## 1.0 EXECUTIVE SUMMARY

---

Mountain Bluffs residential neighborhood is proposed to be located along the east side of Marksheffel Road between Graphite Drive and Zircon Drive in Colorado Springs, Colorado. The project is proposed include 104 single-family residential homes. It is expected that Mountain Bluffs will be completed in the next few years. Therefore, analysis was conducted for the 2025 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study based on the City of Colorado Springs requested scope:

- Barnes Road and Marksheffel Road
- Graphite Drive and Marksheffel Road
- Zircon Drive and Marksheffel Road
- Carefree Circle and Marksheffel Road

In addition, the proposed full movement accesses along Zircon Drive and Graphite Drive were evaluated.

Regional access to Mountain Bluffs will be provided by US-24, I-25, and Powers Boulevard (SH-21). Primary access will be provided by Marksheffel Road. Direct access will be provided by an access along Zircon Drive and an access along Graphite Drive.

Mountain Bluffs is expected to generate approximately 1,046 weekday daily trips, with 78 of these trips occurring during the morning peak hour and 103 of these trips occurring during the afternoon peak hour.

Based on the analysis presented in this report, Kimley-Horn believes the Mountain Bluffs residential neighborhood will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following recommendations:

#### 2025 Recommendations

- With completion of the Mountain Bluffs project, an access along Graphite Drive and an access along Zircon Drive are proposed. Single lane approaches will be sufficient at these two access intersections. It is recommended that the exiting project approaches operate with stop-control with R1-1 “STOP” signs installed on each approach exiting the development.

#### 2045 Recommendations

- By the 2045 horizon, Marksheffel Road is anticipated to be improved to be a four-lane roadway by the City of Colorado Springs providing two through lanes in each direction. The ultimate configuration for the Barnes Road and Marksheffel Road intersection will be constructed by other developments occurring in the area. The Carefree Circle and Marksheffel Road intersection is anticipated to warrant signalization by the long-term horizon. Dual northbound left turn lanes were found to be needed, which can be provided within the existing pavement that is presently striped out.

#### General Recommendations

- Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

## 2.0 INTRODUCTION

---

Kimley-Horn and Associates, Inc. has prepared this report to document the results of a Traffic Impact Study for the Mountain Bluffs residential neighborhood proposed to be located along the east side of Marksheffel Road between Graphite Drive and Zircon Drive in Colorado Springs, Colorado. A vicinity map illustrating the Mountain Bluffs development location is shown in **Figure 1**. Mountain Bluffs is proposed to include 104 single-family residential homes. A conceptual site plan is attached in **Appendix H**. It is expected that Mountain Bluffs will be completed in the next few years; therefore, analysis was conducted for the 2025 short-term buildout horizon as well as the 2045 long-term twenty-year planning horizon.

The purpose of this traffic study is to identify project traffic generation characteristics to determine potential project traffic related impacts on the local street system and to develop the necessary mitigation measures required for the identified traffic impacts. The following intersections were incorporated into this traffic study based on the City of Colorado Springs requested scope:

- Barnes Road and Marksheffel Road
- Graphite Drive and Marksheffel Road
- Zircon Drive and Marksheffel Road
- Carefree Circle and Marksheffel Road

In addition, the proposed full movement accesses along Zircon Drive and Graphite Drive were evaluated.

Regional access to Mountain Bluffs will be provided by US-24, I-25, and Powers Boulevard (SH-21). Primary access will be provided by Marksheffel Road. Direct access will be provided by an access along Zircon Drive and an access along Graphite Drive.

VICINITY MAP

## 3.0 EXISTING AND FUTURE CONDITIONS

---

### 3.1 Existing Study Area

The existing site is comprised of vacant land. The area to the west is residential housing and to the east is comprised of additional residential housing, specifically Filings 2, 3, 4, 5, and 6 of the Enclaves at Mountain Vista. Surrounding the site to the north and south is vacant land. Extending to the north and northeast of the site is the proposed Banning Lewis Ranch Village A-D and to the north is Banning Lewis Ranch Freestyle, both are currently being developed which includes single-family homes, schools, and neighborhood retail.

### 3.2 Existing Roadway Network

Marksheffel Road extends north/south with one through lane in each direction with some sections providing two through lanes in each direction in the study area. The roadway has a posted speed limit ranging from 45 miles per hour to 55 miles per hour. Marksheffel Road is classified as a “Principal Arterial” roadway.

Barnes Road extends east/west, west of Marksheffel Road, with three through lanes in each direction and a posted speed limit of 45 miles per hour. Barnes Road is classified as a “Principal Arterial” roadway.

Carefree Circle extends east/west, west of Marksheffel Road, with three through lanes in each direction and a posted speed limit of 35 miles per hour. Carefree Circle is classified as a “Principal Arterial” roadway.

Zircon Drive extends east/west, east of Marksheffel Road, with one through lane in each direction and a posted speed limit of 30 miles per hour. Likewise, Graphite Drive also extends east/west with one through lane in each direction and a posted speed limit of 30 miles per hour. The City of Colorado Springs does not provide a classification for these two roadways. It can be assumed they follow the characteristics of a “Local Residential” roadway.

The signalized 'T'-intersection of Barnes Road and Marksheffel Road operates with permissive-only northbound left turn phasing. The northbound Marksheffel Road approach provides a left turn lane and a through lane while the southbound Marksheffel Road approach provides a through lane and a right turn lane. The eastbound Barnes Road approach provides separate left turn and right turn lanes. There is additional pavement on the eastbound approach for designation of through lanes when the east leg is constructed. An aerial photo of the existing intersection configuration is provided as follows (north is up – typical).

*Barnes Road & Marksheffel Road*

The unsignalized 'T'-intersection of Graphite Drive and Marksheffel Road operates with stop control on the westbound Graphite Drive approach. The northbound approach provides a through lane and a right turn lane while the southbound approach provide provides a left turn lane and a through lane. The westbound approach provides a single lane for shared left and right movements. An aerial photo of the existing intersection configuration is below.

*Graphite Drive & Marksheffel Road*

The unsignalized 'T'-intersection of Zircon Drive and Marksheffel Road operates with stop control on the westbound Zircon Drive approach. The northbound approach provides a through lane and a right turn lane while the southbound approach provide provides a left turn lane and a through lane. The westbound approach provides separate left and right turn lanes. An aerial photo of the existing intersection configuration is below.

