TRAFFIC IMPACT STUDY

Traffic Engineer's Statement

The attached traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

1.0 EXECUTIVE SUMMARY

A Circle K gas station is proposed to redevelop an existing gas station located on the southwest corner of US-24 and (Old) Meridian Road intersection in El Paso County, Colorado. The project is proposing 16 fueling positions with a 5,200 square foot convenience market to replace the existing gas station to be located on the southeast corner of the US-24 and New Meridian Road intersection. It should be noted that the existing gas station on site currently provides eight (8) fueling positions. In addition, this traffic study has been prepared for the entire redevelopment area bounded by New Meridian Road, Old Meridian Road, US-24, and Swingline Road. The remaining development was studied to include 20,000 square feet of retail space, 7,000 square feet of fast casual restaurant space, and a 4,500 square foot fast food restaurant with drive thru. It is expected that the project will be completed by 2023; therefore, analysis was conducted for the 2023 short term horizon as well as the 2040 long-term horizon per El Paso County requirements.

The purpose of this study is to identify project traffic generation characteristics and potential project traffic related impacts on the local street system, as well as to develop mitigation measures required for identified impacts. The following intersections were incorporated into this traffic study in accordance with El Paso County and Colorado Department of Transportation (CDOT) standards and requirements:

- US-24 and (Old) Meridian Road
- US-24 and (New) Meridian Road (future)
- Swingline Road and (New) Meridian Road (future)
- Swingline Road and (Old) Meridian Road (future realignment)
- Pacific Avenue and (New) Meridian Road (future)
- Pacific Avenue and (Old) Meridian Road (future)

Regional access will be provided by Woodmen Road and United States Highway 24 (US-24). Primary and direct access to the site will be provided from (New) Meridian Road and (Old) Meridian Road. A proposed three-quarter turning movement future intersection of Pacific Avenue and (New) Meridian Road and a full movement access along the west side of (Old) Meridian Road at the future Pacific Avenue will provide direct access. Two full movement driveways will be provided along the proposed Pacific Avenue roadway extending between

(Old) Meridian Road and (New) Meridian Road, as well as an access anticipated along Old Meridian Road assumed for the development area to the south between Pacific Avenue and Swingline Road.

The redeveloped Circle K project is expected to generate approximately 4,356 weekday daily trips with 432 of these trips occurring during the morning peak hour and 360 trips occurring during the afternoon peak hour. Based on traffic volume counts conducted and driveways of the existing gas station, the existing gas station on site is currently generating 110 trips during the weekday morning peak hour and 146 trips during the afternoon peak hour. To account for a COVID-19 adjustment, the existing gas station driveway volumes were increased by approximately 46 percent and would be expected to generate approximately 160 trips during the weekday morning peak hour and 213 trips during the afternoon peak hour. Therefore, the redeveloped Circle K project would be expected to generate 272 morning peak hour trips and 214 afternoon peak hour trips. The entire project with the net increase of Circle K trips plus adjacent retail and restaurant space with ITE procedure internal capture trips calculated is expected to generate a net additional 405 morning peak hour trips and 309 trips afternoon peak hour trips than the existing adjusted site traffic volume level.

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, anticipated surrounding development in the area, and the proposed access system for the project. Assignment of project traffic was based upon the trip generation described previously and the distributions developed.

Based on the analysis presented in this report, Kimley-Horn believes the redeveloped Circle K project with the adjacent retail and restaurant space will be successfully incorporated into the existing and future roadway network. The proposed project development and expected traffic volumes resulted in the following recommendations and conclusions:

2023 Recommendations:

- The following improvements are recommended in association with the project:
 - Pacific Avenue will be constructed as a public right-of-way within the development area with a Urban Non-Residential Collector classification between New Meridian Road and Old Meridian Road. The future intersections of Pacific Avenue/(New)

Meridian Road and Pacific Avenue/(Old Meridian Avenue will provide primary access for the project. The intersection of Pacific Avenue/(New) Meridian Road is proposed to allow three quarter turning movements with westbound left turns being prohibited. The intersection of Pacific Avenue/(Old) Meridian Road is proposed to allow full turning movements. Direct access to the project will be provided from two driveways located along the proposed Pacific Avenue roadway extending between (Old) Meridian Road and (New) Meridian Road.

- The driveway accesses along Pacific Avenue and (Old) Meridian Road, and the two future access intersections of Pacific Avenue/Meridian Road (New) and Pacific Avenue/Meridian Road (Old) are recommended to provide R1-1 "STOP" signs on the exiting approaches. It is anticipated that single shared movement lanes are sufficient for the exiting approaches of all these access intersections. A raised "pork-chop" median may be required in the exiting throat of the three-quarter movement access intersection of Pacific Avenue and (New) Meridian Road to prevent left turns onto (New) Meridian Road. A R3-2 "No Left Turn" sign should be installed under the STOP sign of this future intersection. A northbound right turn lane should be provided at the proposed Pacific Avenue and (New) Meridian Road intersection.
- There is approximately 340 feet of spacing along (New) Meridian Road between US-24 and the proposed Pacific Avenue (measured edge to edge). With the future intersection of Pacific Avenue and (New) Meridian Road being proposed to allow three-quarter turning movements, it is recommended that the northbound left turn lane at the US-24 and (New) Meridian Road intersection be restriped from 400 feet to 150 feet of length to accommodate back-to-back left turn lanes with the future intersection of Pacific Avenue and (New) Meridian Road. Further, the southbound left turn lane at the future Pacific Avenue and (New) Meridian Road intersection should provide 100 feet of length with a reduced shared taper length of 75 feet. A deviation request will need to be provided to allow these substandard left turn lane lengths; however, calculated vehicle queues are expected to be accommodated within the proposed left turn lane lengths.

- o It is recommended that the existing 400-foot northbound right turn lane at the US-24 and (New) Meridian Road intersection be shortened to 155 feet of length plus a 160-foot taper to accommodate the future intersection of Pacific Avenue and (New) Meridian Road. This new length meets El Paso County standards for a design speed of 40 miles per hour and vehicle queues will be accommodated in this lane as the northbound to eastbound right turn acceleration lane will provide free movements at this intersection.
- O It is understood that El Paso County may require a 10-foot additional right-of-way dedication along Old Meridian Road to bring the roadway up to the Urban Non-Residential Collector standard from US-24 to Swingline Road adjacent to the project development. A request of the Advisory Committee will be provided to obtain possible credits from the Road Impact Fee associated with this improvement.
- The following improvements along US-24 were completed by CDOT in association with the ongoing realignment of Meridian Road:
 - CDOT will convert the signalized intersection of US-24 and (Old) Meridian Road to an unsignalized intersection. Further, this intersection will be restricted to rightin/right-out only movements with stop control along the northbound and southbound (Old) Meridian Road approaches.
 - With completion of the new alignment of Meridian Road, it is anticipated that CDOT will construct a combination right turn acceleration to deceleration lane that will extend eastbound along US-24 from (New) Meridian Road to (Old) Meridian Road. Likewise, a combination right turn acceleration to deceleration lane will extend westbound along US-24 from (Old) Meridian Road to (New) Meridian Road.
 - A 600-foot eastbound right turn deceleration lane with a 225-foot taper is recommended at the intersection of US-24 and (New) Meridian Road. A 1,125-foot left turn lane with a 225-foot taper is also recommended along the eastbound approach of this intersection. Likewise, a westbound left turn lane with a length of 855 feet is recommended at the US-24 and (New) Meridian Road intersection. Lastly, a southbound Meridian Road to westbound US-24 right turn acceleration is

recommended with a length of 960 feet plus a 225-foot taper. All these improvements meet CDOT SHAC standards.

Required Access Deviations

- The intersection of Pacific Avenue will be approximately 390 feet south of the (New) Meridian Road and US-24 intersection (measured center to center). The intersection spacing is not located a quarter mile (1,320 feet) from an arterial roadway. Therefore, the proposed intersection does not meet ECM standards. The intersection is expected to meet operational, vehicle queue, and sign distance standards; therefore, it is believed that this intersection should be granted to restrict left-out movements. A deviation will be provided in support of allowing a restricted three-quarter intersection.
- o Pacific Avenue is expected to be classified as a local street with lower volumes and no intentions of having cut-through traffic. Therefore, Pacific Avenue can follow driveway spacing of a local roadway of 330 feet from an arterial roadway and 150 feet between local intersections. The west access will be approximately 215 feet (measured center to center) east of (New) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access. The west access and the east access along Pacific Avenue are offset approximately 515 feet. Therefore, the accesses meet the 150 feet spacing standards. The east access will be approximately 125 feet (measured center to center) west of (Old) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access to be spaced less than 175 feet.
- The proposed intersection access will be approximately 500 feet (measured center to center) south of (Old) Meridian Road and US-24 intersection. The access spacing requirement of a collector roadway to a local roadway intersection is 330 feet. Therefore, it is believed this access meets the access spacing criteria in the ECM.

