe Run 7 ($Q_5 = 9$ cfs and $Q_{100} = 19$ cfs)**. The emergency overflow route at this location is via a Tract directly behind the inlet and then into Pond 1, based upon the proposed grading behind the inlet. As this overflow swale will only be used in an emergency situation, no reinforcement of the swale is required. **Pipe Run 8 ($Q_5 = 15$ cfs and $Q_{100} = 30$ cfs)** represents the combined pipe flows from Design Points 1, 2, 3, 4 & 5. This 30" RCP storm sewer will route these combined developed flows directly into Pond 1. This pond inflow is designated later in this report.

Design Point 6 ($Q_5 = 3 \text{ cfs}$ and $Q_{100} = 6 \text{ cfs}$) collects developed flows from Basin N. At this sump condition, a 5' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and be conveyed via a 18" RCP storm sewer in a southerly direction towards Pond 2. The total flow within the pipe at this location is given by **Pipe Run 9 (Q₅ = 3 cfs and Q₁₀₀ = 6 cfs)**. The emergency overflow route at this location is via a Tract directly behind the inlet and then to an existing rip rap lined drainage channel.

Design Point 7 ($Q_5 = 2 \text{ cfs}$ and $Q_{100} = 3 \text{ cfs}$) collects developed flows from Basin O. At this sump condition, a 5' Type R sump inlet will be installed to completely collect both the 5-year and 100-year developed flows. These flows will have a maximum ponding depth of 1.0' and be conveyed via a 18" RCP storm sewer in a southerly direction towards Pond 2. The total flow within the pipe at this location is given by **Pipe Run 10 (Q₅ = 2 cfs and Q₁₀₀ = 3 cfs)**. The emergency overflow route at this location is in the easterly direction directly into a Hannah Ridge Drive.

Basin E ($Q_5 = 1.1 \text{ cfs}$ and $Q_{100} = 2.1 \text{ cfs}$) consists of flows from the landscaped residential front yards that will sheet flow into Shawnee Drive and be routed to the existing SWQ pond east of the intersection of Shawnee Drive and Constitution Ave.

Basin G ($Q_5 = 1.1 \text{ cfs}$ and $Q_{100} = 2.1 \text{ cfs}$) consists of flows from the landscaped residential front yards that will sheet flow into existing Hunter Jumper Drive and then to existing Shawnee Drive and be routed to the existing SWQ pond east of the intersection of Shawnee Drive and Constitution Ave.

Basin H ($Q_5 = 0.8 \text{ cfs}$ and $Q_{100} = 1.9 \text{ cfs}$) consists of landscaped flows from an area that contains the existing SWQ pond located at the intersection of Shawnee Drive and Constitution Ave.

Basin J ($Q_5 = 2.2 \text{ cfs}$ and $Q_{100} = 4.1 \text{ cfs}$) consists of flows from the landscaped residential front yards that will sheet flow into existing Hunter Jumper Drive and be routed to the existing SWQ pond south of Hunter Jumper Drive in Basin K.

Basin K ($Q_5 = 1.3$ cfs and $Q_{100} = 2.9$ cfs) consists of landscaped flows from an area that contains the existing SWQ pond located south of Hunter Jumper Drive.

Basin L ($Q_5 = 1.5$ cfs and $Q_{100} = 3.4$ cfs) consists of landscaped flows from an area that contains Proposed Full Spectrum SWQ Pond 1.

Basin P ($Q_5 = 0.8$ cfs and $Q_{100} = 1.5$ cfs) consists of flows from the landscaped residential front yards that will sheet flow into existing Hunter Jumper Drive and be routed to the existing SWQ pond east of Hannah Ridge Drive.

Basin M ($Q_5 = 1.9$ cfs and $Q_{100} = 4.3$ cfs) consists of flows from the landscaped tract area that contains an existing rip rap outfall of an existing 90" RCP to an existing box culvert under Hannah Ridge Drive.

Design Point 8 The total inflow into Pond 1 equals $Q_5 = 16$ cfs and $Q_{100} = 33$ cfs. This facility will be constructed with the proposed Filing 1 development and the downstream flows will remain consistent with the previous filings. This facility will have one inflow point. The inflow ($Q_5 = 16$ cfs and $Q_{100} = 33$ cfs) will be from a 30" RCP into a concrete forebay with a required size of 90 CF based on 3% of the WQCV from this inflow. The forebay is designed with 12" high walls, 4.9" notch and a 30" wide concrete trickle channel routing the flows towards the pond outlet. The outlet structure consists of a 4'x4' concrete box with an integral 100 SF micropool allowing for 6" initial surcharge depth. The micropool total depth of 3.0' provides the required 0.3% of the WQCV. The outlet box will have a height of 3.50'. (See UD-BMP Spreadsheets in Appendix) The orifice plate on the front of the outlet box consists of a series of 4 – 15/16" holes, 10.50" apart. (See UD-Detention Spreadsheets in Appendix) This facility will be owned and maintained by the Hannah Ridge HOA.