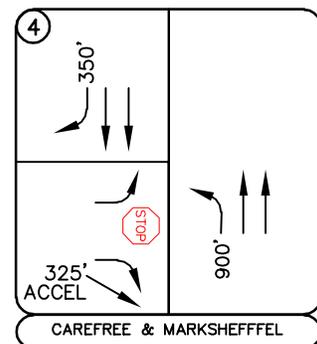

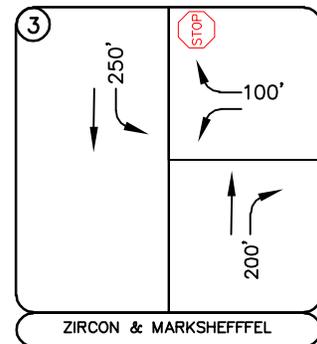

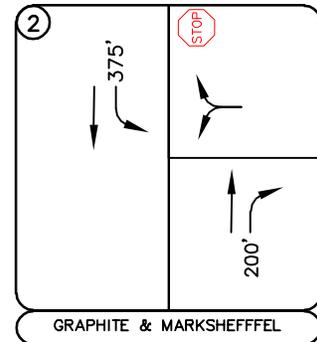

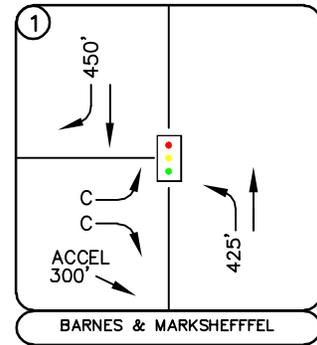

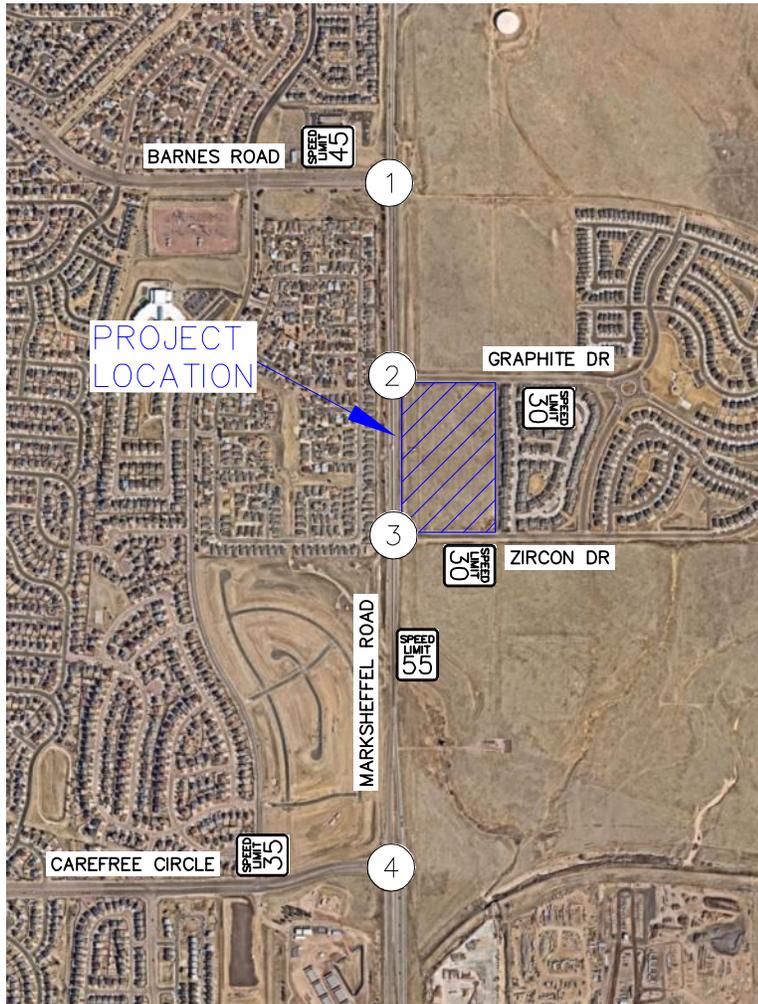

*Zircon Drive & Marksheffel Road*

The unsignalized 'T'-intersection of Carefree Circle and Marksheffel Road operates with stop control on the eastbound Carefree Circle approach. The northbound approach provides a left turn lane and two through lanes while the southbound approach provide provides two through lanes and a right turn lane. The eastbound approach provides separate left and right turn lanes. The eastbound right movements operated under FREE conditions. There is additional pavement on the eastbound approach for designation of through lanes when the east leg is constructed. An aerial photo of the existing intersection configuration is below.

*Carefree Circle & Marksheffel Road*

The intersection lane configuration and control for the study area intersections are shown in **Figure 2**.

 EXISTING GEOMETRY AND CONTROL

### 3.3 Existing Traffic Volumes

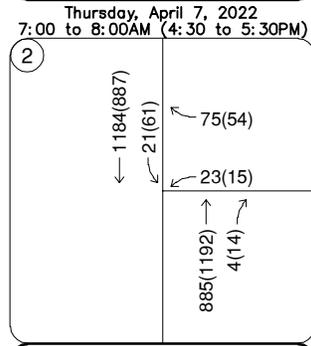

Existing weekday morning and afternoon turning movement counts were conducted at the Barnes Road/Marksheffel Road intersection on Thursday July 29, 2021 and at the Carefree Circle/Marksheffel Road intersection on Tuesday, August 17, 2021. Turning movement counts were conducted at the Graphite Drive/Marksheffel Road and Zircon Drive/Marksheffel Road intersections on Thursday, April 7, 2022. The counts were conducted during the morning and afternoon peak hours of adjacent street traffic in 15-minute intervals from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on these count dates. Of note, the 2021 volumes were balanced with the 2022 counts. The existing intersection traffic volumes are shown in **Figure 3** with count sheets provided in **Appendix A**.

