## Memorandum

To: El Paso County Traffic Engineering  
From: David Kline, PE, PTOE  
Date: April 7, 2020  
Subject: Liberty Tree Academy – Phase 2 Traffic Analysis

Per criteria when providing an update to a recently approved TIS, existing site trip generations and differences between estimates and existing trip generations shall be addressed. Please provide an explanation in your narrative why new traffic counts where not provided as the school was opened last fall.

### Purpose of Memorandum

The purpose of this Phase 2 Traffic Analysis Memorandum is to provide the traffic related documentation required to support the Liberty Tree Academy – Phase 2 Site Development Plan and Construction Documents submittal and the permitting process. This memorandum relies on much of the technical information presented in the approved Liberty Tree Academy Traffic Impact Study dated August 9, 2018. Matrix Design Group prepared this memorandum on behalf of the Liberty Tree Academy Building Corporation.

### Existing/Proposed Site Development

The Liberty Tree Academy site is triangular shape lot, as shown in Figure 1, is bounded by Eastonville Road on the westerly side, regional drainage channel on the easterly side, and a residential lot on the south. The Liberty Tree Academy consists of two phases:

- Phase 1 opened in the fall of 2019 with the existing conditions highlighted below:
  - The private school opened with an initial kindergarten through 8th grade enrollment of 540 student facility. The single two-story building and includes administrative offices, classrooms, gymnasium, warming kitchen, and ancillary rooms.
  - The site is accessed through a single full movement intersection at Eastonville Rd. and Motley Road. The internal 20 feet wide circulatory roadway has an available queue length of 1,380 feet, in addition to 750 feet of loading and pickup parking.
  - The school parking capacity of 50 parking stalls is reached on a continual basis resulting in parking in undeveloped school property, and on Eastonville Rd. The addition parking use is attributed to additional support staff, and teachers. In addition, there is a tendency for parents to park and accompany their children into the building. This pattern results in a longer parking duration than at typical school. The has become a safety concern and Liberty Academy is interested in having more parking in Phase 2 to address the daily need and accommodate special events.
- Phase 2 is proposed to be opened in the fall of 2021 and includes the following;
  - An additional 14,436 square feet building with classroom and office space. With this new building attached to the original building the total combined floor area will be 56,021 square feet.
  - One of the primary interests of Liberty Tree Academy is to provide an academic continuation for the elementary school students to enter the 9th, 10<sup>th</sup>, 11<sup>th</sup>, and 12<sup>th</sup>

grades. Enrollment to these upper grades will occur gradually as the students age and advance. With this addition, the total enrollment is limited to 740 students.

- The Liberty Tree Academy has prohibited driving age students from bringing vehicles on campus with the intent of parking for the duration of the school day. This is a condition of eligibility for enrollment.
- The site access is proposed to be modified to include an additional full movement intersection at Eastonville Rd. and Snaffle Bit Road, which is located northly from the Motley Rd. intersection. The intersection geometry and control will be similar to that at the Eastonville Rd. and Motley Road intersection.
- Access to the school circulating drive aisle is aligned parallel to Eastonville Rd. Adjacent to the drive aisle, 90-degree parking is proposed. The length and configuration allows an additional 85 parking stalls. Pedestrian connectivity is proposed through adjacent sidewalks.
- The circulation plan is intended to be modified to support efficient traffic flow and during the peak period conflicting individual turning will be restricted. This is a dynamic condition managed by the internal school traffic control personnel.
- The Phase 2 circulation plan in the AM and PM peak hour calls for closure of the Motley Rd. at Eastonville Rd intersection and all site traffic will be directed to the Eastonville Rd. and Snaffle Bit Rd. intersection. This is accomplished with movable barricades placed by the school traffic control personnel. All site traffic is circulated through the Phase 2 parking lot and connects to the Phase 1 drive aisle and drop off/pick up lanes.

Please provide an exhibit of this phase 2 circulation plan.

### Trip Generation

The vehicle trips associated with this development were calculated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual, Tenth Edition*. This methodology consists of choosing an independent variable for the land use for a particular time of day. The independent variable correlates to the variation in trip ends and is related to the land use.

ITE Trip Generation Code 534, Private School (K-8) is used since it most closely represents the Liberty Tree Academy. Current enrollment indicates that 67 percentage of students have siblings therefore participating in carpooling, so the trip generation established through ITE may be conservative. An affordable school bus program is available through the School District. For the purpose of this study trip reduction is not considered for student walking, carpooling, or bus service. Table 1 shows the trips that are expected to be generated by both Phase 1 and Phase 2 student enrollment.

Since the Liberty Tree Academy prohibits driving age students from bringing vehicles on campus with the intent of parking for the duration of the school day. The traffic pattern is similar to a K-8 grade private school. In essence the classroom are fill with non-driving high school students.

Please provide a comparison of the previous trips generated by the K-8 and the new trips generated with the addition of the high school students.

**Table 1 – Trip Generation**

Land Use – ITE Code 534	Variable	AM Peak			PM Peak*			Daily		
		Total	In	Out	Total	In	Out	Total	In	Out
<b>Private School (K-8)</b>	740	651	358	293	192	88	104	3,041	1,521	1,520

\*PM peak hour of adjacent street traffic.

### Trip Distribution

During the AM and PM peak hours the site access is proposed through the Eastonville Rd/Snaffle Bit Rd intersection. From this intersection arrival and departure site trips are distributed predominately to/from Eastonville Road with a smaller percentage to/from the west, which serves the adjacent residential area. As a north/south minor arterial roadway Eastonville Road is anticipated to accommodate 95% of the total site trips, with 50% to/from the south, and 45% to/from the north. Snaffle Bit Road is anticipated to accommodate 5% of the site generated trips.

