### Preble's Meadow Jumping Mouse (Threatened)

The Preble's meadow jumping mouse (*Zapus indidomus preblei*) (Preble's mouse) is a small rodent approximately nine inches long with very long hind feet designed for jumping. The Preble's mouse is nocturnal with a diet of insects, seeds, fungi and fruit.

Habitat for the species consists of well-vegetated riparian corridors and adjacent upland habitats. Riparian corridors within the Air Force Academy are examples of good quality Preble's mouse habitat. The species is found in the foothills along the eastern edge of the Front Range from southeastern Wyoming to Colorado Springs.

The Preble's mouse was listed as a threatened species under the ESA in May 1998 due to habitat loss and degradation caused by agricultural, residential, commercial and industrial development.

Currently, any ground-disturbing activities within El Paso County that occur within 300 feet of a stream or the edge of the 100-year floodplain, whichever is greater, must address the Preble's mouse. Project proponents planning work within these areas should contact the U.S. Fish and Wildlife Service's office in Denver with details regarding the proposed project.

County Programs Hazard Mitigation

El Paso County Public Works Department's mission is to provide an effective snow and ice control program, which enables the motoring public to use the County road network during inclement winter weather. This is accomplished by maintaining a reliable road network and provide for the efficient flow of traffic within the County during periods of inclement winter weather.

El Paso County Public Works remains prepared to manage the minor and major snowstorms that periodically occur. In order to monitor weather and road conditions and to accept calls from other agencies and the public, dispatchers are on duty continuously 7 days a week, 24 hours a day. The department also coordinates closely with the Weather Bureau, Emergency Services, Sheriff's Office, Pikes Peak Office of Emergency Management, and others to obtain advanced information on impending storms or emergencies
