Project #10-025 PCD Filing No.:

# FINAL DRAINAGE LETTER FOR LOT 2 CLAREMONT **BUSINESS PARK 2 FILING NO. 2** EL PASO COUNTY COLORADO

#### DRAINAGE PLAN STATEMENTS

#### ENGINEERS STATEMENT

The attached drainage plan and report was prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

Virgil A. Sanchez, P.E. #37160 For and on Behalf of M&S Civil Consultants, Inc

Please provide signatures and stamp

#### DEVELOPER'S STATEMENT

I, the developer(s) have read and will comply with all the requirements specified in this drainage report and plan.

# FINAL DRAINAGE LETTER FOR LOT 2 CLAREMONT BUSINESS PARK 2 FILING NO. 2 EL PASO COUNTY COLORADO

#### Purpose

This Final Drainage Letter for Lot 2 Claremont Business Park 2 Filing No. 2 is in support of the commercial layout for the south half of Lot 2 and Construction Drawings of the subject site and to show the general conformance with the drainage patterns established by the **Final Drainage Report for Claremont Business Park 2 Filing No. 2** prepared by M&S Civil Consultants, Inc. This letter functions to identify the existing and proposed runoff patterns and recommend proposed drainage improvements which are intended to safely convey runoff through the proposed development, while minimizing impacts to downstream facilities and adjacent properties. The analysis has been prepared in accordance with the requirements set forth by El Paso County and remains in compliance with the Final Drainage Report for Claremont for Claremont Business Park 2 Filing No. 2 by M&S Civil Consultants.

#### **General Location and Description**

The Lot 2 Claremont Business Park 2 Filing No.2 is the commercial layout for the south half of Lot 2 of Claremont Business Park 2 Filing No.2. The site is located in the Northeast ¼ of the Northeast ¼ of Section 8, and the Southeast ¼ of the Southeast ¼ of Section 5, Township 14 South, Range 65 West of the 6th P.M. in El Paso County, Colorado. The site is bordered to the northeast by N. Marksheffel Road, to the northwest by Meadowbrook Parkway, and to the south by Claremont Business Park 2 Filing No. 1 (Lots 1-7). See Vicinity Map in Appendix for details.

The site consists of 1.808 acres which is currently vacant land. The development project will connect with the existing drive entrance and construct a commercial building, drive thru, drive aisles, parking, landscaping and utilities through the south half of the site. The Claremont Business Park 2 Filing 2 site is currently zoned "CS" and the proposed principal use for the site will be neighborhood commercial and light industrial.

In addition to the construction of the commercial building, drive aisles and utilities, an existing storm sewer system was constructed that will function to collect runoff from the Lot 2 and route to an existing sand filter basin water quality pond 3 that will be provided to treat runoff from aforementioned improvements. Modifications are to be provided to the existing storm sewer, such as install a proposed 5' Type R inlet and remove sections of existing storm sewer to route Lot 2 runoff into the pond 3. The existing pond 3 will tie into an existing system near Meadowbrook Parkway, which ultimately conveys runoff southwest into the East Fork of Sand Creek.

Per Resolution 16-426 of the BoCC, on-site WQCV is required but on-site stormwater detention is not required. (Refer to appendix).

Individual drainage letter and/or report shall be required with the development of the north half of Lot 2.

#### Soils

The Natural Resources Conservation Service, United States Department of Agriculture, Web Soil Survey, indicates that the soils for this project are: Blakeland Loamy Sand (8), Blendon Sandy Loam (10) and Ellicott Loamy Coarse Sand (28). These soils have been characterized as having Hydrologic Soil Types "A" & "B". The soils classification used for this study is "B". Refer to the Soils Map located in the Appendix of this report

#### **Previous Studies**

The proposed site and surrounding existing drainage facilities have been included in multiple drainage letters and reports. The following is a list of existing documents that were pertinent to analyzing this site.