Pond 1 has the following design parameters as a full-spectrum facility:

0.094 Ac.-ft. WQCV required

0.137 Ac.-ft. EURV required

0.493 Ac.-ft. 100-yr. storage required

Total In-flow: $Q_5 = 16 \text{ cfs}$, $Q_{100} = 33 \text{ cfs}$

Pond Design Release: $Q_5 = 0.07 \text{ cfs}$, $Q_{100} = 6.7 \text{ cfs}$

Pre-development Release: $Q_5 = 0.14 \text{ cfs}$, $Q_{100} = 8.6 \text{ cfs}$

Design Point 9 The total inflow into Pond 2 equals $Q_5 = 5 \text{ cfs}$ and $Q_{100} = 9 \text{ cfs}$. This facility will be constructed with the proposed Filing 1 development and the downstream flows will remain consistent with the previous filings. This facility will have two inflow points. The west inflow ($Q_5 = 3 \text{ cfs}$ and $Q_{100} = 6 \text{ cfs}$) will be from an 18" RCP into a concrete trickle channel. The north inflow ($Q_5 = 2 \text{ cfs}$ and $Q_{100} = 3 \text{ cfs}$) will be from an 18" RCP into a concrete trickle channel. Per the UD-BMP spreadsheet (see appendix) forebays are not required for this small of a facility. The trick channel will be a 30" wide concrete trickle channel routing the flows towards the pond outlet. The outlet structure consists of a 3'x3' concrete box with an integral 100 SF micropool allowing for 6" initial surcharge depth. The micropool total depth of 3.0' provides the required 0.3% of the WQCV. The outlet box will have a height of 2.35'. (See UD-BMP Spreadsheets in Appendix) The orifice plate on the front of the outlet box consists of a series of 3 holes, 9.40" apart. Two 7/16" diameter holes and 1 15/16" diameter hole. (See UD-Detention Spreadsheets in Appendix) This facility will be owned and maintained by the Hannah Ridge HOA.

Pond 2 has the following design parameters as a full-spectrum facility:

0.023 Ac.-ft. WQCV required

0.044 Ac.-ft. EURV required

0.057 Ac.-ft. 100-yr. storage required

Total In-flow: $Q_5 = 5 \text{ cfs}$, $Q_{100} = 9 \text{ cfs}$

Pond Design Release: $Q_5 = 0.03 \text{ cfs}$, $Q_{100} = 2.4 \text{ cfs}$

Pre-development Release: $Q_5 = 0.038 \text{ cfs}$, $Q_{100} = 2.2 \text{ cfs}$

HYDROLOGIC CALCULATIONS

Hydrologic calculations were performed using the City of Colorado Springs/El Paso County Drainage Criteria Manual, as revised in November 1991 and 1994 with County adopted Chapter 6 and Section 3.2.1 of Chapter 13 of the City of Colorado Springs/El Paso County Drainage Criteria Manual as revised in May 2014. Individual on-site developed basin design used for inlet sizing and storm system routing was calculated using the Rational Method. Full-Spectrum detention pond modeling developed using UD-Detention spreadsheet ver. 3.07, Urban Drainage and Flood Control District.

The City of Colorado Springs/El Paso County DCM requires the Four Step Process for receiving water protection that focuses on reducing runoff volumes, treating the water quality capture volume (WQCV), stabilizing drainage ways, and implementing long-term source controls. The Four Step Process pertains to management of smaller, frequently occurring storm events, as opposed to larger storms for which drainage and flood control infrastructure are sized. Implementation of these four steps helps to achieve storm water permit requirements.

This site adheres to this **Four Step Process** as follows:

1. **Employ Runoff Reduction Practices:** Proposed impervious areas (roof tops, patios) will sheet flow across landscaped yards and through open space areas to slow runoff and increase time of concentration prior to being conveyed to the proposed public streets. This will minimize directly connected impervious areas within the project site.

2. **Stabilize Drainageways:** After developed flows utilize the runoff reduction practices through the yards, these flows will travel via curb and gutter within the public streets and eventually public storm systems. These collected flows are then routed directly to the full-spectrum detention facility on-site (Pond 1 and 2).

- 3. Provide Water Quality Capture Volume (WQCV):** Runoff from this development will be treated through capture and slow release of the WQCV in the proposed full-spectrum permanent Extended Detention Basin (Pond 1) designed per current El Paso County drainage criteria.
- 4. Consider need for Industrial and Commercial BMPs:** No industrial or commercial uses are proposed within this development. However, a site-specific storm water quality and erosion control plan and narrative has been submitted along with the grading and erosion control plan. Details such as site-specific source control construction BMP's as well as permanent BMP's were detailed in this plan and narrative to protect receiving waters. BMP's will be constructed and maintained as the development has been graded and erosion control methods employed.

FLOODPLAIN STATEMENT

No portion of this site is located within a FEMA floodplain as determined by the Flood Insurance Rate Maps (F.I.R.M.) Map Number 08041C0752G, with effective dates of December 7, 2018 (See Appendix).

EROSION CONTROL PLAN

The Drainage Criteria Manual specifies an Erosion Control Plan and associated cost estimate be submitted with the Final Drainage Report. We respectfully request that the Erosion Control Plan and cost estimate be submitted in conjunction with the Overlot Grading Plan and construction assurances posted prior to obtaining a grading permit. Early grading is not being requested with these applications.