2040 Recommendations:

- If future traffic volume projections materialize, US-24 will need to be improved to provide at least two through lanes in each direction throughout the study area.
- The westbound left turn lane at the US-24 and Meridian Road intersection may need to be extended from 855 feet to 935 feet of length.
- The eastbound approach of the US-24 and Meridian Road intersection may need to provide dual left turn lanes with 965 feet of length per lane.

General Recommendations:

 All on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to El Paso County Standards as well as the Manual on Uniform Traffic Control Devices – 2009 Edition (MUTCD).

2.0 INTRODUCTION

Kimley-Horn and Associates, Inc. has prepared this report to document the results of a Traffic Impact Study of future traffic conditions associated with a Circle K redevelopment located on the southwest corner of US-24 and (Old) Meridian Road intersection in EI Paso County, Colorado. A vicinity map illustrating the project location is shown in **Figure 1**. The project is proposing 16 fueling positions with a 5,200 square foot convenience market to replace the existing gas station to be located on the southeast corner of the US-24 and New Meridian Road intersection. It should be noted that the existing gas station on site currently provides eight (8) fueling positions. In addition, this traffic study has been prepared for the entire redevelopment area bounded by New Meridian Road, Old Meridian Road, US-24, and Swingline Road. The remaining development was studied to include 20,000 square feet of retail space, 7,000 square feet of fast casual restaurant space, and a 4,500 square foot fast food restaurant with drive thru. A conceptual site plan illustrating the development is shown in **Appendix F**. It is expected that the project will be completed by 2023; therefore, analysis was conducted for the 2023 short term horizon as well as the 2040 long-term horizon per EI Paso County and CDOT requirements.

The purpose of this study is to identify project traffic generation characteristics and potential project traffic related impacts on the local street system, as well as to develop mitigation measures required for identified impacts. The following intersections were incorporated into this traffic study in accordance with El Paso County and Colorado Department of Transportation (CDOT) standards and requirements:

- US-24 and (Old) Meridian Road
- US-24 and (New) Meridian Road (future)
- Swingline Road and (New) Meridian Road (future)
- Swingline Road and (Old) Meridian Road (future realignment)
- Pacific Avenue and (New) Meridian Road (future)
- Pacific Avenue and (Old) Meridian Road (future)

Regional access will be provided by Woodmen Road and United States Highway 24 (US-24). Primary and direct access to the site will be provided from (New) Meridian Road and (Old) Meridian Road. A proposed three-quarter turning movement future intersection of Pacific Avenue and (New) Meridian Road and a full movement access along the west side of (Old) Meridian Road at the future Pacific Avenue will provide direct access. Two full movement driveways will be provided along the proposed Pacific Avenue roadway extending between (Old) Meridian Road and (New) Meridian Road, as well as an access anticipated along Old Meridian Road assumed for the development area to the south between Pacific Avenue and Swingline Road.

3.0 EXISTING AND FUTURE CONDITIONS

3.1 Surrounding Land Use

The project site is comprised of an existing gas station, two single-family residential homes, and vacant land. The south half of the project area will be for future development. The area to the southwest is primarily vacant while the surrounding area in direction includes residential neighborhoods. The area and roadway network surrounding the project site are shown in the aerial of **Figure 2**.

3.2 Existing and Future Roadway Network

US-24 provides one through lane in each direction adjacent to the project site with a posted speed limit of 55 miles per hour. US-24 is classified as a "principal arterial" per El Paso County roadway classification map while being categorized as E-X: Expressway, Major Bypass by CDOT. The March 2018 PEL for this roadway identifies a possible six-lane roadway for US-24. (Old) Meridian Road provides one through lane in each direction with a posted speed limit of 40 miles per hour. The (New) Meridian Road is currently under construction and is located approximately 1,000 feet west of the (Old) Meridian Road. El Paso County classifies Meridian Road as a principal arterial north of US-24 and a minor arterial roadway south of US-24.

At the time of the counts, the existing intersection of US-24 and (Old) Meridian Road was signalized with protective-permissive left turn signal phasing on the eastbound westbound approaches of US-24. The north-south approaches of (Old) Meridian Road operated with split phasing. The eastbound and westbound approaches of this intersection provided a left turn lane, a through lane, and a right turn lane while the northbound and southbound approaches provided a shared through/left turn lane and a right turn lane. It is believed, this intersection will operate under stop control on the north-south approach of (Old) Meridian Road and be restricted to right-in/right-out only movements when construction is completed.

At the time of the counts, the intersection of US-24 and (New) Meridian Road was currently under construction. The US-24 and (New) Meridian Road intersection has recently been signalized with protected-permitted left turn phasing on all four approaches. The northbound and southbound approaches provide a left turn lane, two through lanes, and a right turn lane.

CIRCLE K — US—24 & MERIDIAN EL PASO COUNTY, COLORADO SITE AREA

The eastbound and westbound approaches provide a left turn lane, a through lane, and a right turn lane. The existing intersection lane configuration and control for these study area key intersections are shown in **Figure 3**.

3.3 Existing Traffic Volumes

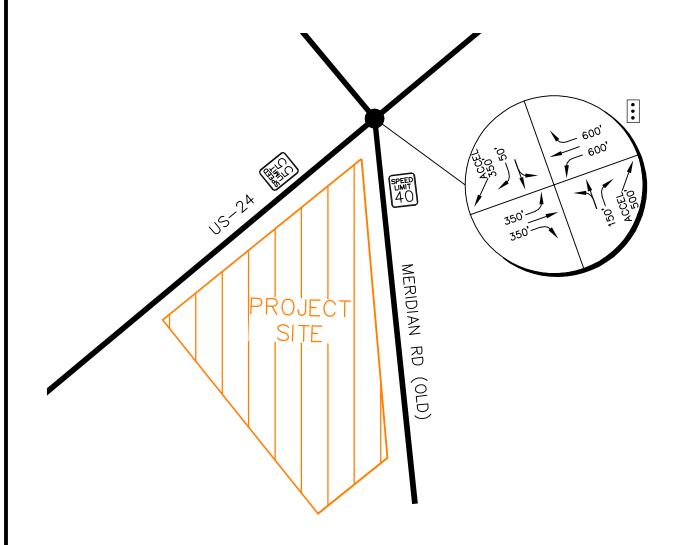

Existing PM peak hour turning movement counts were collected on Wednesday, April 14, 2021 while AM peak hour turning movement counts were conducted on Thursday, April 15, 2021. The counts were conducted in 15-minute intervals during the morning and afternoon peak hours of adjacent street traffic from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM. Existing turning movement counts are shown in **Figure 4** with count sheets provided in **Appendix A**.

Due to the counts being collected during the COVID-19 Pandemic, an adjustment factor was determined in order to grow the counts to non-COVID conditions to represent normal condition traffic volumes. Peak hour through volumes conducted in 2019 that were provided by the Colorado Department of Transportation along US-24 were grown to year 2021. These volumes were compared to the approach volumes collected in 2021 at the intersection of US-24 and (Old) Meridian Road. It was determined the morning peak hour traffic volumes needed to be increase by 46 percent while the afternoon peak hour traffic volumes needed to be increased by 47 percent to identify normal existing conditions traffic volumes. The adjusted peak hour turning movement counts are shown in **Figure 5**.

3.4 Unspecified Development Traffic Growth

Based on information provided on the website for the Colorado Department of Transportation, the 20-year average growth factor along US-24 within the study area between 1.4 and 1.5. The average value equates to an annual growth rate of approximately 1.8 percent per year. Traffic information from the CDOT Online Transportation Information System (OTIS) is included in **Appendix B**. Based on the above information, a 2.0 percent annual growth rate was used to calculate future traffic volumes at the study area intersection and adjacent roadways. This annual growth rate was used to estimated short-term 2023 and long-term 2040 traffic volumes at the key intersections. Existing traffic counts at the intersection of US-24 and (Old) Meridian Road were redistributed to the intersection of US-24 and (New) Meridian Road due to the realignment of Meridian Road and (Old) Meridian Road being restricted to right-in/right-out movements in the future.

