MEMORANDUM

DATE: May 30, 2017

TO: Gilbert LaForce – El Paso County Development Services

FROM: Jeff Hodsdon - LSC Transportation Consultants, Inc.

SUBJECT: D-49 Elementary School
Response to Comments Memorandum - TIS
LSC #174040

Following are the LSC Transportation consultants, Inc. responses to the May 15, 2017 El Paso County Planning and Community Development Department comments regarding the May 3, 2017 Traffic Impact Study by LSC. The updated traffic impact study is attached.

Various comments to incorporate the responses [to the previous comments] within the TIS:

LSC Response: The responses have been incorporated into the updated TIS

Are you anticipating a separate plan set or will it be included on the next resubmittal? [re: A Towner striping/signing plan]

LSC Response: A separate plan set will be included on the next resubmittal. A note has also been placed on the Londonderry plan sheet.

D49 Elementary School Traffic Impact Analysis (LSC #174040) May 30, 2017

Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Jeffrey C. Hodsdon, P.E., #31684

Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

Beth Ridgway

May 30, 2017

Mr. Jim Rohr
Purchasing and Contract Manager
School District 49
10850 East Woodmen Road
Peyton, CO 80831

RE: D49 Elementary School
El Paso County, Colorado
Traffic Impact Analysis
LSC #174040

Dear Mr. Rohr:

In response to your request, LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the proposed new Falcon School District 49 elementary school to be located southeast of the north intersection of Londonderry Drive and Towner Avenue in El Paso County, Colorado. The site location is shown in Figure 1.

REPORT CONTENTS

This report is being prepared as part of a submittal to El Paso County. It identifies the traffic impacts of this development. The report contains the following:

- The traffic count data and street conditions.
- Projections of short-term (2018) and long-term (2040) baseline/background traffic volumes.
- The projected average weekday and peak-hour vehicle-trips to be generated by the site.
- The assignment of the site's projected traffic volumes to the key area streets and intersections for the short and long term and the resulting total traffic volumes for the short and long term.
- The resulting traffic impacts including level of service analysis at key intersections and average daily traffic volumes on key street sections in the vicinity of the site.
- An estimate of the on-site vehicle stacking/queuing distances needed to accommodate busses and morning and afternoon peak parent drop-off and pick-up queues.
- Recommended lane configuration for Towner Avenue and Londonderry Drive.

LAND USE AND ACCESS

The proposed elementary school is to be located southeast of the north intersection of Londonderry Drive and Towner Avenue. Figure 2 shows the proposed site plan. Falcon Middle School is located just south of the site. There are existing single-family homes east and north of the site. Currently the first bell rings at 7:40 a.m. (with classes starting at 7:50 a.m.) and classes end at 3:00 p.m. School times have not been determined for the proposed elementary school, however the school district has indicated that they will likely be within ten minutes of Meridian Ranch Elementary School which runs from 8:30 a.m. to 3:40 p.m.

The vacant parcels generally west of the site are planned to be developed for single-family homes except for a 5.97-acre parcel located just west of the site. That parcel is currently zoned for commercial uses. It will likely be developed with a low intensity use such as a church.

The first phase of the school is planned to support up to 600 students in pre-school through fifth grade. At buildout the school will support up to 900 students.

Full-movement access points are proposed to Towner Avenue and Londonderry Drive. The Towner access point is located about 1,040 feet south of Londonderry Drive (580 feet north of the north Falcon Middle School access). This access is primarily for staff parking and bus pick-up and drop-off. The Londonderry access is located about 400 feet east of Towner Avenue (aligning with Tottenham Court). The Londonderry access is primarily for parent pick-up and drop-off and visitor parking.

Figure 3 shows a pedestrian and bicycle route analysis for the school.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The area roadways in the site's vicinity are shown on Figures 1 and 4 and are described below.

- **Londonderry Drive** is a two-lane Urban Residential Collector that currently extends west from Eastonville Road to Towner Avenue and then loops to the south to intersect Towner Avenue again about one-half mile to the south.
- **Meridian Road** extends north from South Blaney Road to County Line Road. Meridian Road is shown as a four-lane Minor Arterial south of Rex Road and north of Stapleton Drive and a two-lane Minor Arterial north of Rex Road on the *El Paso County Major Transportation Corridors Plan (MTCP)* and *El Paso County Corridor Preservation Plan (CPP)*. Meridian has just been upgraded to four lanes between Stapleton and Indian Paint Trail with the PPRTA project.
- **Stapleton Drive** is classified as a four-lane Urban Principal Arterial on the El Paso County MTCP. However, Stapleton Drive in the vicinity of the site is a two-lane roadway. Stapleton Drive extends east from just west of Towner Drive across Eastonville Road to US Highway 24. Stapleton Drive is planned to be extended south of US 24 to connect with Curtis Road in

2014. Longer-term plans show Stapleton extended west to connect with Briargate Parkway in the future.

- **Towner Avenue** is a 40-foot-wide Urban Residential Collector street (within Paint Brush Hills) that extends south from Londonderry Drive to just south of Woodmen Hills Drive. The posted speed limit is 35 miles per hour.

