TABLE OF CONTENTS

ENGINEER'S STATEMENT

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by El Paso County for drainage reports and said report is in conformity with the master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors, or omissions on my part in preparing this report.

Richard L. Schindler, P.E. #33997
For and on Behalf of Core Engineering Group, LLC

Date 10-24-2018

OWNER'S STATEMENT

I, the Owner, have read and will comply with all the requirements specified in the drainage report and plan.

Lorson, LLC

FLOODPLAIN STATEMENT

To the best of my knowledge and belief, this development is located within a designated floodplain as shown on Flood Insurance Rate Map Panel No. 08041C0957 F and 08041C1000 F, dated March 17, 1997 and modified by modified per LOMR Case No. 14-08-0534P. (See Appendix A, FEMA FIRM Exhibit)

Richard L. Schindler, #33997

Date 10-2-2018

EL PASO COUNTY

Filed in accordance with the requirements of the El Paso County Land Development Code, Drainage Criteria Manual, Volume 1 and 2, and Engineering Criteria Manual, As Amended.

Jennifer Irvine
County Engineer/ECM Administrator

Date

Approved
by Elizabeth Nijkamp
El Paso County Planning and Community Development
on behalf of Jennifer Irvine, County Engineer, ECM Administrator

Conditions: _____

1.0 LOCATION and DESCRIPTION

Lorson Ranch East Filing No. 2 is located east of the East Tributary of Jimmy Camp Creek and north of Fontaine Boulevard. The site is located on approximately 53.87acres of vacant land. This project will develop this site into single-family residential developments. The land for the residential lots is currently owned by Lorson LLC or its nominees for Lorson Ranch.

The site is located in the East 1/2 of Section 14 and the SW 1/4 of Section 13, Township 15 South and Range 65 West of the 6th Principal Meridian. The property is bounded on the south by Fontaine Boulevard, on the east by unplatted land in Lorson Ranch, on the west by The East Tributary of Jimmy Camp Creek, and the north by unplatted land in Banning Lewis Ranch and Rolling Hills Ranch. For reference, a vicinity map is included in Appendix A of this report.

Conformance with applicable Drainage Basin Planning Studies

There is an existing (unapproved) DBPS for Jimmy Camp Creek prepared by Wilson & Company in 1987, and is referenced in this report. The only major drainage improvements for this study area according to the 1987 Wilson study was the reconstruction of the East Tributary of Jimmy Camp Creek (East Tributary). In 2014 a portion of the East Tributary was reconstructed from Fontaine Boulevard south 2,800 feet in accordance with the 1987 study. This section of the East Tributary included a trapezoidal channel section with 6:1 side slopes and a sand bottom. On March 9, 2015 a new DBPS for Jimmy Camp Creek and the East Tributary was completed by Kiowa Engineering. The Kiowa Engineering DBPS for Jimmy Camp Creek has not been adopted by El Paso County but is allowed for concept design. The concept design includes the East Tributary armoring concept and the full spectrum detention pond requirements. The Kiowa DBPS did not calculate drainage fees so current El Paso County drainage/bridge fees apply to this development. Channel improvements in the East Tributary north of Fontaine Boulevard were designed by Kiowa Engineering and are currently under construction and must be completed before this final plat is recorded. Channel improvements south of Fontaine Boulevard within this final plat limits were constructed in 2014.

Conformance with Lorson East MDDP and PDR by Core Engineering Group

Core Engineering Group has an approved MDDP for Lorson East and PDR for Lorson Ranch East which covers this final plat area and the East Tributary. This FDR conforms to the MDDP and PDR for Lorson East and is referenced in this report. Detention/WQ Pond C5 required for this plat has been constructed as part of Lorson Ranch East Filing No. 1 and does not need modification at this time. The adjacent East Tributary Channel has also been reconstructed as part of Lorson Ranch East Filing No. 1. There are also two bridges over the East Tributary and one bridge over Jimmy Camp Creek at Lorson Boulevard that are required to be built for this plat. The East Tributary bridges are located at Fontaine Boulevard and Lorson Boulevard and are currently under construction. The Jimmy Camp Creek Bridge is approved for construction but is waiting on an approved CLOMR from FEMA. Construction of all bridges must be complete prior to recordation of this plat.

Lorson Ranch East is located within the ***"Jimmy Camp Creek Drainage Basin"***, which is a fee basin in El Paso County.

2.0 DRAINAGE CRITERIA

The supporting drainage design and calculations were performed in accordance with the City of Colorado Springs and El Paso County "Drainage Criteria Manual (DCM)", dated November, 1991, the El Paso County "Engineering Criteria Manual", Chapter 6 and Section 3.2.1 Chapter 13 of the City of Colorado Springs Drainage Criteria Manual dated May 2014, and the UDFCD "Urban Storm Drainage Criteria Manual" Volumes 1, 2 and 3 for inlet sizing. No deviations from these published criteria are requested for this site.

The Rational Method as outlined in Section 6.3.0 of the May 2014 "Drainage Criteria Manual" and in Section 3.2.8.F of the El Paso County "Engineering Criteria Manual" was used for basins less than 130

acres to determine the rainfall and runoff conditions for the proposed development of the site. The runoff rates for the 5-year initial storm and 100-year major design storm were calculated.

Current updates to the Drainage Criteria manual for El Paso County states the if detention is necessary, Full Spectrum Detention will be included in the design, based on this criteria, Full Spectrum Detention will be required for this development. Pond C5 is currently under construction as part of Lorson Ranch East Filing No. 1 and will be complete prior to recordation of this plat.

3.0 EXISTING HYDROLOGICAL CONDITIONS

Prior to the early grading of Lorson Ranch East the site was undeveloped with native vegetation (grass with no shrubs) and moderate to steep slopes in a westerly direction the East Tributary of Jimmy Camp Creek.

The Soil Conservation Service (SCS) classifies the soils within the Lorson Ranch East property as Ascalon Loam, Manzanola clay loam; Midway Clay Loam, Nelson-Tassel fine Sandy loam; Razor clay loam; and Wiley silt loam [3]. The sandy and silty loams are considered hydrologic soil group B soils with moderate to moderately rapid permeability. The Midway and Razor clay loams are considered hydrologic soil group C soils with slow permeability. All of these soils are susceptible to erosion by wind and water, have low bearing strength, moderate shrink-swell potential, and high frost heave potential (see table 3.1 below). The clay loams are difficult to vegetate and comprise of a small portion of the study area. These soils can be mitigated easily by limiting their use as topsoil since they comprise of a small portion of the study area. Weathered bedrock will be encountered beneath some of the site but it can be excavated using conventional techniques.

Table 3.1: SCS Soils Survey

Soil	Hydro. Group	Shrink/Swell Potential	Permeability	Surface Runoff Potential	Erosion Hazard
2-Ascalon Sandy Loam	B	Moderate	Moderate	Slow to Medium	Moderate
3-Ascalon Sandy Loam	B	Moderate	Moderate	Slow to Medium	Moderate
52-Manzanola Clay Loam	C	High	Slow	Medium	Moderate
54-Midway Clay Loam	C	High	Slow	Medium to Rapid	Moderate to High
56-Nelson – Tassel Fine Sandy Loam	B	Moderate	Moderately Rapid	Slow	Moderate
75-Razor Clay Loam	C	High	Slow	Medium	Moderate
108-Wiley Silt Loam	B	Moderate	Moderate	Medium	Moderate

Excerpts from the SCS "Soil Survey of El Paso County Area, Colorado" [2] are provided in ***Appendix A*** for further reference.

For the purpose of preparing hydrologic calculations for this report, the soil of each basin are assumed to be wholly comprised of the majority soil hydrologic group. The majority of this site is to be filled by material from the school site which is Razor Clay Loam which is Hydrologic Group C therefore the hydrologic conditions are assumed to be Group C.

An existing electrical easement, with existing transmission towers, is located east side of this site and will be set aside as open space in the future.

Portions of the site are located within the delineated 100-year floodplain of the East Tributary of Jimmy Camp Creek per the Federal Emergency Management Agency (FEMA) Flood Rate Insurance Map (FIRM) number 08041C0957 F & 08041C1000 F, effective 17 March 1997 [2]. Floodplain along the East Tributary was modified per LOMR Case No. 14-08-0534P (see appendix). Floodplain designations include Zone AE and Zone X within the property boundary. A portion of this map is provided in ***Appendix A*** for reference. A CLOMR for the creek and bridge construction which includes grading to remove some areas north of Fontaine Boulevard (east of the channel) from the current floodplain has been submitted to and approved by FEMA under Case No. 17-08-1043R. This development will be required to have the follow-up LOMR completed and approved prior to approval of the plat.

The existing basins for this large site were taken from the Lorson Ranch East MDDP East of the East Tributary and depict conditions prior to any grading in Lorson Ranch East. A map from the MDDP has been included in the appendix.

Overall Basin EX-C flows to Design Point 2
This is the largest existing basin at 452.97 acres which includes approximately the northern half of the site. This basin is an overall existing basin including Basins EX-C1 to EX-C10. There are two offsite basins (OS-C6.1 and OS-C5.1) which flow onto the site from the north and east and are included in the flow at Design Point 2. Under existing conditions, this basin contributes 141.0 cfs and 458.0 cfs for the 5-year and 100-year events respectively at Design Point 2. Design Point 2 is located at the East Tributary and all flow is routed to the East Tributary in an existing swale that is eroded and is not armored.

3.1 INTERIM HYDROLOGICAL CONDITIONS

Interim hydrological conditions have been calculated based on grading that has been completed in accordance with Phase 1 of the Early Grading for Lorson Ranch East (PUDSP 16-003), Fontaine Boulevard/Lamprey Drive construction (CDR 183), and the school site improvements currently under construction. Interim condition existing flows have been calculated to determine interim drainage impacts to this final plat which is located downstream and to make sure runoff is accommodated by the street/storm sewer system constructed as part of this plat and CDR 183. These interim condition calculations are also used to perform hydraulic modeling of Pond C5 to see what effect the existing upstream flows have on the downstream pond outflow rates when compared to pre-developed conditions at the East Tributary. The interim conditions hydraulic modeling will be done by a computer program called Hydraflow (Intellisolve) and is discussed in Interim Conditions for Pond C5 (Section 6.0) of this report.

Interim conditions consist of Fontaine Boulevard construction from Old Glory Drive eastward 3,500 feet to the existing electric transmission lines, Lamprey Drive construction from Fontaine Boulevard northeast 1,800 feet to Yamhill Drive per CDR 183. CDR 183 includes street, storm sewer, sanitary sewer, and watermain construction which provides access to this plat. Interim conditions also include all the interior streets/infrastructure for this final plat and construction of the school site by the school district.

