

Subject: Internal Road System Dimensions for Glamping Site

Dear Tri-Lakes-Monument Fire Protection District,

Thank you for your inquiry regarding the internal road system for our glamping site. Below are the requested details:

- **Road Width:** The internal roads are planned to be 12 feet wide.
- **Road Surface:** The roads will be constructed using a base layer of roadbase material with a top layer of crushed recycled asphalt pavement (RAP).
- **Turn Radius:** All road turns will have a maximum turning angle of 45 degrees.
- **Height Clearance:** There are no height restrictions, as none of the roads pass under overhanging tree branches or other obstructions.
- **Load Capacity:** The load capacity is anticipated to be comparable to that of a standard residential driveway, designed to support typical vehicle loads, including emergency vehicles.

Please let me know if you need any further information or if there are specific requirements we should take into account.

Best regards,
Chris Jeub, Owner
Monument Glamping