### 3.4 Unspecified Development Traffic Growth

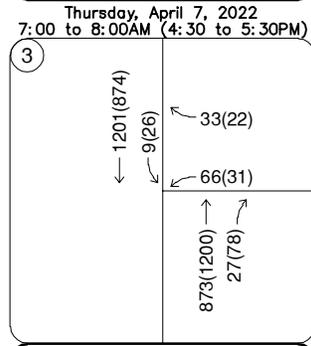

According to traffic projections from the Pikes Peak Area Council of Governments (PPACG) traffic model, the area surrounding the site is expected to have an average 25-year growth factor of 1.33. This growth factor equates to an annual growth rate of 1.1 percent. Of note, the City of Colorado Springs requested a two (2) percent growth rate along Marksheffel Road to be conservative. Therefore, the 1.1 percent annual growth rate was applied to the turning movements and to the east/west roadways while a two (2) percent annual growth rate was applied to Marksheffel Road to forecast 2025 background traffic volumes. Additionally, the Filing 7 and 8 residential homes were included as background traffic. **Figure 4** illustrates the 2025 background traffic volumes at the study intersections.

**FIGURE 4**  
**MOUNTAIN BLUFFS**  
**COLORADO SPRINGS, COLORADO**  
**2025 BACKGROUND TRAFFIC VOLUMES**

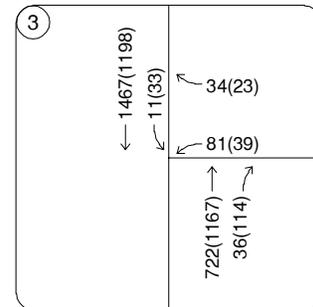

Future total traffic volumes from the “Enclaves at Mountain Vista East Traffic Study” completed in April 2022 by Kimley-Horn and Associates was used for background 2045 traffic volumes for this project. The Enclaves at Mountain Vista East’s 2030 total volumes included the Freestyle Master Plan development and included volumes from the Pikes Peak Area Council of Governments (PPACG) traffic model to derive turning movements at the study intersections. These traffic volumes from the previous traffic study are also provided in **Appendix B**. Per direction of City of Colorado Springs staff, Banning Lewis Parkway and the east/west roadways provide connection to US-24 by 2045. Therefore, some of the Marksheffel Road volumes were diverted to Banning Lewis Parkway. The volumes generated along Marksheffel Road are significantly higher than those in the El Paso County MTCP traffic model. Therefore, the future volumes are believed to be long-range volumes and were used for the 2045 background traffic volumes. The calculated background traffic volumes for 2045 are shown in **Figure 5**.

## 4.0 PROJECT TRAFFIC CHARACTERISTICS

### 4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*<sup>1</sup> published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report fitted curve equations that applies to Single Family Detached Housing (ITE Land Use Code 210), for traffic associated with the development.

Mountain Bluffs is expected to generate approximately 1,046 weekday daily trips, with 78 of these trips occurring during the morning peak hour and 103 of these trips occurring during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual, 11<sup>th</sup> Edition – Volume 1: User's Guide and Handbook, 2022*. **Table 1** summarizes the estimated trip generation for the Mountain Bluffs. The trip generation worksheets are included in **Appendix C**.

