Design Engineer's Statement:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

[Michael Drago, P.E. #59225]

Date

Owner/Developer's Statement:

I, the owner/developer have read and will comply with all of the requirements specified in this drainage report and plan.

*[Sharon Vickers, Vice President]
[LASCO Development]
[1207 Antoine Drive, Houston, TX 77055]*

Date

El Paso County:

Filed in accordance with the requirements of the Drainage Criteria Manual, Volumes 1 and 2, El Paso County Engineering Criteria Manual and Land Development Code as amended.

VIII.	CONCLUSION	8
IX.	REFERENCES	9

I. General Location

The proposed 7-Eleven development is in El Paso County, Colorado bound to the north by Bradley Road, Legacy Hill Drive to the east, a private drive to the south, and Lot 2 of Waterview-East Commercial Subdivision Filing No. 1 to the west. The project falls within a part of the west ½ of Section 9, Township 15 South, Range 65 West of the 6th P.M., El Paso County, Colorado.

The proposed development is within Lot 1 Waterview-East Commercial Subdivision Filing No. 1, where a stormwater pond to be constructed with Waterview East Commercial Filing No. 1 Final Plat to receive all flows from the project and surrounding developments. The pond to be constructed with Waterview East Commercial Filing No. 1 Final Plat is described further in the Drainage Facility Design Portion of this letter. The ultimate outflow for this pond is Jimmy Camp Creek.

The proposed developer falls within the Waterview-East Commercial Subdivision is surrounded by the Trails at Aspen Ridge to west and south, Bradley Road to the north, and S Powers Blvd to the east.

II. Description of Property

The proposed development is located within a 1.99 acre parcel currently comprised of native cover and freshly graded soil. There are little to no trees, shrubs, or vegetation on site due to overlot grading performed by the Master Development as part of the Waterview East Commercial Filing No. 1 infrastructure improvements. The site generally slopes from west to east/southeast. The average slopes on-site are 2-5% and all stormwater drains towards an inlet to be constructed with Waterview East Commercial Filing No. 1 Final Plat within the private drive to the south of the development.

Soil data for the development was obtained from the United States Department of Agriculture Natural Resources Conservation Service (NRCS) Web Soil Survey. Soil within the site is Nelson-Tassel fine sandy loams, 3 to 18 percent slopes, which falls into hydraulic soil group B.

III. Major Basin Descriptions

This report is not yet approved, and comments are being returned this report that may impact the stormwater analysis and the associated design for this specific site. Please coordinate with Kimley Horn to make sure that your design is consistent with their revised report.

975
tter

The proposed lot falls within the Jimmy Camp Creek Major Basin, all basin and bridge fees will be paid by the owner at the time of final plat approval.

The proposed 7-Eleven lot has been analyzed within the "Final Drainage Report – Filing No. 1 Waterview East Commercial", by Kimley Horn, dated March 2026, herein referred to as "Master Drainage Report". Within the Master Drainage Report the proposed site is intended to drain into an extended detention pond to be built as part of the Waterview East Commercial Development, south of the 7-Eleven pad.

There are no recently reported cases of flooding within or around the development. The site is located within Zone "X", areas determined to be outside 0.2% annual chance floodplain, of the Flood Plain, as designated on the Flood Insurance Rate Map (FIRM Map No. 08041C0768G last revised 12/07/2018. Refer to the Appendix for the FIRMette.

The Extended Detention Pond to be constructed with Waterview East Commercial Filing No. 1 Final Plat is to capture 11.85 acres, detain, and treat all stormwater through the use of an extended detention basin. The basin is described within the report entitled, "Waterview East Commercial" by Kimley-Horn and Associates, Inc., project Number 196195001, prepared March 12, 2026 under PDC File No. SF269.

There are no irrigation facilities or other obstructions that could influence or be influenced by the local drainage on-site.

