Todd West, PE Project Engineer

Engineer's Statement

The attached drainage plan and report were prepared under my direct supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions in preparing this report.
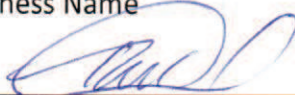

SIGNATURE: _____

Proposed Drainage Map

1) GENERAL LOCATION AND DESCRIPTION

(a)   Location

The Black Hills Office property, addressed as 12740 Black Hills Road, is the north half of the Northeast Quarter of the Southeast Quarter of Section 7, Township 12 South, Range 65 West of the 6th Principal Meridian, County of El Paso, State of Colorado. Black Forest Road bounds the site on the east. Rural Residential development (Zoning RR-5) surrounds the site on the north, south, and west. An existing asphalt and gravel road provides access to the vacant parcel. There are no major drainageways on the site.

(b)   Description of property and Proposed Improvements

The subject property contains approximately 4.83 acres. Sparse ground cover consists of native weeds with a few trees at the northeast corner of the site. A shallow ridgeline divides the site, directing the east portion of the site to the north, and the west portion of the site to the west. The National Resources Conservation Service Web Soil Survey classifies the in situ soils as Hydrologic Group B, which exhibit a moderate infiltration rate when thoroughly wet.

There are no major drainage ways or irrigation facilities on the site. Existing gas and electric facilities run along the property frontage adjacent to Black Forest Road, but do not affect the development of the site.

The development will consist of a single story 4,400 sf office building with a full, walk-out basement of equal size with a 3,250-sf studio/shop building on the 4.83 acres. The office building will house the Owner's corporate functions for Metal Roof Innovations, Ltd. company (strategic planning, accounting, sales/marketing management).

An existing barn (currently under construction) was permitted under the A-5 zoning. Construction began in the spring of 2020. The barn will be re-purposed in use as a studio/shop to supplement the corporate functions. No manufacturing, warehousing, shipping, wholesale or retail sales will take place at this facility.

2) DRAINAGE BASINS AND SUB-BASINS

(a)   Major Basin Description

The site is tributary to the upper reach of Kettle Creek drainage basin (FOMO3000), that flows from north to south approximately 1,500 feet west of the site. The report Drainage Basin Planning Study for Kettle Creek Basin was reviewed in the preparation of this report. The Study is a planning document and is not intended as a basis for final design, and thus has no direct influence on the design of this site. Developed flows will be attenuated as described in this report in order to follow the historic discharge rates as described in the Study.

Based on the FEMA Map No. 08041C0315G, Panel 315 of 1300, with an effective date of 12/07/18 the site is located within Zone X, areas of minimal flood hazard. No portion of the site is located within the 100 year floodplain. The FIRM Map is included in the Appendix on page 17. The upper reach of the Kettle Creek basin is sparsely developed and includes single family homes on large acreages.

(b)   Sub-Basin Description

The site historically drains north and west. The site has been divided into three sub-basins, H-1, H-2, and H-3 and design points have been provided at each to identify the historic rate of discharge form the site (refer to Historic Basin Map included at the end of this report). A portion of Black Forest Road flows east onto the site, and is included in Basin H-2. These offsite flows will continue to follow their historic drainage path onto the site and will flow north and east to design point H2 (historic) and P2 (proposed) following development of the site.

The development of the site will occur on the upper portion of the lot, with the majority of the new impervious areas directed to a proposed detention facility that will intercept flow prior to discharge to the west.

3)   DRAINAGE DESIGN CRITERIA

(a)   Development Criteria Reference

The City of Colorado Springs Drainage Criteria Manual Volumes 1 and 2 (DCMV1 & DCMV2) was utilized per El Paso County's stormwater quality design criteria as well as the applicable standards from the County's Engineering Criteria Manual (ECM).

(b)   Hydrologic Criteria

The Rational Method was selected to calculate existing and proposed runoff rates from the site for the 5 year (minor storm) and 100 year (major storm) recurrence intervals. The design rainfall will be from DCMV1 Table 6-2 Rainfall Depths for

Colorado Springs.