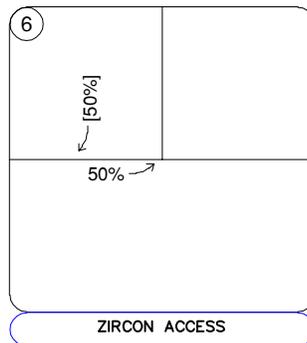

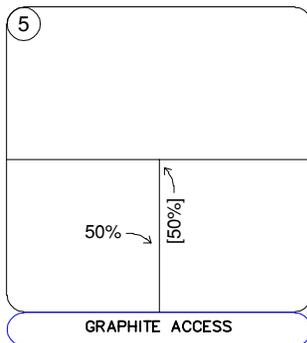

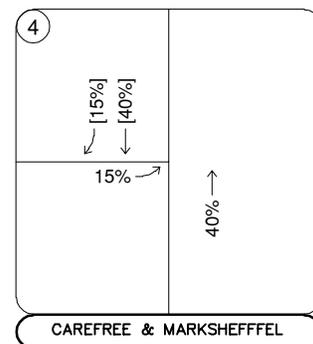

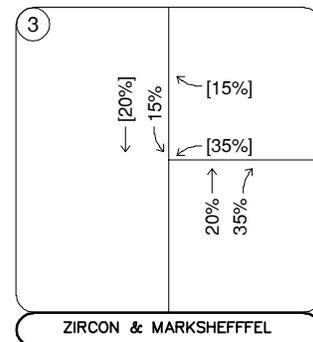

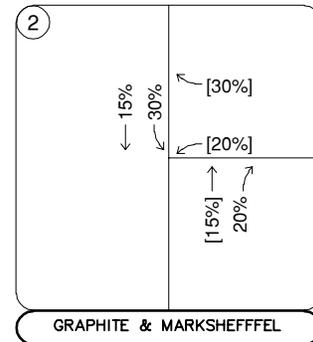

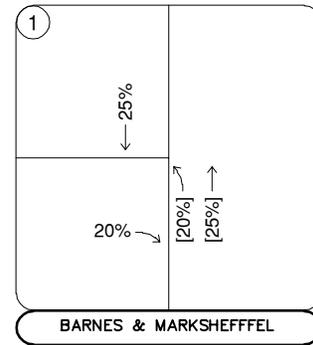

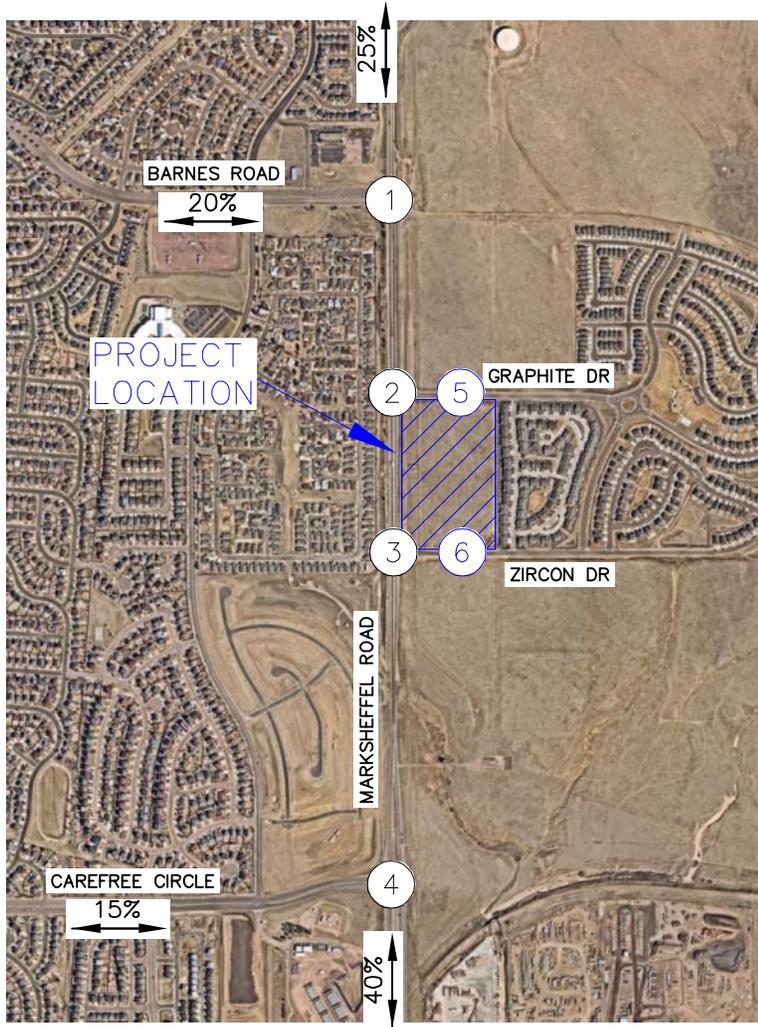

**Table 1 – Mountain Bluffs Traffic Generation**

Land Use and Size	Weekday Vehicle Trips						
	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Single Family Detached (ITE 210) – 104 Dwelling Units	1,046	20	58	78	65	38	103

### 4.2 Trip Distribution

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution for the proposed development is illustrated in **Figure 6**.

<sup>1</sup> Institute of Transportation Engineers, *Trip Generation Manual*, Eleventh Edition, Washington DC, 2022.

- (X) Project Access Intersection
- XX% External Trip Distribution Percentage
- XX%[XX%] Entering[Exiting] Trip Distribution Percentage

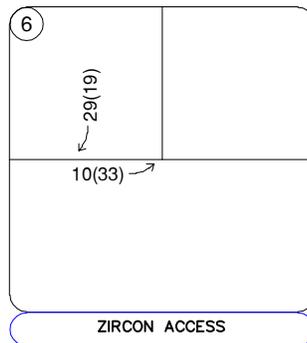

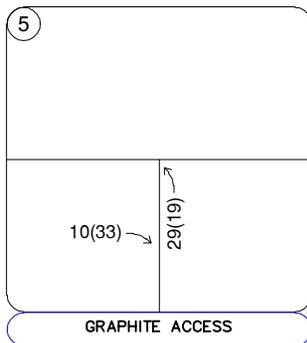

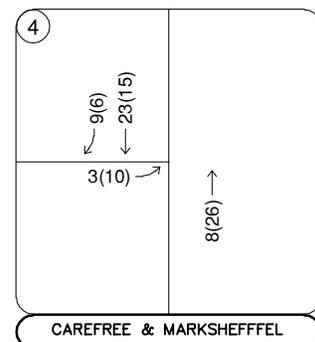

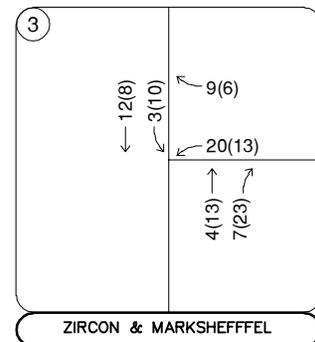

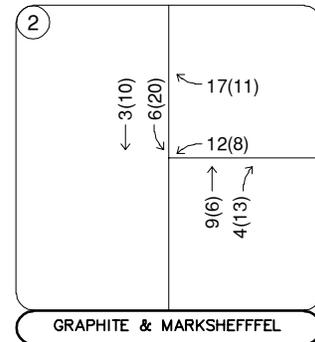

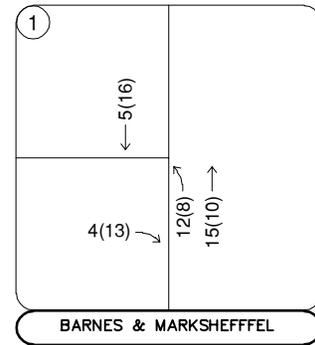

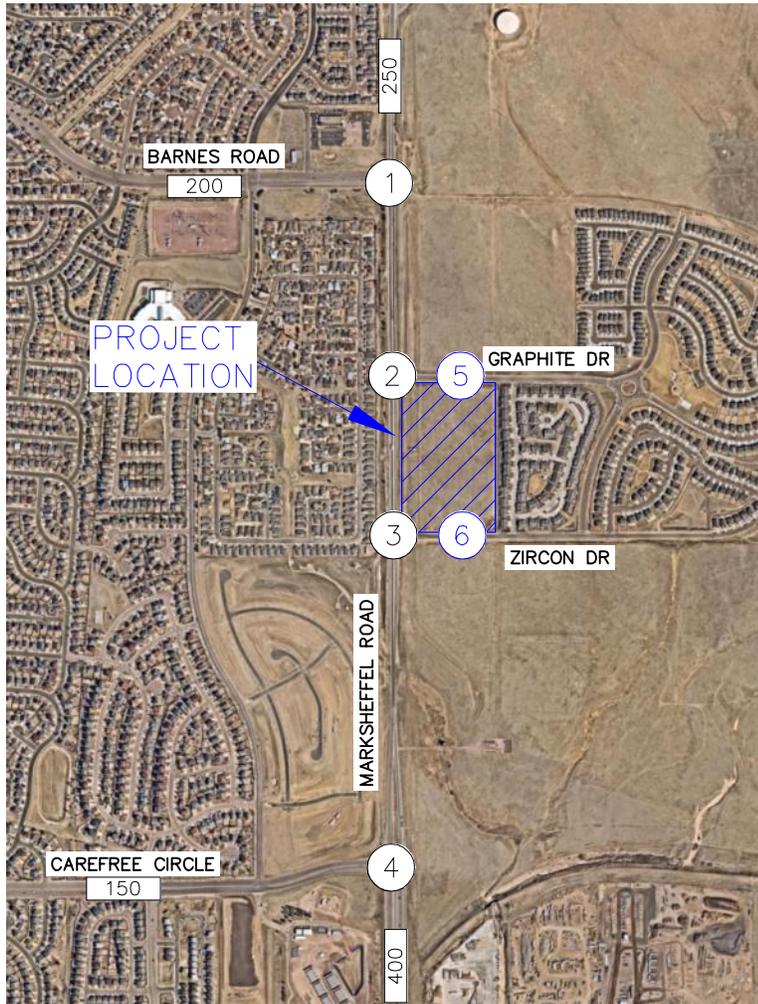

**FIGURE 6**  
 MOUNTAIN BLUFFS  
 COLORADO SPRINGS, COLORADO  
 PROJECT TRIP DISTRIBUTION

### 4.3 Traffic Assignment

Mountain Bluffs traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Traffic assignment is shown in **Figure 7**.