Midtown Collection at Hannah Ridge at Feathergrass Filing No. 1 and 2 Drainage Improvement Costs
(Non-Reimbursable)

ITEM	DESCRIPTION	QUANTITY	UNIT COST	COST
1.	5' Type R Inlet	6 EACH	\$3,791/EA	\$ 23,400.00
2.	15' Type R Inlet	1 EACH	\$7,923/EA	\$ 4,200.00
3.	18" RCP Storm Drain	690 LF	\$69/LF	\$ 47,610.00
4.	24" RCP Storm Drain	980 LF	\$84/LF	\$ 82,320.00
5.	30" RCP Storm Drain	20 LF	\$94/LF	\$ 1,880.00
6.	Type I MH	1 EACH	\$8,592/EA	\$ 8,592.00
7.	Type II MH	8 EACH	\$4,575/EA	\$ 36,600.00
8.	Pond 1 FSD	1 EACH	\$83,000/EA	\$ 83,000.00
9.	Pond 2 FSD	1 EACH	\$53,000/EA	\$ 53,000.00
SUB-TOTAL				\$ 340,602.00
10% ENGINEERING				\$ 34,060.20
5% CONTINGENCIES				<u>\$ 17,030.10</u>
SUB-TOTAL				<u>\$ 391,692.30</u>

Classic Consulting Engineers & Surveyors cannot and does not guarantee that the construction cost will not vary from these opinions of probable construction costs. These opinions represent our best judgment as design professionals familiar with the construction industry and this development in particular.

DRAINAGE & BRIDGE FEES

This site lies within the Sand Creek Drainage Basin. The fees are calculated using the following impervious acreage method approved by El Paso County. All three Filings are re-plats of previously platted tracts within Filing 1. However, these tracts were designated as future development and no fees were paid at time of original platting. Thus, the percent imperviousness for each Filing is calculated below based on the following acreages:

Filing 1: 9.123 ac.
 Filing 2: 3.260 ac.

The total development area for each Filing is broken into different residential uses:

PUD zone (1/8 acre or less SF lots – 65% Impervious)

PUD zone Open space/drainage tracts (Greenbelts – 2% Impervious).

The following calculations are based on the 2019 drainage/bridge fees for the Sand Creek Basin:

FILING 1:

2158 SF avg. lots (1/8 acre or less)

(Per El Paso County Percent Impervious Chart for 1/8 acre or less SF lots: 65%)

5.40 Ac. x 65% = **3.51 Impervious Ac.**

Open Space Tracts

(Per El Paso County Percent Impervious Chart for greenbelts: 2%)

3.720 Ac. x 2% = **0.07 Impervious Ac.**

Total Impervious Acreage: **3.58 Imp. Ac.**

FILING 5 FEE TOTALS:

Bridge Fees

\$ 5,559.00 x 3.58 Impervious Ac. = **\$ 19,901.22**

Drainage Fees

\$ 18,940.00 x 3.58 Impervious Ac. = **\$ 67,805.20**

These Drainage Fees will be paid by developer in the form of cash and/or credits.

FILING 2:

2158 SF avg. lots (1/8 acre or less)

(Per El Paso County Percent Impervious Chart for 1/8 acre or less SF lots: 65%)

$$2.27 \text{ Ac.} \times 65\% = \mathbf{1.48 \text{ Impervious Ac.}}$$

Open Space Tracts

(Per El Paso County Percent Impervious Chart for greenbelts: 2%)

$$0.99 \text{ Ac.} \times 2\% = \mathbf{0.02 \text{ Impervious Ac.}}$$

Total Impervious Acreage: 1.50 Imp. Ac.

FILING 6 FEE TOTALS:

Bridge Fees

$$\$ 5,559.00 \times 1.50 \text{ Impervious Ac.} = \mathbf{\underline{\$ 8,338.50}}$$

Drainage Fees

$$\$ 18,940.00 \times 1.50 \text{ Impervious Ac.} = \mathbf{\underline{\$ 28,410.00}}$$

These Drainage Fees will be paid by developer in the form of cash and/or credits.

SUMMARY

This proposed development remains consistent with the previously approved MDDP and Final Drainage Report for Hannah Ridge at Feathergrass Filing No. 1. The existing storm facilities continue to adequately handle both the 5-yr. and 100-yr. developed flows. All proposed detention facilities meet current criteria and provide full spectrum design. The proposed development will not adversely impact surrounding developments.

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

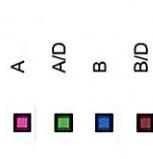

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 16, Sep 10, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 3, 2014—Jun 17, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
8	Blaekland loamy sand, 1·A to 9 percent slopes		57.4	100.0%
Totals for Area of Interest			57.4	100.0%

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

*Aggregation Method: Dominant Condition
Component Percent Cutoff: None Specified*

F.E.M.A. MAP

National Flood Hazard Layer FIRMette

Legend

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards.

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 3/24/2019 at 5:51:46 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017

Design Information (Input)		CDOT Type R Curb Opening
Type of Inlet		
Local Depression (additional to continuous gutter depression 'a' from above)		
Number of Unit Inlets (Grate or Curb Opening)		
Water Depth at Flowline (outside of local depression)		
Grate Information		
Length of a Unit Grate		
Width of a Unit Grate		
Area Opening Ratio for a Grate (typical values 0.15-0.90)		
Clogging Factor for a Single Grate (typical value 0.50 - 0.70)		
Grate Weir Coefficient (typical value 2.15 - 3.60)		
Grate Orifice Coefficient (typical value 0.60 - 0.80)		
Curb Opening Information		
Length of a Unit Curb Opening		
Height of Vertical Curb Opening in Inches		
Height of Curb Orifice Throat in Inches		
Angle of Throat (see USDCM Figure ST-5)		
Side Width for Depression Pan (typically the gutter width of 2 feet)		
Clogging Factor for a Single Curb Opening (typical value 0.10)		
Curb Opening Weir Coefficient (typical value 2.3-3.7)		
Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)		
Low Head Performance Reduction (Calculated)		
Depth for Grate Midwidth		
Depth for Curb Opening Weir Equation		
Combination Inlet Performance Reduction Factor for Long Inlets		
Curb Opening Performance Reduction Factor for Long Inlets		
Grated Inlet Performance Reduction Factor for Long Inlets		
Total Inlet Interception Capacity (assumes clogged condition)		
WARNING: Inlet Capacity less than Q Peak for Minor Storm

