Towerco VI Holdings LLC  
5000 Valleystone Drive  
Cary, NC 27519

SUBJECT: TBD Wayfarer Drive  
Mountain View Electric Association, Inc. (the Association)  
Account Number: 106383000  
Work Order Number: 25-0725

As requested, and based on the preliminary information provided, the Association has completed the initial design of the electric service for your cell tower on Wayfarer Drive. An actual address is required. The cost of the line is computed to be \$8,195.00. We have received your engineering fee of \$500.00. This amount is deducted from your construction costs, leaving a balance of **\$7,695.00**.

This estimate is good for ninety (90) days and is based on the current policies of the Association. These policies may be revised, amended, supplemented, or otherwise changed from time to time in accordance with decisions made by the Association Board of Directors.

A copy of the current Association Extension Policy is available upon your request. A few of the rules and regulations from the policy are:

- A. All costs must be paid prior to the Association scheduling construction of the extension. The contribution will not bear interest and will not be eligible for Shared Cost Refunds.
- B. If at any time it is determined that the estimated cost is inadequate to complete the construction, additional payment will be required before construction of the line extension proceeds.
- C. If the Applicant fails to complete the extension within six (6) months from the date of the Association's Cost Letter, the Applicant will forfeit the engineering fee, if paid, and the Application for the Line Extension will be cancelled.

Full payment must be made, all required easements and permits received, and all pre-construction requirements completed to the Association's satisfaction four (4) to six (6) weeks in advance of any construction. The following list includes, but is not limited to, pre-construction requirements that must be completed to the Association's satisfaction prior to scheduling the job for construction:

- 1) Finish grades and finish sub-grade elevations need to be within plus or minus three tenths (3/10) of a foot in all locations where the distribution system is proposed.
- 2) In the easement areas where the electric lines are to be installed, twenty (20) feet must be cleared of any debris and remain clear throughout the installation process including field staking.
- 3) Locate and mark on-site survey points, such as property corners, boundary lines, cut and fill information, or additional points as requested.

This Association is an equal opportunity provider and employer.

- 4) Address posted at the property.
- 5) Notify the Association if gates are installed and locked so we can arrange access.

It is reasonable for the Association to expect these requirements to be completed in a timely manner. If not completed within ninety (90) days from receipt of payment, it will be necessary, at the Association's sole discretion, to either extend the estimate or make a new estimate incorporating the then current terms of the Association's Extension Policy and current construction costs.

Information about the subsurface soil conditions along proposed Association routes within this area are unknown. The indicated cost for this electric system is based on a perception that the Association or the Association contractors will not encounter subsurface groundwater, rock, or other unforeseen encumbrances during construction. In the event these conditions are encountered, you will be charged for any added costs. The meter set may be withheld pending receipt of payment.

It is the responsibility of the applicant to meet all the requirements of the Inspection Authority, including proper construction of electric lines on the applicant's side of the service delivery point. The Association is permitted to install a meter for a new service only after approval by the inspection authority.

By signing below, you acknowledge that the length of the secondary run may exceed the Association's recommended distance of 250 feet from the transformer. You are aware that the Association provides sufficient voltage only to the metering point, and if you or any future owners of said property do experience voltage drop problems due to this secondary run, the Association will not be held responsible.

Please sign to verify you understand the contents of this letter and that any change of location or redesign of this project may be for a charge. A signed copy must be returned.

Upon receipt of the signed copy of this letter, construction costs totaling **\$7,695.00**, an address, all required easements and permits, and all pre-construction requirements are completed to the Association's satisfaction; the Association will add this project to a construction schedule. However, any project may experience delays due to the availability of material.

If you have any questions regarding this project, please feel free to call me at (719) 494-2607. For scheduling information please contact the Operations Department at [operations@mvea.coop](mailto:operations@mvea.coop) or call Dan Schroeder at (719) 494-2668, 7:00 a.m. – 5:30 p.m. Monday through Thursday.

Sincerely,

Kele Kaoho  
Distribution Line Designer