### 4.4 Total (Background Plus Project) Traffic

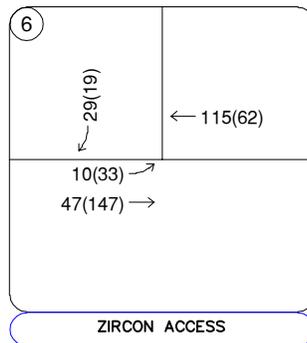

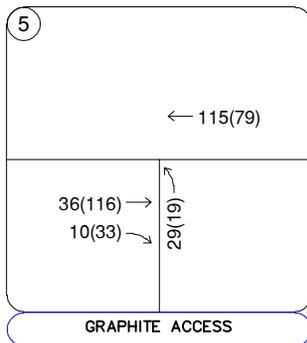

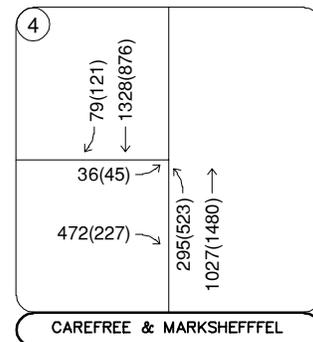

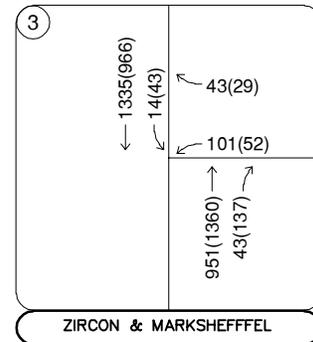

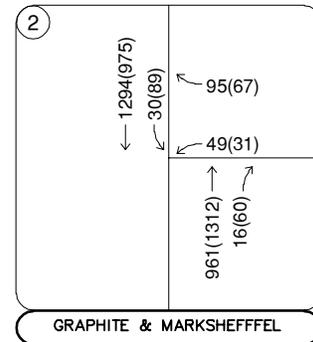

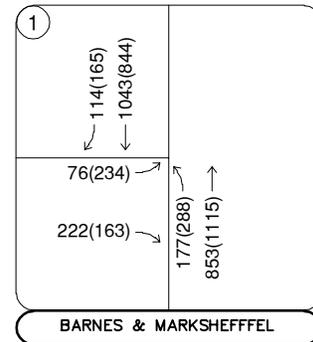

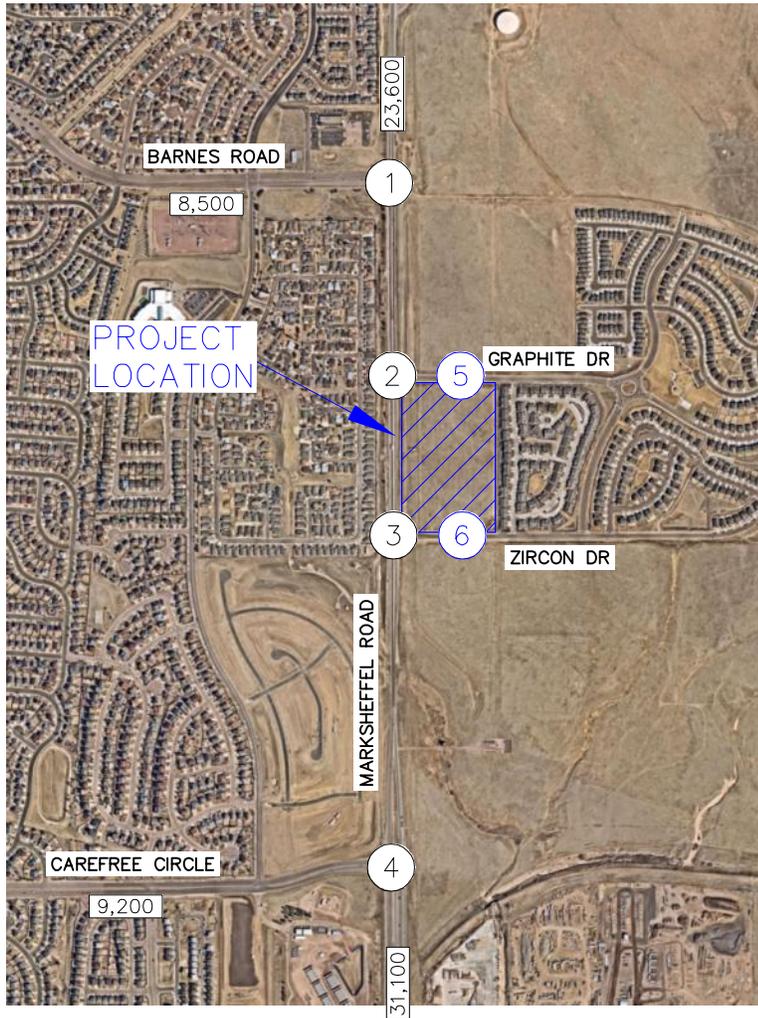

Site traffic volumes were added to the background volumes to represent estimated traffic conditions for the short-term 2025 buildout horizon and long-term 2045 twenty-year planning horizon. These total traffic volumes for the study area are illustrated for the 2025 and 2045 horizon years in **Figures 8** and **9**, respectively.

## 5.0 TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2025 and 2045 development horizons at the identified key intersections. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual (HCM)*<sup>2</sup>.

