**Grandwood Ranch  
Traffic Impact Study  
PCD File No. P191 & SP195  
(LSC #185020)  
June 30, 2020**

**Traffic Engineer's Statement**

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

**Developer's Statement**

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

A handwritten signature in black ink, appearing to read "Jeffrey C. Hodson".

RE: Grandwood Ranch  
El Paso County, CO  
Traffic Impact Study  
LSC #185020  
PCD File No. P191 & SP195

Dear Mr. Herebic,

LSC Transportation Consultants, Inc. has prepared this traffic impact study for the proposed Grandwood Ranch residential development with 48 single-family units in El Paso County, Colorado. Located at El Paso County parcel ID 6119000003, the 146.84-acre parcel on the north side of Higby Road between Fairplay Drive and Colonial Park Drive is currently vacant land.

El Paso County is requiring this development to extend Furrow Road south from Lamplighter Court through the site to Higby Road. The plans show the future intersection of Furrow/Higby located approximately 1,180 feet east of the center of Higby Road/Fairplay Drive.

Three access points are proposed for the property. These access points would become public street intersections. Access to the east portion of the site is proposed to Higby Road approximately 980 feet west of the center of Higby Road/Colonial Park Drive. Access to the west portion of the site would be to Furrow Road (extended) at 707 feet north of Higby Road and 879 feet south of the intersection of Furrow Road/Minglewood Trail/Lamplight Drive. This report has been prepared for resubmittal to El Paso County. The previous version of this report was dated February 12, 2019.

## **REPORT CONTENTS**

The preparation of this report included the following:

- An inventory of existing roadway and traffic conditions on Higby Road adjacent to the site, including surface conditions, functional classification, widths, pavement markings,

traffic control signs, posted speed limits, intersection and access spacing, roadway and intersection alignments, roadway grades and auxiliary turn lanes

- Weekday peak-hour turning movement traffic counts at the intersections of Higby Road/Fairplay Drive and Highway 105/Furrow Road
- Estimated average weekday traffic (AWT) volumes for Higby Road adjacent to the proposed residential development site
- Projections of short-term (with the Furrow connection to Higby Road) and 20-year background traffic volumes on Higby Road adjacent to the site and Furrow Road through the site
- The proposed site land use and access plan
- Evaluation of intersection sight distance
- Estimates of average weekday and weekday peak-hour trip generation for the proposed Grandwood Ranch residential development and the estimated directional distribution of site-generated vehicle-trips on the streets and intersections adjacent to the site
- Projected site-generated and resulting total peak-hour intersection traffic volumes at the site access points on Higby Road and the future planned intersection of Furrow Road with the west access intersection
- Projected total daily and peak-hour traffic volumes on Higby Road and Furrow Road adjacent to the site
- Intersection level of service analysis at the following intersections:
  - Highway 105/Furrow Road
  - Furrow Road/Higby Road
  - Higby Road/West Copper Valley Court/East Copper Valley Court
  - Higby Road/Grandwood Drive
  - Higby Road/Fairplay Drive
- Evaluation of existing, short-term, and long-term projected intersection volumes to determine the short-term requirements for auxiliary right-/left-turn lanes on Higby Road, based on the criteria in El Paso County's *Engineering Criteria Manual* (ECM). Also included are the potential long-term lane requirements.
- Findings and recommendations

#### **LIST OF OTHER TRAFFIC REPORTS USED IN THE PREPARATION OF THIS REPORT**

Homeplace Ranch (non-LSC), Sanctuary Pointe, The Highway 105 Corridor Study (EPC), and the projected MTCP traffic volumes were used in preparation of this report.

#### **LAND USE AND ACCESS**

Figure 1 shows the site location relative to the adjacent and nearby streets. The proposed Grandwood Ranch residential development is proposed to contain approximately 48 single-family dwelling units. Located at El Paso County parcel ID 6119000003, the 146.84-acre site on Higby Road is currently vacant between Fairplay Drive and Colonial Park Drive.

Figure 2 contains the proposed site plan showing the individual residential units, site circulation, and the access points. Two access points are proposed for the property. The Furrow/Higby Road intersection is proposed to be located approximately 1,180 feet east of the center of Higby Road/Fairplay Drive. Higby Road/Grandwood Drive intersection (providing access to lots on the east portion of the site) is proposed approximately 980 feet west of the center of Higby Road/Colonial Park Drive. Both access points are proposed as full-movement, stop sign-controlled intersections. Access to the west area of the site (Furrow Road/Copper Valley Court) would be about 700 feet north of Higby Road.