In addition, traffic volumes associated with the Meridian Road/Falcon Park and Ride were included in the short-term and long-term horizon. The volumes included in the Traffic Operations/Access Assessment: Meridian Road/Falcon Park and Ride prepared by HDR Engineering, Inc in June 2019 is included in **Appendix B.** The calculated background traffic volumes for 2023 and 2040 are shown in **Figure 6** and **Figure 7**, respectively.

4.0 PROJECT TRAFFIC CHARACTERISTICS

4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land uses to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Report*¹ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report average rate equations that apply to Shopping Center (ITE Code 820), Fast Casual Restaurant (ITE 930), Fast-Food Restaurant with Drive-Thru (ITE 934), and Super Convenience Market/Gas Station (ITE 960) for traffic associated with the development.

Since the full buildout of the Circle K Redevelopment is proposed to contain a mix of uses, internal capture trips are expected to occur on site as well. These internal capture trips are shared trips from vehicles already within the internal street network. These shared trips reduce the number of total external trips and were calculated directly per the ITE procedure.

Existing peak hour traffic volumes were collected at the site driveways of the existing gas station on site. Based on the data from these counts, it is determined that the existing site generates 110 morning peak hour trips (59 in and 51 out) and 146 afternoon peak hour trips (70 in and 76 out). To account for a COVID-19 adjustment, the existing gas station driveway volumes were increased by approximately 46 percent and would be expected to generate approximately 160 trips during the weekday morning peak hour and 213 trips during the afternoon peak hour during normal traffic conditions. Therefore, the redeveloped Circle K project would be expected to generate 272 morning peak hour trips and 214 afternoon peak hour trips. The entire project with the net increase of Circle K trips plus adjacent retail and restaurant space with ITE procedure internal capture trips calculated is expected to generate a net additional 405 morning peak hour trips and 309 trips afternoon peak hour trips than the existing adjusted site traffic volume level. Calculations were based on the procedure and information provided in the ITE *Trip Generation Manual*, 10th Edition – Volume 2: Data, 2017. **Table 1** summarizes the

_

¹ Institute of Transportation Engineers, *Trip Generation: An Information Report*, Tenth Edition, Washington DC, 2017.

estimated trip generation for the proposed development. The trip generation worksheets are included in **Appendix C**.

Table 1 – Project Traffic Generation

^{*}Assuming PM peak hour is 8% of the Daily

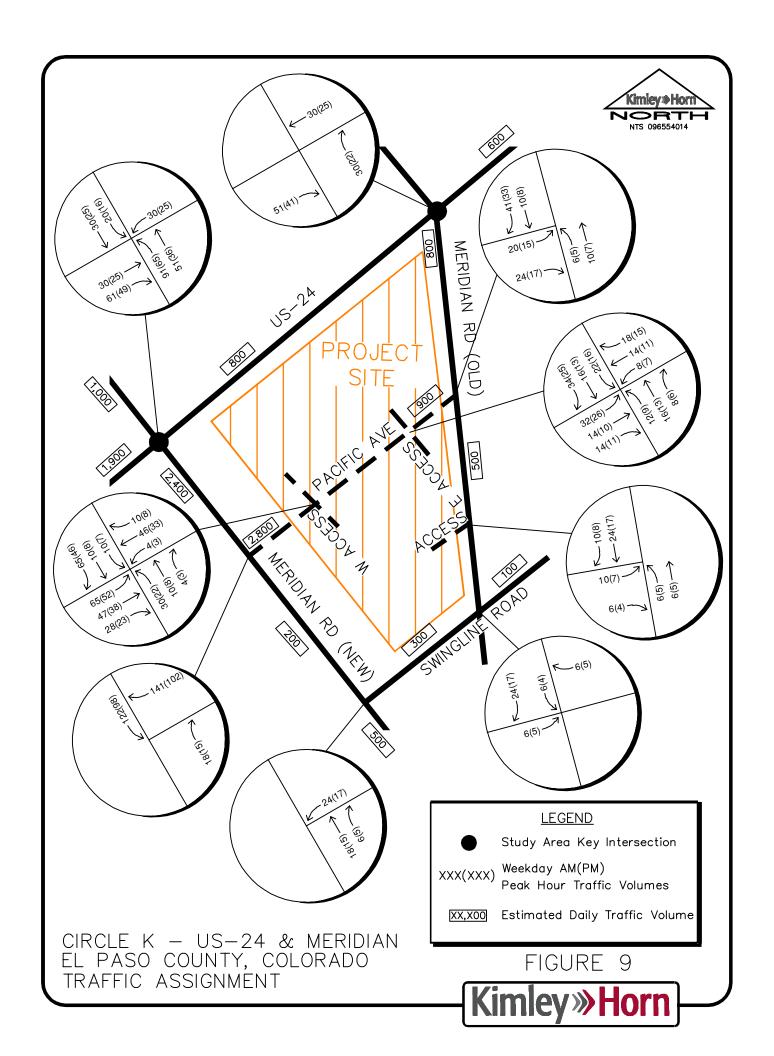

4.2 Trip Distribution

Distribution of site traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding demographic information, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution is illustrated in **Figure 8**.

4.3 Traffic Assignment

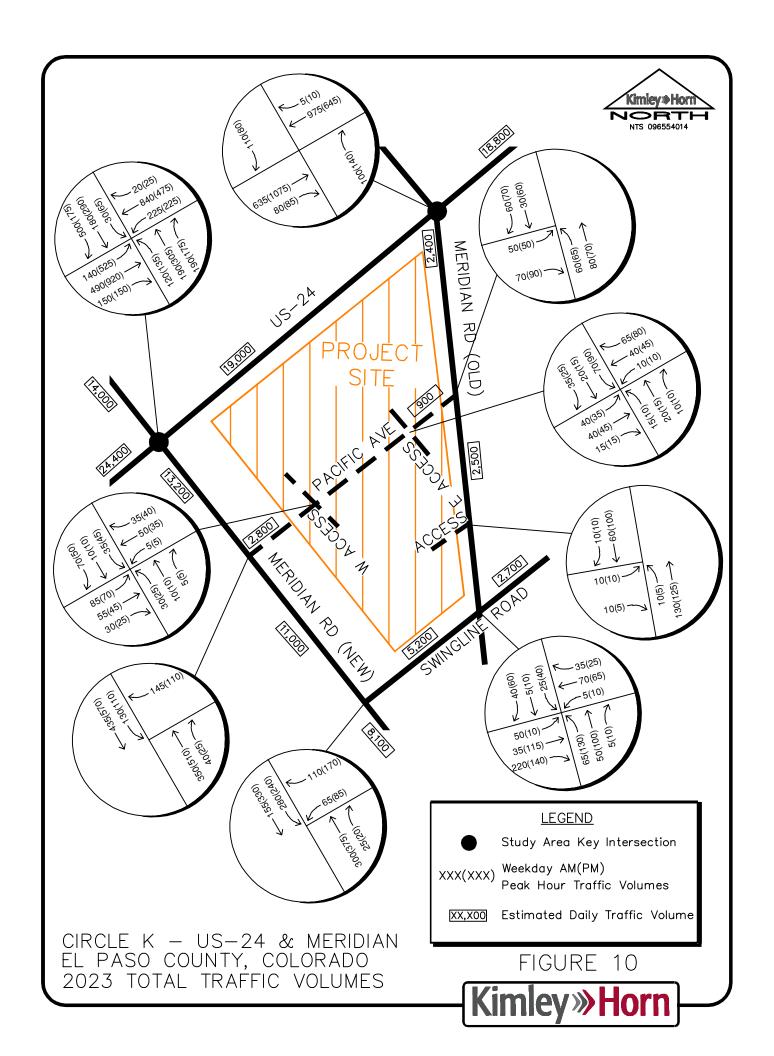

Traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the development shown in **Table 1**. Project traffic assignment for the Circle K project is shown in **Figure 9**.

