November 12, 2015

Mr. Marshal Brown Four Gates Land Development LLC 17435 Roller Coaster Road Monument, CO 80132

> RE: Jackson Ranch Filings 2-5 Transportation Memorandum LSC #134711

Dear Mr. Brown:

In response to your request, LSC Transportation Consultants, Inc. has prepared this transportation memorandum for the proposed Jackson Ranch subdivision Filings 2 through 5 to be located northeast of the intersection of Higby Road and Roller Coaster Road in El Paso County, Colorado, as shown on Figure 1. LSC prepared a Transportation Memorandum for Jackson Ranch dated March 26, 2014. Since completion of that report six lots for single-family homes on the west side of the site have been platted as Filing 1. The currently proposed Jackson Ranch Filings 2 through 5 include the remaining area assumed in the 2014 report plus an additional 59.84 acres to the north.

REPORT CONTENTS

The report contains the following: the existing roadway and traffic conditions adjacent to the site including the intersection lane geometries, traffic controls, posted speed limits, street classifications, etc.; an evaluation of the intersection sight distance at the site access points; existing traffic volumes at the west intersection of Higby Road/Roller Coaster (west) and at Charter Pines Drive/Roller Coaster Road and estimates of future background traffic volumes; the projected average weekday and peak-hour vehicle-trips to be generated by the site; the assignment of the projected site-generated traffic volumes to the adjacent roadways and intersections; the resulting total traffic volumes; and the resulting traffic impacts. The traffic impacts have been quantified by determining the future levels of service at the intersection of Higby/Roller Coaster (west) and the site access points. The report presents findings relative to rural roadway upgrades and auxiliary turn lanes at Higby Road/Roller Coaster Road and the site access points.

Page 2

LAND USE AND ACCESS

The site plan for the Jackson Ranch Subdivision is shown in Figure 2. The six lots in Filing 1, located on the west side of the subdivision are currently platted. The access for Filing 1 has been constructed but none of the lots are occupied as of this report. The proposed Jackson Ranch subdivision is planned to contain lots for 37 single-family homes. Ten of these lots would have access to Roller Coaster Road via a street planned to align with Charter Pines Drive about 1,110 feet north of the existing Filing 1 access. The remaining 27 lots would access a new local road that would extend north from the existing intersection of Higby Road and Oldborough Heights through this development. The March 2014 report assumed this road would serve 38 single-family homes (18 lots were included as part of the site and 20 lots were included as background development).

Access Sight Distance

LSC has field-measured the sight distance along Higby Road and Roller Coaster Road at the proposed access points. The intersection sight distance on Roller Coaster Road from the proposed Filing 5 site access would meet El Paso County Engineering Criteria Manual (ECM) standards in table 2-21 of section 2.3.6G. The sight distance at the proposed access to Higby Road was measured assuming the exiting lane from the north would align with the entering lane on the south side of Higby. The intersection sight distance on Higby Road to the east from the proposed site access was measured to be 550 feet. To the west the sight distance was measured to be about 425 feet. At a distance of about 500-600 feet there is a low point/sag vertical curve in the roadway profile where oncoming vehicles cannot be seen from the access point location. Just west of this low point, oncoming vehicles can be seen. The ECM standard intersection sight distance for 40-mile-per-hour (mph) design speed is 445 feet. Although the field-measured sight distance is 20 feet short of the 445-foot standard, the proposed access location would be acceptable as the access is at the crest of the hill and the eastbound approach to the site access is on a significant upgrade, making a minor speed adjustment by approaching eastbound motorists (to allow a vehicle to enter eastbound Higby) much easier as deceleration is easier on an upgrade. Moreover, a street already exists on the south side of Higby Road aligning with the proposed access point. As it is very common for intersections and access points in rural northern El Paso County to be located at the crests of hills, drivers traveling along Higby will expect an access point/intersection at this location.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

The major roadways in the vicinity of the site are shown on Figure 1 and are described below.

• **Higby Road** is classified as a two-lane Collector and extends east from Jackson Creek Parkway to Roller Coaster Road. The posted speed limit on Higby Road adjacent to the site is 35 miles per hour. The roadway is currently a two-lane rural roadway.

• Roller Coaster Road is classified as a two-lane Collector and extends north from North Gate Boulevard to Higby Road. Roller Coaster then continues north from Higby Road about one-half mile to the west and extends to County Line Road. The posted speed limit on Roller Coaster Road adjacent to the site is 35 miles per hour. The roadway is currently a two-lane rural roadway.