IV. Sub-Basin Descriptions

The proposed 7-Eleven development falls under sub-basin A1 as described in the Master Drainage Report:

The on-site sub-basin A1 consists of native vegetation in the northeast portion of the site. Sub-Basin A1 encompasses Lot 1 which is to be developed into a future convenience store. Detailed drainage design of the convenience store and drainage basins will be provided with a separate Site Development Plan and Final Drainage Report submittal. The sub-basin has an area of 2.00 acres and a weighted imperviousness of 95%. Runoff in this basin will be collected by future proposed storm sewer infrastructure and routed to the 18" RCP storm sewer stub (Design Point A1) to discharge to the pond. Runoff during the 5-year and 100-year events are 5.92 cfs and 13.93 cfs respectively.

The proposed 7-Eleven development will be captured in 6 sub-basins. The proposed basins are listed below:

Basin A1.1

Basin A1.1 is 0.11 acres and consists of the proposed convenience store for an impervious value of 90.0%. The 5-year and 100-year runoff coefficients are 0.73 and 0.81, respectively. Runoff for the 5-year and 100-year is 0.35 cfs and 0.83 cfs, respectively. Runoff from the building is captured within roof drains and conveyed towards Design Point 1 via proposed private underground 6" PVC storm sewer. Captured runoff will continue towards the private extended detention basin south of the site through underground storm sewer.

Basin A1.2

Basin A1.2 is 0.12 acres and consists of drive aisles and landscape area to the west of the proposed convenience store for an impervious value of 75.0%. The 5-year and 100-year runoff coefficients are 0.70 and 0.81, respectively. Runoff for the 5-year and 100-year is 0.36 cfs and 0.90 cfs, respectively. Runoff from the basin is captured within a 5' Type R Inlet on the far west side of the site. Captured runoff will continue towards the private extended detention basin south of the site through underground storm sewer.

Basin A1.3

Basin A1.3 is 0.09 acres and consists of the proposed fueling canopy for an impervious value of 90.0%. The 5-year and 100-year runoff coefficients are 0.73 and 0.81, respectively. Runoff for the 5-year and 100-year is 0.29 cfs and 0.68 cfs, respectively. Runoff from the canopy is captured within roof drains and conveyed towards Design Point 2 via proposed private underground 8" PVC storm sewer. Captured runoff will continue towards the private extended detention basin south of the site through underground storm sewer.

Basin A1.4

Basin A1.4 is 1.64 acres and consists of the majority of the drive aisles, sidewalks, and landscape area on-site for an impervious value of 57.3%. The 5-year and 100-year runoff coefficients are 0.55 and 0.70, respectively. Runoff for the 5-year and 100-year is 3.95 cfs and 10.70 cfs, respectively. Runoff from the basin will drain through proposed 2' curb cuts along the eastern drive aisles and into a 3' grass swale on the east side of the site. Flows are conveyed towards a proposed 30" Nyloplast Basin at the end of the grass swale. Curb cut and swale calculations are provided within the appendix of this letter. Captured runoff

will continue towards the private extended detention basin south of the site through underground storm sewer.

Basin A1.5

Basin A1.5 is 0.03 acres and consists of the public sidewalk to be constructed with Waterview East Commercial Filing No. 1 Final Plat on the SE side of the property for an impervious value of 33.3%. The 5-year and 100-year runoff coefficients are 0.35 and 0.55, respectively. Runoff for the 5-year and 100-year is 0.05 cfs and 0.15 cfs, respectively. Runoff from the basin flows into the private drive south of the site and into a 10' Type R inlet to be constructed with Waterview East Commercial Filing No. 1 Final Plat (Design Point PR1 per the Master Drainage Report) on the south side of the drive. These flows cannot be captured on-site due to the public sidewalk draining away from the site. Captured runoff will continue towards the private extended detention basin south of the site through underground storm sewer.

Basin A1.6

Basin A1.6 is 0.06 acres and consists of the proposed access points and public sidewalk along the private drive for an impervious value of 83.3%. The 5-year and 100-year runoff coefficients are 0.76 and 0.86, respectively. Runoff for the 5-year and 100-year is 0.20 cfs and 0.48 cfs, respectively. Runoff from the basin will be captured by a 10' Type Inlet to be constructed with Waterview East Commercial Filing No. 1 Final Plat (Design Point PR1 per the Master Drainage Report) on the south side of the private drive. Captured runoff will continue towards the private extended detention basin south of the site through underground storm sewer.

