Re: Brightness Certification Letter

To Whom It May Concern:

The following information pertains to the proposed LED 2V 2'8" x 9'5" Digital Display provided by Daktronics, Inc. and located in Colorado Springs, CO.

The proposed sign at 2'8" x 9'5" is set not to exceed .26 footcandles measured at a distance of 55 feet from the sign. The values shown on the attached graph are shown at maximum brightness for nighttime viewing, meaning all white, the typical content would result in values that are 25-35% of the values shown on the graph. This would amount to about 4% of what a typical street light can provide.

The sign comes equipped with a light-sensor (photocell) that detects ambient light levels and adjusts the display intensity automatically according to natural ambient light conditions. With the ambient light sensor operating, this nighttime intensity is factory programmed and password-protected from manipulation.

Daktronics, Inc. is the world leader in the design and manufacture of electronic display systems. We are committed to providing LED displays that adhere to the regulatory environment, working closely with our customers for a responsible approach to the market.

Please let me know if you have any questions or concerns.

Sincerely,
DAKTRONICS, INC.