### 5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). For intersections and roadways in this study area, standard traffic engineering practice recommends overall intersection LOS D and movement/approach LOS E as the minimum desirable thresholds for acceptable operations. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

**Table 2 – Level of Service Definitions**

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	≤ 10	≤ 10
B	> 10 and ≤ 20	> 10 and ≤ 15
C	> 20 and ≤ 35	> 15 and ≤ 25
D	> 35 and ≤ 55	> 25 and ≤ 35
E	> 55 and ≤ 80	> 35 and ≤ 50
F	> 80	> 50

Definitions provided from the Highway Capacity Manual, Sixth Edition, Transportation Research Board, 2016.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and all-way stop controlled intersections are defined for each approach and for the overall intersection.

<sup>2</sup> Transportation Research Board, *Highway Capacity Manual*, Sixth Edition, Washington DC, 2016.

## 5.2 Key Intersection Operational Analysis

Calculations for the operational level of service at the key intersections for the study area are provided in **Appendix E**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 2**. Existing peak hour factors were utilized in the analysis. The City of Colorado Springs provided the existing signal timing for the Barnes Road/Marksheffel Road intersection (timing sheet attached in **Appendix D**). Synchro traffic analysis software was used to analyze the signalized, and unsignalized key intersections for HCM level of service.

### Barnes Road and Marksheffel Road

The signalized ‘T’-intersection of Barnes Road and Marksheffel Road operates with permissive-only northbound left turn phasing. The intersection currently operates at LOS B during the morning peak hour and LOS C during the afternoon peak hour. With project traffic, the intersection is anticipated to continue operating at an acceptable level of service throughout the short-term 2025 horizon. Therefore, no improvements or modifications are needed to the control or lane configurations as result of this project.

By the 2045 horizon, Marksheffel Road is anticipated to be improved to be a four-lane roadway by the City of Colorado Springs with two through lanes in each direction. In addition, the east leg will be constructed with buildout of Freestyle Master Plan and Enclaves at Mountain Vista East projects. Barnes Road is also anticipated to provide two through lanes in each direction in the future. The projected ADT is anticipated to be between 24,100 to 32,000 vehicles per day within the site area. The four-lane roadway is proposed to be carried through all the study intersection along Marksheffel Road. It is understood that ultimately, with the roadway connections from Banning Lewis Parkway to US-24 and the buildout of Banning Lewis Parkway, less vehicles may utilize Marksheffel Road. Therefore, the following lane geometry has been recommended within previous studies at this intersection to accommodate future traffic volumes:

- Eastbound: Dual Left Turn Lanes, Two Through Lanes, and a Right Turn Lane
- Northbound: Left Turn Lane, Two Through Lanes, and a Right Turn Lane
- Westbound: Dual Left Turn Lanes, Two Through Lanes, and a Right Turn Lane
- Southbound: Dual Left Turn Lanes, Two Through Lanes, and a Right Turn Lane

With these 2045 recommendations, the intersection is anticipated to operate with LOS D during the morning and afternoon peak hours. **Table 3** provides the results of the LOS analysis at this intersection.

**Table 3 – Barnes Road & Marksheffel Road LOS Results**

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
<b>2022 Existing</b>	11.1	B	21.1	C
<b>2025 Background</b>	12.3	B	24.4	C
<b>2025 Background Plus Project</b>	12.7	B	25.6	C
<b>2045 Background #</b>	46.6	D	48.3	D
<b>2045 Background Plus Project #</b>	46.2	D	48.6	D

# = Ultimate Intersection Configuration

### Graphite Drive and Marksheffel Road

The unsignalized 'T'-intersection of Graphite Drive and Marksheffel Road operates with stop control on the westbound Graphite Drive approach. The intersection movements operate acceptably at LOS D or better during both peak hours under existing conditions. With project traffic, all movements are anticipated to continue operating at an acceptable level of service E or better throughout the short-term 2025 horizon. As the delay levels are within reasonable and expected limits, no improvements or modifications are proposed at this intersection.

By 2045, Marksheffel Road is anticipated to be improved to be a four-lane roadway with two through lanes in each direction by the City of Colorado Springs. With two through lanes in each direction along Marksheffel Road, the intersection is anticipated to operate with LOS C or better during both peak hours. **Table 4** provides the results of the LOS analysis conducted at this intersection.

**Table 4 – Graphite Drive & Marksheffel Road LOS Results**

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
<b>2022 Existing</b>				
Westbound Approach	23.3	C	29.5	D

<b>2045 Background Plus Project #</b>				
Westbound Approach	16.8	C	21.7	C
Southbound Left	9.4	A	12.5	B

# = Two NB/SB Through Lanes

### Zircon Drive and Marksheffel Road

The unsignalized 'T'-intersection of Zircon Drive and Marksheffel Road operates with stop control on the westbound Zircon Drive approach. The intersection movements operate acceptably during both peak hours under existing conditions. With project traffic, all movements are anticipated to continue operating at an acceptable level of service E or better throughout short-term 2025 horizon. As these delay levels are within reasonable and expected limits, no improvements or modifications are proposed at this intersection.

By 2045, Marksheffel Road is anticipated to be improved to be a four-lane roadway with two through lanes in each direction by the City of Colorado Springs. With two through lanes in each direction along Marksheffel Road, the intersection is anticipated to operate with LOS C or better during both peak hours. **Table 5** provides the results of the LOS analysis conducted at this intersection.

**Table 5 – Zircon Drive & Marksheffel Road LOS Results**

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
<b>2022 Existing</b>				
Westbound Left	38.3	E	25.3	D
Westbound Right	16.5	C	23.7	C
Southbound Left	9.9	A	12.2	B
<b>2025 Background</b>				
Westbound Left	37.6	E	31.6	D
Westbound Right	17.9	C	28.8	D
Southbound Left	10.3	B	13.8	B
<b>2025 Background Plus Project</b>				
Westbound Left	45.6	E	44.1	E
Westbound Right	18.4	C	30.5	D
Southbound Left	10.3	B	14.3	B
<b>2045 Background #</b>				
Westbound Left	21.0	C	26.4	D
Westbound Right	11.0	B	13.6	B
Southbound Left	9.3	A	12.4	B
<b>2045 Background Plus Project #</b>				
Westbound Left	23.5	C	29.6	D
Westbound Right	11.2	B	13.8	B
Southbound Left	9.4	A	21.9	B

# = Two NB/SB Through Lanes

### Carefree Circle and Marksheffel Road

The unsignalized 'T'-intersection of Carefree Circle and Marksheffel Road operates with stop control on the eastbound Carefree Circle approach. The eastbound left turn movement operates with LOS F during both peak hours under existing conditions. An MUTCD four-hour signal warrant was performed at the intersection. The short-term horizon is not anticipated to meet warrants for any of the four hours; however, all four hours are anticipated to meet the Four-Hour Warrant for signalized for the long-term 2045 horizon. The signal warrant worksheet is attached in **Appendix G**. Therefore, the eastbound left movement may operate with higher delays until a traffic signal is warranted and constructed at this intersection. Drivers coming from the west can reroute on the street network and use the signalized intersections of Constitution Avenue or Barnes Road along Marksheffel Road to access their destination instead as delay values increase.