V. Drainage Design Criteria

The proposed development utilizes the El Paso County Drainage Criteria Manual, current version as of October 31, 2018.

The basin falls within the Waterview East Commercial Master Drainage Report. Per the comparison table provided below, the proposed site will not negatively affect any downstream structures as the impervious percent and flows is less than what is allowed per the approved Master Drainage Report.

	Acres	Impervious	C ₁₀₀	Q ₁₀₀ (cfs)
Per Master Drainage Report	2.00	95.0%	0.80	13.63
Proposed Development	2.05	62.0%	0.72	13.27
Difference	+0.05	-33.0%	-0.08	-0.36

As shown in the table above, there is a minor increase of area due to a portion of the improvements falling outside the A1 basin as described within the Master Drainage Report. Even with the additional area, the total flow generated from the development is less than what is allowed per the Master Drainage Report. Therefore, no negative downstream impacts are anticipated as a part of this development and no adjustments to existing or proposed storm sewer to be constructed with Waterview East Commercial Filing No. 1 Final Plat is required.

VI. Four Step Process

Step 1. Employ Runoff Reduction Practices

The proposed development will include the design and construction of a 3' grass swale that will capture a majority of the runoff generated on-site and provide runoff reduction. This will reduce the runoff flowing off-site as throughout the grass swale stormwater will slow down and infiltrate into the soil.

Step 2. Provide a Water Quality Capture Volume

Permanent Water Quality Capture Volume will be provided by the extended detention pond to be constructed with Waterview East Commercial Filing No. 1 Final Plat. Refer to the Master Drainage Report for additional information.

Step 3. Stabilize Drainageways

The proposed site is approximately a mile from Jimmy Camp Creek, there will be no open channels on or adjacent to the site, therefore no stabilization will be necessary as a part of this development.

Step 4. Implement Site Specific and Other Source Control BMPs

Erosion Control construction and design of BMPs are proposed as a part of this development and shown within the GEC drawings. BMPs include

vehicle tracking control, stockpile management, silt fence, stabilized staging areas, and inlet protection.

VII. Hydrologic Criteria

The design rainfall source for this project is the NOAA Atlas 14, one hour point rainfall data. The minor storm, 5-year rainfall value is 1.29 inches. The major storm, 100-year rainfall value is 2.75 inches.

The analysis and design of the Stormwater management system for this project was prepared in accordance with the criteria set forth by the El Paso County Drainage Criteria Manual (hereafter referred to as the DCM) and the Mile High Flood District (MHFD). The Rational Method was used to calculate runoff from the 5-year minor, and 100-year major design storm recurrence intervals. Peak runoff values were calculated using the rational method:

$Q = CIA$, where

Q = Storm runoff in cubic feet per second (cfs)

C = Rainfall coefficients – ratio runoff to rainfall

I = Rainfall intensity in inches per hour

A = Drainage area in acres

Table 6-6 of the El Paso County Drainage Criteria Manual was used for runoff coefficients.

The proposed storm sewers were modeled, and hydraulic grade lines generated, using Bentley StormCAD and FlowMaster software's. The user-defined design inputs for the software include peak flow runoff, pipe diameter, pipe slope & length, pipe material coefficient, and tailwater. For the onsite storm sewer system, the tailwater input was based on free outfall conditions. The hydraulic grade and energy lines have been designed to maintain a minimum of one foot below the final grade.

Inlet capacities calculations were based on utilizing the Mile High Flood District spreadsheet "MHFD_v6.0".

VIII. Conclusion

As described above, the proposed development will not negatively impact the proposed stormwater pond built to be constructed with Waterview East Commercial Filing No. 1 Final Plat. The proposed site reduces the impervious %, C value, and total flows draining into the basin. Refer to the Master Drainage Report for full details and information on the proposed pond.

4. NOAA Rainfall Information

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov/> or contact the National Geodetic Survey at the following address:

NGS Information Services
NGA, NNGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at <http://www.ngs.noaa.gov/>.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, and Anderson Consulting Engineers, Inc. These data are current as of 2008.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact **FEMA Map Service Center (MSC)** via the FEMA Map Information eXchange (FIMAX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at <http://www.msc.fema.gov/>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/business/nfip>.