- Final Drainage Report for Claremont Business Park 2 Filing No. 1, by M&S Civil Consultants, approved 2/11/2021.
- Final Drainage Report for Claremont Business Park 2 Filing No. 2, by M&S Civil Consultants, approval pending.
- Final Drainage Letter for Lot 5 of Claremont Business Park 2 Filing No.1, by M&S Civil Consultants, approved 03/03/2021.
- Final Drainage Letter for Lot 6 of Claremont Business Park 2 Filing No.1, by M&S Civil Consultants, approved 07/08/2021.

#### **Drainage Criteria**

As required by El Paso County, Colorado, this report has been prepared in accordance to the criteria set forth in the El Paso County Drainage Criteria Manual Volume 1 & 2 (DCM), the El Paso County Engineering Criteria Manual (ECM), and El Paso County Resolutions 15-042 and 19-245.

#### **Design Event Frequency**

The 100-year storm event was used as the major storm for the project, and the 5-year storm event was used as the minor storm.

#### **Method of Analysis**

The rational method was used to calculate peak flows as the tributary areas are less than 100 acres.

Where: Q=C\*i\*A

- Q = Maximum runoff rate in cubic feet per second (cfs)
- C = Runoff coefficient
- i = Average rainfall intensity (inches per hour)
- A = Area of drainage sub-basin (acres)

#### Runoff Coefficient

Rational Method coefficients from Table 6-6 of the Drainage Criteria Manual for developed land were utilized in the Rational Method calculations. Composite percent impervious and C values were calculated using roofs, commercial areas, asphalt drives, landscaped areas and parks found within the aforementioned table.

#### **Time of Concentration**

The time of concentration consists of the initial time of overland flow and the travel time (street or channel, etc) to a downstream structure or point of interest. A minimum time of concentrations of 5 minutes is utilized for urban areas.

#### **Rainfall Intensity**

The hypothetical rainfall depths for the 1-hour storm duration were taken from Table 6-2 of the Drainage Criteria Manual.

Project 1-Hour Rainfall Depth Storm Recurrence Interval Rainfall Depth (inches) 5-year 1.50" 100-year 2.52"

The rainfall intensity equation for the Rational Method was taken from Drainage Criteria Manual Volume 1 Figure 6-5.

#### Hydraulic Grade Line Analysis

StormCAD was utilized to analyze the proposed storm sewer system and determine the Hydraulic Grade Line (HGL's) profiles for the major and minor storms. The standard method was used to calculate head loss in the system with K coefficients taken from Table 9-4 of the Colorado Springs DCM.

In addition to the DCM, The Mile High Flood District BMP Sizing (UD-BMPv.3.07) and Detention Design (MHFD Detention v4.06) worksheets were utilized for to check to verify the existing the water quality ponds still functions with the revised tributary areas and impervious values. These spreadsheets were also utilized for the design of the proposed and future on-site water quality ponds. The MFHD-Inlet v5.02 worksheet was utilized to calculate both the street capacities and evaluate inlet capacities.

#### **Floodplain Statement**

I doesn't appear that there are proposed or future on-site ponds. Please clarify or delete if this is carry-over text from a previous report.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel No. 08041C0756G, revised December 7, 2018. No portion of this site is located within the 100 year floodplain. See Appendix.

#### **Existing Drainage Conditions**

As the site has been graded previously with the development of Filing 1, the vegetation is sparse, consisting primarily of native grasses and weeds. Existing site terrain generally slopes from north to southwest at grade rates that vary between 1.2% and 2%. A soil retention wall runs along the eastside of the proposed site, next to U.S. Highway 24 and N. Marksheffel Road, and borders a large portion of the back of the proposed lot. An existing WQ Pond 3 has been constructed on the southwest corner and along the west edge of the site, which will serve as a singular water quality pond for Lot 2 and El Jefe Heights (private street). An existing 18"/24" ADS private storm drain has been constructed along the east side of Meadowbrook Parkway and into Claremont Business Park 2 Filing No.2 that extends to this existing WQ Pond 3.