By 2045, signalization of the intersection is anticipated. In addition, dual northbound left turn lanes were found to be needed, which can be provided within the existing pavement that is presently striped out. Therefore, with signalization and dual northbound left turn lanes, the intersection is anticipated to operate with LOS B during both peak hours. **Table 6** provides the results of the LOS analysis conducted at this intersection.

**Table 6 – Carefree Circle & Marksheffel Road LOS Results**

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS	Delay (sec/veh)	LOS
<b>2022 Existing</b>

<b>2045 Background Plus Project #</b>	16.6	B	19.8	B

# = Signalized, Dual NB Left Turn Lanes

## Project Accesses

With completion of the Mountain Bluffs project, an access along Graphite Drive and an access along Zircon Drive are proposed. Single lane approaches will be sufficient at these two access intersections. It is recommended that R1-1 “STOP” signs be installed on the approach exiting the development at both locations. **Table 7** provides the results of the level of service for the project street accesses. As shown in the table, the project street access intersections are both anticipated to have all movements operating with acceptable LOS A during the peak hours in both the buildout year 2025 and the long term 2045 horizons.

**Table 7 – Project Access Level of Service Results**

Intersection	2025 Total				2045 Total			
	AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
	Delay (sec/veh)	LOS

Southbound Approach	9.0	A	8.7	A	9.0	A	8.7	A

### 5.3 Turn Bay Length Analysis

Auxiliary turn lanes and turn lane lengths are based on the guidelines outlined in the City of Colorado Springs Traffic Criteria Manual. A left turn lane is provided for movements with volumes greater than 10 vehicles per hour whereas right turn lanes were provided for movement with volumes greater than 25 vehicles per hour. In addition, dual left turn lanes are usually needed when 300 or more vehicles per hour are utilizing the turn lane. Marksheffel Road, Barnes Road, and Carefree Circle are classified as principal arterial roadways. By 2045, all roadways will most likely provide a 45 mile per hour speed limit based functional classification from *Section 16.0: Table of Traffic Engineering Design Standards* within the Traffic Criteria Manual. Because most intersections along Marksheffel Road are not built out and currently provide additional pavement for future lanes for future developments, the turn lane lengths that are recommended will follow the City of Colorado Springs turn lane standards.

## 5.4 Vehicle Queuing Analysis

A vehicle queuing analysis was conducted for the study area intersections. The queuing analysis was performed using Synchro presenting the results of the 95<sup>th</sup> percentile queue lengths. Results are shown in the following **Table 8** with calculations provided within the level of service operational sheets of **Appendix E** for unsignalized intersections and **Appendix F** for signalized intersections.