Interim Basin EX4
This interim basin consists of existing flow from undeveloped areas east of Lamprey Drive and the School Site. This basin included the area from Basin Ex-4.1. Runoff flows west overland and in natural drainageways to Pond C3. The existing runoff is 38cfs and 170cfs for the 5-year and 100-year events.

Pond C3 will be constructed with this filing and was designed as part of Lorson Ranch East Preliminary Plan (EGP 18-002). See Interim Detention Pond section of this report.

Interim Basin EX3.1

This interim basin consists of existing flow from undeveloped residential areas east of Lorson Ranch East Filing No. 2. The contours shown for this basin are taken from the Lorson Ranch East Early Grading Plans and the School Site grading plans. The school site has a large volume of dirt export generated by grading the school site and the material will be used to raise the grade in this basin. The existing flows are calculated based on vacant land that has been revegetated since development in this basin may not occur for several years. Future development will have to design storm sewer extensions and street capacities to handle developed flow when the future final plat is prepared. The existing flow is directed overland to a proposed 24" storm sewer constructed with this final plat. The existing runoff is 3.0cfs and 18.0cfs for the 5-year and 100-year events. See Design Point 6 for analysis of the 24" storm sewer and the temporary sediment basin at this location.

Interim Basin EX3.2

This interim basin consists of existing flow from undeveloped areas east of Lorson Ranch East Filing No. 2 and the future Lamprey Drive and Lorson Boulevard extension. The contours shown for this basin are taken from the Lorson Ranch East Early Grading Plans. The school site has a large volume of dirt export generated by grading the school site and the material will be used to raise the grade in this basin. Lamprey Drive and Lorson Boulevard have been graded as part of the Phase 1 grading in the Lorson Ranch East Early Grading plans. The existing flows are calculated based on vacant land that has been revegetated since development in this basin may not occur for several years. Future development will have to design storm sewer extensions and street capacities to handle developed flow when the future final plat is prepared. The existing flow is directed overland to a 36" storm sewer in a temporary sediment basin at Design Point 3. The existing runoff is 5.0cfs and 26.0cfs for the 5-year and 100-year events from this basin. See Design Point 3 for analysis of the 36" storm sewer and the proposed temporary sediment basin at this location.

Interim Basin EX3.3

This interim basin consists of existing flow from undeveloped residential areas east of the school site and south of Lamprey Drive. The existing flow is directed north overland to a proposed temporary sediment basin located at Design Point 3. The existing runoff is 7.0cfs and 41.0cfs for the 5-year and 100-year events. See Design Point 3 for analysis of the 36" storm sewer and the temporary sediment basin at this location.

Interim Basin EX4.1

Interim Basin EX 4.1 is a subset of and is also included in the overall Basin EX-4. This interim basin was added to determine the flow in the future Lorson Boulevard north of Design Point 4 which has been rough graded. The existing flow is directed south in the future Lorson Boulevard which has been rough graded and flows to Design Point 4. The existing runoff is 8.0cfs and 35.0cfs for the 5-year and 100-year events. See Design Point 4 for the capacity of the rough graded Lorson Boulevard.

Basin C13

This basin consists of developed flow from the proposed school site. Runoff flows west in curb/storm sewer constructed by the school to a proposed detention pond at Design Point 9 located on the school site. The school will construct and own/maintain the detention pond. Water Quality for this basin has been provided by Lorson Ranch as part of Pond C5 constructed in Lorson Ranch East Filing No. 1. The developed runoff is 31.5cfs and 70.2cfs for the 5-year and 100-year events entering the school pond. See Design Point 9 for analysis of the proposed School Pond.

4.0 DEVELOPED HYDROLOGICAL CONDITIONS

Hydrology for the **Lorson Ranch East Filing No. 2** final drainage report was based on the City of Colorado Springs/El Paso County Drainage Criteria. Sub-basins that lie within this project were determined and the 5-year and 100-year peak discharges for the developed conditions have been presented in this report. Based on these flows, storm inlets will be added when the street capacity is exceeded.

Soil type C/D has been assumed for the hydrologic conditions because most of the site requires fill and the majority of the fill will be from the school site which is Razor Clay Loam (75), Hydrologic Group C. This approach will provide a more conservative approach to designing the storm sewer infrastructure. See Appendix A for SCS Soils Map.

The time of concentration for each basin and sub-basin was developed using an overland, ditch, street and pipe flow components. The maximum overland flow length for developed conditions was limited to 100 feet. Travel time velocities ranged from 2 to 6 feet per second. The travel time calculations are included in the back of this report.

Runoff coefficients for the various land uses were obtained from Table 6-6 dated May, 2014 from the updated City of Colorado Springs/El Paso County Drainage Criteria Manual. See Appendix B.

Drainage concepts for each of the basins are briefly discussed as follow:

Basin A1

Basins A1 consists of flow from backyards and the East Tributary of Jimmy Camp Creek. Runoff is directed north to the East Tributary of Jimmy Camp Creek. The peak developed flow from this basin is 4.6cfs and 16.9cfs for the 5/100-year storm event See the appendix for detailed calculations. See Section 6.0 for water quality discussions. A WQ deviation is necessary for the backyards draining directly to the East Tributary.

Basin C16.3

Basin C16.3 consists of residential development and future residential development located NE of Shavers Drive and Lamprey Drive. For the purposes of this report the entire basin is assumed to be developed. Runoff is directed southwest in curb/gutter in Mumford Drive and then south to Design Point 6a to a proposed Type “R” inlet in Shavers Drive. For interim conditions some of the flow will be collected at Design Point 6 but the interim condition has been ignored since all flow enters the storm sewer system which has the capacity to handle the ultimate runoff. The peak future developed flow from this basin is 3.6cfs and 7.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.4

Basin C16.4 consists of residential development and future residential development located east of Shavers Drive on Lamprey Drive. Runoff is directed west in curb/gutter in Lamprey Drive and to Design Point 8 to an existing Type “R” inlet in Shavers Drive. For the purposes of this report the entire basin is assumed to be developed which is the worst-case scenario. The peak future developed flow from this basin is 1.7cfs and 3.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.14

Basin C16.14 consists of residential development located north of Lamprey Drive on the east side of Shavers Drive. Runoff is directed south in curb/gutter to Design Point 7 to existing 5’ Type “R” inlet in Shavers Drive constructed per CDR183. The developed flow from this basin is 0.3cfs and 0.6cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.15
Basin C16.15 consists of residential development located north of Mumford Drive on the east side of Shavers Drive. Runoff is directed south in curb/gutter to Design Point 6a to a proposed Type "R" inlet. The developed flow from this basin is 4.8cfs and 10.1cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.16
Basin C16.16 consists of residential development located NE of Clarion Drive and Lamprey Drive. Runoff is directed southwest in curb/gutter in Lamprey Drive to a proposed Type "R" inlet in Mumford Drive at Design Point 10. The developed flow from this basin is 2.9cfs and 5.4cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.17
Basin C16.17 consist of residential development located NE of Clarion Drive and Lamprey Drive. Runoff is directed southwest in curb/gutter in Mumford Drive to a proposed Type "R" inlet in Mumford Drive at Design Point 10. The developed flow from these basin is 3.0cfs and 6.6cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.18
Basin C16.18 consists of residential development located North of Clarion Drive and Mumford Drive. Runoff is directed south in curb/gutter in Mumford Drive to Design Point 10a to a proposed Type "R" inlet in Mumford Drive. The developed flow from this basin is 5.7cfs and 12.2cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.19
Basin C16.19 consists of residential development located on Clarion Drive. Runoff is directed southwest in curb/gutter in Clarion Drive to Design Point 16 to a proposed Type "R" inlet in Wacissa Drive south of Clarion Drive. The developed flow from this basin is 3.1cfs and 6.9cfs for the 5/100-year storm event. See the appendix for detailed calculations.

Basin C16.20
Basin C16.20 consists of residential development located on Nash and Tarbell Drive. Runoff is directed southwest in curb/gutter in Nash and Tarbell Drive to Design Point 12a to a proposed 10' Type "R" inlet in Nash Drive. The developed flow from this basin is 5.4cfs and 12.0cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.21
Basin C16.21 consists of residential development located on Nash and Wacissa Drive. Runoff is directed southwest in curb/gutter in Nash and Wacissa Drive to Design Point 12a and 13 to a proposed Type "R" inlets in Nash Drive and Wacissa Drive. The developed flow from this basin is 3.2cfs and 7.1cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.22
Basin C16.22 consists of residential development located on Nash Drive. Runoff is directed southwest in curb/gutter in Nash Drive to Design Point 12 to a proposed 10' Type "R" inlet in Nash Drive. The developed flow from this basin is 5.1cfs and 11.3cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.23
Basin C16.23 consists of residential development located on Nash Drive. Runoff is directed southwest in curb/gutter in Nash Drive to Design Point 12 to a proposed 10'Type "R" inlet in Nash Drive. The developed flow from this basin is 2.6cfs and 5.8cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.24
Basin C16.24 consists of residential development located on Wacissa and Tarbell Drive. Runoff is directed southwest in curb/gutter in Wacissa Drive to Design Point 13 to a proposed 10' Type "R" inlet in Wacissa Drive south of Nash Drive. The developed flow from this basin is 4.5cfs and 10.1cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.25
Basin C16.25 consists of residential development located on Wacissa Drive. Runoff is directed south in curb/gutter in Wacissa Drive to Design Point 17 to a proposed Type "R" inlet in Wacissa Drive. The developed flow from this basin is 0.8cfs and 1.9cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.26
Basin C16.26 consists of residential development located on Mumford Drive. Runoff is directed north in curb/gutter in Mumford Drive to Design Point 10b to a proposed Type "R" inlet at Mumford/Clarion Drive. The developed flow from this basin is 3.2cfs and 6.9cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.27
Basin C16.27 consists of residential development located on Mumford Drive. Runoff is directed north in curb/gutter in Mumford Drive to Design Point 10c to a proposed Type "R" inlet at Mumford/Clarion Drive. The developed flow from this basin is 0.6cfs and 1.3cfs for the 5/100-year storm event See the appendix for detailed calculations

Basin C16.28
Basin C16.28 consists of residential development located on Wacissa, Zealand, Ballona Drive. Runoff is directed west in Ballona Drive/Zealand Drive and then north in curb/gutter in Wacissa Drive to Design Point 16 to a proposed 30' Type "R" inlet in Wacissa Drive. The developed flow from this basin is 3.9cfs and 8.6cfs for the 5/100-year storm event See the appendix for detailed calculations

