

STRUTHERS RANCH SUBDIVISION, FILING NO. 5

EL PASO COUNTY, COLORADO

DRAINAGE LETTER REPORT

Prepared for:
T-Bone Construction, Inc.
1310 Ford Street
Colorado Springs, Colorado 80915

phone: (719) 570-1456

Prepared by:
CIVAS Engineering, LLC
10056 Brisbane Lane
Littleton, Colorado 80130

phone: (720) 240-5882

October 26, 2020
Revised May 10, 2021
Project No. 20-288
PCD File No. VR211

I. DESIGN ENGINEER'S STATEMENT:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Steven M. Strickling, P.E.
Colorado Number 31237
For and On Behalf of CIVAS Engineering, LLC

II. OWNER/DEVELOPER'S STATEMENT:

I, the owner/developer have read and will comply with all of the requirements specified in this drainage report and plan.

Vernon Clark, Trustee
Clark Family Trust
3585 Hill Circle
Colorado Springs, Colorado 80904

Date

III. EL PASO COUNTY:

Filed in accordance with the requirements of the Drainage Criteria Manual, Volumes 1 and 2, El Paso County Engineering Criteria Manual and Land Development Code as amended.

Jennifer Irvine, P.E.
County Engineer / ECM Administrator

Date

INTRODUCTION

This report represents a “Letter Type” drainage report for Struthers Ranch Subdivision Filing No. 5, which is a part of the “final Drainage Report for Struthers Ranch Filing No. 2”, dated October 14, 2004 (revised), and was prepared in accordance the El Paso County Drainage Criteria Manual (DCM) and satisfies the El Paso County subdivision submittal requirements. This report was also prepared using portions of the City of Colorado Springs DCM and the Mile High Flood District (MHFD) "Urban Storm Drainage Criteria Manual", latest editions.

This report addresses post-development storm peak runoff rates for the 5-year and 100-year storm events. Stormwater detention is provided for the project by an existing regional facility located southwest of the subject property. Water quality is addressed in this report.

PROPERTY LOCATION AND DESCRIPTION

Struthers Ranch Filing No. 5 is a proposed replat of the 4.16 Struthers Ranch Filing No. 4 and will combine Lots 1, 2, 3 and 4 into one 4.16 acre commercial lot. The planned use for Struthers Ranch Filing No. 5 is for a three building commercial / retail development. The property is surrounded by existing platted and developed residential lots on the northeast and east, by Struthers Road, a public right-of-way, to the south and the southwest, and by Struthers Ranch Road, a public right-of-way, to the northwest. Access to the site is from an existing driveway cut in Struthers Ranch Road and a proposed right-in right-out driveway cut in Struthers Road, if allowed by El Paso County.

FIGURE 1 - VICINITY MAP

VICINITY MAP

1" = 2,000'

Soil on the majority of the site, as classified by the Soil Conservation Services of the U.S. Department of Agriculture in the Soil Survey for the El Paso County Area (refer to figures 2, 3 and 4), is Pring coarse sandy loam (71). This soil type has a slow runoff rate and a rapid permeability rate. Pring coarse sandy loam (71) is part of hydrologic soil group B (refer to figure 5).

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

The project site is part of the Black Forest Drainage Basin (FOM04200) and is tributary to Black Forest Creek, located approximately 0.1 miles to the south, which outfalls in Monument Creek, located approximately 0.5 miles to the west.

DRAINAGE CRITERIA

The El Paso County Drainage Criteria Manual (DCM), the City of Colorado Springs DCM and the Mile High Flood District (MHFD) "Urban Storm Drainage Criteria Manual, latest editions were used in the preparation of this report. The Rational Method was used to calculate the post-development storm peak flows for the 5-year and 100-year storm events