Existing Traffic Volumes

Figure 4 shows the existing peak-hour traffic volumes and existing lane geometries and traffic controls at the intersections of Towner/Stapleton and Towner/Londonderry (north and south) and the Falcon Middle School access to Towner. The three peak hours shown are from 8:00 to 9:00 a.m. (the presumed morning peak hour of the school), 3:15 to 4:15 p.m. (the presumed afternoon peak hour of the school), and 4:45 to 5:45 p.m. (the evening peak hour of the adjacent street traffic). The traffic volumes are based on counts by LSC in December 2016 and January 2017. Figure 4 also shows estimates of the daily traffic volumes based on the peak-hour counts on key street segments in the vicinity of the site. The traffic count reports are attached.

Existing Level of Service

Level of service (LOS) is a quantitative measure of the level of delay at an intersection. Level of service is indicated on a scale from “A” to “F.” LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

Table 1 Intersection Levels of Service Delay Ranges		
Level of Service	Signalized Intersections	Unsignalized Intersections
	Control Delay (seconds per vehicle)	
A	10 sec or less	10 sec or less
B	10-20 sec	10-15 sec
C	20-35 sec	15-25 sec
D	35-55 sec	25-35 sec
E	55-80 sec	35-50 sec
F	80 sec or more	50 sec or more

The intersections of Towner/Stapleton and Towner/Londonderry (north and south) and the Falcon Middle School access to Towner have been analyzed to determine the existing levels of service based on the unsignalized method of analysis procedures found in the *Highway Capacity Manual, 2010 Edition* by the Transportation Research Board. The results of the analysis are shown in Figure 4. The level of service reports are attached.

The intersections of Towner/Stapleton and Towner/Londonderry (north and south) and the Falcon Middle School access to Towner are currently operating at a satisfactory level of service as Stop-sign-controlled intersections.

TRIP GENERATION

Estimates of site-generated vehicle-trips are typically made using the nationally published trip generation rates from *Trip Generation, 9th Edition, 2012* by the Institute of Transportation Engineers (ITE), however the results of trip generation estimates for schools based on these rates are significantly lower than the observed traffic patterns at schools within El Paso County. The City of Colorado Springs uses an empirical formula to better estimate traffic generated by schools. Table 2 shows the trip generation estimates for the site based on both ITE trip generation rates and the City of Colorado Springs formula.

Based on the information provided by the City of Colorado Springs, following Phase 1 the school is expected to generate about 1,075 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 319 vehicles would enter and 244 vehicles would exit the site. During the afternoon peak hour of the school, which was assumed to occur between 2:30 and 3:30 p.m., about 132 vehicles would enter and 207 vehicles would exit the site. During the afternoon peak hour of the adjacent street traffic, which generally occurs for one hour between 4:15 and 6:15 p.m., about 44 vehicles would enter and 46 vehicles would exit the site.

At buildout the school is expected to generate about 1,557 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour 476 vehicles would enter and 366 vehicles would exit the site. During the afternoon peak hour of the school about 198 vehicles would enter and 308 vehicles would exit the site. During the afternoon peak hour of the adjacent street traffic about 66 vehicles would enter and 69 vehicles would exit the site.

SHORT-TERM BACKGROUND TRAFFIC AND ANALYSIS

Figure 5 shows the projected background traffic volumes for the short term (2018). Background traffic is the traffic estimated to be on the area streets and roadways without consideration of the proposed development. These background traffic volumes were based on existing traffic volumes (from Figure 4) plus the traffic projected to be generated by Paint Brush Hills Filings 13B, 13C, and 13D and buildout of the remaining portion of Scenic View at Paint Brush Hills. The traffic volumes for these developments were taken from their respective traffic studies completed by LSC. The short-term scenario assumes Stapleton Drive not yet extended west from its current terminus.