Basin C16.29
Basin C16.29 consists of residential development located on Wacissa, Zealand, Clarion Drive. Runoff is directed west in ClarionDrive/Zealand Drive and then in curb/gutter in Wacissa Drive to Design Point 16 to a proposed 30' Type "R" inlet in Wacissa Drive. The developed flow from this basin is 3.7cfs and 8.2cfs for the 5/100-year storm event See the appendix for detailed calculations

Basin C16.30
Basin C16.30 consists of residential development located on Wacissa and Tarbell Drive. Runoff is directed south in curb/gutter in Wacissa Drive to Design Point 14 to a proposed Type "R" inlet in Wacissa Drive. The developed flow from this basin is 6.8cfs and 15.2cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.31
Basin C16.31 consists of backyards of houses on Wacissa Drive, East Tributary, and open space. Runoff is directed overland to the East Tributary. The developed flow from this basin is 6.9cfs and 27.4cfs for the 5/100-year storm event. See Section 6.0 for water quality discussions for backyards. See the appendix for detailed calculations

Basin C16.32
Basin C16.32 consists of residential development located on Wacissa and Ballona Drive. Runoff is directed east in Ballona Drive and then north in curb/gutter in Wacissa Drive to Design Point 17 to a proposed 30' Type "R" inlet. The developed flow from this basin is 1.8cfs and 4.1cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.34
Basin C16.34 consists of flow from Lamprey Drive and the adjacent backyards. Runoff is directed south in curb/gutter in to a Type "R" inlet in the NW corner of Fontaine Boulevard and Lamprey Drive at Design Point 34. The developed flow from this basin is 0.9cfs and 1.9cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.35
Basin C16.35 consists of flow from residential development and Fontaine Boulevard. Runoff is directed south and west in curb/gutter in to a proposed Type "R" inlet in the NE corner of Fontaine Boulevard and Edisto Drive at Design Point 35. The developed flow from this basin is 2.8cfs and 6.2cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C16.36
Basin C16.36 consists of flow from residential development and Pond C5. Runoff is directly tributary to Pond C5. The developed flow from this basin is 6.3cfs and 24.7cfs for the 5/100-year storm event. See the appendix for detailed calculations

Basin C17.8
Basin C17.8 consists of residential development and Fontaine Boulevard on the north side. Runoff is directed west in curb/gutter to Design Point 42 to a Type "R" inlet in Fontaine Boulevard. The peak developed flow from this basin is 3.2cfs and 7.2cfs for the 5/100-year storm event. See the appendix for detailed calculations.

See the Developed Conditions Hydrology Calculations in the back of this report and the Developed Conditions Drainage Map (Map Pocket) for the 5-year and 100-year storm event amounts.

5.0 HYDRAULIC SUMMARY

The sizing of the hydraulic structures and detentions ponds were prepared by using the *StormSewers* and *Hydrographs* computer software programs developed by Intellisolve, which conforms to the methods outlined in the "City of Colorado Springs/El Paso County Drainage Criteria Manual". Street capacities and Inlets were sized by Denver Urban Drainage's xcel spreadsheet UD-Inlet.

It is the intent of this drainage report to use the proposed curb/gutter and storm sewer in the streets to convey runoff to detention and water quality ponds then to the East Tributary of Jimmy Camp Creek. Inlet size and location are preliminary only as shown on the storm sewer layout in the appendix. See Appendix C for detailed hydraulic calculations and the storm sewer model.

Table 1: Street Capacities (100-year capacity is only ½ of street)

	Residential Local		Residential Collector		Principal Arterial	
Street Slope	5-year	100-year	5-year	100-year	5-year	100-year
0.5%	6.3	26.4	9.7	29.3	9.5	28.5
0.6%	6.9	28.9	10.6	32.1	10.4	31.2
0.7%	7.5	31.2	11.5	34.6	11.2	33.7
0.8%	8.0	33.4	12.3	37.0	12.0	36.0
0.9%	8.5	35.4	13.0	39.3	12.7	38.2
1.0%	9.0	37.3	13.7	41.4	13.4	40.2
1.4%	10.5	44.1	16.2	49.0	15.9	47.6
1.8%	12.0	45.4	18.4	50.4	18.0	50.4
2.2%	13.3	42.8	19.4	47.5	19.5	47.5
2.6%	14.4	40.7	18.5	45.1	18.5	45.1
3.0%	15.5	39.0	17.7	43.2	17.8	43.2
3.5%	16.7	37.2	16.9	41.3	17.0	41.3
4.0%	17.9	35.7	16.2	39.7	16.3	39.7

4.5%	19.0	34.5	15.7	38.3	15.7	38.3
5.0%	19.9	33.4	15.2	37.1	15.2	37.1

Note: all flows are in cfs (cubic feet per second)

Design Point 1

Design Point 1 is located at the East Tributary of Jimmy Camp Creek on the north property line. A swale along the north property line will re-direct offsite runoff from Basin OS-C11 westward to the East Tributary so the lots are not burdened with offsite flows. The swale is a "V" swale, 2.5' deep, and at a minimum slope of 1%, and conveys the runoff from the 100-year storm event of 21cfs at a depth of 1.3' deep. The west portion of the swale as it outfalls into the East Tributary will be 9" rip rap, 18" thick for erosion protection. The total flow is 9.4cfs and 21cfs in the 5/100-year storm events

Design Point 2

Design Point 2 is located at the south side of the future Lamprey Drive west of the school site where a natural drainageway is located. This design point accepts flow from an existing undeveloped Basin EX-3.3. The majority of the existing upstream runoff will be diverted into Pond C3 (see Lorson Ranch East MDDP, approved) which will be constructed as part of this plat resulting in reduced flow rates to this design point. The existing runoff is 7cfs and 41cfs in the 5/100-year storm events. The flow is directed west and north in the rough graded Lamprey Drive which is sloped north to Design Point 3 and a temporary sediment basin.

Design Point 3

Design Point 3 is located in the NE corner of Lamprey Drive and the future Yamhill Drive. Flow at this design point is from undeveloped areas to the east in Basins EX-3.2 and EX-3.3. A temporary 36" CMP and a 48" riser will be constructed as part of a temporary sediment basin. The storm sewer will flow southwest to an existing manhole in Lamprey Drive at Yamhill Drive constructed as part of the Fontaine improvements (CDR 183). When Lamprey Drive is extended the temporary pipes and sediment basin will be removed. The total flow at this design point is 12cfs and 67cfs in the 5/100-year storm events. Temporary Sediment Basin EX-3.2 is designed as follows: top=5749.00, btm=5746, top 48" standpipe=5747.50, 100-yr WSEL=5748.37, 8" perforated pipe, volume=2170cuft, bottom is 12'x12', sideslopes are 4:1.

Design Point 4

Design Point 4 is located near Lorson Boulevard just north of Pond C3. This design point was added to design a swale that drains Basin Ex-4 to Pond C3 and for the street capacity of the rough graded Lorson Boulevard. For the rough graded Lorson Boulevard north of Design Point 4 the flow is from Basin Ex-4.1 and has a 100-year flow rate of 35cfs. The rough graded Lorson Boulevard has the capacity to handle the 35cfs flow. South of Design Point 4 the swale will be designed for the entire Basin Ex-4 at a 100-year flow rate of 170cfs. The swale is trapezoidal with a 20' bottom, 10:1 side slopes, and 0.2% slope to Pond C3. This results in a 100-year flow depth of 1.64' and a velocity of 2.85ft/s and will not need to be lined. Geotextile TRM will need to be constructed in Pond C3 to protect the pond slopes at the swale entrance.

Design Point 4a

Design Point 4a is the outflow from Pond C3 prior to any development upstream. The inflow is from Existing Basin Ex-3. The pond outlet consists of a 24" RCP storm sewer. See Pond C3 discussion. The total outflow from Pond C3 is 19.0cfs and 34.0cfs in the 5/100-year storm events. The flow from this design point flows southwest to an existing 54" RCP in Fontaine Bouelvard. The existing flow into the 54" RCP is 176 cfs (from CDR 183 drainage report) for a total flow into the pipe of 210cfs. The hydraulic capacity of the pipe to collect flow is 210cfs (8.6' of depth) and a HW/D ratio of 1.91 based on culvert inlet calculations by Hydraflow express. See appendix.

Design Point 5

Design Point 5 is located at Lamprey Drive and Yamhill Drive at an existing manhole in the intersection. Flow at this design point is from Design Point 3 and 4. The total interim flows at this design point are 12.0cfs and 67.0cfs in the 5/100-year storm events. The existing 36" storm sewer in Lamprey Drive is designed for future flows of 52.5cfs and 71.5cfs for the 5-year and 100-year events (see Fontaine CDR 183). The interim 100year flow can be accommodated by the pipe.

Design Point 6

Design Point 6 is located on Mumford Drive east of Shavers Drive just east of where the street construction for this plat will end. Flow at this design point is from Basin EX-3.1. A 24" RCP storm sewer will be constructed in Mumford Drive to collect this flow. Temporary Sediment Basin EX-3.1 will be constructed over the 24" storm sewer including a 36" standpipe and perforated pipe. The existing interim existing runoff is 3.0cfs and 18.0cfs for the 5-year and 100-year events. The 24" storm sewer in Mumford Drive is designed for future flows of 11.05cfs and 17.9cfs for the 5-year and 100-year events (see Lorson Ranch East PDR) which results in capacity for the interim existing runoff. Temporary Sediment Basin EX-3.1 is designed as follows: top=5743.00, btm=5741, top 36" standpipe=5742.00, 100-yr WSEL=5742.69 for 18cfs, 8" perforated pipe, volume=1162cuft, bottom is 10'x10', sideslopes are 4:1. When Mumford Drive is extended the sediment basin will be removed.