## ROAD AND TRAFFIC CONDITIONS

Figure 1 shows the streets adjacent to and in the vicinity of the site. Adjacent streets serving the site are identified below followed by a brief description of each:

**Higby Road** is shown as a two-lane Collector from Jackson Creek Parkway to Furrow Road and as a Minor Arterial from Furrow Road to Roller Coaster Road on the *El Paso County Year 2040 Roadway Plan*. Adjacent to both proposed site access points, Higby Road has a posted speed limit of 35 miles per hour (mph). Higby Road is an unimproved, 24-foot-wide roadway.

**Furrow Road** is a two-lane Rural Major Collector that terminates approximately 1,500 feet north of Higby Road. El Paso County's *Major Transportation Corridors Plan* (MTCP) shows a planned extension that will connect Furrow Road to Higby Road by 2040. Currently, the posted speed limit on Furrow Road is 25 mph. The intersection of Highway 105/Furrow Road has the following auxiliary turn lanes: eastbound left-, westbound left-, and northbound right-turn.

El Paso County is requiring this development to extend Furrow Road south from Lamplight Court through the site to Higby Road. Furrow Road extended south to Higby Road would form a full-movement, stop sign-controlled T-intersection in the short term.

### Existing Traffic Volumes

Vehicular turning movement counts were conducted at the intersection of Furrow Road/Highway 105 on Tuesday, August 27, 2019 from 6:30 to 8:30 a.m. and from 4:00 to 6:00 p.m. Additionally, vehicular turning-movement counts were available in the Homeplace Ranch traffic report for the intersection of Higby Road/Fairplay Drive on Wednesday, May 16, 2018 from 7:00 to 9:00 a.m. and 4:00 to 6:00 p.m.

Figure 3 shows these turning-movement volumes, as well as the average weekday traffic volumes (estimated based on factored peak-hour count data) on the study area streets. Raw count data is attached.

## SHORT-TERM BACKGROUND TRAFFIC VOLUMES

Figure 4 shows the projected short-term baseline/background traffic volumes. These have been estimated by LSC and assume the extension of Furrow Road south to Higby Road (but not including the trips generated by this project).

These volumes have been estimated using the existing traffic count data at Highway 105/Furrow intersection. The volumes estimate the shift in traffic volumes to/from the south by Hope Montessori and existing resident traffic currently using the Highway 105/Furrow intersection that would occur once the Furrow Road connection to Higby Road is established. The percentage splits representing the traffic shift to/from the south for Timberview and Hope Montessori traffic were calculated considering the trip destinations and origins, trip-length distribution, and current road system (plus this Furrow extension). Please refer to the attached Appendix Figures A-1 through A-4, which quantify LSC estimates of the percentages and volumes of background traffic assumed to shift when this project provides the County with the MTCP planned Furrow Road extension south to Higby.

The background traffic also includes estimates of traffic volumes by motorists that may utilize the connection as a through route (with no origin or destination between Higby and Highway 105). Through traffic may include traffic turning to/from Highway 105 or to/from Furrow north of Highway 105.

## TRIP GENERATION

Estimates of the vehicle-trips projected to be generated by the Grandwood Ranch residential development have been made using the nationally published trip generation rates from *Trip Generation, 10<sup>th</sup> Edition, 2017* by the Institute of Transportation Engineers (ITE). Land use categories “210 – Single-Family Detached Housing,” along with corresponding trip generation rates, have been used to develop the trip generation estimates for site buildout. The site plan, shown in Figure 2, shows 48 single-family lots within the proposed residential development.

Table 1 below presents a summary of the estimated site trip generation. A detailed trip generation estimate for the development, including ITE rates for the proposed land uses, is presented in Table 3 (attached).

The fitted curve ITE rates were used in the trip generation estimate. The R-squared value is over 0.9 and the resulting estimate for the 48 lots was representative, and on the conservative side of representative, of the cluster of data points for subdivisions with about 50 dwelling units. LSC used the methodology in the ITE Handbook to select the appropriate rates.