2035 BACKGROUND TRAFFIC

Figure 6 shows the projected background traffic volumes for the year 2040. As Londonderry Drive is a loop that will only serve this neighborhood no growth in through traffic that would typically be estimated using growth rates is expected. The background traffic volumes on Towner Avenue and Londonderry Drive were therefore based on trip generation estimates for the remaining portion

of the Paint Brush Hills neighborhood left to be developed. These volumes assume 380 additional single-family homes in Paint Brush Hills beyond Filing 13D and a church with a daycare on the six-acre parcel located on the southwest corner of the intersection of Londonderry/Towner (north). As Stapleton Drive currently does not extend east of Towner, it was not possible to utilize a growth rate to determine through traffic volumes on Stapleton Drive. Instead these volumes were based on the *El Paso County MTCP 2040 Transportation Plan Update*.

DIRECTIONAL DISTRIBUTION

The directional distribution of the site-generated traffic volumes on the area roadways is an important factor in determining the site's traffic impacts. Table 3 shows the short-term and long-term directional distribution estimates for the site-generated traffic volumes during the morning school peak, the afternoon school peak and the afternoon peak hour of adjacent street traffic. The table shows separate estimates for staff related traffic and student related traffic. The estimates have been based on the following factors: the site's location with respect to the nearby residential, employment, commercial, and activity centers and the balance of the Falcon and Colorado Springs metropolitan area; the site's proposed land use; the site's proposed access points; and the phasing of the existing and future roadway system serving the site. The long-term distribution takes into account the extension of Stapleton west to Briargate Parkway.

The difference in the morning school peak hour, and afternoon school peak hour and afternoon peak hour of adjacent street traffic distribution estimates is due in part to the difference in travel patterns of staff (mainly entering in the morning and exiting in the evening) and student related traffic (assumed to enter and exit the site in a relatively short period of time) and in part due to a phenomenon similar to the "pass-by" phenomena seen in commercial developments. A pass-by trip is made by a motorist who would already be on the adjacent roadways regardless of the proposed development, but who stops in at the site while passing by. In this case in the mornings some parents would leave their homes in the neighborhood, drop their student off at the school and then continue in the same direction for work or other destinations outside the neighborhood. In the afternoon, this would be reversed as some parents would be coming back from work or errands and would pick up their student before returning home.

SITE-GENERATED TRAFFIC

Figure 7 shows short-term Phase 1-only site-generated traffic volumes. Figure 8 shows the long-term buildout site-generated traffic volumes. The site-generated traffic volumes were calculated by applying the directional distribution percentages (from Table 3) to the trip generation estimates from Table 2.

Staff and student related traffic were assigned separately. All staff related traffic was assumed to use the access to Towner Avenue and student related traffic was assumed to use the access on Londonderry Drive. During the morning peak hour, when most staff enter the site, it was assumed that staff related traffic would have a travel preference of entering west on Stapleton, making a right-turn onto Towner and then a right into the staff parking lot rather than traveling to Londonderry Drive and then making a left onto Towner and a left into the site. In the afternoons, when most staff leave the site, it was assumed the preferred travel path would be to turn left onto Towner Avenue and then travel east on Stapleton.

In the short-term all student related traffic with origins or destinations outside of the immediate neighborhood will need to utilize Meridian Road. As the student drop off access is on Londonderry Drive it was assumed that it would be more convenient for most parents to make a right-turn on Londonderry Drive than to make a left onto Londonderry Drive, a left onto Towner Drive and then left again onto Stapleton Drive to get to Meridian. Once Stapleton Road is extended west it was assumed that a portion of the student related traffic would use Towner Avenue to travel to and from the west.

SHORT-TERM (PHASE 1 ONLY) TOTAL TRAFFIC

Figure 9a shows the projected short-term (Phase 1 only) total traffic volumes. The short-term total traffic volumes are the sum of the short-term background traffic volumes (from Figure 5) plus the short-term Phase 1 site-generated traffic volumes from Figure 7.

Figure 9b shows the lane geometry, traffic control, and level of service at the key intersections based on the short-term total volumes.

2040 TOTAL TRAFFIC

Figure 10a shows the projected 2040 total traffic volumes. The 2040 total traffic volumes are the sum of the 2040 background traffic volumes (from Figure 6) plus the long-term buildout site-generated traffic volumes from Figure 8.

Figure 10b shows the lane geometry, traffic control, and level of service at the key intersections based on the 2040 total volumes.

PROJECTED LEVELS OF SERVICE

All of the intersections along Towner Avenue from Stapleton Drive to Londonderry Drive (north) were analyzed to determine the projected levels of service for the short-term and 2040 background and total traffic volumes based on the unsignalized method of analysis procedures from the *Highway Capacity Manual, 2010 Edition* by the Transportation Research Board, the Synchro signalized intersection procedures, and SimTraffic. Figures 4, 5, 9b, and 10b show the level of service analysis results. The laneage and traffic control assumed in the analysis are depicted on the figures. The level of service reports are attached.