Figures of the traffic volumes show the trip distribution as 2.5%. revise accordingly.

### Traffic Network

The proposed Eastonville Rd and Snaffle Bit Rd intersection is analyzed with the following intersection configuration.

- Northbound – Left Turn Lane, Shared Thru/Right Turn Lane
- Southbound – Left Turn Lane, Shared Thru/Right Turn Lane
- Eastbound – Shared Right/Thru/Left Turn Lane
- Westbound – Shared Thru/Left Turn Lane, Right Turn Lane

Three existing unsignalized intersections that are in close proximity to the were analyzed. For the intersection configuration see the Liberty Tree Academy Study, dated August 9, 2018.

- Eastonville Road at Meridian/Judge Orr Road
- Eastonville Road at Stapleton Drive
- Eastonville Road at Motley Rd – Not Applicable due to peak hour closure.

Please indicate whether or not the existing traffic was analyzed at Eastonville/Snaffle Bit Rd and how the total traffic at this intersection was determined.

Also your previous report indicated the use of the PHF of 0.5 to better reflect the school traffic patterns. Was this PHF used in this analysis?

### Future Traffic

Future traffic was developed by adding the peak hour site traffic to Eastonville Rd. background traffic. The background traffic is established based on the adjacent US 24 highway growth rate since the two facilities are in the vicinity to each other and parallel. The US 24 annual growth rate of 1.5% per year is anticipated and is therefore assumed as background for Eastonville Road, Meridian/Judge Orr Road and Stapleton Drive. The site traffic is added on top of the background volumes to get 2040 total traffic. Table 3 and Table 4 show the 2021 and the 2040 total traffic volumes for both the AM and PM peak hours

### Traffic Analysis

To determine how efficiently and effectively the four intersections accommodate the build-out traffic volumes, each intersection was analyzed using Synchro 10 software. The results are

shown as Levels of Service (LOS). LOS is a qualitative measure used to describe the condition of traffic flow and delay, ranging from excellent conditions at LOS A to very poor conditions at LOS F. LOS D is commonly used as the level of service goal.

Table 2 provides a description of conditions for each LOS at a unsignalized intersection.

**Table 2: Signalized Intersection Level of Service Criteria**

Level of Service	Average Total Delay (seconds per vehicle)	Description
A	< 10	Little or no conflicting traffic for minor street approach.
B	>10 to 15	Minor street begins to notice absence of available gaps.
C	>15 to 25	Minor street begins experiencing delay for available gaps.
D	>25 to 35	Minor street starts to experience queuing.
E	>35 to 50	Extensive minor street queuing due to insufficient gaps.
F	> 50	Insufficient gaps to allow minor street traffic to cross safely through the major street traffic stream.

Source: *HCM2010 Highway Capacity Manual* (Transportation Research Board, 2010)

Tables 3 and 4 provide a summary of the 2021 and 2040 analysis respectively. The Synchro output for both is provided as an attachment.

**Table 3: 2021 Total Traffic Level of Service**

-Southbound Thru/Right	Stop	B	20	B	16
<b>Eastonville Rd/Stapleton Dr</b>	Un-signalized				
-Eastbound Left/Thru/Right	Stop	D	44	C	20
-Westbound Left	Stop	C	6	C	2
-Westbound Thru/Right	Stop	C	16	C	64
-Northbound Left/Thru/Right	Free	A	0	A	0
-Southbound Left/Thru/Right	Free	A	6	A	2

As shown in the above tables, all but one intersection is expected to operate at acceptable levels of service in the AM and PM peak hour at build-out scenarios. The lone exception is the Eastonville Rd and Snaffle Bit Rd intersection. In the AM peak hour, this intersection is shown as operating at capacity (LOS F) in both the 2021 and the 2040 total traffic condition. This is due to the exiting westbound left turn. In review analysis indicates that the AM queue length of 192 feet and in the PM queue length of 240 feet is expected. With the addition of the parking aisle the queue in both conditions are expected to be contained on site.

### Conclusions

The Traffic Impact Study results indicate in the 2021 near term condition and the 2040 long term condition with the Liberty Tree Academy Phase 2, K-12, traffic and the Eastonville Rd/Snaffle Bit Rd intersection operates well with one except. The westbound shared left/through lane experiences internal queue and delay typical of school traffic patterns. The site queue can be accommodated internal within the site drive aisles. Due to introducing Eastonville Rd corridor delay, all-way stop control or roundabout are not recommended. In the near term and long term the project, as proposed, does not adversely impact the existing and proposed intersection operation or roadway corridor.

Please indicate the available queue length provided by the site with the new development. Your previous report indicated that the site was in general conformance with MSTA guidelines. Is that still the case with this proposal?

**Traffic Engineer's Statement**

This traffic memorandum and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Liberty Tree Academy Building Corporation  
PO Box 64614  
Colorado Springs, CO 80962*4/9/2020

Date

Please address the following:

- access location & sight distance analysis at the proposed access at Eastonville/Snaffle bit. Does the location meet ECM criteria?
- Provide discussion regarding the road impact fee.
- Provide analysis/recommendations for improvements at Eastonville/Snaffle Bit intersection. Note that there are left turn lanes shown on the signing and striping plan submitted. Please provide your recommendations for all improvements required at this intersection.
- List any deviations from criteria that the applicant will be making. Note that per County criteria, access is not allowed on a minor arterial roadway. Comments were provided in the site plan to submit a deviation request form for the additional access point at Eastonville/Snaffle Bit.
- Any recommendations/changes/revisions to the roadway signs regarding the school.
- any recommendations/mitigations to bring the movements below LOS D to satisfactory levels.