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

UD-Detention, Version 3.07 (February 2017)

Detention Basin Outlet Structure Design

UD-Detention, Version 3.07 (February 2017)

Project: MIDTOWN AT HANNAH RIDGE FIL. NO. 1

Basin ID: POND 1

	Stage (ft)	Zone Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	1.39	0.094	Orifice Plate
Zone 2 (EURV)	2.21	0.137	Orifice Plate
Zone 3 (100-year)	3.48	0.262	Weir&Pipe (Restrict)
		0.493	Total

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = inches
Orifice Plate: Orifice Area per Row = sq. inches (diameter = 15/16 inch)

Calculated Parameters for Plate
WQ Orifice Area per Row = ft²
Elliptical Half-Width = feet
Elliptical Slot Centroid = feet
Elliptical Slot Area = ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.90	1.80	2.70			
Orifice Area (sq inches)	0.67	0.67	0.67	0.67			
	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)
Stage of Orifice Centroid (ft)							
Orifice Area (sq inches)							

User Input: Vertical Orifice (Circular or Rectangular)

Invert of Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = inches

Calculated Parameters for Vertical Orifice

Not Selected	Not Selected
N/A	N/A
N/A	N/A
N/A	N/A

Vertical Orifice Area = ft²
Vertical Orifice Centroid = feet

User Input: Overflow Weir (Dropbox) and Grate (Flat or Sloped)

Overflow Weir Front Edge Height, Ho = ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = feet
Overflow Weir Slope = H:V (enter zero for flat grate)
Horiz. Length of Weir Sides = feet
Overflow Grate Open Area % = %, grate open area/total area
Debris Clogging % = %

Calculated Parameters for Overflow Weir
Zone 3 Weir = N/A feet
Over Flow Weir Slope Length = N/A feet
Grate Open Area / 100-yr Orifice Area = N/A should be \geq 4
Overflow Grate Open Area w/o Debris = N/A ft²
Overflow Grate Open Area w/ Debris = N/A ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Depth to Invert of Outlet Pipe = ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = inches
Restrictor Plate Height Above Pipe Invert = inches

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate
Zone 3 Restrictor = N/A ft²
Outlet Orifice Area = N/A feet
Outlet Orifice Centroid = N/A radians
Half-Central Angle of Restrictor Plate on Pipe = radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage = ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = feet
Spillway End Slopes = H:V
Freeboard above Max Water Surface = feet