The proposed Grandwood Ranch residential development is projected to generate about 600 vehicle-trips on the average weekday during a 24-hour period, with approximately half entering and half exiting the site. During the morning peak hour, approximately 10 entering vehicles and

29 exiting vehicles would be generated. Approximately 32 entering and 19 exiting vehicles would be generated by the site during the evening peak hour.

**Table 1: Estimated Site Vehicle-Trip Generation**

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	10	29	39
Evening Peak Hour	32	19	51
Daily/24-hour	265	265	529

## TRIP DISTRIBUTION AND ASSIGNMENT

### Trip Directional Distribution

Estimating the directional distribution of site-generated vehicle-trips to the study area roads and intersections is a necessary component in determining the site's traffic impacts. Figure 5 shows the percentages of the site-generated vehicle-trips projected to be oriented to and from the site's major approaches. Estimates have been based on the following factors: the proposed new land use, the area street and road system serving the site, and the site's geographic location relative to the City of Colorado Springs and unincorporated El Paso County.

Most land uses on Higby Road are residential, similar to the proposed Grandwood Ranch site. Existing vehicular turning-movement counts were analyzed to determine directional splits for entering/exiting vehicles at the intersection of Higby Road/Furrow Road, during both the morning and afternoon peaks.

Short-term analysis assumes that Furrow Road will be extended to the south to form a stop sign-controlled, T-intersection with Higby Road. Some vehicle-trips to/from west of the proposed Higby Road/Furrow Road intersection were thus shifted from Higby Road to Highway 105 to account for drivers who would opt to travel to the site via Highway 105 rather than Higby Road, which features challenging topography approaching the site.

Directional distributions were adjusted for the 2040 traffic scenarios to account for planned improvements on Highway 105, including the potential for signalizing the intersection of Highway 105/Furrow Road (as shown in the *MTCP* and the *Highway 105 Corridor Study Corridor Preservation Study* (dated November 2013)). LSC has also completed several traffic studies near the proposed Grandwood Ranch site, which were used as a point of reference for estimating directional distributions.

The estimated significant differential between entering and exiting splits to the north is due to a few factors, including the northbound left turn at Highway 105/Furrow for exiting trips and the location of the Interstate 25 (I-25) southbound on ramp versus the reverse direction – a closer

I-25 off ramp and an eastbound right turn onto Furrow from Highway 105. The future Gleneagle connection also factors into the difference, short term and long term.

### **Site-Generated Traffic**

Site-generated traffic volumes at the following study area intersections have been calculated by applying the directional distribution percentages estimated by LSC (from Figure 5) to the trip generation estimates (from Table 3). Figure 6 and Figure 7 show the projected site-generated traffic volumes for the weekday morning and evening peak hours during the short- and long-term traffic scenarios, respectively.

- Highway 105/Furrow Road
- Furrow Road/Higby Road
- Higby Road/West Copper Valley Court/East Copper Valley Court
- Higby Road/Grandwood Drive
- Higby Road/Fairplay Drive

### **Short-Term Total Traffic Volumes**

Figure 8 shows the sum of the short-term background traffic volumes (from Figure 4) and site-generated peak-hour traffic volumes (shown in Figure 6). These volumes represent the projected short-term total traffic following site buildout.

### **Estimated Future 2040 Background Traffic Volumes**

Figure 9 shows the projected 20-year background traffic volumes for the year 2040. Estimated 2040 background traffic volumes on Highway 105, Furrow Road, and Higby Road are based on projected 2040 volumes in the *MTCP* and the *Highway 105 Corridor Study Corridor Preservation Study* (dated November 2013). Background traffic volumes do **not** include projected traffic to be generated by the proposed Grandwood Ranch residential development.

The short- term background traffic volumes were used as a starting point for developing the 2040 background traffic volumes, as the short-term estimates estimate the initial change in travel patterns with the new segment available between Higby and Highway 105. The long-term volumes account for the continuous through connection between Gleneagle & Furrow.

### **Future 2040 Total Traffic Volumes**

Figure 10 shows the projected 2040 total traffic volumes, which are the sum of 2040 background traffic volumes (from Figure 9) plus the site-generated traffic volumes (from Figure 7).

## LEVEL OF SERVICE ANALYSIS

The following study area intersections have been analyzed to determine the projected intersection levels of service for short- and long-term traffic scenarios for the morning and evening peak-hour time periods:

- Highway 105/Furrow Road
- Furrow Road/Higby Road
- Higby Road/West Copper Valley Court/East Copper Valley Court
- Higby Road/Grandwood Drive
- Higby Road/Fairplay Drive

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 2 shows the level of service delay ranges for signalized and unsignalized intersections.