Table 6-2. Rainfall Depths for Colorado Springs

Return Period	1-Hour Depth	6-Hour Depth	24-Hour Depth
2	1.19	1.70	2.10
5	1.50	2.10	2.70
10	1.75	2.40	3.20
25	2.00	2.90	3.60
50	2.25	3.20	4.20
100	2.52	3.50	4.60

Where Z= 6,840 ft/100

The most current version of UDFCD's Peak Runoff Prediction by the Rational Method, Version 2.00 released May 2017 was used to determine flows. The Runoff Coefficients from DCMV1, Table 6-6 were input to determine peak runoff values.

The development will implement Full Spectrum Detention (FSD) utilizing an Extended Detention Basin (EDB) to capture and treat runoff prior to discharge downstream. Full Spectrum Detention (FSD) is a design concept that provides control of the full range of runoff rates that pass through detention facilities.

4)   DRAINAGE FACILITY DESIGN

(a)   General Concept

The area being developed has been divided into three subbasins. Basin PR-1 includes the paved parking area and portions of the buildings (office and warehouse) and perimeter landscaping. Basin PR-1 will flow within the asphalt parking lot to a new 5' Type R inlet, where it will be conveyed to the pond via an 18" RCP pipe. Due to the small size of the development, per the UD-BMP_v3.07 spreadsheet by MHFD, a forebay is not necessary for this size site.

Basin PR-2 will collect flow from a portion of the office roof, which will be conveyed to the detention basin via an earthen swale. Basin PR-3, located along the northern limit of the development, will flow north following the historic drainage path and is not tributary to the proposed pond.

Basins PR-4 and PR-5 include areas in which the historic and proposed impervious

values will not be affected by the development of the site. These basins have been delineated to compare historic discharge rates to those following development. As shown within the Summary Runoff Table included on the Historic Basin Map and Proposed Basin Map and included below, development of the site will result in a decrease in discharge rates at the design points that are located where flows exit the site.

The imperviousness value of 45.61%, which represents the composite value for the area tributary to the pond, was used to determine the required EDB. The UD-Detention spreadsheet can be found in the Appendix.

The drainage concept for the development does not alter historic drainage patterns. The detention pond will act to limit the stormwater release rate to pre-development conditions.

(b)   Specific Details

The development will implement Full Spectrum Detention (FSD) utilizing an Extended Detention Basin (EDB) to capture and treat runoff prior to discharge downstream. The proposed detention pond is designed using the UDFCD spreadsheet, UD-Detention v.4.03. This design considers the water quality capture volume (WQCV), excess urban runoff volume (EURV), and 100-year detention volume. The EDB serves to limit the release rate to pre-development conditions. This is illustrated by the decrease in flow from historic to proposed conditions when comparing design point H1 to P1, H2 to P2, and H3 to P3 (historic and proposed, respectively) as shown in the tables below. Refer the accompanying drainage maps for locations of design points.

HISTORIC CONDITIONS					
DESIGN POINT	CONTRIBUTING BASIN(S)	CONTRIBUTING AREA (AC)	Q_5 (cfs)	Q_{100} (cfs)	NOTES:
H1	H-1	1.72	0.63	5.86	Releases undetained (following historic flow path)
H2	H-2	2.96	1.97	9.75	Releases undetained (following historic flow path)
H3	H-3	0.23	0.11	0.83	Releases undetained (following historic flow path)

PROPOSED CONDITIONS					
DESIGN POINT	CONTRIBUTING BASIN(S)	CONTRIBUTING AREA (AC)	Q_5 (cfs)	Q_{100} (cfs)	NOTES:
P1	PR-1, PR-2, PR-4	2.16	0.47	4.62	Releases offsite (developed basins PR-1 and PR-2 are detained prior to release)
P2	PR-3	2.60	1.53	8.33	Releases undetained (following historic flow path)
P3	PR-5	0.15	0.05	0.52	Releases undetained (following historic flow path)

The outlet of the EDB pond has been directed to the flowline of an existing drainageway, serving to minimize the potential for erosion. In addition, a low tailwater basin will be installed at the end of the EDB pond outfall pipe. This feature consists of a riprap-lined depression that will dissipate the energy of the pond discharge. This design, together with the net decrease in flow from historic conditions, will serve to protect downstream drainageways.