Agricultural Experiment
Stations, and local
participants

Custom Soil Resource Report for **El Paso County Area, Colorado**

February 26, 2026

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: El Paso County Area, Colorado
Survey Area Data: Version 23, Aug 29, 2025

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 23, 2024—Aug 4, 2024

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
56	Nelson-Tassel fine sandy loams, 3 to 18 percent slopes	2.5	100.0%
Totals for Area of Interest		2.5	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Custom Soil Resource Report

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

El Paso County Area, Colorado

56—Nelson-Tassel fine sandy loams, 3 to 18 percent slopes

Map Unit Setting

National map unit symbol: 3690
Elevation: 5,600 to 6,400 feet
Mean annual precipitation: 12 to 14 inches
Mean annual air temperature: 48 to 52 degrees F
Frost-free period: 135 to 155 days
Farmland classification: Not prime farmland

Map Unit Composition

Nelson and similar soils: 55 percent
Tassel and similar soils: 40 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Nelson

Setting

Landform: Upland hills
Landform position (three-dimensional): Crest, side slope
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Calcareous residuum weathered from interbedded sedimentary rock

Typical profile

A - 0 to 5 inches: fine sandy loam
Ck - 5 to 23 inches: fine sandy loam
Cr - 23 to 27 inches: weathered bedrock

Properties and qualities

Slope: 3 to 12 percent
Depth to restrictive feature: 20 to 40 inches to paralithic bedrock
Drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to high (0.06 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 10 percent
Maximum salinity: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water supply, 0 to 60 inches: Very low (about 2.8 inches)

Interpretive groups

Land capability classification (irrigated): 4e
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: B
Ecological site: R067BY045CO - Shaly Plains
Other vegetative classification: SHALY PLAINS (069AY046CO)
Hydric soil rating: No

Description of Tassel

Setting

Landform: Upland hills

Landform position (three-dimensional): Crest, side slope

Down-slope shape: Linear

Across-slope shape: Linear

Parent material: Calcareous slope alluvium over residuum weathered from sandstone

Typical profile

A - 0 to 4 inches: fine sandy loam

C - 4 to 10 inches: fine sandy loam

Cr - 10 to 14 inches: weathered bedrock

Properties and qualities

Slope: 3 to 18 percent

Depth to restrictive feature: 6 to 20 inches to paralithic bedrock

Drainage class: Well drained

Runoff class: Medium

Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Calcium carbonate, maximum content: 10 percent

Available water supply, 0 to 60 inches: Very low (about 1.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 6s

Hydrologic Soil Group: D

Ecological site: R067BY045CO - Shaly Plains

Other vegetative classification: SHALY PLAINS (069AY046CO)

Hydric soil rating: No

Minor Components

Other soils

Percent of map unit: 4 percent

Hydric soil rating: No

Pleasant

Percent of map unit: 1 percent

Landform: Depressions

Hydric soil rating: Yes

3.1. - Rational Method Runoff Coefficient (C)

The runoff coefficient represents the integrated effects of infiltration, detention storage, evaporation, retention, flow routing, and interception, all of which affect the time distribution and peak rate of runoff. Runoff coefficients are based on the imperviousness of a particular land use and the hydrologic soil type of the area and are to be selected in accordance with Table 6-6.

The procedure for determining the runoff coefficient includes these steps:

1. Categorize the site area into one or more similar land uses, each with a representative imperviousness, according to the information in Table 6-6.
2. Based on the dominant hydrologic soil type in the area, use Table 6-6 to estimate the runoff coefficient for the particular land use category for the design storms of interest.
3. Calculate an area-weighted average runoff coefficient for the site based on the runoff coefficients from individual land use areas of the site.

When analyzing an area for design purposes, urbanization of the full watershed, including both on-site and off-site areas, shall be assumed.

Gravel parking areas, storage areas, and access drives proposed on Site Improvement Plans shall be analyzed based on an imperviousness of 80%. This is due to the potential for gravel areas being paved over time by property owners and the resulting adverse impacts on the stormwater management facilities and adjacent properties.