Calculated Parameters for Spillway

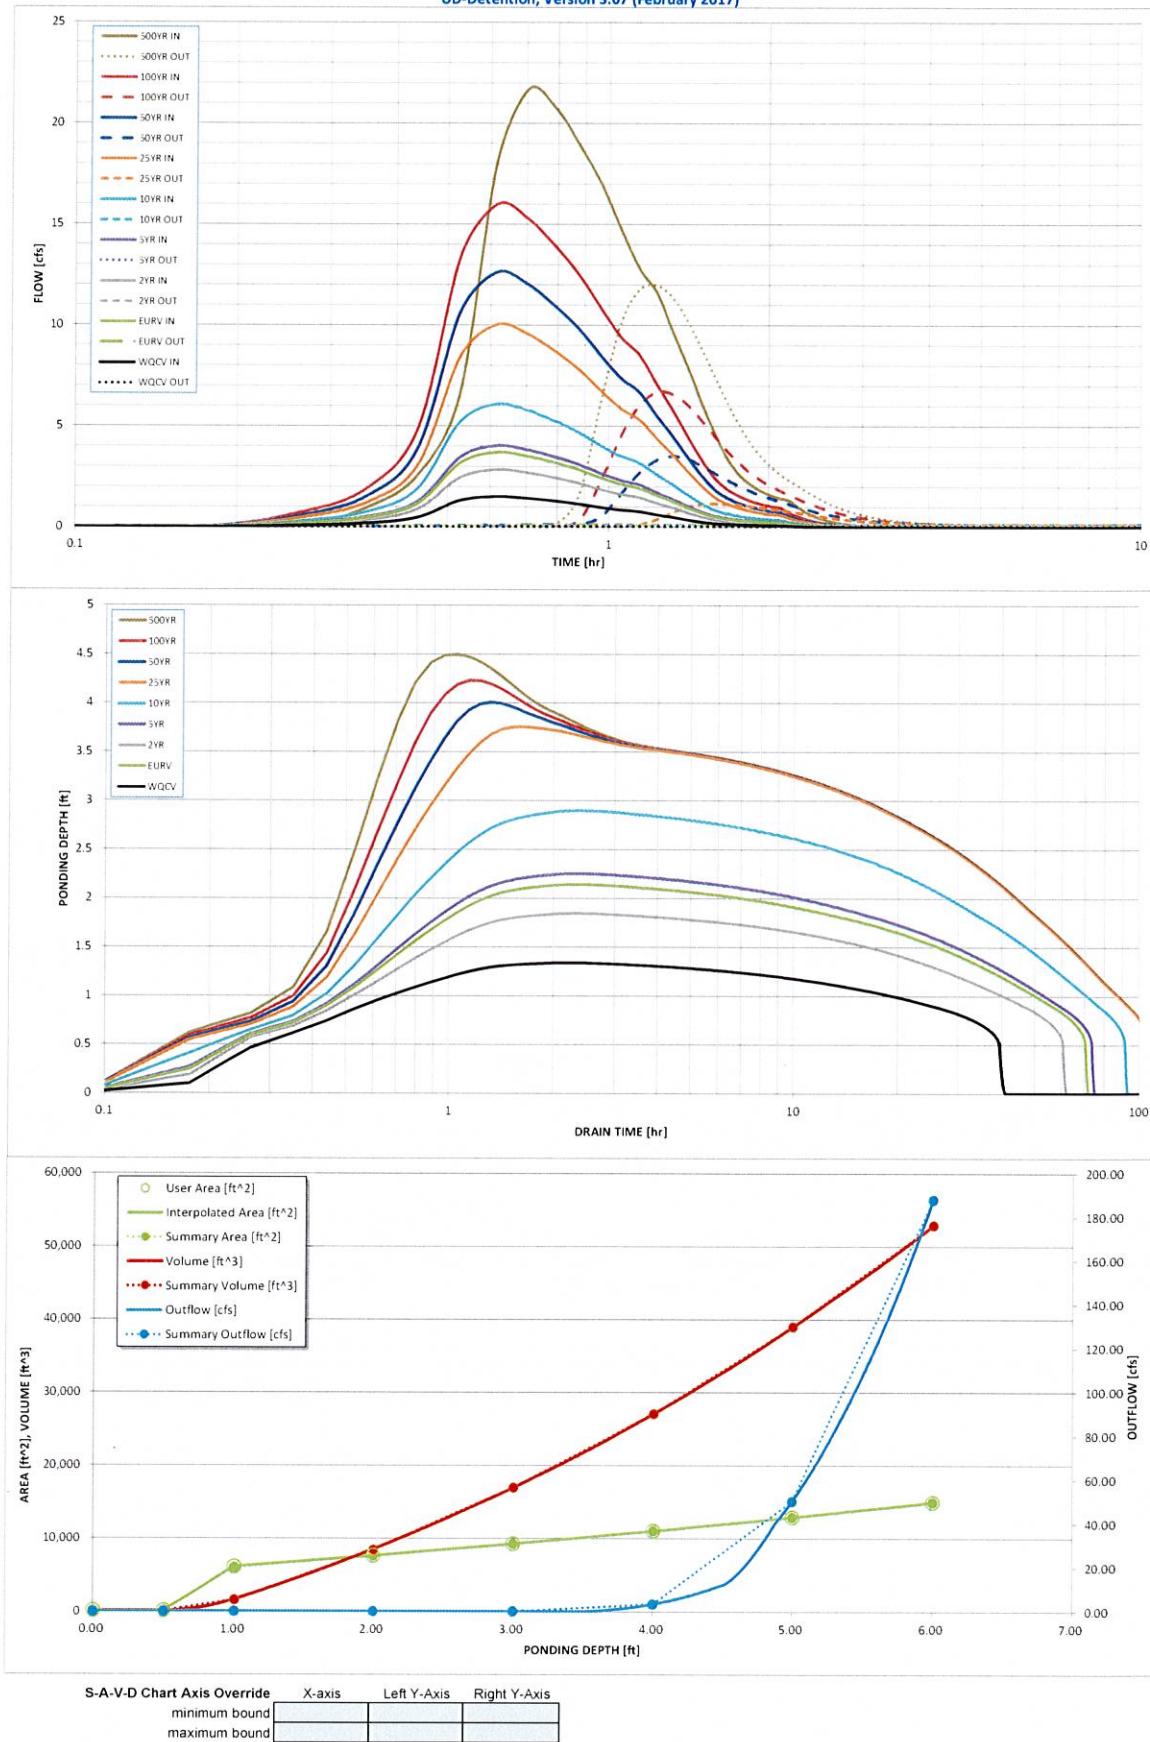

Spillway Design Flow Depth = <input type="text" value="0.23"/> feet
Stage at Top of Freeboard = <input type="text" value="5.73"/> feet
Basin Area at Top of Freeboard = <input type="text" value="0.33"/> acres

Detention Basin Outlet Structure Design

Outflow Hydrograph Workbook Filename:

Storm Inflow Hydrographs

UD-Detention, Version 3.07 (February 2017)

The user can override the calculated inflow hydrographs from this workbook with inflow hydrographs developed in a separate program.