A ten-foot-wide gravel maintenance path provides access to the EDB. The path will provide vehicular access to the bottom of the pond for removing sediment and debris that will collect in the trickle channel and outlet works. The report titled *Stormwater Best Management Practices Inspection and Maintenance Plan (IM Plan) for Black Forest Office*, prepared by 2N Civil for the Owner and/or his assigns, shall be followed to ensure the ongoing performance of the drainage facilities associated with this project.

The cost estimate for the proposed drainage improvements is provided on page 34 in the Appendix of this report.

Drainage Basin Fees are not due with this Site Development Plan application as the lot is not being platted.

5)   OTHER GOVERNMENT AGENCY REQUIREMENTS

A permit issued by the *State of Colorado for Stormwater Discharges Associated with Construction Activity* detailing construction management BMPs will be obtained prior to construction activities.

No other government agency requirements are anticipated for this project.

6)   DISCUSSION OF FOUR STEP PROCESS

Step 1: Employ Runoff Reduction Practices

Portions of the building rooftops will be directed to landscaped areas and/or vegetated swales to promote infiltration via sheet flow across the pervious surfaces. The paved parking area has been limited to the extent allowed by the county's code in an effort to reduce runoff from unnecessary impervious area.

The existing shallow drainageway identified as Basin H-2/PR-3 will remain largely undeveloped in order to maintain this existing site amenity and its historic infiltration capacity.

Step 2: Stabilize Drainageways

Runoff conveyed to the detention pond will flow across riprap placed at the end of the pipe and swale, dissipating the energy in the runoff to prevent erosion and promote infiltration. The low tailwater basin will be installed at the end of the EDB pond outfall pipe. This feature consists of a riprap-lined depression that will dissipate the energy of the pond discharge. These features will be installed at the time of construction, ensuring that natural stream characteristics are maintained.

Step 3: Provide Water Quality Capture Volume (WQCV)

The development will implement an Extended Detention Basin. The outlet structure of the detention basin will act to slowly release the WQCV and EURV to address frequent urban runoff events, intercepting stormwater from developed areas and allowing it to infiltrate into the existing soil, collecting sediment/debris prior to discharge downstream.

There are no streams on or adjacent to the site.

Step 4: Consider Need for Industrial and Commercial BMPs

The use of this commercial development will consist of typical office. No manufacturing, warehousing, shipping, wholesale or retail sales will take place at this facility.

The building manager will be responsible for implementing measures to mitigate the introduction of pollutants to the stormwater drainage system, as well as the ongoing maintenance associated with the detention basin. Parking areas shall be

monitored to ensure litter and/or debris is contained within receptacles.

Final stabilization of all disturbed areas as outlined in the Stormwater Management Plan will ensure that soil erosion does not occur.

7)   DRAWING CONTENTS

(a)   General Location Map

A Vicinity Map is included in the Appendix.

(b)   Drainage Plan

Refer to the Proposed Drainage Plan in the Appendix for basin delineation, drainage routes and flows, and proposed stormwater facilities.

8)   CONCLUSION

In our professional opinion, the proposed development will pose an insignificant change in the historic drainage patterns of the existing site. The development of the office and warehouse will include construction of an Extended Detention Basin, which will provide detention of the WQCV, EURV, and 100 year flow. This facility will slow the rate of discharge from the site to pre-development conditions and promote infiltration. These runoff reduction measures ensure that the capacity of the downstream drainageways will not be negatively affected by the construction of these improvements.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at http://www.ngs.noaa.gov/.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, City of Fountain, Bureau of Land Management, National Oceanic and Atmospheric Administration, United States Geological Survey, and Anderson Consulting Engineers, Inc. These data are current as of 2006.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact FEMA Map Service Center (MSC) via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at http://www.msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

### El Paso County Vertical Datum Offset Table

| Flooding Source	Vertical Datum Offset (ft)
REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION	

Panel Location Map
This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.
LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- ━ ━ ━ Channel, Culvert, or Storm Sewer
- ┃┃┃┃┃ Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation
- Coastal Transect
- 513 Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 7/16/2020 at 3:38 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

3.2   Time of Concentration

One of the basic assumptions underlying the Rational Method is that runoff is a function of the average rainfall rate during the time required for water to flow from the hydraulically most remote part of the drainage area under consideration to the design point. However, in practice, the time of concentration can be an empirical value that results in reasonable and acceptable peak flow calculations.