**Table 2: Intersection Levels of Service Delay Ranges**

Level of Service	Signalized Intersection (Seconds/Vehicle)	Unsignalized Intersection (Seconds/Vehicle)
A	$\leq 10.0$	$\leq 10.0$
B	10.1 - 20.0	10.1 - 15.0
C	20.1 - 35.0	15.1 - 25.0
D	35.1 - 55.0	25.1 - 35.0
E	55.1 - 80.0	35.1 - 50.0
F	$\geq 80.1$	$\geq 50.1$

<sup>1</sup> For unsignalized intersections, if  $v/c \geq 1.0$ , then LOS is LOS F, regardless of the projected average control delay per vehicle

### Short-Term LOS

A summary of LOS for all short-term traffic scenarios during the weekday morning and evening peak hours is shown in Figure 4 and Figure 8. Detailed Synchro reports are attached.

As shown in these figures, all individual turning movements/intersection approaches at the following intersections are projected to operate at LOS C or better, during both peak periods upon site buildout in the short term:

- Furrow Road/Higby Road
- Higby Road/West Copper Valley Court/East Copper Valley Court
- Higby Road/Grandwood Drive
- Higby Road/Fairplay Drive

The intersection of Highway 105/Furrow Road is projected to remain stop sign-controlled in the short term, with no modifications to existing turn-lane geometries. The northbound shared through/left-turn lane is projected to operate at LOS F during both peak hours during the short term, **regardless of whether or not Grandwood Ranch is developed.**

### Long-Term LOS

A summary of LOS for all long-term traffic scenarios during the weekday morning and evening peak hours is shown in Figure 9 and Figure 10. Detailed Synchro reports are attached.

As shown in these figures, all individual turning movements/intersection approaches at the following intersections are projected to operate at LOS D or better during both peak periods upon site buildout in the short term with two-way stop sign control (TWSC):

- Furrow Road/Higby Road
- Higby Road/West Copper Valley Court/East Copper Valley Court
- Higby Road/Grandwood Drive
- Higby Road/Fairplay Drive

The following turning movements are projected to operate at LOS F during both the morning and evening peak hours for the 2040 total traffic scenario if the intersection of Highway 105/Furrow Road were to remain stop sign-controlled:

- Northbound left
- Northbound shared through/right
- Southbound left
- Southbound through

However, all individual turning movements are projected to operate at LOS D or better during both peak hours through the 2040 horizon year if the intersection of Highway 105/Furrow Road were to be signalized.

The intersection of Highway 105/Furrow Road will likely be converted from a stop sign-controlled intersection to a signalized intersection by 2040, as shown in the *Highway 105 Corridor Study Corridor Preservation Study* (dated November 2013). Additional recommended improvements to the intersection include exclusive left-, through, and right-turn lanes for the southbound approach on Furrow Road and conversion of the northbound approach to an exclusive left-turn lane and a shared right/through turn lane. **These modifications to the intersection of Highway 105/Furrow Road were recommended regardless of whether or not Grandwood Ranch is developed.**

## AUXILIARY TURN LANE ANALYSIS

According to the El Paso County *Engineering Criteria Manual* (ECM):

- Exclusive left-turn lanes shall be provided for any access on a Collector or Minor Arterial with a projected peak-hour ingress turning volume of 25 vehicles per hour (vph) or greater.
- Exclusive right-turn lanes shall be provided at Minor Arterial or Collector accesses with a projected peak-hour ingress turning volume of 50 vph or greater.

### Short Term

Projected eastbound short-term background (and total) left-turn volumes at the intersection of Higby Road/Furrow Road are projected to exceed the minimum left-turn volume threshold outlined in the *ECM* with the extension of Furrow Road south to Higby (based on traffic projections). Thus, an exclusive eastbound left-turn lane should be included in the design of the intersection. A concept for the design of this turn lane is included with this report.