The proposed project will construct a commercial building, drive thru, drive aisles, parking, landscaping and utilities through the south half of the site, the existing and proposed drainage analysis will be expanded to evaluate changes in drainage patterns to ensure no negative affects to downstream facilities. An existing conditions drainage map is included in the appendix of this report to accompany the following discussion.

Basins that have remained unchanged from the **Final Drainage Report for Claremont Business Park 2 Filing No. 2** prepared by M&S Civil Consultants, Inc., will herein be identified with \*\* within the report, rational sheets and drainage maps.

#### Existing Conditions Detailed Drainage Discussion

**Design Point 1** (Q5 = 0.6 cfs, Q100 = 3.9 cfs) consists of runoff from undeveloped **Basins \*\*C**, **\*\*C1**, **D**, and **D1**. **Basins \*\*C** and **\*\*C1** are 0.12 and 0.17 acres of existing roadway embankment located generally between the subject site and existing Marksheffel Road. **Basins D** and **D1** are 0.77 and 0.63 acres of undeveloped portions of the subject site. Runoff from the four basins is conveyed to an existing 30" dome grate inline storm system, located south and west of the site at **DP1**. An existing 18" RCP (**Pipe Run 1 (PR1**)) will outfall the captured flows into an existing Water Quality Pond 3, located at the southwest corner of the site.

**Design Point 2** (Q5 = 2.2 cfs, Q100 = 6.9 cfs) consists of runoff from **Basin D2, Basin\*\*E1, \*\*E2** and **Design Point 1 (DP1)**. **Basin D2** is 0.15 acres of existing WQ Pond 3, **Basins \*\*E1** and **\*\*E2** consists 0.27 and 0.21 acres of existing EI Jefe Heights (asphalt paving, curb and gutter and landscaped areas) and **DP1**. Runoff from these basins flow into an existing WQ Pond 3 via existing 18" RCP pipes from EI Jefe Heights and from **DP1**. Runoff will be routed via an existing outfall structure and into the existing storm system which ultimately conveys runoff southwest into the East Fork of Sand Creek.

#### Four Step Process

The development will follow the "Four Step Process" as outlined below:

#### Step 1 - Employ Runoff Reduction Practices

The proposed development uses Low Impact Development (LID) practices to reduce runoff. When possible, runoff is to be directed to pervious areas to promote infiltration and limit directly connected impervious areas.

#### Step 2 - Stabilize Drainageways

Clarify that it will be existing via VR233 once this Lot 2 begins to be developed

There are no drainageways on-site to stabilize. The site is upstream of an existing 42"/48" RCP storm sewer system that discharges directly into the Sand Creek/Channel via an outlet structure with wingwalls (privately owned and maintained by the Central Marksheffel Metropolitan District). The Claremont Business Park 2 Filing No.2 site has proposed a Sand Filter Water Quality Facility that will treat runoff prior to discharging to the existing storm sewer system. There will be no adverse effects on downstream developments as a result of the development of this subdivision.

#### Step 3 - Provide Water Quality Capture Volume

One (1) Sand Filter Basin water quality facility is proposed to provide WQCV at the time of the writing of this report.

#### Step 4 - Consider Need for Industrial and Commercial BMP's

This submittal provides a Preliminary Grading and Erosion Control plan. A Final GEC plan with BMP's in place shall be required with final approval of this report, Grading Plan and construction drawings. The proposed project will use silt fence, a vehicle tracking control pad, a concrete washout area, mulching and reseeding to mitigate the potential for erosion across the site.

#### Proposed Drainage Characteristics

#### **General Concept Drainage Discussion**

The "Final Drainage Report for Claremont Business Park 2 Filing No. 2", dated February 2023, by M&S Civil Consultants, Inc. indicated that flows discharged from the subject site were to be collected and conveyed to the East Fork of Sand Creek Channel via a storm system that was to parallel Meadowbrook Parkway. As a portion of the construction of Claremont Business Park 2 Filing No.2 the existing storm sewer system was extended along the eastern side of Meadowbrook Parkway to collect runoff from the Lots 1, 2 & 3 of Claremont Business Park 2 Filing No.2 re-plat and thus remain in compliance with the previous drainage plans and studies.