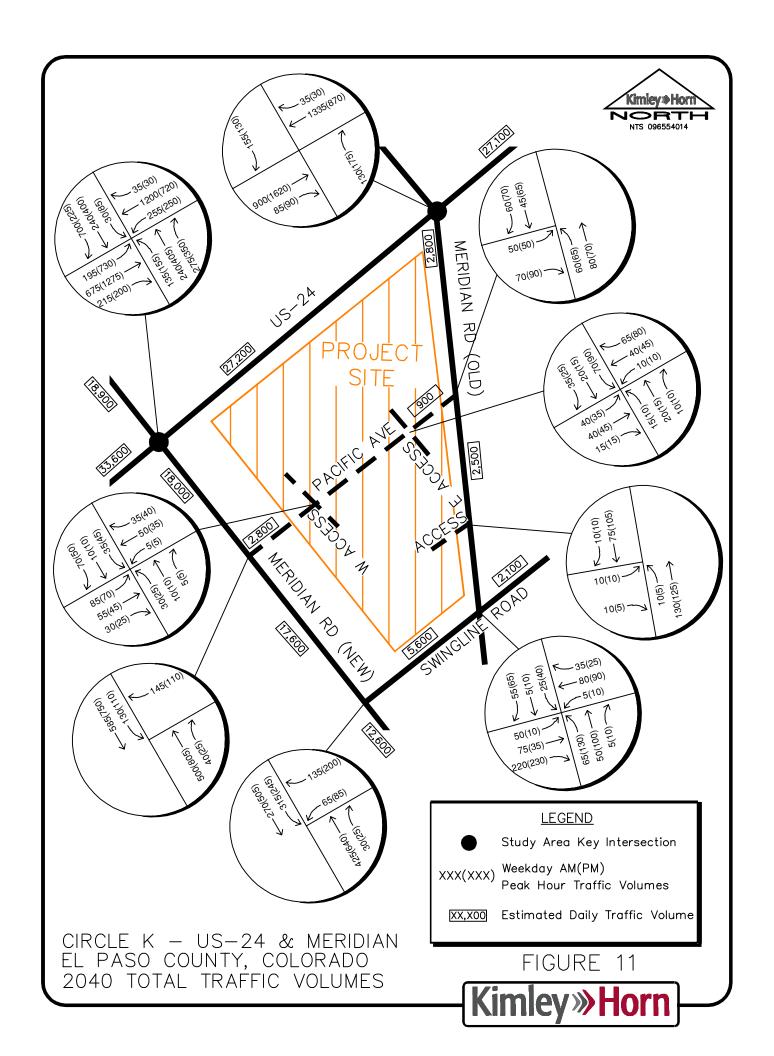

4.4 Total (Background Plus Project) Traffic

Site traffic volumes were added to the background volumes to represent estimated traffic conditions for the short term 2023 horizon and long term 2040 horizon. These total traffic volumes for the site are illustrated for the 2023 and 2040 horizon years in **Figure 10** and **Figure 11**, respectively.

5.0 TRAFFIC OPERATIONS ANALYSIS

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2023 and 2040 development horizons at the identified key intersections and access driveway. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual (HCM)*².

5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). Typical standard traffic engineering practice recommends LOS D for overall intersections and LOS E for movements or approaches as the minimum thresholds for acceptable operations at intersections. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

Table 2 – Level of Service Definitions

| Level of Service | Signalized Intersection Average Total Delay (sec/veh) | Unsignalized Intersection Average Total Delay (sec/veh) |
|---------------------|---|---|
| А | ≤ 10 | ≤ 10 |
| В | > 10 and ≤ 20 | > 10 and ≤ 15 |
| С | > 20 and ≤ 35 | > 15 and ≤ 25 |
| D | > 35 and ≤ 55 | > 25 and ≤ 35 |
| E | > 55 and ≤ 80 | > 35 and ≤ 50 |
| F | > 80 | > 50 |

Definitions provided from the Highway Capacity Manual, Special Report 209, Transportation Research Board, 2010.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the LOS for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. LOS for a two-way stop-controlled intersection is not defined for the intersection as a whole. LOS for signalized, roundabout, and all-way stop controlled intersections are defined for each approach and for the overall intersection.

² Transportation Research Board, *Highway Capacity Manual*, Special Report 209, Washington DC, 2010.

5.2 Key Intersection Operational Analysis

Calculations for the level of service at the key intersection and project access driveways for the study area are provided in **Appendix D**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 3**. Synchro traffic analysis software was used to analyze the study area intersection and access driveway. The Synchro Highway Capacity Manual (HCM) methodology reports were used to analyze intersection delay and level of service.

US-24 and (Old) Meridian Road

The intersection of US-24 and (Old) Meridian Road currently operates as a signalized intersection with protected-permissive left turn phasing on the east-west approaches. This intersection currently operates with LOS C during the morning peak hour and LOS E during the afternoon peak hour. By 2023 and coinciding with the realignment of Meridian Road to the west, the intersection will convert to an unsignalized intersection with stop-control on the north and south approaches and be restricted to right-in/right-out movements on (Old) Meridian Road. With this configuration and control, the intersection movements are anticipated to operate at LOS A during the morning and afternoon peak hours throughout the 2040 horizon. Acceleration lanes will be provided along US-24 at (Old) Meridian Road; therefore, there will not be any movements at this intersection that report vehicular delays. By 2040, the El Paso County Major Transportation Corridors Plan (MTCP) and CDOT PEL both identify US-24 to be widened to six-lanes. It was determined based on the projected through volumes that the roadway would only need to be widened to a four-lane roadway (two through lanes in each direction) and was analyzed as such at the studied intersections along US-24. **Table 3** provides the results of the level of service at this intersection.

Table 3 – US-24 and (Old) Meridian Road LOS Results

^{* =} Acceleration Lane with Free Movement; # = Includes Two Eastbound and Westbound Through Lanes

US-24 and (New) Meridian Road

The intersection of US-24 and (New) Meridian Road is currently under construction and is anticipated to be complete by the short-term horizon buildout year. The northbound and southbound Meridian Road approaches are anticipated to provide a left turn lane, two through lanes, and a channelized free right turn lane. The eastbound and westbound US-24 approaches are anticipated to provide a left turn lane, a through lane, and a right turn lane. Therefore, under the proposed configuration and control, the intersection is anticipated to operate at LOS C during the morning peak hour and LOS D during the afternoon peak hour with the addition of project traffic and re-routed traffic from the US-24 and (Old) Meridian Road intersection. By 2040, US-24 was identified as needing to provide two through lanes in each direction. In addition, if 2040 volumes are realized, eastbound dual left turn lanes are likely to be needed due to high volumes of left turns projected at this intersection in the future. With these improvements, this intersection is anticipated to operate acceptably during the peak hours in 2040. **Table 4** provides the results of the level of service at this intersection.

Table 4 – US-24 and (New) Meridian Road LOS Results

| | AM Pea | ak Hour | PM Peak Hour | | |

5.3 Future Intersections

The future intersections of Pacific Avenue/(New) Meridian Road and Pacific Avenue/(Old Meridian Avenue will provide primary access for the project. The intersection of Pacific Avenue/(New) Meridian Road is proposed to allow three quarter turning movements with westbound left turns being prohibited. The intersection of Pacific Avenue/(Old) Meridian Road is proposed to allow full turning movements. Direct access to the project will be provided from two driveways located along proposed Pacific Avenue extending between (Old) Meridian Road and (New) Meridian Road.

The driveways along Pacific Avenue and (Old) Meridian Road, and the two future access intersections of Pacific Avenue/Meridian Road (New) and Pacific Avenue/Meridian Road (Old) are recommended to provide R1-1 "STOP" signs on the exiting approaches. It is anticipated that single shared movement lanes are sufficient for the exiting approaches of all these access intersections.

A raised "pork-chop" median may be required in the exiting throat of the three-quarter movement access intersection of Pacific Avenue and (New) Meridian Road to prevent left turns onto (New) Meridian Road. A R3-2 "No Left Turn" sign should be installed under the STOP sign of this future intersection.

The future intersection of Swingline Road and (New) Meridian Road is currently being constructed and will open with the completion of (New) Meridian Road in the surrounding area. (New) Meridian Road will provide two through lanes in each direction and separate left and right turn lanes onto Swingline Road. The westbound approach of Swingline Road will operate under stop control and will provide separate left and right turn lanes.

In addition, Swingline Road and (Old) Meridian Road will become a single-lane roundabout. The south leg will provide access to the future Meridian Road/Falcon Park and Ride and terminate approximate 500 feet from the roundabout.

With the recommended lane configurations and control, all the movements at the project accesses and proposed new intersections to the south are anticipated to operate at LOS C or

better during the morning and afternoon peak hour throughout the 2040 horizon. **Table 5** provides the results of the level of service at these intersections.