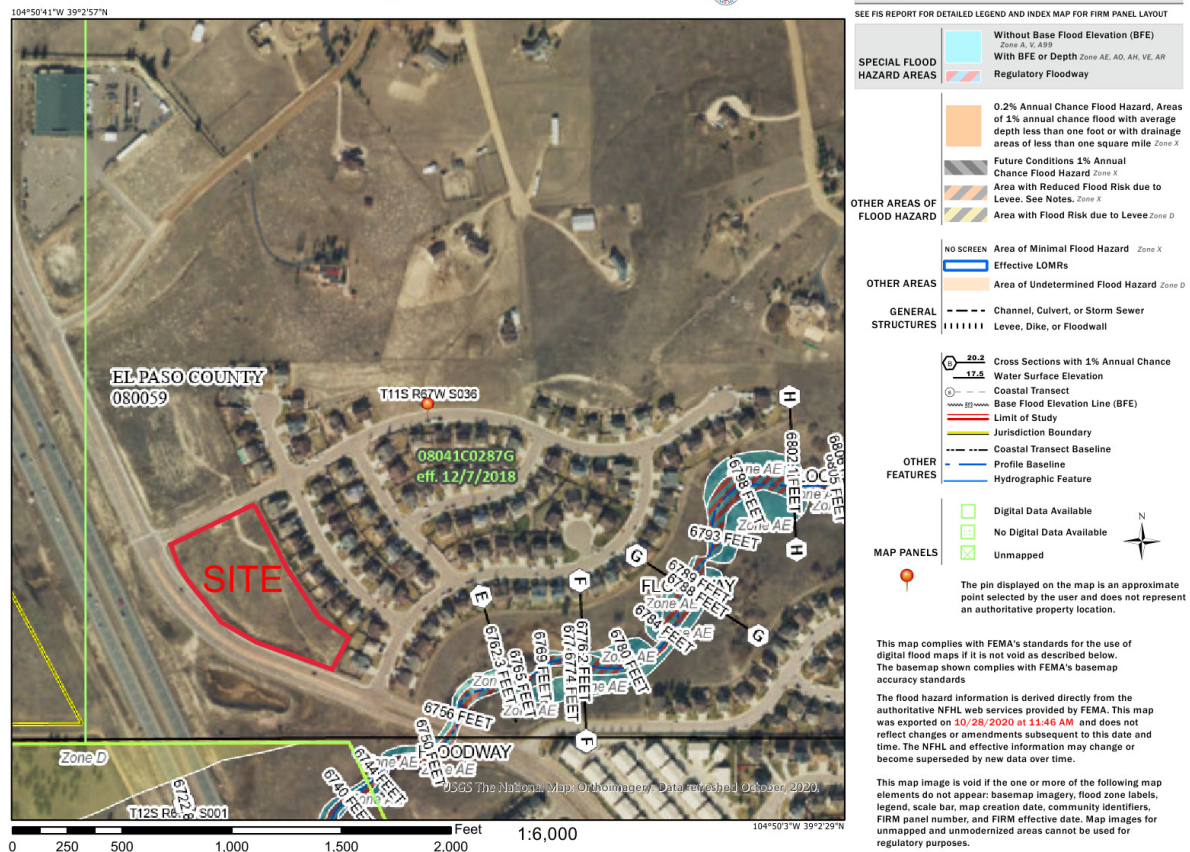

FLOODPLAIN IMPACTS

The FEMA Flood Insurance Rate Map (FIRM) firmette for Community Panel 08041C0287G, revised December 7, 2018 (refer to figure 6) shows that no portion of this development lies within the 100-year flood plain of Black Forest Creek, nor its

tributaries.

FIGURE 6 – FIRM FIRMETTE FOR COMMUNITY PANEL 08041C0287G

National Flood Hazard Layer FIRMette

EXISTING DRAINAGE BASINS

The project site is located in Drainage Basin D6A (3.05 ac.) and Drainage Basin D9A (3.18 ac.) as shown on the Developed Drainage Plan for Struthers Ranch Subdivision, located in the appendix of this report. Off-site flows from the back half of the adjacent single family residential lots flow onto the project site and are a part of both Drainage Basin D6A and Drainage Basin D9A. Drainage Basin D6A surface flows to an existing grated area inlet located in the low point of the basin, adjacent to Struthers Road. Drainage Basin D9A surface flows to an existing drainage channel along the