Design Point 6a

Design Point 6a is located at the SE corner of Shavers Drive and Mumford Drive

(5-year storm)

Tributary Basins: C16.15 **Inlet/MH Number:** Inlet DP6a
Upstream flowby: 1.77cfs **Total Street Flow:** 6.61cfs

Flow Intercepted: 5.71cfs **Flow Bypassed:** 0.9 cfs to Inlet DP8
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs, inlet needed

(100-year storm)

Tributary Basins: C16.15 **Inlet/MH Number:** Inlet DP6a
Upstream flowby: 14.75cfs **Total Street Flow:** 24.87cfs

Flow Intercepted: 11.17cfs **Flow Bypassed:** 13.7cfs to Inlet DP8
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 37.3cfs (half street) is okay

Design Point 6b

Design Point 6b is located at the east side of the intersection of Clarion Drive and Lamprey Drive at a low point in Lamprey Drive. This Design Point was taken from the Fontaine FDR (CDR183)

(5-year storm)

Tributary Basins: C13.1 **Inlet/MH Number:** Inlet DP6b
Upstream flowby: 0 cfs **Total Street Flow:** 6.8cfs

Flow Intercepted: 6.8cfs **Flow Bypassed:**
Inlet Size: 15' type R, sump

Street Capacity: Street slope = 1.5%, capacity = 11cfs

(100-year storm)

Tributary Basins: C13.1 **Inlet/MH Number:** Inlet DP6b
Upstream flowby: 33.0cfs **Total Street Flow:** 40.5cfs

Flow Intercepted: 20.3cfs **Flow Bypassed:** 20.2cfs to Inlet DP10b
Inlet Size: 15' type R, sump

Street Capacity: Street slope = 1.5%, capacity = 44.1cfs (half street) is okay

Design Point 6c

This Design Point was taken from the Fontaine FDR (CDR183). Design Point 6c is located at the east side of the intersection of Clarion Drive and Lamprey Drive at a low point. A 30" RCP constructed in the Fontaine construction plans (CDR183) is stubbed to the school site to collect the flows from Basin C13 (school site). The school site will be required to construct on-site storm sewer/inlets and an on-site detention pond to collect/detain runoff. Water quality for Basin C13 is provided in Pond C5. Runoff rates from this basin are required to be reduced to pre-developed flows of 7.6cfs in the 5-year and 40.5cfs in the 100-year storm events to the 30" RCP stub according to the Fontaine FDR (CDR183). The flow at this design point in the 30" storm sewer from Design Point 9 (school pond outflow) is 0.8cfs in the 5-year and 29cfs in the 100-year storm events which is less than the allowable flow based on hydraulic modeling of the school pond in Hydraflow. See School Pond in Section 6.0.

Design Point 7

This Design Point was taken from the Fontaine FDR (CDR183). Design Point 7 is a small drainage basin (C16.14) that includes a 5' Type R inlet (constructed as part of Fontaine CDR 183) to drain the curb in the NW corner of Shavers Drive and Lamprey Drive. The total flow is 0.3cfs and 0.6cfs in the 5/100 year storm events. There are no bypass flows for this inlet.

Design Point 8

This Design Point was taken from the Fontaine FDR (CDR183). This inlet was constructed as part of the Fontaine CDR183 project. Design Point 8 is located at the NE corner of Shavers Drive and Lamprey Drive

(5-year storm)
Tributary Basins: C16.3-C16.4 **Inlet/MH Number:** Inlet DP8
Upstream flowby: 0.9cfs **Total Street Flow:** 6.2cfs

Flow Intercepted: 6.20cfs **Flow Bypassed:** 0
Inlet Size: 10' type R, sump (existing)

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs, inlet needed

(100-year storm)
Tributary Basins: C16.3-C16.4 **Inlet/MH Number:** Inlet DP8
Upstream flowby: 13.7cfs **Total Street Flow:** 25.2cfs

Flow Intercepted: 16.3cfs **Flow Bypassed:** 8.9cfs to Inlet DP10
Inlet Size: 10' type R, sump, (existing)

Street Capacity: Street slope = 1.0%, capacity = 37.3cfs (half street) is okay

Design Point 9

Design Point 9 is located on the school site and is the detention pond the school will be constructing. The tributary basin for the Pond is Basin C13 and the total inflow is 31.5cfs and 71.2cfs in the 5/100 year storm events. The outflow from the School Pond is 0.8cfs and 29cfs in the 5/100 year storm events and is conveyed to Design Point 6c in a 24" storm sewer. See School Pond in Section 6.0 for more information. A full hydraulic analysis for this pond will be completed by the school.

Design Point 10

Design Point 10 is located at the NE corner of Clarion Drive and Mumford Drive

(5-year storm)
Tributary Basins: C16.16-C16.17 **Inlet/MH Number:** Inlet DP10
Upstream flowby: 0 cfs **Total Street Flow:** 6.0cfs

Flow Intercepted: 6.0cfs **Flow Bypassed:** 0 cfs
Inlet Size: 10' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)
Tributary Basins: C16.16-C16.17 **Inlet/MH Number:** Inlet DP10
Upstream flowby: 8.9cfs **Total Street Flow:** 20.9cfs

Flow Intercepted: 16.3cfs **Flow Bypassed:** 4.6cfs to Inlet DP10a
Inlet Size: 10' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 37.3cfs (half street) is okay

Design Point 10a

Design Point 10a is located at the NW corner of Clarion Drive and Mumford Drive

(5-year storm)

Tributary Basins: C16.18 **Inlet/MH Number:** Inlet DP10a

Upstream flowby: **Total Street Flow:** 5.7cfs

Flow Intercepted: 5.7cfs **Flow Bypassed:** 0 cfs

Inlet Size: 15' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)

Tributary Basins: C16.18 **Inlet/MH Number:** Inlet DP10a

Upstream flowby: 4.6cfs **Total Street Flow:** 16.8cfs

Flow Intercepted: 16.8cfs **Flow Bypassed:** 0cfs

Inlet Size: 15' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 37.3cfs (half street) is okay

Design Point 10b

Design Point 10b is located at the SE corner of Clarion Drive and Mumford Drive

(5-year storm)

Tributary Basins: C16.26 **Inlet/MH Number:** Inlet DP10b

Upstream flowby: **Total Street Flow:** 3.2cfs

Flow Intercepted: 3.2cfs **Flow Bypassed:**

Inlet Size: 5' type R, sump

Street Capacity: Street slope = 0.7%, capacity = 7.5cfs

(100-year storm)

Tributary Basins: C16.26 **Inlet/MH Number:** Inlet DP10b

Upstream flowby: 20.2cfs from Lamprey (Des.Pt 6b) **Total Street Flow:** 27.1cfs (6.9+20.2)

Flow Intercepted: 5.4cfs **Flow Bypassed:** 21.7cfs to Des. Pt 10c

Inlet Size: 5' type R, sump

Street Capacity: Street slope = 0.7%, capacity = 31.2cfs (half street) is okay

Design Point 10c
Design Point 10c is located at the SW corner of Clarion Drive and Mumford Drive

(5-year storm)
Tributary Basins: C16.27 **Inlet/MH Number:** Inlet DP10c
Upstream flowby: **Total Street Flow:** 0.6cfs

Flow Intercepted: 0.6cfs **Flow Bypassed:**
Inlet Size: 5' type R, sump

Street Capacity: Street slope = 0.7%, capacity = 7.5cfs

(100-year storm)
Tributary Basins: C16.27 **Inlet/MH Number:** Inlet DP10c
Upstream flowby: 21.7cfs **Total Street Flow:** 23.0cfs

Flow Intercepted: 2.2cfs **Flow Bypassed:** 20.8cfs to DesPt. 16
Inlet Size: 5' type R, sump

Street Capacity: Street slope = 0.7%, capacity = 31.2cfs (half street) is okay

Design Point 11
Design Point 11 is located at the west side of Clarion Drive and Mumford Drive and is the flow in the storm sewer. The total flow in the storm sewer is 105.6cfs/154.8cfs in the 5/100 year storm events.

Design Point 12
Design Point 12 is located east of Wacissa Drive on the north side of Nash Drive.

(5-year storm)
Tributary Basins: C16.22-C16.23 **Inlet/MH Number:** Inlet DP12
Upstream flowby: **Total Street Flow:** 7.7cfs

Flow Intercepted: 6.28cfs **Flow Bypassed:** 1.4cfs to Inlet DP13
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)
Tributary Basins: C16.22-C16.23 **Inlet/MH Number:** Inlet DP12
Upstream flowby: **Total Street Flow:** 17.1cfs

Flow Intercepted: 9.48cfs **Flow Bypassed:** 7.6cfs to Inlet DP13
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street) is okay

Design Point 12a
Design Point 12a is located east of Wacissa Drive on the south side of Nash Drive.

(5-year storm)
Tributary Basins: C16.20-C16.21 **Inlet/MH Number:** Inlet DP12a
Upstream flowby: **Total Street Flow:** 8.6cfs

Flow Intercepted: 6.68cfs **Flow Bypassed:** 1.9cfs to Inlet DP13
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)
Tributary Basins: C16.20-C16.21 **Inlet/MH Number:** Inlet DP12a
Upstream flowby: **Total Street Flow:** 19.1cfs

Flow Intercepted: 9.97cfs **Flow Bypassed:** 9.1cfs to Inlet DP13
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street) is okay

Design Point 13
Design Point 13 is located in the SE corner of Wacissa Drive and Nash Drive.

(5-year storm)
Tributary Basins: C16.24 **Inlet/MH Number:** Inlet DP13
Upstream flowby: 3.3cfs **Total Street Flow:** 7.8cfs

Flow Intercepted: 6.31cfs **Flow Bypassed:** 1.5cfs to Inlet DP16
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)
Tributary Basins: C16.24 **Inlet/MH Number:** Inlet DP13
Upstream flowby: 16.7cfs **Total Street Flow:** 26.8cfs

Flow Intercepted: 11.52cfs **Flow Bypassed:** 15.3cfs to Inlet DP16
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street) is okay

Design Point 14
Design Point 14 is located in the NW of Wacissa Drive and Nash Drive.

(5-year storm)
Tributary Basins: C16.30 **Inlet/MH Number:** Inlet DP14
Upstream flowby: 0cfs **Total Street Flow:** 6.8cfs

Flow Intercepted: 5.82cfs **Flow Bypassed:** 1.0cfs to Inlet DP17
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs

(100-year storm)
Tributary Basins: C16.30 **Inlet/MH Number:** Inlet DP14
Upstream flowby: 0cfs **Total Street Flow:** 15.2cfs

Flow Intercepted: 8.95cfs **Flow Bypassed:** 6.3cfs to Inlet DP17
Inlet Size: 10' type R, on-grade

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street) is okay

Design Point 15
Design Point 15 is located in the SW of Wacissa Drive and Nash Drive and is the flow in the storm sewer. The total flow in the storm sewer is 25.09cfs/39.92cfs in the 5/100 year storm events.

Design Point 16
Design Point 16 is located in the SE corner of Wacissa Drive and Clarion Drive.