5.4 El Paso County and CDOT Turn Lane Requirement Analysis

El Paso County

The El Paso County ECM was used to determine if left and right turn lanes are warranted along (New) Meridian Road, (Old) Meridian Road, and Pacific Avenue. El Paso County classifies (New) Meridian Road as a minor arterial roadway. According to El Paso County ECM guidelines for Minor Arterials, a left turn lane is required for any access with a project peak hour left turning volume of 25 vehicle per hour or greater whereas a right turn lane is required for any access with a projected peak hour right turning volume of 50 vehicles per hour or greater. (Old). Of note, right turn deceleration lanes may be dropped if the approach volumes is below 150 directional hourly vehicles and left turn deceleration lanes may be dropped if the opposing volumes is predicted to be less than 100 directional hourly vehicles based on the CDOT State Highway Access Code, which is adopted by many jurisdictions for supplementary turn lane guidelines.

Based on 2040 traffic volume projections, a northbound right turn lane <u>is not</u> warranted for the future Pacific Avenue and (New) Meridian Road based on projected 2040 total traffic volumes being 40 northbound right turns during the peak hour and the threshold being 50 vehicles per hour. A southbound left turn lane <u>is warranted</u> for the future Pacific Avenue and (New) Meridian Road based on projected 2040 total traffic volumes being 130 southbound left turns during the peak hour and the threshold being 25 vehicles per hour. In addition, neither right nor left turn lanes are warranted at the project accesses along Pacific Avenue or along (Old) Meridian Road based on turn volumes not meeting the threshold or the opposing/advancing volumes being low.

CDOT

Since US-24 is a state owned and maintained facility, it is recommended that auxiliary turn lanes along US-24 be constructed in accordance with the current CDOT State Highway Access Code (SHAC). CDOT categorizes the segment of US-24 through the study area as E-X: Expressway. According to the State Highway Access Code for category E-X roadways, the following thresholds apply:

 A left turn deceleration lane is required for any access with a projected average daily left turn ingress volume greater than 10 with the transition taper included within the required deceleration length. If the projected peak hour left ingress turning volume is greater than

- 10 vehicles per hour (vph), a left turn deceleration, storage, and taper lane is required for any access.
- A right turn deceleration lane and taper is required for any access with a projected peak hour right ingress turning volume greater than 10 vph.
- A right turn acceleration lane and taper is required for any access with a project peak hour right turning volume greater than 10 vph.

Based on traffic projections and the above thresholds, auxiliary turn lanes requirements along US-24 with a posted speed limit of 55 miles per hour are as follows:

US-24 and (Old) Meridian Road

- An eastbound right turn deceleration lane exists and <u>is</u> warranted based on the projected 2023 background plus project traffic being 85 eastbound right turns during the peak hour and the threshold being 10 vph. The existing right turn lane length is continuous from the eastbound acceleration lane at the (New) Meridian Road and US-24 intersection. The right turn deceleration lane length per SHAC requirements is 600 feet with a 225-foot taper (18.5:1 ratio). Therefore, the 600-foot deceleration lane is not accommodated in the existing combination acceleration to deceleration lane along US-24 from (New) Meridian Road to (Old) Meridian Road.
- A westbound right turn deceleration lane exists and <u>is</u> warranted based on the projected 2023 background plus project traffic being 10 westbound right turns during the peak hour and the threshold being 10 vph. The existing right turn lane length is intended to be continuous from the acceleration lane at the driveway to the east.
- An acceleration lane for the northbound right to eastbound through exists and <u>is</u> warranted based on the projected 2023 background plus project traffic being 140 northbound right turns during the peak hour and the threshold being 10 vph. The existing acceleration lane length is 500 feet long with a 225-foot taper. The acceleration lane length per SHAC requirements is 960 feet with a 225-foot taper (18.5:1 ratio). A design waiver was likely granted previously by CDOT for the existing substandard acceleration lane length due to the bridge located east of this intersection. It is believed that the existing northbound to eastbound acceleration lane along US-24 should remain at the current length and no mitigation is recommended.

• An acceleration lane for the southbound right to westbound through exists and <u>is</u> warranted based on the projected 2023 background plus project traffic being 110 southbound right turns during the peak hour and the threshold being 10 vph. The acceleration lane length per SHAC requirements is 960 feet with a 225-taper (18.5:1 ratio). It is anticipated that with completion of the (New) Meridian Road intersection to the west, a combination acceleration to deceleration lane will extend westbound along US-24 from (Old) Meridian Road to (New) Meridian Road.

US-24 and (New) Meridian Road

The intersection of US-24 and (New) Meridian Road is currently under construction and some turn lanes cannot be determined from the aerials. Therefore, only recommendations based on CDOT standards have been provided for the future auxiliary turn lanes.

- An eastbound right turn deceleration lane <u>is</u> warranted based on the projected 2023 background plus project traffic being 215 eastbound right turns during the peak hour and the threshold being 10 vph. The right turn deceleration lane length per SHAC requirements is 600 feet with a 225-foot taper (18.5:1 ratio). The right turn lane is constructed as a continuous lane. By 2040, when two through lanes are recommended, then the right turn lane is recommended to be constructed to SHAC requirements.
- A westbound right turn deceleration lane <u>is</u> warranted based on the projected 2023 background plus project traffic being 25 westbound right turns during the peak hour and the threshold being 10 vph. The eastbound right turn lane is anticipated to be continuous from the southbound right acceleration lane at the intersection of US-24 and (Old) Meridian Road.
- An eastbound left turn deceleration <u>is</u> warranted based on the projected 2023 background plus project traffic being 525 eastbound left turns during the peak hour and the threshold being 10 vph. The left turn deceleration lane per SHAC requirements is 525 feet of storage plus 600 feet of deceleration length plus a 225-foot taper (18.5:1 ratio). Therefore, the left turn deceleration lane should provide 1,125 feet of length plus a 225-foot taper. If 2040 volumes are realized, eastbound dual left turn lanes will likely be needed at this intersection should provide 965 feet of length per lane plus a 225-foot taper.
- A westbound left turn deceleration <u>is</u> warranted based on the projected 2023 background plus project traffic being 255 westbound left turns during the peak hour and

the threshold being 10 vph. The left turn deceleration lane per SHAC requirements is 255 feet of storage plus 600 feet of deceleration length plus a 225-foot taper (18.5:1 ratio). Therefore, the left turn deceleration lane should provide 855 feet of length plus a 225-foot taper. By 2040, the turn lane may need to be extended to 935 feet of length.

- An acceleration lane for the northbound right to eastbound through <u>is</u> warranted based on the projected 2023 background plus project traffic being 250 northbound right turns during the peak hour and the threshold being 10 vph. The acceleration lane length per SHAC requirements is 960 feet with a 225-foot taper (18.5:1 ratio). However, it is anticipated that a combination acceleration to deceleration lane will extend eastbound along US-24 from (New) Meridian Road to (Old) Meridian Road.
- An acceleration lane for the southbound right to westbound through <u>is</u> warranted based on the projected 2023 background plus project traffic being 500 southbound right turns during the peak hour and the threshold being 10 vph. An acceleration lane has been recently constructed to provide 900 feet in length.

5.5 Queuing Analysis

A queuing analysis was conducted for turn lanes at the study intersections. The queuing analysis was performed using the Synchro analysis software presenting the results of the 95th percentile queue length. Results are shown in the following **Table 6** with calculations provided in **Appendix D** for the unsignalized intersections and **Appendix E** for the signalized intersections.

Table 6 - Turn Lane Length Analysis Results

| Intersection Turn Lane | Existing Turn Lane Length (feet) | 2023 Total Queue Length (feet) | 2023 Recommended Turn Lane Length (feet) | 2040 Total Queue Length (feet) | 2040 Recommended Turn Lane Length (feet) |
|---------------------------------|---|---|---|---|---|
| US-24 & (New) Meridian | (leet) | (leet) | Length (leet) | (ieet) | Lengin (leei) |

| (Old) Meridian Road Access | | | | | |
| Northbound Left | DNE | 25' | C | 25' | C |
| Eastbound Approach | DNE | 25' | C — Continuous | 25' | С |

DNE = Does Not Exist; T = Taper; DL = Dual Left Turn Lanes; C = Continuous Lane

Results of the queuing analysis indicate that vehicle queues are expected to remain within the provided turn lanes of the studied intersections. In addition, the turn lanes for the eastbound left, eastbound right, westbound left, and westbound right at the intersection of US-24 and (New) Meridian Road have been designed per SHAC requirements.

There is approximately 340 feet of spacing along (New) Meridian Road between US-24 and the proposed Pacific Avenue (measured edge to edge). With the future intersection of Pacific Avenue and (New) Meridian Road being proposed to allow three-quarter turning movements, it is recommended that the northbound left turn lane at the US-24 and (New) Meridian Road intersection be restriped from 400 feet to 150 feet of length to accommodate back-to-back left turn lanes with the future intersection of Pacific Avenue and (New) Meridian Road. Further, the southbound left turn lane at the future Pacific Avenue and (New) Meridian Road intersection should provide 100 feet of length with a reduced shared taper length of 75 feet. A deviation request will need to be provided to allow these substandard left turn lane lengths; however, calculated vehicles are expected to be accommodated within the proposed turn lane lengths.