Detention Basin Outlet Structure Design

UD-Detention, Version 3.07 (February 2017)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

5. Forebay

A) Minimum Forebay Volume
 $(V_{FMIN} = \underline{0\%} \text{ of the WQCV})$

$$V_{FMIN} = \underline{0.000} \text{ ac-ft}$$

**A FOREBAY MAY NOT BE
NECESSARY FOR THIS SIZE SITE**

B) Actual Forebay Volume

$$V_F = \underline{0.000} \text{ ac-ft}$$

C) Forebay Depth

$(D_F = \underline{12} \text{ inch maximum})$

$$D_F = \underline{\quad\quad\quad} \text{ in}$$

D) Forebay Discharge

i) Undetained 100-year Peak Discharge

$$Q_{100} = \underline{\quad\quad\quad} \text{ cfs}$$

ii) Forebay Discharge Design Flow
 $(Q_F = 0.02 * Q_{100})$

$$Q_F = \underline{\quad\quad\quad} \text{ cfs}$$

E) Forebay Discharge Design

Choose One
 Berm With Pipe
 Wall with Rect. Notch
 Wall with V-Notch Weir

(flow too small for berm w/ pipe)

F) Discharge Pipe Size (minimum 8-inches)

$$\text{Calculated } D_P = \underline{\quad\quad\quad} \text{ in}$$

G) Rectangular Notch Width

$$\text{Calculated } W_N = \underline{\quad\quad\quad} \text{ in}$$

6. Trickle Channel

A) Type of Trickle Channel

Choose One
 Concrete
 Soft Bottom

F) Slope of Trickle Channel

$$S = \underline{0.0100} \text{ ft / ft}$$

7. Micropool and Outlet Structure

A) Depth of Micropool (2.5-feet minimum)

$$D_M = \underline{2.5} \text{ ft}$$

B) Surface Area of Microool (10 ft² minimum)

$$A_M = \underline{100} \text{ sq ft}$$

C) Outlet Type

Choose One
 Orifice Plate
 Other (Describe):

D) Smallest Dimension of Orifice Opening Based on Hydrograph Routing
 (Use UD-Detention)

$$D_{orifice} = \underline{\quad\quad\quad} \text{ inches}$$

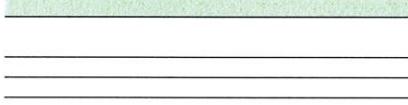

E) Total Outlet Area

$$A_{ot} = \underline{\quad\quad\quad} \text{ square inches}$$

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

UD-Detention, Version 3.07 (February 2017)

Detention Basin Outlet Structure Design

UD-Detention, Version 3.07 (February 2017)

Project: MIDTOWN AT HANNAH RIDGE FIL. 1

Basin ID: POND 1

	Stage (ft)	Zone Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	1.23	0.023	Orifice Plate
Zone 2 (EURV)	2.02	0.044	Orifice Plate
Zone 3 (100-year)	2.82	0.057	Weir&Pipe (Restrict)
	0.123	Total	

Example Zone Configuration (Retention Pond)

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain
Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = inches
Orifice Plate: Orifice Area per Row = inches

Calculated Parameters for Plate
WQ Orifice Area per Row = ft²
Elliptical Half-Width = feet
Elliptical Slot Centroid = feet
Elliptical Slot Area = ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.80	1.60				
Orifice Area (sq. inches)	0.17	0.17	0.69				

Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)							
Orifice Area (sq. inches)							

User Input: Vertical Orifice (Circular or Rectangular)

Not Selected Not Selected
Invert of Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = inches

Calculated Parameters for Vertical Orifice

Not Selected	Not Selected
<input type="text" value="N/A"/>	<input type="text" value="N/A"/> ft ²
<input type="text" value="N/A"/>	<input type="text" value="N/A"/> feet
<input type="text" value="N/A"/>	<input type="text" value="N/A"/> should be ≥ 4

User Input: Overflow Weir (Dropbox) and Grate (Flat or Sloped)

Zone 3 Weir	Not Selected
2.35	<input type="text" value="N/A"/> ft (relative to basin bottom at Stage = 0 ft)
3.00	<input type="text" value="N/A"/> feet

Detention Basin Outlet Structure Design

UD-Detention, Version 3.07 (February 2017)

Detention Basin Outlet Structure Design

Outflow Hydrograph Workbook Filename:

Storm Inflow Hydrographs

UD-Detention, Version 3.07 (February 2017)

The user can override the calculated inflow hydrographs from this workbook with inflow hydrographs developed in a separate program.

Detention Basin Outlet Structure Design

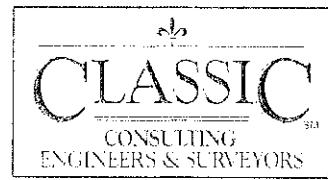

UD-Detention, Version 3.07 (February 2017)