Regarding potential for El Paso County Road Improvement Fee Program credit for this improvement, although there are currently no intersection improvements programmed into the Fee Program for this section of Higby Road, there is a possibility that the Fee Advisory Committee could vote to allow this turn lane to be considered an “eligible improvement” with respect to the Fee Program. Such a determination would depend on the provisions, guidelines, and rules of the Fee Program, the details of the design and/or plans for this section of Higby Road, and this turn lane and other factors. Please refer to the Fee Program documentation for details on initiating a request to consider an improvement eligible and, if approved, the process for memorializing credit. This process will need to be initiated by the applicant, not EPC PCD. Acceptance of this TIS as part of this project does not constitute an agreement that said improvement(s) will be considered “eligible improvement(s).” The applicant should submit a draft/proposed credit agreement to Victoria Chavez (Public Works) concurrent with this land use application or as advised by Ms. Chavez.

A westbound right-turn lane would **not** be required at the intersections of Higby Road/Furrow Road or Higby Road/Grandwood Drive in the short term, based on projected turning-movement volumes at each intersection. Additionally, auxiliary turn lanes would **not** be required at the site access point intersection (Copper Valley Court/Furrow Road).

### Long Term

El Paso County’s *MTCP* shows the planned Gleneagle to Furrow connection across Higby Road and through this site. Estimates of peak- hour turning movements indicate that the intersections of Higby Road/Furrow Drive and Higby Road/Grandwood Drive will potentially require the installation of exclusive right- and additional left-turn auxiliary turn lanes once road connections to the north and south of Higby (and to the south of Higby in the case of the Grandwood Drive

intersection) are built and associated residential developments are completed, **regardless of whether or not Grandwood Ranch is developed.**

The required total auxiliary lane length for the proposed eastbound left-turn lane on Higby Road at its proposed access with Furrow Road is 365 feet, consisting of 205 feet of full-width lane length and a 160-foot approach taper, with adjustments to account for roadway grades, as needed.

Per the *Engineering Criteria Manual*, potential auxiliary turn lanes on Higby Road are shown in Figure 9 and Figure 10. Auxiliary turn lanes would **not** be required at the site access point intersection (Copper Valley Court/Furrow Road).

## SIGHT DISTANCE ANALYSIS

### ECM Requirements

Planned public roadway intersections must meet *ECM* standards for sight distance contained in Section 2.4.1.D.2 of the *ECM*. Intersections are anticipated to be stop sign-controlled, full-movement intersections.

Based on the spot-grades along Higby Road east of the proposed intersection of Higby/Furrow, the prescribed stopping sight distance is 333 feet (downgrade of approximately six percent).

All sight distance field measurements utilized a driver's eye height of 3.5 feet and a height of 3.5 feet for an eastbound vehicle approaching from the west. The following analysis corresponds to field-measured sight distances for the proposed intersection of Higby/Furrow and east Grandwood Ranch site access (Grandwood Drive), as shown in Figure 12.

### Proposed Higby Road/Furrow Road Intersection

Field-measured sight distances for passenger vehicles are as follows:

- To the west: 1,250 feet
- To the east: 650 feet

### Proposed Higby Road/Grandwood Drive

Field-measured sight distances for passenger vehicles are as follows:

- To the west: 645 feet
- To the east: 1,990 feet

### Proposed Access to Furrow Road (Extended)

Based on the plan and profile design drawings, the sight distance at the proposed intersection of Copper Valley Court/Furrow Road would exceed 800 feet to the north and 600 feet to the south along Furrow Road. The intersection and stopping sight distance would meet county standards for a design speed of 40 mph.

### **Comparison to ECM Sight Distance Standards**

With a 35-mph posted speed limit on Higby Road (assumed design speed of 40 mph), the field-measured sight distances for both the proposed intersection of Higby/Furrow and east Grandwood Ranch site access (Grandwood Drive) would exceed the required 445-foot requirement for passenger vehicles shown in ECM Table 2-21.

The requirement of 455 feet for single-unit trucks would be met as well, with the driver's eye being significantly higher than 3.5 feet for single unit trucks. Therefore, access entering sight distance at both access intersections on Higby Road (with Furrow Road and Grandwood Drive, respectively) **would** be acceptable at their proposed locations shown on the site plan. If the access is planned for regular use by multi-unit trucks, the sight distance should be verified for this design vehicle.

### **HIGBY ROAD & FURROW ROAD GRADES**

The existing grade on the proposed westbound approach to the Higby Road/Furrow Road intersection is 6.5 percent. West of the proposed intersection, the grades moderate for the eastbound intersection approach.

