Geologic Hazard Note:
Some areas of the proposed development will be impacted by geologic hazards, including the presence of both expansive and hydrocompactive soils. Mitigation measures and a map of the hazard area can be found in the report prepared by STE, Inc. prepared on April 16, 2007, with an additional study prepared on December 8th, 2015, and located within the files of El Paso County in File No. SP-15-004. Additional studies and mitigation recommendations can be found in a study prepared by Hepworth-Pawlak Geotechnical, Inc. on November 4, 2015 also found in File No. SP-15-004.

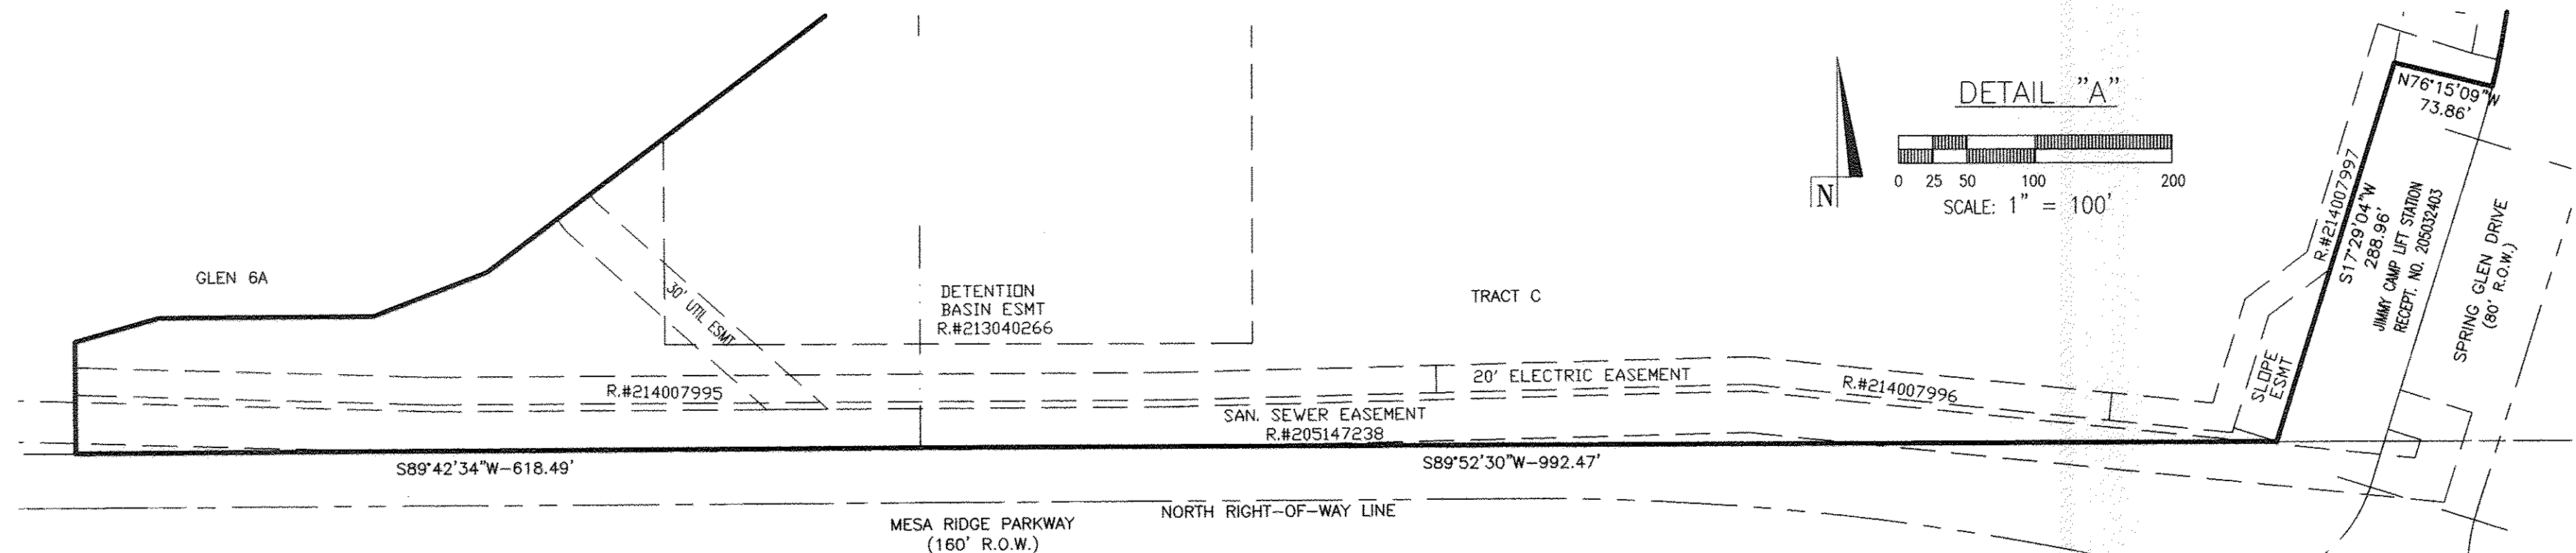

Foundation Perimeter Drains:
Per the study by STE, Inc. on April 16, 2007, "At a minimum, a subsurface perimeter drain will be required around each foundation system. If seepage or evidence of groundwater is present in the excavation a more comprehensive drain system would be warranted (ie curtain drains, capillary breaks, etc.)"

Areas of High Groundwater:
Due to high groundwater in some areas please refer to the recommendations and mitigation methods found in the studies by STE, Inc. and Hepworth-Pawlak for proper mitigation and construction types for foundations.

Streets and Roads Construction Mitigation Techniques
Section 8.4.9. B. III. of the El Paso County Land Use Code, states that roads, drainage improvements, and trails should be constructed away from geologic hazards or protected from geologic hazards, in accordance with the provisions of the ECM. Some streets or portions of streets as depicted on this map are shown in a "No Structure Area" or an "Unstable Area". Proper mitigation techniques will be provided during overlot grading and construction and in accordance with the recommendations of the Soils Engineer as per the Subsurface Soils Investigation Study by STE, Inc. prepared on April 16, 2007 with an additional study prepared on December 8th, 2015, and located within the files of El Paso County in File No. SP-15-004, and the Geotechnical Study prepared by Hepworth-Pawlak Geotechnical, Inc. in November 4, 2015 also found in File No. SP-15-004.

Crown of Existing Slope (No Structure Line)
The "No structure" line as shown on this plot and discussed within the STE, Inc. study of April 16, 2007 delineates the area west of this line as being not recommended for the development of building structures. Roadway construction that is located west of this line will be implemented per the recommendations within said study. All structures on lots near the no-build line must be set back a minimum of ten feet from the no-build line, unless further evaluation during the overlot grading process indicates that a different setback is appropriate. During construction of homes on these lots the engineer of record needs to do further analysis once the foundation holes are opened in order to recommend what mitigation if any is needed or what specific foundation types may be needed.

Expansive Soils Note:
Potentially expansive soils exist or will be placed on all lots in this development, and will require mitigation prior to construction. The risks associated with swell related heave at individual lots should be evaluated during site specific soil investigations.