It is recommended that the existing 400-foot northbound right turn lane at the US-24 and (New) Meridian Road intersection be shortened to 155 feet of length plus a 160-foot taper to accommodate the future intersection of Pacific Avenue and (New) Meridian Road. This new length meets El Paso County standards for a design speed of 40 miles per hour and vehicle queues will be accommodated in this lane as the northbound to eastbound right turn acceleration lane will provide free movements at this intersection.

5.6 Access Spacing and Sight Distance Evaluation

Access Spacing Evaluation

The future Pacific Avenue access along (New) Meridian Road will be located approximately 390 feet south of US-24 (measured centerline to centerline) while the access along (Old) Meridian Road will be located approximately 410 feet south of US-24. According to El Paso County 2016 Major Transportation Corridors Plan Update, Meridian Road to the south of US-24 is classified as a Minor Arterial while (Old) Meridian Road is classified as a collector roadway (although meet the volume threshold for a local roadway) once the (New) Meridian Road realignment is complete. In addition, the proposed Pacific Avenue is classified as a local roadway.

According to the El Paso Engineering Criteria Manual (ECM), spacing of roads accessing an urban minor arterial that will result in a full movement intersection shall be planned at one-quarter mile. It is believed that the new public roadway of Pacific Avenue along (New) Meridian Road should be granted to allow for access to the development area. This Pacific Avenue intersection along (New) Meridian Road is proposed with three-quarter movements with the

exiting left turn movements being restricted. The back-to-back left turn configuration with this proposed access along (New) Meridian Road and the intersection of US-24 and Meridian Road (New) has been discussed in detail above in Section 5.5. According to the El Paso ECM, spacing of intersections along urban arterial roadways a quarter mile whereas intersection spacing along urban collector roadways is 660 feet with 330 feet being acceptable when intersecting local roadways. The spacing of intersections along urban local roadway is 175 feet.

(New) Meridian Road & Pacific Avenue

The intersection access will be approximately 390 feet south of the (New) Meridian Road and US-24 intersection (measured center to center). The intersection spacing is not located a quarter mile (1,320 feet) from an arterial roadway. Therefore, the proposed intersection does not meet ECM standards. The intersection is expected to meet operational, vehicle queue, and sign distance standards; therefore, it is believed that this intersection should be granted to restrict left-out movements. A deviation will be provided in support of allowing a restricted three-quarter intersection.

Pacific Avenue Accesses

Pacific Avenue is expected to be classified as a local street with lower volumes and no intentions of having cut-through traffic. Therefore, Pacific Avenue can follow driveway spacing of a local roadway of 330 feet from an arterial roadway and 150 feet between local intersections. The west access will be approximately 215 feet (measured center to center) east of (New) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access. The west access and the east access along Pacific Avenue are offset approximately 515 feet. Therefore, the accesses meet the 150 feet spacing standards. The east access will be approximately 125 feet (measured center to center) west of (Old) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access to be spaced less than 175 feet.

(Old) Meridian Road & Pacific Avenue

The proposed intersection access will be approximately 500 feet (measured center to center) south of (Old) Meridian Road and US-24 intersection. The access spacing requirement of a

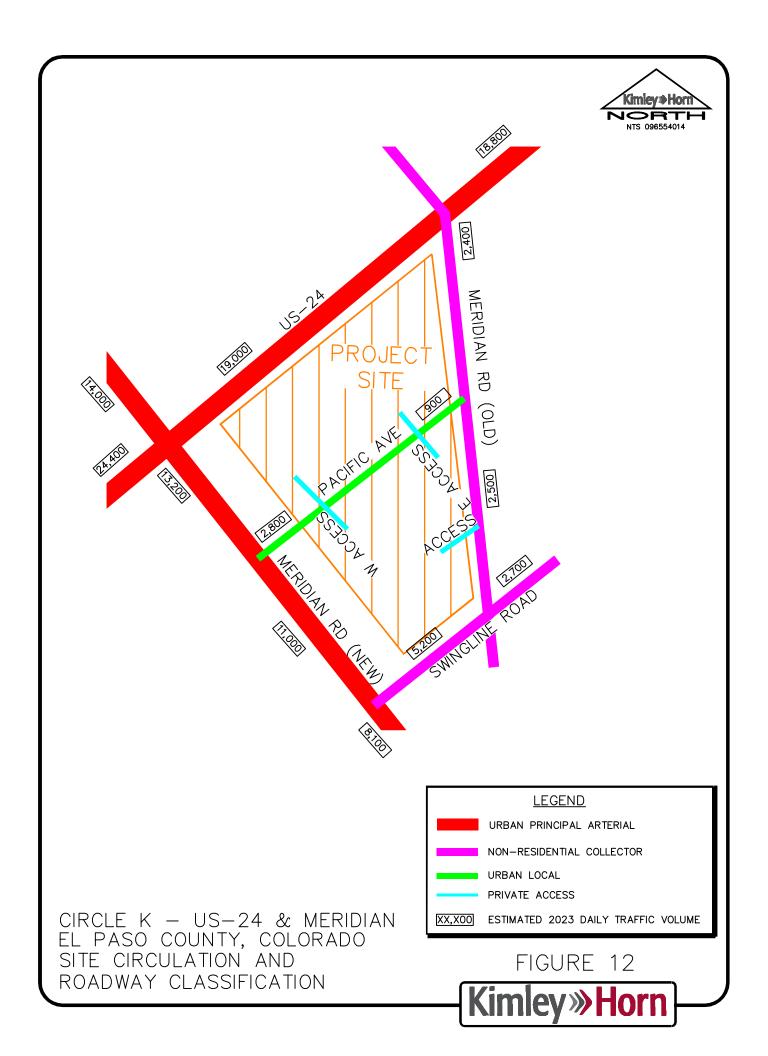

collector roadway to a local roadway intersection is 330 feet. Therefore, it is believed this access meets the access spacing criteria in the ECM.

The future segment of US-24 near the project site meets EI Paso County average daily traffic (ADT) threshold of 40,000 vehicles per day (vpd) for a principal arterial. US-24 is expected to have 24,400 to 18,800 vpd. (New) Meridian Road also meets the ADT for an urban principal arterial with an expected 8,100 to 14,000 vpd. Pacific Road is expected to have approximately 900 to 2,800 vpd which meets the volumes thresholds for an urban local roadway. Swingline Road aligns with the EI Paso County roadway threshold of 20,000 vpd for a non-residential urban collector roadway. Swingline Road is expected to have 2,700 to 5,200 vpd. (Old) Meridian Road is classified as a non-residential collector but with an ADT below 3,000 vpd, the roadway aligns meet the volume characteristics of a local urban roadway. **Figure 12** illustrates the circulation plan and street classification map for roadways internal and external to the project.

Sight Distance Evaluation

With AASHTO standards for a roadway design speed of 40 miles per hour along (New) Meridian Road, the intersection sight distance for a vehicle turning right from stop is 390 feet, while the sight distance for a vehicle turning right from stop is 385 feet. Therefore, all obstructions for right turning vehicles from stop should be clear to the left within the triangle created with a vertex point located 14.5 feet from the edge of the major road and a line-of-sight distance of 385 feet located in the middle of the nearest northbound through lane along (New) Meridian Road.

Likewise, with AASHTO standards and a future collector roadway design speed of 35 miles per hour along (Old) Meridian Road, the intersection sight distance for a vehicle turning left from stop is 390 feet, while the sight distance for a vehicle turning right from stop is 335 feet. Therefore, all obstructions for left turning vehicles from stop should be clear to the right within the triangle created with a vertex point located 14.5 feet from the edge of the major road traveled way (typical position of the minor road driver's eye when stopped) and a line-of-sight distance of 390 feet located in the middle of the northbound through lane along (Old) Meridian Road. Likewise, all obstructions for right turning vehicles from stop should be clear to the left within the triangle created with a vertex point located 14.5 feet from the edge of the major road traveled way and a line-of-sight distance of 335 feet located in the middle of the southbound through lane along (Old) Meridian Road.

It is believed that both accesses are appropriately located to provide the necessary sight distance needed. It is recommended that appropriate sight distance triangles be provided at all site access points to give drivers exiting the development areas a clear view of oncoming traffic. Landscaping and objects within sight triangles must not obstruct drivers' views of the adjacent travel lanes.