(5-year storm)
Tributary Basins: C16.19, C16.28, C16.29 **Inlet/MH Number:** Inlet DP16
Upstream flowby: 1.5cfs **Total Street Flow:** 12.2cfs

Flow Intercepted: 12.2cfs **Flow Bypassed:** 0
Inlet Size: 30' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs, almost half of street flow is from the south. Capacity okay.

(100-year storm)
Tributary Basins: C16.19, C16.28, C16.29 **Inlet/MH Number:** Inlet DP16
Upstream flowby: 36.1cfs **Total Street Flow:** 59.8cfs

Flow Intercepted: 37.4cfs **Flow Bypassed:** 22.4cfs to Inlet DP17
Inlet Size: 25' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street)

Design Point 17
Design Point 17 is located in the SW corner of Wacissa Drive and Clarion Drive.

(5-year storm)
Tributary Basins: C16.25+C16.32 **Inlet/MH Number:** Inlet DP17
Upstream flowby: 1.0cfs **Total Street Flow:** 3.6cfs

Flow Intercepted: 3.6cfs **Flow Bypassed:**
Inlet Size: 30' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 9.0cfs is okay

(100-year storm)
Tributary Basins: C16.25+C16.32 **Inlet/MH Number:** Inlet DP17
Upstream flowby: 28.7cfs **Total Street Flow:** 34.7cfs

Flow Intercepted: 34.7cfs **Flow Bypassed:** 0
Inlet Size: 30' type R, sump

Street Capacity: Street slope = 1.0%, capacity = 35.4cfs (half street) is okay

Design Point 18
Design Point 18 is located west of Clarion Drive and Wacissa Drive and is the total flow in the pipe into Pond C5. The total pipe flow is 146.5cfs in the 5-year and 230.8cfs in the 100-year. The trapezoidal emergency overflow swale from Wacissa Drive to Pond C5 is 1.0' deep, 27' wide bottom, 4:1 side slopes, 2% slope, velocity of 7.59cfs, and has a flow depth of 0.98 feet, Q100=230cfs.

Design Point 34
This design point is copied from the Fontaine final drainage report for CDR 183. Design Point 34 is located northwest corner of Lamprey Drive and Fontaine Boulevard.

(5-year storm)
Tributary Basins: C16.34 **Inlet/MH Number:** Inlet DP34
Upstream flowby: **Total Street Flow:** 0.9cfs

Flow Intercepted: 0.9cfs **Flow Bypassed:**
Inlet Size: 5' type R, sump

Street Capacity: Lamprey Drive street slope = 0.8%, capacity = 12.0cfs, okay

(100-year storm)
Tributary Basins: C16.34 **Inlet/MH Number:** Inlet DP34
Upstream flowby: 6.0cfs **Total Street Flow:** 8.0cfs

Flow Intercepted: 8.0cfs **Flow Bypassed:**
Inlet Size: 5' type R, sump

Street Capacity: Lamprey Drive street slope = 0.8%, capacity = 37.0cfs (half street) is okay

Design Point 35
This design point is copied from the Fontaine final drainage report for CDR 183. Design Point 35 is located in the NE corner of Edisto Drive and Fontaine Boulevard.

(5-year storm)
Tributary Basins: C16.35 **Inlet/MH Number:** Inlet DP35
Upstream flowby: **Total Street Flow:** 2.8cfs

Flow Intercepted: 2.8cfs **Flow Bypassed:**
Inlet Size: 5' type R, sump

Street Capacity: Fontaine Boulevard street slope = 1.0 %, capacity = 13.5cfs, okay

(100-year storm)
Tributary Basins: C16.35 **Inlet/MH Number:** Inlet DP35
Upstream flowby: **Total Street Flow:** 6.1cfs

Flow Intercepted: 6.1cfs **Flow Bypassed:**
Inlet Size: 5' type R, sump

Street Capacity: Fontaine Boulevard street slope = 1.0%, capacity = 40.0cfs (half street) is okay

Design Point 36
This design point is copied from the Fontaine final drainage report for CDR 183. Design Point 36 is a small drainage basin that includes a 5' Type R inlet constructed with Fontaine Bouelvard which collects runoff from the curb in the NW corner of Edisto Drive and Fontaine Boulevard. The total flow is 0.3cfs and 0.6cfs in the 5/100 year storm events. There are no bypass flows for this inlet.

6.0 DETENTION AND WATER QUALITY PONDS & INTERIM DETENTION POND CALCULATIONS

Detention and Storm Water Quality for Lorson Ranch East Filing No. 2 is required per El Paso County criteria. We have implemented the Full Spectrum approach for detention per the Denver Urban Drainage Districts specifications. Pond C5 is a permanent full spectrum pond to serve this filing and incorporates storm water quality features and complies with the Lorson Ranch East MDDP. Pond C5 has been sized, graded, access roads, outlet pipes, overflow structures are provided with the Lorson Ranch East Filing No. 1 development. This final drainage report provides design information on the ultimate inflow/outflow from Pond C5 and also includes an analysis of interim condition inflows and the resultant flows from Pond C5. This data will be used to compare interim flow rates from Pond C5 to pre-development flow rates. See Appendix F for interim hydraulic calculations.

Detention Pond C5 (Ultimate Conditions, from Fontaine FDR, CDR183)
This is a permanent full spectrum detention pond that includes water quality and discharges directly into the East Tributary. Pond C5 is designed in the UDCF Full Spectrum spreadsheets for Water Quality and EURV volumes only. The 5-year and 100-year flow rates are taken from the Lorson East MDDP and have been modeled in a hydraulic modeling software. The outlet structure is a five cell CDOT type D outlet in parallel and the overflow spillway is a wier set slightly above the outlet structure so it releases the 5yr/100yr storm events quickly to match pre-developed rates.

- Watershed Ares: 171 acres (Ultimate Area)
- Watershed Imperviousness: 63%

- Hydrologic Soils Group C/D
- Forebay: 3.51ac-ft (see spreadsheet in appendix) divided between two forebays
- Zone 1 WQCV: 3.298ac-ft, WSEL: 5709.92
- Zone 2 EURV: 9.524ac-ft, WSEL: 5712.27, Top outlet structure set at 5712.60, 3'x18' triple CDOT Type D outlets in parallel.
- (5-yr): 13.06ac-ft, WSEL: 5713.49, 126.3cfs (hydraflow)
- Zone 3 (100-yr): 15.86ac-ft, WSEL: 5714.42, 453.2cfs (hydraflow)
- Pipe Outlet: 48" RCP at 0.5%
- Overflow Spillway: 52' wide bottom, elevation=5713, 4:1 side slopes, flow depth=2.0' at 519cfs inflow, 1' freeboard
- Pre-development release rate into East Tributary=141cfs/458cfs in the 5yr/100 yr storm at this pond outfall (Design Pt. 2, Table 6.2 in MDDP). See Design Point 46 for discussion on flows in creek from this pond
- Pond Bottom Elevation: 5706.00

Design: Composite, WQ/EURV by Full Spectrum Excel Worksheets, 5/100yr by Hydraflow

	WQ	EURV	5-yr	100-yr
Peak Inflow	63.1cfs	181.4cfs	167.5cfs	519.1cfs
Peak Outflow	1.4cfs	7.3cfs	126.3cfs	453.2cfs
Ponding Depth	3.92ft	6.27ft	7.49ft	8.42ft
Stored Volume	3.29ac-ft	9.52ac-ft	13.01ac-ft	15.86ac-ft
Spillway Stage	7.00ft, 52' wide			
Structure Type:	5'x18' flat top outlet structure (cdot type d) with top at stage 6.60ft			

Interim Pond C3

Interim Pond C3 is located east of the powerlines, north of Fontaine Boulevard and was designed as part of the Lorson Ranch East PDR and Early Grading Plans. This pond will be constructed to reduce existing runoff so the capacity of the downstream storm sewer is not exceeded. Interim Detention Pond C3 consists of a 24" pipe outlet, 3:1 pond slopes, and an emergency overflow. The pond outfall flows south in a 24" storm sewer and outlets to Fontaine Boulevard where a 54" storm sewer was constructed as part of the Fontaine Boulevard Improvements.

- Inflow is 38cfs and 170cfs in the 5/100-year storm events for existing conditions.
- Outflow is 19cfs and 34cfs in the 5/100-year storm events. Contained in 24" storm sewer
- 5-year WSEL=5759.56, 100-year WSEL=5763.06
- Emergency Overflow: 20' btm width, weir btm= 5764.00, wier top=5768, 4:1 side slopes, 170cfs at 1.68' depth
- Downstream overflow conveyance – Per El Paso County guidelines, the detention pond downstream emergency overflow conveyance can utilize a portion of the detention pond storage in order to determine the total emergency overflow conveyance needed downstream of the pond. Sizing of the emergency spillway has to be sized to discharge the fully developed undetained inflows. The peak conveyance flow is calculated by hydraulic modelling (Hydraflow model), assuming that the outlet structure is totally plugged and the pond water surface begins at the lowest orifice plate hole depth and ends one foot below the lowest natural grade at the downstream side of the pond (in effect, a one-foot freeboard assuming the above-grade embankment does not exist. (taken from the Lorson Ranch East MDDP). The downstream conveyance for Pond C3 is calculated using the pond one foot below natural grade at elevation

5764.00. Using the hydraulic pond model the corresponding downstream overflow conveyance needs to be 17cfs.

School Pond (for analysis only)

The School Pond is located on the school site east of Design Point 6c and is only included in this report to see what impact the pond has on the downstream storm sewer and the inflow rates to Pond C5. This pond is required by the Lorson Ranch East MDDP to be built on the school site to reduce downstream runoff so the storm system has capacity. Final drainage calculations and design will be provided by the school when the school site is designed. This report assumed a generic outlet structure (CDOT Type C outlet) with a 4"x4" vertical orifice for the 5-year storm and the 100-year storm controlled by stormwater flowing into the top of a Type C outlet structure. A 24" RCP is shown to connect the outlet structure to storm sewer stubbed out at Design Point 6c. The allowable outflow rates are 7.6cfs in the 5-year and 40.5cfs in the 100-year storm events according to the Fontaine FDR (CDR183) and Lorson Ranch East MDDP.