#### (WQ Sand Filter Pond 3)

A permanent water quality pond has been constructed at the southwest corner of Lot 2 to provide treatment for the proposed roadway and Lot 2. An existing private 18" RCP has been installed to capture runoff from Lot 2 and outfalls into existing Pond 3.

#### WQ Sand Filter

An individual drainage letter and/or report shall be required with the development of Lot 2 not otherwise clearly analyzed by this report. A proposed conditions drainage map is included in the Appendix of this report to accompany the following discussion

Isn't that what this document is? Please clarify/revise.

Basins that have remained unchanged from the **Final Drainage Report for Claremont Business Park 2 Filing No. 2** prepared by M&S Civil Consultants, Inc., will herein be identified with \*\* within the report, rational sheets and drainage maps. Basins that have changed from the **Final Drainage Report for Claremont Business Park 2 Filing No. 2** prepared by M&S Civil Consultants, Inc., will herein be identified with # within the report, rational sheets and drainage maps. Basins, Design Points and Pipe Runs that are describing the ultimate build out of Lot 2, will herein be identified with \*\*\* within the report, rational sheets and drainage maps. **This is the first mention of "ultimate build out" v** 

**Proposed Conditions Detailed Drainage Discussion** 

This is the first mention of "ultimate build out" within this report. Please explain what this means. Is Lot 2 to be developed in two phases: "interim" and "ultimate," where "ultimate" represents the second phase?

**Design Point 1** (Q5 = 0.3 cfs, Q100 = 1.6 cfs) consists of runoff from undeveloped **Basins #C** and partially developed **Basin D**. **Basins #C** is 0.04 acres of existing roadway embankment located generally between the subject site and existing Marksheffel Road. **Basins D** is 0.47 acres of partially developed land with asphalt roadway, a 5' Type R Inlet and curb and gutter, the majority of this basin is undeveloped. Runoff from these basins is routed to a proposed 5' Type R sump inlet. Runoff to this inlet will be conveyed via a proposed 15" PP pipe (**Pipe Run 1** (**PR1**, Q5 = 0.3 cfs, Q100 = 1.6 cfs)) to **Design Point 2 (DP2)** and eventually to existing Water Quality Pond 3.

**Design Point 2** (Q5 = 3.1 cfs, Q100 = 6.5 cfs) consists of runoff from **Basin #C1** and developed **Basin D1**. **Basin #C1** is 0.26 acres of existing roadway embankment located generally between the subject site and existing Marksheffel Road. **Basins D1** is 0.93 acres of the developed portion of the subject site. Development includes connection with the existing drive entrance and construction of a commercial building, drive thru, drive aisles, parking, landscaping and utilities through the south half of the site. A small portion of the site is undeveloped. Runoff from these basins is routed to a proposed 5' Type R inlet. Removal of approximately 12' of existing 18" RCP will be required to install the proposed inlet. The inlet shall be installed with non-shrink cementitious grout to fill voids and fasten the inlet and pipe together. The remaining existing 18" RCP (Pipe Run 2 (PR2, Q5 = 3.4 cfs, Q100 = 8.1 cfs)) will route the combined captured flows from **DP1** and **DP2** and will outfall into an existing Water Quality Pond 3, located at the southwest corner of the site. The flows routed to existing WQ Pond 3 from Lot 2 are less than the flows cited in the Claremont Business Park 2 Filing No.2 Final Drainage Report (PR6A, Q5 = 6.0 cfs, Q100 = 11.6 cfs), hence there will be no negative impact on the downstream storm system.