There are some circumstances where the selection of impervious percentage values may require additional investigation due to unique land characteristics (e.g., recent burn areas). When these circumstances arise, it is the designer's responsibility to verify that the correct land use assumptions are made.

When multiple sub-basins are delineated, the composite C value calculation is:

$$C_c = (C_1 A_1 + C_2 A_2 + C_3 A_3 + \dots C_i A_i) / A_t \quad (\text{Eq. 6-6})$$

Where:

- C_c = composite runoff coefficient for total area
- C_i = runoff coefficient for subarea corresponding to surface type or land use
- A_i = area of surface type corresponding to C_i (units must be the same as those used for total area)
- A_t = total area of all subareas for which composite runoff coefficient applies
- i = number of surface types in the drainage area

Table 6-6. Runoff Coefficients for Rational Method

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).
 Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.
 Please refer to NOAA Atlas 14 document for more information.

3 foot curb cuts shown on the plans. Please revise riprap design calculation.

2' CURB CUT

Low Tail Water Basin and Riprap Design

Project Name 7-11 - Legacy and Bradley
17-Mar-26

Instructions: Refer to Section 3.4.3.2 of Chap 8 Vol 2 in UD Manual. Enter values in blue cells. Green cells are calculated.
100-year design flows

Outlet Pipe Information:

Type of Pipe: Rectangular
Storm Sewer Height, H = 0.5 ft

Riprap Size:

Velocity = 2.35 ft/s⁽¹⁾ 100 Year
Design Depth, d = 0.5 ft⁽²⁾
Gravity, g = 32.2 ft/s²

Eqn: HS-16e

$P_d = 4.65$ ft/s

Use Figure HS-20c to find the size and type of riprap to use in the outlet protection basin.

Riprap Selection: Type L
Riprap Diameter, $D_{50} = 9$ inches

Riprap Minimum Thickness:

Eqn: HS-17

Thickness, T = 1.31 ft

Basin Dimensions:

Storm Sewer Height, H = 0.5 ft

Length is defined as being the greater of the following:

$L = 4H = 2$ ft Eqn: HS-18
 $L = (H)^{0.5}(V/2) = 0.830850468$ ft Eqn: HS-19
 $L = 2$ ft

Width:

w = width of box culvert 2 ft
 $W = w + 4H = 4$ ft Eqn: HS-20 or HS-21

Cutoff Wall:

B = 1.56 ft Eqn: HS-22

(1) Obtain Velocity from Section 3.4.3.1 of Vol 2 in the UD Manual or program such as FlowMaster or StormCad

(2) Obtain flow depth from Section 3.4.3.1 of Vol 2 in the UD Manual or program such as FlowMaster or StormCad

sub-basin descriptions.

Sub-Basin A1

The on-site sub-basin A1 consists of native vegetation in the northeast portion of the site. Sub-Basin A1 encompasses Lot 1 which is to be developed into a future convenience store. Detailed drainage design of the convenience store and drainage basins will be provided with a separate Site Development Plan and Final Drainage Report submittal. The sub-basin has an area of 2.00 acres and a weighted imperviousness of 95%. Runoff in this basin will be collected by future proposed storm sewer infrastructure and routed to the 18" RCP storm sewer stub (Design Point A1) to discharge to the pond. Runoff during the 5-year and 100-year events are 5.92 cfs and 13.93 cfs respectively.

Sub-Basin A2

The on-site sub-basin A2 consists of native vegetation in the north portion of the site. Sub-Basin A2 encompasses Lot 2 which is to be developed into a commercial user. Detailed drainage design of the commercial store and drainage basins will be provided with a separate Site Development Plan and Final Drainage Report submittal. The sub-basin has an area of 1.50 acres and a weighted imperviousness of 95%. Runoff in this basin will be collected by future proposed storm sewer infrastructure and routed to the 18" RCP storm sewer stub (Design Point A2) to discharge to the pond. Runoff during the 5-year and 100-year events are 4.48 cfs and 10.32 cfs respectively.