- Inflow is 31.5cfs and 71.2cfs in the 5/100-year storm events.
- Outflow is 0.8cfs and 29cfs in the 5/100-year storm events per Hydraflow.
- 5-year WSEL=5738.44, 100-year WSEL=5739.91
- Top of pond = 5742.00, btm pond =5735.00

Pond C5 for Interim Flow Conditions (for analysis only)

This analysis is only for an interim condition for Pond C5 when a portion of the upstream tributary area has been developed. The upstream developed areas include Lorson Ranch East Filing No. 1, Lorson Ranch East Filing No. 2, Fontaine Boulevard, and Lamprey Drive north of Fontaine Boulevard to Yamhill Drive. All other tributary areas have been assumed to be vacant land. The only interim detention pond modeled is Interim Pond C3 which will be constructed as part of this plat. The remaining existing flows have been modeled as undetained flows.

These interim calculations for this pond include routing the interim existing/developed flows to Pond C5 in Hydraflow modeling software (See Appendix F). Pond C5 has been constructed to the ultimate buildout design as shown in the FDR for Lorson Ranch East Filing No. 1 including the forebays, trickle channels, and the outlet structure. The following is a discussion on the inflow hydrographs used for the analysis:

Hydrograph 1 – school site basin to school pond, fully developed
Hydrograph 2 – existing flow to east end of Fontaine. See Fontaine FDR, CDR183 for basin limits
Hydrograph 3– C17 basins from Lorson Ranch East, fully developed
Hydrograph 4 – basin tributary to Interim Detention Pond C3, vacant land
Hydrograph 5 – school pond outflow hydrograph
Hydrograph 6 – school site basin flowing to Fontaine Bouelvard, fully developed
Hydrograph 7 – C16 Basins from Lorson Ranch East Filing No. 2, fully developed
Hydrograph 8 – Existing Basin EX-3.1-3.3, vacant land
Hydrograph 9 – Outflow from Interim Detention Pond C3
Hydrograph 10 – Interim inflow at Design Point 18 to Pond C5
Hydrograph 11 – Total interim inflow to Pond C5
Hydrograph 12 – Total interim outflow from Pond C5

The interim conditions outflow for Pond C5 is 115cfs and 374cfs for the 5/100 year storm events at Design Point 46. The pre-developed flow conditions at Design Point 46 (Etrib) are 141cfs and 458cfs for the 5/100 year storm events. The interim flows are lower than pre-developed conditions and will not cause negative downstream impacts. The outlet structure does not need modification at this time to accommodate interim flows.

Water Quality Design

Water quality for this final plat will be provided by Pond C5 for 96.8% of the 53.87acre site. Approximately 1.75acres (3.2%) of the total 53.87-acre final plat area consists of backyards that drain directly to the East Tributary over a grass buffer constructed and maintained in accordance with DCM Volume 2. Final platting of these areas includes a deviation from county criteria for a grass buffer bmp. Water Quality for the "C" is provided by full spectrum pond Pond C5.

7.0 DRAINAGE AND BRIDGE FEES

Lorson Ranch East Filing No. 2 is located within the Jimmy Camp Creek drainage basin which is currently a fee basin in El Paso County.

Lorson Ranch East Filing No. 2 contains 53.87 acres. Tract A (10.974 ac) was previously platted and paid fees with Pioneer Landing Filing No. 2 and therefore is not included in this fee. The remainder of this project consists of 7.14 acres of open space (2% impervious), and the remaining 35.76 acres is residential (52% impervious). The 2018 drainage fees are $17,197, bridge fees are $804 and Drainage Surety fees are $7,285 per impervious acre per Resolution 17-348. The drainage and bridge fees are calculated when the final plat is submitted. The fees are due at plat recordation. The following table details the drainage fees for the platted area.

Table 1: Drainage/Bridge Fees

Type of Land Use	Total Area (ac)	Imperviousness	Drainage Fee	Bridge Fee	Surety Fee
Residential Area	35.76	52%	$319,781	$14,950	$135,466
Open Space, Landscape Tracts,	7.14	2%	$2,455	$114	$1,040
		Total	$322,236	$15,064	$136,506

Table 7.1: Public Drainage Facility Costs (non-reimbursable)

Item	Quantity	Unit	Unit Cost	Item Total
Rip Rap	100	CY	$50/CY	$5,000
Inlets/Manholes	23	EA	$3000/EA	$69,000
18" Storm	160	LF	$35	$5,600
24" Storm	385	LF	$40	$15,400
30" Storm	400	LF	$45	$18,000
36" Storm	42	LF	$55	$2,310
48" Storm	175	LF	$85	$14,875
54" Storm	460	LF	$115	$52,900
			Subtotal	$183,085
			Eng/Cont (15%)	$27,462
			Total Est. Cost	$210,547

Table 7.2: Lorson Ranch Metro District Drainage Facility Costs (non-reimbursable)

Item	Quantity	Unit	Unit Cost	Item Total
Interim Pond and Outlet	1	LS	$10,000	$10,000
			Subtotal	$220,547
			Eng/Cont (15%)	$31,582
			Total Est. Cost	$242,129

8.0 FOUR STEP PROCESS

The site has been developed to minimize wherever possible the rate of developed runoff that will leave the site and to provide water quality management for the runoff produced by the site as proposed on the development plan. The following four step process should be considered and incorporated into the storm water collection system and storage facilities where applicable.

Step 1: Employ Runoff Reduction Practices

Lorson Ranch East Filing No. 2 has employed several methods of reducing runoff.

- The street configuration was laid out to minimize the length of streets. Many streets are straight and perpendicular resulting in lots with less wasted space.
- East Tributary of Jimmy Camp Creek with a natural sand bottom and vegetated slopes has been preserved through this site
- Lots on the west side of the site discharge runoff westward over an open space buffer prior to discharge into the creek
- A buffer tract has been added along the SDS watermain easement which reduces impervious areas
- Lorson Ranch Metro District requires homeowners to maintain landscaping on lots
- Full Spectrum Detention Pond C5 has been constructed. The full spectrum detention mimics existing storm discharges

Step 2: Implement BMP's that Slowly Release the Water Quality Capture Volume

Treatment and slow release of the water quality capture volume (WQCV) is required. Lorson Ranch East Filing No. 2 will utilize Pond C5, a full spectrum stormwater detention pond which includes Water Quality Volumes and WQ outlet structures.

Step 3: Stabilize Drainageways

East Tributary of Jimmy Camp Creek is a major drainageway located within this site. In 2018 the East Tributary of JCC was reconstructed and stabilized per county criteria. The design included a low flow channel bottom and selectively armored sides.

Step 4: Implement Site Specific & Source Control BMP's

There are no potential sources of contaminants that could be introduced to the County's MS4. During construction source control will be provided with the proper installation of erosion control BMPs to limit erosion and transport of sediment. Area disturbed by construction will be seeded and mulched. Cut and fill slopes will be reseeded, and the slopes equal to or greater than three-to-one will be protected with erosion control fabric. Silt fences will be placed at the bottom of re-vegetated and rough graded slopes. Inlet protection will be used around proposed inlets. In addition, temporary sediment basins

will be constructed so runoff will be treated prior to discharge. Construction BMPs in the form of vehicle tracking control, sediment basins, concrete washout area, rock socks, buffers, and silt fences will be utilized to protect receiving waters.

9.0 CONCLUSIONS

This drainage report has been prepared in accordance with the City of Colorado Springs/El Paso County Drainage Criteria Manual. The proposed development and drainage infrastructure will not cause adverse impacts to adjacent properties or properties located downstream. Several key aspects of the development discussed above are summarized as follows:

- Developed runoff will be conveyed via curb/gutter and storm sewer facilities
- The East Tributary of Jimmy Camp Creek has been reconstructed within this study area
- Bridges over the East Tributary will be required at Lorson Boulevard and Fontaine Boulevard and have been previously designed by Kiowa Engineering providing access to this site.
- The bridge over Jimmy Camp Creek at Lorson Boulevard is required for this plat
- Detention and water quality for this site area will be provided in a permanent pond C5 maintained by the Lorson Ranch Metro District.
- Access to existing maintenance trails for the East Tributary of Jimmy Camp Creek will be provided on the west side from Tract E and from Fontaine Boulevard.
- Access to existing maintenance trails for the East Tributary of Jimmy Camp Creek will be provided on the east side from Fontaine Boulevard and from Wacissa Drive.
- Lorson Ranch Metro District will maintain Pond C5 and the East Tributary.

3.2 Time of Concentration

One of the basic assumptions underlying the Rational Method is that runoff is a function of the average rainfall rate during the time required for water to flow from the hydraulically most remote part of the drainage area under consideration to the design point. However, in practice, the time of concentration can be an empirical value that results in reasonable and acceptable peak flow calculations.

For urban areas, the time of concentration (t_c) consists of an initial time or overland flow time (t_i) plus the travel time (t_t) in the storm sewer, paved gutter, roadside drainage ditch, or drainage channel. For non-urban areas, the time of concentration consists of an overland flow time (t_i) plus the time of travel in a concentrated form, such as a swale or drainageway. The travel portion (t_t) of the time of concentration can be estimated from the hydraulic properties of the storm sewer, gutter, swale, ditch, or drainageway. Initial time, on the other hand, will vary with surface slope, depression storage, surface cover, antecedent rainfall, and infiltration capacity of the soil, as well as distance of surface flow. The time of concentration is represented by Equation 6-7 for both urban and non-urban areas.

Hyd. No. 1

EX-C

Hydrograph type	= SCS Runoff	Peak discharge	= 458.13 cfs
Storm frequency	= 100 yrs	Time interval	= 6 min
Drainage area	= 452.970 ac	Curve number	= 69
Basin Slope	= 0.0 %	Hydraulic length	= 7400 ft
Tc method	= USER	Time of conc. (Tc)	= 49.50 min
Total precip.	= 4.40 in	Distribution	= Custom
Storm duration	= CSpring_IIA-6min.cds	Shape factor	= 484

Hydrograph Volume = 2,456,980 cuft

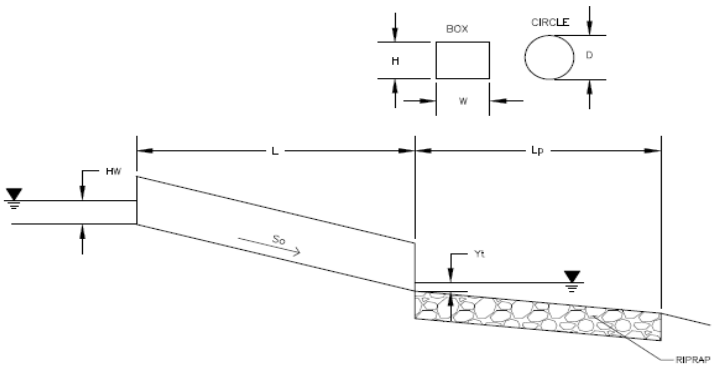
Determination of Culvert Headwater and Outlet Protection

Project: Lorson Ranch East 2

Basin ID: Rip Rap sizing for outlet pipe from 18" into pond C3



Soil Type:
Choose One:
- ○ Sandy
- ◉ Non-Sandy

Supercritical Flow! Using Da to calculate protection type.