**Design Point 3** (Q5 = 5.5 cfs, Q100 = 12.2 cfs) consists of runoff from **Basin D2**, **Basin\*\*E1**, **\*\*E2** and **PR2**. **Basin D2** is 0.15 acres of existing WQ Pond 3, **Basins \*\*E1** and **\*\*E2** consists 0.27 and 0.21 acres of existing EI Jefe Heights (asphalt paving, curb and gutter and landscaped areas) and **PR2**. Runoff from these basins flow into an existing WQ Pond 3 via existing 18" RCP pipes from EI Jefe Heights and from **PR2**. Runoff will be treated and routed via an existing outfall structure and into the existing storm system which ultimately conveys runoff southwest into the East Fork of Sand Creek. The flows routed to existing WQ Pond 3 are less than the flows cited in the Claremont Business Park 2 Filing No.2 Final Drainage Report (**DP6**, Q5 = 7.8 cfs, Q100 = 14.6 cfs), hence there will be no negative impact on the existing WQ Pond 3 and the downstream storm system.

**Design Point \*\*\*1 (Ultimate Build Out)** (Q5 = 0.3 cfs, Q100 = 1.6 cfs) consists of runoff from undeveloped **Basins #C** and partially developed **Basin \*\*\*D**. **Basins #C** is 0.04 acres of existing roadway embankment located generally between the subject site and existing Marksheffel Road. **Basins \*\*\*D** has no current builder but has been assigned a commercial area runoff coefficient number (5-yr 0.81 and 100-yr 0.88) applied to it. **Basins \*\*\*D** is 0.47 acres of future developed land and will route flows to a 5' Type R sump inlet. Runoff to this inlet will be conveyed via a proposed 15" PP pipe (**Pipe Run 1** (**PR1**, Q5 = 1.8 cfs, Q100 = 3.4 cfs)) to **Design Point 2 (DP2)** and eventually to existing Water Quality Pond 3.

**Design Point\*\*\*2 (Ultimate Build Out** (Q5 = 3.9 cfs, Q100 = 7.2 cfs) consists of runoff from **Basin #C1** and developed **Basin \*\*\*D1**. **Basin #C1** is 0.26 acres of existing roadway embankment located generally between the subject site and existing Marksheffel Road. **Basins \*\*\*D1** is 0.93 acres of the fully developed portion of the subject site. Development includes connection with the existing drive entrance and construction of a commercial building, drive thru, drive aisles, parking, landscaping and utilities through the south half of the site. Runoff from these basins is routed to a proposed 5' Type R sump inlet. Removal of approximately 12' of existing 18" RCP will be required to install the proposed inlet. The inlet shall be installed with non-shrink cementitious grout to fill voids and fasten the inlet and pipe together. The remaining existing 18" RCP (**Pipe Run \*\*\*2 (PR\*\*\*2,** Q5 = 5.7 cfs, Q100 = 10.6 cfs)) will route the combined captured flows from **DP1** and **DP2** and will outfall into an existing Water Quality Pond 3, located at the southwest corner of the site. The flows routed to existing WQ Pond 3 from Lot 2 are less than the flows cited in the Claremont Business Park 2 Filing No.2 Final Drainage Report (**PR6A**, Q5 = 6.0 cfs, Q100 = 11.6 cfs), hence there will be no negative impact on the downstream storm system.

**Design Point\*\*\*3** (Q5 = 7.8 cfs, Q100 = 14.6 cfs) consists of runoff from **Basin D2**, **Basin\*\*E1**, **\*\*E2** and **PR\*\*\*2**. **Basin D2** is 0.15 acres of existing WQ Pond 3, **Basins \*\*E1** and **\*\*E2** consists 0.27 and 0.21 acres of existing EI Jefe Heights (asphalt paving, curb and gutter and landscaped areas) and **PR\*\*\*2**. Runoff from these basins flow into an existing WQ Pond 3 via existing 18" RCP pipes from EI Jefe Heights and from **PR\*\*\*2**. Runoff will be treated and routed via an existing outfall structure and into the existing storm system which ultimately conveys runoff southwest into the East Fork of Sand Creek. The flows routed to existing WQ Pond 3 are equivalent to the flows cited in the Claremont Business Park 2 Filing No.2 Final Drainage Report (**DP6**, Q5 = 7.8 cfs, Q100 = 14.6 cfs), hence there will be no negative impact on the existing WQ Pond 3 and the downstream storm system.