southwesterly basin boundary which conveys flow to an existing 30" RCP culvert that connects to the existing grated area inlet in Drainage Basin D6A. An existing 30" RCP from the storm sewer system in Air Garden Lane outfalls into the drainage channel in Drainage Basin D9A. A dual 48" RCP storm conveys developed runoff to an existing regional detention pond in Tract C, Struthers Ranch Subdivision Filing No. 2, located southwest of the project site on the west side of Struthers Road. The regional detention pond does not appear to have been properly maintained and is overgrown with grass/reeds. The owner is aware that this condition needs to be corrected so that it functions as designed and so that the proposed Struthers Ranch Subdivision Filing No. 5 development project does not create any negative drainage impacts on downstream properties. The owner will either 1) coordinate with the Struthers Ranch HOA to get this work completed or 2) have this work done as part of the future Struthers Ranch Subdivision Filing No. 5 Site Development Plan project.

DEVELOPED DRAINAGE BASINS

The proposed Struthers Ranch Subdivision Filing No. 5 commercial development has been divided into 11 on-site basins (A1, A2, B - J) and 4 off-site basins (OS1-OS4) from the back half of the adjacent single family residential lots. Off-site basin OS1 sheet flows into basin A1, off-site basin OS2 sheet flows into basin A2, off-site basin OS3 sheet flows into basin C and off-site basin OS4 sheet flows into basin E. Runoff from basins A1, A2, B, C, D and E surface flow across the pavement to concrete pans and catch curb and gutter to inlets located in the low point of the basin. A storm sewer system conveys developed runoff from the inlets to the water quality Extended Detention Basin (EDB) in basin G. Runoff from basin F is collected by a roof drain system and discharges into the inlet on basin E. Basins H, I and perimeter landscape areas and are part of the existing drainage channel on the southwest part of the site. An existing 30" RCP culvert conveys flows from the existing drainage channel to the existing grated inlet in Basin J. Basin J is the perimeter landscape area on the north and northwest portion of the project site and surface drains to the existing grated area inlet on the west side of the site. Existing dual 48" RCP storm sewers convey flows from the existing grated area inlet, under Struthers Road to the existing detention

pond. The basins, design points, inlets, pipes and developed flows are shown on the developed drainage plan in the appendix. The developed flows for the basins and for the design points are summarized on the following pages.

Basin Summary Table							
Basin Name	Area (ac)	Percent Imperviousness	Time of Concentration tc (min)	Rainfall Intensity I (in/hr)		Peak Flow Q (cfs)	
				5-yr	100-yr	5-yr	100-yr

* PER THE FINAL DRAINAGE REPORT FOR STRUTHERS RANCH FILING NO. 2							

WATER QUALITY

The four step process has been taken to select and implement stormwater quality control measures for the Struthers Ranch Subdivision Filing No. 5 project, in accordance with Section I.7.2 of the el Paso County Engineering Criteria Manual.

Step 1: Employ Runoff Reduction Practices.

The existing topography, the existing storm drainage facilities and the proposed site layout for the Struthers Ranch Subdivision Filing No. 5 project does not make it feasible to minimize the directly connected impervious areas (DCIA) by creating receiving porous areas (RPA) that would receive runoff from unconnected impervious areas (UIA).

Step 2: Stabilize Drainageways.

There are no existing streams or drainageways on this site. Therefore no stabilization is required.

Step 3: Provide Water Quality Capture Volume (WQCV).