Design Information (Input):

	Design Discharge	Q =	10	cfs
Circular Culvert:				
	Barrel Diameter in Inches	D =	18	inches
	Inlet Edge Type (Choose from pull-down list)		Square End Projection	
Box Culvert:			**OR**	
	Barrel Height (Rise) in Feet	Height (Rise) =		ft
	Barrel Width (Span) in Feet	Width (Span) =		ft
	Inlet Edge Type (Choose from pull-down list)			
	Number of Barrels	No =	1	
	Inlet Elevation	Elev IN =	64.6	ft
	Outlet Elevation **OR** Slope	Elev OUT =	58	ft
	Culvert Length	L =	90	ft
	Manning's Roughness	n =	0.012	
	Bend Loss Coefficient	k_b =	0	
	Exit Loss Coefficient	k_x =	1	
	Tailwater Surface Elevation	Elev Y_t =		ft
	Max Allowable Channel Velocity	V =	3	ft/s

Required Protection (Output):

Tailwater Surface Height	Y_t =	0.60	ft
Flow Area at Max Channel Velocity	A_t =	3.33	ft^2
Culvert Cross Sectional Area Available	A =	1.77	ft^2
Entrance Loss Coefficient	k_e =	0.50	
Friction Loss Coefficient	k_f =	1.39	
Sum of All Losses Coefficients	k_s =	2.89	ft
Culvert Normal Depth	Y_n =	0.59	ft
Culvert Critical Depth	Y_c =	1.22	ft
Tailwater Depth for Design	d =	1.36	ft
Adjusted Diameter **OR** Adjusted Rise	D_a =	1.04	ft
Expansion Factor	1/(2*tan(Θ)) =	6.04	
Flow/Diameter$^{2.5}$ **OR** Flow/(Span * Rise$^{1.5}$)	Q/D^2.5 =	3.63	$ft^{0.5}/s$
Froude Number	Fr =	4.16	**Supercritical!**
Tailwater/Adjusted Diameter **OR** Tailwater/Adjusted Rise	Yt/D =	0.58	
Inlet Control Headwater	HW_I =	2.25	ft
Outlet Control Headwater	HW_O =	-3.80	
Design Headwater Elevation	**HW =**	**66.85**	**ft**
Headwater/Diameter OR Headwater/Rise Ratio	**HW/D =**	**1.50**	
Minimum Theoretical Riprap Size	d_{50} =	5	in
Nominal Riprap Size	d_{50} =	6	in

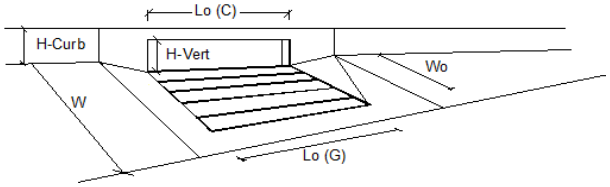
INLET ON A CONTINUOUS GRADE

Project: Lorson East Prelim Plan #100.040

Inlet ID: Inlet DP-6a (Basins C16.15+ bypass from DP-6)

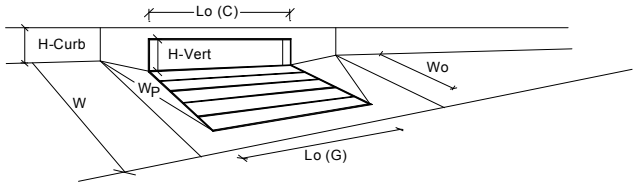


Design Information (Input)		MINOR	MAJOR	
Type of Inlet	Type =	CDOT Type R Curb Opening		
Local Depression (additional to continuous gutter depression 'a' from 'Q-Allow')	a_{LOCAL} =	3.0	3.0	inches
Total Number of Units in the Inlet (Grate or Curb Opening)	No =	1	1	
Length of a Single Unit Inlet (Grate or Curb Opening)	L_o =	10.00	10.00	ft
Width of a Unit Grate (cannot be greater than W from Q-Allow)	W_o =	N/A	N/A	ft
Clogging Factor for a Single Unit Grate (typical min. value = 0.5)	C_f-G =	N/A	N/A	
Clogging Factor for a Single Unit Curb Opening (typical min. value = 0.1)	C_f-C =	0.10	0.10	
Street Hydraulics: OK - Q < maximum allowable from sheet 'Q-Allow'		MINOR	MAJOR	
Design Discharge for Half of Street (from Sheet *Q-Peak*)	**Q_o** =	6.6	24.9	cfs
Water Spread Width	T =	14.6	17.0	ft
Water Depth at Flowline (outside of local depression)	d =	5.0	7.5	inches
Water Depth at Street Crown (or at T_{MAX})	d_{CROWN} =	0.0	1.9	inches
Ratio of Gutter Flow to Design Flow	E_o =	0.409	0.247	
Discharge outside the Gutter Section W, carried in Section T_x	Q_x =	3.9	18.2	cfs
Discharge within the Gutter Section W	Q_w =	2.7	6.0	cfs
Discharge Behind the Curb Face	Q_{BACK} =	0.0	0.7	cfs
Flow Area within the Gutter Section W	A_W =	2.25	5.70	sq ft
Velocity within the Gutter Section W	V_W =	2.9	4.2	fps
Water Depth for Design Condition	d_{LOCAL} =	8.0	10.5	inches
Grate Analysis (Calculated)		MINOR	MAJOR	
Total Length of Inlet Grate Opening	L =	N/A	N/A	ft
Ratio of Grate Flow to Design Flow	$E_{o\text{-}GRATE}$ =	N/A	N/A	
Under No-Clogging Condition		MINOR	MAJOR	
Minimum Velocity Where Grate Splash-Over Begins	V_o =	N/A	N/A	fps
Interception Rate of Frontal Flow	R_f =	N/A	N/A	
Interception Rate of Side Flow	R_x =	N/A	N/A	
Interception Capacity	Q_i =	N/A	N/A	cfs
Under Clogging Condition		MINOR	MAJOR	
Clogging Coefficient for Multiple-unit Grate Inlet	GrateCoef =	N/A	N/A	
Clogging Factor for Multiple-unit Grate Inlet	GrateClog =	N/A	N/A	
Effective (unclogged) Length of Multiple-unit Grate Inlet	L_e =	N/A	N/A	ft
Minimum Velocity Where Grate Splash-Over Begins	V_o =	N/A	N/A	fps
Interception Rate of Frontal Flow	R_f =	N/A	N/A	
Interception Rate of Side Flow	R_x =	N/A	N/A	
Actual Interception Capacity	**Q_a** =	N/A	N/A	cfs
Carry-Over Flow = Q_o-Q_a (to be applied to curb opening or next d/s inlet)	**Q_b** =	N/A	N/A	cfs
Curb or Slotted Inlet Opening Analysis (Calculated)		MINOR	MAJOR	
Equivalent Slope S_e (based on grate carry-over)	S_e =	0.097	0.066	ft/ft
Required Length L_T to Have 100% Interception	L_T =	14.16	32.65	ft
Under No-Clogging Condition		MINOR	MAJOR	
Effective Length of Curb Opening or Slotted Inlet (minimum of L, L_T)	L =	10.00	10.00	ft
Interception Capacity	Q_i =	5.9	11.7	cfs
Under Clogging Condition		MINOR	MAJOR	
Clogging Coefficient	CurbCoef =	1.25	1.25	
Clogging Factor for Multiple-unit Curb Opening or Slotted Inlet	CurbClog =	0.06	0.06	
Effective (Unclogged) Length	L_e =	8.75	8.75	ft
Actual Interception Capacity	**Q_a** =	5.7	11.2	cfs
Carry-Over Flow = $Q_{b(GRATE)}$-Q_a	**Q_b** =	0.9	13.7	cfs
Summary		MINOR	MAJOR	
Total Inlet Interception Capacity	**Q** =	**5.71**	**11.17**	**cfs**
Total Inlet Carry-Over Flow (flow bypassing inlet)	**Q_b** =	**0.9**	**13.7**	**cfs**
Capture Percentage = Q_a/Q_o =	**C%** =	**86**	**45**	**%**

INLET IN A SUMP OR SAG LOCATION

Project = Lorson East Prelim Plan #100.040

Inlet ID = Inlet DP-10 (C16.16+C16.17+bypass from Inlet DP-8)



Design Information (Input)		MINOR	MAJOR	
Type of Inlet	Inlet Type =	CDOT Type R Curb Opening		
Local Depression (additional to continuous gutter depression 'a' from 'Q-Allow')	a_{local} =	3.00	3.00	inches
Number of Unit Inlets (Grate or Curb Opening)	No =	1	1

APPENDIX D – POND AND ROUTING CALCULATIONS

Design Procedure Form: Grass Buffer (GB)

UD-BMP (Version 3.06, November 2016) **Sheet 1 of 1**

Designer:
Company: Core Engineering Group
Date: June 15, 2018
Project: Lorson Ranch East Filing No. 2
Location: Lorson Ranch

1. Design Discharge A) 2-Year Peak Flow Rate of the Area Draining to the Grass Buffer	Q_2 = 1.3 cfs
2. Minimum Width of Grass Buffer	W_G = 26 ft
3. Length of Grass Buffer (14' or greater recommended)	L_G = 60 ft
4. Buffer Slope (in the direction of flow, not to exceed 0.1 ft / ft)	S_G = 0.020 ft / ft
5. Flow Characteristics (sheet or concentrated) A) Does runoff flow into the grass buffer across the entire width of the buffer?	Choose One: (•) Yes ( ) No
B) Watershed Flow Length	F_L = 60 ft
C) Interface Slope (normal to flow)	S_I = 0.010 ft / ft
D) Type of Flow Sheet Flow: $F_L * S_I \leq 1$ Concentrated Flow: $F_L * S_I > 1$	SHEET FLOW
6. Flow Distribution for Concentrated Flows	Choose One: ( ) None (sheet flow) ( ) Slotted Curbing ( ) Level Spreader ( ) Other (Explain):
7 Soil Preparation (Describe soil amendment)	4" topsoil
8 Vegetation (Check the type used or describe "Other")	Choose One: (•) Existing Xeric Turf Grass ( ) Irrigated Turf Grass ( ) Other (Explain):
9. Irrigation (*Select None if existing buffer area has 80% vegetation AND will not be disturbed during construction.)	Choose One: ( ) Temporary ( ) Permanent (•) None*
10. Outflow Collection (Check the type used or describe "Other")	Choose One: ( ) Grass Swale ( ) Street Gutter ( ) Storm Sewer Inlet (•) Other (Explain): Etrib of Jimmy Camp Creek