For urban areas, the time of concentration (t_c) consists of an initial time or overland flow time (t_i) plus the travel time (t_t) in the storm sewer, paved gutter, roadside drainage ditch, or drainage channel. For non-urban areas, the time of concentration consists of an overland flow time (t_i) plus the time of travel in a concentrated form, such as a swale or drainageway. The travel portion (t_t) of the time of concentration can be estimated from the hydraulic properties of the storm sewer, gutter, swale, ditch, or drainageway. Initial time, on the other hand, will vary with surface slope, depression storage, surface cover, antecedent rainfall, and infiltration capacity of the soil, as well as distance of surface flow. The time of concentration is represented by Equation 6-7 for both urban and non-urban areas.

Water Quality Capture Volume (WQCV) =	0.021	acre-feet		acre-feet
Excess Urban Runoff Volume (EURV) =	0.064	acre-feet		acre-feet
2-yr Runoff Volume (P1 = 1.19 in.) =	0.058	acre-feet	1.19	inches
5-yr Runoff Volume (P1 = 1.5 in.) =	0.085	acre-feet	1.50	inches
10-yr Runoff Volume (P1 = 1.75 in.) =	0.108	acre-feet	1.75	inches
25-yr Runoff Volume (P1 = 2 in.) =	0.140	acre-feet	2.00	inches
50-yr Runoff Volume (P1 = 2.25 in.) =	0.166	acre-feet	2.25	inches
100-yr Runoff Volume (P1 = 2.52 in.) =	0.199	acre-feet	2.52	inches
500-yr Runoff Volume (P1 = 3.14 in.) =	0.266	acre-feet	3.14	inches
Approximate 2-yr Detention Volume =	0.048	acre-feet		
Approximate 5-yr Detention Volume =	0.066	acre-feet		
Approximate 10-yr Detention Volume =	0.089	acre-feet		
Approximate 25-yr Detention Volume =	0.098	acre-feet		
Approximate 50-yr Detention Volume =	0.102	acre-feet		
Approximate 100-yr Detention Volume =	0.116	acre-feet		

Define Zones and Basin Geometry

Zone 1 Volume (WQCV) =	0.021	acre-feet
Zone 2 Volume (EURV - Zone 1) =	0.042	acre-feet
Zone 3 Volume (100-year - Zones 1 & 2) =	0.052	acre-feet
Total Detention Basin Volume =	0.116	acre-feet
Initial Surcharge Volume (ISV) =	user	ft^3
Initial Surcharge Depth (ISD) =	user	ft
Total Available Detention Depth (H$_{total}$) =	user	ft
Depth of Trickle Channel (H$_{TC}$) =	user	ft
Slope of Trickle Channel (S$_{TC}$) =	user	ft/ft
Slopes of Main Basin Sides (S$_{main}$) =	user	H:V
Basin Length-to-Width Ratio (R$_{L/W}$) =	user	
Initial Surcharge Area (A$_{ISV}$) =	user	ft^2
Surcharge Volume Length (L$_{ISV}$) =	user	ft
Surcharge Volume Width (W$_{ISV}$) =	user	ft
Depth of Basin Floor (H$_{FLOOR}$) =	user	ft
Length of Basin Floor (L$_{FLOOR}$) =	user	ft
Width of Basin Floor (W$_{FLOOR}$) =	user	ft
Area of Basin Floor (A$_{FLOOR}$) =	user	ft^2
Volume of Basin Floor (V$_{FLOOR}$) =	user	ft^3
Depth of Main Basin (H$_{MAIN}$) =	user	ft
Length of Main Basin (L$_{MAIN}$) =	user	ft
Width of Main Basin (W$_{MAIN}$) =	user	ft
Area of Main Basin (A$_{MAIN}$) =	user	ft^2
Volume of Main Basin (V$_{MAIN}$) =	user	ft^3
Calculated Total Basin Volume (V$_{total}$) =	**user**	acre-feet