Sub-Basin FD1

The on-site sub-basin FD1 consists of native vegetation in the northwest portion of the site and is a future development for commercial uses. The sub-basin has an area of 2.91 acres and a weighted imperviousness of 95%. Runoff in this basin will be collected by future proposed storm sewer infrastructure and routed to the 24" RCP storm sewer stub (Design Point FD1) to discharge to the pond. Runoff during the 5-year and 100-year events are 8.41 cfs and 19.39 cfs respectively.

Sub-Basin FD2

The on-site sub-basin FD2 consists of native vegetation in the west portion of the site and is a future development for commercial uses. The sub-basin has an area of 3.19 acres and a weighted imperviousness of 95%. Runoff in this basin will be collected by future proposed storm sewer infrastructure and routed to the 24" RCP storm sewer stub (Design Point FD2) to discharge to the pond. Runoff during the 5-year and 100-year events are 9.17 cfs and 21.14 cfs respectively.

Sub-Basin PR1

The on-site sub-basin PR1 consists of the proposed private drive. The sub-basin has an area of 0.26 acres and a weighted imperviousness of 100%. Runoff in this basin will be collected by curb and gutter and routed to a proposed private 10' Type 2 curb inlet (Design Point PR1) to discharge to the pond. Runoff during the 5-year and 100-year events are 1.02 cfs and 2.30 cfs respectively.

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.07 (June 2025)

Project: Waterview East Commercial Final Plat 1

Basin ID: A1, A2, FD1, FD2, PR1, PR2, P

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	1.13	0.353	Orifice Plate
Zone 2 (EURV)	3.21	0.827	Orifice Plate
Zone 3 (100-year)	4.63	0.714	Weir&Pipe (Restrict)
Total (all zones)		1.893	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration SCM)

Underdrain Orifice Invert Depth = ft (distance below the filtration media surface)
Underdrain Orifice Diameter = inches

Calculated Parameters for Underdrain

Underdrain Orifice Area = ft²
Underdrain Orifice Centroid = feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation SCM)

Calculated Parameters for Plate

Centroid of Lowest Orifice = 0.00 ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Orifice Plate = 3.21 ft (relative to basin bottom at Stage = 0 ft)
Orifice Plate: Orifice Vertical Spacing = N/A inches
Orifice Plate: Orifice Area per Row = N/A sq. inches

WQ Orifice Area per Row = N/A ft²
Elliptical Half-Width = N/A feet
Elliptical Slot Centroid = N/A feet
Elliptical Slot Area = N/A ft²

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.60	2.75					
Orifice Area (sq. inches)	5.00	3.00	3.00					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Calculated Parameters for Vertical Orifice

Invert of Vertical Orifice = Not Selected Not Selected ft (relative to basin bottom at Stage = 0 ft)
Depth at top of Zone using Vertical Orifice = Not Selected Not Selected ft (relative to basin bottom at Stage = 0 ft)
Vertical Orifice Diameter = Not Selected Not Selected inches

Vertical Orifice Area = Not Selected Not Selected ft²
Vertical Orifice Centroid = Not Selected Not Selected feet

User Input: Overflow Weir (Dropbox with Flat or Sloped Gate and Outlet Pipe OR Rectangular/Trapezoidal Weir and No Outlet Pipe)

Calculated Parameters for Overflow Weir

Overflow Weir Front Edge Height, H_o = Zone 3 Weir Not Selected ft (relative to basin bottom at Stage = 0 ft)
Overflow Weir Front Edge Length = 6.00 N/A feet
Overflow Weir Gate Slope = 0.00 N/A H:V
Horiz. Length of Weir Sides = 6.00 N/A feet
Overflow Gate Type = Type C Gate N/A
Debris Clogging % = 50% N/A %

Height of Gate Upper Edge, H_u = Zone 3 Weir Not Selected feet
Overflow Weir Slope Length = 6.00 N/A feet
Gate Open Area / 100-yr Orifice Area = 14.18 N/A
Overflow Gate Open Area w/o Debris = 25.06 N/A ft²
Overflow Gate Open Area w/ Debris = 12.53 N/A ft²