Notes:

Design Procedure Form: Extended Detention Basin (EDB)

UD-BMP (Version 3.06, November 2016)

Designer: Richard Schindler
Company: Core Engineering Group
Date: February 13, 2018
Project: Lorson Ranch East PDR - Pond c5 forebay design
Location: Pond C5 forebay design (split forebay in two parts)

1. Basin Storage Volume	
A) Effective Imperviousness of Tributary Area, I_a	I_a = 63.0 %
B) Tributary Area's Imperviousness Ratio ($i = I_a / 100$)	i = 0.630
C) Contributing Watershed Area	Area = 171.000 ac
D) For Watersheds Outside of the Denver Region, Depth of Average Runoff Producing Storm	d_6 = in
E) Design Concept (Select EURV when also designing for flood control)	Choose One: (•) Water Quality Capture Volume (WQCV); ( ) Excess Urban Runoff Volume (EURV)
F) Design Volume (WQCV) Based on 40-hour Drain Time ($V_{DESIGN} = (1.0 * (0.91 * i^3 - 1.19 * i^2 + 0.78 * i) / 12 * Area$)	V_{DESIGN} = 3.515 ac-ft
G) For Watersheds Outside of the Denver Region, Water Quality Capture Volume (WQCV) Design Volume ($V_{WQCV\ OTHER} = (d_6 * (V_{DESIGN}/0.43))$)	$V_{DESIGN\ OTHER}$ = ac-ft
H) User Input of Water Quality Capture Volume (WQCV) Design Volume (Only if a different WQCV Design Volume is desired)	$V_{DESIGN\ USER}$ = 3.300 ac-ft
I) Predominant Watershed NRCS Soil Group	Choose One: ( ) A; ( ) B; ( ) C / D — **WQCV selected. Soil group not required.**
J) Excess Urban Runoff Volume (EURV) Design Volume For HSG A: $EURV_A = 1.68 * i^{1.28}$ For HSG B: $EURV_B = 1.36 * i^{1.08}$ For HSG C/D: $EURV_{C/D} = 1.20 * i^{1.08}$	EURV = ac-f t
2. Basin Shape: Length to Width Ratio (A basin length to width ratio of at least 2:1 will improve TSS reduction.)	L : W = 2.0 : 1
3. Basin Side Slopes	
A) Basin Maximum Side Slopes (Horizontal distance per unit vertical, 4:1 or flatter preferred)	Z = 0.33 ft / ft **TOO STEEP (< 3)**
4. Inlet	
A) Describe means of providing energy dissipation at concentrated inflow locations:	

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Richard Schindler
Company: Core Engineering Group
Date: February 13, 2018
Project: Lorson Ranch East PDR - Pond c5 forebay design
Location: Pond C5 forebay design (split forebay in two parts)

5. Forebay

A) Minimum Forebay Volume (V_{FMIN} = 3% of the WQCV) — V_{FMIN} = 0.099 ac-ft

B) Actual Forebay Volume — V_F = 0.150 ac-ft

C) Forebay Depth (D_F = 30 inch maximum) — D_F = 30.0 in

D) Forebay Discharge

i) Undetained 100-year Peak Discharge — Q_{100} = 484.00 cfs

ii) Forebay Discharge Design Flow ($Q_F = 0.02 * Q_{100}$) — Q_F = 9.68 cfs

E) Forebay Discharge Design

Choose One
- ○ Berm With Pipe
- ◉ Wall with Rect. Notch
- ○ Wall with V-Notch Weir

F) Discharge Pipe Size (minimum 8-inches) — Calculated D_P = in

G) Rectangular Notch Width — Calculated W_N = 14.8 in

6. Trickle Channel

A) Type of Trickle Channel

Choose One
- ◉ Concrete
- ○ Soft Bottom

F) Slope of Trickle Channel — S = 0.0040 ft / ft

7. Micropool and Outlet Structure

A) Depth of Micropool (2.5-feet minimum) — D_M = 2.5 ft

B) Surface Area of Micropool (10 ft^2 minimum) — A_M = 88 sq ft

C) Outlet Type

Choose One
- ◉ Orifice Plate
- ○ Other (Describe):

D) Smallest Dimension of Orifice Opening Based on Hydrograph Routing (Use UD-Detention) — $D_{orifice}$ = 3.03 inches

E) Total Outlet Area — A_{ot} = 27.63 square inches

Design Procedure Form: Extended Detention Basin (EDB)

Designer: Richard Schindler
Company: Core Engineering Group
Date: February 13, 2018
Project: Lorson Ranch East PDR - Pond c5 forebay design
Location: Pond C5 forebay design (split forebay in two parts)

8. Initial Surcharge Volume	
A) Depth of Initial Surcharge Volume (Minimum recommended depth is 4 inches)	D_{IS} = 4 in
B) Minimum Initial Surcharge Volume (Minimum volume of 0.3% of the WQCV)	V_{IS} = 431.2 cu ft
C) Initial Surcharge Provided Above Micropool	V_s = 29.3 cu ft
9. Trash Rack	
A) Water Quality Screen Open Area: $A_t = A_{ot} * 38.5*(e^{-0.095D})$	A_t = 798 square inches
B) Type of Screen (If specifying an alternative to the materials recommended in the USDCM, indicate "other" and enter the ratio of the total open are to the total screen are for the material specified.)	*Other (Please describe below)* stainless steel wellscreen
Other (Y/N): Y	
C) Ratio of Total Open Area to Total Area (only for type 'Other')	User Ratio = 0.6
D) Total Water Quality Screen Area (based on screen type)	A_{total} = 1329 sq. in. Based on type 'Other' screen ratio
E) Depth of Design Volume (EURV or WQCV) (Based on design concept chosen under 1E)	H= 3 feet
F) Height of Water Quality Screen (H_{TR})	H_{TR}= 64 inches
G) Width of Water Quality Screen Opening ($W_{opening}$) (Minimum of 12 inches is recommended)	$W_{opening}$ = 20.8 inches

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

UD-Detention, Version 3.07 (February 2017)

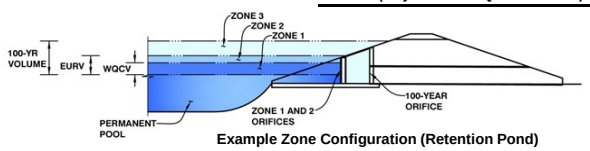
Detention Basin Outlet Structure Design

UD-Detention, Version 3.07 (February 2017)

Project: Lorson East MDDP (100.013)

Basin ID: Pond C5 (only used for WQCV and EURV) Do not use for 2-100-yr Storm Event!!!!!!



Example Zone Configuration (Retention Pond)

	Stage (ft)	Zone Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	4.01	3.515	Orifice Plate
Zone 2 (EURV)	6.57	6.868	Rectangular Orifice
Zone 3 (User)	6.60	0.100	Weir&Pipe (Restrict)
		10.482	Total

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)	Underdrain Orifice Area =	N/A	ft^2
Underdrain Orifice Diameter =	N/A	inches	Underdrain Orifice Centroid =	N/A	feet

Calculated Parameters for Underdrain

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Invert of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)	WQ Orifice Area per Row =	6.396E-02	ft^2
Depth at top of Zone using Orifice Plate =	4.01	ft (relative to basin bottom at Stage = 0 ft)	Elliptical Half-Width =	N/A	feet
Orifice Plate: Orifice Vertical Spacing =	16.00	inches	Elliptical Slot Centroid =	N/A	feet
Orifice Plate: Orifice Area per Row =	9.21	sq. inches (use rectangular openings)	Elliptical Slot Area =	N/A	ft^2

Calculated Parameters for Plate

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	1.34	2.67					
Orifice Area (sq. inches)	9.21	9.21	9.21					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

	Zone 2 Rectangular	Not Selected		Zone 2 Rectangular	Not Selected	
Invert of Vertical Orifice =	4.01	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Area =	0.78	N/A	ft^2
Depth at top of Zone using Vertical Orifice =	6.57	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Centroid =	0.25	N/A	feet
Vertical Orifice Height =	6.00	N/A	inches				
Vertical Orifice Width =	18.68		inches				

Calculated Parameters for Vertical Orifice

User Input: Overflow Weir (Dropbox) and Grate (Flat or Sloped)

	Zone 3 Weir	Not Selected		Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	6.60	N/A	ft (relative to basin bottom at Stage = 0 ft)	Height of Grate Upper Edge, H_t =	6.60	N/A	feet
Overflow Weir Front Edge Length =	3.00	N/A	feet	Over Flow Weir Slope Length =	30.00	N/A	feet
Overflow Weir Slope =	0.00	N/A	H:V (enter zero for flat grate)	Grate Open Area / 100-yr Orifice Area =	5.73	N/A	should be ≥ 4
Horiz. Length of Weir Sides =	30.00	N/A	feet	Overflow Grate Open Area w/o Debris =	72.00	N/A	ft^2
Overflow Grate Open Area % =	80%	N/A	%, grate open area/total area	Overflow Grate Open Area w/ Debris =	36.00	N/A	ft^2
Debris Clogging % =	50%	N/A	%				

Calculated Parameters for Overflow Weir

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

	Zone 3 Restrictor	Not Selected		Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	0.00	N/A	ft (distance below basin bottom at Stage = 0 ft)	Outlet Orifice Area =	12.57	N/A	ft^2
Outlet Pipe Diameter =	48.00	N/A	inches	Outlet Orifice Centroid =	2.00	N/A	feet
Restrictor Plate Height Above Pipe Invert =	48.00		inches	Half-Central Angle of Restrictor Plate on Pipe =	3.14	N/A	radians

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Spillway Invert Stage=	7.00	ft (relative to basin bottom at Stage = 0 ft)	Spillway Design Flow Depth=	2.05	feet
Spillway Crest Length =	52.00	feet	Stage at Top of Freeboard =	12.05	feet
Spillway End Slopes =	4.00	H:V	Basin Area at Top of Freeboard =	3.26	acres
Freeboard above Max Water Surface =	3.00	feet			

Calculated Parameters for Spillway