5.7 Bicycle and Pedestrian Access

Bicycle lanes and sidewalks are provided along both sides of the recently constructed (New) Meridian Road. Sidewalks are provided on both side of Swingline Road. Adjacent to the site, there are no bicycle lanes or sidewalks along US-24 and (Old) Meridian Road.

5.8 Road Impact Fees

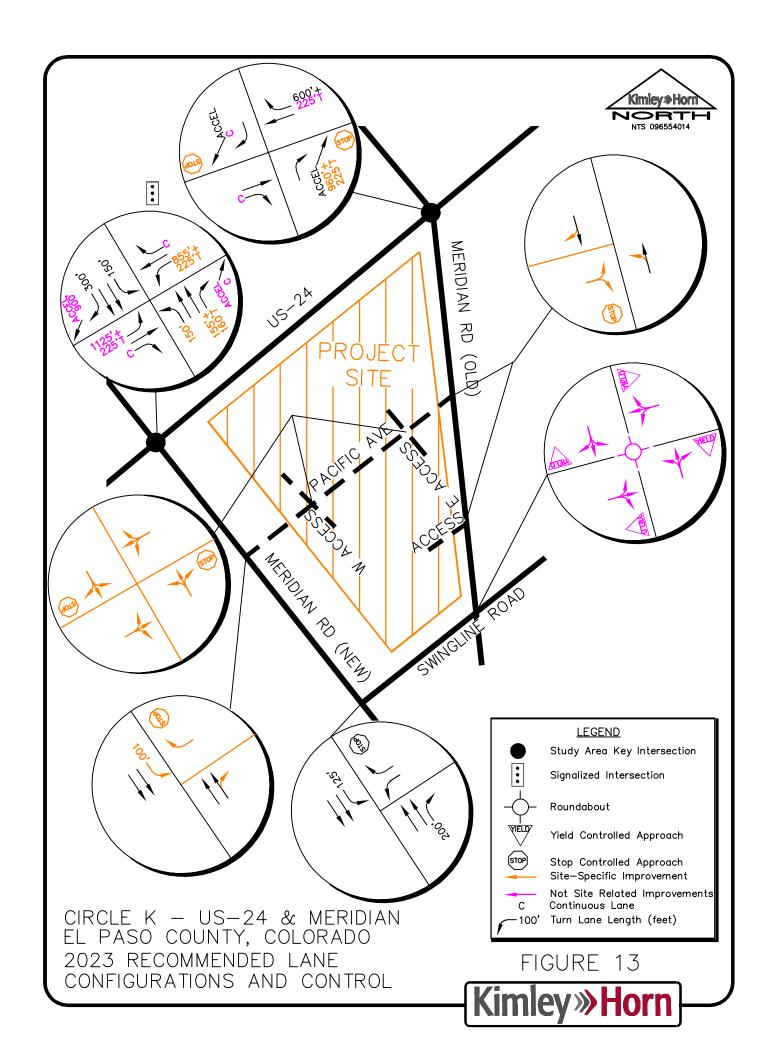

Road impact fees were evaluated based on the EI Paso County Road Impact Fee Schedule. Based on these fee schedule guidelines, the fee per general commercial use is \$4,958 per 1,000 square feet and convenience commercial (restaurants and convenience market) is \$8,800 per 1,000 square feet. Therefore, the road impact fee for the proposed Circle K redevelopment is expected to be \$273,314. During the final plat process, the project team will determine if the impact fees are paid up front or if the property will be included in one of the available public improvement districts with reduced upfront costs. The project team will determine payment methods with the final plat. Of note, the applicant petitions to credit the (Old) Meridian Road improvements as an eligible improvement towards the road impact fee.

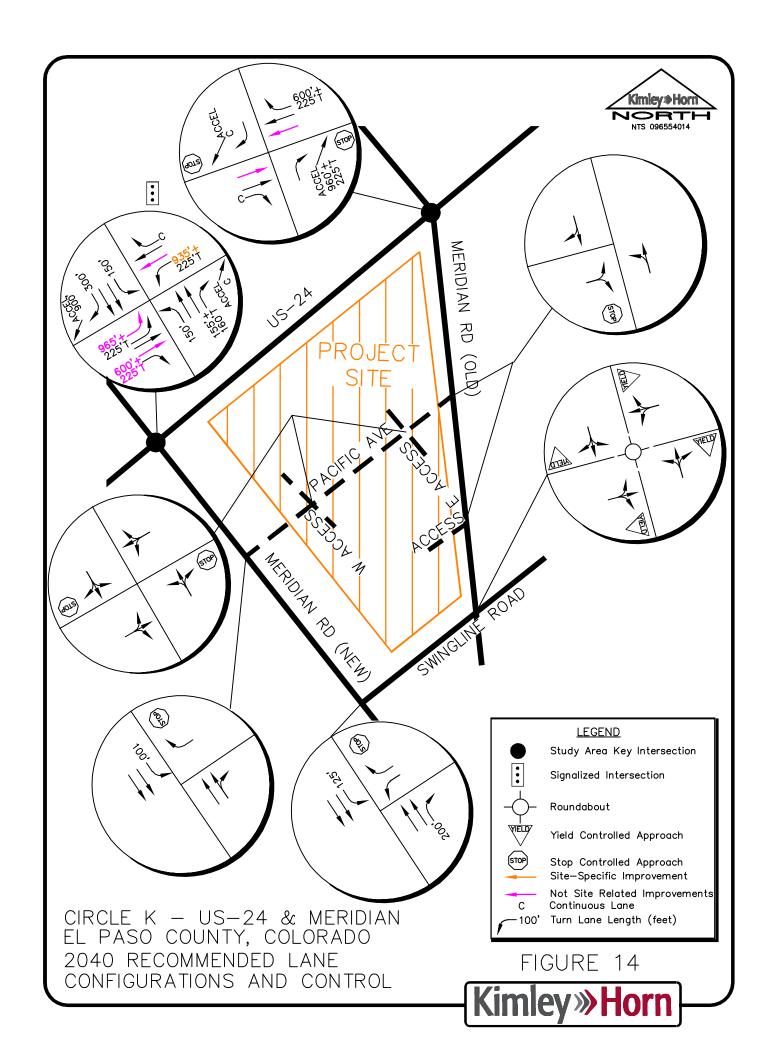

Table 7 – Road Impact Fees

| Use | KSF | Fee / Unit | Total Fee |
|---------------------------|------|------------|-----------|
| General Commercial | 23 | \$4,958 | \$114,034 |
| Restaurants & Gas Station | 18.1 | \$8,800 | \$159,280 |

5.9 Improvement Summary

Based on the results of the intersection operational and queuing analysis, the recommended lane configurations and control at the study key intersection and project access in 2023 and 2040 are shown in **Figure 13** and **Figure 14**, respectively.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analysis presented in this report, Kimley-Horn believes the redeveloped Circle K project with the adjacent retail and restaurant space will be successfully incorporated into the existing and future roadway network. The proposed project development and expected traffic volumes resulted in the following recommendations and conclusions:

2023 Recommendations:

- The following improvements are recommended in association with the project:
 - Pacific Avenue will be constructed as a public right-of-way within the development area with a Urban Non-Residential Collector classification between New Meridian Road and Old Meridian Road. The future intersections of Pacific Avenue/(New) Meridian Road and Pacific Avenue/(Old Meridian Avenue will provide primary access for the project. The intersection of Pacific Avenue/(New) Meridian Road is proposed to allow three quarter turning movements with westbound left turns being prohibited. The intersection of Pacific Avenue/(Old) Meridian Road is proposed to allow full turning movements. Direct access to the project will be provided from two driveways located along the proposed Pacific Avenue roadway extending between (Old) Meridian Road and (New) Meridian Road.
 - The driveway accesses along Pacific Avenue and (Old) Meridian Road, and the two future access intersections of Pacific Avenue/Meridian Road (New) and Pacific Avenue/Meridian Road (Old) are recommended to provide R1-1 "STOP" signs on the exiting approaches. It is anticipated that single shared movement lanes are sufficient for the exiting approaches of all these access intersections. A raised "pork-chop" median may be required in the exiting throat of the three-quarter movement access intersection of Pacific Avenue and (New) Meridian Road to prevent left turns onto (New) Meridian Road. A R3-2 "No Left Turn" sign should be installed under the STOP sign of this future intersection. A northbound right turn lane should be provided at the proposed Pacific Avenue and (New) Meridian Road intersection.
 - There is approximately 340 feet of spacing along (New) Meridian Road between US 24 and the proposed Pacific Avenue (measured edge to edge). With the future

intersection of Pacific Avenue and (New) Meridian Road being proposed to allow three-quarter turning movements, it is recommended that the northbound left turn lane at the US-24 and (New) Meridian Road intersection be restriped from 400 feet to 150 feet of length to accommodate back-to-back left turn lanes with the future intersection of Pacific Avenue and (New) Meridian Road. Further, the southbound left turn lane at the future Pacific Avenue and (New) Meridian Road intersection should provide 100 feet of length with a reduced shared taper length of 75 feet. A deviation request will need to be provided to allow these substandard left turn lane lengths; however, calculated vehicle queues are expected to be accommodated within the proposed left turn lane lengths.