The intersection of Stapleton Drive and Towner Avenue is currently Stop-sign controlled. All movements at this intersection are projected to operate at a satisfactory level of service during the peak hours based on the projected short-term background and total traffic volumes. By 2040, it was assumed that Stapleton Drive would be extended west and this intersection would be signalized. As a signalized intersection, all movements are projected to operate at a satisfactory level of service (LOS D or better) based on the projected 2040 total traffic volumes.

The south and north intersections of Londonderry Drive and Towner Avenue, and the Falcon Middle School access are projected to operate at a satisfactory level of service as Stop-sign-controlled intersections based on the projected short-term and 2040 total traffic volumes.

All movements at the proposed Towner site access (staff parking) are projected to operate at a satisfactory level of service as a Stop-sign-controlled intersection based on the projected short-term and 2040 total traffic volumes.

All movements at the proposed Londonderry site access (visitor parking and parent pick-up/drop-off loop) are projected to operate at a satisfactory level of service as a Stop-sign-controlled intersection based on the projected short-term total traffic volumes. By 2040 the northbound left-turn and through movements at this intersection are projected to operate at LOS F during the morning peak hour. If the school implements an official school crossing point on the east leg of the intersection this has the potential to improve the LOS for the northbound left-turn and through movements.

QUEUEING

The City of Colorado Springs has developed an empirical formula to estimate projected queues at schools. Based a total of 900 students at buildout, the City of Colorado Springs minimum required queue is 1,750 feet and the high demand queue (used for queue design) is 2,100 feet.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

- Based on the information provided by the City of Colorado Springs, following Phase 1 the school is expected to generate about 1,075 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 319 vehicles would enter and 244 vehicles would exit the site. During the afternoon peak hour of the school, which was assumed to occur between 2:30 and 3:30 p.m., about 132 vehicles would enter and 207 vehicles would exit the site. During the afternoon peak hour of the adjacent street traffic, which generally occurs for one hour between 4:15 and 6:15 p.m., about 44 vehicles would enter and 46 vehicles would exit the site.
- At buildout the school is expected to generate about 1,557 vehicle-trips on the average weekday, with about half entering and half exiting the site during a 24-hour period. During the morning peak hour 476 vehicles would enter and 366 vehicles would exit the site. During the afternoon peak hour of the school about 198 vehicles would enter and 308 vehicles would exit the site. During the afternoon peak hour of the adjacent street traffic about 66 vehicles would enter and 69 vehicles would exit the site.

Intersection Lane Configurations

- Towner Avenue is a 40-foot-wide Urban Residential Collector street. It is currently striped with one through lane in each direction between Stapleton Drive and the north Londonderry intersection. A striping and signing plan for Towner Ave. will be included with the next submittal following coordination with the applicant for Paint Brush Hills Filing Nos. 13 C and D, Falcon Middle School personnel, the School District and El Paso County Public Works.
- Londonderry Drive should be restriped from just west of Towner Avenue east to Glenellen Drive to provide a center two-way, left-turn lane. Please refer to the Londonderry Drive signing and striping modification plan by LSC.
- The intersection of Towner/Stapleton is currently a T intersection with most of the westbound traffic making a right-turn. Currently only about two westbound vehicles turn left at this intersection during the morning peak hour and four westbound vehicles turn left during the afternoon peak hour. A separate right-turn lane would provide little benefit as long as Towner/Stapleton remains a T intersection.

School-Related Signing and Striping

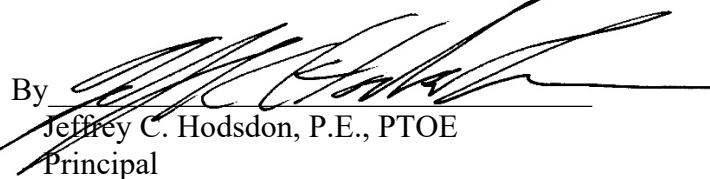

- School 20-mph speed limit zones should be established on Londonderry and potentially extended north along Towner (depending on the outcome of #1 under *Intersection Lane Configurations* above). The designated school crossing locations should likely be established as part of this process. The 20-mph school zone speed limit signs may be supplemented by a programmable flashing beacon system. If the flashing beacon system is not installed now, appropriate time-of-day supplemental plates should be included under the speed limit signs. Please refer to the Londonderry Drive signing and striping modification plan by LSC.