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

Depth to Invert of Outlet Pipe = Zone 3 Restrictor Not Selected ft (distance below basin bottom at Stage = 0 ft)
Outlet Pipe Diameter = 18.00 N/A inches
Restrictor Plate Height Above Pipe Invert = 18.00 inches

Outlet Orifice Area = Zone 3 Restrictor Not Selected ft²
Outlet Orifice Centroid = 0.75 N/A feet
Half-Central Angle of Restrictor Plate on Pipe = 3.14 N/A radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Calculated Parameters for Spillway

Spillway Invert Stage = 4.10 ft (relative to basin bottom at Stage = 0 ft)
Spillway Crest Length = 17.00 feet
Spillway End Slopes = 4.00 H:V
Freeboard above Max Water Surface = 1.00 feet

Spillway Design Flow Depth = 0.89 feet
Stage at Top of Freeboard = 5.99 feet
Basin Area at Top of Freeboard = 0.63 acres
Basin Volume at Top of Freeboard = 2.69 acre-ft

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

 $Q_F = 0.91$ cfs

Width of Notch(W_N)= $Q_F / (3.33 * D_F^{1.5}) * 12 + 0.2 * (D_F * 12)$

$D_F = 1$ ft (Taken from input above)
 $W_N = 5.7$ in

MINIMUM DIMENSIONS FOREBAY B

FOREBAY MINIMUM DIMENSIONS

- *Check Incoming Pipe size fits requirements of Figure 9-43
- * Sizing follows trapezoidal formula. Need to solve for base width

Min. Area (A)	188.38 SF
Incoming Pipe Diameter (D)	2.00 ft
$W_1 (2 \cdot D)$	4.00 ft
h_1	1.50 ft
h_2	2.00 ft
h_3	2.00 ft
h_0	0.67 ft
$H (E_{h_i})$	6.17 ft

$$W_2 = W_1 + [2 \cdot H \cdot \tan(30^\circ)]$$

$$\tan(30^\circ) = 0.58 \quad \text{*This formula ensures degree output}$$

$$W_2 = 11.12 \text{ ft}$$

$$\text{Actual Area} = ((W_1 + W_2) / 2) \cdot H$$

$$A = 46.62 \text{ SF}$$

Greater than minimum Area?

FORMULA
0.75D (2' MAX)
0.75D (2' MIN.)
0.75D (2' MIN.)
* h_0 is a constant 8"

No. Calculate W2 using formula below

*If your actual area is smaller than the required forebay area, back-calculate H from required forebay area and determine h3 by subtracting all hi values

$$A = ((W_1 + W_2) / 2) \cdot H$$

$$W_2 = W_1 + [2 \cdot H \cdot \tan(30^\circ)]$$

$$0 = \tan 30^\circ H^2 + W_1 H - A$$

$$0 = 217.04 \text{ Goal Seek}$$

$$\text{New } H = 23.3 \text{ ft}$$

$$\text{New } W_2 = 30.9 \text{ ft}$$

$$\text{New } h_3 = 19.1 \text{ ft}$$

$$A_{\text{PROVIDED}} = 488 \text{ SF from CAD}$$

$$\text{HEADWALL TOP ELEV.} = \text{Pipe IE} + 1.5 \cdot D$$

$$\text{Pipe IE} = 5910.00 \text{ ft}$$

$$\text{HEADWALL TOP ELEV.} = 5913.00 \text{ ft}$$

FOREBAY NOTCH SIZING: FOREBAY B

Wall with Rect. Notch (W_N equation from UD-BMP spreadsheet)
Undet. 100-year Peak Discharge 26.51 cfs (input from StormCAD)
Forebay Discharge Flow % 2%

$$Q_F = \text{Undet. 100-yr discharge} \cdot \text{Forebay Disch. \%}$$

$$Q_F = 0.53 \text{ cfs}$$

$$\text{Width of Notch}(W_N) = Q_F / (3.33 \cdot D_F^{1.5}) \cdot 12 + 0.2 \cdot (D_F \cdot 12)$$

$$D_F = 1 \text{ ft (Taken from input above)}$$

$$W_N = 4.3 \text{ in}$$