#### Water Quality Provision and Maintenance

The subject site was previously analyzed within the Final Drainage Report for Claremont Business Park 2 Filing No. 2 prepared by M&S Civil Consultants, Inc. Per Resolution 16-426 of the BoCC, on-site WQCV is required but on-site stormwater detention is not required per the FDR for Claremont Business Park Filing 2. The water quality volume required for the site has been determined using the MHFD UD-Detention workbook per the guidelines set forth in the City of Colorado Springs/El Paso County Drainage Criteria Manual - Volume II.

Under VR233, prior to development of Lot 2 under this PPR2345, correct? Please make this clarification.

Delete the "s." Only 1 SFB for Lot 2.

As previously discussed, water quality for the site will be provided by an existing Sand Filter Basins (SFB). Pond 3 is to be constructed initially and will function to treat runoff from the newly constructed improvements (roadway, sidewalks) and Lot 2 or approx 2.32 acres at 80.3% imperviousness. Pond 3 will provide 0.051 acre-feet of water quality storage and shall be maintained by the property owners (equal shares determined by size of lot 2). Flows tributary to the SFB (Pond 3) are released through outlet structure into an existing storm sewer system located along Meadowbrook Parkway. Access shall be granted to the owner and El Paso County for access and maintenance of the private WQCV facility. A private maintenance agreement document shall accompany the final drainage report(s) submittal(s) which construct the WQ pond (Pond 3). WQ Sand Filter

#### **Erosion Control**

Please be consistent with the naming of this pond throughout this report and the other documents/drawings with this PPR. There are about 3 or 4 different nomenclatures in this report alone. I think using "WQ Sand Filter Pond 3" would be the most descriptive and consistent with VR233 docs.

It is the policy of the El Paso County that a grading and erosion control plan (GEC) with the drainage report. The GEC incorporates silt fence, vehicle traffic control, inlet and outlet controls, sediment basin and other best management practices (BMP's) as identified in the DCM Volume 2.

#### **Construction Cost Opinion**

Private Drainage Facilities (NON-Reimbursable) Including Sand Filter WQ Pond 3:

I	ltem	Description	Qua	ntity	Uni	t Cost	Cost
	1.	Remove 18" RCP & 30" Grate inline strm	12	LF	\$50	/LF	\$600.00
	2.	15" PP	66	LF	\$55	/LF	\$3,630.00
	3.	Type R 5' Sump Inlet	1	EA	\$6,500	/EA	\$6,500.00
:	2.	Type R 5' Sump Inlet connect to Ex. RCP	1	EA	\$7 <i>,</i> 500	/EA	\$7,500.00
Please clarify wh	hat this	s means. L					\$18,230.00
am not understa	Inding	and we Engineering Costs (10%)					\$1,823.00
need to know wh pond inspection	ho to s report	end future s to.					\$20,053.00

M & S Civil Consultants, Inc. (M & S) cannot and does not guarantee the construction cost will not vary from these opinions of probable costs. These opinions represent our best judgment as design professionals familiar with the construction industry and this development in particular. The above is only an estimate of the facility cost in 2023.

#### Drainage and Bridge Fees

This site is in the Sand Creek Drainage Basin. The site was previously subdivided into ten commercial lots as a portion of Claremont Business Park 2, Filing No.1. The proposed site has been re-platted as Claremont Business Park 2, Filing No.2.

Drainage fees were paid at the time of the previous platting as Tract C of Claremont Business Park Filing No. 2 (Reception No. 207712506), therefore no additional Drainage Bridge and/or Pond fees are required.