### **ROADWAY CLASSIFICATIONS**

The recommended roadway classifications for the subdivision are shown in Figure 11. This figure also shows roadway classifications for Higby Road, Furrow Road, and Fairplay Drive, per the *MTCP* 2040 Plan.

### **LIST OF DEVIATIONS REQUESTED**

A list of deviation requests is presented in Figure 13. Three deviation request forms have been prepared.

*ECM* Appendix B requires traffic studies to, "State whether the *MTCP* or other approved corridor study calls for the construction of improvements in the immediate area." The *MTCP* identifies the following:

- Furrow Road extension (Lamplighter to Higby) is shown in the MTCP as an Urban two-lane Collector (“New Road Connection”)
- Higby Road (Cloverleaf Road to Roller Coaster Road) as an **Urban** two-lane Minor Arterial (“County Road Upgrade”)

## COUNTY ROAD IMPROVEMENT FEE PROGRAM

### Transportation Impact Fees

Per ECM Appendix B: *State what the current applicable Transportation Impact Fees are and what option the developer will be selecting for payment.*

The applicant is opting out of the PID options and will pay the full fee amount at the time of building permit. The 2010 full-fee single family residential housing rate is \$3,830 per dwelling unit. The total fee amount for 48 single family dwelling units is \$183,840.

### Creditable Improvements

Furrow Road extension and potentially the eastbound left-turn lane at the Furrow/Higby Intersection may both be reimbursable under the MTCP (please refer to the discussion in the auxiliary lane paragraph above). Furrow Road through the site, as an MTCP roadway segment, is most likely considered “eligible.” Regarding potential for El Paso County Road Improvement Fee Program credit for the left-turn lane improvement, although there are currently no intersection improvements programmed into the Fee Program for this section of Higby Road, there is a possibility that the Fee Advisory Committee could vote to allow this turn lane to be considered an “eligible improvement” with respect to the Fee Program. Such a determination would depend on the provisions, guidelines, and rules of the Fee Program, the details of the design and/or plans for this section of Higby Road and this turn lane, and other factors.

Please refer to the Fee Program documentation for details on initiating a request to consider an improvement eligible and, if approved, the process for memorializing credit. This process will need to be initiated by the applicant, not EPC PCD. Acceptance of this TIS as part of this project does not constitute an agreement that said improvements will be considered “eligible improvements.” The applicant should submit a draft/proposed credit agreement to Victoria Chavez (Public Works) concurrent with this land use application or as advised by Ms. Chavez

## PROJECT IMPACT AT HIGHWAY 105/FURROW ROAD INTERSECTION

The Grandwood Ranch project traffic will not exceed 5% impact on the NB approach to Highway 105/Furrow Road when compared to short-term **background traffic** (based on existing traffic, the site traffic would represent a 7.5 percent increase in morning peak-hour traffic on the northbound approach traffic at the Highway 105/Furrow intersection and a 5.3 percent increase in the afternoon peak hour. An escrow for a potential future traffic signal at this intersection

should not be required, as this intersection likely meets the criteria contained in the Fee program implementation document for an “eligible intersection.”

### **MULTI-MODAL TRANSPORTATION & TDM OPPORTUNITIES**

The Rural Local roadways proposed for the project will carry low traffic volumes and thus will be suitable for pedestrians and bicycles. Furrow Road will be constructed to Rural Collector standards, which includes a paved shoulder suitable for cyclists.

### **IMPROVEMENTS SUMMARY TABLE**

Please refer to Table 3, which presents a summary of improvements.

### **CONCLUSIONS**

- The site is projected to generate about 550 new driveway vehicle trips on the average weekday.
- During the weekday morning peak hour of adjacent street traffic, 10 vehicles would enter the site while 30 vehicles would exit.
- During the weekday evening peak hour of adjacent street traffic, 33 vehicles would enter the site while 19 vehicles would exit.
- All individual turning movements and approaches at the adjacent and site access intersections are projected to operate at LOS D or better during both peak hours through the 2040 horizon year.
- An eastbound left-turn lane is projected to be warranted per ECM criteria the planned intersection of Higby/Furrow. Turn lanes would not be needed at the site access point intersections. Please refer to the “Auxiliary Turn Lane Analysis” section and Table 5 for more detail on turn lane requirements.
- A list of deviations is presented in Figure 13.
- LSC recommends that both site access point intersections be stop sign-controlled.