Existing Traffic Volumes

Figure 3 shows the morning and afternoon peak-hour traffic volumes at the intersections of Higby Road and Roller Coaster Road (west) and Charter Pines Drive and Roller Coaster Road. These volumes are based on manual traffic counts by LSC in October 2015. The traffic count reports are attached. Figure 3 also shows estimated average daily traffic based on factored peak-hour counts.

Existing Level of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

	Table 1	
Intersection	Levels of Service Delay	Ranges
Level of Service	Signalized Intersections	Unsignalized Intersections
	Control Delay (seco	onds per vehicle)
Α	10 sec or less	10 sec or less
В	10-20 sec	10-15 sec
С	20-35 sec	15-25 sec
D	35-55 sec	25-35 sec
Е	55-80 sec	35-50 sec
F	80 sec or more	50 sec or more

The intersections of Higby/Roller Coaster (west) and Charter Pines Drive/Roller Coaster Road were analyzed based on the unsignalized method of analysis procedures from the *Highway Capacity Manual*, 2010 Edition by the Transportation Research Board. As shown in Figure 3, these intersections are currently operating at a satisfactory level of service (LOS B or better). The level of service reports are attached.

2035 BACKGROUND TRAFFIC

Figure 4 shows the projected background traffic volumes for the year 2035. Background traffic is the traffic projected to be on the adjacent roadways and intersections without consideration of the proposed development. The background traffic volumes include through traffic and traffic generated by other area potential developments, but assumes that zero traffic is generated by the site. The 2035 background traffic volumes assume buildout of Filing 1 of the Jackson Ranch subdivision and buildout of the JT Ranch subdivision located southeast of the intersection of Higby Road and Roller Coaster Road (west). The overall traffic volume growth rate used (including site traffic) is 2.2 percent per year on Roller Coaster Road and about 3.5 percent per year on Higby Road adjacent to the site.

TRIP GENERATION

Estimates of the vehicle-trips to be generated by the site have been estimated using trip generation rates from *Trip Generation*, *9th Edition*, *2012* by the Institute of Transportation Engineers (ITE). Table 2 shows the average weekday and peak-hour trip generation estimates.

Jackson Ranch Filings 2 through 5 are projected to generate about 352 new vehicle-trips on the average weekday, with about half entering and half exiting the site. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about seven vehicles would enter and 21 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:15 and 6:15 p.m., about 23 vehicles would enter and 14 vehicles would exit the site.

TRIP DISTRIBUTION AND ASSIGNMENT

The estimated directional distribution of the site-generated traffic volumes on the adjacent roadways is an important factor in determining the site's traffic impacts. Figure 5 shows the directional distribution estimates for the site-generated traffic volumes. The directional distribution estimates were based on the following factors: existing area development, the area roadway system, the site's proposed land use, and the existing traffic counts.

SITE-GENERATED TRAFFIC

When the directional distribution percentages (from Figure 5) were applied to the trip generation estimates (from Table 2), the resulting site-generated traffic volumes were determined. Figure 6 shows the site-generated traffic volumes.

SHORT-TERM TOTAL TRAFFIC

Figure 7 shows the sum of the existing traffic volumes (from Figure 3) plus traffic estimated to be generated by Jackson Ranch Filing 1 plus the site-generated traffic volumes from Jackson Ranch Filings 2 through 5 (from Figure 6). These volumes identify the short-term impacts of the development.

2035 TOTAL TRAFFIC

Figure 8 shows the total traffic volumes for the year 2035. The 2035 total traffic volumes are the sum of the site-generated traffic volumes (from Figure 6) and the 2035 background traffic volumes (from Figure 4).

PROJECTED LEVELS OF SERVICE

The intersection of Higby/Roller Coaster (west) and the site access points were analyzed to determine the projected levels of service based on existing plus site-generated, 2035 background, and 2035 total traffic. The results of the analysis are shown in Figures 4, 7, and 8. As shown on the figures, all the analyzed intersections are projected to operate at a satisfactory level of service (LOS B or better) as two-way Stop-sign-controlled intersections based on projected existing plus site-generated, 2035 background, and 2035 total traffic volumes. The level of service reports are attached.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

• Jackson Ranch Filings 2 through 5 are projected to generate about 352 new vehicle-trips on the average weekday, with about half entering and half exiting the site. During the morning peak hour, about seven vehicles would enter and 21 vehicles would exit the site. During the afternoon peak hour, about 23 vehicles would enter and 14 vehicles would exit the site.