Water quality capture volume is provided for the proposed project in the Extended Detention Basin (EDB) in basin G and has been designed using the MHFD-Detention_v4.00 spreadsheet. The drainage area tributary to the EDB, for determining the water quality capture volume (WQCV), is 4.63 acres (basins A1, A2, B, C, D, E, F, G, OS1, OS2, OS3 and OS4) and has a calculated composite imperviousness of 70.3%. The drainage area of the project site that is not tributary to the EDB is 0.58 ac. (basins H, I, and J). These areas are perimeter landscape areas downstream of the EDB and are 14% of the total site area, which is less than the 20% allowed to be excluded from the WQCV requirement, as per Section I.7.1.C of the El Paso County Engineering Criteria Manual. The EDB will provide 0.107 ac-ft of WQCV storage volume with a water surface elevation of 6758.00. An orifice plate with 1 column and 3 rows of 13/16" dia. holes spaced at 10.5 inches on center, located in the EDB outlet structure, will provide the release of the water quality capture volume in 40 hours. The forebay, located in the upper end of the EDB, will provide additional water quality enhancement by providing an initial sediment storage volume of 93 c.f., which is 2% of the water quality capture volume. A 0.8" opening in the forebay curb will release flows into a concrete low flow channel designed to convey 0.32 cfs, which is 2% of the 100-year inflow rate into the EDB. Flows in excess of the WQCV will flow through the top of the grated outlet structure to a 24" RCP outfall pipe. The 24" RCP storm sewer will convey the 100-year developed flows from the outlet structure to the existing grated area inlet in basin J. Should the outlet structure become clogged, a 25 ft. wide buried rip rap emergency overflow weir at elevation 6758.60 will convey the 100 year developed peak inflow rate of 16.1 cfs (as calculated in the MHFD-Detention_v4.00 spreadsheet) from the detention pond at a depth of 0.38 feet and with a freeboard depth of 1.02 feet to the top of the 8' wide EDB berm. Maintenance access to the pond will be provided by a 15' wide gravel access ramp with a maximum slope of 10%, and

will extend from the paved parking lot down to the bottom of the EDB.

Inspection and maintenance of the water quality storage volume area and orifice plate, as well as for the forebay, will be performed as described in the “Standard Operation Procedure (SOP) For Extended Detention Basin (EDB) Inspection and Maintenance” manual prepared for this project. The maintenance and repair of the water quality features of the EDB will remain the responsibility of the property owner.

Step 4: Consider Need for Industrial and Commercial BMPs.

The Struthers Ranch Subdivision Filing No. 5 project will provide source control Best Management Practices (BMP's) that include periodic sweeping of the parking lot to prevent accumulation of litter and debris, periodic inspection of the outdoor trash receptacle and enclosure to ensure that the lid and enclosure gate are functioning so that the trash is properly covered and contained, the collection and disposal of grass clippings after mowing operations and maintaining the landscaping with a minimal use of pesticides and fertilizers.

The design flows from the Struther's Ranch Subdivision Filing No. 5 project (SRS Flg 5) are in compliance with design flows calculated from the Final Drainage Report for Struther's Ranch Subdivision Filing No. 2 (SRS Flg 2) as summarized below.

		<u>SRS Flg 2</u>	<u>SRS Flg 5</u>
		Q ₅ /Q ₁₀₀ (CFS)	Q ₅ /Q ₁₀₀ (CFS)
DP9	30" F.E.S.	43.2 / 84.8	8.6 / 52.3
DP11	Inlet Grate	14.0 / 24.3	0.1 / 0.8
DP11	Inlet Box	55.0 / 105.3	28.4 / 71.7

DRAINAGE FEES

This project site lies within the Black Forest Creek Drainage Basin. All applicable drainage basin fees were paid at the time of platting for Struthers Ranch Subdivision Filing No. 2.

CONCLUSIONS

A. Compliance with Standards

This report has been prepared in accordance with the El Paso County Drainage Criteria Manual guideline for a "Letter Type" Drainage Report. The storm sewer and water quality improvements provide adequate protection to this site without adverse impacts on adjoining upstream or downstream properties.

B. Drainage Concept

The proposed drainage patterns and drainage design for the Struthers Ranch Subdivision Filing No. 5 commercial development project conforms to the approved developed drainage plan for Struthers Ranch Subdivision Filing No. 2. Developed runoff from this subdivision will be conveyed by an existing public drainage system to an existing regional detention pond located on Tract C, Struthers Ranch subdivision Filing No. 2, which releases flows at historic rates, mitigating the impacts of the upstream development on downstream properties.

3.2 Time of Concentration

One of the basic assumptions underlying the Rational Method is that runoff is a function of the average rainfall rate during the time required for water to flow from the hydraulically most remote part of the drainage area under consideration to the design point. However, in practice, the time of concentration can be an empirical value that results in reasonable and acceptable peak flow calculations.