#### Summary

The proposed design meets the design assumptions utilized in the "Final Drainage Report for Claremont Business Park 2 Filing No. 2", by M&S Civil Consultants, Inc. The "Final Drainage Report for Claremont Business Park 2 Filing No. 2" calculated that DP 6 generated of (Q5=7.8 cfs and Q100=14.6). The proposed development (Lot 2, DP2) will generate Q5=2.9 cfs and Q100=9.5 which is less than what was anticipated by the Final Drainage Report for Claremont Business Park 2 Filing No. 2. Also the ultimate build out of the proposed development (Lot 2, DP\*\*\*2) will generate Q5=4.8 cfs and Q100=12.8 which is less than what was anticipated by the Final Drainage Report for Claremont Business Park 2 Filing No. 2. Therefore the proposed development shall not have a negative impact on the downstream storm system and is adequately sized to convey the proposed generated flows. Thus, the development of Lot 2 Claremont Business Park 2 Filing No.2 shall not adversely affect the surrounding development. The proposed drainage facilities will adequately convey, detain and route runoff from the onsite & offsite flows to existing facilities. Owner/developer of the lot shall comply with this final drainage report that will be submitted. Care will be taken to accommodate overland emergency flow routes on site and temporary drainage conditions.

## **RESOLUTION NO. 16-426**

## **BOARD OF COUNTY COMMISSIONERS** COUNTY OF EL PASO, STATE OF COLORADO

Resolution Denying an Appeal by Hammers Construction LLC (APP-16-002) of the Administrative Determination made by the Planning and Community Development Department Executive Director regarding the requirement for permanent/post construction Water Quality (permanent stormwater quality best management practices or BMP's).

WHEREAS, pursuant to §§30-11-101(1)(e) and 30-11-107(1)(e), C.R.S., the Board of County Commissioners of El Paso County, Colorado (hereinafter "Board) has the legislative authority to manage the concerns of El Paso County when deemed by the Board to be in the best interests of the County and its inhabitants; and

WHEREAS, after consultation with the County Attorney's Office, the Executive Director of Planning and Community Development on August 4, 2016 issued an administrative determination finding made an administrative determination that all undeveloped lots within the Claremont Business Park are subject to installation of permanent stormwater management best management practices (BMP's) associated with development, and that the terms of a 2008 approved deviation relieving the developer of the requirements have not been met.; and

WHEREAS, an appeal of the administrative determination was filed by Hammers Construction on August 10, 2016, and a hearing date was set for September 27, 2016 to hear the appeal; and

WHEREAS, the hearing was continued to a date certain of November 22, 2016; and

WHEREAS, at the Applicant's appeal hearing on November 22, 2016, testimony from the Applicant and the Applicant's representatives was heard by the Board in favor of the appeal, testimony from representatives of Planning and Community Development Department and was presented, and such testimony and associated evidence was weighed by the Board; and

Resolution No. 16-426 Page 2

WHEREAS, the Board, having reviewed the testimony and evidence, hereby finds and determines that the requested appeal of the administrative determination by the Planning and Community Development Executive Director by the Applicant did not satisfy the criteria of approval to overturn the administrative determination.

NOW, THEREFORE, BE IT RESOLVED that the Board of County Commissioners of El Paso County, Colorado, hereby denies the appeal of the administrative determination by Hammers Construction and determines that permanent stormwater management best management practices (BMP's) are required with new development within the Claremont Business Park: and

**BE** IT **FURTHER RESOLVED** that Sallie Clark, duly elected, qualified member and Chair of the Board of County Commissioners, or Darryl Glenn, duly elected, qualified member and Vice Chair of the Board of County Commissioners, be and is hereby authorized on behalf of the Board to execute any and all documents necessary to carry out the intent of the Board as described herein.

DONE THIS 22<sup>nd</sup> day of November, 2016, at Colorado Springs Colorado.

BOARD OF COUNTY COMMISSIONERS EL PASO COUNTY, COLORADO

e ( Oal By:

Chair of the Board