Depth Increment = 0.20 ft

DETENTION BASIN OUTLET STRUCTURE DESIGN
MHFD-Detention, Version 4.03 (May 2020)

Project: Black Forest Office
Basin ID: EDB Basin (PR-1 and PR-2)

Example Zone Configuration (Retention Pond)
	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	1.14	0.021	Orifice Plate
Zone 2 (EURV)	1.63	0.042	Orifice Plate
Zone 3 (100-year)	2.15	0.052	Weir&Pipe (Restrict)
Total (all zones)		0.116	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP) — Calculated Parameters for Underdrain

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)
Underdrain Orifice Diameter =	N/A	inches

Underdrain Orifice Area =	N/A	ft²
Underdrain Orifice Centroid =	N/A	feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP) — Calculated Parameters for Plate

Invert of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate =	1.63	ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing =	6.50	inches
Orifice Plate: Orifice Area per Row =	N/A	inches

WQ Orifice Area per Row =	N/A	ft²
Elliptical Half-Width =	N/A	feet
Elliptical Slot Centroid =	N/A	feet
Elliptical Slot Area =	N/A	ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.54	1.09					
Orifice Area (sq. inches)	0.14	0.14	0.50					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular) — Calculated Parameters for Vertical Orifice

	Not Selected	Not Selected	
Invert of Vertical Orifice =	N/A	N/A	ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice =	N/A	N/A	ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter =	N/A	N/A	inches

	Not Selected	Not Selected	
Vertical Orifice Area =	N/A	N/A	ft²
Vertical Orifice Centroid =	N/A	N/A	feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir (and No Outlet Pipe) — Calculated Parameters for Overflow Weir

	Zone 3 Weir	Not Selected			Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	1.63	N/A	ft (relative to basin bottom at Stage = 0 ft)	Height of Grate Upper Edge, H_t =	2.63	N/A	feet
Overflow Weir Front Edge Length =	4.00	N/A	feet	Overflow Weir Slope Length =	4.12	N/A	feet
Overflow Weir Grate Slope =	4.00	N/A	H:V	Grate Open Area / 100-yr Orifice Area =	69.46	N/A	
Horiz. Length of Weir Sides =	4.00	N/A	feet	Overflow Grate Open Area w/o Debris =	11.54	N/A	ft²
Overflow Grate Open Area % =	70%	N/A	%, grate open area/total area	Overflow Grate Open Area w/ Debris =	5.77	N/A	ft²
Debris Clogging % =	50%	N/A	%				

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice) — Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

	Zone 3 Restrictor	Not Selected			Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	3.40	N/A	ft (distance below basin bottom at Stage = 0 ft)	Outlet Orifice Area =	0.17	N/A	ft²
Outlet Pipe Diameter =	18.00	N/A	inches	Outlet Orifice Centroid =	0.13	N/A	feet
Restrictor Plate Height Above Pipe Invert =	2.70		inches	Half-Central Angle of Restrictor Plate on Pipe =	0.80	N/A	radians

---

User Input: Emergency Spillway (Rectangular or Trapezoidal) — Calculated Parameters for Spillway

|					
Spillway Invert Stage=	2.62	ft (relative to basin bottom at Stage = 0 ft)	Spillway Design Flow Depth=	0.33	feet
Spillway Crest Length =	5.00	feet	Stage at Top of Freeboard =	3.95	feet
Spillway End Slopes =	4.00	H:V	Basin Area at Top of Freeboard =	0.16	acres
Freeboard above Max Water Surface =	1.00	feet	Basin Volume at Top of Freeboard =	0.35	acre-ft

---

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.03 (May 2020)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

Stage - Storage Description	Stage [ft]	Area [ft²]	Area [acres]	Volume [ft³]	Volume [ac-ft]	Total Outflow [cfs]

For best results, include the stages of all grade slope changes (e.g. ISV and Floor) from the S-A-V table on Sheet 'Basin'.

Also include the inverts of all outlets (e.g. vertical orifice, overflow grate, and spillway, where applicable).