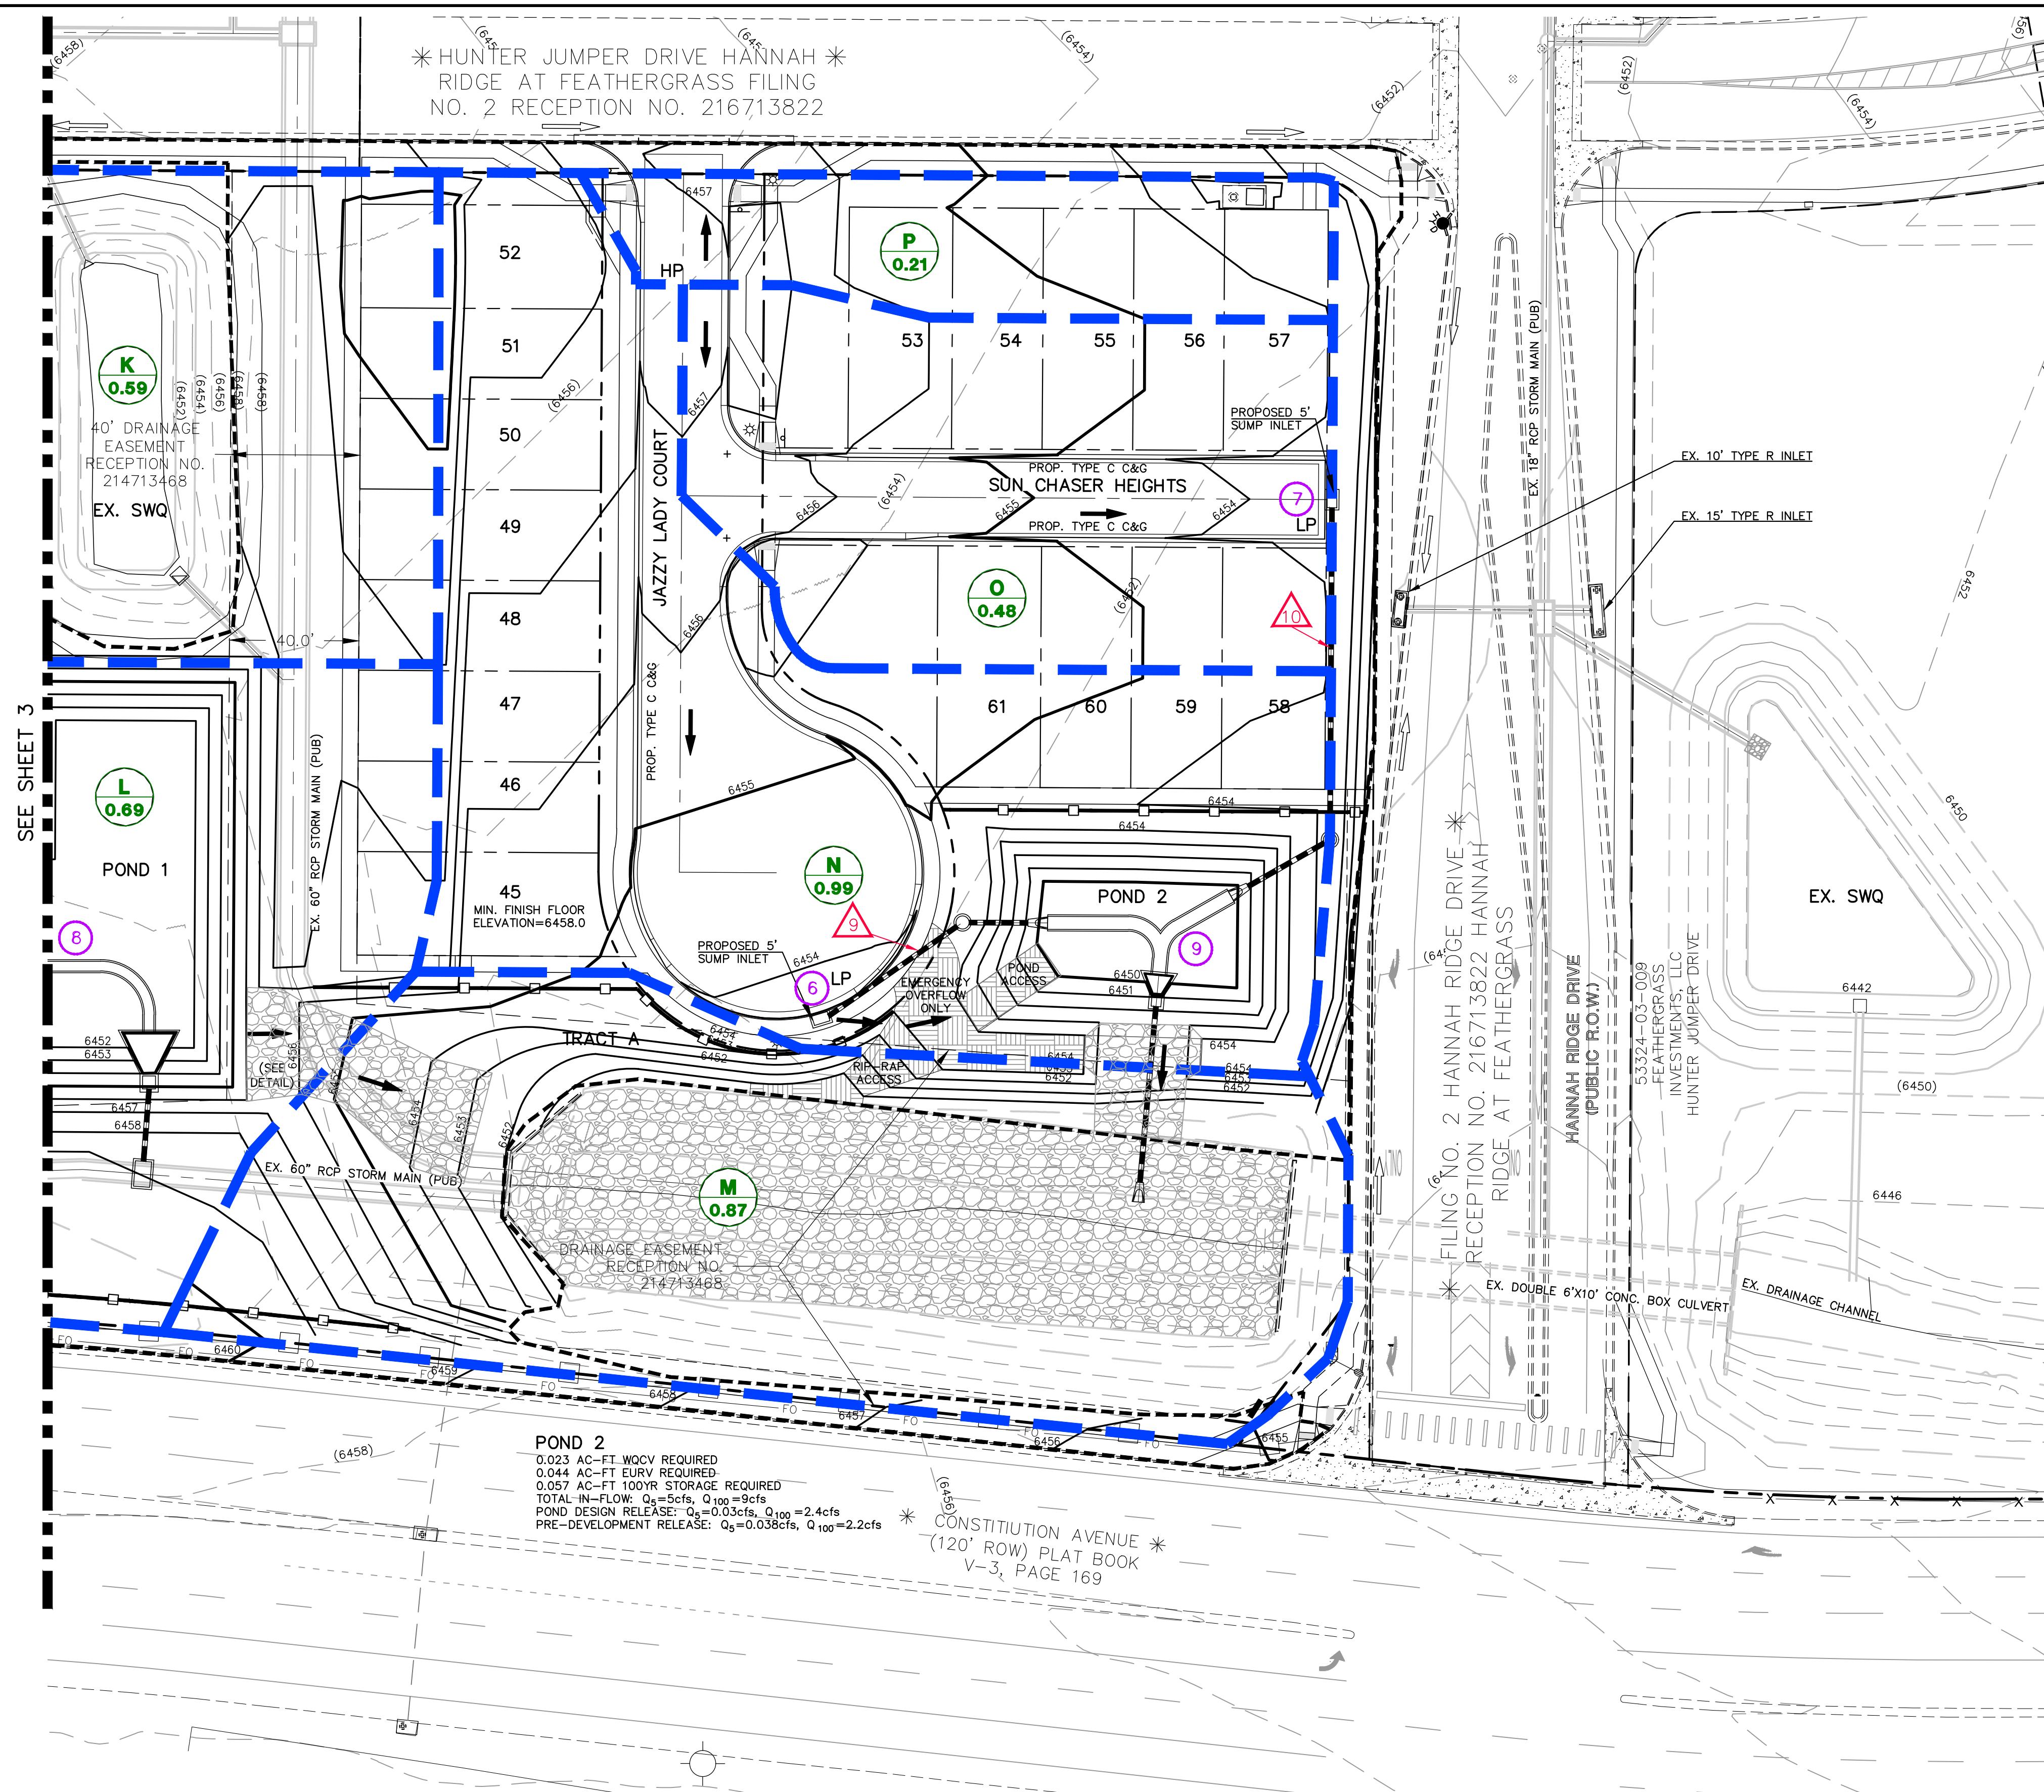

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.
