

### **Road Condition Video Survey Statement – Grazing Yak Solar Project**

The video survey documenting the road conditions along the haul routes was submitted to El Paso County Planning and Community Development on a USB drive in November 2018 as part of the WSE-O application. The Applicant understands that the El Paso County Public Works Department will monitor haul route road conditions during construction, and that the department will request that road conditions be returned to their original or better condition at the completion of construction. In addition, the Applicant understands that a condition of the Project 1041 approval would be that roads along the Project haul route are returned to their original or better condition.