**Table 8 – Turn Lane Queuing Analysis Results**

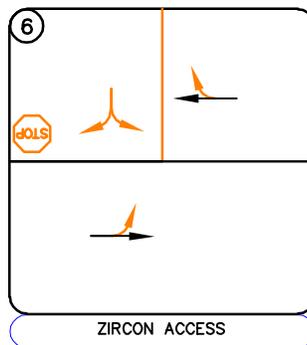

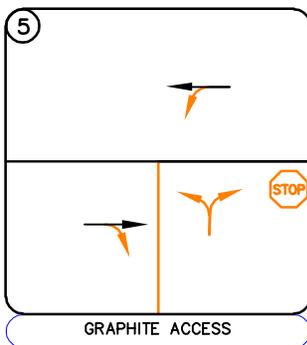

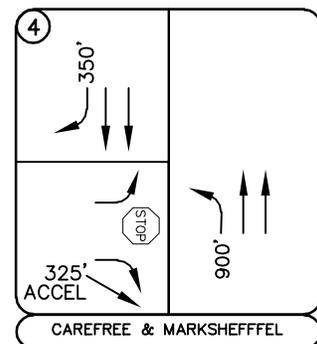

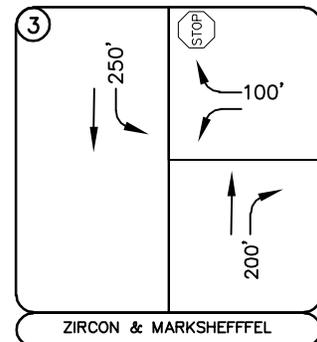

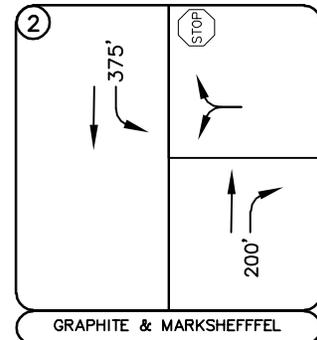

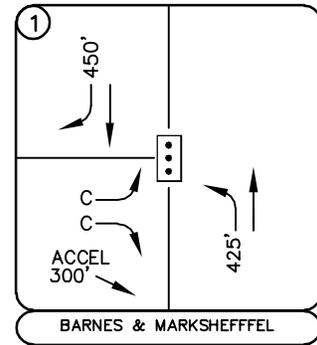

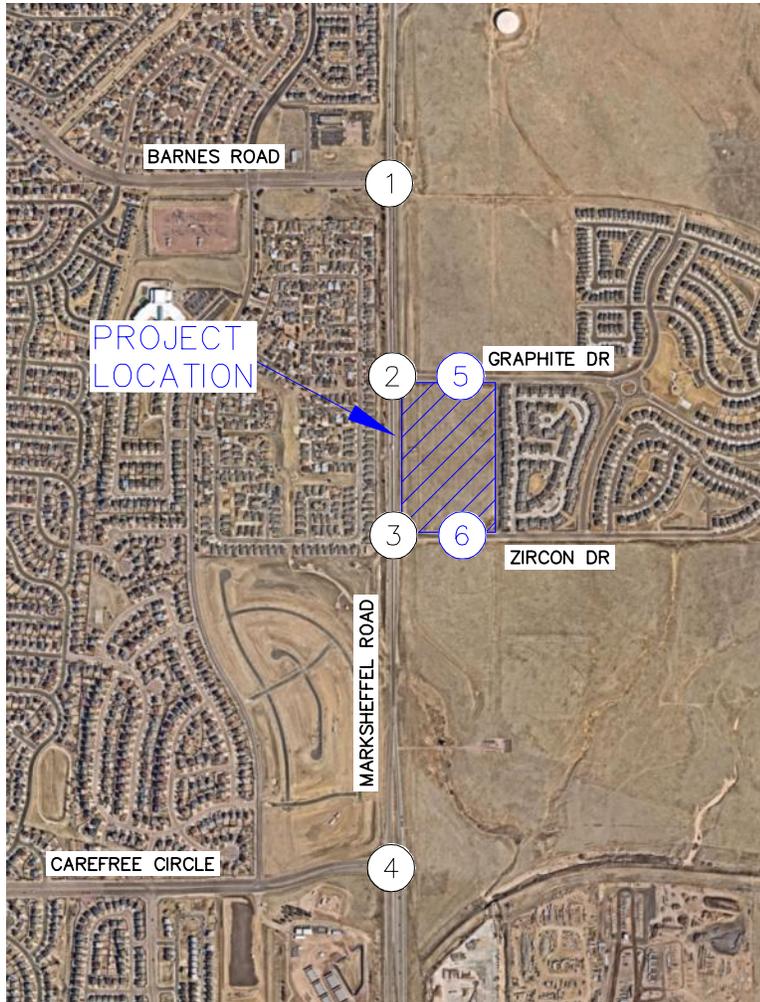

Intersection Turn Lane	Existing Turn Lane Length (feet)	2025 Calculated Queue (feet)	2025 Recommended Length (feet)	2045 Calculated Queue (feet)	2045 Recommended Length (feet)

Southbound Right	350'	25'	350'	16'	350'

DNE = Does Not Exist; C = Continuous; **Red** Text = Storage Deficiency; **Blue** Text = Recommendation

As shown in the results presented within the queuing table, all vehicle queues are anticipated to be accommodated within the existing turn bay lengths in the 2025 buildout horizon. With most intersections needing additional widening or reconfiguration by 2045, all auxiliary turn lanes should be constructed with the storage lengths as provided in **Table 8** above. The turn lane lengths were based on the City of Colorado Springs Traffic Criteria Manual. With a 45 mile per hour speed limit on most roadways, a lane length of 200 feet and a taper length of 180 feet were used. The left turn lane storage length at the signalized intersection is based on the 95<sup>th</sup> percentile queue.

## 5.5 Improvement Summary

Based on the results of the intersection operational and vehicle queuing analysis, the key intersection recommended improvements and control are shown in **Figure 10** for the short-term 2025 horizon and **Figure 11** for the long-term 2045 horizon.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

---

Based on the analysis presented in this report, Kimley-Horn believes the Mountain Bluffs residential neighborhood will be successfully incorporated into the existing and future roadway network. Analysis of the existing street network, the proposed project development, and expected traffic volumes resulted in the following recommendations:

### 2025 Recommendations

- With completion of the Mountain Bluffs project, an access along Graphite Drive and an access along Zircon Drive are proposed. Single lane approaches will be sufficient at these two access intersections. It is recommended that the exiting project approaches operate with stop-control with R1-1 “STOP” signs installed on each approach exiting the development.

### 2045 Recommendations

- By the 2045 horizon, Marksheffel Road is anticipated to be improved to be a four-lane roadway by the City of Colorado Springs providing two through lanes in each direction. The ultimate configuration for the Barnes Road and Marksheffel Road intersection will be constructed by other developments occurring in the area. The Carefree Circle and Marksheffel Road intersection is anticipated to warrant signalization by the long-term horizon. Dual northbound left turn lanes were found to be needed, which can be provided within the existing pavement that is presently striped out.

### General Recommendations

- Any onsite or offsite improvements should be incorporated into the Civil Drawings and conform to standards of the City of Colorado Springs and the Manual on Uniform Traffic Control Devices (MUTCD) – 2009 Edition.

## Trip Generation Worksheets

Project Mountain Bluffs  
 Subject Trip Generation for Single-Family Detached Housing  
 Designed by MAG Date April 14, 2022 Job No. 196465000  
 Checked by \_\_\_\_\_ Date \_\_\_\_\_ Sheet No. \_\_\_\_\_ of \_\_\_\_\_

**TRIP GENERATION MANUAL TECHNIQUES**

ITE Trip Generation Manual 11th Edition, Fitted Curve Equations

Land Use Code - Single-Family Detached Housing (210)

Independent Variable - Dwelling Units (X)

$X = 104$   
 $T = \text{Average Vehicle Trip Ends}$

**Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (200 Series Page 220)**

$\text{Ln}(T) = 0.91 \text{Ln}(X) + 0.12$ $\text{Ln}(T) = 0.91 * \text{Ln}(104) + 0.12$	Directional Distribution:    26% ent.    74% exit. $T = 78$ Average Vehicle Trip Ends 20 entering            58 exiting  $20 + 58 = 78$
--	---

**Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (200 Series Page 221)**

$\text{Ln}(T) = 0.94 \text{Ln}(X) + 0.27$ $\text{Ln}(T) = 0.94 * \text{Ln}(104) + 0.27$	Directional Distribution:    63% ent.    37% exit. $T = 103$ Average Vehicle Trip Ends 65 entering            38 exiting  $65 + 38 = 103$
--	---

**Weekday (200 Series Page 219)**

$\text{Ln}(T) = 0.92 \text{Ln}(X) + 2.68$ $\text{Ln}(T) = 0.92 * \text{Ln}(104) + 2.68$	Directional Distribution: 50% entering, 50% exiting $T = 1046$ Average Vehicle Trip Ends 523 entering            523 exiting  $523 + 523 = 1046$
--	--