For urban areas, the time of concentration (t_c) consists of an initial time or overland flow time (t_i) plus the travel time (t_t) in the storm sewer, paved gutter, roadside drainage ditch, or drainage channel. For non-urban areas, the time of concentration consists of an overland flow time (t_i) plus the time of travel in a concentrated form, such as a swale or drainageway. The travel portion (t_t) of the time of concentration can be estimated from the hydraulic properties of the storm sewer, gutter, swale, ditch, or drainageway. Initial time, on the other hand, will vary with surface slope, depression storage, surface cover, antecedent rainfall, and infiltration capacity of the soil, as well as distance of surface flow. The time of concentration is represented by Equation 6-7 for both urban and non-urban areas.

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project:

Struthers Ranch Retail

Inlet ID:

Inlet DP 1

**Gutter Geometry (Enter data in the blue cells)**

Maximum Allowable Width for Spread Behind Curb

 $T_{BACK} = 5.0$ ft

Side Slope Behind Curb (leave blank for no conveyance credit behind curb)

 $S_{BACK} = 0.020$ ft/ft

Manning's Roughness Behind Curb (typically between 0.012 and 0.020)

 $n_{BACK} = 0.020$

Height of Curb at Gutter Flow Line

 $H_{CURB} = 6.00$ inches

Distance from Curb Face to Street Crown

 $T_{CROWN} = 20.0$ ft

Gutter Width

 $W = 2.00$ ft

Street Transverse Slope

 $S_X = 0.020$ ft/ft

Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)

 $S_W = 0.083$ ft/ft

Street Longitudinal Slope - Enter 0 for sump condition

 $S_O = 0.000$ ft/ft

Manning's Roughness for Street Section (typically between 0.012 and 0.020)

 $n_{STREET} = 0.014$

Max. Allowable Spread for Minor & Major Storm

	Minor Storm	Major Storm	
$T_{MAX} =$	20.0	20.0	ft
$d_{MAX} =$	6.0	6.0	inches

Max. Allowable Depth at Gutter Flowline for Minor & Major Storm

 $d_{MAX} = 6.0$ inches

Check boxes are not applicable in SUMP conditions

☐☐**MINOR STORM Allowable Capacity is based on Depth Criterion**

	Minor Storm	Major Storm	
$Q_{allow} =$	SUMP	SUMP	cfs

MAJOR STORM Allowable Capacity is based on Depth Criterion

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017

Design Information (Input)

Type of Inlet:

Local Depression (additional to continuous gutter depression 'a' from above)

Number of Unit Inlets (Grate or Curb Opening)

Water Depth at Flowline (outside of local depression)

Grate Information

Length of a Unit Grate

Width of a Unit Grate

Area Opening Ratio for a Grate (typical values 0.15-0.90)

Clogging Factor for a Single Grate (typical value 0.50 - 0.70)

Grate Weir Coefficient (typical value 2.15 - 3.60)

Grate Orifice Coefficient (typical value 0.60 - 0.80)

Curb Opening Information

Length of a Unit Curb Opening

Height of Vertical Curb Opening in Inches

Height of Curb Orifice Throat in Inches

Angle of Throat (see USDCM Figure ST-5)

Side Width for Depression Pan (typically the gutter width of 2 feet)

Clogging Factor for a Single Curb Opening (typical value 0.10)

Curb Opening Weir Coefficient (typical value 2.3-3.7)

Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)

Low Head Performance Reduction (Calculated)

Depth for Grate Midwidth

Depth for Curb Opening Weir Equation

Combination Inlet Performance Reduction Factor for Long Inlets

Curb Opening Performance Reduction Factor for Long Inlets

Grated Inlet Performance Reduction Factor for Long Inlets

Total Inlet Interception Capacity (assumes clogged condition)

Max. Allowable Depth at Gutter Flowline for Minor & Major Storm

Check boxes are not applicable in SUMP conditions

	Minor Storm	Major Storm	
$T_{MAX} =$	20.0	20.0	ft
$d_{MAX} =$	6.0	6.0	inches
	<input type="checkbox"/>	<input type="checkbox"/>	

MINOR STORM Allowable Capacity is based on Depth Criterion**MAJOR STORM Allowable Capacity is based on Depth Criterion**

	Minor Storm	Major Storm	
$Q_{allow} =$	SUMP	SUMP	cfs

INLET IN A SUMP OR SAG LOCATION

Version 4.05 Released March 2017

Design Information (Input)