32

BLACK FOREST OFFICE

POND OUTLET PIPE

D =	18 inches
D =	1.5 ft
A =	1.77 sq ft
V Allowed	6.05 ft/s

Q = 2.00 cfs

Use Type M Riprap Minimum

Required Riprap Rock Size

P_d	6.31
V =	6.05 ft/s
g =	32.20 ft/sq sec
d =	0.1 (assumed value)

Req'd Riprap Type Based off P_d

L

Riprap Type	D_{50}-Median Rock Size (in.)
L	9
M	12
H	18
B18	18 (Grouted)

By Figure HS-20 in Drainage Criteria Manual Vol. 2, Type L Riprap is Mandated
Using Type L

Length of Riprap Required - Basin Length Minimum

L = 4D

D =	1.5 ft
L =	6.00 ft

L = $D^{1/2}$ x (V/2)

D =	1.5 ft
V =	6.05 ft/s
L =	3.70 ft

Using the Greater of the Two Lengths, L = 6

Basin Minimum Width

W = 4D	
D =	1.5 ft - Diameter of Circular Conduit
W =	6.00 ft

Minimum Thickness of Riprap, T

T = 1.75 x D_{50}	
D_{50} =	9 inches
T =	1.31 ft

ORIFICE PLATE NOTES:

1. PROVIDE CONTINUOUS NEOPRENE GASKET MATERIAL BETWEEN THE ORIFICE PLATE AND CONCRETE.

2. BOLT PLATE TO CONCRETE 12" MAX. ON CENTER. SEE TABLE OS-2 FOR PLATE THICKNESS.
EURV AND WQCV TRASH RACKS:

1. WELL-SCREEN TRASH RACKS SHALL BE STAINLESS STEEL AND SHALL BE ATTACHED BY INTERMITTENT WELDS ALONG THE EDGE OF THE MOUNTING FRAME.

2. BAR GATE TRASH RACKS SHALL BE ALUMINUM AND SHALL BE BOLTED USING STAINLESS STEEL HARDWARE.

3. TRASH RACK OPEN AREAS ARE FOR SPECIFIED TRASH RACK MATERIALS. TOTAL TRASH RACK SIZE MAY NEED TO BE ADJUSTED FOR MATERIALS HAVING DIFFERENT OPEN AREA/GROSS AREA RATIO (R VALUE).

4. STRUCTURAL DESIGN OF TRASH RACKS SHALL BE BASED ON FULL HYDROSTATIC HEAD WITH ZERO HEAD DOWNSTREAM OF THE RACK.
OVERFLOW SAFETY GRATES:

1. ALL SAFETY GRATES SHALL BE MOUNTED USING STAINLESS STEEL HARDWARE AND PROVIDED WITH HINGED AND LOCKABLE OR BOLTABLE ACCESS PANELS.

2. SAFETY GRATES SHALL BE STAINLESS STEEL, ALUMINUM, OR STEEL. STEEL GRATES SHALL BE HOT DIP GALVANIZED AND MAY BE HOT POWDER COATED AFTER GALVANIZING.

3. SAFETY GRATES SHALL BE DESIGNED SUCH THAT THE DIAGONAL DIMENSION OF EACH OPENING IS SMALLER THAN THE DIAMETER OF THE OUTLET PIPE.

4. STRUCTURAL DESIGN OF SAFETY GRATES SHALL BE BASED ON FULL HYDROSTATIC HEAD WITH ZERO HEAD DOWNSTREAM OF THE RACK.

CAUTION: NOTICE TO CONTRACTOR

THE CONTRACTOR IS SPECIFICALLY CAUTIONED THAT THE LOCATION AND/OR ELEVATION OF EXISTING UTILITIES AS SHOWN ON THESE PLANS IS BASED ON RECORDS OF THE VARIOUS UTILITY COMPANIES AND, WHERE POSSIBLE, MEASUREMENTS TAKEN IN THE FIELD. THE INFORMATION IS NOT TO BE RELIED ON AS BEING EXACT OR COMPLETE. THE CONTRACTOR MUST CALL THE LOCAL UTILITY LOCATION CENTER AT LEAST 48 HOURS BEFORE ANY EXCAVATION TO REQUEST EXACT FIELD LOCATIONS OF THE UTILITIES. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO RELOCATE ALL EXISTING UTILITIES WHICH CONFLICT WITH THE PROPOSED IMPROVEMENTS SHOWN ON THE PLANS.