Projected Levels of Service

- The intersection of Higby/Roller Coaster (west) is projected to continue to operate at a satisfactory level of service as a two-way Stop-sign-controlled intersection based on existing plus sitegenerated, 2035 background, and 2035 total traffic volumes.
- The site access points to Roller Coaster Road and Higby Road are both projected to operate at a satisfactory level of service as two-way Stop-sign-controlled intersections based on existing plus site-generated, 2035 background, and 2035 total traffic volumes.

Roadway Classifications

- Based on the 2035 total average daily traffic volumes, the cul de sac off Roller Coaster Road, which would serve the ten lots in Filing 5, should be classified as Rural Local.
- Based on the 2035 total average daily traffic volumes the new street that will extend north from the intersection of Higby Road and Oldborough Heights through Jackson Ranch serving Filings 2 through 4 should be classified as a Rural Local street.

Auxiliary Turn Lanes

- Based solely on the existing turning volume as shown in Figure 3 and the criteria contained in the El Paso County *Engineering Criteria Manual*, an eastbound left turn is currently required on Higby Road approaching Roller Coaster Road (west) (existing deficiency). Traffic added to this turning movement by this project is projected to be only two vehicles per hour (an increase of less than five percent); therefore, this project should not be required to install this turn lane.
- The 2035 total westbound right-turning volume at the intersection of Higby Road/Roller Coaster (west) as shown in Figure 8 is projected to be approaching the criteria contained in the El Paso County Engineering Criteria Manual for a right-turn deceleration lane. Traffic added to this turning movement by this project is projected to be five vehicles per hour (an increase of less than five percent). Therefore, this project should not be required to install this turn lane. **The** applicant should dedicate the extra right-of-way (ROW) needed to accommodate this rightturn lane should it be needed in the future. Based on the existing design speed of 40 mph (posted 35 mph), the westbound right-turn lane on Higby Road approaching Roller Coaster (west) would need to be 155 feet long plus a 160-foot taper. Should Highy Road be upgraded to a Rural Major Collector with a design speed of 50 mph (posted 45 mph), this lane would need to be 235 feet long plus a 200-foot taper. Based on these potential dimensions, an additional rectangular ROW dedication of 12 feet wide by 235 feet long (for the deceleration portion of the lane) plus a 200-foot-long triangular section beginning 12 feet wide and tapering back to the 15-foot ROW dedication line (for the taper portion) is recommended to accommodate this future lane. This ROW dedication is shown on the Preliminary Plan.
- Based on the criteria contained in the El Paso County Engineering Criteria Manual, no auxiliary
 turn lanes would be required on Higby Road approaching the south site access nor on Roller
 Coaster Road approaching the west site access.
- Roller Coaster Road and Higby Road are candidates for rural roadway upgrades in the future. Based on the daily volumes projected, these roads would likely be upgraded to Rural Major Collector standards (the *Major Transportation Corridors Plan* shows these roadways as Collectors) depending on actual growth in the area and growth in traffic volumes on these roadways. This project does not impact these roadways to a level requiring any improvements by this project. However, the project would be paying countywide roadway improvement program fees. The plan shows right-of-way dedications of 15 feet on both Higby Road and Roller Coaster Road. The 15 feet plus the existing 30 feet from the centerline would total 45 feet or one-half of a Rural Minor Collector right-of-way (90 feet).
- This project will be required to participate in the countywide roadway improvement fee program.
 The specific PID option selected and associated fee amounts will be addressed with the final plats.

* * * * *

We trust this transportation memorandum will assist you in gaining approval of the proposed Jackson Ranch subdivision. Please contact me if you have any questions or need further assistance.

Sincerely,

LSC TRANSPORTATION CONSULTANTS, INC

Since there are no significant changes to Jackson Ranch Filings 2, 3, and 4 compared to the approved traffic study for the preliminary plan (from 27 lots to 25 lots). and the approved TIS dated May 9, 2016 is less than three years, the TIS is acceptable.

Replace the submitted TIS with the approved Transportation Memorandum Update by LSC dated May 9, 2016 for Jackson Ranch Filings 2-5.