Type of Inlet CDOT Type R Curb Opening
 Local Depression (additional to continuous gutter depression 'a' from above)
 Number of Unit Inlets (Grate or Curb Opening)
 Water Depth at Flowline (outside of local depression)
Grate Information
 Length of a Unit Grate
 Width of a Unit Grate
 Area Opening Ratio for a Grate (typical values 0.15-0.90)
 Clogging Factor for a Single Grate (typical value 0.50 - 0.70)
 Grate Weir Coefficient (typical value 2.15 - 3.60)
 Grate Orifice Coefficient (typical value 0.60 - 0.80)

Curb Opening Information

Length of a Unit Curb Opening
 Height of Vertical Curb Opening in Inches
 Height of Curb Orifice Throat in Inches
 Angle of Throat (see USDCM Figure ST-5)
 Side Width for Depression Pan (typically the gutter width of 2 feet)
 Clogging Factor for a Single Curb Opening (typical value 0.10)
 Curb Opening Weir Coefficient (typical value 2.3-3.7)
 Curb Opening Orifice Coefficient (typical value 0.60 - 0.70)

Low Head Performance Reduction (Calculated)

Depth for Grate Midwidth
 Depth for Curb Opening Weir Equation
 Combination Inlet Performance Reduction Factor for Long Inlets
 Curb Opening Performance Reduction Factor for Long Inlets
 Grated Inlet Performance Reduction Factor for Long Inlets

Total Inlet Interception Capacity (assumes clogged condition)

Inlet Capacity IS GOOD for Minor and Major Storms(>Q PEAK)

Assumed Depth of Flow: 0.17 ft.

Calculation Results

cross-sectional area: 0.25 s.f.
wetted perimeter: 3.03 ft.
Capacity: 0.39 cfs
Velocity: 1.54 fps
Velocity Head: 0.04 ft.

Low Flow Channel Flow:	0.39 cfs	
2% of 100-yr EDB Inflow:	0.32	OK
(2% of 16.1 cfs)		

MHFD-Detention, Version 4.00 (December 2019)

Project: Struthers Ranch Subdivision Filing No. 5

Basin ID: G

Example Zone Configuration (Retention Pond)

Watershed Information

Selected BMP Type =	EDB	
Watershed Area =	4.63	acres
Watershed Length =	650	ft
Watershed Length to Centroid =	325	ft
Watershed Slope =	0.040	ft/ft
Watershed Imperviousness =	70.30%	percent
Percentage Hydrologic Soil Group A =	0.0%	percent
Percentage Hydrologic Soil Group B =	100.0%	percent
Percentage Hydrologic Soil Groups C/D =	0.0%	percent
Target WQVC Drain Time =	40.0	hours
Location for 1-hr Rainfall Depth =	User Input	

After providing required inputs above including 1-hour rainfall depths, click 'Run CUHP' to generate runoff hydrographs using the embedded Colorado Urban Hydrograph Procedure.

Water Quality Capture Volume (WQCV) =	0.107	acre-feet
Excess Urban Runoff Volume (EURV) =	0.358	acre-feet
2-yr Runoff Volume ($P1 = 1.19$ in.) =	0.308	acre-feet
5-yr Runoff Volume ($P1 = 1.5$ in.) =	0.415	acre-feet
10-yr Runoff Volume ($P1 = 1.75$ in.) =	0.506	acre-feet
25-yr Runoff Volume ($P1 = 2$ in.) =	0.612	acre-feet
500-yr Runoff Volume ($P1 = 2.25$ in.) =	0.706	acre-feet
100-yr Runoff Volume ($P1 = 2.52$ in.) =	0.819	acre-feet
500-yr Runoff Volume ($P1 = 3.14$ in.) =	1.059	acre-feet
Approximate 2-yr Detention Volume =	0.280	acre-feet
Approximate 5-yr Detention Volume =	0.372	acre-feet
Approximate 10-yr Detention Volume =	0.470	acre-feet
Approximate 25-yr Detention Volume =	0.505	acre-feet
Approximate 50-yr Detention Volume =	0.525	acre-feet
Approximate 100-yr Detention Volume =	0.562	acre-feet

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.00 (December 2019)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.