- o It is recommended that the existing 400-foot northbound right turn lane at the US-24 and (New) Meridian Road intersection be shortened to 155 feet of length plus a 160-foot taper to accommodate the future intersection of Pacific Avenue and (New) Meridian Road. This new length meets El Paso County standards for a design speed of 40 miles per hour and vehicle queues will be accommodated in this lane as the northbound to eastbound right turn acceleration lane will provide free movements at this intersection.
- O It is understood that El Paso County may require a 10-foot additional right-of-way dedication along Old Meridian Road to bring the roadway up to the Urban Non-Residential Collector standard from US-24 to Swingline Road adjacent to the project development. A request of the Advisory Committee will be provided to obtain possible credits from the Road Impact Fee associated with this improvement.
- The following improvements along US-24 were completed by CDOT in association with the ongoing realignment of Meridian Road:
 - CDOT will convert the signalized intersection of US-24 and (Old) Meridian Road to an unsignalized intersection. Further, this intersection will be restricted to rightin/right-out only movements with stop control along the northbound and southbound (Old) Meridian Road approaches.

- With completion of the new alignment of Meridian Road, it is anticipated that CDOT will construct a combination right turn acceleration to deceleration lane that will extend eastbound along US-24 from (New) Meridian Road to (Old) Meridian Road. Likewise, a combination right turn acceleration to deceleration lane will extend westbound along US-24 from (Old) Meridian Road to (New) Meridian Road.
- A 600-foot eastbound right turn deceleration lane with a 225-foot taper is recommended at the intersection of US-24 and (New) Meridian Road. A 1,125-foot left turn lane with a 225-foot taper is also recommended along the eastbound approach of this intersection. Likewise, a westbound left turn lane with a length of 855 feet is recommended at the US-24 and (New) Meridian Road intersection. Lastly, a southbound Meridian Road to westbound US-24 right turn acceleration is recommended with a length of 960 feet plus a 225-foot taper. All these improvements meet CDOT SHAC standards.

Required Access Deviations

- The intersection of Pacific Avenue will be approximately 390 feet south of the (New) Meridian Road and US-24 intersection (measured center to center). The intersection spacing is not located a quarter mile (1,320 feet) from an arterial roadway. Therefore, the proposed intersection does not meet ECM standards. The intersection is expected to meet operational, vehicle queue, and sign distance standards; therefore, it is believed that this intersection should be granted to restrict left-out movements. A deviation will be provided in support of allowing a restricted three-quarter intersection.
- o Pacific Avenue is expected to be classified as a local street with lower volumes and no intentions of having cut-through traffic. Therefore, Pacific Avenue can follow driveway spacing of a local roadway of 330 feet from an arterial roadway and 150 feet between local intersections. The west access will be approximately 215 feet (measured center to center) east of (New) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access. The west access and the east access along Pacific Avenue are offset approximately 515 feet. Therefore, the accesses

meet the 150 feet spacing standards. The east access will be approximately 125 feet (measured center to center) west of (Old) Meridian Road. The intersection is expected to meet operational and vehicle queue standards; therefore, a deviation will be provided in support of allowing this access to be spaced less than 175 feet.

The proposed intersection access will be approximately 500 feet (measured center to center) south of (Old) Meridian Road and US-24 intersection. The access spacing requirement of a collector roadway to a local roadway intersection is 330 feet. Therefore, it is believed this access meets the access spacing criteria in the ECM.

2040 Recommendations:

- If future traffic volume projections materialize, US-24 will need to be improved to provide at least two through lanes in each direction throughout the study area.
- The westbound left turn lane at the US-24 and Meridian Road intersection may need to be extended from 855 feet to 935 feet of length.
- The eastbound approach of the US-24 and Meridian Road intersection may need to provide dual left turn lanes with 965 feet of length per lane.

General Recommendations:

 All on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to El Paso County Standards as well as the Manual on Uniform Traffic Control Devices – 2009 Edition (MUTCD).

TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 10th Edition, Average Rate Equations

Land Use Code - Fast Casual Restaurant (930)

Independant Variable - 1000 Square Feet Gross Floor Area (X)

Gross Floor Area = 7,000 Square Feet

X = 7.000

T = Average Vehicle Trip Ends

Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (900 Series Page 62)

Average Weekday Directional Distribution: 67% ent. 33% exit. T = 2.07 (X) T = 14 Average Vehicle Trip Ends T = 2.07 * 7.000 9 entering 5 exiting

9 (*) + 5 = 14

Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (900 Series Page 63)

Average Weekday Directional Distribution: 55% ent. 45% exit. T = 14.13(X) T = 99 Average Vehicle Trip Ends

T = 14.13 * 7.000 54 entering 45 exiting

54 + 45 = 99

Weekday (10% K-Factor from PM Peak Hour)

Average Weekday Directional Distribution: 50% entering, 50% exiting

T = 990 Average Vehicle Trip Ends

(T) = PM Peak Total / K Factor 0.1 495 entering 495 exiting

495 + 495 = 990

Saturday Peak Hour of Generator (900 Series Page 67)

Directional Distribution: 55% ent. 45% exit.

T = 34.02 (X) T = 238 Average Vehicle Trip Ends

T = 34.02 * 7.000 131 entering 107 exiting

131 + 107 = 238

TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 10th Edition, Average Rate Equations

Land Use Code - Super Convenience Market/Gas Station (960)

Independant Variable - 1000 Square Feet Gross Leasable Area (X)

Gross Leasable Area = 5,200 Square Feet

X = 5.200

T = Average Vehicle Trip Ends

Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (900 Series Page 404)

Directional Distribution: 50% ent. 50% exit. T = 83.14 (X) T = 432 Average Vehicle Trip Ends T = 83.14 * 5.200 216 entering 216 exiting

216 + 216 = 432

Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (900 Series page 405)

Directional Distribution: 50% ent. 50% exit. T = 69.28 (X) T = 360 Average Vehicle Trip Ends 180 entering 180 exiting 180 + 180 + 180 = 360

Weekday (800 Series page 335)

Average Weekday Directional Distribution: 50% entering, 50% exiting T = 837.58 (X) T = 837.58 * 5.200 Directional Distribution: 50% entering, 50% exiting T = 4356 Average Vehicle Trip Ends 2178 entering 2178 exiting

2178 + 2178 = 4356

¹Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

⁶Person-Trips

*Indicates computation that has been rounded to the nearest whole number.

Estimation Tool Developed by the Texas A&M Transportation Institute - Version 2013.1

²Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

³Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

⁴Enter vehicle occupancy assumed in Table 1-A vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be made to Tables 5-A, 9-A (O and D). Enter transit, non-motorized percentages that will result with proposed mixed-use project complete.

⁵Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-A.

¹Land Use Codes (LUCs) from *Trip Generation Manual*, published by the Institute of Transportation Engineers.

²Total estimate for all other land uses at mixed-use development site is not subject to internal trip capture computations in this estimator.

³Enter trips assuming no transit or non-motorized trips (as assumed in ITE *Trip Generation Manual*).

⁴Enter vehicle occupancy assumed in Table 1-P vehicle trips. If vehicle occupancy changes for proposed mixed-use project, manual adjustments must be ⁵Vehicle-trips computed using the mode split and vehicle occupancy values provided in Table 2-P.

⁶Person-Trips

*Indicates computation that has been rounded to the nearest whole number.

| | PCD Engineering Division | Staff recommends this project be put on hold until the rezone application (CS213) is approved and at least 1 round of review of the vacate/replat (VR223) is processed. Engineering concern was identified during the early assistance that the current layout of the private road acts as a cut through between new Meridian Road and Old Meridian Road. There is potential the private road tract configuration as shown may change during the vacate/replat application process. The final configuration of the vacate & replat and access may have significant impact to the site development plan layout.
